PATENT PROTECTION

A10 Networks, Inc. products are protected by patents in the U.S. and elsewhere. The following website is provided to satisfy the virtual patent marking provisions of various jurisdictions including the virtual patent marking provisions of the America Invents Act. A10 Networks, Inc. products, including all Thunder Series products, are protected by one or more of U.S. patents and patents pending listed at: a10-virtual-patent-marking.

TRADEMARKS

A10 Networks, Inc. trademarks are listed at: a10-trademarks

DISCLAIMER

This document does not create any express or implied warranty about A10 Networks, Inc. or about its products or services, including but not limited to fitness for a particular use and non-infringement. A10 Networks, Inc. has made reasonable efforts to verify that the information contained herein is accurate, but A10 Networks, Inc. assumes no responsibility for its use. All information is provided "as-is." The product specifications and features described in this publication are based on the latest information available; however, specifications are subject to change without notice, and certain features may not be available upon initial product release. Contact A10 Networks, Inc. for current information regarding its products or services. A10 Networks, Inc. products and services are subject to A10 Networks, Inc. standard terms and conditions.

ENVIRONMENTAL CONSIDERATIONS

Some electronic components may possibly contain dangerous substances. For information on specific component types, please contact the manufacturer of that component. Always consult local authorities for regulations regarding proper disposal of electronic components in your area.

FURTHER INFORMATION

For additional information about A10 products, terms and conditions of delivery, and pricing, contact your nearest A10 Networks, Inc. location, which can be found by visiting www.a10networks.com

CONTENTS

1 Overview: 1

1.1 Start Here . . . 1
1.1.1 Logging On . . . 1

2.1.17 aam authentication file portal . . . 393
portal Specification . . . 393
portal attributes . . . 394
2.1.18 aam authentication file portal-image . . . 394
portal-image Specification . . . 394
portal-image attributes . . . 395
2.1.19 aam authentication file portal-image oper . . . 395
portal-image Specification . . . 395
portal-image attributes . . . 396
2.1.20 aam authentication file portal oper . . . 397

portal Specification . . . 397
portal attributes . . . 398
2.1.21 aam authentication global . . . 398
global Specification . . . 399
global attributes . . . 400
2.1.22 aam authentication global stats . . . 401
global Specification . . . 402
global attributes . . . 402
2.1.23 aam authentication jwks . . . 406
jwks Specification . . . 406
jwks attributes . . . 407
2.1.24 aam authentication jwks oper . . . 407
jwks Specification . . . 407
jwks attributes . . . 408
2.1.25 aam authentication jwt . . . 408
jwt Specification . . . 409
jwt-list . . . 411
jwt attributes . . . 411
2.1.26 aam authentication log . . . 413
log Specification . . . 413
log attributes . . . 414
2.1.27 aam authentication logon . . . 415
logon Specification . . . 415
logon attributes . . . 415
2.1.28 aam authentication logon form-based . . . 428
form-based Specification . . . 429
form-based-list . . . 431
form-based attributes . . . 431
2.1.29 aam authentication logon http-authenticate . . . 439
http-authenticate Specification . . . 440
http-authenticate attributes . . . 440
2.1.30 aam authentication logon http-authenticate instance . . . 444
instance Specification . . . 445
instance-list . . . 447
instance attributes . . . 447
2.1.31 aam authentication logon http-authenticate instance stats . . . 451
instance Specification . . . 451
instance-list . . . 453
instance attributes . . . 453
2.1.32 aam authentication oauth . . . 454
oauth Specification . . . 454
oauth attributes . . . 454
2.1.33 aam authentication oauth authorization-server . . . 460
authorization-server Specification . . . 460
authorization-server-list . . . 462
authorization-server attributes . . . 462
2.1.34 aam authentication oauth authorization-server stats . . . 464
authorization-server Specification . . . 464
authorization-server-list . . . 465
authorization-server attributes . . . 466
2.1.35 aam authentication oauth client . . . 467
client Specification . . . 467
client-list . . . 469
client attributes . . . 469

2.1.36 aam authentication oauth global . . . 471
global Specification . . . 472
global attributes . . . 474
2.1.37 aam authentication oauth global oper . . . 474
global Specification . . . 474
global attributes . . . 475
2.1.38 aam authentication oauth global stats . . . 476
global Specification . . . 476
global attributes . . . 477
2.1.39 aam authentication password-retry . . . 478
password-retry Specification . . . 478
password-retry attributes . . . 479
2.1.40 aam authentication password-retry oper . . . 479
password-retry Specification . . . 479
password-retry attributes . . . 480
2.1.41 aam authentication portal . . . 481
portal Specification . . . 481
portal-list . . . 483
portal attributes . . . 483
2.1.42 aam authentication portal change-password . . . 522
change-password Specification . . . 522
change-password attributes . . . 524
2.1.43 aam authentication portal logon . . . 535
logon Specification . . . 535
logon attributes . . . 537
2.1.44 aam authentication portal logon-fail . . . 548
logon-fail Specification . . . 548
logon-fail attributes . . . 550
2.1.45 aam authentication portal notify-change-password . . . 555
notify-change-password Specification . . . 555
notify-change-password attributes . . . 557
2.1.46 aam authentication relay . . . 566
relay Specification . . . 567
relay attributes . . . 567
2.1.47 aam authentication relay form-based . . . 582
form-based Specification . . . 582
form-based attributes . . . 582
2.1.48 aam authentication relay form-based instance . . . 586
instance Specification . . . 586
instance-list . . . 588
instance attributes . . . 588
2.1.49 aam authentication relay form-based instance request-uri . . . 592
request-uri Specification . . . 592
request-uri-list . . . 593
request-uri attributes . . . 594
2.1.50 aam authentication relay form-based instance stats . . . 596
instance Specification . . . 596
instance-list . . . 597
instance attributes . . . 597
2.1.51 aam authentication relay http-basic . . . 599
http-basic Specification . . . 599
http-basic attributes . . . 599
2.1.52 aam authentication relay http-basic instance . . . 601
instance Specification . . . 601

instance-list . . . 603
instance attributes . . . 603
2.1.53 aam authentication relay http-basic instance stats . . . 604
instance Specification . . . 604
instance-list . . . 606
instance attributes . . . 606
2.1.54 aam authentication relay kerberos . . . 607
kerberos Specification . . . 607
kerberos attributes . . . 609
2.1.55 aam authentication relay kerberos instance . . . 612
instance Specification . . . 612
instance-list . . . 614
instance attributes . . . 615
2.1.56 aam authentication relay kerberos instance oper . . . 617
instance Specification . . . 617
instance-list . . . 618
instance attributes . . . 618
2.1.57 aam authentication relay kerberos instance stats . . . 620
instance Specification . . . 620
instance-list . . . 621
instance attributes . . . 621
2.1.58 aam authentication relay kerberos stats . . . 622
kerberos Specification . . . 622
kerberos attributes . . . 623
2.1.59 aam authentication relay oauth . . . 626
oauth Specification . . . 626
oauth-list . . . 628
oauth attributes . . . 628
2.1.60 aam authentication relay oauth stats . . . 630
oauth Specification . . . 630
oauth-list . . . 631
oauth attributes . . . 631
2.1.61 aam authentication relay saml . . . 632
saml Specification . . . 632
saml-list . . . 634
saml attributes . . . 634
2.1.62 aam authentication relay saml stats . . . 636
saml Specification . . . 637
saml-list . . . 638
saml attributes . . . 638
2.1.63 aam authentication relay ws-federation . . . 639
ws-federation Specification . . . 639
ws-federation-list . . . 641
ws-federation attributes . . . 641
2.1.64 aam authentication relay ws-federation stats . . . 643
ws-federation Specification . . . 643
ws-federation-list . . . 644
ws-federation attributes . . . 644
2.1.65 aam authentication saml . . . 645
saml Specification . . . 645
saml attributes . . . 646
2.1.66 aam authentication saml global . . . 657
global Specification . . . 657
global attributes . . . 659

2.1.67 aam authentication saml global stats . . . 660
global Specification . . . 660
global attributes . . . 661
2.1.68 aam authentication saml identity-provider . . . 663
identity-provider Specification . . . 664
identity-provider-list . . . 666
identity-provider attributes . . . 666
2.1.69 aam authentication saml identity-provider oper . . . 667
identity-provider Specification . . . 667
identity-provider-list . . . 668
identity-provider attributes . . . 669
2.1.70 aam authentication saml identity-provider stats . . . 671
identity-provider Specification . . . 671
identity-provider-list . . . 672
identity-provider attributes . . . 673
2.1.71 aam authentication saml metadata . . . 674
metadata Specification . . . 674
metadata attributes . . . 675
2.1.72 aam authentication saml metadata-monitor . . . 675
metadata-monitor Specification . . . 675
metadata-monitor attributes . . . 677
2.1.73 aam authentication saml metadata oper . . . 678
metadata Specification . . . 678
metadata attributes . . . 679
2.1.74 aam authentication saml service-provider . . . 679
service-provider Specification . . . 680
service-provider-list . . . 682
service-provider attributes . . . 682
2.1.75 aam authentication saml service-provider stats . . . 689
service-provider Specification . . . 689

CHAPTER

ONE

OVERVIEW:

1.1 Start Here

The aXAPI version 3.0 offers an HTTP interface that can be used to configure and monitor your ACOS device. The end-user can use the following HTTP methods to operate the AXAPI:

1. POST
2. GET
3. PUT
4. DELETE

Details about the usage of the above HTTP methods are covered in the *Operations* section.

In general, the API user will perform the following sequence of steps:

1. Log in: Request an authorization signature. See *Logging On* for details.
2. Use HTTP methods (POST, GET, etc), along with the authorization signature retrieved in Step 1, to configure or monitor the ACOS device. See *Making an API call* for details.
3. Log off: Inform the API that authorization is no longer needed for the signature retrieved in Step 1. See *Logging Off* for details.

Note: aXAPIv3 operates over HTTPS

1.1.1 Logging On

This step is required to retrieve an authorization signature to be used to authenticate API calls. This is achieved by sending a POST request to the URI `/axapi/v3/auth` using using the credentials for the ACOS device, by inserting the following JSON payload:

```
curl -k https://10.100.5.71/axapi/v3/auth \
-H "Content-Type:application/json" \
-d '{
    "credentials": {
        "username": "admin",
        "password": "a10"
    }
}'
```

This example uses the default username (“admin”) and default password (“a10”) for the ACOS device.

If the credentials are valid, the API will return a JSON response like the one below:

```
{
  "authresponse" : {
  "signature":"ea697a2bc0eb6ec9a1ec7723a3c9b0",
  "description":"the signature should be set in Authorization header for following␣
↪request."
   }
}
```

The value of the signature attribute (ea697a2bc0eb6ec9a1ec7723a3c9b0, in this example) should be used for future aXAPI operations within an HTTP Authorization header, which will be discussed later.

1.1.2 Making an API call

As mentioned earlier, the end-user interacts with the aXAPI using the HTTP methods listed in the *Operations* section. The end-user is required to use an HTTP Header named `Authorization` with a value equal to `A10 <signature>`, where signature is the authorization signature obtained during the *Logging On* stage.

Each object is identified by a URI.

For instance, in order to create an SLB virtual server, we would make the following POST request on the object’s URI `/axapi/v3/slb/virtual-server`:

```
curl -k POST https://10.100.5.71/axapi/v3/slb/virtual-server \
-H "Content-Type:application/json" \
-H "Authorization: A10 ea697a2bc0eb6ec9a1ec7723a3c9b0" \
-d '{
        "virtual-server": {
                "name": "a",
                "ip-address": "4.4.4.4",
                "enable-disable-action": "enable",
                "redistribution-flagged": 0,
                "arp-disable": 0,
                "policy": 0,
                "virtual-server": 0,
                "logging": 0,
                "stats-data-action": "stats-data-enable",
                "extended-stats": 0,
                "port-list": [
                        {
                                "port-number": 0,
                                "protocol": "tcp",
                                "range": 0,
                                "conn-limit": 8000000,
                                "reset": 0,
                                "no-logging": 0,
                                "use-alternate-port": 0,
                                "action": "enable",
                                "def-selection-if-pref-failed": "def-selection-if-pref-
↪failed",
                                "ha-conn-mirror": 0,
```

(continues on next page)

(continued from previous page)

```
                                "skip-rev-hash": 0,
                                "message-switching": 0,
                                "force-routing-mode": 0,

                                "extended-stats": 0,
                                "snat-on-vip": 0,
                                "stats-data-action": "stats-data-enable",
                                "syn-cookie": 0,
                                "no-auto-up-on-aflex": 0,
                                "no-dest-nat": 0,
                                "enable-scaleout": 0,
                                "auto": 0,
                                "ipinip": 0,
                                "use-rcv-hop-for-resp": 0,
                                "template-tcp": "default",
                                "template-virtual-port": "default",
                                "use-default-if-no-server": 0,
                                "a10-url": "https://100.31.1.101/axapi/v3/slb/virtual-
↪server/a/port/0+tcp"
                        }
                ]
        }
}'
```

1.1.3 Logging Off

This step is required to indicate to the ACOS device that all aXAPI operations have been completed for the current authorized session. This is achieved by sending a POST request to the URI `/axapi/v3/logoff` along with the authorization header and content-type header discussed in the *Making an API call* section.

1.1.4 Contents

How to Use this Reference

This reference contains an entry for each ACOS object that can be accessed via the aXAPIv3. Each entry has the following sections:

Specification Table
: Provides basic information about the object, such as what type of object it is.

Operations Allowed
: Lists the operations that can be performed on instances of this object, along with the HTTP method and URI template required to perform each operation.

Children
: Provides information about children objects of this object.

Stats Data
: Lists the statistics available for this object.

Operational Data
: Lists the statistics available for this object.

Attributes
Lists all attributes that can be retrieved or configured via the object's allowed operations.

Specification Table

The specification table provides the following information about the resource:

URI
The URI template that can be used to access a representation of instances of this object. The template format is the same as that defined in RFC 6570.

Type
Indicates what type of resource it is. For further information about resource types, see *Resources*.

Object Key(s)
The object key is the unique identifier for each instance of this object. It is typically either the name or ID of the object. It is used to identify the resource in the JSON schema. You cannot change the value associated with a resource's object key. You must instead create a new resource with a different value for the object key.

Resource Name
This is the name of the object, not the instance of that object. It is used to identify the object in the ACOS device's schema, in URI calls, and throughout the reference entry for this object.

List of Resources
If the object is a *list* type object (see *Resources* for details), this is the resource name that will be used to access the list of all configured instances of this object.

Schema
You can click this link to see the JSON schema for this object. The schema includes all information about the object. The following key:value pairs are of particular importance:

- id - contains the URI template of the object
- properties - contains all of the accessible attributes of the object. These are also listed on the reference page for the object. Each property contains type and/or format of the property, its minimum and maximum values or length, a description and whether it is optional or required.
- object-keys - contains the object key, as described above
- required - lists all properties of this object which are required when configuring the object via the aXAPI.

Operations Allowed

The operations table lists all supported operations for instances of this object. For each operation, it lists the HTTP method and URI template that are used to execute the operation.

The payload makes it clear whether the JSON payload contains the list of this type of object or the attributes of an individual instance of the object.

For information about aXAPIv3 operations, see *Operations*.

Children

This table lists the children of the current resource. It also lists the type and endpoint URI of each child object. Click on the object's name to see its reference entry.

Stats Data

This table lists all counters available for the object. Each row displays the name of the object in the JSON schema. The table also displays the size of the counter and a brief description of what it represents.

There may be additional statistics tables, depending on how many different categories of statistics are allowed for this resource.

Operational Data

This table lists any operational data attributes by name, and describes what they represent. Many objects will contain the "state" attribute, which specifies whether the object is Up or Down.

Some resources may contain session information or current mappings, such as a dynamically assigned IP or MAC address.

Attributes

This section describes each of the objects accessible attributes. In the JSON payload, the name of the attribute will be the key, and the value will either be the value you specify (POST or PUT methods) or the value currently configured on this object on the ACOS device (GET method)

Each listing will provide information about the attribute:

Description
: Describes the ACOS configuration feature that this attribute represents.

Supported Values
: Lists the supported values for boolean attributes.

Range
: Specifies the range of accepted integers for number attributes.

Default
: Describes the default configuration this attribute that will remain in effect unless it is directly configured.

Dependency
: Specifies whether there are any other parameters that are required before this parameter can be configured.

Mutual Exclusion
: Indicates other attributes that cannot be configured if this attribute is configured.

Mandatory
: Indicates whether or not this attribute is mandatory to configuring the object on the ACOS device.

Reference Object
: Includes a link to an object that must be configured before this parameter can be applied or included.

Type
: States what type of value the attribute requires. The following table shows the supported field types.

Type	Description
dummy	Used for fields that have no configuration significance but act as a place-holder (or intermediate node).
encrypted	Goes hand in hand with the password type. A password field must come before an encrypted-type field. You cannot configure this field, this is only to get the encrypted value of the password.
enum	Used as a variation of string. The accepted value can only be one of the values listed for that field. If three values are listed (such as Full, Half, auto) only one can be used: `"duplexity":"Full"`
enum-list	Used like enum, but an enum-list can accept multiple enumerated values, separated by a comma. If three values are listed (such as axapi, cli, web) all can be used simultaneously: `"access-type":"axapi,cli,web"`
flag	Accepts a boolean. By default, the value of 0 is assumed for the flag. To enable the attribute or property, you need to specify the the keyword along with the value of 0 or 1: `"use-if-ip":1` or `"use-if-ip":true`
interface	Accepts interfaces referring to the physical ports. It automatically builds the range of ports allowed: `"ethernet-start":1, "ethernet-end":3`
ipv4-address	Accepts the ipv4 address. The format is A.B.C.D: `"ip-address":"10.1.1.1"`
ipv4-cidr	Accepts both the IP address and the prefix length in the same field: `"ipv4addr":"10.1.1.0/24"`
ipv4-netmask	Accepts the network mask for the ipv4 network. The format is A.B.C.D or /nn: `"ipv4-netmask":"255.255.255.0"`
ipv4-netmask-brief	Same as ipv4-netmask
ipv4-rev-netmask	Same as ipv4-netmask except that it accepts the reverse mask: `0.0.0.255`
ipv6-address	Accepts the ipv6 address. The format is A:B:C:D:E:F:G:H: `"ipv6-address":"2334:1234:1234::1"`
ipv6-address-plen	Accepts the ipv6 address along with the prefix length: `"address":"2334:1234:1234::1/64"`
line	Treated just like a string in aXAPI: `"description":"This is a line long description"`
mac-address	Accepts the mac address. The format is aabb.ccdd.eeff: `"mac-addr":"2323.2323.3434"`
nasp-string	Accepts the Network Service Access Point address or Network Entity Title. The format is XX.XXXX. . . . .XXXX.XX.
number	Accepts a basic number: `"mtu":1500`
password	Accepts variety of characters that can be used in a password. The password field should always be followed by another field of type encrypted, so as not to store or display the values entered: `"passphrase":"asdbasfsdf"`
string	Accepts a sequence of characters: `"name":"acl1"`
string-rlx	Used as a variation of string type. The difference is that it accepts extra characters such as spaces, which are not allowed in basic string type: `"name":"abc def"`

Resources

The following types of resources can be accessed and configured using aXAPIv3.

Elements

An element is a specific instance of a configurable object on the ACOS device. You can typically configure more than one of each type of element on the ACOS device. All elements exist within collections.

Example

A configured virtual port on the ACOS device is an element.

URI: /axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}

The following example shows retrieving a configured virtual port **80+tcp** on the SLB virtual server named **vs1**:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+tcp \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "port": {
                "port-number": 80,
                "protocol": "tcp",

                "no-dest-nat": 0,
                "uuid": "fbb05d0a-4f10-11e5-ade5-79d397dc1ac7",
                "sampling-enable": [{
                        "counters1": "curr_conn"
                }, {
                        "counters1": "slowest_rsp_time"
                }, {
                        "counters1": "total_dns_pkts"
                }, {
                        "counters1": "total_ssl_conn"
                }]
        }
}
```

Collections

A collection is a set of a particular type of element. Whenever a new element of that type is created, it is added to the collection.

You can configure individual elements separately, or you can create or modify multiple elements at once by creating or replacing the collection in which they are contained.

New elements are created through the collection resource URI.

Example

The list of all virtual ports on a particular virtual server.

URI: /axapi/v3/slb/virtual-server/{name}/port/

The following example shows retrieving a list of configured virtual ports on the virtual server named **vs1**:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "port-list": [{
                "port-number": 80,
                "protocol": "tcp",
                "range": 0,
                "conn-limit": 8000000,
                "reset": 0,
                "no-logging": 0,
                "use-alternate-port": 0,
                "action": "enable",
                "def-selection-if-pref-failed": "def-selection-if-pref-failed",
                "ha-conn-mirror": 0,
                "skip-rev-hash": 0,
                "message-switching": 0,
```

                }],
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+tcp"
        }]
}
```

Intermediate Resources

An intermediate resource contains representations of all elements and collections contained within it, but does not have any configurable parameters of its own.

Example

The SLB resource, which would include all SLB configurations on the ACOS device, including its real and virtual ports and servers.

URI: /axapi/v3/slb/

The following example shows the global SLB settings:

```
curl -k GET https://10.10.10.10/axapi/v3/slb \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

See *View Entire SLB Configuration* for response.

Configuration Resources

A configuration object is used to configure settings of a particular feature on the ACOS device. Unlike elements, which exist in collections, there is only one of each type of configuration object. If you do not explicitly configure parameters for a configuration object, then the default values for those parameters will apply.

Example

The global SLB settings, which include time-outs and resource usage.

URI: /axapi/v3/slb/common/

The following example shows the global slb settings:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/common \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "common": {
                "extended-stats": 0,
                "stats-data-disable": 0,
                "graceful-shutdown-enable": 0,
                "rate-limit-logging": 0,
                "dsr-health-check-enable": 0,
                "reset-stale-session": 0,
                "dns-cache-enable": 0,
                "dns-cache-age": 300,

                "l2l3-trunk-lb-disable": 0,
                "snat-gwy-for-l3": 0,
                "disable-server-auto-reselect": 0,
                "enable-l7-req-acct": 0,
                "disable-adaptive-resource-check": 0,
                "snat-on-vip": 0,
                "mss-table": 536,
                "no-auto-up-on-aflex": 0,
                "hw-compression": 0,
                "max-http-header-count": 90,
                "scale-out": 1,
                "sort-res": 0,
                "use-mss-tab": 0,
                "drop-icmp-to-vip-when-vip-down": 0,
                "uuid": "8efc8170-5dc0-11e5-9e23-c3d12b0485c7"
        }
}
```

Statistics Data Resources

A statistics data resource can be used to retrieve statistics of a particular element or collection. Not all elements and collections will have statistics data.

Example

The statistics data for a particular virtual port will return statistics about traffic on that port.

URI: /axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/stats

The following example shows retrieving statistics for a configured virtual port **80+tcp** on the SLB virtual server named **vs1**:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+tcp/stats \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
        {
        "port": {
                "stats": {
                        "curr_conn": 0,
                        "total_l4_conn": 0,
                        "total_l7_conn": 0,
                        "total_tcp_conn": 0,
                        "total_conn": 0,
                        "total_fwd_bytes": 0,
                        "total_fwd_pkts": 0,
                        "total_rev_bytes": 0,
                        "total_rev_pkts": 0,
                        "total_dns_pkts": 0,
                        "total_mf_dns_pkts": 0,
                        "es_total_failure_actions": 0,
                        "compression_bytes_before": 0,
                        "compression_bytes_after": 0,
                        "compression_hit": 0,
                        "compression_miss": 0,
                        "compression_miss_no_client": 0,
                        "compression_miss_template_exclusion": 0,
                        "curr_req": 0,
                        "total_req": 0,
                        "total_req_succ": 0,
                        "peak_conn": 0,
                        "curr_conn_rate": 0,
                        "last_rsp_time": 0,
                        "fastest_rsp_time": 0,
                        "slowest_rsp_time": 0,
                        "loc_permit": 0,
                        "loc_deny": 0,
                        "loc_conn": 0,
                        "curr_ssl_conn": 0,
```

(continues on next page)

(continued from previous page)

```
                        "total_ssl_conn": 0
                },
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+tcp/stats",
                "port-number": 80,
                "protocol": "tcp"
        }
}
```

Operational Data Resources

An operational data resource can be used to retrieve information about the operational status of a particular element or collection. Not all elements and collections have an operational status. Some elements will have an up/down status that cannot be altered. However, other statuses might include dynamic sessions which can be reset.

Example

The operational data resource for a virtual port will return information about whether the port is up or down.

URI: /axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/oper

The following example shows retrieving operational data for a configured virtual port **80+tcp** on the SLB virtual server named **vs1**:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+tcp/oper \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "port": {
                "oper": {
                        "state": "Down",
                        "loc_list": "",
                        "geo_location": "",
                        "level_str": "",
                        "group_id": 0,
                        "loc_max_depth": 0,
                        "loc_success": 0,
                        "loc_error": 0,
                        "loc_override": 0,
                        "loc_last": ""
                },
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+tcp/oper",
                "port-number": 80,
                "protocol": "tcp"
        }
}
```

Baseline Data Resources

Not all elements and collections will have baseline data resources. A baseline data resource can be used to retrieve the minimum, maximum, and average value for each enabled counter over the last 30 seconds. Counters will vary per object, and can be used to help troubleshoot or improve performance. To view baseline information, first use the `sampling-enable` property for the object of interest and choose from the available counters. Note that only the counters used in the `sampling-enable` property are listed in the GET response.

Example

After using the `sampling-enable` property to select counters such as current connections, total DNS packets, total SSL connections, and slowest response time, then the baseline data resource can be used to retrieve the data.

URI: /axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/baseline

The following example shows how to update the existing SLB virtual server named **vs1** to use the `sampling-enable` parameter on port 80 tcp:

```
curl -k PUT https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
-d '{
        "port": {
                "port-number": 80,
                "protocol": "tcp",
                "sampling-enable": [{
                        "counters1": "curr_conn"
                }, {
                        "counters1": "slowest_rsp_time"
                }, {
                        "counters1": "total_dns_pkts"
                }, {
                        "counters1": "total_ssl_conn"
                }]
        }
}'
```

The following example shows retrieving the baseline data for the enabled counters:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+tcp/baseline \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "port": {
                "baseline": [{
                        "counter_name": "curr_conn",
                        "min": 0,
                        "max": 0,
                        "avg": 0
                }, {
```

(continues on next page)

(continued from previous page)

```
                        "counter_name": "total_dns_pkts",
                        "min": 0,
                        "max": 0,
                        "avg": 0
                }, {
                        "counter_name": "slowest_rsp_time",
                        "min": 0,
                        "max": 0,
                        "avg": 0
                }, {
                        "counter_name": "total_ssl_conn",
                        "min": 0,
                        "max": 0,
                        "avg": 0
                }],
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+tcp/baseline",
                "port-number": 80,
                "protocol": "tcp"
        }
}
```

Rate Data Resources

Not all elements and collections will have rate data resources. A rate data resource can be used to retrieve the average value of each counter over the following intervals:

- last second
- last 5 seconds
- last 10 seconds
- last 30 seconds

Counters will vary per object, and can be used to help troubleshoot or improve performance. To view rate information, first use the `sampling-enable` property for the object of interest and choose from the available counters. Note that only the counters used in the `sampling-enable` property are listed in the GET response.

Example

After using the `sampling-enable` property to select counters such as current connections, total DNS packets, total SSL connections, and slowest response time, then the rate data resource can be used to retrieve the data. See *Baseline Data Resources* for the sampling-enable example.

URI: /axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/rate

The following example shows retrieving the rate data for the enabled counters:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+tcp/rate \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "port": {
                "rate": [{
                        "counter_name": "curr_conn",
                        "1sec_rate": 0,
                        "5sec_rate": 0,
                        "10sec_rate": 0,
                        "30sec_rate": 0
                }, {
                        "counter_name": "total_dns_pkts",
                        "1sec_rate": 0,
                        "5sec_rate": 0,
                        "10sec_rate": 0,
                        "30sec_rate": 0
                }, {
                        "counter_name": "slowest_rsp_time",
                        "1sec_rate": 0,
                        "5sec_rate": 0,
                        "10sec_rate": 0,
                        "30sec_rate": 0
                }, {
                        "counter_name": "total_ssl_conn",
                        "1sec_rate": 0,
                        "5sec_rate": 0,
                        "10sec_rate": 0,
                        "30sec_rate": 0
                }],
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+tcp/rate",
                "port-number": 80,
                "protocol": "tcp"
        }
}
```

UUID

Every object gets an auto-generated unique identifier assigned when it is created. Once you save the running configuration, the UUID remains the same regardless if the ACOS device is reloaded or fails over in VCS mode.

Example

When you configure a real server, the server gets a UUID. When you configure a virtual port on a virtual server, that element gets a UUID. When you add a service group, that collection gets a UUID. The UUID can be used as an endpoint to retrieve information about an object, to update an object, or to delete an object.

URI: /axapi/v3/uuid/{id}

The following example shows using the UUID of **fbb05d0a-4f10-11e5-ade5-79d397dc1ac7** to retrieve a configured virtual port 80 tcp on the SLB virtual server named vs1:

```
curl -k GET https://10.10.10.10/axapi/v3/uuid/fbb05d0a-4f10-11e5-ade5-79d397dc1ac7 \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "port": {
                "port-number": 80,
                "protocol": "tcp",
                "range": 0,
                "conn-limit": 8000000,
                "reset": 0,
                "no-logging": 0,
                "use-alternate-port": 0,
                "action": "enable",
                "def-selection-if-pref-failed": "def-selection-if-pref-failed",
                "ha-conn-mirror": 0,
                "skip-rev-hash": 0,
                "message-switching": 0,
                "force-routing-mode": 0,
                "reset-on-server-selection-fail": 0,
                "clientip-sticky-nat": 0,
                "extended-stats": 0,
                "snat-on-vip": 0,
                "stats-data-action": "stats-data-enable",
                "syn-cookie": 0,
                "no-auto-up-on-aflex": 0,
                "scaleout-bucket-count": 32,
                "auto": 0,
                "ipinip": 0,
                "rtp-sip-call-id-match": 0,
                "use-rcv-hop-for-resp": 0,
                "template-tcp": "default",
                "template-virtual-port": "default",
                "use-default-if-no-server": 0,
                "no-dest-nat": 0,
                "uuid": "fbb05d0a-4f10-11e5-ade5-79d397dc1ac7",
                "sampling-enable": [{
                        "counters1": "curr_conn"
                }, {
                        "counters1": "slowest_rsp_time"
                }, {
                        "counters1": "total_dns_pkts"
                }, {
                        "counters1": "total_ssl_conn"
                }]
        }
}
```

Operations

The available operations vary depending on the type of object involved. See the sections below for details about the available options for each type of resource, and the HTTP method that is used to complete each operation.

Elements

The table below lists the supported operations for element resources.

Table 1.1: Supported Operations for aXAPIv3 Elements

Operation	HTTP Method	Description
Get Object	GET	Returns the JSON data of a configured element.
Modify Object	POST	Modifies an element that has already been created. Note that this usage of the HTTP POST method is idempotent, as all elements have a unique name or identifier in the form of their Object Key.
Replace Object	PUT	Replaces a configured element's configuration with a new configuration. This operation is idempotent. However, unlike Modify Object, it is not additive. This means that if a particular parameter was previously configured, but you do not specify a value for it while performing a Replace Object operation, that parameter will be reset to its default value.
Delete Object	DELETE	Removes the element from its collection and from the ACOS device.

Collections

The table below lists the supported operations for collection resources.

Operation	HTTP Method	Description
Get List	GET	Returns a JSON representation of all elements inside a collection, and their parameters and child elements.
Create List	POST	This method allows you to either create new elements or modify existing elements in this collection.
Replace List	PUT	Similar to Replace Object, this operation replaces all values inside the collection. This means that any element not in the Replace List operation's JSON data will be removed from the collection and the ACOS device.
Delete List	DELETE	Deletes all elements within the collection, removing them from the ACOS device's configuration. Note that the collection itself cannot be deleted - it will continue to exist as an empty list.

Intermediate Resources

The table below lists the supported operations for intermediate resources.

Operation	HTTP Method	Description
Get Object	GET	Returns configuration information for the elements and collections contained in the module.

Note: You cannot modify an intermediate resource, or use it to configure any elements or collections contained within it.

Configuration Resources

The table below lists the supported operations for configuration resources.

Operation	HTTP Method	Description
Get Object	GET	Returns a representation of the current configuration of this resource.
Modify Object	POST	Specify values other than the default settings for this configuration object. You can only configure one of each configuration object. This use of the POST method is idempotent.
Replace Object	PUT	Replaces the settings object's attributes completely. This means that if a particular parameter was previously configured, and is not in the Replace Object's parameters, that parameter's values will be set to the default.
Delete Object	DELETE	Deletes the configuration resource, returning all attributes to their default values.

Statistics Data Resources

The table below lists the supported operations for statistics data resources.

Operation	HTTP Method	Description
Get Object	GET	Returns statistics counters and their current values for the element or collection resource specified in the URI.
Modify Object	POST	Reset specific counters to zero for the element or collection resource.
Delete Object	DELETE	Clear all counters for the element or collection resource.

Note: You cannot modify statistics data resources. You can only get or reset the values of the counters.

Operational Data Resources

The table below lists the supported operations for operational data resources.

Operation	HTTP Method	Description
Get Object	GET	Return information about the operational status of the element, such as Up or Down, or any current sessions or dynamically assigned attributes.
Delete Object	DELETE	Reset the operational status of a resource that contains sessions or dynamically assigned attributes, such as IP or MAC addresses.

Note: You cannot always modify an operational data resource directly. In those cases, you would modify the element's status through the element's own URI. (For example, a virtual port can be enabled or disabled via its own URI, but its operational data resource only indicates whether it is Up or Down.)

Baseline Data Resources

The table below lists the supported operations for baseline data resources.

Operation	HTTP Method	Description
Get Object	GET	Returns baseline counters and their current values for the element or collection resource specified in the URI.

Note: You cannot modify baseline data resources.

Rate Data Resources

The table below lists the supported operations for rate data resources.

Operation	HTTP Method	Description
Get Object	GET	Returns rate counters and their current values for the element or collection resource specified in the URI.

Note: You cannot modify rate data resources.

Example API Configuration

The following example shows a possible configuration of an HTTP Virtual Server using the aXAPI. The workflow consists of the following steps:

- Configure Real Servers - configure a real server and its ports.
- Configure Service Group - add real servers to a service group.
- Configure Virtual Server - create a virtual server, and its virtual ports, binding the service group to the virtual port.
- View Your Configuration - confirm the SLB configuration is correct.
- Edit Your Configuration - use the UUID to make configuration changes.

Note: For this example, the ACOS device will have an IP address of 10.10.10.10. To configure a virtual server on your own ACOS device, you must change the IP address in the following example cURL calls to the IP address or hostname configured on your ACOS device.

Configure Real Servers

Use the Create Object operation to create a new real server. To do so, perform an HTTP request using the POST method to https://10.10.10.10/axapi/v3/slb/server/ and include any parameters for SLB real servers that you want in your configuration. This example is fairly simple, so the server will only be configured with a name and IP address.

To configure a real server, make the following HTTP request, defining the server's name and host IP address:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/server \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "server-list": [
        {
         "name":"server1",
          "host":"10.10.10.11"
        }
  ]
}'
```

The HTTP response to the above request will contain the following payload:

```
{
  "server": {
        "name":"server1",
        "host":"10.10.10.11",
        "action":"enable",
        "template-server":"default",
        "health-check-disable":0,
        "conn-limit":8000000,
        "no-logging":0,
        "weight":1,
        "slow-start":0,
        "spoofing-cache":0,
```

(continues on next page)

(continued from previous page)

```
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
        "uuid":"a9e3bba4-c9e4-11e4-b4dd-fa163eeb9631"
  }
}
```

Take note of the UUID if you want to use it for subsequent calls regarding server1. See *Edit the Configuration* for further details.

Add a Port to the Server

Next, create the ports on the server. To do so, make a POST request to the following /axapi/v3/slb/server/server1/port/. Note that you could also create the ports at the same time as the server, by including a port-list object in the payload of the POST request in the previous step.

To create a port on server1, use the following HTTP request, which defines the port number and protocol for the server port:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/server/server1/port/ \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "port-list": [
        {
          "port-number":80,
          "protocol":"tcp"
        }
  ]
}'
```

The body of the response will look like this:

```
{
  "port": {
        "port-number":80,
        "protocol":"tcp",
        "range":0,
        "template-port":"default",
        "action":"enable",
        "no-ssl":0,
        "health-check-disable":0,
        "weight":1,
        "conn-limit":8000000,
        "no-logging":0,
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
        "uuid":"c12d9618-c9e4-11e4-b4dd-fa163eeb9631"
  }
}
```

Take note of the UUID if you want to use it for subsequent calls regarding the port. See *Edit the Configuration* for further details.

Confirm the Real Server Configuration

To confirm your configuration, you can perform a GET request for the server configuration to https://10.10.10.10/axapi/v3/slb/server/server1. Here is an example:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server/server1 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

Here is an example of confirming the configuration by using the UUID endpoint (rather than using /slb/server/server1):

```
curl -k GET https://10.10.10.10/axapi/v3/uuid/a9e3bba4-c9e4-11e4-b4dd-fa163eeb9631 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

If everything has been configured correctly, this request will return the following response payload:

```
{
  "server": {
        "name":"server1",
        "host":"10.10.10.11",
        "action":"enable",
        "template-server":"default",
        "health-check-disable":0,
        "conn-limit":8000000,
        "no-logging":0,
        "weight":1,
        "slow-start":0,
        "spoofing-cache":0,
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
        "uuid":"a9e3bba4-c9e4-11e4-b4dd-fa163eeb9631",
        "port-list": [
          {
                "port-number":80,
                "protocol":"tcp",
                "range":0,
                "template-port":"default",
                "action":"enable",
                "no-ssl":0,
                "health-check-disable":0,
                "weight":1,
                "conn-limit":8000000,
                "no-logging":0,
                "stats-data-action":"stats-data-enable",
                "extended-stats":0,
                "uuid":"c12d9618-c9e4-11e4-b4dd-fa163eeb9631",
                "a10-url":"/axapi/v3/slb/server/server1/port/80+tcp"
          }
        ]
  }
}
```

You can also confirm the configuration by viewing the list of all configured servers on the ACOS device. To do so,

perform an HTTP GET request to https://10.10.10.10/axapi/v3/slb/server/:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

If everything has been configured correctly, the following HTTP response body will be returned:

```
{
  "server-list": [
        {
          "name":"server1",
          "host":"10.10.10.11",
          "action":"enable",
          "template-server":"default",
          "health-check-disable":0,
          "conn-limit":8000000,
          "no-logging":0,
          "weight":1,
          "slow-start":0,
          "spoofing-cache":0,
          "stats-data-action":"stats-data-enable",
          "extended-stats":0,
          "uuid":"a9e3bba4-c9e4-11e4-b4dd-fa163eeb9631",
          "port-list": [
                {
                  "port-number":80,
                  "protocol":"tcp",
                  "range":0,
                  "template-port":"default",
                  "action":"enable",
                  "no-ssl":0,
                  "health-check-disable":0,
                  "weight":1,
                  "conn-limit":8000000,
                  "no-logging":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"c12d9618-c9e4-11e4-b4dd-fa163eeb9631",
                  "a10-url":"/axapi/v3/slb/server/server1/port/80+tcp"
                }
          ],
          "a10-url":/axapi/v3/slb/server/server1"
        }
  ]
}
```

Create a Second Real Server

You can repeat this process to add additional servers and/or ports. For example, the following POST request will configure a new server that will be part of the pool of servers available to the virtual server:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/server \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "server-list": [
        {
          "name":"server2",
          "host":"10.10.10.12",
          "port-list": [
                {
                  "port-number":80,
                  "protocol":"tcp"
                }
          ]
        }
  ]
}'
```

Note: This can also be fulfilled with a PUT request, but you must be certain to include the settings for server1 in the PUT request, otherwise server1 will be removed from the configuration.

Configure a Service Group

Next we will configure the service group. This is the pool of servers (specifically the two servers created above) that will be used for load balancing the traffic to the virtual server.

To create a service group, perform a POST request to https://10.10.10.10/axapi/v3/slb/service-group/:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/service-group \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "service-group-list": [
        {
          "name":"sg1",
          "protocol":"tcp"
        }
  ]
}'
```

If the request succeeds, the following response will be received:

```
{
  "service-group": {
        "name":"sg1",
        "protocol":"tcp",
```

(continues on next page)

(continued from previous page)

```
        "lb-method":"round-robin",
        "stateless-auto-switch":0,
        "reset-on-server-selection-fail":0,
        "priority-affinity":0,
        "backup-server-event-log":0,
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
        "traffic-replication-mirror":0,
        "traffic-replication-mirror-da-repl":0,
        "traffic-replication-mirror-ip-repl":0,
        "traffic-replication-mirror-sa-da-repl":0,
        "traffic-replication-mirror-sa-repl":0,
        "health-check-disable":0,
        "sample-rsp-time":0,
        "uuid":"53a24e44-c9e5-11e4-b4dd-fa163eeb9631"
  }
}
```

Take note of the UUID if you want to use it for subsequent calls regarding the service-group.

Add Servers to the Service Group

You can now add the servers as members of the service group. Create a POST request to https://10.10.10.10/axapi/v3/slb/service-group/sg1/member/:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/service-group/sg1/member \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "member-list": [
        {
          "name":"server1",
          "port":80
        },
        {
          "name":"server2",
          "port":80
        }
  ]
}'
```

The following payload will be returned in the response:

```
{
  "member-list": [
        {
          "name":"server1",
          "port":80,
          "member-state":"enable",
          "member-stats-data-disable":0,
          "member-priority":1,
```

(continues on next page)

(continued from previous page)

```
          "uuid":"6afde274-c9e5-11e4-b4dd-fa163eeb9631"
        },
        {
          "name":"server2",
          "port":80,
          "member-state":"enable",
          "member-stats-data-disable":0,
          "member-priority":1,
          "uuid":"6afe0614-c9e5-11e4-b4dd-fa163eeb9631"
        }
  ]
}
```

Confirm the Service Group Configuration

To confirm the service group has been configured, you can perform a GET request to https://10.10.10.10/axapi/v3/slb/service-group/sg1/:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/service-group/sg1/ \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

Here is an example of confirming the service group configuration by using the UUID endpoint (rather than using /slb/service-group/sg1/):

```
curl -k GET https://10.10.10.10/axapi/v3/uuid/53a24e44-c9e5-11e4-b4dd-fa163eeb9631 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

The response should look like this:

```
{
  "service-group": {
        "name":"sg1",
        "protocol":"tcp",
        "lb-method":"round-robin",
        "stateless-auto-switch":0,
        "reset-on-server-selection-fail":0,
        "priority-affinity":0,
        "backup-server-event-log":0,
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
        "traffic-replication-mirror":0,
        "traffic-replication-mirror-da-repl":0,
        "traffic-replication-mirror-ip-repl":0,
        "traffic-replication-mirror-sa-da-repl":0,
        "traffic-replication-mirror-sa-repl":0,
        "health-check-disable":0,
        "sample-rsp-time":0,
        "uuid":"53a24e44-c9e5-11e4-b4dd-fa163eeb9631",
        "member-list": [
```

(continues on next page)

(continued from previous page)

```
          {
                "name":"server1",
                "port":80,
                "member-state":"enable",
                "member-stats-data-disable":0,
                "member-priority":1,
                "uuid":"6afde274-c9e5-11e4-b4dd-fa163eeb9631",
                "a10-url":"/axapi/v3/slb/service-group/sg1/member/server1+80"
          },
          {
                "name":"server2",
                "port":80,
                "member-state":"enable",
                "member-stats-data-disable":0,
                "member-priority":1,
                "uuid":"6afe0614-c9e5-11e4-b4dd-fa163eeb9631",
                "a10-url":"/axapi/v3/slb/service-group/sg1/member/server2+80"
          }
        ]
  }
}
```

You can also check the list of all configured service groups using a GET request to https://10.10.10.10/axapi/v3/slb/service-group/:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/service-group \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

If the service group has been configured correctly, the following response will be received:

```
{
  "service-group-list": [
        {
          "name":"sg1",
          "protocol":"tcp",
          "lb-method":"round-robin",
          "stateless-auto-switch":0,
          "reset-on-server-selection-fail":0,
          "priority-affinity":0,
          "backup-server-event-log":0,
          "stats-data-action":"stats-data-enable",
          "extended-stats":0,
          "traffic-replication-mirror":0,
          "traffic-replication-mirror-da-repl":0,
          "traffic-replication-mirror-ip-repl":0,
          "traffic-replication-mirror-sa-da-repl":0,
          "traffic-replication-mirror-sa-repl":0,
          "health-check-disable":0,
          "sample-rsp-time":0,
          "uuid":"53a24e44-c9e5-11e4-b4dd-fa163eeb9631",
          "member-list": [
```

(continues on next page)

(continued from previous page)

```
                {
                  "name":"server1",
                  "port":80,
                  "member-state":"enable",
                  "member-stats-data-disable":0,
                  "member-priority":1,
                  "uuid":"6afde274-c9e5-11e4-b4dd-fa163eeb9631",
                  "a10-url":"/axapi/v3/slb/service-group/sg1/member/server1+80"
                },
                {
                  "name":"server2",
                  "port":80,
                  "member-state":"enable",
                  "member-stats-data-disable":0,
                  "member-priority":1,
                  "uuid":"6afe0614-c9e5-11e4-b4dd-fa163eeb9631",
                  "a10-url":"/axapi/v3/slb/service-group/sg1/member/server2+80"
                }
          ],
          "a10-url":"/axapi/v3/slb/service-group/sg1"
        }
  ]
}
```

Configure a Virtual Server

Configure the virtual server that will be receiving the traffic that will be load balanced by the back-end real servers. Use a POST request sent to https://10.10.10.10/axapi/v3/slb/virtual-server/:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/virtual-server \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "virtual-server-list": [
        {
          "name":"vip1",
          "ip-address":"10.10.10.20"
        }
  ]
}'
```

The response will look like this:

```
{
  "virtual-server": {
        "name":"vip1",
        "ip-address":"10.10.10.20",
        "enable-disable-action":"enable",
        "redistribution-flagged":0,
        "arp-disable":0,
        "stats-data-action":"stats-data-enable",
```

(continues on next page)

(continued from previous page)

```
        "extended-stats":0,
        "uuid":"de3238c6-c9e5-11e4-b4dd-fa163eeb9631"
  }
}
```

Take note of the UUID if you want to use it for subsequent calls regarding the virtual-server.

Add a Virtual Port

You can then configure a virtual port on the virtual server. Traffic sent to the HTTP port will be redirected to the servers in the service group, using the load-balancing algorithm specified in the service group's configuration. In this case, the default algorithm, round robin, is used.

You can either configure virtual ports while you are configuring the virtual server (using the *port-list* child element) or by sending a POST request to https://10.10.10.10/axapi/v3/slb/virtual-server/vip1/port/:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/virtual-server/vip1/port \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "port-list": [
        {
          "port-number":80,
          "protocol":"http",
          "service-group":"sg1"
        }
  ]
}'
```

The following response will be received:

```
{
  "port": {
        "port-number":80,
        "protocol":"http",
        "range":0,
        "conn-limit":8000000,
        "reset":0,
        "no-logging":0,
        "use-alternate-port":0,
        "action":"enable",
        "def-selection-if-pref-failed":"def-selection-if-pref-failed",
        "skip-rev-hash":0,
        "message-switching":0,
        "force-routing-mode":0,
        "reset-on-server-selection-fail":0,
        "clientip-sticky-nat":0,
        "extended-stats":0,
        "snat-on-vip":0,
        "stats-data-action":"stats-data-enable",
        "syn-cookie":0,
        "no-auto-up-on-aflex":0,
```

(continues on next page)

(continued from previous page)

```
        "no-dest-nat":0,
        "scaleout-bucket-count":32,
        "auto":0,
        "service-group":"sg1",
        "ipinip":0,
        "rtp-sip-call-id-match":0,
        "use-rcv-hop-for-resp":0,
        "redirect-to-https":0,
        "template-virtual-port":"default",
        "uuid":"f2152182-c9e5-11e4-b4dd-fa163eeb9631"
  }
}
```

Take note of the UUID if you want to use it for subsequent calls regarding the port. See *Edit the Configuration* for further details.

Confirm the Virtual Server Configuration

To confirm the configuration of the virtual server, perform a GET request to https://10.10.10.10/axapi/v3/slb/virtual-server/vip1/:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vip1 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

Here is an example of confirming the virtual server configuration by using the UUID endpoint (rather than using /slb/virtual-server/vip1/):

```
curl -k GET https://10.10.10.10/axapi/v3/uuid/de3238c6-c9e5-11e4-b4dd-fa163eeb9631 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

If the virtual server has been configured as described in the steps above, the response payload will look like this:

```
{
  "virtual-server": {
        "name":"vip1",
        "ip-address":"10.10.10.20",
        "enable-disable-action":"enable",
        "redistribution-flagged":0,
        "arp-disable":0,
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
        "uuid":"de3238c6-c9e5-11e4-b4dd-fa163eeb9631",
        "port-list": [
          {
                "port-number":80,
                "protocol":"http",
                "range":0,
                "conn-limit":8000000,
                "reset":0,
                "no-logging":0,
```

(continues on next page)

(continued from previous page)

```
                "use-alternate-port":0,
                "action":"enable",
                "def-selection-if-pref-failed":"def-selection-if-pref-failed",
                "skip-rev-hash":0,
                "message-switching":0,
                "force-routing-mode":0,
                "reset-on-server-selection-fail":0,
                "clientip-sticky-nat":0,
                "extended-stats":0,
                "snat-on-vip":0,
                "stats-data-action":"stats-data-enable",
                "syn-cookie":0,
                "no-auto-up-on-aflex":0,
                "no-dest-nat":0,
                "scaleout-bucket-count":32,
                "auto":0,
                "service-group":"sg1",
                "ipinip":0,
                "rtp-sip-call-id-match":0,
                "use-rcv-hop-for-resp":0,
                "redirect-to-https":0,
                "template-virtual-port":"default",
                "uuid":"f2152182-c9e5-11e4-b4dd-fa163eeb9631",
                "a10-url":"/axapi/v3/slb/virtual-server/vip1/port/80+http"
            }
        ]
    }
}
```

You can also perform a GET request to see the list of all configured virtual servers. To do so, you would perform a GET request to the URL https://10.10.10.10/axapi/v3/slb/virtual-server/:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

View Entire SLB Configuration

To confirm that everything is configured correctly, you can also perform a GET on the SLB intermediate resource. This will show all SLB configurations, including the virtual and real servers, and the service group. Make a GET request to https://10.10.10.10/axapi/v3/slb/:

```
curl -k GET https://10.10.10.10/axapi/v3/slb \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

Assuming everything has been configured as described in the above steps, and no other SLB items exist in the ACOS device's configuration, the HTTP response would contain the following payload:

```
{
  "slb": {
```

(continues on next page)

(continued from previous page)

```
        "resource-usage": {
          "client-ssl-template-count":32,
          "conn-reuse-template-count":32,
          "fast-tcp-template-count":32,
          "fast-udp-template-count":32,
          "http-template-count":32,
          "nat-pool-addr-count":10,
          "persist-cookie-template-count":32,
          "persist-srcip-template-count":32,
          "proxy-template-count":32,
          "real-port-count":64,
          "real-server-count":1024,
          "server-ssl-template-count":32,
          "service-group-count":32,
          "stream-template-count":32,
          "virtual-port-count":32,
          "virtual-server-count":16,
          "uuid":"95c48e3c-c9b7-11e4-88c6-fa163eeb9631",
          "a10-url":"/axapi/v3/slb/resource-usage"
        },
        "server-list": [
          {
                "name":"server1",
                "host":"10.10.10.11",
                "action":"enable",
                "template-server":"default",
                "health-check-disable":0,
                "conn-limit":8000000,
                "no-logging":0,
                "weight":1,

    }
}
```

Edit the Configuration

In addition to accessing and editing *Resources* by URI, it is also possible to do so by UUID. The following examples show a few ways to use the UUID for updating or deleting resources.

Note: Object keys are optional when using the UUID to edit resources. Also, object keys cannot be changed by UUID (for example, you will get an error if you try to change server1 to server3).

To disable server1 by using the UUID endpoint (rather than using /slb/server/server1/):

```
curl -k POST https://10.10.10.10/axapi/v3/uuid/a9e3bba4-c9e4-11e4-b4dd-fa163eeb9631 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "server": {
        "action": "disable"
  }
}'
```

To delete the port on server1 by using the UUID endpoint (rather than using /slb/server/server1/port/):

```
curl -k -i -X DELETE https://10.10.10.10/axapi/v3/uuid/c12d9618-c9e4-11e4-b4dd-
↪fa163eeb9631 \
```

(continues on next page)

(continued from previous page)

```
-H "Content-Type:application/json" \
-H "Authorization: A10 dfb4690024c8bcdeded6270534a984"
```

To revise the number of concurrent connections on the vip port by using the UUID endpoint (rather than using /slb/virtual-server/vip1/port/):

```
curl -k PUT https://10.10.10.10/axapi/v3/uuid/f2152182-c9e5-11e4-b4dd-fa163eeb9631 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "port": {
        "conn-limit": 4000000
  }
}'
```

Filters

aXAPI filters work with GET methods to specify that only certain records of interest will appear in the responses. Without filters, all the records are returned by default.

