Description SCTP idle timeout in minutes (default 5)

Type: number

Range: 1-63

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sctp_rate-limit

Specification	Value
Type	*object*

destination-list

Type: List

Reference Object: */axapi/v3/cgnv6/sctp/rate-limit/destination/{ip}*

source-list

Type: List

Reference Object: */axapi/v3/cgnv6/sctp/rate-limit/source/{ip}*

sctp_rate-limit_source-list

Specification	Value
Type	*list*
Block object keys	

ip

Description IP address

Type: string

Format: ipv4-address

rate-limit

Description Rate limit in packets per second

Type: number

Range: 1-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sctp_rate-limit_destination-list

Specification	Value
Type	*list*
Block object keys	

ip

Description IP address

Type: string

Format: ipv4-address

rate-limit

Description Rate limit in packets per second

Type: number

Range: 1-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sctp_permit-payload-protocol

Specification	Value
Type	*object*

protocol-id-list

Type: List

Reference Object: */axapi/v3/cgnv6/sctp/permit-payload-protocol/protocol-id/{id}*

protocol-name-list

Type: List

Reference Object: */axapi/v3/cgnv6/sctp/permit-payload-protocol/protocol-name/{protocol}*

sctp_permit-payload-protocol_protocol-id-list

Specification	Value
Type	*list*
Block object keys	

id

Description Specify SCTP permitted payload protocol IDs

Type: number

Range: 1-63

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sctp_permit-payload-protocol_protocol-name-list

Specification	Value
Type	*list*
Block object keys	

protocol

Description 'iua': IUA; 'm2ua': M2UA; 'm3ua': M3UA; 'sua': SUA; 'm2pa': M2PA; 'h.323': H.323;

Type: string

Supported Values: iua, m2ua, m3ua, sua, m2pa, h.323

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

shared-service-group

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns64

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns64_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'query': Query; 'query-bad-pkt': Query Bad Packet; 'query-chg': Query Changed; 'query-parallel': Query Parallel; 'query-passive': Query Passive; 'resp': Response; 'resp-bad-pkt': Response Bad Packet; 'resp-bad-qr': Response Bad Query; 'resp-chg': Response Changed; 'resp-err': Response Error; 'resp-empty': Response Empty; 'resp-local': Response Local; 'adjust': Translated; 'cache': Cache; 'drop': Dropped;

Type: string

Supported Values: all, query, query-bad-pkt, query-chg, query-parallel, query-passive, resp, resp-bad-pkt, resp-bad-qr, resp-chg, resp-err, resp-empty, resp-local, adjust, cache, drop

nat46-stateless

Specification	Value
Type	*object*

fragmentation

Description: fragmentation is a **JSON Block**. Please see below for *nat46-stateless_fragmentation*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat46-stateless/fragmentation*

global

Description: global is a **JSON Block**. Please see below for *nat46-stateless_global*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat46-stateless/global*

partition-prefix-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat46-stateless/partition-prefix/{partition}*

prefix

Description: prefix is a **JSON Block**. Please see below for *nat46-stateless_prefix*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat46-stateless/prefix*

static-dest-mapping-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat46-stateless/static-dest-mapping/{v4-address}+{v6-address}*

nat46-stateless_static-dest-mapping-list

Specification	Value
Type	*list*
Block object keys	

count

Description Set number of consecutive mappings (Number of mappings)

Type: number

shared

Description Share/Expose this mapping with other partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

to-shared

Description Send NATed traffic through shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-address

Description IPv4 address

Type: string

Format: ipv4-address

v6-address

Description IPv6 address

Type: string

Format: ipv6-address

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat46-stateless_fragmentation

Specification	Value
Type	*object*

inbound

Description: inbound is a **JSON Block**. Please see below for *nat46-stateless_fragmentation_inbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat46-stateless/fragmentation/inbound*

outbound

Description: outbound is a **JSON Block**. Please see below for *nat46-stateless_fragmentation_outbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat46-stateless/fragmentation/outbound*

nat46-stateless_fragmentation_inbound

Specification	Value
Type	*object*

action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat46-stateless_fragmentation_outbound