The aXAPI filter mechanisms provide two aspects of control for all the GET methods. Both of the following mechanisms can work together.

- *Paging Mechanism* - handles a huge amount of data records under an aXAPI endpoint.
- *Field Filtering Mechanism* - picks up special data records that match specified fields.

The stats and oper filters work a bit differently for the GET methods, so their usage is limited to a subset of URIs.

- *Statistics Data Filtering* - for use with URIs that include the `/stats` endpoint.
- *Oper Endpoint Filtering* - for use with URIs that include the `/oper` endpoint.

The slot filters are used in chassis platforms to collect data from both Processing Units (PU) 1 and 2, as well as to aggregate statistical and basic operational data.

- *Slot Filtering* - for use with `/stats` and `/oper` endpoints, which includes 'slot' filter.

The user tag filters are limited to a subset of SSL Insight objects. They are used to automatically mark an object that is created in the SSLi Services GUI.

- *User Tag Filtering* - for use with SSLi objects that include the **"user-tag":"Security"** property.

Paging Mechanism

The paging mechanism helps to break up large responses into more manageable chunks.

The filter keywords `total`, `start`, and `count` are reserved for the paging mechanism.

- total - shows how many records currently exist.
- start - indicates an index from which those records will be returned.
- count - indicates a limitation. It controls how many records should be returned.

For example, if there are four slb servers, the `total=true` filter shows the total count of slb servers:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?total=true \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "total-count":4
}
```

If there are four slb servers, the `start=3` filter shows the server at index number 3: [d1, d2, s1, **s2**]:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?start=3 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server-list": [
                {
                  "name":"s2",
                  "host":"1.1.1.2",
                  "action":"enable",
                  "template-server":"default",
                  "health-check-disable":0,
                  "conn-limit":8000000,
                  "no-logging":0,
                  "weight":1,
                  "slow-start":0,
                  "spoofing-cache":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"a7ec1a00-3270-11df-a8af-000d480a65d0",
                  "a10-url":"/axapi/v3/slb/server/s2"
                }
        ]
}
```

If there are four slb servers, the `start=1&count=1` filters show a list of servers starting at index number 1, but only a list of 1: [d1, **d2**, s1, s2]:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?start=1&count=1 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server-list": [
                {
                  "name":"d2",
                  "host":"1.1.1.4",
                  "action":"enable",
                  "template-server":"default",
                  "health-check-disable":0,
```

(continues on next page)

(continued from previous page)

```
                  "conn-limit":8000000,
                  "no-logging":0,
                  "weight":1,
                  "slow-start":0,
                  "spoofing-cache":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"b059da1a-3270-11df-a8af-000d480a65d0",
                  "a10-url":"/axapi/v3/slb/server/d2"
                }
        ]
}
```

Field Filtering Mechanism

Field filtering is used to select a matched set of instances as returned records. A filtering keyword is simply a field keyword defined within the schema file. Currently, only the string type field can be supported. The matching rule is that a field's value contains the specified string from filter.

For example, the field `name` is used as a filter to find slb servers whose names contain the character **s**:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?name=s \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server-list": [
                {
                  "name":"s1",
                  "host":"1.1.1.1",
                  "action":"disable",
                  "template-server":"default",
                  "health-check-disable":0,
                  "conn-limit":8000000,
                  "no-logging":0,
                  "weight":1,
                  "slow-start":0,
                  "spoofing-cache":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"a25672e8-3270-11df-a8af-000d480a65d0",
                  "a10-url":"/axapi/v3/slb/server/s1"
                },
                {
                  "name":"s2",
                  "host":"1.1.1.2",
                  "action":"enable",
                  "template-server":"default",
                  "health-check-disable":0,
                  "conn-limit":8000000,
```

(continues on next page)

(continued from previous page)

```
                  "no-logging":0,
                  "weight":1,
                  "slow-start":0,
                  "spoofing-cache":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"a7ec1a00-3270-11df-a8af-000d480a65d0",
                  "a10-url":"/axapi/v3/slb/server/s2"
                }
        ]
}
```

The combination of multiple fields as filters means an AND relationship, such as using the `name` & `action` fields to find slb servers that start with s and are enabled:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?name=s&action=enable \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server-list": [
                {
                  "name":"s2",
                  "host":"1.1.1.2",
                  "action":"enable",
                  "template-server":"default",
                  "health-check-disable":0,
                  "conn-limit":8000000,
                  "no-logging":0,
                  "weight":1,
                  "slow-start":0,
                  "spoofing-cache":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"a7ec1a00-3270-11df-a8af-000d480a65d0",
                  "a10-url":"/axapi/v3/slb/server/s2"
                }
        ]
}
```

It is possible to use field filtering and paging mechanisms together, such as using the `name` field with the `total` & `count` filters to find the total number of slb servers whose names start with s, starting from index number 0, but only a list of 1:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?name=s&start=0&count=1 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server-list": [
```

(continues on next page)

(continued from previous page)

```
                {
                  "name":"s1",
                  "host":"1.1.1.1",
                  "action":"disable",
                  "template-server":"default",
                  "health-check-disable":0,
                  "conn-limit":8000000,
                  "no-logging":0,
                  "weight":1,
                  "slow-start":0,
                  "spoofing-cache":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"a25672e8-3270-11df-a8af-000d480a65d0",
                  "a10-url":"/axapi/v3/slb/server/s1"
                }
        ]
}
```

Statistics Data Filtering

Some schema files define extended statistics data. To get this part of the data, you need to use the corresponding filter within the URIs that include the `/stats` endpoint. For example, slb virtual port has such statistics data, according to its L7 protocol.

Basic Statistics

The basic statistics are available at the statistics data URI: /axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/stats:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+http/stats \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Response
{
        "port": {
                "stats": {
                        "curr_conn": 0,
                        "total_l4_conn": 0,
                        "total_l7_conn": 0,
                        "total_tcp_conn": 0,
                        "total_conn": 0,
                        "total_fwd_bytes": 0,
                        "total_fwd_pkts": 0,
                        "total_rev_bytes": 0,
                        "total_rev_pkts": 0,
                        "total_dns_pkts": 0,

                        "compression_miss_no_client": 0,
                        "compression_miss_template_exclusion": 0,
                        "curr_req": 0,
                        "total_req": 0,
                        "total_req_succ": 0,
                        "peak_conn": 0,
                        "curr_conn_rate": 0,
                        "last_rsp_time": 0,
                        "fastest_rsp_time": 0,
                        "slowest_rsp_time": 0
                },
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+http/stats",
                "port-number": 80,
                "protocol": "http"
        }
}
```

Extended HTTP Statistics

The extended statistics for the slb virtual port are available with the addition of the `http_vport=true` filter:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+http/stats?http_
↪vport=true \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

                                "REQ_OVER_5s": 0
                        }
                },
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+http/stats",
                "port-number": 80,
                "protocol": "http"
        }
}
```

Note: The paging mechanism and field filtering mechanism cannot work with extended statistics filtering.

Reserved Filter Statistics

For typical config endpoints, there is a reserved ON/OFF filter called `stats` for getting config data and basic statistics data at the same time:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+http?stats=true \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "port": {
                "port-number": 80,
                "protocol": "http",
                "range": 0,
                "conn-limit": 8000000,

                        "fastest_rsp_time": 0,
                        "slowest_rsp_time": 0
                }
        }
}
```

Note: This is not a `/stats` endpoint, but the addition of a `?stats=true` filter. The extended statistics cannot work in this way.

Oper Endpoint Filtering

The oper endpoints end with the keyword `/oper`. These are used to retrieve dynamic operational status information from the back-end to see things like available memory, status of fans, admins logged in, etc. Filters are now also available for getting the status plus available extras such as total number of elements, a single record, and the configuration. The valid filters are defined by the oper field in the schema file. As the field filtering mechanism does, it accepts a string value. The paging mechanism is also supported. As of now, its scope is not the object instance. Instead, it works for oper fields within a multiple block.

Used by itself, the `/oper` endpoint will show operational data for each element within a collection or intermediate resource:

```
curl -k GET https://10.10.10.10/axapi/v3/admin-session/oper \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Response
{
        "admin-session": {
                "oper" : {
                  "session-list": [
                        {
                          "sid":"1",
                          "name":"admin",
                          "src_ip":"10.10.10.11",
                          "type":"WEB",
                          "cfg_mode":"No"
                        },
                        {
                          "sid":"*3",
                          "name":"admin",
                          "src_ip":"10.10.10.12",
                          "type":"WEBSERVICE",
                          "cfg_mode":"No"
                        }
                  ]
                },
                "a10-url":"/axapi/v3/admin-session/oper"
        }
}
```

Used with the `total` paging mechanism, it will find the total number of elements at an endpoint. The back-end determines if oper field filtering mechanism works or not:

```
curl -k GET https://10.10.10.10/axapi/v3/admin-session/oper?total=true \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
  "total-count":2
}
```

In the following example, the `start` paging mechanism is used to find a single object instance record at an endpoint. The back-end determines if oper field filtering mechanism works or not:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server/s2/oper?start=0 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server": {
                "oper": {
                        "state": "Down"
                },
                "a10-url": "/axapi/v3/slb/server/s2/oper",
                "name": "s2"
        }
}
```

For typical config endpoints, there is a reserved ON/OFF filter called `oper` for getting config data and basic operational data at the same time:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server/s1?oper=true \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server": {
                "name":"s1",
                "host":"1.1.1.1",
                "action":"disable",
                "template-server":"default",
                "health-check-disable":0,
                "conn-limit":8000000,
                "no-logging":0,
                "weight":1,
                "slow-start":0,
                "spoofing-cache":0,
                "stats-data-action":"stats-data-enable",
                "extended-stats":0,
                "uuid":"a25672e8-3270-11df-a8af-000d480a65d0",
                "oper" : {
                  "state":"Disabled"
                }
        }
}
```

Note: This is not the `/oper` endpoint, but the addition of the `?oper=true` filter.

Slot Filtering

The slot filters are used in chassis platforms to collect data from both Processing Units (PU) 1 and 2, as well as to aggregate statistical and basic operational data.

They are used to:

- Retrieve statistics and operational data from PU 1 and 2 individually
- Aggregate statistical data by default
- Aggregate operational data based on the schema with the metadata.

The 'slot' filter accepts an integer value that indicates the slot ID for PU1 or PU2. When 'slot' is set to 0, data is fetched from PU1. When 'slot' is set to 1, data is fetched from PU2. If 'slot' is not specified, the default slot ID is used. For statistical data, the default slot ID is 0 and 1. For operational data, the default slot ID is 0.

Some endpoints do not support processing units. For example:

```
    GET /axapi/v3/ddos/dst/entry/oper?slot=1
    {
            "response": {
                    "status": "fail",
                    "err": {
                            "code": 1023655943,
                            "from": "JSON",
                            "msg": "Local only.",
                            "location": "slot"
                    }
            }
}
```

The 'slot' filter can be specified multiple times to aggregate the specified PUs. For example:

```
GET /axapi/v3/system/control-cpu/stats?slot=0&slot=1
{
        "control-cpu": {
                "stats" : {
                        "ctrl-cpu-number":2,
                        "cpu-1":19,
                        "cpu-2":0,
                }
        }
}
```

Aggregating Statistics Data

By default, aXAPI automatically aggregates statistical data from all PUs. However, the 'slot' filter can be specified to fetch data on a per PU basis and retrieve information from a specific PU. For example:

```
GET /axapi/v3/system/control-cpu/stats?slot=0
{
        "control-cpu": {
                "stats" : {
                        "ctrl-cpu-number":1,
                        "cpu-1":15,
                        "cpu-2":0,
```

(continues on next page)

(continued from previous page)

```
                        "cpu-3":0,
                }
        }
}
GET /axapi/v3/system/control-cpu/stats?slot=1
{
        "control-cpu": {
                "stats" : {
                        "ctrl-cpu-number":1,
                        "cpu-1":5,
                        "cpu-2":0,
                }
        }
}
GET /axapi/v3/system/control-cpu/stats
{
        "control-cpu": {
                "stats" : {
                        "ctrl-cpu-number":2,
                        "cpu-1":19,
                        "cpu-2":0,
                }
        }
}
```

Aggregating Operational Data

By default, aXAPI does not automatically aggregate the Operational data. It depends on the oper schema having corresponding attributes described by the metadata "slot-oper-merge," "slot-num-add," and "slot-aggregate" to perform the aggregation. Using these attributes can help aggregate the oper array list. For example, see the below request and its response. In response, each session-list entry has an additional field "slot_id" to indicate the PUs:

```
        GET /axapi/v3/admin-session/oper
        {
                "admin-session": {
                        "oper" : {
                                "session-list": [
                                {
                                        "sid":"2",
                                        "name":"admin",
                                        "start_time":"15:12:33 IST Fri May 20 2016",
                                        "src_ip":"127.0.0.1",
                                        "type":"WEBSERVICE",
                                        "cfg_mode":"No",
                                        "slot_id":0                                [ PU1␣
↪slot id]
                                },
                                {
                                        "sid":"*5",
                                        "name":"admin",
                                        "start_time":"15:34:55 IST Fri May 20 2016",
                                        "src_ip":"172.17.65.23",
                                        "type":"WEBSERVICE",
```

(continues on next page)

(continued from previous page)

```
                                        "cfg_mode":"No",
                                        "slot_id":0
                                },
                                {
                                        "sid":"2",
                                        "name":"admin",
                                        "start_time":"15:12:33 IST Fri May 20 2016",
                                        "src_ip":"127.0.0.1",
                                        "type":"WEBSERVICE",
                                        "cfg_mode":"No",
                                        "slot_id":1
                                },
                                {
                                        "sid":"*5",
                                        "name":"admin",
                                        "start_time":"15:34:55 IST Fri May 20 2016",
                                        "src_ip":"172.17.65.23",
                                        "type":"WEBSERVICE",
                                        "cfg_mode":"No",
                                        "slot_id":1                                [ PU2␣
↪slot id]
                                }
                        ]
                },
                "a10-url":"/axapi/v3/admin-session/oper"
    }
}
```

User Tag Filtering

The user tag filter is used by the GUI to group SSLi objects together by auto-configuring them with the **Security** string in the **user-tag** property. You can use these tags to filter your search results based on the string.

For example, when you create SSLi Services objects in the GUI for SSLi_vip_001, they will automatically be tagged with **user-tag Security** as seen in the `show run` command of the CLI:

```
!
slb server SSLi_vip_001_server_001 100.100.100.8
  user-tag Security
  port 0 tcp
  ...
!
slb service-group SSLi_vip_001_SSLi tcp
  user-tag Security
  member SSLi_vip_001_server_001 8080
  ...
!
slb template client-ssl SSLi_vip_001_client_ssl
  user-tag Security
  forward-proxy-bypass web-category health-and-medicine
  ...
```

(continues on next page)

(continued from previous page)

```
!
slb virtual-server SSLi_vip_001 0.0.0.0 acl name acl_SSLi_vip_001
  user-tag Security
  port 0 tcp
  ...
!
end
```

In the case of searching by tag to retrieve all your SLB Security servers, you can use the `user-tag=Security` filter on your GET request. In the response, you will see the output of **"user-tag":"Security"** in the SLB servers that were auto-configured with that property:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?user-tag=Security \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

```

1.2 Batching Requests

Multiple GET requests for different URI's can be issued by a POST request against `/axapi/v3/batch-get`. Using batching requests reduces the number of API calling times which improves the performance on the CLIENT side.

1.2.1 Intended Use and Limitations

- Only the POST method is allowed.
- The `schema request` call should not use the Batch-Get operation as it will result in failure.

1.2.2 Error Handling

- If one of the API calls is incorrect, its corresponding response attribute `resp` will contain the error JSON data.

Example

The following example shows how to call multiple API's in a single call:

```
    POST /axapi/v3/batch-get
    {
"batch-get-list" : [
             {"uri":"/axapi/v3/interface/ethernet/1/schema"},
             {"uri":"/axapi/v3/interface/ethernet?total=true"},
             {"uri":"/axapi/v3/interface/ethernet?start=2&count=3"},
             {"uri":"/axapi/v3/interface/ethernet?start=2&count=3&wrong-filter=xxx"},
             {"uri":"/axapi/v3/interface/ethernet/1/oper"},
             {"uri":"/axapi/v3/slb/server/s1/stats"},
             {"uri":"/axapi/v3/no-such-endpoint"}
    ]
}
```

If this request succeeds, the following response will be recieved:

```
{
  "batch-get-list": [
        {
          "uri":"/axapi/v3/interface/ethernet/1/schema",
          "resp":{
                "http-status":400,
                "status":"fail",
                  "err": {
                        "code":1023524864,
                        "msg":"JSON message is wrong."
                  }
          }
        },
        {
          "uri":"/axapi/v3/interface/ethernet?total=true",
          "resp":{
                "total-count":8
          }
        },
        {
          "uri":"/axapi/v3/interface/ethernet?start=2&count=3",
          "resp":{
                "ethernet-list": [
                  {
                        "ifnum":3,
```

                        "msg":"URI not found."
                  }
          }
        }
  ]
}
```

1.3 Status Codes

aXAPI uses three categories of HTTP status codes - 2XX, 4XX, and 5XX.

- 2XX indicates success of request.
- 4XX indicates client side error. For example, if the JSON data is incorrect.
- 5XX indicates server (ACOS device) side error.

1.3.1 Status Code List

The returned set of status codes may keep evolving but its basic categories and meanings are as follows:

200 OK

This response indicates success and also returns a response message. The response format could be JSON data, plain text, or octet binary data.

For example:

```
GET /axapi/v3/interface/Ethernet/1 returns JSON data.
POST /axapi/v3/clideploy with a show command returns plain text.
GET /axapi/v3/file/ssl-cert returns a pem file or zipped file.
```

201 CREATED

This response is the same as 200 OK with an indication that a new resource or record has been created.

204 NO CONTENT

This response indicates success without any response data. In this case, the client has no need to parse any data. Normally, operational APIs have no response data for the client to read and the 204 status code is returned to indicate the operation is executed successfully.

For example, to import a file:

```
POST /axapi/v3/file/aflex
```

202 ACCEPTED

This response indicates that the request has been accepted and there is no error for now, but the action is still in process. Normally, this status code is returned for time-consuming tasks such as upgrading. In this case, the client might need to periodically check status.

400 BAD REQUEST

This response indicates that the API does not understand the request. Incorrect JSON syntax and not matching schemas may cause this response. All JSON properties are defined by a schema file. The client needs to follow the schema definition to send a request. For example, `ip-address` is defined as string but if the client issues it as a number, this error may be caused.

401 UNAUTHORIZED

This response indicates that the request is from an untrusted client and authentication is required. In this case, the client would need to authenticate itself and resend the request. Authentication URI `/axapi/v3/auth`

403 FORBIDDEN

This response indicates that the client does not have sufficient privileges for such a request. The relative cases include RBA control, platform control, and license control.

404 NOT FOUND

This response indicates that the requested records do not exist or the APIs are not supported. For example, GET `/axapi/abc/def` has no definition attached to it.

415 UNSUPPORTED MEDIA TYPE

This response indicates that the client sends the request with the wrong data format which cannot be accepted by the ACOS device. For example, if the ACOS device can only accept "application/json" and the client sends "plain/text".

500 INTERNAL SERVER ERROR

This response indicates that because of a server side error the request cannot be processed. For example, the system is down or the system resources are used up.

CHAPTER

TWO

CONFIGURATION APIS:

2.1 aam

Objects:

2.1.1 aam

AAM related configuration

aam Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	aam
Element URI	/axapi/v3/aam
Element Attributes	aam_attributes
Partition Visibility	shared
Schema	`aam schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam

aam_attributes

aam attributes

aaa-policy-list

Type: List

Reference Object: */axapi/v3/aam/aaa-policy/{name}*

access-log

Description: access-log is a **JSON Block**. Please see below for *access-log*

Type: Object

Reference Object: */axapi/v3/aam/access-log*

auth-log

Description: auth-log is a **JSON Block**. Please see below for *auth-log*

Type: Object

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

Reference Object: */axapi/v3/aam/authentication*

authorization

Description: authorization is a **JSON Block**. Please see below for *authorization*

Type: Object

Reference Object: */axapi/v3/aam/authorization*

jwt-authorization-list

Type: List

Reference Object: */axapi/v3/aam/jwt-authorization/{name}*

rdns

Description: rdns is a **JSON Block**. Please see below for *rdns*

Type: Object

Reference Object: */axapi/v3/aam/rdns*

resource-usage

Description: resource-usage is a **JSON Block**. Please see below for *resource-usage*

Type: Object

Reference Object: */axapi/v3/aam/resource-usage*

resource-usage

Specification	Value
Type	*object*

identity-provider-limit

Description Total Number of Identity Provider exists in the System

Type: number

Range: 64-256

Default: 64

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-log

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

jwt-authorization-list

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

exp-claim-requried

Description Specify the exp claim is required for JWT authorization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-cache-enable

Description Enable caching authorized JWT token and skip verification and authorization for cached tokens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-exp-default

Description Specify the default token expiration if exp claim is not available (default 1800)

Type: number

Range: 1-86400

jwt-forwarding

Description Specify JWT token will not be stripped while forwarding client request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-level

Description '0': log disable; '1': only log authorzation fail (default); '2': only log authorization success; '3': log all;

Type: string

Supported Values: 0, 1, 2, 3

name

Description Specify JWT authorization template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-jwt-authorization-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verification-cert

Description Specify the certificate to verify JWT token signature

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-cert, verification-jwks, and verification-secret are mutually exclusive

verification-jwks

Description Specify the jwks file to verify JWT token signature

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-jwks, verification-cert, and verification-secret are mutually exclusive

verification-secret

Description Specify secret for verify JWT token signature

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-secret, verification-cert, and verification-jwks are mutually exclusive

jwt-authorization-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'jwt-request': JWT Request; 'jwt-authorize-success': JWT Authorize Success; 'jwt-authorize-failure': JWT Authorize Failure; 'jwt-missing-token': JWT Missing Token; 'jwt-missing-claim': JWT Missing Claim; 'jwt-token-expired': JWT Token Expired; 'jwt-signature-failure': JWT Signature Failure; 'jwt-other-error': JWT Other Error;

Type: string

Supported Values: all, jwt-request, jwt-authorize-success, jwt-authorize-failure, jwt-missing-token, jwt-missing-claim, jwt-token-expired, jwt-signature-failure, jwt-other-error

authentication

Specification	Value
Type	*object*

account

Description: account is a **JSON Block**. Please see below for *authentication_account*

Type: Object

Reference Object: */axapi/v3/aam/authentication/account*

captcha

Description: captcha is a **JSON Block**. Please see below for *authentication_captcha*

Type: Object

Reference Object: */axapi/v3/aam/authentication/captcha*

file

Description: file is a **JSON Block**. Please see below for *authentication_file*

Type: Object

Reference Object: */axapi/v3/aam/authentication/file*

global

Description: global is a **JSON Block**. Please see below for *authentication_global*

Type: Object

Reference Object: */axapi/v3/aam/authentication/global*

jwks

Description: jwks is a **JSON Block**. Please see below for *authentication_jwks*

Type: Object

Reference Object: */axapi/v3/aam/authentication/jwks*

jwt-list

Type: List

Reference Object: */axapi/v3/aam/authentication/jwt/{name}*

log

Description: log is a **JSON Block**. Please see below for *authentication_log*

Type: Object

Reference Object: */axapi/v3/aam/authentication/log*

logon

Description: logon is a **JSON Block**. Please see below for *authentication_logon*

Type: Object

Reference Object: */axapi/v3/aam/authentication/logon*

oauth

Description: oauth is a **JSON Block**. Please see below for *authentication_oauth*

Type: Object

Reference Object: */axapi/v3/aam/authentication/oauth*

password-retry

Description: password-retry is a **JSON Block**. Please see below for *authentication_password-retry*

Type: Object

Reference Object: */axapi/v3/aam/authentication/password-retry*

portal-list

Type: List

Reference Object: */axapi/v3/aam/authentication/portal/{name}*

relay

Description: relay is a **JSON Block**. Please see below for *authentication_relay*

Type: Object

Reference Object: */axapi/v3/aam/authentication/relay*

saml

Description: saml is a **JSON Block**. Please see below for *authentication_saml*

Type: Object

Reference Object: */axapi/v3/aam/authentication/saml*

server

Description: server is a **JSON Block**. Please see below for *authentication_server*

Type: Object

Reference Object: */axapi/v3/aam/authentication/server*

service-group-list

Type: List

Reference Object: */axapi/v3/aam/authentication/service-group/{name}*

session

Description: session is a **JSON Block**. Please see below for *authentication_session*

Type: Object

Reference Object: */axapi/v3/aam/authentication/session*

session-attr

Description: session-attr is a **JSON Block**. Please see below for *authentication_session-attr*

Type: Object

Reference Object: */axapi/v3/aam/authentication/session-attr*

template-list

Type: List

Reference Object: */axapi/v3/aam/authentication/template/{name}*

authentication_jwt-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'redirect': redirect JWT to specific URI; 'relay': relay JWT to back-end;

Type: string

Supported Values: redirect, relay

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

issuer

Description Specify JWT issuer claim value

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

jwt-relay-uri

Description Specify JWT relay URI (for relay action)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

name

Description Specify JWT issuer template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description The JWT signature secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

signature-secret

Description Specify the JWT signature secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

token-lifetime

Description Specify JWT token lifetime (Specify lifetime (in seconds), default is 300.)

Type: number

Range: 0-86400

Default: 300

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_account

Specification	Value
Type	*object*

kerberos-spn-list

Type: List

Reference Object: */axapi/v3/aam/authentication/account/kerberos-spn/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_account_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response;

Type: string

Supported Values: all, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other

authentication_account_kerberos-spn-list

Specification	Value
Type	*list*
Block object keys	

account

Description Specify domain account for SPN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.)

name

Description Specify AD account name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of domain account

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

realm

Description Specify Kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description Password of AD account

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

service-principal-name

Description Specify service principal name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_portal-list

Specification	Value
Type	*list*
Block object keys	

change-password

Description: change-password is a **JSON Block**. Please see below for *authentication_portal-list_change-password*

Type: Object

Reference Object: */axapi/v3/aam/authentication/portal/{name}/change-password*

logo-cfg

Description: logo-cfg is a **JSON Block**. Please see below for *authentication_portal-list_logo-cfg*

Type: Object

logon

Description: logon is a **JSON Block**. Please see below for *authentication_portal-list_logon*

Type: Object

Reference Object: */axapi/v3/aam/authentication/portal/{name}/logon*

logon-fail

Description: logon-fail is a **JSON Block**. Please see below for *authentication_portal-list_logon-fail*

Type: Object

Reference Object: */axapi/v3/aam/authentication/portal/{name}/logon-fail*

name

Description 'default-portal': Default portal configuration;

Type: string

Supported Values: default-portal

notify-change-password

Description: notify-change-password is a **JSON Block**. Please see below for *authentication_portal-list_notify-change-password*

Type: Object

Reference Object: */axapi/v3/aam/authentication/portal/{name}/notify-change-password*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_portal-list_logon-fail

Specification	Value
Type	*object*

background

Description: background is a **JSON Block**. Please see below for *authentication_portal-list_logon-fail_background*

title-cfg

Description: title-cfg is a **JSON Block**. Please see below for *authentication_portal-list_logon-fail_title-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_portal-list_logon-fail_fail-msg-cfg

Specification	Value
Type	*object*

fail-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure logon failure message in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

fail-text

Description Specify logon failure message (Default: Login Failed!!)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_logon-fail_title-cfg

Specification	Value
Type	*object*

title

Description Configure title in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: title-color-name and title-color-value are mutually exclusive

title-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: title-color-value and title-color-name are mutually exclusive

title-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: title-face and title-font-custom are mutually exclusive

title-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: title-font-custom and title-face are mutually exclusive

title-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

title-text

Description Specify title (Default: Try Too Many Times)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_logon-fail_background

Specification	Value
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name, bgfile, and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value, bgfile, and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile, bgcolor-name, and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

authentication_portal-list_logo-cfg

Specification	Value
Type	*object*

height

Description Specify logo image height (Default: 71)

Type: number

Range: 50-400

Default: 71

logo

Description Specify logo image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

width

Description Specify logo image width (Default: 134)

Type: number

Range: 50-400

Default: 134

authentication_portal-list_notify-change-password

Specification	Value
Type	*object*

background

Description: background is a **JSON Block**. Please see below for *authentication_portal-list_notify-change-password_background*

Type: Object

cfm-pwd-cfg

Description: cfm-pwd-cfg is a **JSON Block**. Please see below for *authentication_portal-list_notify-change-password_cfm-pwd-cfg*

Type: Object

change-text

Description Specify change button text in default change password notification page (Default: Change)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

change-url

Description Specify change password action URL in default change password notification page (Default: /notify_change.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password-var

Description Specify confirm password variable name in default change password notification page (Default: cp_cfm_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

continue-text

Description Specify continue button text in default change password notification page (Default: Continue)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

continue-url

Description Specify continue action URL in default change password notification page (Default: /continue.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-password-var

Description Specify new password variable name in default change password notification page (Default: cp_new_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pwd-cfg

Description: new-pwd-cfg is a **JSON Block**. Please see below for *authentication_portal-list_notify-change-password_new-pwd-cfg*

Type: Object

old-password-var

Description Specify old password variable name in default change password notification page (Default: cp_old_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Description: old-pwd-cfg is a **JSON Block**. Please see below for *authentication_portal-list_notify-change-password_old-pwd-cfg*

Type: Object

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *authentication_portal-list_notify-change-password_username-cfg*

Type: Object

username-var

Description Specify username variable name in default change password notification page (Default: cp_usr)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_portal-list_notify-change-password_new-pwd-cfg

Specification	Value
Type	*object*

new-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: new-color-name and new-color-value are mutually exclusive

new-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: new-color-value and new-color-name are mutually exclusive

new-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: new-face and new-font-custom are mutually exclusive

new-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-font-custom and new-face are mutually exclusive

new-password

Description Configure new password text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

new-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

new-text

Description Specify new password text (Default: New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_notify-change-password_old-pwd-cfg

Specification	Value
Type	*object*

old-color

Description Specify font color (Default: black)

Specification	Value
Type	*object*

cfm-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: cfm-color-name and cfm-color-value are mutually exclusive

cfm-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: cfm-color-value and cfm-color-name are mutually exclusive

cfm-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: cfm-face and cfm-font-custom are mutually exclusive

cfm-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: cfm-font-custom and cfm-face are mutually exclusive

cfm-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

cfm-text

Description Specify confirm password text (Default: Confirm New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password

Description Configure confirm password text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_portal-list_notify-change-password_username-cfg

Specification	Value
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_portal-list_logon

Specification	Value
Type	*object*

action-url

Description Specify form action URL in default logon page (Default: /logon.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *authentication_portal-list_logon_background*

Type: Object

captcha-type

Description 'reCAPTCHAv2-checkbox': Google reCAPTCHAv2 Checkbox; 'reCAPTCHAv2-invisible': Google reCAPTCHAv2 Invisible; 'reCAPTCHAv3': Google reCAPTCHAv3;

Type: string

Supported Values: reCAPTCHAv2-checkbox, reCAPTCHAv2-invisible, reCAPTCHAv3

enable-CAPTCHA

Description Enable CAPTCHA in deafult logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-passcode

Description Enable passcode field in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

fail-msg-cfg

Description: fail-msg-cfg is a **JSON Block**. Please see below for *authentication_portal-list_logon_fail-msg-cfg*

Type: Object

passcode-cfg

Description: passcode-cfg is a **JSON Block**. Please see below for *authentication_portal-list_logon_passcode-cfg*

Type: Object

passcode-var

Description Specify passcode variable name in default logon page (Default: passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-cfg

Description: password-cfg is a **JSON Block**. Please see below for *authentication_portal-list_logon_password-cfg*

Type: Object

password-var

Description Specify password variable name in default logon page (Default: pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

reCAPTCHA-cfg

Description: reCAPTCHA-cfg is a **JSON Block**. Please see below for *authentication_portal-list_logon_reCAPTCHA-cfg*

Type: Object

site-key-string

Description Site key string

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default logon page (Default: Log In)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *authentication_portal-list_logon_username-cfg*

Type: Object

username-var

Description Specify username variable name in default logon page (Default: user)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_portal-list_logon_passcode-cfg

Specification	Value
Type	*object*

passcode

Description Configure passcode text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passcode-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: passcode-color-name and passcode-color-value are mutually exclusive

passcode-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: passcode-color-value and passcode-color-name are mutually exclusive

passcode-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: passcode-face and passcode-font-custom are mutually exclusive

passcode-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: passcode-font-custom and passcode-face are mutually exclusive

passcode-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

passcode-text

Description Specify passcode text (Default: Passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_logon_reCAPTCHA-cfg

Specification	Value
Type	*object*

reCAPTCHA-action

Description Specify reCAPTCHA action (Specify action string, only accept alphanumeric, underscore, and slash (Default: A10_DEFAULT_LOGON))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: A10_DEFAULT_LOGON

reCAPTCHA-badge

Description 'bottom-left': bottom left corner; 'bottom-right': bottom right corner;

Type: string

Supported Values: bottom-left, bottom-right

Default: bottom-right

reCAPTCHA-size

Description 'normal': normal size; 'compact': compact size;

Type: string

Supported Values: normal, compact

Default: normal

reCAPTCHA-theme

Description 'light': light theme; 'dark': dark theme;

Type: string

Supported Values: light, dark

Default: light

authentication_portal-list_logon_background

Specification	Value
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name, bgfile, and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value, bgfile, and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile, bgcolor-name, and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

authentication_portal-list_logon_fail-msg-cfg

Specification	Value
Type	*object*

authz-fail-msg

Description Configure authorization failure message in default logon page, its text attributes follow fail-msg's (Specify authorization failure message (Default: Authorization failed. Please contact your system administrator.))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

fail-color

Description Specify font color (Default: red)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: red

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure login failure message in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

fail-text

Description Specify login failure message (Default: Invalid username or password. Please try again.)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_logon_password-cfg

Specification	Value
Type	*object*

pass-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

pass-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: pass-color-name and pass-color-value are mutually exclusive

pass-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: pass-color-value and pass-color-name are mutually exclusive

pass-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: pass-face and pass-font-custom are mutually exclusive

pass-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

pass-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: pass-font-custom and pass-face are mutually exclusive

pass-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

pass-text

Description Specify password text (Default: Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Configure password text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_portal-list_logon_username-cfg

Specification	Value
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: User Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_portal-list_change-password

Specification	Value
Type	*object*

action-url

Description Specify form action URL in default change password page (Default: /change.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *authentication_portal-list_change-password_background*

Type: Object

cfm-pwd-cfg

Description: cfm-pwd-cfg is a **JSON Block**. Please see below for *authentication_portal-list_change-password_cfm-pwd-cfg*

Type: Object

confirm-password-var

Description Specify confirm password variable name in default change password page (Default: cp_cfm_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-password-var

Description Specify new password variable name in default change password page (Default: cp_new_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pwd-cfg

Description: new-pwd-cfg is a **JSON Block**. Please see below for *authentication_portal-list_change-password_new-pwd-cfg*

Type: Object

old-password-var

Description Specify old password variable name in default change password page (Default: cp_old_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Description: old-pwd-cfg is a **JSON Block**. Please see below for *authentication_portal-list_change-password_old-pwd-cfg*

Type: Object

reset-text

Description Specify reset button text in default change password page (Default: Reset)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default change password page (Default: Submit)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

title-cfg

Description: title-cfg is a **JSON Block**. Please see below for *authentication_portal-list_change-password_title-cfg*

Type: Object

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *authentication_portal-list_change-password_username-cfg*

Type: Object

username-var

Description Specify username variable name in default change password page (Default: cp_usr)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_portal-list_change-password_new-pwd-cfg

Specification	Value
Type	*object*

new-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: new-color-name and new-color-value are mutually exclusive

new-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: new-color-value and new-color-name are mutually exclusive

new-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: new-face and new-font-custom are mutually exclusive

new-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-font-custom and new-face are mutually exclusive

new-password

Description Configure new password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

new-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

new-text

Description Specify new password text (Default: New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_change-password_title-cfg

Specification	Value
Type	*object*

title

Description Configure title in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: title-color-name and title-color-value are mutually exclusive

title-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: title-color-value and title-color-name are mutually exclusive

title-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: title-face and title-font-custom are mutually exclusive

title-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: title-font-custom and title-face are mutually exclusive

title-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

title-text

Description Specify title (Default: Please Change Your Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_change-password_old-pwd-cfg

Specification	Value
Type	*object*

old-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: old-color-name and old-color-value are mutually exclusive

old-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: old-color-value and old-color-name are mutually exclusive

old-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: old-face and old-font-custom are mutually exclusive

old-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: old-font-custom and old-face are mutually exclusive

old-password

Description Configure old password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

old-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

old-text

Description Specify old password text (Default: Old Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_change-password_background

Specification	Value
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name, bgfile, and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value, bgfile, and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile, bgcolor-name, and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

authentication_portal-list_change-password_cfm-pwd-cfg

Specification	Value
Type	*object*

cfm-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: cfm-color-name and cfm-color-value are mutually exclusive

cfm-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: cfm-color-value and cfm-color-name are mutually exclusive

cfm-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: cfm-face and cfm-font-custom are mutually exclusive

cfm-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: cfm-font-custom and cfm-face are mutually exclusive

cfm-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

cfm-text

Description Specify confirm password text (Default: Confirm New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password

Description Configure confirm password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_portal-list_change-password_username-cfg

Specification	Value
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_log

Specification	Value
Type	*object*

enable

Description Enable authentication logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

facility

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use;

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'syslog': Syslog Format (default); 'cef': Common Event Format;

Type: string

Supported Values: syslog, cef

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_relay

Specification	Value
Type	*object*

form-based

Description: form-based is a **JSON Block**. Please see below for *authentication_relay_form-based*

Type: Object

Reference Object: */axapi/v3/aam/authentication/relay/form-based*

http-basic

Description: http-basic is a **JSON Block**. Please see below for *authentication_relay_http-basic*

Type: Object

Reference Object: */axapi/v3/aam/authentication/relay/http-basic*

kerberos

Description: kerberos is a **JSON Block**. Please see below for *authentication_relay_kerberos*

Type: Object

Reference Object: */axapi/v3/aam/authentication/relay/kerberos*

oauth-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/oauth/{name}*

saml-list

Type: List

authentication_relay_form-based

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/form-based/instance/{name}*

authentication_relay_form-based_instance-list

Specification	Value
Type	*list*
Block object keys	

name

Description Specify form-based authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-form-inst-tmpl*

request-uri-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri/{match-type}+{uri}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_relay_form-based_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'invalid_srv_rsp': Invalid Server Response; 'post_fail': POST Failed; 'invalid_cred': Invalid Credential; 'bad_req': Bad Request; 'not_fnd': Not Found; 'error': Internal Server Error; 'other_error': Other Error;

Type: string

Supported Values: all, request, invalid_srv_rsp, post_fail, invalid_cred, bad_req, not_fnd, error, other_error

authentication_relay_form-based_instance-list_request-uri-list

Specification	Value
Type	*list*
Block object keys	

action-uri

Description Specify the action-URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cookie

Description: cookie is a **JSON Block**. Please see below for *authentication_relay_form-based_instance-list_request-uri-list_cookie*

Type: Object

domain-variable

Description Specify domain variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

max-packet-collect-size

Description Specify the max packet collection size in bytes, default is 1MB

Type: number

Range: 1024-2097152

Default: 1048576

other-variables

Description Specify other variables (n1=v1&n2=v2) in form relay

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uri

Description Specify request URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-variable

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_relay_form-based_instance-list_request-uri-list_cookie

Specification	Value
Type	*object*

cookie-value

Description: cookie-value is a **JSON Block**. Please see below for *authentication_relay_form-based_instance-list_request-uri-list_cookie_cookie-value*

Type: Object

authentication_relay_form-based_instance-list_request-uri-list_cookie_cookie-value

Specification	Value
Type	*object*

cookie-value

Description Specify cookie in POST packet

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

authentication_relay_ws-federation-list

Specification	Value
Type	*list*
Block object keys	

application-server

Description 'sharepoint': Microsoft SharePoint; 'exchange-owa': Microsoft Exchange OWA;

Type: string

Supported Values: sharepoint, exchange-owa

authentication-uri

Description Specify WS-Federation relay URI, default is /_trust/

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify WS-Federation authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-ws-fed-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_relay_ws-federation-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure;

Type: string

Supported Values: all, request, success, failure

authentication_relay_oauth-list

Specification	Value
Type	*list*
Block object keys	

all

Description All URI can be relay

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and match-type are mutually exclusive

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

Mutual Exclusion: match-type and all are mutually exclusive

match-uri

Description

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description Specify oauth authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-type

Description 'access-token': Relay access token to backend; 'id-token': Relay JWT to backend;

Type: string

Supported Values: access-token, id-token

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_relay_oauth-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'relay-req': some help string; 'relay-succ': some help string; 'relay-fail': some help string;

Type: string

Supported Values: all, relay-req, relay-succ, relay-fail

authentication_relay_saml-list

Specification	Value
Type	*list*
Block object keys	

idp-auth-uri

Description Specify the URI for IDP to handle SAML authentication request

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

match-uri

Description Match URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method

Description 'get-from-backend': Get RelayState parameter from backend server; 'request-uri': Use the (URL encoded) current request-uri as the RelayState;

Type: string

Supported Values: get-from-backend, request-uri

Mutual Exclusion: method and value are mutually exclusive

name

Description Specify SAML authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-acs-uri

Description Specify the backend server assertion consuming service URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

retry-number

Description Specify how many continuous fail for SAML relay will trigger. Default will not retry.

Type: number

Range: 0-10

Default: 0

sampling-enable

Type: List

server-cookie-name

Description Specify the cookie name that used by backend server for authenticated users

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Use the fixed string as the RelayState

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: value and method are mutually exclusive

authentication_relay_saml-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure; 'error': Error;

Type: string

Supported Values: all, request, success, failure, error

authentication_relay_kerberos

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/kerberos/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_relay_kerberos_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Total Request Send; 'response-get': Total Response Get; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error;

Type: string

Supported Values: all, request-send, response-get, timeout-error, other-error, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

authentication_relay_kerberos_instance-list

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

kerberos-account

Description Specify the kerberos account name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kerberos-kdc

Description Specify the kerberos kdc ip or host name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc and kerberos-kdc-service-group are mutually exclusive

kerberos-kdc-service-group

Description Specify an authentication service group as multiple KDCs

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc-service-group and kerberos-kdc are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

kerberos-realm

Description Specify the kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify Kerberos authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of Kerberos password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify The KDC port, default is 88

Type: number

Range: 1-65535

Default: 88

sampling-enable

Type: List

secret-string

Description The kerberos client password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

timeout

Description Specify timeout for kerberos transport, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_relay_kerberos_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Request Send; 'response-receive': Response Receive; 'current-requests-of-user': Current Pending Requests of User; 'tickets': Tickets;

Type: string

Supported Values: all, request-send, response-receive, current-requests-of-user, tickets

authentication_relay_http-basic

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/http-basic/instance/{name}*

authentication_relay_http-basic_instance-list

Specification	Value
Type	*list*
Block object keys	

domain

Description Specify user domain, default is null

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-format

Description 'user-principal-name': Append domain with User Principal Name format. (e.g. user@domain); 'down-level-logon-name': Append domain with Down-Level Logon Name format. (e.g. domainuser);

Type: string

Supported Values: user-principal-name, down-level-logon-name

Default: down-level-logon-name

name

Description Specify HTTP basic authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-hbase-inst-tmpl*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_relay_http-basic_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'success': Success; 'no-creds': No Credential; 'bad-req': Bad Request; 'unauth': Unauthorized; 'forbidden': Forbidden; 'not-found': Not Found; 'server-error': Internal Server Error; 'unavailable': Service Unavailable;

Type: string

Supported Values: all, success, no-creds, bad-req, unauth, forbidden, not-found, server-error, unavailable

authentication_jwks

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_session-attr

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_logon

Specification	Value
Type	*object*

form-based-list

Type: List

Reference Object: */axapi/v3/aam/authentication/logon/form-based/{name}*

http-authenticate

Description: http-authenticate is a **JSON Block**. Please see below for *authentication_logon_http-authenticate*

Type: Object

Reference Object: */axapi/v3/aam/authentication/logon/http-authenticate*

authentication_logon_form-based-list

Specification	Value
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

challenge-variable

Description Specify challenge variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-page-cfg

Description: cp-page-cfg is a **JSON Block**. Please see below for *authentication_logon_form-based-list_cp-page-cfg*

Type: Object

csp-support

Description: csp-support is a **JSON Block**. Please see below for *authentication_logon_form-based-list_csp-support*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

hsts-timeout

Description Set HSTS policy expired timeout in seconds, 0 means to disable HSTS policy

Type: number

Range: 0-315360000

logon-page-cfg

Description: logon-page-cfg is a **JSON Block**. Please see below for *authentication_logon_form-based-list_logon-page-cfg*

Type: Object

name

Description Specify form-based authentication logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-variable

Description Specify new-pin variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

notify-cp-page-cfg

Description: notify-cp-page-cfg is a **JSON Block**. Please see below for *authentication_logon_form-based-list_notify-cp-page-cfg*

Type: Object

portal

Description: portal is a **JSON Block**. Please see below for *authentication_logon_form-based-list_portal*

Type: Object

retry

Description Maximum number of consecutive failed logon attempts (default 3)

Type: number

Range: 1-32

Default: 3

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_logon_form-based-list_csp-support

Specification	Value
Type	*object*

none

Description Set CSP frame-ancestors to none (also X-Frame-Options deny)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: none, self, and specificURI are mutually exclusive

optional-second-URI

Description Set optional second customized CSP URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

self

Description Set CSP frame-ancestors to self (also X-Frame-Options same-origin)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: self and none are mutually exclusive

specificURI

Description Set customized CSP frame-ancestors (maximum 2 URIs can be set)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: specificURI and none are mutually exclusive

authentication_logon_form-based-list_notify-cp-page-cfg

Specification	Value
Type	*object*

notifychangepassword-change-url

Description Specify change password action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

notifychangepassword-continue-url

Description Specify continue action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

authentication_logon_form-based-list_portal

Specification	Value
Type	*object*

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page, new-pin-page, and next-token-page are mutually exclusive

changepasswordpage

Description Specify change password page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

default-portal

Description Use default portal

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-portal and portal-name are mutually exclusive

failpage

Description Specify logon fail page name (portal fail page name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon

Description Specify logon page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

next-token-page

Description Specify next token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: next-token-page and challenge-page are mutually exclusive

notifychangepasswordpage

Description Specify change password notification page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-name

Description Specify portal name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: portal-name and default-portal are mutually exclusive

authentication_logon_form-based-list_logon-page-cfg

Specification	Value
Type	*object*

action-url

Description Specify form submission action url

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

authz-failure-message

Description Specify authorization failure message shown in logon page (Specify error string, default is "Authorization failed. Please contact your system administrator.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

captcha-variable

Description Specify captcha variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

disable-change-password-link

Description Don't display change password link on logon page forcibly even backend authentication server supports it (LDAP or Kerberos)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

login-failure-message

Description Specify login failure message shown in logon page (Specify error string, default is “Invalid username or password. Please try again.”)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passcode-variable

Description Specify passcode variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-variable

Description Specify username variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_logon_form-based-list_cp-page-cfg

Specification	Value
Type	*object*

changepassword-url

Description Specify changepassword form submission action url (changepassword action url)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cp-cfm-pwd-enum

Description 'changepassword-password-confirm-variable': Specify password confirm variable name in form submission;

Type: string

Supported Values: changepassword-password-confirm-variable

cp-cfm-pwd-var

Description Specify password confirm variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-new-pwd-enum

Description 'changepassword-new-password-variable': Specify new password variable name in form submission;

Type: string

Supported Values: changepassword-new-password-variable

cp-new-pwd-var

Description Specify new password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-old-pwd-enum

Description 'changepassword-old-password-variable': Specify old password variable name in form submission;

Type: string

Supported Values: changepassword-old-password-variable

cp-old-pwd-var

Description Specify old password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-user-enum

Description 'changepassword-username-variable': Specify username variable name in form submission;

Type: string

Supported Values: changepassword-username-variable

cp-user-var

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_logon_http-authenticate

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/logon/http-authenticate/instance/{name}*

authentication_logon_http-authenticate_instance-list

Specification	Value
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-method

Description: auth-method is a **JSON Block**. Please see below for *authentication_logon_http-authenticate_instance-list_auth-method*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

hsts-timeout

Description Set HSTS policy expired timeout in seconds, 0 means to disable HSTS policy

Type: number

Range: 0-315360000

name

Description Specify HTTP-Authenticate logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-logon-http-ins-tmpl*

retry

Description Maximum number of consecutive failed logon attempts (default 3)

Type: number

Range: 1-32

Default: 3

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_logon_http-authenticate_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'spn_krb_request': SPN Kerberos Request; 'spn_krb_success': SPN Kerberos Success; 'spn_krb_faiure': SPN Kerberos Failure;

Type: string

Supported Values: all, spn_krb_request, spn_krb_success, spn_krb_faiure

authentication_logon_http-authenticate_instance-list_auth-method

Specification	Value
Type	*object*

basic

Description: basic is a **JSON Block**. Please see below for *authentication_logon_http-authenticate_instance-list_auth-method_basic*

Type: Object

negotiate

Description: negotiate is a **JSON Block**. Please see below for *authentication_logon_http-authenticate_instance-list_auth-method_negotiate*

Type: Object

authentication_logon_http-authenticate_instance-list_auth-method_negotiate

Specification	Value
Type	*object*

negotiate-enable

Description Enable SPENGO logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_logon_http-authenticate_instance-list_auth-method_basic

Specification	Value
Type	*object*

basic-enable

Description Enable Basic logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-realm

Description Specify realm for basic logon

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page and new-pin-page are mutually exclusive

challenge-response-form

Description Specify challenge-response form for RSA-RADIUS authentication

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-variable

Description Specify challenge variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

new-pin-variable

Description Specify new PIN variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-page

Description Specify next-token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_service-group-list

Specification	Value
Type	*list*
Block object keys	

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

lb-method

Description 'round-robin': Round robin on server level;

Type: string

Supported Values: round-robin

member-list

Type: List

Reference Object: */axapi/v3/aam/authentication/service-group/{name}/member/{name}+{port}*

name

Description Specify AAM service group name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-service-group-tmpl*

protocol

Description 'tcp': TCP AAM service; 'udp': UDP AAM service;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_service-group-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'server_selection_fail_drop': Drops due to Service selection failure; 'server_selection_fail_reset': Resets sent out for Service selection failure; 'service_peak_conn': Peak connection count for the Service Group; 'service_healthy_host': Service Group healthy host count; 'service_unhealthy_host': Service Group unhealthy host count; 'service_req_count': Service Group request count; 'service_resp_count': Service Group response count; 'service_resp_2xx': Service Group response 2xx count; 'service_resp_3xx': Service Group response 3xx count; 'service_resp_4xx': Service Group response 4xx count; 'service_resp_5xx': Service Group response 5xx count; 'service_curr_conn_overflow': Current connection counter overflow count;

Type: string

Supported Values: all, server_selection_fail_drop, server_selection_fail_reset, service_peak_conn, service_healthy_host, service_unhealthy_host, service_req_count, service_resp_count, service_resp_2xx, service_resp_3xx, service_resp_4xx, service_resp_5xx, service_curr_conn_overflow

authentication_service-group-list_member-list

Specification	Value
Type	*list*
Block object keys	

member-priority

Description Priority of Port in the Group

Type: number

Range: 1-16

member-state

Description 'enable': Enable member service port; 'disable': Disable member service port;

Type: string

Supported Values: enable, disable

Default: enable

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-service-group-mem-tmpl*

port

Description Port number

Type: number

Range: 1-65534

Default: 65534

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_service-group-list_member-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_conn': Total established connections; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_status_code_2xx': Total reverse packets inspected status code 2xx; 'total_rev_pkts_inspected_status_code_non_5xx': Total reverse packets inspected status code non 5xx; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total requests successful; 'peak_conn': some help string; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'curr_conn_overflow': Current connection counter overflow count;

Type: string

Supported Values: all, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, total_rev_pkts_inspected, total_rev_pkts_inspected_status_code_2xx, total_rev_pkts_inspected_status_code_non_5xx, curr_req, total_req, total_req_succ, peak_conn, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, curr_conn_overflow

authentication_global

Specification	Value
Type	*object*

max-auth-resp-size

Description Specify the max auth resp size in bytes(from authd to a10lb), default is 64KB

Type: number

Range: 2048-131072

Default: 65536

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'requests': Total Authentication Request; 'responses': Total Authentication Response; 'misses': Total Authentication Request Missed; 'ocsp-stapling-requests-to-a10authd': Total OCSP Stapling Request; 'ocsp-stapling-responses-from-a10authd': Total OCSP Stapling Response; 'opened-socket': Total AAM Socket Opened; 'open-socket-failed': Total AAM Open Socket Failed; 'connect': Total AAM Connection; 'connect-failed': Total AAM Connect Failed; 'created-timer': Total AAM Timer Created; 'create-timer-failed': Total AAM Timer Creation Failed; 'total-request': Total Request Received by A10 Auth Service; 'get-socket-option-failed': Total AAM Get Socket Option Failed; 'aflex-authz-succ': Total Authorization success number in aFleX; 'aflex-authz-fail': Total Authorization failure number in aFleX; 'authn-success': Total Authentication success number; 'authn-failure': Total Authentication failure number; 'authz-success': Total Authorization success number; 'authz-failure': Total Authorization failure number; 'active-session': Total Active Auth-Sessions; 'active-user': Total Active Users; 'dns-resolve-failed': Total AAM DNS resolve failed; 'domain-wlist-match': Total DOMAIN WHITELIST match number; 'domain-wlist-unmatch': Total DOMAIN WHITELIST unmatch number;

Type: string

Supported Values: all, requests, responses, misses, ocsp-stapling-requests-to-a10authd, ocsp-stapling-responses-from-a10authd, opened-socket, open-socket-failed, connect, connect-failed, created-timer, create-timer-failed, total-request, get-socket-option-failed, aflex-authz-succ, aflex-authz-fail, authn-success, authn-failure, authz-success, authz-failure, active-session, active-user, dns-resolve-failed, domain-wlist-match, domain-wlist-unmatch, auth_ctx_num

authentication_saml

Specification	Value
Type	*object*

global

Description: global is a **JSON Block**. Please see below for *authentication_saml_global*

Type: Object

Reference Object: */axapi/v3/aam/authentication/saml/global*

identity-provider-list

Type: List

Reference Object: */axapi/v3/aam/authentication/saml/identity-provider/{name}*

metadata

Description: metadata is a **JSON Block**. Please see below for *authentication_saml_metadata*

Type: Object

Reference Object: */axapi/v3/aam/authentication/saml/metadata*

metadata-monitor

Description: metadata-monitor is a **JSON Block**. Please see below for *authentication_saml_metadata-monitor*

Type: Object

Reference Object: */axapi/v3/aam/authentication/saml/metadata-monitor*

service-provider-list

Type: List

Reference Object: */axapi/v3/aam/authentication/saml/service-provider/{name}*

session

Description: session is a **JSON Block**. Please see below for *authentication_saml_session*

Type: Object

Reference Object: */axapi/v3/aam/authentication/saml/session*

authentication_saml_service-provider-list

Specification	Value
Type	*list*
Block object keys	

SP-initiated-single-logout-service

Type: List

acs-uri-bypass

Description After user authenticated, bypass requests with assertion-consuming-service location URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

adfs-ws-federation

Description: adfs-ws-federation is a **JSON Block**. Please see below for *authentication_saml_service-provider-list_adfs-ws-federation*

Type: Object

artifact-resolution-service

Type: List

assertion-consuming-service

Type: List

bad-request-redirect-url

Description Specify URL to redirect

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

certificate

Description SAML service provider certificate file (PFX format is required.)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

entity-id

Description SAML service provider entity ID

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

metadata-export-service

Description: metadata-export-service is a **JSON Block**. Please see below for *authentication_saml_service-provider-list_metadata-export-service*

Type: Object

name

Description Specify SAML authentication service provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-saml-service-prov-tmpl*

require-assertion-signed

Description: require-assertion-signed is a **JSON Block**. Please see below for *authentication_saml_service-provider-list_require-assertion-signed*

Type: Object

saml-request-signed

Description: saml-request-signed is a **JSON Block**. Please see below for *authentication_saml_service-provider-list_saml-request-signed*

Type: Object

sampling-enable

Type: List

service-url

Description SAML service provider service URL (ex. https://www.a10networks.com/saml.sso)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

signature-algorithm

Description 'SHA1': use SHA1 as signature algorithm (default); 'SHA256': use SHA256 as signature algorithm;

Type: string

Supported Values: SHA1, SHA256

Default: SHA1

single-logout-service

Type: List

soap-tls-certificate-validate

Description: soap-tls-certificate-validate is a **JSON Block**. Please see below for *authentication_saml_service-provider-list_soap-tls-certificate-validate*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

username-attribute

Description Specify the assertion attribute which value is username

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_saml_service-provider-list_require-assertion-signed

Specification	Value
Type	*object*

require-assertion-signed-enable

Description Enable required signing of SAML assertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_saml_service-provider-list_single-logout-service

Specification	Value
Type	*list*
Block object keys	

SLO-binding

Description 'post': POST binding of single logout service; 'redirect': Redirect binding of single logout service; 'soap': SOAP binding of single logout service;

Type: string

Supported Values: post, redirect, soap

SLO-location

Description The location of name-id management service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_saml_service-provider-list_assertion-consuming-service

Specification	Value
Type	*list*
Block object keys	

assertion-binding

Description 'artifact': Artifact binding of assertion consuming service; 'paos': PAOS binding of assertion consuming service; 'post': POST binding of assertion consuming service;

Type: string

Supported Values: artifact, paos, post

assertion-index

Description The index of assertion consuming service

Type: number

Range: 0-5

assertion-location

Description The location of assertion consuming service endpoint. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_saml_service-provider-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'sp-metadata-export-req': Metadata Export Request; 'sp-metadata-export-success': Metadata Export Success; 'login-auth-req': Login Authentication Request; 'login-auth-resp': Login Authentication Response; 'acs-req': SAML Single-Sign-On Request; 'acs-success': SAML Single-Sign-On Success; 'acs-authz-fail': SAML Single-Sign-On Authorization Fail; 'acs-error': SAML Single-Sign-On Error; 'slo-req': Single Logout Request; 'slo-success': Single Logout Success; 'slo-error': Single Logout Error; 'sp-slo-req': SP-initiated Single Logout Request; 'glo-slo-success': Total Global Logout Success; 'loc-slo-success': Total Local Logout Success; 'par-slo-success': Total Partial Logout Success; 'other-error': Other Error;

Type: string

Supported Values: all, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, other-error

authentication_saml_service-provider-list_saml-request-signed

Specification	Value
Type	*object*

saml-request-signed-disable

Description Disable signing signature for SAML (Authn/Artifact Resolve) requests

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_saml_service-provider-list_SP-initiated-single-logout-service

Specification	Value
Type	*list*
Block object keys	

SP-SLO-location

Description The location of SP-initiated single logout service endpoint. (ex. /Logout)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

asynchronous

Description the IDP will not send a logout response to AX

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_saml_service-provider-list_adfs-ws-federation

Specification	Value
Type	*object*

ws-federation-enable

Description Enable ADFS WS-Federation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_saml_service-provider-list_soap-tls-certificate-validate

Specification	Value
Type	*object*

soap-tls-certificate-validate-disable

Description Disable verification for server certificate in TLS session when resolving artificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_saml_service-provider-list_artifact-resolution-service

Specification	Value
Type	*list*
Block object keys	

artifact-binding

Description 'soap': SOAP binding of artifact resolution service;

Type: string

Supported Values: soap

artifact-index

Description The index of artifact resolution service

Type: number

Range: 0-5

artifact-location

Description The location of artifact resolution service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_saml_service-provider-list_metadata-export-service

Specification	Value
Type	*object*

md-export-location

Description Specify the URI to export SP metadata (Export URI. Default is /A10SP_Metadata)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sign-xml

Description Sign exported SP metadata XML with SP's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_saml_identity-provider-list

Specification	Value
Type	*list*
Block object keys	

metadata

Description URL of SAML identity provider's metadata file

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description SAML authentication identity provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

reload-interval

Description Specify URI metadata reload period (Specify URI metadata reload period in seconds, default is 28800)

Type: number

Range: 1-86400

Default: 28800

reload-metadata

Description Reload IdP's metadata immediately

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_saml_global

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_saml_global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'requests-to-a10saml': Total Request to A10 SAML Service; 'responses-from-a10saml': Total Response from A10 SAML Service; 'sp-metadata-export-req': Total Metadata Export Request; 'sp-metadata-export-success': Toal Metadata Export Success; 'login-auth-req': Total Login Authentication Request; 'login-auth-resp': Total Login Authentication Response; 'acs-req': Total SAML Single-Sign-On Request; 'acs-success': Total SAML Single-Sign-On Success; 'acs-authz-fail': Total SAML Single-Sign-On Authorization Fail; 'acs-error': Total SAML Single-Sign-On Error; 'slo-req': Total Single Logout Request; 'slo-success': Total Single Logout Success; 'slo-error': Total Single Logout Error; 'sp-slo-req': Total SP-initiated Single Logout Request; 'glo-slo-success': Total Global Logout Success; 'loc-slo-success': Total Local Logout Success; 'par-slo-success': Total Partial Logout Success; 'relay-req': some help string; 'relay-success': some help string; 'relay-fail': some help string; 'relay-error': some help string; 'other-error': Total Other Error;

Type: string

Supported Values: all, requests-to-a10saml, responses-from-a10saml, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, relay-req, relay-success, relay-fail, relay-error, other-error

authentication_saml_session

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_saml_metadata-monitor

Specification	Value
Type	*object*

acs-continuous-fail-threshold

Description Specify how many ACS continuous fails will trigger metadata reload (ACS continuous fail threshold (default: 10))

Type: number

Range: 2-254

acs-missing-period

Description Specify how long no acs request will trigger metadata reload (in seconds (default: 60))

Type: number

Range: 1-254

acs-missing-threshold

Description Specify how many ACS request missing in the period will trigger metadata reload (ACS request missing threshold (default: 100))

Type: number

Range: 10-254

status

Description 'enable': Enable SAML metadata out-of-sync detection; 'disable': Disable SAML metadata out-of-sync detection;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_saml_metadata

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server

Specification	Value
Type	*object*

ldap

Description: ldap is a **JSON Block**. Please see below for *authentication_server_ldap*

Type: Object

Reference Object: */axapi/v3/aam/authentication/server/ldap*

ocsp

Description: ocsp is a **JSON Block**. Please see below for *authentication_server_ocsp*

Type: Object

Reference Object: */axapi/v3/aam/authentication/server/ocsp*

radius

Description: radius is a **JSON Block**. Please see below for *authentication_server_radius*

Type: Object

Reference Object: */axapi/v3/aam/authentication/server/radius*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

windows

Description: windows is a **JSON Block**. Please see below for *authentication_server_windows*

Type: Object

Reference Object: */axapi/v3/aam/authentication/server/windows*

authentication_server_windows

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/server/windows/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server_windows_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'kerberos-request-send': Total Kerberos Request; 'kerberos-response-get': Total Kerberos Response; 'kerberos-timeout-error': Total Kerberos Timeout; 'kerberos-other-error': Total Kerberos Other Error; 'ntlm-authentication-success': Total NTLM Authentication Success; 'ntlm-authentication-failure': Total NTLM Authentication Failure; 'ntlm-proto-negotiation-success': Total NTLM Protocol Negotiation Success; 'ntlm-proto-negotiation-failure': Total NTLM Protocol Negotiation Failure; 'ntlm-session-setup-success': Total NTLM Session Setup Success; 'ntlm-session-setup-failed': Total NTLM Session Setup Failure; 'kerberos-request-normal': Total Kerberos Normal Request; 'kerberos-request-dropped': Total Kerberos Dropped Request; 'kerberos-response-success': Total Kerberos Success Response; 'kerberos-response-failure': Total Kerberos Failure Response; 'kerberos-response-error': Total Kerberos Error Response; 'kerberos-response-timeout': Total Kerberos Timeout Response; 'kerberos-response-other': Total Kerberos Other Response; 'kerberos-job-start-error': Total Kerberos Job Start Error; 'kerberos-polling-control-error': Total Kerberos Polling Control Error; 'ntlm-prepare-req-success': Total NTLM Prepare Request Success; 'ntlm-prepare-req-failed': Total NTLM Prepare Request Failed; 'ntlm-timeout-error': Total NTLM Timeout; 'ntlm-other-error': Total NTLM Other Error; 'ntlm-request-normal': Total NTLM Normal Request; 'ntlm-request-dropped': Total NTLM Dropped Request; 'ntlm-response-success': Total NTLM Success Response; 'ntlm-response-failure': Total NTLM Failure Response; 'ntlm-response-error': Total NTLM Error Response; 'ntlm-response-timeout': Total NTLM Timeout Response; 'ntlm-response-other': Total NTLM Other Response; 'ntlm-job-start-error': Total NTLM Job Start Error; 'ntlm-polling-control-error': Total NTLM Polling Control Error; 'kerberos-pw-expiry': Total Kerberos password expiry; 'kerberos-pw-change-success': Total Kerberos password change success; 'kerberos-pw-change-failure': Total Kerberos password change failure; 'kerberos-validate-kdc-success': Total Kerberos KDC Validation Success; 'kerberos-validate-kdc-failure': Total Kerberos KDC Validation Failure; 'kerberos-generate-kdc-keytab-success': Total Kerberos KDC Keytab Generation Success; 'kerberos-generate-kdc-keytab-failure': Total Kerberos KDC Keytab Generation Failure; 'kerberos-delete-kdc-keytab-success': Total Kerberos KDC Keytab Deletion Success; 'kerberos-delete-kdc-keytab-failure': Total Kerberos KDC Keytab Deletion Failure; 'kerberos-kdc-keytab-count': Current Kerberos KDC Keytab Count;

Type: string

Supported Values: all, kerberos-request-send, kerberos-response-get, kerberos-timeout-error, kerberos-other-error, kerberos-request-normal, kerberos-request-dropped, kerberos-response-success, kerberos-response-failure, kerberos-response-error, kerberos-response-timeout, kerberos-response-other, kerberos-job-start-error, kerberos-polling-control-error, kerberos-pw-expiry, kerberos-pw-change-success, kerberos-pw-change-failure, kerberos-validate-kdc-success, kerberos-validate-kdc-failure, kerberos-generate-kdc-keytab-success,

kerberos-generate-kdc-keytab-failure, kerberos-delete-kdc-keytab-success, kerberos-delete-kdc-keytab-failure, kerberos-kdc-keytab-count

authentication_server_windows_instance-list

Specification	Value
Type	*list*
Block object keys	

auth-protocol

Description: auth-protocol is a **JSON Block**. Please see below for *authentication_server_windows_instance-list_auth-protocol*

Type: Object

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *authentication_server_windows_instance-list_host*

Type: Object

name

Description Specify Windows authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-win-inst-tmpl*

realm

Description Specify realm of Windows server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-apacheds-kdc

Description Enable weak cipher (DES CRC/MD5/MD4) and merge AS-REQ in single packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify connection timeout to server, default is 10 seconds

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server_windows_instance-list_host

Specification	Value
Type	*object*

hostip

Description Specify the Windows server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Specify the Windows server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

authentication_server_windows_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'krb_send_req_success': Kerberos Request; 'krb_get_resp_success': Kerberos Response; 'krb_timeout_error': Kerberos Timeout; 'krb_other_error': Kerberos Other Error; 'krb_pw_expiry': Kerberos password expiry; 'krb_pw_change_success': Kerberos password change success; 'krb_pw_change_failure': Kerberos password change failure; 'ntlm_proto_nego_success': NTLM Protocol Negotiation Success; 'ntlm_proto_nego_failure': NTLM Protocol Negotiation Failure; 'ntlm_session_setup_success': NTLM Session Setup Success; 'ntlm_session_setup_failure': NTLM Session Setup Failure; 'ntlm_prepare_req_success': NTLM Prepare Request Success; 'ntlm_prepare_req_error': NTLM Prepare Request Error; 'ntlm_auth_success': NTLM Authentication Success; 'ntlm_auth_failure': NTLM Authentication Failure; 'ntlm_timeout_error': NTLM Timeout; 'ntlm_other_error': NTLM Other Error; 'krb_validate_kdc_success': Kerberos KDC Validation Success; 'krb_validate_kdc_failure': Kerberos KDC Validation Failure;

Type: string

Supported Values: all, krb_send_req_success, krb_get_resp_success, krb_timeout_error, krb_other_error, krb_pw_expiry, krb_pw_change_success, krb_pw_change_failure, krb_validate_kdc_success, krb_validate_kdc_failure

authentication_server_windows_instance-list_auth-protocol

Specification	Value
Type	*object*

kdc-validate

Description Enable KDC validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

kerberos-kdc-validation

Description: kerberos-kdc-validation is a **JSON Block**. Please see below for *authentication_server_windows_instance-list_auth-protocol_kerberos-kdc-validation*

Type: Object

kerberos-password-change-port

Description Specify the Kerbros password change port, default is 464

Type: number

Range: 1-65534

Default: 464

kerberos-port

Description Specify the Kerberos port, default is 88

Type: number

Range: 1-65534

Default: 88

kport-hm

Description Check Kerberos port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kport-hm and kport-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

kport-hm-disable

Description Disable configured Kerberos port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kport-hm-disable and kport-hm are mutually exclusive

authentication_server_windows_instance-list_auth-protocol_kerberos-kdc-validation

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.)

kdc-account

Description Specify account for KDC validation

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kdc-password

Description Specify account password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

kdc-pwd

Description Account password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

kdc-spn

Description Specify SPN for KDC validation

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_server_ocsp

Specification	Value
Type	*object*

instance-list

Type: List

Supported Values: all, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-request-normal, stapling-request-dropped, stapling-response-success, stapling-response-failure, stapling-response-error, stapling-response-timeout, stapling-response-other, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

authentication_server_ocsp_instance-list

Specification	Value
Type	*list*
Block object keys	

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

http-version

Description Set HTTP version (default 1.0)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify OCSP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ocsp-inst-tmpl*

port-health-check

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-health-check and port-health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-health-check-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-health-check-disable and port-health-check are mutually exclusive

responder-ca

Description Specify the trusted OCSP responder's CA cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

responder-cert

Description Specify the trusted OCSP responder's cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

sampling-enable

Type: List

url

Description Specify the OCSP server's address (Format: http://host{[}:port{]}/) (The OCSP server's address(Format: http://host{[}:port{]}/))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version-type

Description '1.1': HTTP version 1.1;

Type: string

Supported Values: 1.1

authentication_server_ocsp_instance-list_sampling-enable

Description 'all': all; 'request': Request; 'certificate-good': Good Certificate Response; 'certificate-revoked': Revoked Certificate Response; 'certificate-unknown': Unknown Certificate Response; 'timeout': Timeout; 'fail': Handle OCSP response failed; 'stapling-request': OCSP Stapling Request Send; 'stapling-certificate-good': OCSP Stapling Good Certificate Response; 'stapling-certificate-revoked': OCSP Stapling Revoked Certificate Response; 'stapling-certificate-unknown': OCSP Stapling Unknown Certificate Response; 'stapling-timeout': OCSP Stapling Timeout; 'stapling-fail': Handle OCSP response failed;

Type: string

Supported Values: all, request, certificate-good, certificate-revoked, certificate-unknown, timeout, fail, stapling-request, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-timeout, stapling-fail

authentication_server_radius

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/server/radius/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server_radius_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Total Authentication Success; 'authen_failure': Total Authentication Failure; 'authorize_success': Total Authorization Success; 'authorize_failure': Total Authorization Failure; 'access_challenge': Total Access-Challenge Message Receive; 'timeout_error': Total Timeout; 'other_error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, accounting-request-sent, accounting-success, accounting-failure

authentication_server_radius_instance-list

Specification	Value
Type	*list*
Block object keys	

accounting-port

Description Specify the RADIUS server's accounting port, default is 1813

Type: number

Range: 1-65534

Default: 1813

acct-port-hm

Description Specify accounting port health check method

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acct-port-hm and acct-port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

acct-port-hm-disable

Description Disable configured accounting port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: acct-port-hm-disable and acct-port-hm are mutually exclusive

auth-type

Description 'pap': PAP authentication. Default; 'mschapv2': MS-CHAPv2 authentication; 'mschapv2-pap': Use MS-CHAPv2 first. If server doesn't support it, try PAP;

Type: string

Supported Values: pap, mschapv2, mschapv2-pap

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *authentication_server_radius_instance-list_host*

Type: Object

interval

Description Specify the interval time for resend the request (second), default is 3 seconds (The interval time(second), default is 3 seconds)

Type: number

Range: 1-1024

Default: 3

message-authenticator-verify-enable

Description Verify Message-Authenticator attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify RADIUS authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-rad-inst-tmpl*

port

Description Specify the RADIUS server's authentication port, default is 1812

Type: number

Range: 1-65534

Default: 1812

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

retry

Description Specify the retry number for resend the request, default is 5 (The retry number, default is 5)

Type: number

Range: 1-32

Default: 5

sampling-enable

Type: List

secret

Description Specify the RADIUS server's secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server_radius_instance-list_host

Specification	Value
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

authentication_server_radius_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Authentication Success; 'authen_failure': Authentication Failure; 'authorize_success': Authorization Success; 'authorize_failure': Authorization Failure; 'access_challenge': Access-Challenge Message Receive; 'timeout_error': Timeout; 'other_error': Other Error; 'request': Request; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, accounting-request-sent, accounting-success, accounting-failure

authentication_server_ldap

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/server/ldap/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server_ldap_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Total Admin Bind Success; 'admin-bind-failure': Total Admin Bind Failure; 'bind-success': Total User Bind Success; 'bind-failure': Total User Bind Failure; 'search-success': Total Search Success; 'search-failure': Total Search Failure; 'authorize-success': Total Authorization Success; 'authorize-failure': Total Authorization Failure; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error; 'ssl-session-created': TLS/SSL Session Created; 'ssl-session-failure': TLS/SSL Session Failure; 'ldaps-idle-conn-num': LDAPS Idle Connection Number; 'ldaps-inuse-conn-num': LDAPS In-use Connection Number; 'pw-expiry': Total Password expiry; 'pw-change-success': Total password change success; 'pw-change-failure': Total password change failure;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, ssl-session-created, ssl-session-failure, ldaps-idle-conn-num, ldaps-inuse-conn-num, pw-expiry, pw-change-success, pw-change-failure

authentication_server_ldap_instance-list

Specification	Value
Type	*list*
Block object keys	

admin-dn

Description The LDAP server's admin DN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

admin-secret

Description Specify the LDAP server's admin secret password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-type

Description 'ad': Active Directory. Default; 'open-ldap': OpenLDAP;

Type: string

Supported Values: ad, open-ldap

base

Description Specify the LDAP server's search base

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

bind-with-dn

Description Enforce using DN for LDAP binding(All user input name will be used to create DN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ca-cert

Description Specify the LDAPS CA cert filename (Trusted LDAPS CA cert filename)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

default-domain

Description Specify default domain for LDAP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

derive-bind-dn

Description: derive-bind-dn is a **JSON Block**. Please see below for *authentication_server_ldap_instance-list_derive-bind-dn*

Type: Object

dn-attribute

Description Specify Distinguished Name attribute, default is CN

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: cn

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *authentication_server_ldap_instance-list_host*

Type: Object

ldaps-conn-reuse-idle-timeout

Description Specify LDAPS connection reuse idle timeout value (in seconds) (Specify idle timeout value (in seconds), default is 0 (not reuse LDAPS connection))

Type: number

Range: 0-86400

Default: 0

name

Description Specify LDAP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ldap-inst-tmpl*

port

Description Specify the LDAP server's authentication port, default is 389

Type: number

Range: 1-65534

Default: 389

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

prompt-pw-change-before-exp

Description Prompt user to change password before expiration in N days. This option only takes effect when server type is AD (Prompt user to change password before expiration in N days, default is not to prompt the user)

Type: number

Range: 1-999

protocol

Description 'ldap': Use LDAP (default); 'ldaps': Use LDAP over SSL; 'starttls': Use LDAP StartTLS;

Type: string

Supported Values: ldap, ldaps, starttls

Default: ldap

pwdmaxage

Description Specify the LDAP server's default password expiration time (in seconds) (The LDAP server's default password expiration time (in seconds), default is 0 (no expiration))

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

timeout

Description Specify timout for LDAP, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server_ldap_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Admin Bind Success; 'admin-bind-failure': Admin Bind Failure; 'bind-success': User Bind Success; 'bind-failure': User Bind Failure; 'search-success': Search Success; 'search-failure': Search Failure; 'authorize-success': Authorization Success; 'authorize-failure': Authorization Failure; 'timeout-error': Timeout; 'other-error': Other Error; 'request': Request; 'ssl-session-created': TLS/SSL Session Created; 'ssl-session-failure': TLS/SSL Session Failure; 'pw_expiry': Password expiry; 'pw_change_success': Password change success; 'pw_change_failure': Password change failure;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, ssl-session-created, ssl-session-failure, pw_expiry, pw_change_success, pw_change_failure

authentication_server_ldap_instance-list_derive-bind-dn

Specification	Value
Type	*object*

username-attr

Description Specify attribute name of username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

authentication_server_ldap_instance-list_host

Specification	Value
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

authentication_captcha

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/captcha/instance/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_captcha_instance-list

Specification	Value
Type	*list*
Block object keys	

client-ip-param-name

Description Specify client ip parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

method

Description 'POST': API uses POST method; 'GET': API uses GET method;

Type: string

Supported Values: POST, GET

Default: POST

name

Description Specify captcha profile name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resp-error-code-field-name

Description Specify error code field name used in JSON response (Set field name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

resp-result-field-name

Description Specify result field name used in JSON response (Set field name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-key

Description Specify secret key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-key-param-name

Description Specify secret key parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-key-string

Description Secret key string

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

send-client-ip

Description Send client IP address in API

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify timeout for verify API response (Specify timeout value, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

token-param-name

Description Specify token parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

url

Description Specify verify API URL, default scheme is https

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_session

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_file

Specification	Value
Type	*object*

portal

Description: portal is a **JSON Block**. Please see below for *authentication_file_portal*

Type: Object

Reference Object: */axapi/v3/aam/authentication/file/portal*

portal-image

Description: portal-image is a **JSON Block**. Please see below for *authentication_file_portal-image*

Type: Object

Reference Object: */axapi/v3/aam/authentication/file/portal-image*

authentication_file_portal

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_file_portal-image

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_oauth

Specification	Value
Type	*object*

authorization-server-list

Type: List

Reference Object: */axapi/v3/aam/authentication/oauth/authorization-server/{name}*

client-list

Type: List

Reference Object: */axapi/v3/aam/authentication/oauth/client/{name}*

global

Description: global is a **JSON Block**. Please see below for *authentication_oauth_global*

Type: Object

Reference Object: */axapi/v3/aam/authentication/oauth/global*

authentication_oauth_global

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_oauth_global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'auth-req': some help string; 'auth-succ': some help string; 'auth-fail': some help string; 'auth-error': some help string; 'relay-req': some help string; 'relay-succ': some help string; 'relay-fail': some help string; 'other-error': some help string;

Type: string

Supported Values: all, auth-req, auth-succ, auth-fail, auth-error, relay-req, relay-succ, relay-fail, other-error

authentication_oauth_client-list

Specification	Value
Type	*list*
Block object keys	

client-id

Description Specify oauth client-id

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-secret

Description

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

grant-type

Description 'implicit': The authorization server will return access token directly.; 'authorization-code': The authorization server will respond with code which can be exchange for access token.; 'hybrid-code-id-token': The authorization server will respond with both code and id token.; 'hybrid-code-token': The authorization server will respond with both code and access token.; 'hybrid-all': The authorization server will respond with code, access token and id token;

Type: string

Supported Values: implicit, authorization-code, hybrid-code-id-token, hybrid-code-token, hybrid-all

infinity

Description Auth session never time out whatever value oauth servers' response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: infinity and token-lifetime are mutually exclusive

name

Description Specify client object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

no-reply

Description AX will not check the nonce value in response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parameter-nonce-enable

Description Enable nonce parameter for authorization and token request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirection-endpoint

Description Oauth client redirection endpoint service URL.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

scope

Description Specify request scope parameters (e.g. profile email address phone)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

session-init-ttl

Description TTL for Thunder to wait for first response from authorization server

Type: number

Range: 1-60

token-lifetime

Description

Type: number

Range: 1-2592000

Mutual Exclusion: token-lifetime and infinity are mutually exclusive

type

Description 'openid-connect': openid-connect;

Type: string

Supported Values: openid-connect

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_oauth_authorization-server-list

Specification	Value
Type	*list*
Block object keys	

authorization-endpoint

Description Specify URI for authorization

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-method

Description 'ignored': Clients' browser will send data according to server spec (default); 'post': Clients' browser will send data by POST; 'get': Clients' browser will send data by GET;

Type: string

Supported Values: ignored, post, get

issuer

Description Specify openid provider name for authorization

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description Specify authorization server object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

server-method

Description 'post': AX will send data to server by POST (default); 'get': AX will send data to server by GET;

Type: string

Supported Values: post, get

token-endpoint

Description Specify URI for token exchange

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verification-cert

Description Specify certificate to verify ID token signature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-cert and verification-jwks are mutually exclusive

verification-jwks

Description Specify jwks file to verify ID token signature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-jwks and verification-cert are mutually exclusive

authentication_oauth_authorization-server-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'auth-req': some help string; 'auth-succ': some help string; 'auth-fail': some help string; 'auth-error': some help string; 'other-error': some help string;

Type: string

Supported Values: all, auth-req, auth-succ, auth-fail, auth-error, other-error

authentication_password-retry

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_template-list

Specification	Value
Type	*list*
Block object keys	

account

Description Specify AD domain account

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/account/kerberos-spn*

accounting-server

Description Specify a RADIUS accounting server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: accounting-server and accounting-service-group are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/radius/instance*

accounting-service-group

Description Specify an authentication service group for RADIUS accounting

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: accounting-service-group and accounting-server are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

auth-sess-mode

Description 'cookie-based': Track auth-session by cookie (default); 'ip-based': Track auth-session by client IP;

Type: string

Supported Values: cookie-based, ip-based

captcha

Description Specify captcha profile (Specify captcha proflie name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/captcha/instance*

chain

Type: List

cookie-domain

Type: List

cookie-domain-group

Type: List

cookie-httponly-enable

Description Enable httponly attribute for AAM cookies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cookie-max-age

Description Configure Max-Age for authentication session cookie (Configure Max-Age in seconds, 0 for no Max-Age/Expires attributes. Default is 604800 (1 week).)

Type: number

Range: 0-2592000

Default: 604800

cookie-samesite

Description 'strict': Specify SameSite attribute as Strict for AAM cookie; 'lax': Specify Same-Site attribute as Lax for AAM cookie; 'none': Specify SameSite attribute as None for AAM cookie;

Type: string

Supported Values: strict, lax, none

cookie-secure-enable

Description Enable secure attribute for AAM cookies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-logout-disable

Description Disable forward logout request to backend application server. The config-field logout-url must be configured first

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt

Description Specify authentication jwt template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/jwt*

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description 'use-partition-level-config': Use configuration of authentication-log enable command; 'enable': Enable authentication logs for this template; 'disable': Disable authentication logs for this template;

Type: string

Supported Values: use-partition-level-config, enable, disable

Default: use-partition-level-config

logon

Description Specify authentication logon (Specify authentication logon template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

logout-idle-timeout

Description Specify idle logout time (Specify idle timeout in seconds, default is 300)

Type: number

Range: 1-86400

Default: 300

logout-url

Description Specify logout url (Specify logout url string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

max-session-time

Description Specify default SAML token lifetime (Specify lifetime (in seconds) of SAML token when it not provided by token attributes, default is 28800. (0 for indefinite))

Type: number

Range: 0-86400

modify-content-security-policy

Description Put redirect-uri or service-principal-name into CSP header to avoid CPS break authentication process

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Authentication template name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

oauth-authorization-server

Description Specify OAUTH authorization server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

oauth-client

Description Specify OAUTH client

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

redirect-hostname

Description Hostname(Length 1-31) for transparent-proxy authentication

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

relay

Description Specify authentication relay (Specify authentication relay template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

saml-idp

Description Specify SAML identity provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

saml-sp

Description Specify SAML service provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server

Description Specify authentication server (Specify authentication server template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Bind an authentication service group to this template (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group, server, and chain-server are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

type

Description 'saml': SAML authentication template; 'standard': Standard authentication template; 'oauth': Oauth 2.0 authentication template;

Type: string

Supported Values: saml, standard, oauth

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_template-list_chain

Specification	Value
Type	*list*
Block object keys	

chain-server

Description Specify authentication server (Specify authentication server template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-server, service-group, and chain-sg are mutually exclusive

chain-server-priority

Description Set server priority, higher the number higher the priority. Default is 3. (Chain server priority, higher the number higher the priority. Default is 3.)

Type: number

Range: 1-5

Default: 3

chain-sg

Description Bind an authentication service group to this template (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-sg and chain-server are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

chain-sg-priority

Description Set service-group priority, higher the number higher the priority. Default is 3. (Chain service-group priority, higher the number higher the priority. Default is 3.)

Type: number

Range: 1-5

Default: 3

authentication_template-list_cookie-domain-group

Specification	Value
Type	*list*
Block object keys	

cookie-dmngrp

Description Specify group id to join in the cookie-domain

Type: number

Range: 0-31

authentication_template-list_cookie-domain

Specification	Value
Type	*list*
Block object keys	

cookie-dmn

Description Specify domain scope for the authentication (ex: .a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 2 characters

rdns

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aaa-policy-list

Specification	Value
Type	*list*
Block object keys	

aaa-rule-list

Type: List

Reference Object: */axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}*

name

Description Specify AAA policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-aaa-policy-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aaa-policy-list_aaa-rule-list

Specification	Value
Type	*list*
Block object keys	

access-list

Description: access-list is a **JSON Block**. Please see below for *aaa-policy-list_aaa-rule-list_access-list*

Type: Object

action

Description 'allow': Allow traffic that matches this rule; 'deny': Deny traffic that matches this rule;

Type: string

Supported Values: allow, deny

auth-failure-bypass

Description Forward client request even though authentication has failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-template

Description Specify authentication template name to bind to the AAA rule

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/template*

authorize-policy

Description Specify authorization policy to bind to the AAA rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authorization/policy*

captcha-authz-policy

Description Specify authorization policy for CAPTCHA (Authorization policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authorization/policy*

domain-name

Description Specify domain name to bind to the AAA rule (ex: a10networks.com, www.a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

domain-whitelist

Description Specify the AC type class-list for the domain-whitelist

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

host

Type: List

index

Description Specify AAA rule index

Type: number

Range: 1-256

match-encoded-uri

Description Enable URL decoding for URI matching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify port number for aaa-rule, default is 0 for all port numbers

Type: number

Range: 1-65535

sampling-enable

Type: List

uri

Type: List

user-agent

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aaa-policy-list_aaa-rule-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_count': some help string; 'hit_deny': some help string; 'hit_auth': some help string; 'hit_bypass': some help string; 'failure_bypass': some help string;

Type: string

Supported Values: all, total_count, hit_deny, hit_auth, hit_bypass, failure_bypass

aaa-policy-list_aaa-rule-list_uri

Specification	Value
Type	*list*
Block object keys	

match-type

Description 'contains': Match URI if request URI contains specified URI; 'ends-with': Match URI if request URI ends with specified URI; 'equals': Match URI if request URI equals specified URI; 'starts-with': Match URI if request URI starts with specified URI;

Type: string

Supported Values: contains, ends-with, equals, starts-with

uri-str

Description Specify URI string

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

aaa-policy-list_aaa-rule-list_user-agent

Specification	Value
Type	*list*
Block object keys	

user-agent-match-type

Description 'contains': Match request User-Agent header if it contains specified string; 'ends-with': Match request User-Agent header if it ends with specified string; 'equals': Match request User-Agent header if it equals specified string; 'starts-with': Match request User-Agent header if it starts with specified string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

user-agent-str

Description Specify request User-Agent string

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

aaa-policy-list_aaa-rule-list_host

Specification	Value
Type	*list*
Block object keys	

host-match-type

Description 'contains': Match HOST if request HTTP HOST header contains specified hostname; 'ends-with': Match HOST if request HTTP HOST header ends with specified hostname; 'equals': Match HOST if request HTTP HOST header equals specified hostname; 'starts-with': Match HOST if request HTTP HOST header starts with specified hostname;

Type: string

Supported Values: contains, ends-with, equals, starts-with

host-str

Description Specify URI string

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

aaa-policy-list_aaa-rule-list_access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Mutual Exclusion: acl-id and acl-name are mutually exclusive

acl-name

Description 'ip-name': Apply an IP named access list; 'ipv6-name': Apply an IPv6 named access list;

Type: string

Supported Values: ip-name, ipv6-name

Mutual Exclusion: acl-name and acl-id are mutually exclusive

name

Description Specify Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

aaa-policy-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'req': Request; 'req-reject': Request Rejected; 'req-auth': Request Matching Authentication Template; 'req-bypass': Request Bypassed; 'req-skip': Request Skipped; 'error': Error; 'failure-bypass': Auth Failure Bypass;

Type: string

Supported Values: all, req, req-reject, req-auth, req-bypass, req-skip, error, failure-bypass

authorization

Specification	Value
Type	*object*

jwt

Description: jwt is a **JSON Block**. Please see below for *authorization_jwt*

Type: Object

Reference Object: */axapi/v3/aam/authorization/jwt*

policy-list

Type: List

Reference Object: */axapi/v3/aam/authorization/policy/{name}*

authorization_policy-list

Specification	Value
Type	*list*
Block object keys	

attribute-list

Type: List

Reference Object: */axapi/v3/aam/authorization/policy/{name}/attribute/{attr-num}*

attribute-rule

Description Define attribute rule for authorization policy

Type: string

Format: string-rlx

extended-filter

Description Extended search filter. EX: Check whether user belongs to a nested group. (memberOf:1.2.840.113556.1.4.1941:=$GROUP-DN)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

forward-policy-authorize-only

Description This policy only provides server info for forward policy feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-authorization

Description Specify JWT authorization template (Specify JWT authorization template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: jwt-authorization, server, and service-group are mutually exclusive

Reference Object: */axapi/v3/aam/jwt-authorization*

jwt-claim-map-list

Type: List

Reference Object: */axapi/v3/aam/authorization/policy/{name}/jwt-claim-map/{attr-num}*

name

Description Specify authorization policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server

Description Specify a LDAP or RADIUS server for authorization (Specify a LDAP or RADIUS server name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: server, service-group, and jwt-authorization are mutually exclusive

service-group

Description Specify an authentication service group for authorization (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group, server, and jwt-authorization are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authorization_policy-list_jwt-claim-map-list

Specification	Value
Type	*list*
Block object keys	

attr-num

Description Spcify attribute ID for claim mapping

Type: number

Range: 1-32

bool-val

Description 'true': True; 'false': False;

Type: string

Supported Values: true, false

boolean-type

Description Claim type is boolean

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: boolean-type, string-type, and number-type are mutually exclusive

claim

Description Specify JWT claim name to map to.

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

num-val

Description Specify JWT claim value.

Type: number

Range: 0-4294967295

number-type

Description Claim type is number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-type, string-type, and boolean-type are mutually exclusive

str-val

Description Specify JWT claim value.

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

string-type

Description Claim type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-type, number-type, and boolean-type are mutually exclusive

type

Description Specify claim type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authorization_policy-list_attribute-list

Specification	Value
Type	*list*
Block object keys	

A10-AX-AUTH-URI

Description Custom-defined attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: A10-AX-AUTH-URI and attribute-name are mutually exclusive

a10-dynamic-defined

Description The value of this attribute will depend on AX configuration instead of user configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

any

Description Matched when attribute is present (with any value).

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and attr-type are mutually exclusive

attr-int

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-int-val

Description Set attribute value

Type: number

Range: 0-4294967295

attr-ip

Description 'equal': Operation type is equal; 'not-equal': Operation type is not-equal;

Type: string

Supported Values: equal, not-equal

attr-ipv4

Description IPv4 address

Type: string

Format: ipv4-address

attr-num

Description Set attribute ID for authorization policy

Type: number

Range: 1-32

attr-number

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-number-val

Description Set attribute value

Type: string

Maximum Length: 20 characters

Maximum Length: 1 characters

attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

attr-str-val

Description Set attribute value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: attr-type and any are mutually exclusive

attribute-name

Description Specify attribute name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: attribute-name and A10-AX-AUTH-URI are mutually exclusive

custom-attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

custom-attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

integer-type

Description Attribute type is integer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: integer-type,string-type, ip-type, and number-type are mutually exclusive

ip-type

Description IP address is transformed into network byte order

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip-type,string-type, integer-type, and number-type are mutually exclusive

number-type

Description Attribute type is decimal number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-type,string-type, integer-type, and ip-type are mutually exclusive

string-type

Description Attribute type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-type,integer-type, ip-type, and number-type are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authorization_jwt

Specification	Value
Type	*object*

cache

Description: cache is a **JSON Block**. Please see below for *authorization_jwt_cache*

Type: Object

Reference Object: */axapi/v3/aam/authorization/jwt/cache*

authorization_jwt_cache

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-log

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.2 aam aaa-policy

AAM AAA policy configuration

aaa-policy Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*aaa-policy-list*
Collection URI	/axapi/v3/aam/aaa-policy
Element Name	aaa-policy
Element URI	/axapi/v3/aam/aaa-policy/{name}
Element Attributes	aaa-policy_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/aam/aaa-policy/{name}/stats
Schema	`aaa-policy schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/aaa-policy

aaa-policy attributes

```
POST /axapi/v3/aam/aaa-policy/
Payload:
{
    "aaa-policy": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/aam/aaa-policy

aaa-policy attributes

Get Object

GET

/axapi/v3/aam/aaa-policy/{name}

aaa-policy attributes

```
GET /axapi/v3/aam/aaa-policy/a
Reponse:
{
    "aaa-policy": {
        "name": "a",
        "uuid": "d91c1d36-086c-11f0-847f-51c757813e60",
        "user-tag": "a",
        "a10-url": "/axapi/v3/aam/aaa-policy/a"
    }
}
```

Get List

GET

/axapi/v3/aam/aaa-policy

aaa-policy-list

Modify Object

POST

/axapi/v3/aam/aaa-policy/{name}

aaa-policy attributes

Replace Object

PUT

/axapi/v3/aam/aaa-policy/{name}

aaa-policy attributes

```
PUT /axapi/v3/aam/aaa-policy/a
Payload:
{
    "aaa-policy": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/aam/aaa-policy

aaa-policy-list

Delete Object

DELETE

/axapi/v3/aam/aaa-policy/{name}

aaa-policy attributes

```
DELETE /axapi/v3/aam/aaa-policy/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

aaa-policy-list

aaa-policy-list is **JSON List** of *aaa-policy attributes*

aaa-policy-list : [

{ *aaa-policy attributes* },

{ *aaa-policy attributes* },

...

]

aaa-policy attributes

aaa-rule-list

Type: List

Reference Object: */axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}*

name

Description Specify AAA policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-aaa-policy-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aaa-rule-list

Specification	Value
Type	*list*
Block object keys	

access-list

Description: access-list is a **JSON Block**. Please see below for *aaa-rule-list_access-list*

Type: Object

action

Description 'allow': Allow traffic that matches this rule; 'deny': Deny traffic that matches this rule;

Type: string

Supported Values: allow, deny

auth-failure-bypass

Description Forward client request even though authentication has failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-template

Description Specify authentication template name to bind to the AAA rule

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/template*

authorize-policy

Description Specify authorization policy to bind to the AAA rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authorization/policy*

captcha-authz-policy

Description Specify authorization policy for CAPTCHA (Authorization policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authorization/policy*

domain-name

Description Specify domain name to bind to the AAA rule (ex: a10networks.com, www.a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

domain-whitelist

Description Specify the AC type class-list for the domain-whitelist

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

host

Type: List

index

Description Specify AAA rule index

Type: number

Range: 1-256

match-encoded-uri

Description Enable URL decoding for URI matching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify port number for aaa-rule, default is 0 for all port numbers

Type: number

Range: 1-65535

sampling-enable

Type: List

uri

Type: List

user-agent

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aaa-rule-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_count': some help string; 'hit_deny': some help string; 'hit_auth': some help string; 'hit_bypass': some help string; 'failure_bypass': some help string;

Type: string

Supported Values: all, total_count, hit_deny, hit_auth, hit_bypass, failure_bypass

aaa-rule-list_uri

Specification	Value
Type	*list*
Block object keys	

match-type

Description 'contains': Match URI if request URI contains specified URI; 'ends-with': Match URI if request URI ends with specified URI; 'equals': Match URI if request URI equals specified URI; 'starts-with': Match URI if request URI starts with specified URI;

Type: string

Supported Values: contains, ends-with, equals, starts-with

uri-str

Description Specify URI string

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

aaa-rule-list_user-agent

Specification	Value
Type	*list*
Block object keys	

user-agent-match-type

Description 'contains': Match request User-Agent header if it contains specified string; 'ends-with': Match request User-Agent header if it ends with specified string; 'equals': Match request User-Agent header if it equals specified string; 'starts-with': Match request User-Agent header if it starts with specified string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

user-agent-str

Description Specify request User-Agent string

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

aaa-rule-list_host

Specification	Value
Type	*list*
Block object keys	

host-match-type

Description 'contains': Match HOST if request HTTP HOST header contains specified hostname; 'ends-with': Match HOST if request HTTP HOST header ends with specified hostname; 'equals': Match HOST if request HTTP HOST header equals specified hostname; 'starts-with': Match HOST if request HTTP HOST header starts with specified hostname;

Type: string

Supported Values: contains, ends-with, equals, starts-with

host-str

Description Specify URI string

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

aaa-rule-list_access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Mutual Exclusion: acl-id and acl-name are mutually exclusive

Reference Object: */axapi/v3/access-list/standard*

acl-name

Description 'ip-name': Apply an IP named access list; 'ipv6-name': Apply an IPv6 named access list;

Type: string

Supported Values: ip-name, ipv6-name

Mutual Exclusion: acl-name and acl-id are mutually exclusive

name

Description Specify Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'req': Request; 'req-reject': Request Rejected; 'req-auth': Request Matching Authentication Template; 'req-bypass': Request Bypassed; 'req-skip': Request Skipped; 'error': Error; 'failure-bypass': Auth Failure Bypass;

Type: string

Supported Values: all, req, req-reject, req-auth, req-bypass, req-skip, error, failure-bypass

2.1.3 aam aaa-policy aaa-rule

Rules of AAA policy

aaa-rule Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*index*
Collection Name	*aaa-rule-list*
Collection URI	/axapi/v3/aam/aaa-policy/{name}/aaa-rule
Element Name	aaa-rule
Element URI	/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}
Element Attributes	aaa-rule_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}/stats
Schema	`aaa-rule schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/aaa-policy/{name}/aaa-rule

aaa-rule attributes

Create List

POST

/axapi/v3/aam/aaa-policy/{name}/aaa-rule

aaa-rule attributes

Get Object

GET

/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}

aaa-rule attributes

Get List

GET

/axapi/v3/aam/aaa-policy/{name}/aaa-rule

aaa-rule-list

Modify Object

POST

/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}

aaa-rule attributes

Replace Object

PUT

/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}

aaa-rule attributes

Replace List

PUT

/axapi/v3/aam/aaa-policy/{name}/aaa-rule

aaa-rule-list

Delete Object

DELETE

/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}

aaa-rule attributes

aaa-rule-list

aaa-rule-list is **JSON List** of *aaa-rule attributes*

aaa-rule-list : [

{ *aaa-rule attributes* },

{ *aaa-rule attributes* },

...

]

aaa-rule attributes

access-list

Description: access-list is a **JSON Block**. Please see below for *access-list*

Type: Object

action

Description 'allow': Allow traffic that matches this rule; 'deny': Deny traffic that matches this rule;

Type: string

Supported Values: allow, deny

auth-failure-bypass

Description Forward client request even though authentication has failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-template

Description Specify authentication template name to bind to the AAA rule

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/template*

authorize-policy

Description Specify authorization policy to bind to the AAA rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authorization/policy*

captcha-authz-policy

Description Specify authorization policy for CAPTCHA (Authorization policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authorization/policy*

domain-name

Description Specify domain name to bind to the AAA rule (ex: a10networks.com, www.a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

domain-whitelist

Description Specify the AC type class-list for the domain-whitelist

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

host

Type: List

index

Description Specify AAA rule index

Type: number

Range: 1-256

match-encoded-uri

Description Enable URL decoding for URI matching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify port number for aaa-rule, default is 0 for all port numbers

Type: number

Range: 1-65535

sampling-enable

Type: List

uri

Type: List

user-agent

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_count': some help string; 'hit_deny': some help string; 'hit_auth': some help string; 'hit_bypass': some help string; 'failure_bypass': some help string;

Type: string

Supported Values: all, total_count, hit_deny, hit_auth, hit_bypass, failure_bypass

uri

Specification	Value
Type	*list*
Block object keys	

match-type

Description 'contains': Match URI if request URI contains specified URI; 'ends-with': Match URI if request URI ends with specified URI; 'equals': Match URI if request URI equals specified URI; 'starts-with': Match URI if request URI starts with specified URI;

Type: string

Supported Values: contains, ends-with, equals, starts-with

uri-str

Description Specify URI string

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

user-agent

Specification	Value
Type	*list*
Block object keys	

user-agent-match-type

Description 'contains': Match request User-Agent header if it contains specified string; 'ends-with': Match request User-Agent header if it ends with specified string; 'equals': Match request User-Agent header if it equals specified string; 'starts-with': Match request User-Agent header if it starts with specified string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

user-agent-str

Description Specify request User-Agent string

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

host

Specification	Value
Type	*list*
Block object keys	

host-match-type

Description 'contains': Match HOST if request HTTP HOST header contains specified hostname; 'ends-with': Match HOST if request HTTP HOST header ends with specified hostname; 'equals': Match HOST if request HTTP HOST header equals specified hostname; 'starts-with': Match HOST if request HTTP HOST header starts with specified hostname;

Type: string

Supported Values: contains, ends-with, equals, starts-with

host-str

Description Specify URI string

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Mutual Exclusion: acl-id and acl-name are mutually exclusive

Reference Object: */axapi/v3/access-list/standard*

acl-name

Description 'ip-name': Apply an IP named access list; 'ipv6-name': Apply an IPv6 named access list;

Type: string

Supported Values: ip-name, ipv6-name

Mutual Exclusion: acl-name and acl-id are mutually exclusive

name

Description Specify Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

2.1.4 aam aaa-policy aaa-rule stats

Statistics for the object aaa-rule

aaa-rule Specification

Parameter	Value
Type	*Collection*
Collection Name	*aaa-rule-list*
Collection URI	/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}
Element Name	aaa-rule
Element URI	/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}/stats
Element Attributes	aaa-rule_attributes
Partition Visibility	None
Schema	`aaa-rule schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}

aaa-rule attributes

Create List

POST

/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}

aaa-rule attributes

Get Object

GET

/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}/stats

aaa-rule attributes

Get List

GET

/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}

aaa-rule-list

Modify Object

POST

/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}/stats

aaa-rule attributes

Replace Object

PUT

/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}/stats

aaa-rule attributes

Replace List

PUT

/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}

aaa-rule-list

Delete Object

DELETE

/axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}/stats

aaa-rule attributes

aaa-rule-list

aaa-rule-list is **JSON List** of *aaa-rule attributes*

aaa-rule-list : [

{ *aaa-rule attributes* },

{ *aaa-rule attributes* },

…

]

aaa-rule attributes

index

Description Specify AAA rule index

Type: number

Range: 1-256

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

failure_bypass

Description some help string

Type: number

Format: counter

hit_auth

Description some help string

Type: number

Format: counter

hit_bypass

Description some help string

Type: number

Format: counter

hit_deny

Description some help string

Type: number

Format: counter

total_count

Description some help string

Type: number

Format: counter

2.1.5 aam aaa-policy stats

Statistics for the object aaa-policy

aaa-policy Specification

Parameter	Value
Type	*Collection*
Collection Name	*aaa-policy-list*
Collection URI	/axapi/v3/aam/aaa-policy/{name}
Element Name	aaa-policy
Element URI	/axapi/v3/aam/aaa-policy/{name}/stats
Element Attributes	aaa-policy_attributes
Partition Visibility	None
Schema	`aaa-policy schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/aaa-policy/{name}

aaa-policy attributes

Create List

POST

/axapi/v3/aam/aaa-policy/{name}

aaa-policy attributes

Get Object

GET

/axapi/v3/aam/aaa-policy/{name}/stats

aaa-policy attributes

Get List

GET

/axapi/v3/aam/aaa-policy/{name}

aaa-policy-list

Modify Object

POST

/axapi/v3/aam/aaa-policy/{name}/stats

aaa-policy attributes

Replace Object

PUT

/axapi/v3/aam/aaa-policy/{name}/stats

aaa-policy attributes

Replace List

PUT

/axapi/v3/aam/aaa-policy/{name}

aaa-policy-list

Delete Object

DELETE

/axapi/v3/aam/aaa-policy/{name}/stats

aaa-policy attributes

aaa-policy-list

aaa-policy-list is **JSON List** of *aaa-policy attributes*

```
aaa-policy-list : [
        { aaa-policy attributes },
        { aaa-policy attributes },
        ...
    ]
```

aaa-policy attributes

aaa-rule-list

Type: List

Reference Object: */axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}*

name

Description Specify AAA policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

aaa-rule-list

Specification	Value
Type	*list*
Block object keys	

index

Description Specify AAA rule index

Type: number

Range: 1-256

stats

Description: stats is a **JSON Block**. Please see below for *aaa-rule-list_stats*

Type: Object

aaa-rule-list_stats

Specification	Value
Type	*object*

failure_bypass

Description some help string

Type: number

Format: counter

hit_auth

Description some help string

Type: number

Format: counter

hit_bypass

Description some help string

Type: number

Format: counter

hit_deny

Description some help string

Type: number

Format: counter

total_count

Description some help string

Type: number

Format: counter

stats

Specification	Value
Type	*object*

error

Description Error

Type: number

Format: counter

failure-bypass

Description Auth Failure Bypass

Type: number

Format: counter

req

Description Request

Type: number

Format: counter

req-auth

Description Request Matching Authentication Template

Type: number

Format: counter

req-bypass

Description Request Bypassed

Type: number

Format: counter

req-reject

Description Request Rejected

Type: number

Format: counter

req-skip

Description Request Skipped

Type: number

Format: counter

2.1.6 aam access-log oper

Operational Status for the object access-log

access-log Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	access-log
Element URI	/axapi/v3/aam/access-log/oper

Reference Object: */axapi/v3/aam/authentication/session*

session-attr

Description: session-attr is a **JSON Block**. Please see below for *session-attr*

Type: Object

Reference Object: */axapi/v3/aam/authentication/session-attr*

template-list

Type: List

Reference Object: */axapi/v3/aam/authentication/template/{name}*

jwt-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'redirect': redirect JWT to specific URI; 'relay': relay JWT to back-end;

Type: string

Supported Values: redirect, relay

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

issuer

Description Specify JWT issuer claim value

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

jwt-relay-uri

Description Specify JWT relay URI (for relay action)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

name

Description Specify JWT issuer template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description The JWT signature secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

signature-secret

Description Specify the JWT signature secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

token-lifetime

Description Specify JWT token lifetime (Specify lifetime (in seconds), default is 300.)

Type: number

Range: 0-86400

Default: 300

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

account

Specification	Value
Type	*object*

kerberos-spn-list

Type: List

Reference Object: */axapi/v3/aam/authentication/account/kerberos-spn/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

account_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response;

Type: string

Supported Values: all, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other

account_kerberos-spn-list

Specification	Value
Type	*list*
Block object keys	

account

Description Specify domain account for SPN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.)

name

Description Specify AD account name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of domain account

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

realm

Description Specify Kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description Password of AD account

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

service-principal-name

Description Specify service principal name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

portal-list

Specification	Value
Type	*list*
Block object keys	

change-password

Description: change-password is a **JSON Block**. Please see below for *portal-list_change-password*

Type: Object

Reference Object: */axapi/v3/aam/authentication/portal/{name}/change-password*

logo-cfg

Description: logo-cfg is a **JSON Block**. Please see below for *portal-list_logo-cfg*

Type: Object

logon

Description: logon is a **JSON Block**. Please see below for *portal-list_logon*

Type: Object

Reference Object: */axapi/v3/aam/authentication/portal/{name}/logon*

logon-fail

Description: logon-fail is a **JSON Block**. Please see below for *portal-list_logon-fail*

Type: Object

Reference Object: */axapi/v3/aam/authentication/portal/{name}/logon-fail*

name

Description 'default-portal': Default portal configuration;

Type: string

Supported Values: default-portal

notify-change-password

Description: notify-change-password is a **JSON Block**. Please see below for *portal-list_notify-change-password*

Type: Object

Reference Object: */axapi/v3/aam/authentication/portal/{name}/notify-change-password*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

portal-list_logon-fail

Specification	Value
Type	*object*

background

Description: background is a **JSON Block**. Please see below for *portal-list_logon-fail_background*

Type: Object

fail-msg-cfg

Description: fail-msg-cfg is a **JSON Block**. Please see below for *portal-list_logon-fail_fail-msg-cfg*

Type: Object

title-cfg

Description: title-cfg is a **JSON Block**. Please see below for *portal-list_logon-fail_title-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

portal-list_logon-fail_fail-msg-cfg

Specification	Value
Type	*object*

fail-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure logon failure message in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

fail-text

Description Specify logon failure message (Default: Login Failed!!)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-list_logon-fail_title-cfg

Specification	Value
Type	*object*

title

Description Configure title in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: title-color-name and title-color-value are mutually exclusive

title-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: title-color-value and title-color-name are mutually exclusive

title-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: title-face and title-font-custom are mutually exclusive

title-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: title-font-custom and title-face are mutually exclusive

title-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

title-text

Description Specify title (Default: Try Too Many Times)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: User Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

portal-list_change-password

Specification	Value
Type	*object*

action-url

Description Specify form action URL in default change password page (Default: /change.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *portal-list_change-password_background*

Type: Object

cfm-pwd-cfg

Description: cfm-pwd-cfg is a **JSON Block**. Please see below for *portal-list_change-password_cfm-pwd-cfg*

Type: Object

confirm-password-var

Description Specify confirm password variable name in default change password page (Default: cp_cfm_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-password-var

Description Specify new password variable name in default change password page (Default: cp_new_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pwd-cfg

Description: new-pwd-cfg is a **JSON Block**. Please see below for *portal-list_change-password_new-pwd-cfg*

Type: Object

old-password-var

Description Specify old password variable name in default change password page (Default: cp_old_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Description: old-pwd-cfg is a **JSON Block**. Please see below for *portal-list_change-password_old-pwd-cfg*

Type: Object

reset-text

Description Specify reset button text in default change password page (Default: Reset)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default change password page (Default: Submit)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

title-cfg

Description: title-cfg is a **JSON Block**. Please see below for *portal-list_change-password_title-cfg*

Type: Object

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *portal-list_change-password_username-cfg*

Type: Object

username-var

Description Specify username variable name in default change password page (Default: cp_usr)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

portal-list_change-password_new-pwd-cfg

Specification	Value
Type	*object*

new-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: new-color-name and new-color-value are mutually exclusive

new-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: new-color-value and new-color-name are mutually exclusive

new-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: new-face and new-font-custom are mutually exclusive

new-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-font-custom and new-face are mutually exclusive

new-password

Description Configure new password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

new-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

new-text

Description Specify new password text (Default: New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-list_change-password_title-cfg

Specification	Value
Type	*object*

title

Description Configure title in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: title-color-name and title-color-value are mutually exclusive

title-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: title-color-value and title-color-name are mutually exclusive

title-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: title-face and title-font-custom are mutually exclusive

title-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: title-font-custom and title-face are mutually exclusive

title-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

title-text

Description Specify title (Default: Please Change Your Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-list_change-password_old-pwd-cfg

Specification	Value
Type	*object*

old-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: old-color-name and old-color-value are mutually exclusive

old-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: old-color-value and old-color-name are mutually exclusive

old-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: old-face and old-font-custom are mutually exclusive

old-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: old-font-custom and old-face are mutually exclusive

old-password

Description Configure old password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

old-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

old-text

Description Specify old password text (Default: Old Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-list_change-password_background

Specification	Value
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name, bgfile, and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value, bgfile, and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile, bgcolor-name, and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

portal-list_change-password_cfm-pwd-cfg

Specification	Value
Type	*object*

cfm-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: cfm-color-name and cfm-color-value are mutually exclusive

cfm-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: cfm-color-value and cfm-color-name are mutually exclusive

cfm-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: cfm-face and cfm-font-custom are mutually exclusive

cfm-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: cfm-font-custom and cfm-face are mutually exclusive

cfm-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

cfm-text

Description Specify confirm password text (Default: Confirm New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password

Description Configure confirm password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

portal-list_change-password_username-cfg

Specification	Value
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Specification	Value
Type	*object*

enable

Description Enable authentication logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

facility

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use;

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'syslog': Syslog Format (default); 'cef': Common Event Format;

Type: string

Supported Values: syslog, cef

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay

Specification	Value
Type	*object*

form-based

Description: form-based is a **JSON Block**. Please see below for *relay_form-based*

Type: Object

Reference Object: */axapi/v3/aam/authentication/relay/form-based*

http-basic

Description: http-basic is a **JSON Block**. Please see below for *relay_http-basic*

Type: Object

Reference Object: */axapi/v3/aam/authentication/relay/http-basic*

kerberos

Description: kerberos is a **JSON Block**. Please see below for *relay_kerberos*

Type: Object

Reference Object: */axapi/v3/aam/authentication/relay/kerberos*

oauth-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/oauth/{name}*

saml-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/saml/{name}*

ws-federation-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/ws-federation/{name}*

relay_form-based

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/form-based/instance/{name}*

relay_form-based_instance-list

Specification	Value
Type	*list*
Block object keys	

name

Description Specify form-based authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-form-inst-tmpl*

request-uri-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri/{match-type}+{uri}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_form-based_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'invalid_srv_rsp': Invalid Server Response; 'post_fail': POST Failed; 'invalid_cred': Invalid Credential; 'bad_req': Bad Request; 'not_fnd': Not Found; 'error': Internal Server Error; 'other_error': Other Error;

Type: string

Supported Values: all, request, invalid_srv_rsp, post_fail, invalid_cred, bad_req, not_fnd, error, other_error

relay_form-based_instance-list_request-uri-list

Specification	Value
Type	*list*
Block object keys	

action-uri

Description Specify the action-URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cookie

Description: cookie is a **JSON Block**. Please see below for *relay_form-based_instance-list_request-uri-list_cookie*

Type: Object

domain-variable

Description Specify domain variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

max-packet-collect-size

Description Specify the max packet collection size in bytes, default is 1MB

Type: number

Range: 1024-2097152

Default: 1048576

other-variables

Description Specify other variables (n1=v1&n2=v2) in form relay

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uri

Description Specify request URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-variable

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_form-based_instance-list_request-uri-list_cookie

Specification	Value
Type	*object*

cookie-value

Description: cookie-value is a **JSON Block**. Please see below for *relay_form-based_instance-list_request-uri-list_cookie_cookie-value*

Type: Object

relay_form-based_instance-list_request-uri-list_cookie_cookie-value

Specification	Value
Type	*object*

cookie-value

Description Specify cookie in POST packet

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

relay_ws-federation-list

Specification	Value
Type	*list*
Block object keys	

application-server

Description 'sharepoint': Microsoft SharePoint; 'exchange-owa': Microsoft Exchange OWA;

Type: string

Supported Values: sharepoint, exchange-owa

authentication-uri

Description Specify WS-Federation relay URI, default is /_trust/

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify WS-Federation authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-ws-fed-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_ws-federation-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure;

Type: string

Supported Values: all, request, success, failure

relay_oauth-list

Specification	Value
Type	*list*
Block object keys	

all

Description All URI can be relay

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and match-type are mutually exclusive

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

Mutual Exclusion: match-type and all are mutually exclusive

match-uri

Description

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description Specify oauth authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-type

Description 'access-token': Relay access token to backend; 'id-token': Relay JWT to backend;

Type: string

Supported Values: access-token, id-token

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_oauth-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'relay-req': some help string; 'relay-succ': some help string; 'relay-fail': some help string;

Type: string

Supported Values: all, relay-req, relay-succ, relay-fail

relay_saml-list

Specification	Value
Type	*list*
Block object keys	

idp-auth-uri

Description Specify the URI for IDP to handle SAML authentication request

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

match-uri

Description Match URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method

Description 'get-from-backend': Get RelayState parameter from backend server; 'request-uri': Use the (URL encoded) current request-uri as the RelayState;

Type: string

Supported Values: get-from-backend, request-uri

Mutual Exclusion: method and value are mutually exclusive

name

Description Specify SAML authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-acs-uri

Description Specify the backend server assertion consuming service URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

retry-number

Description Specify how many continuous fail for SAML relay will trigger. Default will not retry.

Type: number

Range: 0-10

Default: 0

sampling-enable

Type: List

server-cookie-name

Description Specify the cookie name that used by backend server for authenticated users

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Use the fixed string as the RelayState

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: value and method are mutually exclusive

relay_saml-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure; 'error': Error;

Type: string

Supported Values: all, request, success, failure, error

relay_kerberos

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/kerberos/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_kerberos_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Total Request Send; 'response-get': Total Response Get; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error;

Type: string

Supported Values: all, request-send, response-get, timeout-error, other-error, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

relay_kerberos_instance-list

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

kerberos-account

Description Specify the kerberos account name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kerberos-kdc

Description Specify the kerberos kdc ip or host name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc and kerberos-kdc-service-group are mutually exclusive

kerberos-kdc-service-group

Description Specify an authentication service group as multiple KDCs

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc-service-group and kerberos-kdc are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

kerberos-realm

Description Specify the kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify Kerberos authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of Kerberos password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify The KDC port, default is 88

Type: number

Range: 1-65535

Default: 88

sampling-enable

Type: List

secret-string

Description The kerberos client password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

timeout

Description Specify timeout for kerberos transport, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_kerberos_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Request Send; 'response-receive': Response Receive; 'current-requests-of-user': Current Pending Requests of User; 'tickets': Tickets;

Type: string

Supported Values: all, request-send, response-receive, current-requests-of-user, tickets

relay_http-basic

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/http-basic/instance/{name}*

relay_http-basic_instance-list

Specification	Value
Type	*list*
Block object keys	

domain

Description Specify user domain, default is null

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-format

Description 'user-principal-name': Append domain with User Principal Name format. (e.g. user@domain); 'down-level-logon-name': Append domain with Down-Level Logon Name format. (e.g. domainuser);

Type: string

Supported Values: user-principal-name, down-level-logon-name

Default: down-level-logon-name

name

Description Specify HTTP basic authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-hbase-inst-tmpl*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_http-basic_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'success': Success; 'no-creds': No Credential; 'bad-req': Bad Request; 'unauth': Unauthorized; 'forbidden': Forbidden; 'not-found': Not Found; 'server-error': Internal Server Error; 'unavailable': Service Unavailable;

Type: string

Supported Values: all, success, no-creds, bad-req, unauth, forbidden, not-found, server-error, unavailable

jwks

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

session-attr

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logon

Specification	Value
Type	*object*

form-based-list

Type: List

Reference Object: */axapi/v3/aam/authentication/logon/form-based/{name}*

http-authenticate

Description: http-authenticate is a **JSON Block**. Please see below for *logon_http-authenticate*

Type: Object

Reference Object: */axapi/v3/aam/authentication/logon/http-authenticate*

logon_form-based-list

Specification	Value
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

challenge-variable

Description Specify challenge variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-page-cfg

Description: cp-page-cfg is a **JSON Block**. Please see below for *logon_form-based-list_cp-page-cfg*

Type: Object

csp-support

Description: csp-support is a **JSON Block**. Please see below for *logon_form-based-list_csp-support*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

hsts-timeout

Description Set HSTS policy expired timeout in seconds, 0 means to disable HSTS policy

Type: number

Range: 0-315360000

logon-page-cfg

Description: logon-page-cfg is a **JSON Block**. Please see below for *logon_form-based-list_logon-page-cfg*

Type: Object

name

Description Specify form-based authentication logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-variable

Description Specify new-pin variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

notify-cp-page-cfg

Description: notify-cp-page-cfg is a **JSON Block**. Please see below for *logon_form-based-list_notify-cp-page-cfg*

Type: Object

portal

Description: portal is a **JSON Block**. Please see below for *logon_form-based-list_portal*

Type: Object

retry

Description Maximum number of consecutive failed logon attempts (default 3)

Type: number

Range: 1-32

Default: 3

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logon_form-based-list_csp-support

Specification	Value
Type	*object*

none

Description Set CSP frame-ancestors to none (also X-Frame-Options deny)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: none, self, and specificURI are mutually exclusive

optional-second-URI

Description Set optional second customized CSP URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

self

Description Set CSP frame-ancestors to self (also X-Frame-Options same-origin)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: self and none are mutually exclusive

specificURI

Description Set customized CSP frame-ancestors (maximum 2 URIs can be set)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: specificURI and none are mutually exclusive

logon_form-based-list_notify-cp-page-cfg

Specification	Value
Type	*object*

notifychangepassword-change-url

Description Specify change password action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

notifychangepassword-continue-url

Description Specify continue action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

logon_form-based-list_portal

Specification	Value
Type	*object*

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page, new-pin-page, and next-token-page are mutually exclusive

changepasswordpage

Description Specify change password page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

default-portal

Description Use default portal

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-portal and portal-name are mutually exclusive

failpage

Description Specify logon fail page name (portal fail page name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon

Description Specify logon page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

next-token-page

Description Specify next token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: next-token-page and challenge-page are mutually exclusive

notifychangepasswordpage

Description Specify change password notification page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-name

Description Specify portal name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: portal-name and default-portal are mutually exclusive

logon_form-based-list_logon-page-cfg

Specification	Value
Type	*object*

action-url

Description Specify form submission action url

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

authz-failure-message

Description Specify authorization failure message shown in logon page (Specify error string, default is "Authorization failed. Please contact your system administrator.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

captcha-variable

Description Specify captcha variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

disable-change-password-link

Description Don't display change password link on logon page forcibly even backend authentication server supports it (LDAP or Kerberos)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

login-failure-message

Description Specify login failure message shown in logon page (Specify error string, default is “Invalid username or password. Please try again.”)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passcode-variable

Description Specify passcode variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-variable

Description Specify username variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon_form-based-list_cp-page-cfg

Specification	Value
Type	*object*

changepassword-url

Description Specify changepassword form submission action url (changepassword action url)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cp-cfm-pwd-enum

Description 'changepassword-password-confirm-variable': Specify password confirm variable name in form submission;

Type: string

Supported Values: changepassword-password-confirm-variable

cp-cfm-pwd-var

Description Specify password confirm variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-new-pwd-enum

Description 'changepassword-new-password-variable': Specify new password variable name in form submission;

Type: string

Supported Values: changepassword-new-password-variable

cp-new-pwd-var

Description Specify new password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-old-pwd-enum

Description 'changepassword-old-password-variable': Specify old password variable name in form submission;

Type: string

Supported Values: changepassword-old-password-variable

cp-old-pwd-var

Description Specify old password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-user-enum

Description 'changepassword-username-variable': Specify username variable name in form submission;

Type: string

Supported Values: changepassword-username-variable

cp-user-var

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon_http-authenticate

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/logon/http-authenticate/instance/{name}*

logon_http-authenticate_instance-list

Specification	Value
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-method

Description: auth-method is a **JSON Block**. Please see below for *logon_http-authenticate_instance-list_auth-method*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

hsts-timeout

Description Set HSTS policy expired timeout in seconds, 0 means to disable HSTS policy

Type: number

Range: 0-315360000

name

Description Specify HTTP-Authenticate logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-logon-http-ins-tmpl*

retry

Description Maximum number of consecutive failed logon attempts (default 3)

Type: number

Range: 1-32

Default: 3

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logon_http-authenticate_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'spn_krb_request': SPN Kerberos Request; 'spn_krb_success': SPN Kerberos Success; 'spn_krb_faiure': SPN Kerberos Failure;

Type: string

Supported Values: all, spn_krb_request, spn_krb_success, spn_krb_faiure

logon_http-authenticate_instance-list_auth-method

Specification	Value
Type	*object*

basic

Description: basic is a **JSON Block**. Please see below for *logon_http-authenticate_instance-list_auth-method_basic*

Type: Object

negotiate

Description: negotiate is a **JSON Block**. Please see below for *logon_http-authenticate_instance-list_auth-method_negotiate*

Type: Object

logon_http-authenticate_instance-list_auth-method_negotiate

Specification	Value
Type	*object*

negotiate-enable

Description Enable SPENGO logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logon_http-authenticate_instance-list_auth-method_basic

Specification	Value
Type	*object*

basic-enable

Description Enable Basic logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-realm

Description Specify realm for basic logon

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page and new-pin-page are mutually exclusive

challenge-response-form

Description Specify challenge-response form for RSA-RADIUS authentication

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-variable

Description Specify challenge variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

new-pin-variable

Description Specify new PIN variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-page

Description Specify next-token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group-list

Specification	Value
Type	*list*
Block object keys	

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

lb-method

Description 'round-robin': Round robin on server level;

Type: string

Supported Values: round-robin

member-list

Type: List

Reference Object: */axapi/v3/aam/authentication/service-group/{name}/member/{name}+{port}*

name

Description Specify AAM service group name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-service-group-tmpl*

protocol

Description 'tcp': TCP AAM service; 'udp': UDP AAM service;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'server_selection_fail_drop': Drops due to Service selection failure; 'server_selection_fail_reset': Resets sent out for Service selection failure; 'service_peak_conn': Peak connection count for the Service Group; 'service_healthy_host': Service Group healthy host count; 'service_unhealthy_host': Service Group unhealthy host count; 'service_req_count': Service Group request count; 'service_resp_count': Service Group response count; 'service_resp_2xx': Service Group response 2xx count; 'service_resp_3xx': Service Group response 3xx count; 'service_resp_4xx': Service Group response 4xx count; 'service_resp_5xx': Service Group response 5xx count; 'service_curr_conn_overflow': Current connection counter overflow count;

Type: string

Supported Values: all, server_selection_fail_drop, server_selection_fail_reset, service_peak_conn, service_healthy_host, service_unhealthy_host, service_req_count, service_resp_count, service_resp_2xx, service_resp_3xx, service_resp_4xx, service_resp_5xx, service_curr_conn_overflow

service-group-list_member-list

Specification	Value
Type	*list*
Block object keys	

member-priority

Description Priority of Port in the Group

Type: number

Range: 1-16

member-state

Description 'enable': Enable member service port; 'disable': Disable member service port;

Type: string

Supported Values: enable, disable

Default: enable

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/server/ldap*

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-service-group-mem-tmpl*

port

Description Port number

Type: number

Range: 1-65534

Default: 65534

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_member-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_conn': Total established connections; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_status_code_2xx': Total reverse packets inspected status code 2xx; 'total_rev_pkts_inspected_status_code_non_5xx': Total reverse packets inspected status code non 5xx; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total requests successful; 'peak_conn': some help string; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'curr_conn_overflow': Current connection counter overflow count;

Type: string

Supported Values: all, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, total_rev_pkts_inspected, total_rev_pkts_inspected_status_code_2xx, total_rev_pkts_inspected_status_code_non_5xx, curr_req, total_req, total_req_succ, peak_conn, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, curr_conn_overflow

global

Specification	Value
Type	*object*

max-auth-resp-size

Description Specify the max auth resp size in bytes(from authd to a10lb), default is 64KB

Type: number

Range: 2048-131072

Default: 65536

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'requests': Total Authentication Request; 'responses': Total Authentication Response; 'misses': Total Authentication Request Missed; 'ocsp-stapling-requests-to-a10authd': Total OCSP Stapling Request; 'ocsp-stapling-responses-from-a10authd': Total OCSP Stapling Response; 'opened-socket': Total AAM Socket Opened; 'open-socket-failed': Total AAM Open Socket Failed; 'connect': Total AAM Connection; 'connect-failed': Total AAM Connect Failed; 'created-timer': Total AAM Timer Created; 'create-timer-failed': Total AAM Timer Creation Failed; 'total-request': Total Request Received by A10 Auth Service; 'get-socket-option-failed': Total AAM Get Socket Option Failed; 'aflex-authz-succ': Total Authorization success number in aFleX; 'aflex-authz-fail': Total Authorization failure number in aFleX; 'authn-success': Total Authentication success number; 'authn-failure': Total Authentication failure number; 'authz-success': Total Authorization success number; 'authz-failure': Total Authorization failure number; 'active-session': Total Active Auth-Sessions; 'active-user': Total Active Users; 'dns-resolve-failed': Total AAM DNS resolve failed; 'domain-wlist-match': Total DOMAIN WHITELIST match number; 'domain-wlist-unmatch': Total DOMAIN WHITELIST unmatch number;

Type: string

Supported Values: all, requests, responses, misses, ocsp-stapling-requests-to-a10authd, ocsp-stapling-responses-from-a10authd, opened-socket, open-socket-failed, connect, connect-failed, created-timer, create-timer-failed, total-request, get-socket-option-failed, aflex-authz-succ, aflex-authz-fail, authn-success, authn-failure, authz-success, authz-failure, active-session, active-user, dns-resolve-failed, domain-wlist-match, domain-wlist-unmatch, auth_ctx_num

saml

Specification	Value
Type	*object*

global

Description: global is a **JSON Block**. Please see below for *saml_global*

Type: Object

Reference Object: */axapi/v3/aam/authentication/saml/global*

identity-provider-list

Type: List

Reference Object: */axapi/v3/aam/authentication/saml/identity-provider/{name}*

metadata

Description: metadata is a **JSON Block**. Please see below for *saml_metadata*

Type: Object

saml_service-provider-list

Specification	Value
Type	*list*
Block object keys	

SP-initiated-single-logout-service

Type: List

acs-uri-bypass

Description After user authenticated, bypass requests with assertion-consuming-service location URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

adfs-ws-federation

Description: adfs-ws-federation is a **JSON Block**. Please see below for *saml_service-provider-list_adfs-ws-federation*

Type: Object

artifact-resolution-service

Type: List

assertion-consuming-service

Type: List

bad-request-redirect-url

Description Specify URL to redirect

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

certificate

Description SAML service provider certificate file (PFX format is required.)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

entity-id

Description SAML service provider entity ID

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

metadata-export-service

Description: metadata-export-service is a **JSON Block**. Please see below for *saml_service-provider-list_metadata-export-service*

Type: Object

name

Description Specify SAML authentication service provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-saml-service-prov-tmpl*

require-assertion-signed

Description: require-assertion-signed is a **JSON Block**. Please see below for *saml_service-provider-list_require-assertion-signed*

Type: Object

saml-request-signed

Description: saml-request-signed is a **JSON Block**. Please see below for *saml_service-provider-list_saml-request-signed*

Type: Object

sampling-enable

Type: List

service-url

Description SAML service provider service URL (ex. https://www.a10networks.com/saml.sso)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

signature-algorithm

Description 'SHA1': use SHA1 as signature algorithm (default); 'SHA256': use SHA256 as signature algorithm;

Type: string

Supported Values: SHA1, SHA256

Default: SHA1

single-logout-service

Type: List

soap-tls-certificate-validate

Description: soap-tls-certificate-validate is a **JSON Block**. Please see below for *saml_service-provider-list_soap-tls-certificate-validate*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

username-attribute

Description Specify the assertion attribute which value is username

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

saml_service-provider-list_require-assertion-signed

Specification	Value
Type	*object*

require-assertion-signed-enable

Description Enable required signing of SAML assertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml_service-provider-list_single-logout-service

Specification	Value
Type	*list*
Block object keys	

SLO-binding

Description 'post': POST binding of single logout service; 'redirect': Redirect binding of single logout service; 'soap': SOAP binding of single logout service;

Type: string

Supported Values: post, redirect, soap

SLO-location

Description The location of name-id management service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

saml_service-provider-list_assertion-consuming-service

Specification	Value
Type	*list*
Block object keys	

assertion-binding

Description 'artifact': Artifact binding of assertion consuming service; 'paos': PAOS binding of assertion consuming service; 'post': POST binding of assertion consuming service;

Type: string

Supported Values: artifact, paos, post

assertion-index

Description The index of assertion consuming service

Type: number

Range: 0-5

assertion-location

Description The location of assertion consuming service endpoint. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

saml_service-provider-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'sp-metadata-export-req': Metadata Export Request; 'sp-metadata-export-success': Metadata Export Success; 'login-auth-req': Login Authentication Request; 'login-auth-resp': Login Authentication Response; 'acs-req': SAML Single-Sign-On Request; 'acs-success': SAML Single-Sign-On Success; 'acs-authz-fail': SAML Single-Sign-On Authorization Fail; 'acs-error': SAML Single-Sign-On Error; 'slo-req': Single Logout Request; 'slo-success': Single Logout Success; 'slo-error': Single Logout Error; 'sp-slo-req': SP-initiated Single Logout Request; 'glo-slo-success': Total Global Logout Success; 'loc-slo-success': Total Local Logout Success; 'par-slo-success': Total Partial Logout Success; 'other-error': Other Error;

Type: string

Supported Values: all, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, other-error

saml_service-provider-list_saml-request-signed

Specification	Value
Type	*object*

saml-request-signed-disable

Description Disable signing signature for SAML (Authn/Artifact Resolve) requests

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml_service-provider-list_SP-initiated-single-logout-service

Specification	Value
Type	*list*
Block object keys	

SP-SLO-location

Description The location of SP-initiated single logout service endpoint. (ex. /Logout)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

asynchronous

Description the IDP will not send a logout response to AX

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml_service-provider-list_adfs-ws-federation

Specification	Value
Type	*object*

ws-federation-enable

Description Enable ADFS WS-Federation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml_service-provider-list_soap-tls-certificate-validate

Specification	Value
Type	*object*

soap-tls-certificate-validate-disable

Description Disable verification for server certificate in TLS session when resolving artificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml_service-provider-list_artifact-resolution-service

Specification	Value
Type	*list*
Block object keys	

artifact-binding

Description 'soap': SOAP binding of artifact resolution service;

Type: string

Supported Values: soap

artifact-index

Description The index of artifact resolution service

Type: number

Range: 0-5

artifact-location

Description The location of artifact resolution service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

saml_service-provider-list_metadata-export-service

Specification	Value
Type	*object*

md-export-location

Description Specify the URI to export SP metadata (Export URI. Default is /A10SP_Metadata)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sign-xml

Description Sign exported SP metadata XML with SP's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml_identity-provider-list

Specification	Value
Type	*list*
Block object keys	

metadata

Description URL of SAML identity provider's metadata file

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description SAML authentication identity provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

reload-interval

Description Specify URI metadata reload period (Specify URI metadata reload period in seconds, default is 28800)

Type: number

Range: 1-86400

Default: 28800

reload-metadata

Description Reload IdP's metadata immediately

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

saml_global

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

saml_global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'requests-to-a10saml': Total Request to A10 SAML Service; 'responses-from-a10saml': Total Response from A10 SAML Service; 'sp-metadata-export-req': Total Metadata Export Request; 'sp-metadata-export-success': Toal Metadata Export Success; 'login-auth-req': Total Login Authentication Request; 'login-auth-resp': Total Login Authentication Response; 'acs-req': Total SAML Single-Sign-On Request; 'acs-success': Total SAML Single-Sign-On Success; 'acs-authz-fail': Total SAML Single-Sign-On Authorization Fail; 'acs-error': Total SAML Single-Sign-On Error; 'slo-req': Total Single Logout Request; 'slo-success': Total Single Logout Success; 'slo-error': Total Single Logout Error; 'sp-slo-req': Total SP-initiated Single Logout Request; 'glo-slo-success': Total Global Logout Success; 'loc-slo-success': Total Local Logout Success; 'par-slo-success': Total Partial Logout Success; 'relay-req': some help string; 'relay-success': some help string; 'relay-fail': some help string; 'relay-error': some help string; 'other-error': Total Other Error;

Type: string

Supported Values: all, requests-to-a10saml, responses-from-a10saml, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, relay-req, relay-success, relay-fail, relay-error, other-error

saml_session

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

saml_metadata-monitor

Specification	Value
Type	*object*

acs-continuous-fail-threshold

Description Specify how many ACS continuous fails will trigger metadata reload (ACS continuous fail threshold (default: 10))

Type: number

Range: 2-254

acs-missing-period

Description Specify how long no acs request will trigger metadata reload (in seconds (default: 60))

Type: number

Range: 1-254

acs-missing-threshold

Description Specify how many ACS request missing in the period will trigger metadata reload (ACS request missing threshold (default: 100))

Type: number

Range: 10-254

status

Description 'enable': Enable SAML metadata out-of-sync detection; 'disable': Disable SAML metadata out-of-sync detection;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

saml_metadata

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server

Specification	Value
Type	*object*

ldap

Description: ldap is a **JSON Block**. Please see below for *server_ldap*

Type: Object

Reference Object: */axapi/v3/aam/authentication/server/ldap*

ocsp

Description: ocsp is a **JSON Block**. Please see below for *server_ocsp*

Type: Object

Reference Object: */axapi/v3/aam/authentication/server/ocsp*

radius

Description: radius is a **JSON Block**. Please see below for *server_radius*

Type: Object

Reference Object: */axapi/v3/aam/authentication/server/radius*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

windows

Description: windows is a **JSON Block**. Please see below for *server_windows*

Type: Object

Reference Object: */axapi/v3/aam/authentication/server/windows*

server_windows

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/server/windows/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_windows_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'kerberos-request-send': Total Kerberos Request; 'kerberos-response-get': Total Kerberos Response; 'kerberos-timeout-error': Total Kerberos Timeout; 'kerberos-other-error': Total Kerberos Other Error; 'ntlm-authentication-success': Total NTLM Authentication Success; 'ntlm-authentication-failure': Total NTLM Authentication Failure; 'ntlm-proto-negotiation-success': Total NTLM Protocol Negotiation Success; 'ntlm-proto-negotiation-failure': Total NTLM Protocol Negotiation Failure; 'ntlm-session-setup-success': Total NTLM Session Setup Success; 'ntlm-session-setup-failed': Total NTLM Session Setup Failure; 'kerberos-request-normal': Total Kerberos Normal Request; 'kerberos-request-dropped': Total Kerberos Dropped Request; 'kerberos-response-success': Total Kerberos Success Response; 'kerberos-response-failure': Total Kerberos Failure Response; 'kerberos-response-error': Total Kerberos Error Response; 'kerberos-response-timeout': Total Kerberos Timeout Response; 'kerberos-response-other': Total Kerberos Other Response; 'kerberos-job-start-error': Total Kerberos Job Start Error; 'kerberos-polling-control-error': Total Kerberos Polling Control Error; 'ntlm-prepare-req-success': Total NTLM Prepare Request Success; 'ntlm-prepare-req-failed': Total NTLM Prepare Request Failed; 'ntlm-timeout-error': Total NTLM Timeout; 'ntlm-other-error': Total NTLM Other Error; 'ntlm-request-normal': Total NTLM Normal Request; 'ntlm-request-dropped': Total NTLM Dropped Request; 'ntlm-response-success': Total NTLM Success Response; 'ntlm-response-failure': Total NTLM Failure Response; 'ntlm-response-error': Total NTLM Error Response; 'ntlm-response-timeout': Total NTLM Timeout Response; 'ntlm-response-other': Total NTLM Other Response; 'ntlm-job-start-error': Total NTLM Job Start Error; 'ntlm-polling-control-error': Total NTLM Polling Control Error; 'kerberos-pw-expiry': Total Kerberos password expiry; 'kerberos-pw-change-success': Total Kerberos password change success; 'kerberos-pw-change-failure': Total Kerberos password change failure; 'kerberos-validate-kdc-success': Total Kerberos KDC Validation Success; 'kerberos-validate-kdc-failure': Total Kerberos KDC Validation Failure; 'kerberos-generate-kdc-keytab-success': Total Kerberos KDC Keytab Generation Success; 'kerberos-generate-kdc-keytab-failure': Total Kerberos KDC Keytab Generation Failure; 'kerberos-delete-kdc-keytab-success': Total Kerberos KDC Keytab Deletion Success; 'kerberos-delete-kdc-keytab-failure': Total Kerberos KDC Keytab Deletion Failure; 'kerberos-kdc-keytab-count': Current Kerberos KDC Keytab Count;

Type: string

Supported Values: all, kerberos-request-send, kerberos-response-get, kerberos-timeout-error, kerberos-other-error, kerberos-request-normal, kerberos-request-dropped, kerberos-response-success, kerberos-response-failure, kerberos-response-error, kerberos-response-timeout, kerberos-response-other, kerberos-job-start-error, kerberos-polling-control-error, kerberos-pw-expiry, kerberos-pw-change-success, kerberos-pw-change-failure, kerberos-validate-kdc-success, kerberos-validate-kdc-failure, kerberos-generate-kdc-keytab-success,

kerberos-generate-kdc-keytab-failure, kerberos-delete-kdc-keytab-success, kerberos-delete-kdc-keytab-failure, kerberos-kdc-keytab-count

server_windows_instance-list

Specification	Value
Type	*list*
Block object keys	

auth-protocol

Description: auth-protocol is a **JSON Block**. Please see below for *server_windows_instance-list_auth-protocol*

Type: Object

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *server_windows_instance-list_host*

Type: Object

name

Description Specify Windows authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-win-inst-tmpl*

realm

Description Specify realm of Windows server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-apacheds-kdc

Description Enable weak cipher (DES CRC/MD5/MD4) and merge AS-REQ in single packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify connection timeout to server, default is 10 seconds

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_windows_instance-list_host

Specification	Value
Type	*object*

hostip

Description Specify the Windows server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Specify the Windows server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

server_windows_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'krb_send_req_success': Kerberos Request; 'krb_get_resp_success': Kerberos Response; 'krb_timeout_error': Kerberos Timeout; 'krb_other_error': Kerberos Other Error; 'krb_pw_expiry': Kerberos password expiry; 'krb_pw_change_success': Kerberos password change success; 'krb_pw_change_failure': Kerberos password change failure; 'ntlm_proto_nego_success': NTLM Protocol Negotiation Success; 'ntlm_proto_nego_failure': NTLM Protocol Negotiation Failure; 'ntlm_session_setup_success': NTLM Session Setup Success; 'ntlm_session_setup_failure': NTLM Session Setup Failure; 'ntlm_prepare_req_success': NTLM Prepare Request Success; 'ntlm_prepare_req_error': NTLM Prepare Request Error; 'ntlm_auth_success': NTLM Authentication Success; 'ntlm_auth_failure': NTLM Authentication Failure; 'ntlm_timeout_error': NTLM Timeout; 'ntlm_other_error': NTLM Other Error; 'krb_validate_kdc_success': Kerberos KDC Validation Success; 'krb_validate_kdc_failure': Kerberos KDC Validation Failure;

Type: string

Supported Values: all, krb_send_req_success, krb_get_resp_success, krb_timeout_error, krb_other_error, krb_pw_expiry, krb_pw_change_success, krb_pw_change_failure, krb_validate_kdc_success, krb_validate_kdc_failure

server_windows_instance-list_auth-protocol

Specification	Value
Type	*object*

kdc-validate

Description Enable KDC validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

kerberos-kdc-validation

Description: kerberos-kdc-validation is a **JSON Block**. Please see below for *server_windows_instance-list_auth-protocol_kerberos-kdc-validation*

Type: Object

kerberos-password-change-port

Description Specify the Kerbros password change port, default is 464

Type: number

Range: 1-65534

Default: 464

kerberos-port

Description Specify the Kerberos port, default is 88

Type: number

Range: 1-65534

Default: 88

kport-hm

Description Check Kerberos port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kport-hm and kport-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

kport-hm-disable

Description Disable configured Kerberos port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kport-hm-disable and kport-hm are mutually exclusive

server_windows_instance-list_auth-protocol_kerberos-kdc-validation

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.)

kdc-account

Description Specify account for KDC validation

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kdc-password

Description Specify account password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

kdc-pwd

Description Account password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

kdc-spn

Description Specify SPN for KDC validation

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server_ocsp

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/server/ocsp/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_ocsp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'stapling-certificate-good': Total OCSP Stapling Good Certificate Response; 'stapling-certificate-revoked': Total OCSP Stapling Revoked Certificate Response; 'stapling-certificate-unknown': Total OCSP Stapling Unknown Certificate Response; 'stapling-request-normal': Total OSCP Stapling Normal Request; 'stapling-request-dropped': Total OCSP Stapling Dropped Request; 'stapling-response-success': Total OCSP Stapling Success Response; 'stapling-response-failure': Total OCSP Stapling Failure Response; 'stapling-response-error': Total OCSP Stapling Error Response; 'stapling-response-timeout': Total OCSP Stapling Timeout Response; 'stapling-response-other': Total OCSP Stapling Other Response; 'request-normal': Total OSCP Normal Request; 'request-dropped': Total OCSP Dropped Request; 'response-success': Total OCSP Success Response; 'response-failure': Total OCSP Failure Response; 'response-error': Total OCSP Error Response; 'response-timeout': Total OCSP Timeout Response; 'response-other': Total OCSP Other Response; 'job-start-error': Total OCSP Job Start Error; 'polling-control-error': Total OCSP Polling Control Error;

Type: string

Supported Values: all, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-request-normal, stapling-request-dropped, stapling-response-success, stapling-response-failure, stapling-response-error, stapling-response-timeout, stapling-response-other, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

server_ocsp_instance-list

Specification	Value
Type	*list*
Block object keys	

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

http-version

Description Set HTTP version (default 1.0)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify OCSP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ocsp-inst-tmpl*

port-health-check

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-health-check and port-health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-health-check-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-health-check-disable and port-health-check are mutually exclusive

responder-ca

Description Specify the trusted OCSP responder's CA cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

responder-cert

Description Specify the trusted OCSP responder's cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

sampling-enable

Type: List

url

Description Specify the OCSP server's address (Format: http://host{[}:port{]}/) (The OCSP server's address(Format: http://host{[}:port{]}/))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version-type

Description '1.1': HTTP version 1.1;

Type: string

Supported Values: 1.1

server_ocsp_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'certificate-good': Good Certificate Response; 'certificate-revoked': Revoked Certificate Response; 'certificate-unknown': Unknown Certificate Response; 'timeout': Timeout; 'fail': Handle OCSP response failed; 'stapling-request': OCSP Stapling Request Send; 'stapling-certificate-good': OCSP Stapling Good Certificate Response; 'stapling-certificate-revoked': OCSP Stapling Revoked Certificate Response; 'stapling-certificate-unknown': OCSP Stapling Unknown Certificate Response; 'stapling-timeout': OCSP Stapling Timeout; 'stapling-fail': Handle OCSP response failed;

Type: string

Supported Values: all, request, certificate-good, certificate-revoked, certificate-unknown, timeout, fail, stapling-request, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-timeout, stapling-fail

server_radius

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/server/radius/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_radius_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Total Authentication Success; 'authen_failure': Total Authentication Failure; 'authorize_success': Total Authorization Success; 'authorize_failure': Total Authorization Failure; 'access_challenge': Total Access-Challenge Message Receive; 'timeout_error': Total Timeout; 'other_error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, accounting-request-sent, accounting-success, accounting-failure

server_radius_instance-list

Specification	Value
Type	*list*
Block object keys	

accounting-port

Description Specify the RADIUS server's accounting port, default is 1813

Type: number

Range: 1-65534

Default: 1813

acct-port-hm

Description Specify accounting port health check method

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acct-port-hm and acct-port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

acct-port-hm-disable

Description Disable configured accounting port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: acct-port-hm-disable and acct-port-hm are mutually exclusive

auth-type

Description 'pap': PAP authentication. Default; 'mschapv2': MS-CHAPv2 authentication; 'mschapv2-pap': Use MS-CHAPv2 first. If server doesn't support it, try PAP;

Type: string

Supported Values: pap, mschapv2, mschapv2-pap

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *server_radius_instance-list_host*

Type: Object

interval

Description Specify the interval time for resend the request (second), default is 3 seconds (The interval time(second), default is 3 seconds)

Type: number

Range: 1-1024

Default: 3

message-authenticator-verify-enable

Description Verify Message-Authenticator attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify RADIUS authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-rad-inst-tmpl*

port

Description Specify the RADIUS server's authentication port, default is 1812

Type: number

Range: 1-65534

Default: 1812

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

retry

Description Specify the retry number for resend the request, default is 5 (The retry number, default is 5)

Type: number

Range: 1-32

Default: 5

sampling-enable

Type: List

secret

Description Specify the RADIUS server's secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_radius_instance-list_host

Specification	Value
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

server_radius_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Authentication Success; 'authen_failure': Authentication Failure; 'authorize_success': Authorization Success; 'authorize_failure': Authorization Failure; 'access_challenge': Access-Challenge Message Receive; 'timeout_error': Timeout; 'other_error': Other Error; 'request': Request; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, accounting-request-sent, accounting-success, accounting-failure

server_ldap

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/server/ldap/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_ldap_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Total Admin Bind Success; 'admin-bind-failure': Total Admin Bind Failure; 'bind-success': Total User Bind Success; 'bind-failure': Total User Bind Failure; 'search-success': Total Search Success; 'search-failure': Total Search Failure; 'authorize-success': Total Authorization Success; 'authorize-failure': Total Authorization Failure; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error; 'ssl-session-created': TLS/SSL Session Created; 'ssl-session-failure': TLS/SSL Session Failure; 'ldaps-idle-conn-num': LDAPS Idle Connection Number; 'ldaps-inuse-conn-num': LDAPS In-use Connection Number; 'pw-expiry': Total Password expiry; 'pw-change-success': Total password change success; 'pw-change-failure': Total password change failure;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, ssl-session-created, ssl-session-failure, ldaps-idle-conn-num, ldaps-inuse-conn-num, pw-expiry, pw-change-success, pw-change-failure

server_ldap_instance-list

Specification	Value
Type	*list*
Block object keys	

admin-dn

Description The LDAP server's admin DN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

admin-secret

Description Specify the LDAP server's admin secret password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-type

Description 'ad': Active Directory. Default; 'open-ldap': OpenLDAP;

Type: string

Supported Values: ad, open-ldap

base

Description Specify the LDAP server's search base

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

bind-with-dn

Description Enforce using DN for LDAP binding(All user input name will be used to create DN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ca-cert

Description Specify the LDAPS CA cert filename (Trusted LDAPS CA cert filename)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

default-domain

Description Specify default domain for LDAP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

derive-bind-dn

Description: derive-bind-dn is a **JSON Block**. Please see below for *server_ldap_instance-list_derive-bind-dn*

Type: Object

dn-attribute

Description Specify Distinguished Name attribute, default is CN

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: cn

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *server_ldap_instance-list_host*

Type: Object

ldaps-conn-reuse-idle-timeout

Description Specify LDAPS connection reuse idle timeout value (in seconds) (Specify idle timeout value (in seconds), default is 0 (not reuse LDAPS connection))

Type: number

Range: 0-86400

Default: 0

name

Description Specify LDAP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ldap-inst-tmpl*

port

Description Specify the LDAP server's authentication port, default is 389

Type: number

Range: 1-65534

Default: 389

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

prompt-pw-change-before-exp

Description Prompt user to change password before expiration in N days. This option only takes effect when server type is AD (Prompt user to change password before expiration in N days, default is not to prompt the user)

Type: number

Range: 1-999

protocol

Description 'ldap': Use LDAP (default); 'ldaps': Use LDAP over SSL; 'starttls': Use LDAP StartTLS;

Type: string

Supported Values: ldap, ldaps, starttls

Default: ldap

pwdmaxage

Description Specify the LDAP server's default password expiration time (in seconds) (The LDAP server's default password expiration time (in seconds), default is 0 (no expiration))

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

timeout

Description Specify timout for LDAP, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_ldap_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Admin Bind Success; 'admin-bind-failure': Admin Bind Failure; 'bind-success': User Bind Success; 'bind-failure': User Bind Failure; 'search-success': Search Success; 'search-failure': Search Failure; 'authorize-success': Authorization Success; 'authorize-failure': Authorization Failure; 'timeout-error': Timeout; 'other-error': Other Error; 'request': Request; 'ssl-session-created': TLS/SSL Session Created; 'ssl-session-failure': TLS/SSL Session Failure; 'pw_expiry': Password expiry; 'pw_change_success': Password change success; 'pw_change_failure': Password change failure;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, ssl-session-created, ssl-session-failure, pw_expiry, pw_change_success, pw_change_failure

server_ldap_instance-list_derive-bind-dn

Specification	Value
Type	*object*

username-attr

Description Specify attribute name of username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

server_ldap_instance-list_host

Specification	Value
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

captcha

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/captcha/instance/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

captcha_instance-list

Specification	Value
Type	*list*
Block object keys	

client-ip-param-name

Description Specify client ip parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

method

Description 'POST': API uses POST method; 'GET': API uses GET method;

Type: string

Supported Values: POST, GET

Default: POST

name

Description Specify captcha profile name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resp-error-code-field-name

Description Specify error code field name used in JSON response (Set field name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

resp-result-field-name

Description Specify result field name used in JSON response (Set field name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-key

Description Specify secret key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-key-param-name

Description Specify secret key parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-key-string

Description Secret key string

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

send-client-ip

Description Send client IP address in API

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify timeout for verify API response (Specify timeout value, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

token-param-name

Description Specify token parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

url

Description Specify verify API URL, default scheme is https

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

session

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

file

Specification	Value
Type	*object*

portal

Description: portal is a **JSON Block**. Please see below for *file_portal*

Type: Object

Reference Object: */axapi/v3/aam/authentication/file/portal*

portal-image

Description: portal-image is a **JSON Block**. Please see below for *file_portal-image*

Type: Object

Reference Object: */axapi/v3/aam/authentication/file/portal-image*

file_portal

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

file_portal-image

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oauth

Specification	Value
Type	*object*

authorization-server-list

Type: List

Reference Object: */axapi/v3/aam/authentication/oauth/authorization-server/{name}*

client-list

Type: List

Reference Object: */axapi/v3/aam/authentication/oauth/client/{name}*

global

Description: global is a **JSON Block**. Please see below for *oauth_global*

Type: Object

Reference Object: */axapi/v3/aam/authentication/oauth/global*

oauth_global

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oauth_global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'auth-req': some help string; 'auth-succ': some help string; 'auth-fail': some help string; 'auth-error': some help string; 'relay-req': some help string; 'relay-succ': some help string; 'relay-fail': some help string; 'other-error': some help string;

Type: string

Supported Values: all, auth-req, auth-succ, auth-fail, auth-error, relay-req, relay-succ, relay-fail, other-error

oauth_client-list

Specification	Value
Type	*list*
Block object keys	

client-id

Description Specify oauth client-id

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-secret

Description

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

grant-type

Description 'implicit': The authorization server will return access token directly.; 'authorization-code': The authorization server will respond with code which can be exchange for access token.; 'hybrid-code-id-token': The authorization server will respond with both code and id token.; 'hybrid-code-token': The authorization server will respond with both code and access token.; 'hybrid-all': The authorization server will respond with code, access token and id token;

Type: string

Supported Values: implicit, authorization-code, hybrid-code-id-token, hybrid-code-token, hybrid-all

infinity

Description Auth session never time out whatever value oauth servers' response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: infinity and token-lifetime are mutually exclusive

name

Description Specify client object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

no-reply

Description AX will not check the nonce value in response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parameter-nonce-enable

Description Enable nonce parameter for authorization and token request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirection-endpoint

Description Oauth client redirection endpoint service URL.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

scope

Description Specify request scope parameters (e.g. profile email address phone)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

session-init-ttl

Description TTL for Thunder to wait for first response from authorization server

Type: number

Range: 1-60

token-lifetime

Description

Type: number

Range: 1-2592000

Mutual Exclusion: token-lifetime and infinity are mutually exclusive

type

Description 'openid-connect': openid-connect;

Type: string

Supported Values: openid-connect

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oauth_authorization-server-list

Specification	Value
Type	*list*
Block object keys	

authorization-endpoint

Description Specify URI for authorization

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-method

Description 'ignored': Clients' browser will send data according to server spec (default); 'post': Clients' browser will send data by POST; 'get': Clients' browser will send data by GET;

Type: string

Supported Values: ignored, post, get

issuer

Description Specify openid provider name for authorization

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description Specify authorization server object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

server-method

Description 'post': AX will send data to server by POST (default); 'get': AX will send data to server by GET;

Type: string

Supported Values: post, get

token-endpoint

Description Specify URI for token exchange

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verification-cert

Description Specify certificate to verify ID token signature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-cert and verification-jwks are mutually exclusive

verification-jwks

Description Specify jwks file to verify ID token signature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-jwks and verification-cert are mutually exclusive

oauth_authorization-server-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'auth-req': some help string; 'auth-succ': some help string; 'auth-fail': some help string; 'auth-error': some help string; 'other-error': some help string;

Type: string

Supported Values: all, auth-req, auth-succ, auth-fail, auth-error, other-error

password-retry

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list

Specification	Value
Type	*list*
Block object keys	

account

Description Specify AD domain account

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/account/kerberos-spn*

accounting-server

Description Specify a RADIUS accounting server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: accounting-server and accounting-service-group are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/radius/instance*

accounting-service-group

Description Specify an authentication service group for RADIUS accounting

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: accounting-service-group and accounting-server are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

auth-sess-mode

Description 'cookie-based': Track auth-session by cookie (default); 'ip-based': Track auth-session by client IP;

Type: string

Supported Values: cookie-based, ip-based

captcha

Description Specify captcha profile (Specify captcha proflie name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/captcha/instance*

chain

Type: List

cookie-domain

Type: List

cookie-domain-group

Type: List

cookie-httponly-enable

Description Enable httponly attribute for AAM cookies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cookie-max-age

Description Configure Max-Age for authentication session cookie (Configure Max-Age in seconds, 0 for no Max-Age/Expires attributes. Default is 604800 (1 week).)

Type: number

Range: 0-2592000

Default: 604800

cookie-samesite

Description 'strict': Specify SameSite attribute as Strict for AAM cookie; 'lax': Specify Same-Site attribute as Lax for AAM cookie; 'none': Specify SameSite attribute as None for AAM cookie;

Type: string

Supported Values: strict, lax, none

cookie-secure-enable

Description Enable secure attribute for AAM cookies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-logout-disable

Description Disable forward logout request to backend application server. The config-field logout-url must be configured first

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt

Description Specify authentication jwt template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/jwt*

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description 'use-partition-level-config': Use configuration of authentication-log enable command; 'enable': Enable authentication logs for this template; 'disable': Disable authentication logs for this template;

Type: string

Supported Values: use-partition-level-config, enable, disable

Default: use-partition-level-config

logon

Description Specify authentication logon (Specify authentication logon template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/logon/form-based*

logout-idle-timeout

Description Specify idle logout time (Specify idle timeout in seconds, default is 300)

Type: number

Range: 1-86400

Default: 300

logout-url

Description Specify logout url (Specify logout url string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

max-session-time

Description Specify default SAML token lifetime (Specify lifetime (in seconds) of SAML token when it not provided by token attributes, default is 28800. (0 for indefinite))

Type: number

Range: 0-86400

modify-content-security-policy

Description Put redirect-uri or service-principal-name into CSP header to avoid CPS break authentication process

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Authentication template name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

oauth-authorization-server

Description Specify OAUTH authorization server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

oauth-client

Description Specify OAUTH client

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

redirect-hostname

Description Hostname(Length 1-31) for transparent-proxy authentication

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

relay

Description Specify authentication relay (Specify authentication relay template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/relay/http-basic/instance*

saml-idp

Description Specify SAML identity provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

saml-sp

Description Specify SAML service provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server

Description Specify authentication server (Specify authentication server template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: server and service-group are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/ldap/instance*

service-group

Description Bind an authentication service group to this template (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group, server, and chain-server are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

type

Description 'saml': SAML authentication template; 'standard': Standard authentication template; 'oauth': Oauth 2.0 authentication template;

Type: string

Supported Values: saml, standard, oauth

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_chain

Specification	Value
Type	*list*
Block object keys	

chain-server

Description Specify authentication server (Specify authentication server template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-server, service-group, and chain-sg are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/ldap/instance*

chain-server-priority

Description Set server priority, higher the number higher the priority. Default is 3. (Chain server priority, higher the number higher the priority. Default is 3.)

Type: number

Range: 1-5

Default: 3

chain-sg

Description Bind an authentication service group to this template (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-sg and chain-server are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

chain-sg-priority

Description Set service-group priority, higher the number higher the priority. Default is 3. (Chain service-group priority, higher the number higher the priority. Default is 3.)

Type: number

Range: 1-5

Default: 3

template-list_cookie-domain-group

Specification	Value
Type	*list*
Block object keys	

cookie-dmngrp

Description Specify group id to join in the cookie-domain

Type: number

Range: 0-31

template-list_cookie-domain

Specification	Value
Type	*list*
Block object keys	

cookie-dmn

Description Specify domain scope for the authentication (ex: .a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 2 characters

kerberos-spn-list

Type: List

Reference Object: */axapi/v3/aam/authentication/account/kerberos-spn/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response;

Type: string

Supported Values: all, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other

kerberos-spn-list

Specification	Value
Type	*list*
Block object keys	

account

Description Specify domain account for SPN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.)

name

Description Specify AD account name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of domain account

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

realm

Description Specify Kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description Password of AD account

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

service-principal-name

Description Specify service principal name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.10 aam authentication account kerberos-spn

AD domain account associated with a SPN

kerberos-spn Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*kerberos-spn-list*
Collection URI	/axapi/v3/aam/authentication/account/kerberos-spn
Element Name	kerberos-spn
Element URI	/axapi/v3/aam/authentication/account/kerberos-spn/{name}
Element Attributes	kerberos-spn_attributes
Partition Visibility	shared
Schema	`kerberos-spn schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/authentication/account/kerberos-spn

kerberos-spn attributes

```
POST /axapi/v3/aam/authentication/account/kerberos-spn/
Payload:
{
    "kerberos-spn": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/aam/authentication/account/kerberos-spn

kerberos-spn attributes

Get Object

GET

/axapi/v3/aam/authentication/account/kerberos-spn/{name}

kerberos-spn attributes

```
GET /axapi/v3/aam/authentication/account/kerberos-spn/a
Reponse:
{
    "kerberos-spn": {
        "name": "a",
        "password": 0,
        "uuid": "eb8bdec4-086d-11f0-847f-51c757813e60",
        "user-tag": "a",
        "a10-url": "/axapi/v3/aam/authentication/account/kerberos-spn/a"
    }
}
```

```
DELETE /axapi/v3/aam/authentication/account/kerberos-spn/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

kerberos-spn-list

kerberos-spn-list is **JSON List** of *kerberos-spn attributes*

kerberos-spn-list : [

{ *kerberos-spn attributes* },

{ *kerberos-spn attributes* },

...

]

kerberos-spn attributes

account

Description Specify domain account for SPN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.)

name

Description Specify AD account name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of domain account

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

realm

Description Specify Kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description Password of AD account

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

service-principal-name

Description Specify service principal name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.11 aam authentication account stats

Statistics for the object account

account Specification

}
```

captcha attributes

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/captcha/instance/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list

Specification	Value
Type	*list*
Block object keys	

client-ip-param-name

Description Specify client ip parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

method

Description 'POST': API uses POST method; 'GET': API uses GET method;

Type: string

Supported Values: POST, GET

Default: POST

name

Description Specify captcha profile name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resp-error-code-field-name

Description Specify error code field name used in JSON response (Set field name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

resp-result-field-name

Description Specify result field name used in JSON response (Set field name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-key

Description Specify secret key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-key-param-name

Description Specify secret key parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-key-string

Description Secret key string

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

send-client-ip

Description Send client IP address in API

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify timeout for verify API response (Specify timeout value, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

token-param-name

Description Specify token parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

url

Description Specify verify API URL, default scheme is https

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.13 aam authentication captcha instance

```

jwt-list

jwt-list is **JSON List** of *jwt attributes*

jwt-list : [

{ *jwt attributes* },

{ *jwt attributes* },

...

]

jwt attributes

action

Description 'redirect': redirect JWT to specific URI; 'relay': relay JWT to back-end;

Type: string

Supported Values: redirect, relay

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

issuer

Description Specify JWT issuer claim value

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

jwt-relay-uri

Description Specify JWT relay URI (for relay action)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

name

Description Specify JWT issuer template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description The JWT signature secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

signature-secret

Description Specify the JWT signature secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

token-lifetime

Description Specify JWT token lifetime (Specify lifetime (in seconds), default is 300.)

Type: number

Range: 0-86400

Default: 300

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

    }
}
```

log attributes

enable

Description Enable authentication logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

facility

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use;

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'syslog': Syslog Format (default); 'cef': Common Event Format;

Type: string

Supported Values: syslog, cef

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.27 aam authentication logon

Authentication logon configuration

logon Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	logon
Element URI	/axapi/v3/aam/authentication/logon
Element Attributes	logon_attributes
Partition Visibility	shared
Schema	`logon schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam/authentication/logon

logon_attributes

logon attributes

form-based-list

Type: List

Reference Object: */axapi/v3/aam/authentication/logon/form-based/{name}*

http-authenticate

Description: http-authenticate is a **JSON Block**. Please see below for *http-authenticate*

Type: Object

Reference Object: */axapi/v3/aam/authentication/logon/http-authenticate*

form-based-list

Specification	Value
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

challenge-variable

Description Specify challenge variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-page-cfg

Description: cp-page-cfg is a **JSON Block**. Please see below for *form-based-list_cp-page-cfg*

Type: Object

csp-support

Description: csp-support is a **JSON Block**. Please see below for *form-based-list_csp-support*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

hsts-timeout

Description Set HSTS policy expired timeout in seconds, 0 means to disable HSTS policy

Type: number

Range: 0-315360000

logon-page-cfg

Description: logon-page-cfg is a **JSON Block**. Please see below for *form-based-list_logon-page-cfg*

Type: Object

name

Description Specify form-based authentication logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-variable

Description Specify new-pin variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

notify-cp-page-cfg

Description: notify-cp-page-cfg is a **JSON Block**. Please see below for *form-based-list_notify-cp-page-cfg*

Type: Object

portal

Description: portal is a **JSON Block**. Please see below for *form-based-list_portal*

Type: Object

retry

Description Maximum number of consecutive failed logon attempts (default 3)

Type: number

Range: 1-32

Default: 3

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

form-based-list_csp-support

Specification	Value
Type	*object*

none

Description Set CSP frame-ancestors to none (also X-Frame-Options deny)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: none, self, and specificURI are mutually exclusive

optional-second-URI

Description Set optional second customized CSP URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

self

Description Set CSP frame-ancestors to self (also X-Frame-Options same-origin)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: self and none are mutually exclusive

specificURI

Description Set customized CSP frame-ancestors (maximum 2 URIs can be set)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: specificURI and none are mutually exclusive

form-based-list_notify-cp-page-cfg

Specification	Value
Type	*object*

notifychangepassword-change-url

Description Specify change password action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

notifychangepassword-continue-url

Description Specify continue action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

form-based-list_portal

Specification	Value
Type	*object*

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page, new-pin-page, and next-token-page are mutually exclusive

changepasswordpage

Description Specify change password page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

default-portal

Description Use default portal

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-portal and portal-name are mutually exclusive

failpage

Description Specify logon fail page name (portal fail page name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon

Description Specify logon page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

next-token-page

Description Specify next token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: next-token-page and challenge-page are mutually exclusive

notifychangepasswordpage

Description Specify change password notification page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-name

Description Specify portal name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: portal-name and default-portal are mutually exclusive

form-based-list_logon-page-cfg

Specification	Value
Type	*object*

action-url

Description Specify form submission action url

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

authz-failure-message

Description Specify authorization failure message shown in logon page (Specify error string, default is "Authorization failed. Please contact your system administrator.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

captcha-variable

Description Specify captcha variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

disable-change-password-link

Description Don't display change password link on logon page forcibly even backend authentication server supports it (LDAP or Kerberos)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

login-failure-message

Description Specify login failure message shown in logon page (Specify error string, default is “Invalid username or password. Please try again.”)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passcode-variable

Description Specify passcode variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-variable

Description Specify username variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

form-based-list_cp-page-cfg

Specification	Value
Type	*object*

changepassword-url

Description Specify changepassword form submission action url (changepassword action url)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cp-cfm-pwd-enum

Description 'changepassword-password-confirm-variable': Specify password confirm variable name in form submission;

Type: string

Supported Values: changepassword-password-confirm-variable

cp-cfm-pwd-var

Description Specify password confirm variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-new-pwd-enum

Description 'changepassword-new-password-variable': Specify new password variable name in form submission;

Type: string

Supported Values: changepassword-new-password-variable

cp-new-pwd-var

Description Specify new password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-old-pwd-enum

Description 'changepassword-old-password-variable': Specify old password variable name in form submission;

Type: string

Supported Values: changepassword-old-password-variable

cp-old-pwd-var

Description Specify old password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-user-enum

Description 'changepassword-username-variable': Specify username variable name in form submission;

Type: string

Supported Values: changepassword-username-variable

cp-user-var

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-authenticate

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/logon/http-authenticate/instance/{name}*

http-authenticate_instance-list

Specification	Value
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-method

Description: auth-method is a **JSON Block**. Please see below for *http-authenticate_instance-list_auth-method*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

hsts-timeout

Description Set HSTS policy expired timeout in seconds, 0 means to disable HSTS policy

Type: number

Range: 0-315360000

name

Description Specify HTTP-Authenticate logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-logon-http-ins-tmpl*

retry

Description Maximum number of consecutive failed logon attempts (default 3)

Type: number

Range: 1-32

Default: 3

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-authenticate_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'spn_krb_request': SPN Kerberos Request; 'spn_krb_success': SPN Kerberos Success; 'spn_krb_faiure': SPN Kerberos Failure;

Type: string

Supported Values: all, spn_krb_request, spn_krb_success, spn_krb_faiure

http-authenticate_instance-list_auth-method

Specification	Value
Type	*object*

basic

Description: basic is a **JSON Block**. Please see below for *http-authenticate_instance-list_auth-method_basic*

Type: Object

negotiate

Description: negotiate is a **JSON Block**. Please see below for *http-authenticate_instance-list_auth-method_negotiate*

Type: Object

http-authenticate_instance-list_auth-method_negotiate

Specification	Value
Type	*object*

negotiate-enable

Description Enable SPENGO logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-authenticate_instance-list_auth-method_basic

Specification	Value
Type	*object*

basic-enable

Description Enable Basic logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-realm

Description Specify realm for basic logon

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page and new-pin-page are mutually exclusive

challenge-response-form

Description Specify challenge-response form for RSA-RADIUS authentication

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-variable

Description Specify challenge variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

new-pin-variable

Description Specify new PIN variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-page

Description Specify next-token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

2.1.28 aam authentication logon form-based

Form-based Authentication Logon

form-based Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*form-based-list*
Collection URI	/axapi/v3/aam/authentication/logon/form-based
Element Name	form-based
Element URI	/axapi/v3/aam/authentication/logon/form-based/{name}
Element Attributes	form-based_attributes
Partition Visibility	shared
Schema	`form-based schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/authentication/logon/form-based

form-based attributes

```
POST /axapi/v3/aam/authentication/logon/form-based/
Payload:
{
    "form-based": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/aam/authentication/logon/form-based

form-based attributes

Get Object

GET

/axapi/v3/aam/authentication/logon/form-based/{name}

form-based attributes

```
GET /axapi/v3/aam/authentication/logon/form-based/a
Reponse:
{
    "form-based": {
        "name": "a",
        "portal": {
            "default-portal": 0
        },
```

(continues on next page)

(continued from previous page)

form-based-list

Delete Object

DELETE

/axapi/v3/aam/authentication/logon/form-based/{name}

form-based attributes

```
DELETE /axapi/v3/aam/authentication/logon/form-based/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

form-based-list

form-based-list is **JSON List** of *form-based attributes*

form-based-list : [

{ *form-based attributes* },

{ *form-based attributes* },

...

]

form-based attributes

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

challenge-variable

Description Specify challenge variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-page-cfg

Description: cp-page-cfg is a **JSON Block**. Please see below for *cp-page-cfg*

Type: Object

csp-support

Description: csp-support is a **JSON Block**. Please see below for *csp-support*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

hsts-timeout

Description Set HSTS policy expired timeout in seconds, 0 means to disable HSTS policy

Type: number

Range: 0-315360000

logon-page-cfg

Description: logon-page-cfg is a **JSON Block**. Please see below for *logon-page-cfg*

Type: Object

name

Description Specify form-based authentication logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-variable

Description Specify new-pin variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

notify-cp-page-cfg

Description: notify-cp-page-cfg is a **JSON Block**. Please see below for *notify-cp-page-cfg*

Type: Object

portal

Description: portal is a **JSON Block**. Please see below for *portal*

Type: Object

retry

Description Maximum number of consecutive failed logon attempts (default 3)

Type: number

Range: 1-32

Default: 3

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

csp-support

Specification	Value
Type	*object*

none

Description Set CSP frame-ancestors to none (also X-Frame-Options deny)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: none, self, and specificURI are mutually exclusive

optional-second-URI

Description Set optional second customized CSP URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

self

Description Set CSP frame-ancestors to self (also X-Frame-Options same-origin)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: self and none are mutually exclusive

specificURI

Description Set customized CSP frame-ancestors (maximum 2 URIs can be set)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: specificURI and none are mutually exclusive

notify-cp-page-cfg

Specification	Value
Type	*object*

notifychangepassword-change-url

Description Specify change password action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

notifychangepassword-continue-url

Description Specify continue action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

portal

Specification	Value
Type	*object*

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page, new-pin-page, and next-token-page are mutually exclusive

changepasswordpage

Description Specify change password page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

default-portal

Description Use default portal

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-portal and portal-name are mutually exclusive

failpage

Description Specify logon fail page name (portal fail page name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon

Description Specify logon page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

next-token-page

Description Specify next token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: next-token-page and challenge-page are mutually exclusive

notifychangepasswordpage

Description Specify change password notification page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-name

Description Specify portal name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: portal-name and default-portal are mutually exclusive

logon-page-cfg

Specification	Value
Type	*object*

action-url

Description Specify form submission action url

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

authz-failure-message

Description Specify authorization failure message shown in logon page (Specify error string, default is "Authorization failed. Please contact your system administrator.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

captcha-variable

Description Specify captcha variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

disable-change-password-link

Description Don't display change password link on logon page forcibly even backend authentication server supports it (LDAP or Kerberos)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

login-failure-message

Description Specify login failure message shown in logon page (Specify error string, default is "Invalid username or password. Please try again.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passcode-variable

Description Specify passcode variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-variable

Description Specify username variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-page-cfg

Specification	Value
Type	*object*

changepassword-url

Description Specify changepassword form submission action url (changepassword action url)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cp-cfm-pwd-enum

Description 'changepassword-password-confirm-variable': Specify password confirm variable name in form submission;

Type: string

Supported Values: changepassword-password-confirm-variable

cp-cfm-pwd-var

Description Specify password confirm variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-new-pwd-enum

Description 'changepassword-new-password-variable': Specify new password variable name in form submission;

Type: string

Supported Values: changepassword-new-password-variable

cp-new-pwd-var

Description Specify new password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-old-pwd-enum

Description 'changepassword-old-password-variable': Specify old password variable name in form submission;

Type: string

Supported Values: changepassword-old-password-variable

cp-old-pwd-var

Description Specify old password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-user-enum

Description 'changepassword-username-variable': Specify username variable name in form submission;

Type: string

Supported Values: changepassword-username-variable

cp-user-var

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

2.1.29 aam authentication logon http-authenticate

HTTP-authenticate Logon

http-authenticate Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	http-authenticate
Element URI	/axapi/v3/aam/authentication/logon/http-authenticate
Element Attributes	http-authenticate_attributes
Partition Visibility	shared
Schema	`http-authenticate schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam/authentication/logon/http-authenticate

http-authenticate_attributes

http-authenticate attributes

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/logon/http-authenticate/instance/{name}*

instance-list

Specification	Value
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-method

Description: auth-method is a **JSON Block**. Please see below for *instance-list_auth-method*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

hsts-timeout

Description Set HSTS policy expired timeout in seconds, 0 means to disable HSTS policy

Type: number

Range: 0-315360000

name

Description Specify HTTP-Authenticate logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-logon-http-ins-tmpl*

retry

Description Maximum number of consecutive failed logon attempts (default 3)

Type: number

Range: 1-32

Default: 3

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'spn_krb_request': SPN Kerberos Request; 'spn_krb_success': SPN Kerberos Success; 'spn_krb_faiure': SPN Kerberos Failure;

Type: string

Supported Values: all, spn_krb_request, spn_krb_success, spn_krb_faiure

instance-list_auth-method

Specification	Value
Type	*object*

basic

Description: basic is a **JSON Block**. Please see below for *instance-list_auth-method_basic*

Type: Object

negotiate

Description: negotiate is a **JSON Block**. Please see below for *instance-list_auth-method_negotiate*

Type: Object

instance-list_auth-method_negotiate

Specification	Value
Type	*object*

negotiate-enable

Description Enable SPENGO logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

instance-list_auth-method_basic

Specification	Value
Type	*object*

basic-enable

Description Enable Basic logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-realm

Description Specify realm for basic logon

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page and new-pin-page are mutually exclusive

challenge-response-form

Description Specify challenge-response form for RSA-RADIUS authentication

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-variable

Description Specify challenge variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

new-pin-variable

Description Specify new PIN variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-page

Description Specify next-token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

```

instance-list

instance-list is **JSON List** of *instance attributes*

instance-list : [

{ *instance attributes* },

{ *instance attributes* },

...

]

instance attributes

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-method

Description: auth-method is a **JSON Block**. Please see below for *auth-method*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

hsts-timeout

Description Set HSTS policy expired timeout in seconds, 0 means to disable HSTS policy

Type: number

Range: 0-315360000

name

Description Specify HTTP-Authenticate logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-logon-http-ins-tmpl*

retry

Description Maximum number of consecutive failed logon attempts (default 3)

Type: number

Range: 1-32

Default: 3

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'spn_krb_request': SPN Kerberos Request; 'spn_krb_success': SPN Kerberos Success; 'spn_krb_faiure': SPN Kerberos Failure;

Type: string

Supported Values: all, spn_krb_request, spn_krb_success, spn_krb_faiure

auth-method

Specification	Value
Type	*object*

basic

Description: basic is a **JSON Block**. Please see below for *auth-method_basic*

Type: Object

negotiate

Description: negotiate is a **JSON Block**. Please see below for *auth-method_negotiate*

Type: Object

auth-method_negotiate

Specification	Value
Type	*object*

negotiate-enable

Description Enable SPENGO logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-method_basic

Specification	Value
Type	*object*

basic-enable

Description Enable Basic logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-realm

Description Specify realm for basic logon

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page and new-pin-page are mutually exclusive

challenge-response-form

Description Specify challenge-response form for RSA-RADIUS authentication

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-variable

Description Specify challenge variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

new-pin-variable

Description Specify new PIN variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-page

Description Specify next-token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

global

Description: global is a **JSON Block**. Please see below for *global*

Type: Object

Reference Object: */axapi/v3/aam/authentication/oauth/global*

global

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'auth-req': some help string; 'auth-succ': some help string; 'auth-fail': some help string; 'auth-error': some help string; 'relay-req': some help string; 'relay-succ': some help string; 'relay-fail': some help string; 'other-error': some help string;

Type: string

Supported Values: all, auth-req, auth-succ, auth-fail, auth-error, relay-req, relay-succ, relay-fail, other-error

client-list

Specification	Value
Type	*list*
Block object keys	

client-id

Description Specify oauth client-id

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-secret

Description

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

grant-type

Description 'implicit': The authorization server will return access token directly.; 'authorization-code': The authorization server will respond with code which can be exchange for access token.; 'hybrid-code-id-token': The authorization server will respond with both code and id token.; 'hybrid-code-token': The authorization server will respond with both code and access token.; 'hybrid-all': The authorization server will respond with code, access token and id token;

Type: string

Supported Values: implicit, authorization-code, hybrid-code-id-token, hybrid-code-token, hybrid-all

infinity

Description Auth session never time out whatever value oauth servers' response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: infinity and token-lifetime are mutually exclusive

name

Description Specify client object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

no-reply

Description AX will not check the nonce value in response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parameter-nonce-enable

Description Enable nonce parameter for authorization and token request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirection-endpoint

Description Oauth client redirection endpoint service URL.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

scope

Description Specify request scope parameters (e.g. profile email address phone)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

session-init-ttl

Description TTL for Thunder to wait for first response from authorization server

Type: number

Range: 1-60

token-lifetime

Description

Type: number

Range: 1-2592000

Mutual Exclusion: token-lifetime and infinity are mutually exclusive

type

Description 'openid-connect': openid-connect;

Type: string

Supported Values: openid-connect

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authorization-server-list

Specification	Value
Type	*list*
Block object keys	

authorization-endpoint

Description Specify URI for authorization

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-method

Description 'ignored': Clients' browser will send data according to server spec (default); 'post': Clients' browser will send data by POST; 'get': Clients' browser will send data by GET;

Type: string

Supported Values: ignored, post, get

issuer

Description Specify openid provider name for authorization

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description Specify authorization server object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

server-method

Description 'post': AX will send data to server by POST (default); 'get': AX will send data to server by GET;

Type: string

Supported Values: post, get

token-endpoint

Description Specify URI for token exchange

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verification-cert

Description Specify certificate to verify ID token signature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-cert and verification-jwks are mutually exclusive

verification-jwks

Description Specify jwks file to verify ID token signature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-jwks and verification-cert are mutually exclusive

authorization-server-list_sampling-enable

Specification	Value

Maximum Length: 1 characters

client-secret

Description

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

grant-type

Description 'implicit': The authorization server will return access token directly.; 'authorization-code': The authorization server will respond with code which can be exchange for access token.; 'hybrid-code-id-token': The authorization server will respond with both code

and id token.; 'hybrid-code-token': The authorization server will respond with both code and access token.; 'hybrid-all': The authorization server will respond with code, access token and id token;

Type: string

Supported Values: implicit, authorization-code, hybrid-code-id-token, hybrid-code-token, hybrid-all

infinity

Description Auth session never time out whatever value oauth servers' response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: infinity and token-lifetime are mutually exclusive

name

Description Specify client object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

no-reply

Description AX will not check the nonce value in response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parameter-nonce-enable

Description Enable nonce parameter for authorization and token request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirection-endpoint

Description Oauth client redirection endpoint service URL.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

scope

Description Specify request scope parameters (e.g. profile email address phone)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

session-init-ttl

Description TTL for Thunder to wait for first response from authorization server

Type: number

Range: 1-60

token-lifetime

Description

Type: number

Range: 1-2592000

Mutual Exclusion: token-lifetime and infinity are mutually exclusive

type

Description 'openid-connect': openid-connect;

Type: string

Supported Values: openid-connect

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Specification	Value
Type	*object*

fail-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure logon failure message in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

fail-text

Description Specify logon failure message (Default: Login Failed!!)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon-fail_title-cfg

Specification	Value
Type	*object*

title

Description Configure title in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: title-color-name and title-color-value are mutually exclusive

title-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: title-color-value and title-color-name are mutually exclusive

title-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: title-face and title-font-custom are mutually exclusive

title-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: title-font-custom and title-face are mutually exclusive

title-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

title-text

Description Specify title (Default: Try Too Many Times)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon-fail_background

Specification	Value
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name, bgfile, and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value, bgfile, and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile, bgcolor-name, and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

logo-cfg

Specification	Value
Type	*object*

height

Description Specify logo image height (Default: 71)

Type: number

Range: 50-400

Default: 71

logo

Description Specify logo image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

width

Description Specify logo image width (Default: 134)

Type: number

Range: 50-400

Default: 134

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logon

Specification	Value
Type	*object*

action-url

Description Specify form action URL in default logon page (Default: /logon.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *logon_background*

Type: Object

captcha-type

Description 'reCAPTCHAv2-checkbox': Google reCAPTCHAv2 Checkbox; 'reCAPTCHAv2-invisible': Google reCAPTCHAv2 Invisible; 'reCAPTCHAv3': Google reCAPTCHAv3;

Type: string

Supported Values: reCAPTCHAv2-checkbox, reCAPTCHAv2-invisible, reCAPTCHAv3

enable-CAPTCHA

Description Enable CAPTCHA in deafult logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-passcode

Description Enable passcode field in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

fail-msg-cfg

Description: fail-msg-cfg is a **JSON Block**. Please see below for *logon_fail-msg-cfg*

Type: Object

passcode-cfg

Description: passcode-cfg is a **JSON Block**. Please see below for *logon_passcode-cfg*

Type: Object

passcode-var

Description Specify passcode variable name in default logon page (Default: passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-cfg

Description: password-cfg is a **JSON Block**. Please see below for *logon_password-cfg*

Type: Object

password-var

Description Specify password variable name in default logon page (Default: pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

reCAPTCHA-cfg

Description: reCAPTCHA-cfg is a **JSON Block**. Please see below for *logon_reCAPTCHA-cfg*

Type: Object

site-key-string

Description Site key string

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default logon page (Default: Log In)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *logon_username-cfg*

Type: Object

username-var

Description Specify username variable name in default logon page (Default: user)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logon_passcode-cfg

Specification	Value
Type	*object*

passcode

Description Configure passcode text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passcode-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: passcode-color-name and passcode-color-value are mutually exclusive

passcode-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: passcode-color-value and passcode-color-name are mutually exclusive

passcode-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: passcode-face and passcode-font-custom are mutually exclusive

passcode-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: passcode-font-custom and passcode-face are mutually exclusive

passcode-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

passcode-text

Description Specify passcode text (Default: Passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon_reCAPTCHA-cfg

Specification	Value
Type	*object*

reCAPTCHA-action

Description Specify reCAPTCHA action (Specify action string, only accept alphanumeric, underscore, and slash (Default: A10_DEFAULT_LOGON))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: A10_DEFAULT_LOGON

reCAPTCHA-badge

Description 'bottom-left': bottom left corner; 'bottom-right': bottom right corner;

Type: string

Supported Values: bottom-left, bottom-right

Default: bottom-right

reCAPTCHA-size

Description 'normal': normal size; 'compact': compact size;

Type: string

Supported Values: normal, compact

Default: normal

reCAPTCHA-theme

Description 'light': light theme; 'dark': dark theme;

Type: string

Supported Values: light, dark

Default: light

logon_background

Specification	Value
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name, bgfile, and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value, bgfile, and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile, bgcolor-name, and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

logon_fail-msg-cfg

Specification	Value
Type	*object*

authz-fail-msg

Description Configure authorization failure message in default logon page, its text attributes follow fail-msg's (Specify authorization failure message (Default: Authorization failed. Please contact your system administrator.))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

fail-color

Description Specify font color (Default: red)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: red

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure login failure message in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

fail-text

Description Specify login failure message (Default: Invalid username or password. Please try again.)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon_password-cfg

Specification	Value
Type	*object*

pass-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

pass-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: pass-color-name and pass-color-value are mutually exclusive

pass-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: pass-color-value and pass-color-name are mutually exclusive

pass-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: pass-face and pass-font-custom are mutually exclusive

pass-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

pass-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: pass-font-custom and pass-face are mutually exclusive

pass-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

pass-text

Description Specify password text (Default: Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Configure password text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logon_username-cfg

Specification	Value
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: User Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-password

Specification	Value
Type	*object*

action-url

Description Specify form action URL in default change password page (Default: /change.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *change-password_background*

Type: Object

cfm-pwd-cfg

Description: cfm-pwd-cfg is a **JSON Block**. Please see below for *change-password_cfm-pwd-cfg*

Type: Object

confirm-password-var

Description Specify confirm password variable name in default change password page (Default: cp_cfm_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-password-var

Description Specify new password variable name in default change password page (Default: cp_new_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pwd-cfg

Description: new-pwd-cfg is a **JSON Block**. Please see below for *change-password_new-pwd-cfg*

Type: Object

old-password-var

Description Specify old password variable name in default change password page (Default: cp_old_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Description: old-pwd-cfg is a **JSON Block**. Please see below for *change-password_old-pwd-cfg*

Type: Object

reset-text

Description Specify reset button text in default change password page (Default: Reset)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default change password page (Default: Submit)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

title-cfg

Description: title-cfg is a **JSON Block**. Please see below for *change-password_title-cfg*

Type: Object

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *change-password_username-cfg*

Type: Object

username-var

Description Specify username variable name in default change password page (Default: cp_usr)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

change-password_new-pwd-cfg

Specification	Value
Type	*object*

new-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: new-color-name and new-color-value are mutually exclusive

new-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: new-color-value and new-color-name are mutually exclusive

new-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: new-face and new-font-custom are mutually exclusive

new-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-font-custom and new-face are mutually exclusive

new-password

Description Configure new password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

new-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

new-text

Description Specify new password text (Default: New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

change-password_title-cfg

Specification	Value
Type	*object*

title

Description Configure title in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: title-color-name and title-color-value are mutually exclusive

title-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: title-color-value and title-color-name are mutually exclusive

title-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: title-face and title-font-custom are mutually exclusive

title-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: title-font-custom and title-face are mutually exclusive

title-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

title-text

Description Specify title (Default: Please Change Your Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

change-password_old-pwd-cfg

Specification	Value

```

change-password attributes

action-url

Description Specify form action URL in default change password page (Default: /change.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *background*

Type: Object

cfm-pwd-cfg

Description: cfm-pwd-cfg is a **JSON Block**. Please see below for *cfm-pwd-cfg*

Type: Object

confirm-password-var

Description Specify confirm password variable name in default change password page (Default: cp_cfm_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-password-var

Description Specify new password variable name in default change password page (Default: cp_new_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pwd-cfg

Description: new-pwd-cfg is a **JSON Block**. Please see below for *new-pwd-cfg*

Type: Object

old-password-var

Description Specify old password variable name in default change password page (Default: cp_old_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Description: old-pwd-cfg is a **JSON Block**. Please see below for *old-pwd-cfg*

Type: Object

reset-text

Description Specify reset button text in default change password page (Default: Reset)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default change password page (Default: Submit)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

title-cfg

Description: title-cfg is a **JSON Block**. Please see below for *title-cfg*

Type: Object

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *username-cfg*

Type: Object

username-var

Description Specify username variable name in default change password page (Default: cp_usr)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

new-pwd-cfg

Specification	Value
Type	*object*

new-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: new-color-name and new-color-value are mutually exclusive

new-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: new-color-value and new-color-name are mutually exclusive

new-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: new-face and new-font-custom are mutually exclusive

new-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-font-custom and new-face are mutually exclusive

new-password

Description Configure new password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

new-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

new-text

Description Specify new password text (Default: New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

title-cfg

Specification	Value
Type	*object*

title

Description Configure title in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: title-color-name and title-color-value are mutually exclusive

title-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: title-color-value and title-color-name are mutually exclusive

title-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: title-face and title-font-custom are mutually exclusive

title-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: title-font-custom and title-face are mutually exclusive

title-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

title-text

Description Specify title (Default: Please Change Your Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Specification	Value
Type	*object*

old-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: old-color-name and old-color-value are mutually exclusive

old-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: old-color-value and old-color-name are mutually exclusive

old-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: old-face and old-font-custom are mutually exclusive

old-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: old-font-custom and old-face are mutually exclusive

old-password

Description Configure old password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

old-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

old-text

Description Specify old password text (Default: Old Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Specification	Value
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name, bgfile, and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value, bgfile, and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile, bgcolor-name, and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

cfm-pwd-cfg

Specification	Value
Type	*object*

cfm-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: cfm-color-name and cfm-color-value are mutually exclusive

cfm-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: cfm-color-value and cfm-color-name are mutually exclusive

cfm-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: cfm-face and cfm-font-custom are mutually exclusive

cfm-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: cfm-font-custom and cfm-face are mutually exclusive

cfm-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

cfm-text

Description Specify confirm password text (Default: Confirm New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password

Description Configure confirm password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

username-cfg

Specification	Value
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

```

logon attributes

action-url

Description Specify form action URL in default logon page (Default: /logon.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *background*

Type: Object

captcha-type

Description 'reCAPTCHAv2-checkbox': Google reCAPTCHAv2 Checkbox; 'reCAPTCHAv2-invisible': Google reCAPTCHAv2 Invisible; 'reCAPTCHAv3': Google reCAPTCHAv3;

Type: string

Supported Values: reCAPTCHAv2-checkbox, reCAPTCHAv2-invisible, reCAPTCHAv3

enable-CAPTCHA

Description Enable CAPTCHA in deafult logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-passcode

Description Enable passcode field in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

fail-msg-cfg

Description: fail-msg-cfg is a **JSON Block**. Please see below for *fail-msg-cfg*

Type: Object

passcode-cfg

Description: passcode-cfg is a **JSON Block**. Please see below for *passcode-cfg*

Type: Object

passcode-var

Description Specify passcode variable name in default logon page (Default: passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-cfg

Description: password-cfg is a **JSON Block**. Please see below for *password-cfg*

Type: Object

password-var

Description Specify password variable name in default logon page (Default: pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

reCAPTCHA-cfg

Description: reCAPTCHA-cfg is a **JSON Block**. Please see below for *reCAPTCHA-cfg*

Type: Object

site-key-string

Description Site key string

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default logon page (Default: Log In)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *username-cfg*

Type: Object

username-var

Description Specify username variable name in default logon page (Default: user)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

passcode-cfg

Specification	Value
Type	*object*

passcode

Description Configure passcode text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passcode-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: passcode-color-name and passcode-color-value are mutually exclusive

passcode-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: passcode-color-value and passcode-color-name are mutually exclusive

passcode-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: passcode-face and passcode-font-custom are mutually exclusive

passcode-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: passcode-font-custom and passcode-face are mutually exclusive

passcode-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

passcode-text

Description Specify passcode text (Default: Passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

reCAPTCHA-cfg

Specification	Value
Type	*object*

reCAPTCHA-action

Description Specify reCAPTCHA action (Specify action string, only accept alphanumeric, underscore, and slash (Default: A10_DEFAULT_LOGON))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: A10_DEFAULT_LOGON

reCAPTCHA-badge

Description 'bottom-left': bottom left corner; 'bottom-right': bottom right corner;

Type: string

Supported Values: bottom-left, bottom-right

Default: bottom-right

reCAPTCHA-size

Description 'normal': normal size; 'compact': compact size;

Type: string

Supported Values: normal, compact

Default: normal

reCAPTCHA-theme

Description 'light': light theme; 'dark': dark theme;

Type: string

Supported Values: light, dark

Default: light

background

Specification	Value
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name, bgfile, and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value, bgfile, and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile, bgcolor-name, and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

fail-msg-cfg

Specification	Value
Type	*object*

authz-fail-msg

Description Configure authorization failure message in default logon page, its text attributes follow fail-msg's (Specify authorization failure message (Default: Authorization failed. Please contact your system administrator.))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

fail-color

Description Specify font color (Default: red)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: red

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure login failure message in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

fail-text

Description Specify login failure message (Default: Invalid username or password. Please try again.)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-cfg

Specification	Value
Type	*object*

pass-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

pass-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: pass-color-name and pass-color-value are mutually exclusive

pass-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: pass-color-value and pass-color-name are mutually exclusive

pass-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: pass-face and pass-font-custom are mutually exclusive

pass-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

pass-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: pass-font-custom and pass-face are mutually exclusive

pass-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

pass-text

Description Specify password text (Default: Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Configure password text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

username-cfg

Specification	Value
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: User Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.1.46 aam authentication relay

Authentication relay configuration

relay Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	relay
Element URI	/axapi/v3/aam/authentication/relay
Element Attributes	relay_attributes
Partition Visibility	shared
Schema	`relay schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam/authentication/relay

relay_attributes

relay attributes

form-based

Description: form-based is a **JSON Block**. Please see below for *form-based*

Type: Object

Reference Object: */axapi/v3/aam/authentication/relay/form-based*

http-basic

Description: http-basic is a **JSON Block**. Please see below for *http-basic*

Type: Object

Reference Object: */axapi/v3/aam/authentication/relay/http-basic*

kerberos

Description: kerberos is a **JSON Block**. Please see below for *kerberos*

Type: Object

Reference Object: */axapi/v3/aam/authentication/relay/kerberos*

oauth-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/oauth/{name}*

saml-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/saml/{name}*

ws-federation-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/ws-federation/{name}*

form-based

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/form-based/instance/{name}*

form-based_instance-list

Specification	Value
Type	*list*
Block object keys	

name

Description Specify form-based authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-form-inst-tmpl*

request-uri-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri/{match-type}+{uri}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

form-based_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'invalid_srv_rsp': Invalid Server Response; 'post_fail': POST Failed; 'invalid_cred': Invalid Credential; 'bad_req': Bad Request; 'not_fnd': Not Found; 'error': Internal Server Error; 'other_error': Other Error;

Type: string

Supported Values: all, request, invalid_srv_rsp, post_fail, invalid_cred, bad_req, not_fnd, error, other_error

form-based_instance-list_request-uri-list

Specification	Value
Type	*list*
Block object keys	

action-uri

Description Specify the action-URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cookie

Description: cookie is a **JSON Block**. Please see below for *form-based_instance-list_request-uri-list_cookie*

Type: Object

domain-variable

Description Specify domain variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

max-packet-collect-size

Description Specify the max packet collection size in bytes, default is 1MB

Type: number

Range: 1024-2097152

Default: 1048576

other-variables

Description Specify other variables (n1=v1&n2=v2) in form relay

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uri

Description Specify request URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-variable

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

form-based_instance-list_request-uri-list_cookie

Specification	Value
Type	*object*

cookie-value

Description: cookie-value is a **JSON Block**. Please see below for *form-based_instance-list_request-uri-list_cookie_cookie-value*

Type: Object

form-based_instance-list_request-uri-list_cookie_cookie-value

Specification	Value
Type	*object*

cookie-value

Description Specify cookie in POST packet

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ws-federation-list

Specification	Value
Type	*list*
Block object keys	

application-server

Description 'sharepoint': Microsoft SharePoint; 'exchange-owa': Microsoft Exchange OWA;

Type: string

Supported Values: sharepoint, exchange-owa

authentication-uri

Description Specify WS-Federation relay URI, default is /_trust/

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify WS-Federation authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-ws-fed-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ws-federation-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure;

Type: string

Supported Values: all, request, success, failure

oauth-list

Specification	Value
Type	*list*
Block object keys	

all

Description All URI can be relay

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and match-type are mutually exclusive

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

Mutual Exclusion: match-type and all are mutually exclusive

match-uri

Description

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description Specify oauth authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-type

Description 'access-token': Relay access token to backend; 'id-token': Relay JWT to backend;

Type: string

Supported Values: access-token, id-token

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oauth-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'relay-req': some help string; 'relay-succ': some help string; 'relay-fail': some help string;

Type: string

Supported Values: all, relay-req, relay-succ, relay-fail

saml-list

Specification	Value
Type	*list*
Block object keys	

idp-auth-uri

Description Specify the URI for IDP to handle SAML authentication request

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

match-uri

Description Match URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method

Description 'get-from-backend': Get RelayState parameter from backend server; 'request-uri': Use the (URL encoded) current request-uri as the RelayState;

Type: string

Supported Values: get-from-backend, request-uri

Mutual Exclusion: method and value are mutually exclusive

name

Description Specify SAML authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-acs-uri

Description Specify the backend server assertion consuming service URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

retry-number

Description Specify how many continuous fail for SAML relay will trigger. Default will not retry.

Type: number

Range: 0-10

Default: 0

sampling-enable

Type: List

server-cookie-name

Description Specify the cookie name that used by backend server for authenticated users

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Use the fixed string as the RelayState

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: value and method are mutually exclusive

saml-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure; 'error': Error;

Type: string

Supported Values: all, request, success, failure, error

kerberos

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/kerberos/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

kerberos_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Total Request Send; 'response-get': Total Response Get; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error;

Type: string

Supported Values: all, request-send, response-get, timeout-error, other-error, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

kerberos_instance-list

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

kerberos-account

Description Specify the kerberos account name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kerberos-kdc

Description Specify the kerberos kdc ip or host name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc and kerberos-kdc-service-group are mutually exclusive

kerberos-kdc-service-group

Description Specify an authentication service group as multiple KDCs

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc-service-group and kerberos-kdc are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

kerberos-realm

Description Specify the kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify Kerberos authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of Kerberos password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify The KDC port, default is 88

Type: number

Range: 1-65535

Default: 88

sampling-enable

Type: List

secret-string

Description The kerberos client password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

timeout

Description Specify timeout for kerberos transport, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

kerberos_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Request Send; 'response-receive': Response Receive; 'current-requests-of-user': Current Pending Requests of User; 'tickets': Tickets;

Type: string

Supported Values: all, request-send, response-receive, current-requests-of-user, tickets

http-basic

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/http-basic/instance/{name}*

http-basic_instance-list

Specification	Value
Type	*list*
Block object keys	

domain

Description Specify user domain, default is null

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-format

Description 'user-principal-name': Append domain with User Principal Name format. (e.g. user@domain); 'down-level-logon-name': Append domain with Down-Level Logon Name format. (e.g. domainuser);

Type: string

Supported Values: user-principal-name, down-level-logon-name

Default: down-level-logon-name

name

Description Specify HTTP basic authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-hbase-inst-tmpl*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-basic_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'success': Success; 'no-creds': No Credential; 'bad-req': Bad Request; 'unauth': Unauthorized; 'forbidden': Forbidden; 'not-found': Not Found; 'server-error': Internal Server Error; 'unavailable': Service Unavailable;

Type: string

Supported Values: all, success, no-creds, bad-req, unauth, forbidden, not-found, server-error, unavailable

2.1.47 aam authentication relay form-based

Form-based Authentication Relay

form-based Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	form-based
Element URI	/axapi/v3/aam/authentication/relay/form-based
Element Attributes	form-based_attributes
Partition Visibility	shared
Schema	`form-based schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam/authentication/relay/form-based

form-based_attributes

form-based attributes

instance-list

Type: List

instance-list

Specification	Value
Type	*list*
Block object keys	

name

Description Specify form-based authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-form-inst-tmpl*

request-uri-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri/{match-type}+{uri}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'invalid_srv_rsp': Invalid Server Response; 'post_fail': POST Failed; 'invalid_cred': Invalid Credential; 'bad_req': Bad Request; 'not_fnd': Not Found; 'error': Internal Server Error; 'other_error': Other Error;

Type: string

Supported Values: all, request, invalid_srv_rsp, post_fail, invalid_cred, bad_req, not_fnd, error, other_error

instance-list_request-uri-list

Specification	Value
Type	*list*
Block object keys	

action-uri

Description Specify the action-URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cookie

Description: cookie is a **JSON Block**. Please see below for *instance-list_request-uri-list_cookie*

Type: Object

domain-variable

Description Specify domain variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

max-packet-collect-size

Description Specify the max packet collection size in bytes, default is 1MB

Type: number

Range: 1024-2097152

Default: 1048576

other-variables

Description Specify other variables (n1=v1&n2=v2) in form relay

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uri

Description Specify request URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-variable

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list_request-uri-list_cookie

Specification	Value
Type	*object*

cookie-value

Description: cookie-value is a **JSON Block**. Please see below for *instance-list_request-uri-list_cookie_cookie-value*

Type: Object

instance-list_request-uri-list_cookie_cookie-value

Specification	Value
Type	*object*

cookie-value

Description Specify cookie in POST packet

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

2.1.48 aam authentication relay form-based instance

Form-based Authentication Relay

instance Specification

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'invalid_srv_rsp': Invalid Server Response; 'post_fail': POST Failed; 'invalid_cred': Invalid Credential; 'bad_req': Bad Request; 'not_fnd': Not Found; 'error': Internal Server Error; 'other_error': Other Error;

Type: string

Supported Values: all, request, invalid_srv_rsp, post_fail, invalid_cred, bad_req, not_fnd, error, other_error

request-uri-list

Specification	Value
Type	*list*
Block object keys	

action-uri

Description Specify the action-URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cookie

Description: cookie is a **JSON Block**. Please see below for *request-uri-list_cookie*

Type: Object

domain-variable

Description Specify domain variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

max-packet-collect-size

Description Specify the max packet collection size in bytes, default is 1MB

Type: number

Range: 1024-2097152

Default: 1048576

other-variables

Description Specify other variables (n1=v1&n2=v2) in form relay

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uri

Description Specify request URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-variable

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

request-uri-list_cookie

Specification	Value
Type	*object*

cookie-value

Description: cookie-value is a **JSON Block**. Please see below for *request-uri-list_cookie_cookie-value*

Type: Object

request-uri-list_cookie_cookie-value

Specification	Value
Type	*object*

cookie-value

Description Specify cookie in POST packet

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

2.1.49 aam authentication relay form-based instance request-uri

URI of authentication web page

request-uri Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*match-type, uri*
Collection Name	*request-uri-list*
Collection URI	/axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri
Element Name	request-uri
Element URI	/axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri/{match-type}+{uri}
Element Attributes	request-uri_attributes
Partition Visibility	shared
Schema	`request-uri schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri

request-uri attributes

Create List

POST

/axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri

request-uri attributes

Get Object

GET

/axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri/{match-type}+{uri}

request-uri attributes

Get List

GET

/axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri

request-uri-list

Modify Object

POST

/axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri/{match-type}+{uri}

request-uri attributes

Replace Object

PUT

/axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri/{match-type}+{uri}

request-uri attributes

Replace List

PUT

/axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri

request-uri-list

Delete Object

DELETE

/axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri/{match-type}+{uri}

request-uri attributes

request-uri-list

request-uri-list is **JSON List** of *request-uri attributes*

request-uri-list : [

{ *request-uri attributes* },

{ *request-uri attributes* },

...

]

request-uri attributes

action-uri

Description Specify the action-URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cookie

Description: cookie is a **JSON Block**. Please see below for *cookie*

Type: Object

domain-variable

Description Specify domain variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

max-packet-collect-size

Description Specify the max packet collection size in bytes, default is 1MB

Type: number

Range: 1024-2097152

Default: 1048576

other-variables

Description Specify other variables (n1=v1&n2=v2) in form relay

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uri

Description Specify request URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-variable

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cookie

Specification	Value
Type	*object*

cookie-value

Description: cookie-value is a **JSON Block**. Please see below for *cookie_cookie-value*

Type: Object

cookie_cookie-value

Specification	Value
Type	*object*

cookie-value

Description Specify cookie in POST packet

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

2.1.50 aam authentication relay form-based instance stats

Statistics for the object instance

instance Specification

Parameter	Value
Type	*Collection*
Collection Name	*instance-list*
Collection URI	/axapi/v3/aam/authentication/relay/form-based/instance/{name}
Element Name	instance
Element URI	/axapi/v3/aam/authentication/relay/form-based/instance/{name}/stats
Element Attributes	instance_attributes
Partition Visibility	None
Schema	`instance schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/authentication/relay/form-based/instance/{name}

instance attributes

Create List

POST

/axapi/v3/aam/authentication/relay/form-based/instance/{name}

instance attributes

Get Object

GET

instance-list

Delete Object

DELETE

/axapi/v3/aam/authentication/relay/form-based/instance/{name}/stats

instance attributes

instance-list

instance-list is **JSON List** of *instance attributes*

instance-list : [

{ *instance attributes* },

{ *instance attributes* },

...

]

instance attributes

name

Description Specify form-based authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

bad_req

Description Bad Request

Type: number

Format: counter

error

Description Internal Server Error

Type: number

Format: counter

invalid_cred

Description Invalid Credential

Type: number

Format: counter

invalid_srv_rsp

Description Invalid Server Response

Type: number

Format: counter

not_fnd

Description Not Found

Type: number

Format: counter

other_error

Description Other Error

Type: number

Format: counter

post_fail

Description POST Failed

Type: number

Format: counter

request

Description Request

Type: number

Format: counter

2.1.51 aam authentication relay http-basic

HTTP Basic Authentication Relay

http-basic Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	http-basic
Element URI	/axapi/v3/aam/authentication/relay/http-basic
Element Attributes	http-basic_attributes
Partition Visibility	shared
Schema	`http-basic schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam/authentication/relay/http-basic

http-basic_attributes

http-basic attributes

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/relay/http-basic/instance/{name}*

instance-list

Specification	Value
Type	*list*
Block object keys	

domain

Description Specify user domain, default is null

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-format

Description 'user-principal-name': Append domain with User Principal Name format. (e.g. user@domain); 'down-level-logon-name': Append domain with Down-Level Logon Name format. (e.g. domainuser);

Type: string

Supported Values: user-principal-name, down-level-logon-name

Default: down-level-logon-name

name

Description Specify HTTP basic authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-hbase-inst-tmpl*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'success': Success; 'no-creds': No Credential; 'bad-req': Bad Request; 'unauth': Unauthorized; 'forbidden': Forbidden; 'not-found': Not Found; 'server-error': Internal Server Error; 'unavailable': Service Unavailable;

Type: string

Supported Values: all, success, no-creds, bad-req, unauth, forbidden, not-found, server-error, unavailable

2.1.52 aam authentication relay http-basic instance

HTTP Basic Authentication Relay instance

instance Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*instance-list*
Collection URI	/axapi/v3/aam/authentication/relay/http-basic/instance
Element Name	instance

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

kerberos-account

Description Specify the kerberos account name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kerberos-kdc

Description Specify the kerberos kdc ip or host name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc and kerberos-kdc-service-group are mutually exclusive

kerberos-kdc-service-group

Description Specify an authentication service group as multiple KDCs

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc-service-group and kerberos-kdc are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

kerberos-realm

Description Specify the kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify Kerberos authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of Kerberos password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify The KDC port, default is 88

Type: number

Range: 1-65535

Default: 88

sampling-enable

Type: List

secret-string

Description The kerberos client password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

timeout

Description Specify timeout for kerberos transport, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Request Send; 'response-receive': Response Receive; 'current-requests-of-user': Current Pending Requests of User; 'tickets': Tickets;

Type: string

Supported Values: all, request-send, response-receive, current-requests-of-user, tickets

secret-string

Description The kerberos client password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

timeout

Description Specify timeout for kerberos transport, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Request Send; 'response-receive': Response Receive; 'current-requests-of-user': Current Pending Requests of User; 'tickets': Tickets;

Type: string

Supported Values: all, request-send, response-receive, current-requests-of-user, tickets

2.1.56 aam authentication relay kerberos instance oper

Operational Status for the object instance

instance Specification

Parameter	Value
Type	*Collection*
Collection Name	*instance-list*
Collection URI	/axapi/v3/aam/authentication/relay/kerberos/instance/{name}
Element Name	instance
Element URI	/axapi/v3/aam/authentication/relay/kerberos/instance/{name}/oper

    }
}
```

saml-list

saml-list is **JSON List** of *saml attributes*

saml-list : [

{ *saml attributes* },

{ *saml attributes* },

...

]

saml attributes

idp-auth-uri

Description Specify the URI for IDP to handle SAML authentication request

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

match-uri

Description Match URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method

Description 'get-from-backend': Get RelayState parameter from backend server; 'request-uri': Use the (URL encoded) current request-uri as the RelayState;

Type: string

Supported Values: get-from-backend, request-uri

Mutual Exclusion: method and value are mutually exclusive

name

Description Specify SAML authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-acs-uri

Description Specify the backend server assertion consuming service URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

retry-number

Description Specify how many continuous fail for SAML relay will trigger. Default will not retry.

Type: number

Range: 0-10

Default: 0

sampling-enable

Type: List

server-cookie-name

Description Specify the cookie name that used by backend server for authenticated users

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Use the fixed string as the RelayState

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: value and method are mutually exclusive

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure; 'error': Error;

Type: string

Supported Values: all, request, success, failure, error

2.1.62 aam authentication relay saml stats

Format: counter

2.1.65 aam authentication saml

AAM SAML related configuration

saml Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	saml
Element URI	/axapi/v3/aam/authentication/saml
Element Attributes	saml_attributes
Partition Visibility	shared
Schema	`saml schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam/authentication/saml

saml_attributes

saml attributes

global

Description: global is a **JSON Block**. Please see below for *global*

Type: Object

Reference Object: */axapi/v3/aam/authentication/saml/global*

identity-provider-list

Type: List

Reference Object: */axapi/v3/aam/authentication/saml/identity-provider/{name}*

metadata

Description: metadata is a **JSON Block**. Please see below for *metadata*

Type: Object

Reference Object: */axapi/v3/aam/authentication/saml/metadata*

metadata-monitor

Description: metadata-monitor is a **JSON Block**. Please see below for *metadata-monitor*

Type: Object

Reference Object: */axapi/v3/aam/authentication/saml/metadata-monitor*

service-provider-list

Type: List

Reference Object: */axapi/v3/aam/authentication/saml/service-provider/{name}*

session

Description: session is a **JSON Block**. Please see below for *session*

Type: Object

Reference Object: */axapi/v3/aam/authentication/saml/session*

service-provider-list

Specification	Value
Type	*list*
Block object keys	

SP-initiated-single-logout-service

Type: List

acs-uri-bypass

Description After user authenticated, bypass requests with assertion-consuming-service location URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

adfs-ws-federation

Description: adfs-ws-federation is a **JSON Block**. Please see below for *service-provider-list_adfs-ws-federation*

Type: Object

artifact-resolution-service

Type: List

assertion-consuming-service

Type: List

bad-request-redirect-url

Description Specify URL to redirect

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

certificate

Description SAML service provider certificate file (PFX format is required.)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

entity-id

Description SAML service provider entity ID

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

metadata-export-service

Description: metadata-export-service is a **JSON Block**. Please see below for *service-provider-list_metadata-export-service*

Type: Object

name

Description Specify SAML authentication service provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-saml-service-prov-tmpl*

require-assertion-signed

Description: require-assertion-signed is a **JSON Block**. Please see below for *service-provider-list_require-assertion-signed*

Type: Object

saml-request-signed

Description: saml-request-signed is a **JSON Block**. Please see below for *service-provider-list_saml-request-signed*

Type: Object

sampling-enable

Type: List

service-url

Description SAML service provider service URL (ex. https://www.a10networks.com/saml.sso)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

signature-algorithm

Description 'SHA1': use SHA1 as signature algorithm (default); 'SHA256': use SHA256 as signature algorithm;

Type: string

Supported Values: SHA1, SHA256

Default: SHA1

single-logout-service

Type: List

soap-tls-certificate-validate

Description: soap-tls-certificate-validate is a **JSON Block**. Please see below for *service-provider-list_soap-tls-certificate-validate*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

username-attribute

Description Specify the assertion attribute which value is username

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-provider-list_require-assertion-signed

Specification	Value
Type	*object*

require-assertion-signed-enable

Description Enable required signing of SAML assertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-provider-list_single-logout-service

Specification	Value
Type	*list*
Block object keys	

SLO-binding

Description 'post': POST binding of single logout service; 'redirect': Redirect binding of single logout service; 'soap': SOAP binding of single logout service;

Type: string

Supported Values: post, redirect, soap

SLO-location

Description The location of name-id management service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-provider-list_assertion-consuming-service

Specification	Value
Type	*list*
Block object keys	

assertion-binding

Description 'artifact': Artifact binding of assertion consuming service; 'paos': PAOS binding of assertion consuming service; 'post': POST binding of assertion consuming service;

Type: string

Supported Values: artifact, paos, post

assertion-index

Description The index of assertion consuming service

Type: number

Range: 0-5

assertion-location

Description The location of assertion consuming service endpoint. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-provider-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'sp-metadata-export-req': Metadata Export Request; 'sp-metadata-export-success': Metadata Export Success; 'login-auth-req': Login Authentication Request; 'login-auth-resp': Login Authentication Response; 'acs-req': SAML Single-Sign-On Request; 'acs-success': SAML Single-Sign-On Success; 'acs-authz-fail': SAML Single-Sign-On Authorization Fail; 'acs-error': SAML Single-Sign-On Error; 'slo-req': Single Logout Request;

'slo-success': Single Logout Success; 'slo-error': Single Logout Error; 'sp-slo-req': SP-initiated Single Logout Request; 'glo-slo-success': Total Global Logout Success; 'loc-slo-success': Total Local Logout Success; 'par-slo-success': Total Partial Logout Success; 'other-error': Other Error;

Type: string

Supported Values: all, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, other-error

service-provider-list_saml-request-signed

Specification	Value
Type	*object*

saml-request-signed-disable

Description Disable signing signature for SAML (Authn/Artifact Resolve) requests

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-provider-list_SP-initiated-single-logout-service

Specification	Value
Type	*list*
Block object keys	

SP-SLO-location

Description The location of SP-initiated single logout service endpoint. (ex. /Logout)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

asynchronous

Description the IDP will not send a logout response to AX

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-provider-list_adfs-ws-federation

Specification	Value
Type	*object*

ws-federation-enable

Description Enable ADFS WS-Federation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-provider-list_soap-tls-certificate-validate

Specification	Value
Type	*object*

soap-tls-certificate-validate-disable

Description Disable verification for server certificate in TLS session when resolving artificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-provider-list_artifact-resolution-service

Specification	Value
Type	*list*
Block object keys	

artifact-binding

Description 'soap': SOAP binding of artifact resolution service;

Type: string

Supported Values: soap

artifact-index

Description The index of artifact resolution service

Type: number

Range: 0-5

artifact-location

Description The location of artifact resolution service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-provider-list_metadata-export-service

Specification	Value
Type	*object*

md-export-location

Description Specify the URI to export SP metadata (Export URI. Default is /A10SP_Metadata)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sign-xml

Description Sign exported SP metadata XML with SP's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

identity-provider-list

Specification	Value
Type	*list*
Block object keys	

metadata

Description URL of SAML identity provider's metadata file

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description SAML authentication identity provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

reload-interval

Description Specify URI metadata reload period (Specify URI metadata reload period in seconds, default is 28800)

Type: number

Range: 1-86400

Default: 28800

reload-metadata

Description Reload IdP's metadata immediately

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'requests-to-a10saml': Total Request to A10 SAML Service; 'responses-from-a10saml': Total Response from A10 SAML Service; 'sp-metadata-export-req': Total Metadata Export Request; 'sp-metadata-export-success': Toal Metadata Export Success; 'login-auth-req': Total Login Authentication Request; 'login-auth-resp': Total Login Authentication Response; 'acs-req': Total SAML Single-Sign-On Request; 'acs-success': Total SAML Single-Sign-On Success; 'acs-authz-fail': Total SAML Single-Sign-On Authorization Fail; 'acs-error': Total SAML Single-Sign-On Error; 'slo-req': Total Single Logout Request; 'slo-success': Total Single Logout Success; 'slo-error': Total Single Logout Error; 'sp-slo-req': Total SP-initiated Single Logout Request; 'glo-slo-success': Total Global Logout Success; 'loc-slo-success': Total Local Logout Success; 'par-slo-success': Total Partial Logout Success; 'relay-req': some help string; 'relay-success': some help string; 'relay-fail': some help string; 'relay-error': some help string; 'other-error': Total Other Error;

Type: string

Supported Values: all, requests-to-a10saml, responses-from-a10saml, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, relay-req, relay-success, relay-fail, relay-error, other-error

session

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

metadata-monitor

Specification	Value
Type	*object*

acs-continuous-fail-threshold

Description Specify how many ACS continuous fails will trigger metadata reload (ACS continuous fail threshold (default: 10))

Type: number

Range: 2-254

acs-missing-period

Description Specify how long no acs request will trigger metadata reload (in seconds (default: 60))

Type: number

Range: 1-254

acs-missing-threshold

Description Specify how many ACS request missing in the period will trigger metadata reload (ACS request missing threshold (default: 100))

Type: number

Range: 10-254

status

Description 'enable': Enable SAML metadata out-of-sync detection; 'disable': Disable SAML metadata out-of-sync detection;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

metadata

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

        "msg": "Success"
```

(continues on next page)

(continued from previous page)

```
    }
}
```

metadata-monitor attributes

acs-continuous-fail-threshold

Description Specify how many ACS continuous fails will trigger metadata reload (ACS continuous fail threshold (default: 10))

Type: number

Range: 2-254

acs-missing-period

Description Specify how long no acs request will trigger metadata reload (in seconds (default: 60))

Type: number

Range: 1-254

acs-missing-threshold

Description Specify how many ACS request missing in the period will trigger metadata reload (ACS request missing threshold (default: 100))

Type: number

Range: 10-254

status

Description 'enable': Enable SAML metadata out-of-sync detection; 'disable': Disable SAML metadata out-of-sync detection;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-provider-list

service-provider-list is **JSON List** of *service-provider attributes*

service-provider-list : [

{ *service-provider attributes* },

{ *service-provider attributes* },

...

]

service-provider attributes

SP-initiated-single-logout-service

Type: List

acs-uri-bypass

Description After user authenticated, bypass requests with assertion-consuming-service location URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

adfs-ws-federation

Description: adfs-ws-federation is a **JSON Block**. Please see below for *adfs-ws-federation*

Type: Object

artifact-resolution-service

Type: List

assertion-consuming-service

Type: List

bad-request-redirect-url

Description Specify URL to redirect

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

certificate

Description SAML service provider certificate file (PFX format is required.)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

entity-id

Description SAML service provider entity ID

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

metadata-export-service

Description: metadata-export-service is a **JSON Block**. Please see below for *metadata-export-service*

Type: Object

name

Description Specify SAML authentication service provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-saml-service-prov-tmpl*

require-assertion-signed

Description: require-assertion-signed is a **JSON Block**. Please see below for *require-assertion-signed*

Type: Object

saml-request-signed

Description: saml-request-signed is a **JSON Block**. Please see below for *saml-request-signed*

Type: Object

sampling-enable

Type: List

service-url

Description SAML service provider service URL (ex. https://www.a10networks.com/saml.sso)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

signature-algorithm

Description 'SHA1': use SHA1 as signature algorithm (default); 'SHA256': use SHA256 as signature algorithm;

Type: string

Supported Values: SHA1, SHA256

Default: SHA1

single-logout-service

Type: List

soap-tls-certificate-validate

Description: soap-tls-certificate-validate is a **JSON Block**. Please see below for *soap-tls-certificate-validate*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

username-attribute

Description Specify the assertion attribute which value is username

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

require-assertion-signed

Specification	Value
Type	*object*

require-assertion-signed-enable

Description Enable required signing of SAML assertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

single-logout-service

Specification	Value
Type	*list*
Block object keys	

SLO-binding

Description 'post': POST binding of single logout service; 'redirect': Redirect binding of single logout service; 'soap': SOAP binding of single logout service;

Type: string

Supported Values: post, redirect, soap

SLO-location

Description The location of name-id management service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

assertion-consuming-service

Specification	Value
Type	*list*
Block object keys	

assertion-binding

Description 'artifact': Artifact binding of assertion consuming service; 'paos': PAOS binding of assertion consuming service; 'post': POST binding of assertion consuming service;

Type: string

Supported Values: artifact, paos, post

assertion-index

Description The index of assertion consuming service

Type: number

Range: 0-5

assertion-location

Description The location of assertion consuming service endpoint. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'sp-metadata-export-req': Metadata Export Request; 'sp-metadata-export-success': Metadata Export Success; 'login-auth-req': Login Authentication Request; 'login-auth-resp': Login Authentication Response; 'acs-req': SAML Single-Sign-On Request; 'acs-success': SAML Single-Sign-On Success; 'acs-authz-fail': SAML Single-Sign-On Authorization Fail; 'acs-error': SAML Single-Sign-On Error; 'slo-req': Single Logout Request; 'slo-success': Single Logout Success; 'slo-error': Single Logout Error; 'sp-slo-req': SP-initiated Single Logout Request; 'glo-slo-success': Total Global Logout Success; 'loc-slo-success': Total Local Logout Success; 'par-slo-success': Total Partial Logout Success; 'other-error': Other Error;

Type: string

Supported Values: all, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, other-error

saml-request-signed

Specification	Value
Type	*object*

saml-request-signed-disable

Description Disable signing signature for SAML (Authn/Artifact Resolve) requests

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

SP-initiated-single-logout-service

Specification	Value
Type	*list*
Block object keys	

SP-SLO-location

Description The location of SP-initiated single logout service endpoint. (ex. /Logout)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

asynchronous

Description the IDP will not send a logout response to AX

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

adfs-ws-federation

Specification	Value
Type	*object*

ws-federation-enable

Description Enable ADFS WS-Federation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

soap-tls-certificate-validate

Specification	Value
Type	*object*

soap-tls-certificate-validate-disable

Description Disable verification for server certificate in TLS session when resolving artificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

artifact-resolution-service

Specification	Value
Type	*list*
Block object keys	

artifact-binding

Description 'soap': SOAP binding of artifact resolution service;

Type: string

Supported Values: soap

artifact-index

Description The index of artifact resolution service

Type: number

Range: 0-5

artifact-location

Description The location of artifact resolution service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

metadata-export-service

Specification	Value
Type	*object*

md-export-location

Description Specify the URI to export SP metadata (Export URI. Default is /A10SP_Metadata)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sign-xml

Description Sign exported SP metadata XML with SP's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.1.75 aam authentication saml service-provider stats

Statistics for the object service-provider

service-provider Specification

Parameter	Value
Type	*Collection*
Collection Name	*service-provider-list*
Collection URI	/axapi/v3/aam/authentication/saml/service-provider/{name}

Type: Object

stats

Specification	Value
Type	*object*

acs-authz-fail

Description SAML Single-Sign-On Authorization Fail

Type: number

Format: counter

acs-error

Description SAML Single-Sign-On Error

Type: number

Format: counter

acs-req

Description SAML Single-Sign-On Request

Type: number

Format: counter

acs-success

Description SAML Single-Sign-On Success

Type: number

Format: counter

glo-slo-success

Description Total Global Logout Success

Type: number

Format: counter

loc-slo-success

Description Total Local Logout Success

Type: number

Format: counter

login-auth-req

Description Login Authentication Request

Type: number

Format: counter

login-auth-resp

Description Login Authentication Response

Type: number

Format: counter

other-error

Description Other Error

Type: number

Format: counter

par-slo-success

Description Total Partial Logout Success

Type: number

Format: counter

slo-error

Description Single Logout Error

Type: number

Format: counter

slo-req

Description Single Logout Request

Type: number

Format: counter

slo-success

Description Single Logout Success

Type: number

Format: counter

sp-metadata-export-req

Description Metadata Export Request

Type: number

Format: counter

sp-metadata-export-success

Description Metadata Export Success

Type: number

Format: counter

sp-slo-req

Description SP-initiated Single Logout Request

Type: string

Supported Values: all, kerberos-request-send, kerberos-response-get, kerberos-timeout-error, kerberos-other-error, kerberos-request-normal, kerberos-request-dropped, kerberos-response-success, kerberos-response-failure, kerberos-response-error, kerberos-response-timeout, kerberos-response-other, kerberos-job-start-error, kerberos-polling-control-error, kerberos-pw-expiry, kerberos-pw-change-success, kerberos-pw-change-failure, kerberos-validate-kdc-success, kerberos-validate-kdc-failure, kerberos-generate-kdc-keytab-success, kerberos-generate-kdc-keytab-failure, kerberos-delete-kdc-keytab-success, kerberos-delete-kdc-keytab-failure, kerberos-kdc-keytab-count

windows_instance-list

Specification	Value
Type	*list*
Block object keys	

auth-protocol

Description: auth-protocol is a **JSON Block**. Please see below for *windows_instance-list_auth-protocol*

Type: Object

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *windows_instance-list_host*

Type: Object

name

Description Specify Windows authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-win-inst-tmpl*

realm

Description Specify realm of Windows server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-apacheds-kdc

Description Enable weak cipher (DES CRC/MD5/MD4) and merge AS-REQ in single packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify connection timeout to server, default is 10 seconds

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

windows_instance-list_host

Specification	Value
Type	*object*

hostip

Description Specify the Windows server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Specify the Windows server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

windows_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'krb_send_req_success': Kerberos Request; 'krb_get_resp_success': Kerberos Response; 'krb_timeout_error': Kerberos Timeout; 'krb_other_error': Kerberos Other Error; 'krb_pw_expiry': Kerberos password expiry; 'krb_pw_change_success': Kerberos password change success; 'krb_pw_change_failure': Kerberos password change failure; 'ntlm_proto_nego_success': NTLM Protocol Negotiation Success; 'ntlm_proto_nego_failure': NTLM Protocol Negotiation Failure; 'ntlm_session_setup_success': NTLM Session Setup Success; 'ntlm_session_setup_failure': NTLM Session Setup Failure; 'ntlm_prepare_req_success': NTLM Prepare Request Success; 'ntlm_prepare_req_error': NTLM Prepare Request Error; 'ntlm_auth_success': NTLM Authentication Success; 'ntlm_auth_failure': NTLM Authentication Failure; 'ntlm_timeout_error': NTLM Timeout; 'ntlm_other_error': NTLM Other Error; 'krb_validate_kdc_success': Kerberos KDC Validation Success; 'krb_validate_kdc_failure': Kerberos KDC Validation Failure;

Type: string

Supported Values: all, krb_send_req_success, krb_get_resp_success, krb_timeout_error, krb_other_error, krb_pw_expiry, krb_pw_change_success, krb_pw_change_failure, krb_validate_kdc_success, krb_validate_kdc_failure

windows_instance-list_auth-protocol

Specification	Value
Type	*object*

kdc-validate

Description Enable KDC validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

kerberos-kdc-validation

Description: kerberos-kdc-validation is a **JSON Block**. Please see below for *windows_instance-list_auth-protocol_kerberos-kdc-validation*

Type: Object

kerberos-password-change-port

Description Specify the Kerbros password change port, default is 464

Type: number

Range: 1-65534

Default: 464

kerberos-port

Description Specify the Kerberos port, default is 88

Type: number

Range: 1-65534

Default: 88

kport-hm

Description Check Kerberos port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kport-hm and kport-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

kport-hm-disable

Description Disable configured Kerberos port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kport-hm-disable and kport-hm are mutually exclusive

windows_instance-list_auth-protocol_kerberos-kdc-validation

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.)

kdc-account

Description Specify account for KDC validation

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kdc-password

Description Specify account password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

kdc-pwd

Description Account password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

kdc-spn

Description Specify SPN for KDC validation

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ocsp

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/server/ocsp/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ocsp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'stapling-certificate-good': Total OCSP Stapling Good Certificate Response; 'stapling-certificate-revoked': Total OCSP Stapling Revoked Certificate Response; 'stapling-certificate-unknown': Total OCSP Stapling Unknown Certificate Response; 'stapling-request-normal': Total OSCP Stapling Normal Request; 'stapling-request-dropped': Total OCSP Stapling Dropped Request; 'stapling-response-success': Total OCSP Stapling Success Response; 'stapling-response-failure': Total OCSP Stapling Failure Response; 'stapling-response-error': Total OCSP Stapling Error Response; 'stapling-response-timeout': Total OCSP Stapling Timeout Response; 'stapling-response-other': Total OCSP Stapling Other Response; 'request-normal': Total OSCP Normal Request; 'request-dropped': Total OCSP Dropped Request; 'response-success': Total OCSP Success Response; 'response-failure': Total OCSP Failure Response; 'response-error': Total OCSP Error Response; 'response-timeout': Total OCSP Timeout Response; 'response-other': Total OCSP Other Response; 'job-start-error': Total OCSP Job Start Error; 'polling-control-error': Total OCSP Polling Control Error;

Type: string

Supported Values: all, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-request-normal, stapling-request-dropped, stapling-response-success, stapling-response-failure, stapling-response-error, stapling-response-timeout, stapling-response-other, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

ocsp_instance-list

Specification	Value
Type	*list*
Block object keys	

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

http-version

Description Set HTTP version (default 1.0)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify OCSP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ocsp-inst-tmpl*

port-health-check

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-health-check and port-health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-health-check-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-health-check-disable and port-health-check are mutually exclusive

responder-ca

Description Specify the trusted OCSP responder's CA cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

responder-cert

Description Specify the trusted OCSP responder's cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

sampling-enable

Type: List

url

Description Specify the OCSP server's address (Format: http://host{[}:port{]}/) (The OCSP server's address(Format: http://host{[}:port{]}/))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version-type

Description '1.1': HTTP version 1.1;

Type: string

Supported Values: 1.1

ocsp_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'certificate-good': Good Certificate Response; 'certificate-revoked': Revoked Certificate Response; 'certificate-unknown': Unknown Certificate Response; 'timeout': Timeout; 'fail': Handle OCSP response failed; 'stapling-request': OCSP Stapling Request Send; 'stapling-certificate-good': OCSP Stapling Good Certificate Response; 'stapling-certificate-revoked': OCSP Stapling Revoked Certificate Response; 'stapling-certificate-unknown': OCSP Stapling Unknown Certificate Response; 'stapling-timeout': OCSP Stapling Timeout; 'stapling-fail': Handle OCSP response failed;

Type: string

Supported Values: all, request, certificate-good, certificate-revoked, certificate-unknown, timeout, fail, stapling-request, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-timeout, stapling-fail

radius

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/server/radius/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

radius_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Total Authentication Success; 'authen_failure': Total Authentication Failure; 'authorize_success': Total Authorization Success; 'authorize_failure': Total Authorization Failure; 'access_challenge': Total Access-Challenge Message Receive; 'timeout_error': Total Timeout; 'other_error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, accounting-request-sent, accounting-success, accounting-failure

radius_instance-list

Specification	Value
Type	*list*
Block object keys	

accounting-port

Description Specify the RADIUS server's accounting port, default is 1813

Type: number

Range: 1-65534

Default: 1813

acct-port-hm

Description Specify accounting port health check method

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acct-port-hm and acct-port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

acct-port-hm-disable

Description Disable configured accounting port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: acct-port-hm-disable and acct-port-hm are mutually exclusive

auth-type

Description 'pap': PAP authentication. Default; 'mschapv2': MS-CHAPv2 authentication; 'mschapv2-pap': Use MS-CHAPv2 first. If server doesn't support it, try PAP;

Type: string

Supported Values: pap, mschapv2, mschapv2-pap

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *radius_instance-list_host*

Type: Object

interval

Description Specify the interval time for resend the request (second), default is 3 seconds (The interval time(second), default is 3 seconds)

Type: number

Range: 1-1024

Default: 3

message-authenticator-verify-enable

Description Verify Message-Authenticator attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify RADIUS authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-rad-inst-tmpl*

port

Description Specify the RADIUS server's authentication port, default is 1812

Type: number

Range: 1-65534

Default: 1812

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

retry

Description Specify the retry number for resend the request, default is 5 (The retry number, default is 5)

Type: number

Range: 1-32

Default: 5

sampling-enable

Type: List

secret

Description Specify the RADIUS server's secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

radius_instance-list_host

Specification	Value
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

radius_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Authentication Success; 'authen_failure': Authentication Failure; 'authorize_success': Authorization Success; 'authorize_failure': Authorization Failure; 'access_challenge': Access-Challenge Message Receive; 'timeout_error': Timeout; 'other_error': Other Error; 'request': Request; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, accounting-request-sent, accounting-success, accounting-failure

ldap

Specification	Value
Type	*object*

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/server/ldap/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ldap_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Total Admin Bind Success; 'admin-bind-failure': Total Admin Bind Failure; 'bind-success': Total User Bind Success; 'bind-failure': Total User Bind Failure; 'search-success': Total Search Success; 'search-failure': Total Search Failure; 'authorize-success': Total Authorization Success; 'authorize-failure': Total Authorization Failure; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error; 'ssl-session-created': TLS/SSL Session Created;

'ssl-session-failure': TLS/SSL Session Failure; 'ldaps-idle-conn-num': LDAPS Idle Connection Number; 'ldaps-inuse-conn-num': LDAPS In-use Connection Number; 'pw-expiry': Total Password expiry; 'pw-change-success': Total password change success; 'pw-change-failure': Total password change failure;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, ssl-session-created, ssl-session-failure, ldaps-idle-conn-num, ldaps-inuse-conn-num, pw-expiry, pw-change-success, pw-change-failure

ldap_instance-list

Specification	Value
Type	*list*
Block object keys	

admin-dn

Description The LDAP server's admin DN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

admin-secret

Description Specify the LDAP server's admin secret password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-type

Description 'ad': Active Directory. Default; 'open-ldap': OpenLDAP;

Type: string

Supported Values: ad, open-ldap

base

Description Specify the LDAP server's search base

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

bind-with-dn

Description Enforce using DN for LDAP binding(All user input name will be used to create DN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ca-cert

Description Specify the LDAPS CA cert filename (Trusted LDAPS CA cert filename)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

default-domain

Description Specify default domain for LDAP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

derive-bind-dn

Description: derive-bind-dn is a **JSON Block**. Please see below for *ldap_instance-list_derive-bind-dn*

Type: Object

dn-attribute

Description Specify Distinguished Name attribute, default is CN

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: cn

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *ldap_instance-list_host*

Type: Object

ldaps-conn-reuse-idle-timeout

Description Specify LDAPS connection reuse idle timeout value (in seconds) (Specify idle timeout value (in seconds), default is 0 (not reuse LDAPS connection))

Type: number

Range: 0-86400

Default: 0

name

Description Specify LDAP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ldap-inst-tmpl*

port

Description Specify the LDAP server's authentication port, default is 389

Type: number

Range: 1-65534

Default: 389

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

prompt-pw-change-before-exp

Description Prompt user to change password before expiration in N days. This option only takes effect when server type is AD (Prompt user to change password before expiration in N days, default is not to prompt the user)

Type: number

Range: 1-999

protocol

Description 'ldap': Use LDAP (default); 'ldaps': Use LDAP over SSL; 'starttls': Use LDAP StartTLS;

Type: string

Supported Values: ldap, ldaps, starttls

Default: ldap

pwdmaxage

Description Specify the LDAP server's default password expiration time (in seconds) (The LDAP server's default password expiration time (in seconds), default is 0 (no expiration))

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

timeout

Description Specify timout for LDAP, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ldap_instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Admin Bind Success; 'admin-bind-failure': Admin Bind Failure; 'bind-success': User Bind Success; 'bind-failure': User Bind Failure; 'search-success': Search Success; 'search-failure': Search Failure; 'authorize-success': Authorization Success; 'authorize-failure': Authorization Failure; 'timeout-error': Timeout; 'other-error': Other Error; 'request': Request; 'ssl-session-created': TLS/SSL Session Created; 'ssl-session-failure': TLS/SSL Session Failure; 'pw_expiry': Password expiry; 'pw_change_success': Password change success; 'pw_change_failure': Password change failure;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, ssl-session-created, ssl-session-failure, pw_expiry, pw_change_success, pw_change_failure

ldap_instance-list_derive-bind-dn

Specification	Value
Type	*object*

username-attr

Description Specify attribute name of username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

ldap_instance-list_host

Specification	Value
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

2.1.79 aam authentication server ldap

LDAP Authentication Server

ldap Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ldap

    }
}
```

ldap attributes

instance-list

Type: List

Reference Object: */axapi/v3/aam/authentication/server/ldap/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Total Admin Bind Success; 'admin-bind-failure': Total Admin Bind Failure; 'bind-success': Total User Bind Success; 'bind-failure': Total User Bind Failure; 'search-success': Total Search Success; 'search-failure': Total Search Failure; 'authorize-success': Total Authorization Success; 'authorize-failure': Total Authorization Failure; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error; 'ssl-session-created': TLS/SSL Session Created; 'ssl-session-failure': TLS/SSL Session Failure; 'ldaps-idle-conn-num': LDAPS Idle Connection Number; 'ldaps-inuse-conn-num': LDAPS In-use Connection Number; 'pw-expiry': Total Password expiry; 'pw-change-success': Total password change success; 'pw-change-failure': Total password change failure;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, ssl-session-created, ssl-session-failure, ldaps-idle-conn-num, ldaps-inuse-conn-num, pw-expiry, pw-change-success, pw-change-failure

instance-list

Specification	Value
Type	*list*
Block object keys	

admin-dn

Description The LDAP server's admin DN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

admin-secret

Description Specify the LDAP server's admin secret password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-type

Description 'ad': Active Directory. Default; 'open-ldap': OpenLDAP;

Type: string

Supported Values: ad, open-ldap

base

Description Specify the LDAP server's search base

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

bind-with-dn

Description Enforce using DN for LDAP binding(All user input name will be used to create DN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ca-cert

Description Specify the LDAPS CA cert filename (Trusted LDAPS CA cert filename)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

default-domain

Description Specify default domain for LDAP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

derive-bind-dn

Description: derive-bind-dn is a **JSON Block**. Please see below for *instance-list_derive-bind-dn*

Type: Object

dn-attribute

Description Specify Distinguished Name attribute, default is CN

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: cn

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *instance-list_host*

Type: Object

ldaps-conn-reuse-idle-timeout

Description Specify LDAPS connection reuse idle timeout value (in seconds) (Specify idle timeout value (in seconds), default is 0 (not reuse LDAPS connection))

Type: number

Range: 0-86400

Default: 0

name

Description Specify LDAP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ldap-inst-tmpl*

port

Description Specify the LDAP server's authentication port, default is 389

Type: number

Range: 1-65534

Default: 389

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

prompt-pw-change-before-exp

Description Prompt user to change password before expiration in N days. This option only takes effect when server type is AD (Prompt user to change password before expiration in N days, default is not to prompt the user)

Type: number

Range: 1-999

protocol

Description 'ldap': Use LDAP (default); 'ldaps': Use LDAP over SSL; 'starttls': Use LDAP StartTLS;

Type: string

Supported Values: ldap, ldaps, starttls

Default: ldap

pwdmaxage

Description Specify the LDAP server's default password expiration time (in seconds) (The LDAP server's default password expiration time (in seconds), default is 0 (no expiration))

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

timeout

Description Specify timout for LDAP, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Admin Bind Success; 'admin-bind-failure': Admin Bind Failure; 'bind-success': User Bind Success; 'bind-failure': User Bind Failure; 'search-success': Search Success; 'search-failure': Search Failure; 'authorize-success': Authorization Success; 'authorize-failure': Authorization Failure; 'timeout-error': Timeout; 'other-error': Other Error; 'request': Request; 'ssl-session-created': TLS/SSL Session Created; 'ssl-session-failure': TLS/SSL Session Failure; 'pw_expiry': Password expiry; 'pw_change_success': Password change success; 'pw_change_failure': Password change failure;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, ssl-session-created, ssl-session-failure, pw_expiry, pw_change_success, pw_change_failure

instance-list_derive-bind-dn

Specification	Value
Type	*object*

username-attr

Description Specify attribute name of username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

instance-list_host

Specification	Value
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

}
```

instance-list

instance-list is **JSON List** of *instance attributes*

instance-list : [

{ *instance attributes* },

{ *instance attributes* },

...

]

instance attributes

admin-dn

Description The LDAP server's admin DN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

admin-secret

Description Specify the LDAP server's admin secret password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-type

Description 'ad': Active Directory. Default; 'open-ldap': OpenLDAP;

Type: string

Supported Values: ad, open-ldap

base

Description Specify the LDAP server's search base

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

bind-with-dn

Description Enforce using DN for LDAP binding(All user input name will be used to create DN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ca-cert

Description Specify the LDAPS CA cert filename (Trusted LDAPS CA cert filename)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

default-domain

Description Specify default domain for LDAP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

derive-bind-dn

Description: derive-bind-dn is a **JSON Block**. Please see below for *derive-bind-dn*

Type: Object

dn-attribute

Description Specify Distinguished Name attribute, default is CN

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: cn

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *host*

Type: Object

ldaps-conn-reuse-idle-timeout

Description Specify LDAPS connection reuse idle timeout value (in seconds) (Specify idle timeout value (in seconds), default is 0 (not reuse LDAPS connection))

Type: number

Range: 0-86400

Default: 0

name

Description Specify LDAP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ldap-inst-tmpl*

port

Description Specify the LDAP server's authentication port, default is 389

Type: number

Range: 1-65534

Default: 389

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

prompt-pw-change-before-exp

Description Prompt user to change password before expiration in N days. This option only takes effect when server type is AD (Prompt user to change password before expiration in N days, default is not to prompt the user)

Type: number

Range: 1-999

protocol

Description 'ldap': Use LDAP (default); 'ldaps': Use LDAP over SSL; 'starttls': Use LDAP StartTLS;

Type: string

Supported Values: ldap, ldaps, starttls

Default: ldap

pwdmaxage

Description Specify the LDAP server's default password expiration time (in seconds) (The LDAP server's default password expiration time (in seconds), default is 0 (no expiration))

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

timeout

Description Specify timout for LDAP, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Admin Bind Success; 'admin-bind-failure': Admin Bind Failure; 'bind-success': User Bind Success; 'bind-failure': User Bind Failure; 'search-success': Search Success; 'search-failure': Search Failure; 'authorize-success': Authorization Success; 'authorize-failure': Authorization Failure; 'timeout-error': Timeout; 'other-error': Other Error; 'request': Request; 'ssl-session-created': TLS/SSL Session Created; 'ssl-session-failure': TLS/SSL Session Failure; 'pw_expiry': Password expiry; 'pw_change_success': Password change success; 'pw_change_failure': Password change failure;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, ssl-session-created, ssl-session-failure, pw_expiry, pw_change_success, pw_change_failure

derive-bind-dn

Specification	Value
Type	*object*

username-attr

Description Specify attribute name of username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

host

Specification	Value
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

2.1.81 aam authentication server ldap instance stats

Statistics for the object instance

instance Specification

Parameter	Value
Type	*Collection*
Collection Name	*instance-list*

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Total Authentication Success; 'authen_failure': Total Authentication Failure; 'authorize_success': Total Authorization Success; 'authorize_failure': Total Authorization Failure; 'access_challenge': Total Access-Challenge Message Receive; 'timeout_error': Total Timeout; 'other_error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, accounting-request-sent, accounting-success, accounting-failure

instance-list

Specification	Value
Type	*list*
Block object keys	

accounting-port

Description Specify the RADIUS server's accounting port, default is 1813

Type: number

Range: 1-65534

Default: 1813

acct-port-hm

Description Specify accounting port health check method

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acct-port-hm and acct-port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

acct-port-hm-disable

Description Disable configured accounting port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: acct-port-hm-disable and acct-port-hm are mutually exclusive

auth-type

Description 'pap': PAP authentication. Default; 'mschapv2': MS-CHAPv2 authentication; 'mschapv2-pap': Use MS-CHAPv2 first. If server doesn't support it, try PAP;

Type: string

Supported Values: pap, mschapv2, mschapv2-pap

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *instance-list_host*

Type: Object

interval

Description Specify the interval time for resend the request (second), default is 3 seconds (The interval time(second), default is 3 seconds)

Type: number

Range: 1-1024

Default: 3

message-authenticator-verify-enable

Description Verify Message-Authenticator attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify RADIUS authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-rad-inst-tmpl*

port

Description Specify the RADIUS server's authentication port, default is 1812

Type: number

Range: 1-65534

Default: 1812

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

retry

Description Specify the retry number for resend the request, default is 5 (The retry number, default is 5)

Type: number

Range: 1-32

Default: 5

sampling-enable

Type: List

secret

Description Specify the RADIUS server's secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list_host

Specification	Value
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Authentication Success; 'authen_failure': Authentication Failure; 'authorize_success': Authorization Success; 'authorize_failure': Authorization Failure; 'access_challenge': Access-Challenge Message Receive; 'timeout_error': Timeout; 'other_error': Other Error; 'request': Request; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, accounting-request-sent, accounting-success, accounting-failure

2.1.91 aam authentication server radius instance

RADIUS Authentication Server instance

instance Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*

Supported Values: pap, mschapv2, mschapv2-pap

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *host*

Type: Object

interval

Description Specify the interval time for resend the request (second), default is 3 seconds (The interval time(second), default is 3 seconds)

Type: number

Range: 1-1024

Default: 3

message-authenticator-verify-enable

Description Verify Message-Authenticator attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify RADIUS authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-rad-inst-tmpl*

port

Description Specify the RADIUS server's authentication port, default is 1812

Type: number

Range: 1-65534

Default: 1812

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

retry

Description Specify the retry number for resend the request, default is 5 (The retry number, default is 5)

Type: number

Range: 1-32

Default: 5

sampling-enable

Type: List

secret

Description Specify the RADIUS server's secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host

Specification	Value
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Authentication Success; 'authen_failure': Authentication Failure; 'authorize_success': Authorization Success; 'authorize_failure': Authorization Failure; 'access_challenge': Access-Challenge Message Receive; 'timeout_error': Timeout; 'other_error': Other Error; 'request': Request; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, accounting-request-sent, accounting-success, accounting-failure

2.1.92 aam authentication server radius instance stats

Statistics for the object instance

instance Specification

Parameter	Value
Type	*Collection*
Collection Name	*instance-list*
Collection URI	/axapi/v3/aam/authentication/server/radius/instance/{name}

auth-protocol

Description: auth-protocol is a **JSON Block**. Please see below for *instance-list_auth-protocol*

Type: Object

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *instance-list_host*

Type: Object

name

Description Specify Windows authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-win-inst-tmpl*

realm

Description Specify realm of Windows server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-apacheds-kdc

Description Enable weak cipher (DES CRC/MD5/MD4) and merge AS-REQ in single packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify connection timeout to server, default is 10 seconds

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list_host

Specification	Value
Type	*object*

hostip

Description Specify the Windows server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Specify the Windows server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

instance-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'krb_send_req_success': Kerberos Request; 'krb_get_resp_success': Kerberos Response; 'krb_timeout_error': Kerberos Timeout; 'krb_other_error': Kerberos Other Error; 'krb_pw_expiry': Kerberos password expiry; 'krb_pw_change_success': Kerberos password change success; 'krb_pw_change_failure': Kerberos password change failure; 'ntlm_proto_nego_success': NTLM Protocol Negotiation Success; 'ntlm_proto_nego_failure': NTLM Protocol Negotiation Failure; 'ntlm_session_setup_success': NTLM Session Setup Success; 'ntlm_session_setup_failure': NTLM Session Setup Failure; 'ntlm_prepare_req_success': NTLM Prepare Request Success; 'ntlm_prepare_req_error': NTLM Prepare Request Error; 'ntlm_auth_success': NTLM Authentication Success; 'ntlm_auth_failure': NTLM Authentication Failure; 'ntlm_timeout_error': NTLM Timeout; 'ntlm_other_error': NTLM Other Error; 'krb_validate_kdc_success': Kerberos KDC Validation Success; 'krb_validate_kdc_failure': Kerberos KDC Validation Failure;

Type: string

Supported Values: all, krb_send_req_success, krb_get_resp_success, krb_timeout_error, krb_other_error, krb_pw_expiry, krb_pw_change_success, krb_pw_change_failure, krb_validate_kdc_success, krb_validate_kdc_failure

instance-list_auth-protocol

Specification	Value
Type	*object*

kdc-validate

Description Enable KDC validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

kerberos-kdc-validation

Description: kerberos-kdc-validation is a **JSON Block**. Please see below for *instance-list_auth-protocol_kerberos-kdc-validation*

Type: Object

kerberos-password-change-port

Description Specify the Kerbros password change port, default is 464

Type: number

Range: 1-65534

Default: 464

kerberos-port

Description Specify the Kerberos port, default is 88

Type: number

Range: 1-65534

Default: 88

kport-hm

Description Check Kerberos port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kport-hm and kport-hm-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

kport-hm-disable

Description Disable configured Kerberos port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kport-hm-disable and kport-hm are mutually exclusive

instance-list_auth-protocol_kerberos-kdc-validation

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.)

kdc-account

Description Specify account for KDC validation

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kdc-password

Description Specify account password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

kdc-pwd

Description Account password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

kdc-spn

Description Specify SPN for KDC validation

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

2.1.95 aam authentication server windows instance

"Windows Server, using Kerberos or NTLM for authentication"

instance Specification

```

template-list

template-list is **JSON List** of *template attributes*

template-list : [

{ *template attributes* },

{ *template attributes* },

...

]

template attributes

account

Description Specify AD domain account

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/account/kerberos-spn*

accounting-server

Description Specify a RADIUS accounting server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: accounting-server and accounting-service-group are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/radius/instance*

accounting-service-group

Description Specify an authentication service group for RADIUS accounting

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: accounting-service-group and accounting-server are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

auth-sess-mode

Description 'cookie-based': Track auth-session by cookie (default); 'ip-based': Track auth-session by client IP;

Type: string

Supported Values: cookie-based, ip-based

captcha

Description Specify captcha profile (Specify captcha proflie name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/captcha/instance*

chain

Type: List

cookie-domain

Type: List

cookie-domain-group

Type: List

cookie-httponly-enable

Description Enable httponly attribute for AAM cookies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cookie-max-age

Description Configure Max-Age for authentication session cookie (Configure Max-Age in seconds, 0 for no Max-Age/Expires attributes. Default is 604800 (1 week).)

Type: number

Range: 0-2592000

Default: 604800

cookie-samesite

Description 'strict': Specify SameSite attribute as Strict for AAM cookie; 'lax': Specify SameSite attribute as Lax for AAM cookie; 'none': Specify SameSite attribute as None for AAM cookie;

Type: string

Supported Values: strict, lax, none

cookie-secure-enable

Description Enable secure attribute for AAM cookies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-logout-disable

Description Disable forward logout request to backend application server. The config-field logout-url must be configured first

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt

Description Specify authentication jwt template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/jwt*

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description 'use-partition-level-config': Use configuration of authentication-log enable command; 'enable': Enable authentication logs for this template; 'disable': Disable authentication logs for this template;

Type: string

Supported Values: use-partition-level-config, enable, disable

Default: use-partition-level-config

logon

Description Specify authentication logon (Specify authentication logon template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/logon/form-based*

logout-idle-timeout

Description Specify idle logout time (Specify idle timeout in seconds, default is 300)

Type: number

Range: 1-86400

Default: 300

logout-url

Description Specify logout url (Specify logout url string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

max-session-time

Description Specify default SAML token lifetime (Specify lifetime (in seconds) of SAML token when it not provided by token attributes, default is 28800. (0 for indefinite))

Type: number

Range: 0-86400

modify-content-security-policy

Description Put redirect-uri or service-principal-name into CSP header to avoid CPS break authentication process

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Authentication template name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

oauth-authorization-server

Description Specify OAUTH authorization server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

oauth-client

Description Specify OAUTH client

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

redirect-hostname

Description Hostname(Length 1-31) for transparent-proxy authentication

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

relay

Description Specify authentication relay (Specify authentication relay template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/relay/http-basic/instance*

saml-idp

Description Specify SAML identity provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

saml-sp

Description Specify SAML service provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server

Description Specify authentication server (Specify authentication server template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: server and service-group are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/ldap/instance*

service-group

Description Bind an authentication service group to this template (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group, server, and chain-server are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

type

Description 'saml': SAML authentication template; 'standard': Standard authentication template; 'oauth': Oauth 2.0 authentication template;

Type: string

Supported Values: saml, standard, oauth

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

chain

Specification	Value
Type	*list*
Block object keys	

chain-server

Description Specify authentication server (Specify authentication server template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-server, service-group, and chain-sg are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/ldap/instance*

chain-server-priority

Description Set server priority, higher the number higher the priority. Default is 3. (Chain server priority, higher the number higher the priority. Default is 3.)

Type: number

Range: 1-5

Default: 3

chain-sg

Description Bind an authentication service group to this template (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-sg and chain-server are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

chain-sg-priority

Description Set service-group priority, higher the number higher the priority. Default is 3. (Chain service-group priority, higher the number higher the priority. Default is 3.)

Type: number

Range: 1-5

Default: 3

cookie-domain-group

Specification	Value
Type	*list*
Block object keys	

cookie-dmngrp

Description Specify group id to join in the cookie-domain

Type: number

Range: 0-31

cookie-domain

Specification	Value
Type	*list*
Block object keys	

cookie-dmn

Description Specify domain scope for the authentication (ex: .a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 2 characters

2.1.110 aam authorization

AAM authorization related configuration

authorization Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	authorization
Element URI	/axapi/v3/aam/authorization
Element Attributes	authorization_attributes
Partition Visibility	shared
Schema	`authorization schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam/authorization

authorization_attributes

authorization attributes

jwt

Description: jwt is a **JSON Block**. Please see below for *jwt*

Type: Object

Reference Object: */axapi/v3/aam/authorization/jwt*

policy-list

Type: List

Reference Object: */axapi/v3/aam/authorization/policy/{name}*

policy-list

Specification	Value
Type	*list*
Block object keys	

attribute-list

Type: List

Reference Object: */axapi/v3/aam/authorization/policy/{name}/attribute/{attr-num}*

attribute-rule

Description Define attribute rule for authorization policy

Type: string

Format: string-rlx

extended-filter

Description Extended search filter. EX: Check whether user belongs to a nested group. (memberOf:1.2.840.113556.1.4.1941:=$GROUP-DN)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

forward-policy-authorize-only

Description This policy only provides server info for forward policy feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-authorization

Description Specify JWT authorization template (Specify JWT authorization template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: jwt-authorization, server, and service-group are mutually exclusive

Reference Object: */axapi/v3/aam/jwt-authorization*

jwt-claim-map-list

Type: List

Reference Object: */axapi/v3/aam/authorization/policy/{name}/jwt-claim-map/{attr-num}*

name

Description Specify authorization policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server

Description Specify a LDAP or RADIUS server for authorization (Specify a LDAP or RADIUS server name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: server, service-group, and jwt-authorization are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/ldap/instance*

service-group

Description Specify an authentication service group for authorization (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group, server, and jwt-authorization are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_jwt-claim-map-list

Specification	Value
Type	*list*
Block object keys	

attr-num

Description Spcify attribute ID for claim mapping

Type: number

Range: 1-32

bool-val

Description 'true': True; 'false': False;

Type: string

Supported Values: true, false

boolean-type

Description Claim type is boolean

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: boolean-type, string-type, and number-type are mutually exclusive

claim

Description Specify JWT claim name to map to.

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

num-val

Description Specify JWT claim value.

Type: number

Range: 0-4294967295

number-type

Description Claim type is number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-type, string-type, and boolean-type are mutually exclusive

str-val

Description Specify JWT claim value.

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

string-type

Description Claim type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-type, number-type, and boolean-type are mutually exclusive

type

Description Specify claim type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_attribute-list

Specification	Value
Type	*list*
Block object keys	

A10-AX-AUTH-URI

Description Custom-defined attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: A10-AX-AUTH-URI and attribute-name are mutually exclusive

a10-dynamic-defined

Description The value of this attribute will depend on AX configuration instead of user configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

any

Description Matched when attribute is present (with any value).

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and attr-type are mutually exclusive

attr-int

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-int-val

Description Set attribute value

Type: number

Range: 0-4294967295

attr-ip

Description 'equal': Operation type is equal; 'not-equal': Operation type is not-equal;

Type: string

Supported Values: equal, not-equal

attr-ipv4

Description IPv4 address

Type: string

Format: ipv4-address

attr-num

Description Set attribute ID for authorization policy

Type: number

Range: 1-32

attr-number

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-number-val

Description Set attribute value

Type: string

Maximum Length: 20 characters

Maximum Length: 1 characters

attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

attr-str-val

Description Set attribute value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: attr-type and any are mutually exclusive

attribute-name

Description Specify attribute name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: attribute-name and A10-AX-AUTH-URI are mutually exclusive

custom-attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

custom-attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

integer-type

Description Attribute type is integer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: integer-type,string-type, ip-type, and number-type are mutually exclusive

ip-type

Description IP address is transformed into network byte order

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip-type,string-type, integer-type, and number-type are mutually exclusive

number-type

Description Attribute type is decimal number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-type,string-type, integer-type, and ip-type are mutually exclusive

string-type

Description Attribute type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-type,integer-type, ip-type, and number-type are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

jwt

Specification	Value
Type	*object*

cache

Description: cache is a **JSON Block**. Please see below for *jwt_cache*

Type: Object

Reference Object: */axapi/v3/aam/authorization/jwt/cache*

jwt_cache

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.111 aam authorization jwt

AAM authorization JWT related operations

jwt Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	jwt
Element URI	/axapi/v3/aam/authorization/jwt
Element Attributes	jwt_attributes
Partition Visibility	shared
Schema	`jwt schema`

Operations Allowed:

    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

policy-list

policy-list is **JSON List** of *policy attributes*

policy-list : [

{ *policy attributes* },

{ *policy attributes* },

...

]

policy attributes

attribute-list

Type: List

Reference Object: */axapi/v3/aam/authorization/policy/{name}/attribute/{attr-num}*

attribute-rule

Description Define attribute rule for authorization policy

Type: string

Format: string-rlx

extended-filter

Description Extended search filter. EX: Check whether user belongs to a nested group. (memberOf:1.2.840.113556.1.4.1941:=$GROUP-DN)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

forward-policy-authorize-only

Description This policy only provides server info for forward policy feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-authorization

Description Specify JWT authorization template (Specify JWT authorization template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: jwt-authorization, server, and service-group are mutually exclusive

Reference Object: */axapi/v3/aam/jwt-authorization*

jwt-claim-map-list

Type: List

Reference Object: */axapi/v3/aam/authorization/policy/{name}/jwt-claim-map/{attr-num}*

name

Description Specify authorization policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server

Description Specify a LDAP or RADIUS server for authorization (Specify a LDAP or RADIUS server name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: server, service-group, and jwt-authorization are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/ldap/instance*

service-group

Description Specify an authentication service group for authorization (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group, server, and jwt-authorization are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

jwt-claim-map-list

Specification	Value
Type	*list*
Block object keys	

attr-num

Description Spcify attribute ID for claim mapping

Type: number

Range: 1-32

bool-val

Description 'true': True; 'false': False;

Type: string

Supported Values: true, false

boolean-type

Description Claim type is boolean

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: boolean-type, string-type, and number-type are mutually exclusive

claim

Description Specify JWT claim name to map to.

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

num-val

Description Specify JWT claim value.

Type: number

Range: 0-4294967295

number-type

Description Claim type is number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-type, string-type, and boolean-type are mutually exclusive

str-val

Description Specify JWT claim value.

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

string-type

Description Claim type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-type, number-type, and boolean-type are mutually exclusive

type

Description Specify claim type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

attribute-list

Specification	Value
Type	*list*
Block object keys	

A10-AX-AUTH-URI

Description Custom-defined attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: A10-AX-AUTH-URI and attribute-name are mutually exclusive

a10-dynamic-defined

Description The value of this attribute will depend on AX configuration instead of user configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

any

Description Matched when attribute is present (with any value).

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and attr-type are mutually exclusive

attr-int

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-int-val

Description Set attribute value

Type: number

Range: 0-4294967295

attr-ip

Description 'equal': Operation type is equal; 'not-equal': Operation type is not-equal;

Type: string

Supported Values: equal, not-equal

attr-ipv4

Description IPv4 address

Type: string

Format: ipv4-address

attr-num

Description Set attribute ID for authorization policy

Type: number

Range: 1-32

attr-number

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-number-val

Description Set attribute value

Type: string

Maximum Length: 20 characters

Maximum Length: 1 characters

attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

attr-str-val

Description Set attribute value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: attr-type and any are mutually exclusive

attribute-name

Description Specify attribute name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: attribute-name and A10-AX-AUTH-URI are mutually exclusive

custom-attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

custom-attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

integer-type

Description Attribute type is integer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: integer-type,string-type, ip-type, and number-type are mutually exclusive

ip-type

Description IP address is transformed into network byte order

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip-type,string-type, integer-type, and number-type are mutually exclusive

number-type

Description Attribute type is decimal number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-type,string-type, integer-type, and ip-type are mutually exclusive

string-type

Description Attribute type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-type,integer-type, ip-type, and number-type are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.115 aam authorization policy attribute

Authorization-policy attribute configuration

attribute Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*attr-num*
Collection Name	*attribute-list*

attribute-list

attribute-list is **JSON List** of *attribute attributes*

```
attribute-list : [
        { attribute attributes },
        { attribute attributes },
        ...
    ]
```

attribute attributes

A10-AX-AUTH-URI

Description Custom-defined attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: A10-AX-AUTH-URI and attribute-name are mutually exclusive

a10-dynamic-defined

Description The value of this attribute will depend on AX configuration instead of user configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

any

Description Matched when attribute is present (with any value).

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and attr-type are mutually exclusive

attr-int

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-int-val

Description Set attribute value

Type: number

Range: 0-4294967295

attr-ip

Description 'equal': Operation type is equal; 'not-equal': Operation type is not-equal;

Type: string

Supported Values: equal, not-equal

attr-ipv4

Description IPv4 address

Type: string

Format: ipv4-address

attr-num

Description Set attribute ID for authorization policy

Type: number

Range: 1-32

attr-number

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-number-val

Description Set attribute value

Type: string

Maximum Length: 20 characters

Maximum Length: 1 characters

attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

attr-str-val

Description Set attribute value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: attr-type and any are mutually exclusive

attribute-name

Description Specify attribute name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: attribute-name and A10-AX-AUTH-URI are mutually exclusive

custom-attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

custom-attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

integer-type

Description Attribute type is integer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: integer-type,string-type, ip-type, and number-type are mutually exclusive

ip-type

Description IP address is transformed into network byte order

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip-type,string-type, integer-type, and number-type are mutually exclusive

number-type

Description Attribute type is decimal number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-type,string-type, integer-type, and ip-type are mutually exclusive

```

jwt-claim-map attributes

attr-num

Description Spcify attribute ID for claim mapping

Type: number

Range: 1-32

bool-val

Description 'true': True; 'false': False;

Type: string

Supported Values: true, false

boolean-type

Description Claim type is boolean

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: boolean-type, string-type, and number-type are mutually exclusive

claim

Description Specify JWT claim name to map to.

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

num-val

Description Specify JWT claim value.

Type: number

Range: 0-4294967295

number-type

Description Claim type is number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-type, string-type, and boolean-type are mutually exclusive

str-val

Description Specify JWT claim value.

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

string-type

Description Claim type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-type, number-type, and boolean-type are mutually exclusive

type

Description Specify claim type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.117 aam jwt-authorization

AAM JWT authorization related configuration

jwt-authorization Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*jwt-authorization-list*
Collection URI	/axapi/v3/aam/jwt-authorization
Element Name	jwt-authorization
Element URI	/axapi/v3/aam/jwt-authorization/{name}
Element Attributes	jwt-authorization_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/aam/jwt-authorization/{name}/stats
Schema	`jwt-authorization schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/jwt-authorization

jwt-authorization attributes

```
POST /axapi/v3/aam/jwt-authorization/
Payload:
{
    "jwt-authorization": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/aam/jwt-authorization

jwt-authorization attributes

Get Object

GET

/axapi/v3/aam/jwt-authorization/{name}

jwt-authorization attributes

```
GET /axapi/v3/aam/jwt-authorization/a
Reponse:
{
    "jwt-authorization": {
        "name": "a",
        "jwt-cache-enable": 0,
        "exp-claim-requried": 0,
        "jwt-forwarding": 0,
        "uuid": "ac3e5b42-087d-11f0-847f-51c757813e60",
        "user-tag": "a",
        "a10-url": "/axapi/v3/aam/jwt-authorization/a"
    }
}
```

Get List

GET

/axapi/v3/aam/jwt-authorization

jwt-authorization-list

Modify Object

POST

/axapi/v3/aam/jwt-authorization/{name}

jwt-authorization attributes

Replace Object

PUT

/axapi/v3/aam/jwt-authorization/{name}

jwt-authorization attributes

```
PUT /axapi/v3/aam/jwt-authorization/a
Payload:
{
    "jwt-authorization": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/aam/jwt-authorization

jwt-authorization-list

Delete Object

DELETE

/axapi/v3/aam/jwt-authorization/{name}

jwt-authorization attributes

```
DELETE /axapi/v3/aam/jwt-authorization/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

jwt-authorization-list

jwt-authorization-list is **JSON List** of *jwt-authorization attributes*

jwt-authorization-list : [

{ *jwt-authorization attributes* },

{ *jwt-authorization attributes* },

...

]

jwt-authorization attributes

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

exp-claim-requried

Description Specify the exp claim is required for JWT authorization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-cache-enable

Description Enable caching authorized JWT token and skip verification and authorization for cached tokens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-exp-default

Description Specify the default token expiration if exp claim is not available (default 1800)

Type: number

Range: 1-86400

jwt-forwarding

Description Specify JWT token will not be stripped while forwarding client request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-level

Description '0': log disable; '1': only log authorzation fail (default); '2': only log authorization success; '3': log all;

Type: string

Supported Values: 0, 1, 2, 3

name

Description Specify JWT authorization template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/aam-jwt-authorization-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verification-cert

Description Specify the certificate to verify JWT token signature

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-cert, verification-jwks, and verification-secret are mutually exclusive

verification-jwks

Description Specify the jwks file to verify JWT token signature

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-jwks, verification-cert, and verification-secret are mutually exclusive

verification-secret

Description Specify secret for verify JWT token signature

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-secret, verification-cert, and verification-jwks are mutually exclusive

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'jwt-request': JWT Request; 'jwt-authorize-success': JWT Authorize Success; 'jwt-authorize-failure': JWT Authorize Failure; 'jwt-missing-token': JWT Missing Token; 'jwt-missing-claim': JWT Missing Claim; 'jwt-token-expired': JWT Token Expired; 'jwt-signature-failure': JWT Signature Failure; 'jwt-other-error': JWT Other Error;

Type: string

Supported Values: all, jwt-request, jwt-authorize-success, jwt-authorize-failure, jwt-missing-token, jwt-missing-claim, jwt-token-expired, jwt-signature-failure, jwt-other-error

2.1.118 aam jwt-authorization stats

Statistics for the object jwt-authorization

jwt-authorization Specification

Parameter	Value
Type	*Collection*
Collection Name	*jwt-authorization-list*
Collection URI	/axapi/v3/aam/jwt-authorization/{name}
Element Name	jwt-authorization
Element URI	/axapi/v3/aam/jwt-authorization/{name}/stats
Element Attributes	jwt-authorization_attributes
Partition Visibility	None
Schema	`jwt-authorization schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/jwt-authorization/{name}

jwt-authorization attributes

Create List

POST

/axapi/v3/aam/jwt-authorization/{name}

jwt-authorization attributes

Get Object

GET

jwt-authorization-list

Delete Object

DELETE

/axapi/v3/aam/jwt-authorization/{name}/stats

jwt-authorization attributes

jwt-authorization-list

jwt-authorization-list is **JSON List** of *jwt-authorization attributes*

```
jwt-authorization-list : [
        { jwt-authorization attributes },
        { jwt-authorization attributes },
        ...
    ]
```

jwt-authorization attributes

name

Description Specify JWT authorization template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

jwt-authorize-failure

Description JWT Authorize Failure

Type: number

Format: counter

jwt-authorize-success

Description JWT Authorize Success

Type: number

Format: counter

jwt-missing-claim

Description JWT Missing Claim

Type: number

Format: counter

jwt-missing-token

Description JWT Missing Token

Type: number

Format: counter

jwt-other-error

Description JWT Other Error

Type: number

Format: counter

jwt-request

Description JWT Request

Type: number

Format: counter

jwt-signature-failure

Description JWT Signature Failure

Type: number

Format: counter

jwt-token-expired

Description JWT Token Expired

Type: number

Format: counter

2.1.119 aam rdns

acl-log

Description Log matches against this entry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code, icmp-code, and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type, icmp-type, and special-type are mutually exclusive

dscp

Description DSCP

Type: number

Range: 1-63

dst-any

Description Any destination host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst-any,dst-host, dst-subnet, and dst-object-group are mutually exclusive

dst-eq

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-eq,dst-gt, dst-lt, and dst-range are mutually exclusive

dst-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: dst-gt,dst-eq, dst-lt, and dst-range are mutually exclusive

dst-host

Description A single destination host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: dst-host,dst-any, dst-subnet, and dst-object-group are mutually exclusive

dst-lt

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

Mutual Exclusion: dst-lt,dst-eq, dst-gt, and dst-range are mutually exclusive

dst-mask

Description Destination Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

dst-object-group

Description Destination network object group name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-object-group,dst-any, dst-host, and dst-subnet are mutually exclusive

dst-port-end

Description Edning Destination Port Number

Type: number

Range: 1-65535

dst-range

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-range,dst-eq, dst-gt, and dst-lt are mutually exclusive

dst-subnet

Description Destination Address

Type: string

Format: ipv4-address

Mutual Exclusion: dst-subnet,dst-any, dst-host, and dst-object-group are mutually exclusive

established

Description TCP established

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

extd-action

Description 'deny': Deny; 'permit': Permit; 'l3-vlan-fwd-disable': Disable L3 forwarding between VLANs;

Type: string

Supported Values: deny, permit, l3-vlan-fwd-disable

extd-remark

Description Access list entry comment (Notes for this ACL)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

extd-seq-num

Description Sequence number

Type: number

Range: 1-8192

fragments

Description IP fragments

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmp,tcp, udp, ip, and service-obj-group are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code, any-code, and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type, any-type, and special-type are mutually exclusive

ip

Description Any Internet Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip,icmp, tcp, udp, and service-obj-group are mutually exclusive

service-obj-group

Description Service object group (Source object group name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-obj-group,icmp, tcp, udp, and ip are mutually exclusive

special-code

Description 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code, any-code, and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5, redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type, icmp-type, and any-type are mutually exclusive

src-any

Description Any source host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src-any,src-host, src-subnet, and src-object-group are mutually exclusive

src-eq

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: src-eq,src-gt, src-lt, and src-range are mutually exclusive

src-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: src-gt,src-eq, src-lt, and src-range are mutually exclusive

src-host

Description A single source host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: src-host,src-any, src-subnet, and src-object-group are mutually exclusive

src-lt

Description Match only packets with a lower port number

Type: number

Range: 2-65535

Mutual Exclusion: src-lt,src-eq, src-gt, and src-range are mutually exclusive

src-mask

Description Source Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

src-object-group

Description Network object group (Source network object group name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-object-group,src-any, src-host, and src-subnet are mutually exclusive

src-port-end

Description Ending Port Number

Type: number

Range: 1-65535

src-range

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: src-range,src-eq, src-gt, and src-lt are mutually exclusive

src-subnet

Description Source Address

Type: string

Format: ipv4-address

Mutual Exclusion: src-subnet,src-any, src-host, and src-object-group are mutually exclusive

tcp

Description protocol TCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tcp,icmp, udp, ip, and service-obj-group are mutually exclusive

transparent-session-only

Description Only log transparent sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk

Description Ethernet trunk (trunk number)

Type: number

Format: interface

udp

Description protocol UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: udp,icmp, tcp, ip, and service-obj-group are mutually exclusive

vlan

Description VLAN ID

Type: number

Range: 1-4094

extended attributes

extended-list

extended-list is **JSON List** of *extended attributes*

extended-list : [

{ *extended attributes* },

{ *extended attributes* },

…

]

extended attributes

extd

Description IP extended access list

Type: number

Range: 100-199

rules

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rules

Specification	Value
Type	*list*
Block object keys	

acl-log

Description Log matches against this entry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code, icmp-code, and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type, icmp-type, and special-type are mutually exclusive

dscp

Description DSCP

Type: number

Range: 1-63

dst-any

Description Any destination host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst-any,dst-host, dst-subnet, and dst-object-group are mutually exclusive

dst-eq

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-eq,dst-gt, dst-lt, and dst-range are mutually exclusive

dst-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: dst-gt,dst-eq, dst-lt, and dst-range are mutually exclusive

dst-host

Description A single destination host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: dst-host,dst-any, dst-subnet, and dst-object-group are mutually exclusive

dst-lt

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

Mutual Exclusion: dst-lt,dst-eq, dst-gt, and dst-range are mutually exclusive

dst-mask

Description Destination Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

dst-object-group

Description Destination network object group name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-object-group,dst-any, dst-host, and dst-subnet are mutually exclusive

dst-port-end

Description Edning Destination Port Number

Type: number

Range: 1-65535

dst-range

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-range,dst-eq, dst-gt, and dst-lt are mutually exclusive

dst-subnet

Description Destination Address

Type: string

Format: ipv4-address

Mutual Exclusion: dst-subnet,dst-any, dst-host, and dst-object-group are mutually exclusive

established

Description TCP established

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

extd-action

Description 'deny': Deny; 'permit': Permit; 'l3-vlan-fwd-disable': Disable L3 forwarding between VLANs;

Type: string

Supported Values: deny, permit, l3-vlan-fwd-disable

extd-remark

Description Access list entry comment (Notes for this ACL)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

extd-seq-num

Description Sequence number

Type: number

Range: 1-8192

fragments

Description IP fragments

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmp,tcp, udp, ip, and service-obj-group are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code, any-code, and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type, any-type, and special-type are mutually exclusive

ip

Description Any Internet Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip,icmp, tcp, udp, and service-obj-group are mutually exclusive

service-obj-group

Description Service object group (Source object group name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-obj-group,icmp, tcp, udp, and ip are mutually exclusive

special-code

Description 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code, any-code, and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5, redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type, icmp-type, and any-type are mutually exclusive

src-any

Description Any source host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src-any,src-host, src-subnet, and src-object-group are mutually exclusive

src-eq

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: src-eq,src-gt, src-lt, and src-range are mutually exclusive

src-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: src-gt,src-eq, src-lt, and src-range are mutually exclusive

src-host

Description A single source host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: src-host,src-any, src-subnet, and src-object-group are mutually exclusive

src-lt

Description Match only packets with a lower port number

Type: number

Range: 2-65535

Mutual Exclusion: src-lt,src-eq, src-gt, and src-range are mutually exclusive

src-mask

Description Source Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

src-object-group

Description Network object group (Source network object group name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-object-group,src-any, src-host, and src-subnet are mutually exclusive

src-port-end

Description Ending Port Number

Type: number

Range: 1-65535

src-range

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: src-range,src-eq, src-gt, and src-lt are mutually exclusive

src-subnet

Description Source Address

Type: string

Format: ipv4-address

Mutual Exclusion: src-subnet,src-any, src-host, and src-object-group are mutually exclusive

tcp

Description protocol TCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tcp,icmp, udp, ip, and service-obj-group are mutually exclusive

transparent-session-only

Description Only log transparent sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk

Description Ethernet trunk (trunk number)

Type: number

Format: interface

udp

Description protocol UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: udp,icmp, tcp, ip, and service-obj-group are mutually exclusive

vlan

Description VLAN ID

Type: number

Range: 1-4094

oracle attributes

action

Description 'enable': Enable Configuration; 'disable': Disable Configuration;

Type: string

Supported Values: enable, disable

Default: disable

compartment-id

Description OCI compartment id

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

fingerprint

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

health-check-interval

Description '5': 5 seconds; '10': 10 seconds; '15': 15 seconds; '20': 20 seconds;

Type: string

Supported Values: 5, 10, 15, 20

host-name

Description Configure the host name for bootstrap server(e.g www.a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: host-name, ipv4-address, and ipv6-address are mutually exclusive

ipv4-address

Description Configure the bootstrap server's IPv4 address (the host IPv4 address)

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address, ipv6-address, and host-name are mutually exclusive

ipv6-address

Description Configure the bootstrap server's IPv6 address (the host IPv6 address)

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address, ipv4-address, and host-name are mutually exclusive

port

Description Configure the http port to use (port 8500)

Type: number

Range: 1-65535

private-key-path

Description

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

service-label

Type: List

tenancy-id

Description OCI tenancy id

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

user-id

Description OCI user id

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-label

Specification	Value
Type	*list*
Block object keys	

service-label-name

Description Name service group to be monitored

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

2.5 acos-events

Objects:

2.5.1 acos-events

Configure message logging

acos-events Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	acos-events
Element URI	/axapi/v3/acos-events
Element Attributes	acos-events_attributes
Partition Visibility	shared
Schema	`acos-events schema`

Operations Allowed:

Get Object

GET

/axapi/v3/acos-events

acos-events_attributes

acos-events attributes

active-template

Description: active-template is a **JSON Block**. Please see below for *active-template*

Type: Object

Description: rate-limit-remote is a **JSON Block**. Please see below for *rate-limit-remote*

Type: Object

Reference Object: */axapi/v3/acos-events/rate-limit-remote*

statistics

Description: statistics is a **JSON Block**. Please see below for *statistics*

Type: Object

Reference Object: */axapi/v3/acos-events/statistics*

template-list

Type: List

Reference Object: */axapi/v3/acos-events/template/{name}*

use-partition

Description: use-partition is a **JSON Block**. Please see below for *use-partition*

Type: Object

Reference Object: */axapi/v3/acos-events/use-partition*

rate-limit-remote

Specification	Value
Type	*object*

limit

Description Configure rate limit for logs sent to remote via classic logging config

Type: number

Range: 0-250

Default: 32

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

statistics

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

statistics_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msg_sent': Messages sent, to Remote; 'msg_sent_logdb': Messages sent, to LogDB; 'msg_dropped_format_not_defined': Messages Dropped, format not defined; 'msg_dropped_malloc_failure': Messages Dropped, malloc failure; 'msg_dropped_no_template': Messages Dropped, no active template; 'msg_dropped_selector': Messages Dropped, selector does not enable msg; 'msg_dropped_too_long': Messages Dropped, invalid length; 'msg_dropped_craft_fail': Messages Dropped, msg crafting failed; 'msg_dropped_local_log_ratelimit': Messages Dropped, local log ratelimited; 'msg_dropped_remote_log_ratelimit': Messages Dropped, remote log ratelimited; 'msg_dropped_send_failed': Messages Dropped, send failed; 'msg_dropped_no_active_member': Messages Dropped, no active member in collector grp; 'msg_dropped_route_fail': Messages Dropped, Route lookup failed; 'msg_dropped_other': Messages Dropped, unexpected error; 'no_template': Message API called, with no active template; 'msg_dropped_lost_during_config_change': Messages Dropped, lost during config change; 'local_enqueue_pass': Messages enqueue to Logd passed; 'msg_sent_to_logd': Messages sent to Logd via IPC; 'msg_retry_after_socket_fail': Messages retried to be sent to Logd via IPC; 'msg_sent_direct_syslog': Messages sent to syslog directly from axlog; 'msg_dropped_send_to_logd_fail': Messages Dropped, send to Logd via IPC failed; 'msg_dropped_trylock_fail': Messages Dropped, Trylock failed in axlog; 'msg_dropped_remote_cplane_log_ratelimit': Messages Dropped,

Remote cplane log ratelimited; 'msg_dropped_remote_dplane_log_ratelimit': Messages Dropped, Remote dplane log ratelimited; 'msg_dropped_local_enqueue_failed': Messages Dropped, Enqueue to Logd failed; 'msg_dropped_grp_not_used': Messages Dropped, Collector group not used; 'msg_sent_remote_cplane': Messages Sent, to remote in logd; 'msg_dropped_no_template_logd': Messages Dropped, no active template in Logd; 'msg_dropped_lost_during_config_change_logd': Messages Dropped, lost during config change in Logd; 'msg_dropped_craft_fail_logd': Messages Dropped, msg crafting failed in Logd; 'msg_dropped_send_failed_logd': Messages Dropped, send failed in Logd; 'msg_dropped_no_active_member_logd': Messages Dropped, no active member in collector grp in Logd; 'msg_dropped_other_logd': Messages Dropped, unexpected error in Logd; 'msg_dropped_invalid_part': Messages Dropped, Invalid partition Id; 'acos_evt_test_logs_ticks': Number of ticks when running ACOS Event Test Logs; 'param_msg_sent_to_hc': Parameterized log sent to HC; 'param_msg_sent_fail': Parameterized log send to HC failed; 'param_msg_encode_fail': Parameterized log AVRO encoding failed;

Type: string

Supported Values: all, msg_sent, msg_sent_logdb, msg_dropped_format_not_defined, msg_dropped_malloc_failure, msg_dropped_no_template, msg_dropped_selector, msg_dropped_too_long, msg_dropped_craft_fail, msg_dropped_local_log_ratelimit, msg_dropped_remote_log_ratelimit, msg_dropped_send_failed, msg_dropped_no_active_member, msg_dropped_route_fail, msg_dropped_other, no_template, msg_dropped_lost_during_config_change, local_enqueue_pass, msg_sent_to_logd, msg_retry_after_socket_fail, msg_sent_direct_syslog, msg_dropped_send_to_logd_fail, msg_dropped_trylock_fail, msg_dropped_remote_cplane_log_ratelimit, msg_dropped_remote_dplane_log_ratelimit, msg_dropped_local_enqueue_failed, msg_dropped_grp_not_used, msg_sent_remote_cplane, msg_dropped_no_template_logd, msg_dropped_lost_during_config_change_logd, msg_dropped_craft_fail_logd, msg_dropped_send_failed_logd, msg_dropped_no_active_member_logd, msg_dropped_other_logd, msg_dropped_invalid_part, acos_evt_test_logs_ticks, param_msg_sent_to_hc, param_msg_sent_fail, param_msg_encode_fail, logd_stats_system_logs, logd_stats_system_logs_dropped, logd_stats_audit_logs, logd_stats_audit_logs_dropped

log-parameterization

Specification	Value
Type	*object*

log-rate

Description Max number of parameterized logs sent per second

Type: number

Range: 0-10000

Default: 10

message-selector

Description: message-selector is a **JSON Block**. Please see below for *log-parameterization_message-selector*

Type: Object

Reference Object: */axapi/v3/acos-events/log-parameterization/message-selector*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log-parameterization_message-selector

Specification	Value
Type	*object*

rule-list

Type: List

Reference Object: */axapi/v3/acos-events/log-parameterization/message-selector/rule/{index}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log-parameterization_message-selector_rule-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'send': log messages selected by this rule will be sent (Default); 'drop': log messages selected by this rule will be dropped;

Type: string

Supported Values: send, drop

Default: send

index

Description Specify rule index - rules are applied in numeric order

Type: number

Range: 1-256

message-id

Description Select a specific message by message-id and optionally severity

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

message-id-scope

Description 'all': Log messages at this level and all sub-trees; 'node-only': Log messages at this node only; 'children-only': Log messages at all sub-trees only; 'log-field-only': Log message for this Log Field only;

Type: string

Supported Values: all, node-only, children-only, log-field-only

severity-oper

Description 'equal-and-higher': emergency is highest, debugging lowest; 'equal': single severity;

Type: string

Supported Values: equal-and-higher, equal

severity-val

Description 'emergency': System unusable log messages (Most Important); 'alert': Action must be taken immediately; 'critical': Critical conditions; 'error': Error conditions; 'warning': Warning conditions; 'notification': Normal but significant conditions; 'information': Informational messages; 'debugging': Debug level messages (Least Important);

Type: string

Supported Values: emergency, alert, critical, error, warning, notification, information, debugging

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

use-partition

Specification	Value
Type	*object*

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

active-template

Specification	Value
Type	*object*

name

Description Specify the logging template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/acos-events/template*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logdb

Specification	Value
Type	*object*

enable-all

Description Enable logging for all widgets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-cgn

Description Enable CGN logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-fw

Description Enable Firewall logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-http-forward-proxy

Description Enable HTTP forward proxy logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-link-cost

Description Enable link-cost logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-mqtt

Description Enable MQTT logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-smtp

Description Enable SMTP logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-ssli

Description Enable SSLi logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

messages

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-logging

Specification	Value
Type	*object*

delete-old-logs-in-disk

Description Operational command to delete the old logs stored in disk

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable local-logging when FW log servers are down (Default: Not enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-disk-space

Description Configure Max disk space in MB to be used for storing the logs (Default: 100MB)

Type: number

Range: 50-20000

Default: 100

rate-limit

Description Configure number of logs per second to be stored in disk (Default: 1000)

Type: number

Range: 1-60000

Default: 1000

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-logging_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'init-pass': Local logging Init Successful; 'init-fail': Local logging Init Fail; 'freed': Local logging Stopped; 'disk-over-thres': Number of logs Dropped, Disk reached threshold; 'rate-limited': Number of logs Dropped, Rate limited; 'not-inited': Number of logs Dropped, Local logging not inited; 'sent-to-store': Number of logs sent to be stored; 'sent-to-store-fail': Number of Logs sent to be stored Failed; 'store-fail': Number of logs failed to be stored; 'in-logs': Number of logs successfully stored; 'in-bytes': Number of bytes successfully stored; 'in-logs-backlog': Number of backlogs loaded from disk; 'in-bytes-backlog': Number of backlog bytes loaded from disk; 'in-store-fail-no-space': Number of logs Dropped, failed without disk space; 'in-discard-logs': Number of old logs discarded to fit in new logs; 'in-discard-bytes': Number of old bytes discarded to fit in new logs; 'out-logs': Number of logs sent to log servers; 'out-bytes': Number of bytes sent to log-servers; 'out-error': Number of

errors during send; 'remaining-logs': Total number of remaining logs yet to be sent; 'remaining-bytes': Total number of remaining bytes yet to be sent; 'moved-to-delq': Local Logging moved to delq to be deleted; 'out-retry': Number of attempted retries to send logs; 'out-retry-fail': Number of retries failed with error; 'curr-total-chunks': Current Number of blocks; 'curr-mem-chunks': Current blocks in memory; 'curr-fs-chunks': Current blocks in file system; 'curr-fs-chunks-up': Current blocks in file system loaded in memory; 'curr-fs-chunks-down': Current blocks in file system not loaded in memory; 'in-logs-agg': Total Aggregate, Number of logs successfully stored; 'in-bytes-agg': Total Aggregate, Number of bytes successfully stored; 'in-logs-backlog-agg': Total Aggregate, Number of backlogs loaded from disk; 'in-bytes-backlog-agg': Total Aggregate, Number of backlog bytes loaded from disk; 'in-store-fail-no-space-agg': Total Aggregate, Number of logs Dropped, failed without disk space; 'in-discard-logs-agg': Total Aggregate, Number of old logs discarded to fit in new logs; 'in-discard-bytes-agg': Total Aggregate, Number of old bytes discarded to fit in new logs; 'out-logs-agg': Total Aggregate, Number of logs sent to log servers; 'out-bytes-agg': Total Aggregate, Number of bytes sent to log-servers; 'out-error-agg': Total Aggregate, Number of errors during send; 'out-retry-agg': Total Aggregate, Number of attempted retries to send logs; 'out-retry-fail-agg': Total Aggregate, Number of retries failed with error; 'in-logs-curr-agg': Current Aggregate, Number of logs successfully stored; 'in-bytes-curr-agg': Current Aggregate, Number of bytes successfully stored; 'in-logs-backlog-curr-agg': Current Aggregate, Number of backlogs loaded from disk; 'in-bytes-backlog-curr-agg': Current Aggregate, Number of backlog bytes loaded from disk; 'in-discard-logs-curr-agg': Current Aggregate, Number of old logs discarded to fit in new logs; 'in-discard-bytes-curr-agg': Current Aggregate, Number of old bytes discarded to fit in new logs; 'out-logs-curr-agg': Current Aggregate, Number of logs sent to log servers; 'out-bytes-curr-agg': Current Aggregate, Number of bytes sent to log-servers;

Type: string

Supported Values: all, init-pass, init-fail, freed, disk-over-thres, rate-limited, not-inited, sent-to-store, sent-to-store-fail, store-fail, in-logs, in-bytes, in-logs-backlog, in-bytes-backlog, in-store-fail-no-space, in-discard-logs, in-discard-bytes, out-logs, out-bytes, out-error, remaining-logs, remaining-bytes, moved-to-delq, out-retry, out-retry-fail, curr-total-chunks, curr-mem-chunks, curr-fs-chunks, curr-fs-chunks-up, curr-fs-chunks-down, in-logs-agg, in-bytes-agg, in-logs-backlog-agg, in-bytes-backlog-agg, in-store-fail-no-space-agg, in-discard-logs-agg, in-discard-bytes-agg, out-logs-agg, out-bytes-agg, out-error-agg, out-retry-agg, out-retry-fail-agg, in-logs-curr-agg, in-bytes-curr-agg, in-logs-backlog-curr-agg, in-bytes-backlog-curr-agg, in-discard-logs-curr-agg, in-discard-bytes-curr-agg, out-logs-curr-agg, out-bytes-curr-agg

message-id-list

Specification	Value
Type	*list*
Block object keys	

log-msg

Description Specify log message-id lineage

Type: string

Maximum Length: 512 characters

Maximum Length: 1 characters

message-id-scope-route

Description 'all': Log messages at this level and all sub-trees; 'node-only': Log messages at this node only; 'children-only': Log messages at all sub-trees only; 'log-field-only': This is a log-field (Default);

Type: string

Supported Values: all, node-only, children-only, log-field-only

Default: log-field-only

property

Description: property is a **JSON Block**. Please see below for *message-id-list_property*

Type: Object

Reference Object: */axapi/v3/acos-events/message-id/{log-msg}+{message-id-scope-route}/property*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Reference Object: */axapi/v3/acos-events/message-id/{log-msg}+{message-id-scope-route}/property/severity*

message-id-list_property_log-route

Specification	Value
Type	*object*

log-route-val

Description 'local-only': send logs to local-only; 'remote-only': send logs to remote-only; 'local-and-remote': send logs to both local and remote;

Type: string

Supported Values: local-only, remote-only, local-and-remote

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

message-id-list_property_severity

Specification	Value
Type	*object*

severity-val

Description 'emergency': System unusable log messages (Most Important); 'alert': Action must be taken immediately; 'critical': Critical conditions; 'error': Error conditions; 'warning': Warning conditions; 'notification': Normal but significant conditions; 'information': Informational messages; 'debugging': Debug level messages (Least Important);

Type: string

Supported Values: emergency, alert, critical, error, warning, notification, information, debugging

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

message-id-list_property_rate-limit

Specification	Value
Type	*object*

rate-limit-val

Description 'enable': enable rate-limiting of logs; 'disable': disable rate-limiting of logs;

Type: string

Supported Values: enable, disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log-properties

Specification	Value
Type	*object*

add-msgid-in-header

Description Add Message ID in log messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-8K-tcp-syslog

Description Enable 8K size remote TCP syslog

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-millisec

Description Enable timestamp in millisecond

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-iso8601-timestamp

Description Send syslog messages with Standard Header format

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log-server-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': Enable this Logging Server; 'disable': Disable this Logging Server;

Type: string

Supported Values: enable, disable

Default: enable

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

host

Description IP Address

Type: string

Format: ipv4-address

name

Description Server Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Type: List

Reference Object: */axapi/v3/acos-events/log-server/{name}/port/{port-number}+{protocol}*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 address

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Supported Values: all, msgs_sent

log-server-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msgs_sent': Number of log messages sent;

Type: string

Supported Values: all, msgs_sent

rate-limit-local

Specification	Value
Type	*object*

limit

Description Configure Rate Limit for Local logs

Type: number

Range: 0-100

Default: 32

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

collector-group-list

Specification	Value
Type	*list*
Block object keys	

facility

Description 'local0': Local use(Default); 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use; (Facility parameter for syslog messages)

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'syslog': log message format is syslog (Default); 'cef': log message format is cef; 'leef': log message format is leef;

Type: string

Supported Values: syslog, cef, leef

Default: syslog

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

log-distribution

Description 'round-robin': Log server selection will be based on round-robin (Default); 'hashing': Log messages at this node only;

Type: string

Supported Values: round-robin, hashing

Default: round-robin

log-server-list

Type: List

Reference Object: */axapi/v3/acos-events/collector-group/{name}/log-server/{name}+{port}*

name

Description Specify log server group name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

protocol

Description 'udp': use udp syslog protocol to send messages to log collector; 'tcp': use tcp syslog protocol to send messages to log collector;

Type: string

Supported Values: udp, tcp

rate

Description Specify the log message rate per second(Default 500)

Type: number

Range: 0-2147483647

Default: 500

sampling-enable

Type: List

server-distribution-hash

Description 'name': Hashing will be based on log server name (Default); 'ip-tuple': Hashing will be based on ip-tuple;

Type: string

Supported Values: name, ip-tuple

Default: name

use-mgmt-port

Description Use managament port to connect to the log servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

collector-group-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msgs_sent': Number of log messages sent; 'msgs_rate_limited': Number of rate limited log messages; 'msgs_dropped': Number of messages dropped for other reasons;

Type: string

Supported Values: all, msgs_sent, msgs_rate_limited, msgs_dropped

collector-group-list_log-server-list

Specification	Value
Type	*list*
Block object keys	

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/acos-events/log-server*

port

Description Port number

Type: number

Range: 0-65534

Default: 65534

Reference Object: */axapi/v3/acos-events/log-server/port*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list

Specification	Value
Type	*list*
Block object keys	

message-selector-list

Type: List

Reference Object: */axapi/v3/acos-events/template/{name}/message-selector/{name}*

name

Description Specify logging template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_message-selector-list

Specification	Value
Type	*list*
Block object keys	

collector-group-list

Type: List

Reference Object: */axapi/v3/acos-events/template/{name}/message-selector/{name}/collector-group/{name}*

name

Description Specify the message selector name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/acos-events/message-selector*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_message-selector-list_collector-group-list

Specification	Value
Type	*list*
Block object keys	

name

Description Specify the log server group for receiving log messages

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/acos-events/collector-group*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

message-selector-list

Specification	Value
Type	*list*
Block object keys	

name

Description Specify message selector name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-list

Type: List

Reference Object: */axapi/v3/acos-events/message-selector/{name}/rule/{index}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

message-selector-list_rule-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'send': log messages selected by this rule will be sent; 'drop': log messages selected by this rule will be dropped;

Type: string

Supported Values: send, drop

Default: send

index

Description Specify rule index - rules are applied in numeric order

Type: number

Range: 1-256

message-id

Description Select a specific message by message-id and optionally severity

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

message-id-scope

Description 'all': Log messages at this level and all sub-trees; 'node-only': Log messages at this node only; 'children-only': Log messages at all sub-trees only; 'log-field-only': Log message for this Log Field only;

Type: string

Supported Values: all, node-only, children-only, log-field-only

severity-oper

Description 'equal-and-higher': emergency is highest, debugging lowest; 'equal': single severity;

Type: string

Supported Values: equal-and-higher, equal

severity-val

Description 'emergency': System unusable log messages (Most Important); 'alert': Action must be taken immediately; 'critical': Critical conditions; 'error': Error conditions; 'warning': Warning conditions; 'notification': Normal but significant conditions; 'information': Informational messages; 'debugging': Debug level messages (Least Important);

Type: string

Supported Values: emergency, alert, critical, error, warning, notification, information, debugging

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.5.2 acos-events active-template

Configure global logging template

active-template Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	active-template
Element URI	/axapi/v3/acos-events/active-template
Element Attributes	active-template_attributes
Partition Visibility	shared
Schema	`active-template schema`

Operations Allowed:

Create Object

POST

/axapi/v3/acos-events/active-template

active-template attributes

```
POST /axapi/v3/acos-events/active-template
Payload:
{
    "active-template": {
        "name": "a"
    }
}
```

Get Object

GET

/axapi/v3/acos-events/active-template

active-template attributes

```
GET /axapi/v3/acos-events/active-template
Reponse:
{
    "active-template": {
        "name": "a",
        "uuid": "c6a84534-b6ab-11ef-8f5a-ae71681635d0",
        "a10-url": "/axapi/v3/acos-events/active-template"
    }
}
```

Modify Object

POST

/axapi/v3/acos-events/active-template

active-template attributes

Replace Object

PUT

/axapi/v3/acos-events/active-template

active-template attributes

```
PUT /axapi/v3/acos-events/active-template
Payload:
{
    "active-template": {
        "name": "a"
    }
}
```

Delete Object

DELETE

/axapi/v3/acos-events/active-template

active-template attributes

```
DELETE /axapi/v3/acos-events/active-template
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

active-template attributes

name

Description Specify the logging template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/acos-events/template*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.5.3 acos-events collector-group

Configure log servers group

collector-group Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*collector-group-list*
Collection URI	/axapi/v3/acos-events/collector-group
Element Name	collector-group
Element URI	/axapi/v3/acos-events/collector-group/{name}
Element Attributes	collector-group_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/acos-events/collector-group/{name}/stats
Schema	`collector-group schema`

Operations Allowed:

Create Object

POST

/axapi/v3/acos-events/collector-group

collector-group attributes

```
POST /axapi/v3/acos-events/collector-group/
Payload:
{
    "collector-group": {
        "protocol": "udp",
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/acos-events/collector-group

collector-group attributes

Get Object

GET

/axapi/v3/acos-events/collector-group/{name}

collector-group attributes

Get List

GET

/axapi/v3/acos-events/collector-group

collector-group-list

Modify Object

POST

/axapi/v3/acos-events/collector-group/{name}

collector-group attributes

Replace Object

PUT

/axapi/v3/acos-events/collector-group/{name}

collector-group attributes

Replace List

PUT

/axapi/v3/acos-events/collector-group

collector-group-list

Delete Object

DELETE

/axapi/v3/acos-events/collector-group/{name}

collector-group attributes

collector-group-list

collector-group-list is **JSON List** of *collector-group attributes*

collector-group-list : [

{ *collector-group attributes* },

{ *collector-group attributes* },

...

]

collector-group attributes

facility

Description 'local0': Local use(Default); 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use; (Facility parameter for syslog messages)

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'syslog': log message format is syslog (Default); 'cef': log message format is cef; 'leef': log message format is leef;

Type: string

Supported Values: syslog, cef, leef

Default: syslog

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

log-distribution

Description 'round-robin': Log server selection will be based on round-robin (Default); 'hashing': Log messages at this node only;

Type: string

Supported Values: round-robin, hashing

Default: round-robin

log-server-list

Type: List

Reference Object: */axapi/v3/acos-events/collector-group/{name}/log-server/{name}+{port}*

name

Description Specify log server group name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

protocol

Description 'udp': use udp syslog protocol to send messages to log collector; 'tcp': use tcp syslog protocol to send messages to log collector;

Type: string

Supported Values: udp, tcp

rate

Description Specify the log message rate per second(Default 500)

Type: number

Range: 0-2147483647

Default: 500

sampling-enable

Type: List

server-distribution-hash

Description 'name': Hashing will be based on log server name (Default); 'ip-tuple': Hashing will be based on ip-tuple;

Type: string

Supported Values: name, ip-tuple

Default: name

use-mgmt-port

Description Use managament port to connect to the log servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msgs_sent': Number of log messages sent; 'msgs_rate_limited': Number of rate limited log messages; 'msgs_dropped': Number of messages dropped for other reasons;

Type: string

Supported Values: all, msgs_sent, msgs_rate_limited, msgs_dropped

log-server-list

Specification	Value
Type	*list*
Block object keys	

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/acos-events/log-server*

port

Description Port number

Type: number

Range: 0-65534

Default: 65534

Reference Object: */axapi/v3/acos-events/log-server/port*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.5.4 acos-events collector-group log-server

Configure log server DNS Name/ip-address and optional port

log-server Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name, port*
Collection Name	*log-server-list*
Collection URI	/axapi/v3/acos-events/collector-group/{name}/log-server
Element Name	log-server
Element URI	/axapi/v3/acos-events/collector-group/{name}/log-server/{name}+{port}
Element Attributes	log-server_attributes

        "status": "OK",
        "msg": "Success"
    }
}
```

local-logging attributes

delete-old-logs-in-disk

Description Operational command to delete the old logs stored in disk

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable local-logging when FW log servers are down (Default: Not enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-disk-space

Description Configure Max disk space in MB to be used for storing the logs (Default: 100MB)

Type: number

Range: 50-20000

Default: 100

rate-limit

Description Configure number of logs per second to be stored in disk (Default: 1000)

Type: number

Range: 1-60000

Default: 1000

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'init-pass': Local logging Init Successful; 'init-fail': Local logging Init Fail; 'freed': Local logging Stopped; 'disk-over-thres': Number of logs Dropped, Disk reached threshold; 'rate-limited': Number of logs Dropped, Rate limited; 'not-inited': Number of logs Dropped, Local logging not inited; 'sent-to-store': Number of logs sent to be stored; 'sent-to-store-fail': Number of Logs sent to be stored Failed; 'store-fail': Number of logs failed to be stored; 'in-logs': Number of logs successfully stored; 'in-bytes': Number of bytes successfully stored; 'in-logs-backlog': Number of backlogs loaded from disk; 'in-bytes-backlog': Number of backlog bytes loaded from disk; 'in-store-fail-no-space': Number of logs Dropped, failed without disk space; 'in-discard-logs': Number of old logs discarded to fit in new logs; 'in-discard-bytes': Number of old bytes discarded to fit in new logs; 'out-logs': Number of logs sent to log servers; 'out-bytes': Number of bytes sent to log-servers; 'out-error': Number of errors during send; 'remaining-logs': Total number of remaining logs yet to be sent; 'remaining-bytes': Total number of remaining bytes yet to be sent; 'moved-to-delq': Local Logging moved to delq to be deleted; 'out-retry': Number of attempted retries to send logs; 'out-retry-fail':

Number of retries failed with error; 'curr-total-chunks': Current Number of blocks; 'curr-mem-chunks': Current blocks in memory; 'curr-fs-chunks': Current blocks in file system; 'curr-fs-chunks-up': Current blocks in file system loaded in memory; 'curr-fs-chunks-down': Current blocks in file system not loaded in memory; 'in-logs-agg': Total Aggregate, Number of logs successfully stored; 'in-bytes-agg': Total Aggregate, Number of bytes successfully stored; 'in-logs-backlog-agg': Total Aggregate, Number of backlogs loaded from disk; 'in-bytes-backlog-agg': Total Aggregate, Number of backlog bytes loaded from disk; 'in-store-fail-no-space-agg': Total Aggregate, Number of logs Dropped, failed without disk space; 'in-discard-logs-agg': Total Aggregate, Number of old logs discarded to fit in new logs; 'in-discard-bytes-agg': Total Aggregate, Number of old bytes discarded to fit in new logs; 'out-logs-agg': Total Aggregate, Number of logs sent to log servers; 'out-bytes-agg': Total Aggregate, Number of bytes sent to log-servers; 'out-error-agg': Total Aggregate, Number of errors during send; 'out-retry-agg': Total Aggregate, Number of attempted retries to send logs; 'out-retry-fail-agg': Total Aggregate, Number of retries failed with error; 'in-logs-curr-agg': Current Aggregate, Number of logs successfully stored; 'in-bytes-curr-agg': Current Aggregate, Number of bytes successfully stored; 'in-logs-backlog-curr-agg': Current Aggregate, Number of backlogs loaded from disk; 'in-bytes-backlog-curr-agg': Current Aggregate, Number of backlog bytes loaded from disk; 'in-discard-logs-curr-agg': Current Aggregate, Number of old logs discarded to fit in new logs; 'in-discard-bytes-curr-agg': Current Aggregate, Number of old bytes discarded to fit in new logs; 'out-logs-curr-agg': Current Aggregate, Number of logs sent to log servers; 'out-bytes-curr-agg': Current Aggregate, Number of bytes sent to log-servers;

Type: string

Supported Values: all, init-pass, init-fail, freed, disk-over-thres, rate-limited, not-inited, sent-to-store, sent-to-store-fail, store-fail, in-logs, in-bytes, in-logs-backlog, in-bytes-backlog, in-store-fail-no-space, in-discard-logs, in-discard-bytes, out-logs, out-bytes, out-error, remaining-logs, remaining-bytes, moved-to-delq, out-retry, out-retry-fail, curr-total-chunks, curr-mem-chunks, curr-fs-chunks, curr-fs-chunks-up, curr-fs-chunks-down, in-logs-agg, in-bytes-agg, in-logs-backlog-agg, in-bytes-backlog-agg, in-store-fail-no-space-agg, in-discard-logs-agg, in-discard-bytes-agg, out-logs-agg, out-bytes-agg, out-error-agg, out-retry-agg, out-retry-fail-agg, in-logs-curr-agg, in-bytes-curr-agg, in-logs-backlog-curr-agg, in-bytes-backlog-curr-agg, in-discard-logs-curr-agg, in-discard-bytes-curr-agg, out-logs-curr-agg, out-bytes-curr-agg

Format: counter

freed

Description Local logging Stopped

Type: number

Format: counter

in-bytes

Description Number of bytes successfully stored

Type: number

Format: counter

in-bytes-backlog

Description Number of backlog bytes loaded from disk

Type: number

Format: counter

in-discard-bytes

Description Number of old bytes discarded to fit in new logs

Type: number

Format: counter

in-discard-logs

Description Number of old logs discarded to fit in new logs

Type: number

Format: counter

in-logs

Description Number of logs successfully stored

Type: number

Format: counter

in-logs-backlog

Description Number of backlogs loaded from disk

Type: number

Format: counter

in-store-fail-no-space

Description Number of logs Dropped, failed without disk space

Type: number

Format: counter

init-fail

Description Local logging Init Fail

Type: number

Format: counter

init-pass

Description Local logging Init Successful

Type: number

Format: counter

not-inited

Description Number of logs Dropped, Local logging not inited

Type: number

Format: counter

out-bytes

Description Number of bytes sent to log-servers

Type: number

Format: counter

out-error

Description Number of errors during send

Type: number

Format: counter

out-logs

Description Number of logs sent to log servers

Type: number

Format: counter

rate-limited

Description Number of logs Dropped, Rate limited

Type: number

Format: counter

remaining-bytes

Description Total number of remaining bytes yet to be sent

Type: number

Format: counter

remaining-logs

Description Total number of remaining logs yet to be sent

Type: number

Format: counter

sent-to-store

Description Number of logs sent to be stored

Type: number

Format: counter

sent-to-store-fail

Description Number of Logs sent to be stored Failed

Type: number

Format: counter

store-fail

Description Number of logs failed to be stored

Type: number

Format: counter

2.5.8 acos-events log-parameterization

Harmony controller log parameterization configuration

log-parameterization Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	log-parameterization
Element URI	/axapi/v3/acos-events/log-parameterization
Element Attributes	log-parameterization_attributes
Partition Visibility	shared
Schema	`log-parameterization schema`

Operations Allowed:

Create Object

POST

/axapi/v3/acos-events/log-parameterization

log-parameterization attributes

```
POST /axapi/v3/acos-events/log-parameterization
Payload:
{
    "log-parameterization": {
        "log-rate": 0
    }
}
```

Get Object

GET

/axapi/v3/acos-events/log-parameterization

log-parameterization attributes

```
GET /axapi/v3/acos-events/log-parameterization
Reponse:
{
    "log-parameterization": {
        "log-rate": 0,
        "uuid": "de1a78da-b6ac-11ef-8f5a-ae71681635d0",
```

(continues on next page)

(continued from previous page)

```
        "a10-url": "/axapi/v3/acos-events/log-parameterization"
    }
}
```

Modify Object

POST

/axapi/v3/acos-events/log-parameterization

log-parameterization attributes

Replace Object

PUT

/axapi/v3/acos-events/log-parameterization

log-parameterization attributes

```
PUT /axapi/v3/acos-events/log-parameterization
Payload:
{
    "log-parameterization": {
        "log-rate": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/acos-events/log-parameterization

log-parameterization attributes

```
DELETE /axapi/v3/acos-events/log-parameterization
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

log-parameterization attributes

log-rate

Description Max number of parameterized logs sent per second

Type: number

Range: 0-10000

Default: 10

message-selector

Description: message-selector is a **JSON Block**. Please see below for *message-selector*

Type: Object

Reference Object: */axapi/v3/acos-events/log-parameterization/message-selector*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

message-selector

Specification	Value
Type	*object*

rule-list

Type: List

Reference Object: */axapi/v3/acos-events/log-parameterization/message-selector/rule/{index}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

message-selector_rule-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'send': log messages selected by this rule will be sent (Default); 'drop': log messages selected by this rule will be dropped;

Type: string

Supported Values: send, drop

Default: send

index

Description Specify rule index - rules are applied in numeric order

Type: number

Range: 1-256

message-id

Description Select a specific message by message-id and optionally severity

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

message-id-scope

Description 'all': Log messages at this level and all sub-trees; 'node-only': Log messages at this node only; 'children-only': Log messages at all sub-trees only; 'log-field-only': Log message for this Log Field only;

Type: string

Supported Values: all, node-only, children-only, log-field-only

severity-oper

Description 'equal-and-higher': emergency is highest, debugging lowest; 'equal': single severity;

Type: string

Supported Values: equal-and-higher, equal

severity-val

Description 'emergency': System unusable log messages (Most Important); 'alert': Action must be taken immediately; 'critical': Critical conditions; 'error': Error conditions; 'warning': Warning conditions; 'notification': Normal but significant conditions; 'information': Informational messages; 'debugging': Debug level messages (Least Important);

Type: string

Supported Values: emergency, alert, critical, error, warning, notification, information, debugging

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.5.9 acos-events log-parameterization message-selector

Configure message selector to select messages to be logged/blocked

message-selector Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	message-selector
Element URI	/axapi/v3/acos-events/log-parameterization/message-selector
Element Attributes	message-selector_attributes
Partition Visibility	shared

message-selector-list

message-selector-list is **JSON List** of *message-selector attributes*

message-selector-list : [

{ *message-selector attributes* },

{ *message-selector attributes* },

...

]

message-selector attributes

name

Description Specify message selector name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-list

Type: List

Reference Object: */axapi/v3/acos-events/message-selector/{name}/rule/{index}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rule-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'send': log messages selected by this rule will be sent; 'drop': log messages selected by this rule will be dropped;

Type: string

Supported Values: send, drop

Default: send

index

Description Specify rule index - rules are applied in numeric order

Type: number

Range: 1-256

message-id

Description Select a specific message by message-id and optionally severity

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

message-id-scope

Description 'all': Log messages at this level and all sub-trees; 'node-only': Log messages at this node only; 'children-only': Log messages at all sub-trees only; 'log-field-only': Log message for this Log Field only;

Type: string

Supported Values: all, node-only, children-only, log-field-only

severity-oper

Description 'equal-and-higher': emergency is highest, debugging lowest; 'equal': single severity;

Type: string

Supported Values: equal-and-higher, equal

severity-val

Description 'emergency': System unusable log messages (Most Important); 'alert': Action must be taken immediately; 'critical': Critical conditions; 'error': Error conditions; 'warning': Warning conditions; 'notification': Normal but significant conditions; 'information': Informational messages; 'debugging': Debug level messages (Least Important);

Type: string

Supported Values: emergency, alert, critical, error, warning, notification, information, debugging

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.5.23 acos-events message-selector rule

Configure rules to select messages for which logging is enabled/blocked

rule Specification

Parameter	Value

        { rule attributes },
        ...
    ]
```

rule attributes

action

Description 'send': log messages selected by this rule will be sent; 'drop': log messages selected by this rule will be dropped;

Type: string

Supported Values: send, drop

Default: send

index

Description Specify rule index - rules are applied in numeric order

Type: number

Range: 1-256

message-id

Description Select a specific message by message-id and optionally severity

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

message-id-scope

Description 'all': Log messages at this level and all sub-trees; 'node-only': Log messages at this node only; 'children-only': Log messages at all sub-trees only; 'log-field-only': Log message for this Log Field only;

Type: string

Supported Values: all, node-only, children-only, log-field-only

severity-oper

Description 'equal-and-higher': emergency is highest, debugging lowest; 'equal': single severity;

Type: string

Supported Values: equal-and-higher, equal

severity-val

Description 'emergency': System unusable log messages (Most Important); 'alert': Action must be taken immediately; 'critical': Critical conditions; 'error': Error conditions; 'warning': Warning conditions; 'notification': Normal but significant conditions; 'information': Informational messages; 'debugging': Debug level messages (Least Important);

Type: string

Supported Values: emergency, alert, critical, error, warning, notification, information, debugging

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.5.24 acos-events messages

```

admin-list

admin-list is **JSON List** of *admin attributes*

admin-list : [

{ *admin attributes* },

{ *admin attributes* },

...

]

admin attributes

access

Description: access is a **JSON Block**. Please see below for *access*

Type: Object

Reference Object: */axapi/v3/admin/{user}/access*

access-list

Description Specify an ACL to classify a trusted host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: access-list and trusted-host-cidr are mutually exclusive

action

Description 'enable': Enable user; 'disable': Disable user;

Type: string

Supported Values: enable, disable

Default: enable

aws-accesskey

Description: aws-accesskey is a **JSON Block**. Please see below for *aws-accesskey*

Type: Object

Reference Object: */axapi/v3/admin/{user}/aws-accesskey*

azure-cred

Description: azure-cred is a **JSON Block**. Please see below for *azure-cred*

Type: Object

Reference Object: */axapi/v3/admin/{user}/azure-cred*

cloud-cred

Description: cloud-cred is a **JSON Block**. Please see below for *cloud-cred*

Type: Object

Reference Object: */axapi/v3/admin/{user}/cloud-cred*

encrypted

Description Specify an ENCRYPTED password string (System admin user password)

gcp-cred

Description: gcp-cred is a **JSON Block**. Please see below for *gcp-cred*

Type: Object

Reference Object: */axapi/v3/admin/{user}/gcp-cred*

passwd-string

Description Config admin user password

Type: string

Format: password

password

Description: password is a **JSON Block**. Please see below for *password*

Type: Object

Reference Object: */axapi/v3/admin/{user}/password*

password-key

Description Config admin user password

Type: boolean

Supported Values: true, false, 1, 0

privilege-global

Description 'read': Set read privilege; 'write': Set write privilege; 'hm': Set external health monitor script content operations privilege;

Type: string

Supported Values: read, write, hm

privilege-list

Type: List

privilege-shell-root

Description Set shell root privilege

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssh-pubkey

Description: ssh-pubkey is a **JSON Block**. Please see below for *ssh-pubkey*

Type: Object

Reference Object: */axapi/v3/admin/{user}/ssh-pubkey*

trusted-host

Description Set trusted network administrator can login in

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trusted-host-acl-id

Description ACL ID

Type: number

Range: 1-99

trusted-host-cidr

Description Trusted IP Address with network mask

Type: string

Format: ipv4-cidr

Mutual Exclusion: trusted-host-cidr and access-list are mutually exclusive

user

Description System admin user name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

azure-cred

Specification	Value
Type	*object*

delete

Description Delete an authorized Azure credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-url

Description File URL

Type: string

Format: url

import

Description Import an azure-credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show

Description Show authorized azure credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cloud-cred

Specification	Value
Type	*object*

delete

Description Delete an authorized cloud credentials and cloud configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-url

Description File URL

Type: string

Format: url

import

Description Import an Cloud-Cred and Cloud-Config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show

Description Show authorized cloud credentials and cloud configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

type

Description 'aws-cred': aws-cred; 'aws-config': aws-config; 'azure-cred': azure-cred; 'vmware-cred': vmware-cred;

Type: string

Supported Values: aws-cred, aws-config, azure-cred, vmware-cred

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

privilege-list

Specification	Value
Type	*list*
Block object keys	

partition-name

Description Partition Name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

privilege-partition

Description 'partition-enable-disable': Set per-partition enable/disable privilege; 'partition-read': Set per-partition read privilege; 'partition-write': Set per-partition write privilege;

Type: string

Supported Values: partition-enable-disable, partition-read, partition-write

aws-accesskey

Specification	Value
Type	*object*

delete

Description Delete an authorized aws accesskey

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-url

Description File URL

Type: string

Format: url

import

Description Import an aws-accesskey

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show

Description Show authorized aws accesskey

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

access

Specification	Value
Type	*object*

access-type

Description

Type: string

Format: enum-list

Default: axapi,cli,web

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssh-pubkey

Specification	Value
Type	*object*

delete

Description Delete an authorized public key (SSH key index)

Type: number

Range: 1-1000000

file-url

Description File URL

Type: string

Format: url

import

Description Import an authorized public key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

list

Description List all authorized public keys

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gcp-cred

Specification	Value
Type	*object*

delete

Description Delete an authorized GCP credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-url

Description File URL

Type: string

Format: url

import

Description Import an GCP-credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show

Description Show authorized GCP credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Specification	Value
Type	*object*

encrypted-in-module

Description Specify an ENCRYPTED password string (System admin user password)

password-in-module

Description Config admin user password

Type: string

Format: password

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.6.2 admin access

Config access type

access Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	access

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

info

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reset

Specification	Value
Type	*object*

feature-name

Description 'app-fw': Application Firewall; 'ca-bundle': CA Certificate Bundle;

Type: string

Supported Values: app-fw, ca-bundle

checknow

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

revert

Specification	Value
Type	*object*

feature-name

Description 'app-fw': Application Firewall; 'a10-threat-intel': A10 Threat intel class list; 'central-cert-pin-list': Central updated cert pinning list;

Type: string

Supported Values: app-fw, a10-threat-intel, central-cert-pin-list

proxy-server

Specification	Value
Type	*object*

auth-type

Description 'ntlm': NTLM authentication(default); 'basic': Basic authentication;

Type: string

Supported Values: ntlm, basic

Default: ntlm

domain

Description Realm for NTLM authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

https-port

Description Proxy server HTTPs port

Type: number

Range: 1-65535

password

Description Password for proxy authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-host

Description Proxy server hostname or IP address

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

secret-string

Description password value

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Username for proxy authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

check-now

Specification	Value

Type: string

Supported Values: app-fw, ca-bundle, a10-threat-intel, central-cert-pin-list

from-staging-server

Description Get files from GLM Staging storage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prod-ver

Description update to this specific version, if this option is not configured, update to the latest version

Type: string

Maximum Length: 70 characters

Maximum Length: 1 characters

stage-ver

Description update this specific version

Type: string

Maximum Length: 70 characters

Maximum Length: 1 characters

config-list

Specification	Value
Type	*list*
Block object keys	

daily

Description Every day

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: daily and weekly are mutually exclusive

day-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

debug

Description Enable libcurl debug option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-ssl-verify

Description Disable peer server certificate verification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

feature-name

Description 'app-fw': Application Firewall Configuration; 'ca-bundle': CA Certificate Bundle; 'a10-threat-intel': A10 Threat intel class list; 'central-cert-pin-list': Central updated cert pinning list;

Type: string

Supported Values: app-fw, ca-bundle, a10-threat-intel, central-cert-pin-list

schedule

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

week-day

Description 'Monday': Monday; 'Tuesday': Tuesday; 'Wednesday': Wednesday; 'Thursday': Thursday; 'Friday': Friday; 'Saturday': Saturday; 'Sunday': Sunday;

Type: string

Supported Values: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday

week-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

weekly

Description Every week

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: weekly and daily are mutually exclusive

PUT /axapi/v3/automatic-update/proxy-server
Payload:
{
    "proxy-server": {
        "proxy-host": "abcd"
    }
}
```

Delete Object

DELETE

/axapi/v3/automatic-update/proxy-server

proxy-server attributes

```
DELETE /axapi/v3/automatic-update/proxy-server
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

proxy-server attributes

auth-type

Description 'ntlm': NTLM authentication(default); 'basic': Basic authentication;

Type: string

Supported Values: ntlm, basic

Default: ntlm

domain

Description Realm for NTLM authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

https-port

Description Proxy server HTTPs port

Type: number

Range: 1-65535

password

Description Password for proxy authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-host

Description Proxy server hostname or IP address

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

secret-string

Description password value

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Username for proxy authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

apply-config

Description: apply-config is a **JSON Block**. Please see below for *apply-config*

Type: Object

Reference Object: */axapi/v3/axdebug/apply-config*

capture

Description: capture is a **JSON Block**. Please see below for *capture*

Type: Object

Reference Object: */axapi/v3/axdebug/capture*

count

Description Maximum packets to capture per cpu. Default is 3000. (Maximum packets to capture. For umlimited, specify 0)

Type: number

Range: 0-65535

Default: 3000

delete

Description: delete is a **JSON Block**. Please see below for *delete*

Type: Object

Reference Object: */axapi/v3/axdebug/delete*

exit

Description: exit is a **JSON Block**. Please see below for *exit*

Type: Object

Reference Object: */axapi/v3/axdebug/exit*

filter-config-list

Type: List

Reference Object: */axapi/v3/axdebug/filter-config/{number}*

inc-port-num

Description Port Numbers separated by commas(,) and hyphens(-) without spaces. ex: 4,5,10-30, or separated by spaces and double-quoted(“)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

incoming

Description Incoming interface. (For all ports, don't specify port number.)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

length

Description Packet length to capture

Type: number

Range: 64-12000

Default: 1518

maxfile

Description Maximum number of debug packet files. Default is 100

Type: number

Range: 1-65535

Default: 100

out-port-num

Description Port Numbers separated by commas(,) and hyphens(-) without spaces. ex: 4,5,10-30, or separated by spaces and double-quoted(")

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

outgoing

Description Outgoing interface (For all ports, don't specify port number.)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pcapng-config

Description: pcapng-config is a **JSON Block**. Please see below for *pcapng-config*

Type: Object

Reference Object: */axapi/v3/axdebug/pcapng-config*

save-config

Description: save-config is a **JSON Block**. Please see below for *save-config*

Type: Object

Reference Object: */axapi/v3/axdebug/save-config*

sess-filter-dis

Description Disable session based filter

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Maximum number of minutes for a capture. Default is 5 minutes. For unlimited, specify 0

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

delete

Specification	Value
Type	*object*

capture-file

Description Delete a capture file (Specify target filename to change)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

config-file

Description Delete AXDebug config file (Specify target filename to change)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

apply-config

Specification	Value
Type	*object*

config-file

Description config file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

save-config

Specification	Value
Type	*object*

config-file

Description config file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

default

Description save to default config file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

capture

Specification	Value
Type	*object*

brief

Description Print basic packet information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

current-slot

Description Only for current-slot of chassis

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Include packet payload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-stop

Description Non-stop execution

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

save

Description Save packets into file (Specify filename to save packets)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

exit

Specification	Value
Type	*object*

stop-capture

Description stop capture traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filter-config-list

Specification	Value
Type	*list*
Block object keys	

WORD0

Description WORD0 to compare

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: WORD0, hex, and integer are mutually exclusive

WORD1

Description WORD min value

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

WORD2

Description WORD max value

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

comp-hex

Description value to compare

Type: string

Format: time-hh:mm

Maximum Length: 2 characters

Maximum Length: 1 characters

dst

Description Destination

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst and l3-proto are mutually exclusive

dst-ip

Description dest IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-ipv4-address

Description dest ip address

Type: string

Format: ipv4-address

dst-mac

Description dest mac address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-mac-addr

Description dest mac address

Type: string

Format: mac-address

dst-port

Description dest port number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-port-num

Description dest Port number

Type: number

Range: 1-65535

hex

Description Define hex value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: hex,integer, word, and WORD0 are mutually exclusive

inner-ip

Description IP in IP or IP in IPv6 packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: inner-ip and l3-proto are mutually exclusive

inner-ipv4-address

Description IP address

Type: string

Format: ipv4-address

inner-ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

inner-ipv6

Description IPv6 in IPv6 or IPv6 in IPv4 packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: inner-ipv6 and l3-proto are mutually exclusive

inner-ipv6-address

Description IPv6 address

Type: string

Format: ipv6-address

integer

Description Define decimal value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: integer,hex, word, and WORD0 are mutually exclusive

integer-comp

Description value to compare

Type: number

Range: 1-255

integer-max

Description max value

Type: number

Range: 1-255

integer-min

Description min value

Type: number

Range: 1-255

ip

Description IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip, l3-proto, and ipv6 are mutually exclusive

ipv4-address

Description ip address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ipv6

Description IPV6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipv6, l3-proto, and ip are mutually exclusive

ipv6-address

Description ipv6 address

Type: string

Format: ipv6-address

l3-proto

Description 'arp': arp; 'neighbor': neighbor;

Type: string

Supported Values: arp, neighbor

Mutual Exclusion: l3-proto,dst, src, ip, ipv6, mac, port, proto, offset, inner-ip, and inner-ipv6 are mutually exclusive

length

Description byte length

Type: number

Range: 1-65535

mac

Description mac address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: mac and l3-proto are mutually exclusive

mac-addr

Description mac address

Type: string

Format: mac-address

max-hex

Description max value

Type: string

Format: time-hh:mm

Maximum Length: 2 characters

Maximum Length: 1 characters

min-hex

Description min value

Type: string

Format: time-hh:mm

Maximum Length: 2 characters

Maximum Length: 1 characters

number

Description Specify filter id

Type: number

Range: 1-32

offset

Description byte offset

Type: number

Range: 0-65535

Mutual Exclusion: offset and l3-proto are mutually exclusive

oper-range

Description 'gt': greater than; 'gte': greater than or equal to; 'se': smaller than or equal to; 'st': smaller than; 'eq': equal to; 'range': select a range;

Type: string

Supported Values: gt, gte, se, st, eq, range

port

Description port configurations

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port and l3-proto are mutually exclusive

port-num-max

Description max port number

Type: number

Range: 1-65535

port-num-min

Description min port number

Type: number

Range: 1-65535

prot-num

Description protocol number

Type: number

Range: 1-255

Mutual Exclusion: prot-num and proto-val are mutually exclusive

proto

Description ip protocol number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: proto and l3-proto are mutually exclusive

proto-val

Description 'icmp': icmp; 'icmpv6': icmpv6; 'tcp': tcp; 'udp': udp;

Type: string

Supported Values: icmp, icmpv6, tcp, udp

Mutual Exclusion: proto-val and prot-num are mutually exclusive

src

Description Src

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src and l3-proto are mutually exclusive

src-ip

Description src IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-ipv4-address

Description src ip address

Type: string

Format: ipv4-address

src-mac

Description src mac address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-mac-addr

Description src mac address

Type: string

Format: mac-address

src-port

Description src port number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-port-num

Description src Port number

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

word

Description Define hex value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: word, hex, and integer are mutually exclusive

pcapng-config

Specification	Value
Type	*object*

exit

Description Exit from axdebug pcapng mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pcapng-enable

Description Enable pcapng

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-key-enable

Description Enable ssl key tracking

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.16.2 axdebug filter-config

Description WORD max value

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

comp-hex

Description value to compare

Type: string

Format: time-hh:mm

Maximum Length: 2 characters

Maximum Length: 1 characters

dst

Description Destination

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst and l3-proto are mutually exclusive

dst-ip

Description dest IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-ipv4-address

Description dest ip address

Type: string

Format: ipv4-address

dst-mac

Description dest mac address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-mac-addr

Description dest mac address

Type: string

Format: mac-address

dst-port

Description dest port number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-port-num

Description dest Port number

Type: number

Range: 1-65535

hex

Description Define hex value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: hex,integer, word, and WORD0 are mutually exclusive

inner-ip

Description IP in IP or IP in IPv6 packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: inner-ip and l3-proto are mutually exclusive

inner-ipv4-address

Description IP address

Type: string

Format: ipv4-address

inner-ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

inner-ipv6

Description IPv6 in IPv6 or IPv6 in IPv4 packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: inner-ipv6 and l3-proto are mutually exclusive

inner-ipv6-address

Description IPv6 address

Type: string

Format: ipv6-address

integer

Description Define decimal value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: integer,hex, word, and WORD0 are mutually exclusive

integer-comp

Description value to compare

Type: number

Range: 1-255

integer-max

Description max value

Type: number

Range: 1-255

integer-min

Description min value

Type: number

Range: 1-255

ip

Description IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip, l3-proto, and ipv6 are mutually exclusive

ipv4-address

Description ip address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ipv6

Description IPV6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipv6, l3-proto, and ip are mutually exclusive

ipv6-address

Description ipv6 address

Type: string

Format: ipv6-address

l3-proto

Description ‘arp’: arp; ‘neighbor’: neighbor;

Type: string

Supported Values: arp, neighbor

Mutual Exclusion: l3-proto,dst, src, ip, ipv6, mac, port, proto, offset, inner-ip, and inner-ipv6 are mutually exclusive

length

Description byte length

Type: number

Range: 1-65535

mac

Description mac address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: mac and l3-proto are mutually exclusive

mac-addr

Description mac address

Type: string

Format: mac-address

max-hex

Description max value

Type: string

Format: time-hh:mm

Maximum Length: 2 characters

Maximum Length: 1 characters

min-hex

Description min value

Type: string

Format: time-hh:mm

Maximum Length: 2 characters

Maximum Length: 1 characters

number

Description Specify filter id

Type: number

Range: 1-32

offset

Description byte offset

Type: number

Range: 0-65535

Mutual Exclusion: offset and l3-proto are mutually exclusive

oper-range

Description 'gt': greater than; 'gte': greater than or equal to; 'se': smaller than or equal to; 'st': smaller than; 'eq': equal to; 'range': select a range;

Type: string

Supported Values: gt, gte, se, st, eq, range

port

Description port configurations

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port and l3-proto are mutually exclusive

port-num-max

Description max port number

Type: number

Range: 1-65535

port-num-min

Description min port number

Type: number

Range: 1-65535

prot-num

Description protocol number

Type: number

Range: 1-255

Mutual Exclusion: prot-num and proto-val are mutually exclusive

proto

Description ip protocol number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: proto and l3-proto are mutually exclusive

proto-val

Description 'icmp': icmp; 'icmpv6': icmpv6; 'tcp': tcp; 'udp': udp;

Type: string

Supported Values: icmp, icmpv6, tcp, udp

Mutual Exclusion: proto-val and prot-num are mutually exclusive

src

Description Src

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src and l3-proto are mutually exclusive

src-ip

Description src IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-ipv4-address

Description src ip address

Type: string

Format: ipv4-address

src-mac

Description src mac address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-mac-addr

Description src mac address

Type: string

Format: mac-address

src-port

Description src port number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-port-num

Description src Port number

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

word

Description Define hex value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: word, hex, and integer are mutually exclusive

2.16.3 axdebug pcapng-config

Configure pacpng

pcapng-config Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	pcapng-config
Element URI	/axapi/v3/axdebug/pcapng-config
Element Attributes	pcapng-config_attributes
Partition Visibility	shared
Schema	`pcapng-config schema`

Operations Allowed:

Create Object

POST

/axapi/v3/axdebug/pcapng-config

pcapng-config attributes

Get Object

GET

/axapi/v3/axdebug/pcapng-config

pcapng-config attributes

Modify Object

POST

/axapi/v3/axdebug/pcapng-config

pcapng-config attributes

Replace Object

PUT

/axapi/v3/axdebug/pcapng-config

pcapng-config attributes

Delete Object

DELETE

/axapi/v3/axdebug/pcapng-config

pcapng-config attributes

pcapng-config attributes

exit

Description Exit from axdebug pcapng mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pcapng-enable

Description Enable pcapng

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-key-enable

Description Enable ssl key tracking

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.17 backup

Objects:

2.17.1 backup

Backup system files

backup Specification

Parameter	Value
Type	*operational*
Element Name	backup
Element URI	/axapi/v3/backup
Element Attributes	backup_attributes
Partition Visibility	shared
Schema	`backup schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/backup

backup attributes

backup attributes

log

Description: log is a **JSON Block**. Please see below for *log*

system

Description: system is a **JSON Block**. Please see below for *system*

Type: Object

Reference Object: */axapi/v3/backup/system*

status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

system

Specification	Value
Type	*object*

encrypt

Description Encrypt the backup file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

remote-file

Description profile name for remote url

Type: string

Format: url

store-name

Description Save backup store information

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

store

Specification	Value
Type	*object*

creat-cfg

Description: creat-cfg is a **JSON Block**. Please see below for *store_creat-cfg*

Type: Object

delete-cfg

Description: delete-cfg is a **JSON Block**. Please see below for *store_delete-cfg*

Type: Object

store_delete-cfg

Specification	Value
Type	*object*

delete

Description Delete store

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

store-name-del

Description profile name for deleting

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

store_creat-cfg

Specification	Value
Type	*object*

create

Description Create store

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remote-file

Description profile name for remote url

Type: string

Format: url

store-name

Description profile name to store remote url

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

log

Specification	Value
Type	*object*

all

Description all log

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

core

Description Backup core files only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

date

Description specify number of days

Type: number

Range: 1-31

day

Description Most recent day

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

expedite

Description Expedite the Backup

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

messages

Description Backup messages file only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

month

Description Most recent month

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

period

Description Specify backup period

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remote-file

Description profile name for remote url

Type: string

Format: url

showtech

Description Backup showtech files only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data

Description Backup web statistical data

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

store-name

Description Save backup store information

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

week

Description Most recent week

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.17.2 backup status oper

Operational Status for the object status

status Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	status
Element URI	/axapi/v3/backup/status/oper

backup-periodic attributes

Replace Object

PUT

/axapi/v3/backup-periodic

backup-periodic attributes

Delete Object

DELETE

/axapi/v3/backup-periodic

backup-periodic attributes

```
DELETE /axapi/v3/backup-periodic
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

backup-periodic attributes

day

Description Specify interval days

Type: number

Range: 1-199

Mutual Exclusion: day, hour, and week are mutually exclusive

encrypt

Description Encrypt the backup file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat

Description Backup fixed-nat port mapping files

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hour

Description Specify interval hours

Type: number

Range: 1-65534

Mutual Exclusion: hour, day, and week are mutually exclusive

log

Description Backup log files

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remote-file

Description profile name for remote url

Type: string

Format: url

store-name

Description profile name to store remote url

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

system

Description Backup system files

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

week

Description Specify interval weeks

Type: number

Range: 1-199

Mutual Exclusion: week, day, and hour are mutually exclusive

2.19 banner

Objects:

2.19.1 banner

Define a login banner

banner Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	banner
Element URI	/axapi/v3/banner
Element Attributes	banner_attributes
Partition Visibility	shared
Schema	`banner schema`

Operations Allowed:

Create Object

POST

/axapi/v3/banner

banner attributes

```
POST /axapi/v3/banner
Payload:
{
    "banner": {
        "exec-banner-cfg": {
            "exec": 1
        }
    }
}
```

Get Object

GET

Type: Object

login-banner-cfg

Description: login-banner-cfg is a **JSON Block**. Please see below for *login-banner-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

exec-banner-cfg

Specification	Value
Type	*object*

exec

Description Set EXEC process creation banner

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exec-banner

Description Banner text, string n is taken as line break of multi-line banner text, use \n for n, 077 for ? and 011 for tab

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

login-banner-cfg

Specification	Value
Type	*object*

login

Description Set login banner

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

login-banner

Description Banner text, string n is taken as line break of multi-line banner text, use \n to indicate n

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

2.20 bgp

Objects:

2.20.1 bgp

Border Gateway Protocol (BGP)

bgp Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	bgp
Element URI	/axapi/v3/bgp
Element Attributes	bgp_attributes
Partition Visibility	shared
Schema	`bgp schema`

Operations Allowed:

Create Object

POST

        "msg": "Success"
    }
}
```

bgp attributes

asdot

Description Enable ASDot notation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

asdot-plus

Description Enable ASDot+ notation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-advertisement

Description: disable-advertisement is a **JSON Block**. Please see below for *disable-advertisement*

Type: Object

extended-asn-cap

Description Enable the router to send 4-octet ASN capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nexthop-trigger

Description: nexthop-trigger is a **JSON Block**. Please see below for *nexthop-trigger*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-advertisement

Specification	Value
Type	*object*

on-boot

Description Upon boot-up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nexthop-trigger

Specification	Value
Type	*object*

delay

Description Configure nexthop trigger delay time interval (Nexthop Trigger Delay time interval between 1 and 100)

Type: number

Range: 1-100

enable

Description Enable the nexthop tracking functionality

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.21 bios-prog

capture-config-list

capture-config-list is **JSON List** of *capture-config attributes*

capture-config-list : [

{ *capture-config attributes* },

{ *capture-config attributes* },

...

]

capture-config attributes

count

Description Specify maximum packet number. (default 0 for unlimited)

Type: number

Range: 0-65535

Default: 0

Mutual Exclusion: count and file-history-size are mutually exclusive

enable

Description Enable capture-config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-history-size

Description (Default) Specify pcapng file history size in MB (default 10)

Type: number

Range: 1-6144

Mutual Exclusion: file-history-size, file-size, and count are mutually exclusive

file-size

Description Specify pcapng filesize in MB (default 10)

Type: number

Range: 1-6144

Mutual Exclusion: file-size and file-history-size are mutually exclusive

filter

Description Filter packets to save using Berkeley Packet Filter syntax

Type: string

Format: string-rlx

Maximum Length: 1024 characters

Maximum Length: 1 characters

length

Description Packet length Bytes to capture (Default 128)

Type: number

Range: 64-1518

name

Description capture-config name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_radius_server

Specification	Value
Type	*object*

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default); 'delete-entry-and-sessions': Delete the entry and data sessions associated;

Type: string

Supported Values: ignore, delete-entry, delete-entry-and-sessions

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI;

Type: string

Supported Values: msisdn, imei, imsi

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

disable-reply

Description Toggle option for RADIUS reply packet(Default: Accounting response will be sent)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (Port number)

Type: number

Range: 1024-65535

remote

Description: remote is a **JSON Block**. Please see below for *lsn_radius_server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

lsn_radius_server_remote

counters1

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'request-bad-secret-dropped': RADIUS Request Bad Secret Dropped; 'request-no-key-vap-dropped': RADIUS Request No Key Attribute Dropped;

'request-malformed-dropped': RADIUS Request Malformed Dropped; 'request-ignored': RADIUS Request Ignored; 'radius-table-full': RADIUS Request Dropped (Table Full); 'secret-not-configured-dropped': RADIUS Secret Not Configured Dropped; 'ha-standby-dropped': HA Standby Dropped; 'ipv6-prefix-length-mismatch': Framed IPV6 Prefix Length Mismatch; 'invalid-key': Radius Request has Invalid Key Field; 'smp-created': RADIUS SMP Created; 'smp-deleted': RADIUS SMP Deleted; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-in-rml': RADIUS SMP in RML; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received; 'acct-on-filters-full': RADIUS Acct On Request Ignored(Filters Full); 'acct-on-dup-request': Duplicate RADIUS Acct On Request; 'ip-mismatch-delete': Radius Entry IP Mismatch Delete; 'ip-add-race-drop': Radius Entry IP Add Race Drop; 'ha-sync-no-key-vap-dropped': HA Record Sync No key dropped; 'inter-card-msg-fail-drop': Inter-Card Message Fail Drop; 'radius-packets-redirected': RADIUS packets redirected (SO); 'radius-packets-redirect-fail-dropped': RADIUS packets dropped due to redirect failure (SO); 'radius-packets-process-local': RADIUS packets processed locally without redirection (SO); 'radius-packets-dropped-not-lo': RADIUS packets dropped dest not loopback (SO); 'radius-inter-card-dup-redir': RADIUS packet dropped as redirected by other blade (SO);

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-created, smp-deleted, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-in-rml, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

lsn_radius_server_attribute

Specification	Value
Type	*list*
Block object keys	

attribute-value

Description 'inside-ipv6-prefix': Framed IPv6 Prefix; 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

lsn_port-overloading_tcp_port-list

Specification	Value
Type	*list*
Block object keys	

port

Description Single Destination Port or Port Range Start

Type: number

port-end

Description Port Range End

Type: number

lsn_system-status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_health-check-gateway-list

Specification	Value
Type	*list*
Block object keys	

ipv4-addr

Description Specify IPv4 Gateway

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-addr and ipv6-addr are mutually exclusive

ipv6-addr

Description Specify IPv6 Gateway

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr and ipv4-addr are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_alg

Specification	Value
Type	*object*

dns

Description: dns is a **JSON Block**. Please see below for *lsn_alg_dns*

Type: Object

Reference Object: */axapi/v3/cgnv6/lsn/alg/dns*

esp

Description: esp is a **JSON Block**. Please see below for *lsn_alg_esp*

Type: Object

counters1

Description 'all': all; 'h225ras-message': H323 H225 RAS Message; 'h225cs-message': H323 H225 Call Signaling Message; 'h245ctl-message': H323 H245 Media Control Message; 'h245-tunneled': H323 H245 Tunnelled Message; 'fast-start': H323 FastStart; 'parse-error': Message Parse Error; 'message-cross-multi-packets': H323 Message Cross Multiple Packets; 'conn-ext-creation-failure': H323 Packet Rewrite Failure; 'rewrite-failure': H323 Message Rewrite Failure; 'tcp-out-of-order-drop': TCP Out-of-Order Drop; 'h245-dynamic-addr-exceed': H323 H245 Dynamic Address Exceed;

Type: string

Supported Values: all, h225ras-message, h225cs-message, h245ctl-message, h245-tunneled, fast-start, parse-error, message-cross-multi-packets, conn-ext-creation-failure, rewrite-failure, tcp-out-of-order-drop, h245-dynamic-addr-exceed

lsn_alg_rtp

Specification	Value
Type	*object*

rtp-stun-timeout

Description RTP/RTCP STUN timeout (default: 5 minutes)}

Type: number

Range: 2-10

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_alg_dns

Specification	Value
Type	*object*

dns-value

Description 'disable': Disable DNS ALG for LSN;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_alg_tftp

Specification	Value
Type	*object*

sampling-enable

Type: List

tftp-value

Description 'enable': Enable TFTP ALG for LSN;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_alg_tftp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-created': TFTP Client Sessions Created; 'helper-created': TFTP Helper Sessions created; 'helper-freed': TFTP Helper Sessions freed; 'helper-freed-used': TFTP Helper Sessions freed used; 'helper-freed-unused': TFTP Helper Sessions freed unused; 'helper-already-used': TFTP Helper Session already used; 'helper-in-rml': TFTP Helper Session in Remove List;

Type: string

Supported Values: all, session-created, helper-created, helper-freed, helper-freed-used, helper-freed-unused, helper-already-used, helper-in-rml

lsn_alg_mgcp

Specification	Value
Type	*object*

mgcp-value

Description 'enable': Enable MGCP ALG for LSN;

Type: string

Supported Values: enable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_alg_mgcp_sampling-enable

Type: string

Supported Values: all, auep, aucx, crcx, dlcx, epcf, mdcx, ntfy, rqnt, rsip, parse-error, conn-ext-creation-failure, third-party-sdp, sdp-process-candidate-failure, sdp-op-failure, sdp-alloc-port-map-success, sdp-alloc-port-map-failure, modify-failure, rewrite-failure, tcp-out-of-order-drop

lsn_inside

Specification	Value
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *lsn_inside_source*

Type: Object

Reference Object: */axapi/v3/cgnv6/lsn/inside/source*

lsn_inside_source

Specification	Value
Type	*object*

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_global

Specification	Value
Type	*object*

attempt-port-preservation

Description 'disable': Don't attempt port preservation for NAT allocation;

Type: string

Supported Values: disable

enhanced-user-tracking

Description Enable enhanced user tracking and visibility (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hairpinning

Description 'filter-none': Allow self-hairpinning (default). Warning: Only applies to UDP. TCP will use filter-self-ip-port; 'filter-self-ip': Block hairpinning to the user's own IP; 'filter-self-ip-port': Block hairpinning to the user's same IP and port combination;

Type: string

Supported Values: filter-none, filter-self-ip, filter-self-ip-port

Default: filter-none

half-close-timeout

Description Set LSN Half close timeout (Half close timeout in seconds (default not set))

Type: number

Range: 2-3000

icmp

Description: icmp is a **JSON Block**. Please see below for *lsn_global_icmp*

Type: Object

inbound-refresh

Description 'enable': Enable NAT Inbound Refresh Behavior; 'disable': Disable NAT Inbound Refresh Behavior;

Type: string

Supported Values: enable, disable

Default: enable

inbound-refresh-full-cone

Description 'enable': Enable NAT full cone refresh for inbound flows; 'disable': Disable NAT full cone refresh for inbound flows;

Type: string

Supported Values: enable, disable

Default: enable

ip-selection

Description 'random': Random (long-run uniformly distributed) NAT IP selection (default); 'round-robin': Round-robin; 'least-used-strict': Fewest NAT ports used; 'least-udp-used-strict': Fewest UDP NAT ports used; 'least-tcp-used-strict': Fewest TCP NAT ports used; 'least-reserved-strict': Fewest NAT ports reserved; 'least-udp-reserved-strict': Fewest UDP NAT ports reserved; 'least-tcp-reserved-strict': Fewest TCP NAT ports reserved; 'least-users-strict': Fewest number of users;

Type: string

Supported Values: random, round-robin, least-used-strict, least-udp-used-strict, least-tcp-used-strict, least-reserved-strict, least-udp-reserved-strict, least-tcp-reserved-strict, least-users-strict

Default: random

logging

Description: logging is a **JSON Block**. Please see below for *lsn_global_logging*

Type: Object

port-batching

Description: port-batching is a **JSON Block**. Please see below for *lsn_global_port-batching*

Type: Object

sampling-enable

Type: List

strictly-sticky-nat

Description Strictly adheres to sticky-nat (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-timeout

Description Set LSN SYN timeout (SYN idle-timeout in seconds (default: 4 seconds))

Type: number

Range: 2-30

Default: 4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_global_icmp

Specification	Value
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

lsn_global_logging

Specification	Value
Type	*object*

default-template

Description Bind the default NAT logging template for LSN (Bind a NAT logging template)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/logging*

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-name and shared are mutually exclusive

Reference Object: */axapi/v3/partition*

pool

Type: List

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared and partition-name are mutually exclusive

lsn_global_logging_pool

Specification	Value
Type	*list*

lsn_tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *lsn_tcp_mss-clamp*

Type: Object

Reference Object: */axapi/v3/cgnv6/lsn/tcp/mss-clamp*

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *lsn_tcp_reset-on-error*

Type: Object

Reference Object: */axapi/v3/cgnv6/lsn/tcp/reset-on-error*

lsn_tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60))))

Type: number

Range: 0-1460

Default: 456

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'subtract': Specify the value to subtract from the TCP MSS; 'none': No TCP MSS clamping (default);

Type: string

Supported Values: fixed, subtract, none

Default: none

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: not configured)

Type: number

Range: 0-1460

mss-value

Description The max value allowed for the TCP MSS (default: not configured)},

Type: number

Range: 0-1460

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_tcp_reset-on-error

Specification	Value
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_data-sessions

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Description 'all': all; 'tcp-total-ports-allocated': Total TCP ports allocated; 'udp-total-ports-allocated': Total UDP ports allocated; 'icmp-total-ports-allocated': Total ICMP ports allocated;

Type: string

Supported Values: all, tcp-total-ports-allocated, udp-total-ports-allocated, icmp-total-ports-allocated

global_domain-list

Specification	Value
Type	*object*

aaaa-query

Description 'enable': Enable the DNS AAAA query for each domain in the domain list.; 'disable': Disable the DNS AAAA query for each domain in the domain list.;

Type: string

Supported Values: enable, disable

Default: enable

fail-interval

Description Set up the global failure interval in second for the DNS resolution.

Type: number

Range: 3-600

interval

Description Set up the global query interval in minute for the DNS resolution.

Type: number

Range: 1-1440

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation

Specification	Value
Type	*object*

icmp-timeout

Description: icmp-timeout is a **JSON Block**. Please see below for *translation_icmp-timeout*

Type: Object

service-timeout-list

Type: List

Reference Object: */axapi/v3/cgnv6/translation/service-timeout/{service-type}+{port}*

tcp-timeout

Description TCP protocol extended translations (Timeout in seconds (Interval of 60 seconds), default is 300 seconds (5 minutes))

Type: number

Range: 2-15000

Default: 300

udp-timeout

Description UDP protocol extended translations (Timeout in seconds (Interval of 60 seconds), default is 300 seconds (5 minutes))

Type: number

Range: 2-15000

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation_service-timeout-list

Specification	Value
Type	*list*
Block object keys	

fast

Description Use Fast Aging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fast and timeout-val are mutually exclusive

port

Description Port Number

Type: number

Range: 1-65535

port-end

Description End Port Number

Type: number

Range: 1-65535

service-type

Description 'tcp': TCP Protocol; 'udp': UDP Protocol;

Type: string

Supported Values: tcp, udp

timeout-val

Description Timeout in seconds (Interval of 60 seconds)

Type: number

Range: 2-15000

Mutual Exclusion: timeout-val and fast are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation_icmp-timeout

Specification	Value
Type	*object*

fast

Description Use Fast Aging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fast and icmp-timeout-val are mutually exclusive

icmp-timeout-val

Description Timeout in seconds (Interval of 60 seconds)

Type: number

Range: 2-15000

Mutual Exclusion: icmp-timeout-val and fast are mutually exclusive

icmp

Specification	Value
Type	*object*

sampling-enable

Type: string

Supported Values: all, icmp-unknown-type, icmp-no-port-info, icmp-no-session-drop, icmpv6-unknown-type, icmpv6-no-port-info, icmpv6-no-session-drop, icmp-to-icmp, icmp-to-icmpv6, icmpv6-to-icmp, icmpv6-to-icmpv6, icmp-bad-type, icmpv6-bad-type, 64-known-drop, 64-unknown-drop, 64-midpoint-hop, 46-known-drop, 46-unknown-drop, 46-no-prefix-for-ipv4, 46-bad-encap-ip-header-len, icmp-to-icmp-err, icmp-to-icmpv6-err, icmpv6-to-icmp-err, icmpv6-to-icmpv6-err, encap-cross-cpu-no-match, encap-cross-cpu-preprocess-err, icmp-to-icmp-unknown-l4, icmp-to-icmpv6-unknown-l4, icmpv6-to-icmp-unknown-l4, icmpv6-to-icmpv6-unknown-l4, static-nat, echo-to-pool-reply, echo-to-pool-drop, error-to-pool-drop, echo-to-pool-reply-v6, echo-to-pool-drop-v6, error-to-pool-drop-v6, error-ip-mismatch

port-batch-v1

Specification	Value
Type	*object*

enable-port-batch-v1

Description Enable lsn port-batching v1 (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pcp

Specification	Value
Type	*object*

default-template

Description Bind the default template for PCP (Bind a PCP template)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

uuid

Description uuid of the object

fixed-nat_inside_iplist-list

Specification	Value
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-ip-list

Description Name of IP List used to specify Inside Users

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *fixed-nat_inside_iplist-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-config-template

Description Scaleout service-config template to bind (Scaleout service-config template name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *fixed-nat_inside_iplist-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

fixed-nat_inside_iplist-list_usable-nat-ports

Specification	Value
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

fixed-nat_inside_iplist-list_offset

Specification	Value
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

fixed-nat_inside_ipv4address-list

Specification	Value
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv4 Inside User End Address

Type: string

Format: ipv4-address

inside-netmask

Description IPv4 Netmask

Type: string

Format: ipv4-netmask-brief

inside-start-address

Description IPv4 Inside User Start Address

Type: string

Format: ipv4-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *fixed-nat_inside_ipv4address-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-config-template

Description Scaleout service-config template to bind (Scaleout service-config template name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *fixed-nat_inside_ipv4address-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

fixed-nat_inside_ipv4address-list_usable-nat-ports

Specification	Value
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

fixed-nat_inside_ipv4address-list_offset

Specification	Value
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

fixed-nat_inside_ipv6address-list

Specification	Value
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv6 Inside User End Address

Type: string

Format: ipv6-address

inside-netmask

Description Inside User IPv6 Netmask

Type: number

Range: 64-128

inside-start-address

Description IPv6 Inside User Start Address

Type: string

Format: ipv6-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *fixed-nat_inside_ipv6address-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-config-template

Description Scaleout service-config template to bind (Scaleout service-config template name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *fixed-nat_inside_ipv6address-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

fixed-nat_inside_ipv6address-list_usable-nat-ports

Specification	Value
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

fixed-nat_inside_ipv6address-list_offset

Specification	Value
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

fixed-nat_global

Specification	Value
Type	*object*

create-port-mapping-file

Description Create Port Mapping File

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-mapping-files-count

Description Number of old fixed_nat files to store

Type: number

Range: 1-10

Default: 5

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Type: List

tftp-value

Description 'disable': Disable ALG;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stateful-firewall_alg_tftp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-created': TFTP Client Sessions created; 'helper-created': TFTP Helper Sessions created; 'helper-freed': TFTP Helper Sessions freed; 'helper-freed-used': TFTP Helper Sessions freed used; 'helper-freed-unused': TFTP Helper Sessions freed unused; 'helper-already-used': TFTP Helper Session already used; 'helper-in-rml': TFTP Helper Session in Remove List;

Type: string

Supported Values: all, session-created, helper-created, helper-freed, helper-freed-used, helper-freed-unused, helper-already-used, helper-in-rml

stateful-firewall_global

Specification	Value
Type	*object*

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

stateful-firewall-value

Description 'enable': Enable stateful firewall;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stateful-firewall_global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'tcp_packet_process': TCP Packet Process; 'udp_packet_process': UDP Packet Process; 'other_packet_process': Other Packet Process; 'packet_inbound_deny': Inbound Packet Denied; 'packet_process_failure': Packet Error Drop; 'outbound_session_created': Outbound Session Created; 'outbound_session_freed': Outbound Session Freed; 'inbound_session_created': Inbound Session Created; 'inbound_session_freed': Inbound Session Freed; 'tcp_session_created': TCP Session Created; 'tcp_session_freed': TCP Session Freed; 'udp_session_created': UDP Session Created; 'udp_session_freed': UDP Session Freed; 'other_session_created': Other Session Created; 'other_session_freed': Other Session Freed; 'session_creation_failure': Session Creation Failure; 'no_fwd_route': No Forward Route; 'no_rev_route': No Reverse Route; 'packet_standby_drop': Standby Drop; 'tcp_fullcone_created': TCP Full-cone Created; 'tcp_fullcone_freed': TCP Full-cone Freed; 'udp_fullcone_created': UDP Full-cone Created;

'udp_fullcone_freed': UDP Full-cone Freed; 'fullcone_creation_failure': Full-Cone Creation Failure; 'eif_process': Endpnt-Independent Filter Matched; 'one_arm_drop': One-Arm Drop; 'no_class_list_match': No Class-List Match Drop; 'outbound_session_created_shadow': Outbound Session Created Shadow; 'outbound_session_freed_shadow': Outbound Session Freed Shadow; 'inbound_session_created_shadow': Inbound Session Created Shadow; 'inbound_session_freed_shadow': Inbound Session Freed Shadow; 'tcp_session_created_shadow': TCP Session Created Shadow; 'tcp_session_freed_shadow': TCP Session Freed Shadow; 'udp_session_created_shadow': UDP Session Created Shadow; 'udp_session_freed_shadow': UDP Session Freed Shadow; 'other_session_created_shadow': Other Session Created Shadow; 'other_session_freed_shadow': Other Session Freed Shadow; 'session_creation_failure_shadow': Session Creation Failure Shadow; 'bad_session_freed': Bad Session Proto on Free; 'ctl_mem_alloc': Memory Alloc; 'ctl_mem_free': Memory Free; 'tcp_fullcone_created_shadow': TCP Full-cone Created Shadow; 'tcp_fullcone_freed_shadow': TCP Full-cone Freed Shadow; 'udp_fullcone_created_shadow': UDP Full-cone Created Shadow; 'udp_fullcone_freed_shadow': UDP Full-cone Freed Shadow; 'fullcone_in_del_q': Full-cone Found in Delete Queue; 'fullcone_overflow_eim': EIM Overflow; 'fullcone_overflow_eif': EIF Overflow; 'fullcone_free_found': Full-cone Free Found From Conn; 'fullcone_free_retry_lookup': Full-cone Retry Look-up; 'fullcone_free_not_found': Full-cone Free Not Found; 'eif_limit_exceeded': EIF Limit Exceeded; 'eif_disable_drop': EIF Disable Drop; 'eif_process_failure': EIF Process Failure; 'eif_filtered': EIF Filtered; 'ha_standby_session_created': HA Standby Session Created; 'ha_standby_session_eim': HA Standby Session EIM; 'ha_standby_session_eif': HA Standby Session EIF;

Type: string

Supported Values: all, tcp_packet_process, udp_packet_process, other_packet_process, packet_inbound_deny, packet_process_failure, outbound_session_created, outbound_session_freed, inbound_session_created, inbound_session_freed, tcp_session_created, tcp_session_freed, udp_session_created, udp_session_freed, other_session_created, other_session_freed, session_creation_failure, no_fwd_route, no_rev_route, packet_standby_drop, tcp_fullcone_created, tcp_fullcone_freed, udp_fullcone_created, udp_fullcone_freed, fullcone_creation_failure, eif_process, one_arm_drop, no_class_list_match, outbound_session_created_shadow, outbound_session_freed_shadow, inbound_session_created_shadow, inbound_session_freed_shadow, tcp_session_created_shadow, tcp_session_freed_shadow, udp_session_created_shadow, udp_session_freed_shadow, other_session_created_shadow, other_session_freed_shadow, session_creation_failure_shadow, bad_session_freed, ctl_mem_alloc, ctl_mem_free, tcp_fullcone_created_shadow, tcp_fullcone_freed_shadow, udp_fullcone_created_shadow, udp_fullcone_freed_shadow, fullcone_in_del_q, fullcone_overflow_eim, fullcone_overflow_eif, fullcone_free_found, fullcone_free_retry_lookup, fullcone_free_not_found, eif_limit_exceeded, eif_disable_drop, eif_process_failure, eif_filtered, ha_standby_session_created, ha_standby_session_eim, ha_standby_session_eif

stateful-firewall_tcp

Specification	Value
Type	*object*

idle-timeout-list

Type: List

Reference Object: */axapi/v3/cgnv6/stateful-firewall/tcp/idle-timeout/{port}+{port-end}*

stun-timeout-list

Type: List

Reference Object: */axapi/v3/cgnv6/stateful-firewall/tcp/stun-timeout/{port}+{port-end}*

syn-timeout

Description: syn-timeout is a **JSON Block**. Please see below for *stateful-firewall_tcp_syn-timeout*

Type: Object

Reference Object: */axapi/v3/cgnv6/stateful-firewall/tcp/syn-timeout*

stateful-firewall_tcp_stun-timeout-list

Specification	Value
Type	*list*
Block object keys	

port

Description Single Destination Port or Port Range Start

Type: number

Range: 1-65535

port-end

Description Port Range End

Type: number

Range: 1-65535

stun-timeout-val-port-range

Description STUN timeout (default: 2minutes)

Type: number

Range: 0-60

Default: 2

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stateful-firewall_tcp_syn-timeout

Specification	Value
Type	*object*

syn-timeout-val

Description Set Seconds session can remain in half-open state before being deleted (default: 4 seconds)

Type: number

Range: 2-30

Default: 4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stateful-firewall_tcp_idle-timeout-list

Specification	Value
Type	*list*
Block object keys	

idle-timeout-val-port-range

Description Set Idle timeout for IPv4 and IPv6 TCP established sessions (Idle timeout for IPv4 and IPv6 TCP established sessions (default: 300 seconds))

Type: number

Range: 60-15000

Default: 300

port

Description Single Destination Port or Port Range Start

Type: number

Range: 1-65535

port-end

Description Port Range End

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stateful-firewall_stun-timeout-list

Specification	Value
Type	*list*
Block object keys	

port

Description Single Destination Port or Port Range Start

Type: number

Range: 1-65535

port-end

Description Port Range End

Type: number

Range: 1-65535

stun-timeout-val-port-range

Description STUN timeout (default: 2 minutes)

Type: number

Range: 0-60

Default: 2

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stateful-firewall_endpoint-independent-filtering

Specification	Value
Type	*object*

tcp

Description: tcp is a **JSON Block**. Please see below for *stateful-firewall_endpoint-independent-filtering_tcp*

Type: Object

Reference Object: */axapi/v3/cgnv6/stateful-firewall/endpoint-independent-filtering/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *stateful-firewall_endpoint-independent-filtering_udp*

Type: Object

Reference Object: */axapi/v3/cgnv6/stateful-firewall/endpoint-independent-filtering/udp*

stateful-firewall_endpoint-independent-filtering_udp

Specification	Value
Type	*object*

port-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stateful-firewall_endpoint-independent-filtering_udp_port-list

Specification	Value
Type	*list*
Block object keys	

port

Description Single Destination Port or Port Range Start

Type: number

port-end

Description Port Range End

Type: number

stateful-firewall_endpoint-independent-filtering_tcp

Specification	Value
Type	*object*

port-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stateful-firewall_endpoint-independent-filtering_tcp_port-list

Specification	Value
Type	*list*
Block object keys	

port

Description Single Destination Port or Port Range Start

Type: number

port-end

Description Port Range End

Type: number

nat

Specification	Value
Type	*object*

exclude-port

Description: exclude-port is a **JSON Block**. Please see below for *nat_exclude-port*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/exclude-port*

histogram

Description: histogram is a **JSON Block**. Please see below for *nat_histogram*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/histogram*

icmp

Description: icmp is a **JSON Block**. Please see below for *nat_icmp*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/icmp*

icmpv6

Description: icmpv6 is a **JSON Block**. Please see below for *nat_icmpv6*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/icmpv6*

inside

Description: inside is a **JSON Block**. Please see below for *nat_inside*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/inside*

pool-group-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat/pool-group/{pool-group-name}*

pool-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat/pool/{pool-name}*

range-list-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat/range-list/{name}+{partition}*

shared-pool

Description: shared-pool is a **JSON Block**. Please see below for *nat_shared-pool*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/shared-pool*

shared-pool-group

Description: shared-pool-group is a **JSON Block**. Please see below for *nat_shared-pool-group*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/shared-pool-group*

nat_shared-pool

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_shared-pool-group

Specification	Value
Type	*object*

members

Description: members is a **JSON Block**. Please see below for *nat_shared-pool-group_members*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/shared-pool-group/members*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_shared-pool-group_members

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_pool-group-list

Specification	Value
Type	*list*
Block object keys	

member-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat/pool-group/{pool-group-name}/member/{pool-name}*

pool-group-name

Description Specify pool group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid

Type: number

Range: 1-31

nat_pool-group-list_member-list

Specification	Value
Type	*list*
Block object keys	

pool-name

Description Specify CGNv6 NAT pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_histogram

Specification	Value
Type	*object*

bin-count

Description Number of bins in the histogram (default: 50)

Type: number

Range: 10-100

Default: 50

bin-skew

Description Percentage of bins that represent the upper bound (default: 75)

Type: number

Range: 50-80

Default: 75

data-skew

Description Percentage of data that represents the upper bound (default: 25)

Type: number

Range: 5-50

Default: 25

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_icmpv6

Specification	Value
Type	*object*

respond-to-ping

Description Respond to ICMPv6 echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_range-list-list

Specification	Value
Type	*list*
Block object keys	

global-netmaskv4

Description Mask for this Address range

Type: string

Format: ipv4-netmask

global-start-ipv4-addr

Description Global Start IPv4 Address of this list

Type: string

Format: ipv4-address

local-netmaskv4

Description Mask for this Address range

Type: string

Format: ipv4-netmask

local-start-ipv4-addr

Description Local Start IPv4 Address of this list

Type: string

Format: ipv4-address

name

Description Name for this Static List

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-count

Description Number of addresses to be translated in this range

Type: number

Range: 1-200000

v4-vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat_exclude-port

Specification	Value
Type	*object*

tcp

Description: tcp is a **JSON Block**. Please see below for *nat_exclude-port_tcp*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/exclude-port/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *nat_exclude-port_udp*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/exclude-port/udp*

nat_exclude-port_udp

Specification	Value
Type	*object*

port-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_exclude-port_udp_port-list

Specification	Value
Type	*list*
Block object keys	

port

Description Single Port or Port Range Start

Type: number

port-end

Description Port Range End

Type: number

nat_exclude-port_tcp

Specification	Value
Type	*object*

port-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_exclude-port_tcp_port-list

Specification	Value
Type	*list*
Block object keys	

port

Description Single Port or Port Range Start

Type: number

port-end

Description Port Range End

Type: number

nat_icmp

Specification	Value
Type	*object*

always-source-nat-errors

Description Source NAT intermediate routers' IPs for ICMP errors (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

respond-to-ping

Description Respond to ICMP echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_inside

Specification	Value
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *nat_inside_source*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/inside/source*

nat_inside_source

Specification	Value
Type	*object*

static-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat/inside/source/static/{src-address}+{partition}*

statistics

Description: statistics is a **JSON Block**. Please see below for *nat_inside_source_statistics*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/inside/source/statistics*

nat_inside_source_statistics

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_inside_source_static-list

Specification	Value
Type	*list*
Block object keys	

nat-address

Description NAT Address

Type: string

Format: ipv4-address

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

src-address

Description Original Source Address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat_pool-list

Specification	Value
Type	*list*
Block object keys	

all

Description Share with all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

exclude-ip

Type: List

group

Description Share with a partition group (Partition Group Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

max-users-per-ip

Description Number of users that can be assigned to a NAT IP

Type: number

Range: 1-64512

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

partition

Description Share with a single partition (Partition Name)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

per-batch-port-usage-warning-threshold

Description Configure warning log threshold for per batch port usage (default: disabled) (Number of ports)

Type: number

Range: 32-4096

pool-name

Description Specify pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-batch-v2-size

Description '64': Allocate 64 ports at a time; '128': Allocate 128 ports at a time; '256': Allocate 256 ports at a time; '512': Allocate 512 ports at a time; '1024': Allocate 1024 ports at a time; '2048': Allocate 2048 ports at a time; '4096': Allocate 4096 ports at a time;

Type: string

Supported Values: 64, 128, 256, 512, 1024, 2048, 4096

service-config-template

Description Service-template name to bind

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description Share this pool with other partitions (default: not shared)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

simultaneous-batch-allocation

Description Allocate same TCP and UDP batches at once

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

tcp-time-wait-interval

Description Minutes before TCP NAT ports can be reused

Type: number

Range: 0-10

usable-nat-ports

Description Configure usable NAT ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports-end

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-nat-ports-start

Description Start Port of Usable NAT Ports (needs to be even)

Type: number

Range: 1024-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat_pool-list_exclude-ip

Specification	Value
Type	*list*
Block object keys	

exclude-ip-end

Description Address range end

Type: string

Format: ipv4-address

exclude-ip-start

Description Single IP address or IP address range start

Type: string

Format: ipv4-address

sctp

Specification	Value
Type	*object*

global

Description: global is a **JSON Block**. Please see below for *sctp_global*

Type: Object

Reference Object: */axapi/v3/cgnv6/sctp/global*

permit-payload-protocol

Description: permit-payload-protocol is a **JSON Block**. Please see below for *sctp_permit-payload-protocol*

Type: Object

Reference Object: */axapi/v3/cgnv6/sctp/permit-payload-protocol*

rate-limit

Description: rate-limit is a **JSON Block**. Please see below for *sctp_rate-limit*

Type: Object

Reference Object: */axapi/v3/cgnv6/sctp/rate-limit*

rate-limit-entries

Description: rate-limit-entries is a **JSON Block**. Please see below for *sctp_rate-limit-entries*

Type: Object

Reference Object: */axapi/v3/cgnv6/sctp/rate-limit-entries*

sctp_rate-limit-entries

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sctp_global

Specification	Value
Type	*object*

half-open-timeout

Description Set SCTP half-open timeout (SCTP half-open timeout in seconds (default 4))

Type: number

Range: 2-30

Default: 4

idle-timeout