Specification	Value
Type	*object*

action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv6

Default: ipv6

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv6, send-icmp

Default: send-icmp

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat46-stateless_global

Specification	Value
Type	*object*

sampling-enable

Type: List

tcp

Description: tcp is a **JSON Block**. Please see below for *nat46-stateless_global_tcp*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat46-stateless_global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'outbound_ipv4_received': Outbound IPv4 packets received; 'outbound_ipv4_drop': Outbound IPv4 packets dropped; 'outbound_ipv4_fragment_received': Outbound IPv4 fragment packets received; 'outbound_ipv6_unreachable': Outbound IPv6 destination unreachable; 'outbound_ipv6_fragmented': Outbound IPv6 packets fragmented; 'inbound_ipv6_received': Inbound IPv6 packets received; 'inbound_ipv6_drop': Inbound IPv6 packets dropped; 'inbound_ipv6_fragment_received': Inbound IPv6 fragment packets received; 'inbound_ipv4_unreachable': Inbound IPv4 destination unreachable; 'inbound_ipv4_fragmented': Inbound IPv4 packets fragmented; 'packet_too_big': Packet too big; 'fragment_error': Fragment processing errors; 'icmpv6_to_icmp': ICMPv6 to ICMP; 'icmpv6_to_icmp_error': ICMPv6 to ICMP errors; 'icmp_to_icmpv6': ICMP to

ICMPv6; 'icmp_to_icmpv6_error': ICMP to ICMPv6 errors; 'ha_standby': HA is standby; 'other_error': Other errors; 'conn_count': conn count;

Type: string

Supported Values: all, outbound_ipv4_received, outbound_ipv4_drop, outbound_ipv4_fragment_received, outbound_ipv6_unreachable, outbound_ipv6_fragmented, inbound_ipv6_received, inbound_ipv6_drop, inbound_ipv6_fragment_received, inbound_ipv4_unreachable, inbound_ipv4_fragmented, packet_too_big, fragment_error, icmpv6_to_icmp, icmpv6_to_icmp_error, icmp_to_icmpv6, icmp_to_icmpv6_error, ha_standby, other_error, conn_count

nat46-stateless_global_tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *nat46-stateless_global_tcp_mss-clamp*

Type: Object

nat46-stateless_global_tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60))))

Type: number

Range: 0-1420

Default: 456

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 20);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 20)

Type: number

Range: 0-1420

Default: 20

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

nat46-stateless_prefix

Specification	Value
Type	*object*

ipv6-prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat46-stateless_partition-prefix-list

Specification	Value
Type	*list*
Block object keys	

ipv6-prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

partition

Description Partition Name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

map

Specification	Value
Type	*object*

encapsulation

Description: encapsulation is a **JSON Block**. Please see below for *map_encapsulation*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/encapsulation*

translation

Description: translation is a **JSON Block**. Please see below for *map_translation*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/translation*

map_encapsulation

Specification	Value
Type	*object*

domain-list

Type: List

Reference Object: */axapi/v3/cgnv6/map/encapsulation/domain/{name}*

fragmentation

Description: fragmentation is a **JSON Block**. Please see below for *map_encapsulation_fragmentation*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/encapsulation/fragmentation*

map_encapsulation_fragmentation

Specification	Value
Type	*object*

inbound

Description: inbound is a **JSON Block**. Please see below for *map_encapsulation_fragmentation_inbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/encapsulation/fragmentation/inbound*

outbound

Description: outbound is a **JSON Block**. Please see below for *map_encapsulation_fragmentation_outbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/encapsulation/fragmentation/outbound*

map_encapsulation_fragmentation_inbound

Specification	Value
Type	*object*

df-set

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets; 'ipv6': Use IPv6 fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv4, ipv6, send-icmp

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets; 'ipv6': Use IPv6 fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv4, ipv6

Default: ipv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

map_encapsulation_fragmentation_outbound

Specification	Value
Type	*object*

df-set

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set)(default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmp, send-icmpv6

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

map_encapsulation_domain-list

Specification	Value
Type	*list*
Block object keys	

basic-mapping-rule

Description: basic-mapping-rule is a **JSON Block**. Please see below for *map_encapsulation_domain-list_basic-mapping-rule*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/encapsulation/domain/{name}/basic-mapping-rule*

description

Description MAP-E domain description

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

format

Description 'draft-03': Construct IPv6 Interface Identifier according to draft-03;

Type: string

Supported Values: draft-03

health-check-gateway

Description: health-check-gateway is a **JSON Block**. Please see below for *map_encapsulation_domain-list_health-check-gateway*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/encapsulation/domain/{name}/health-check-gateway*

name

Description MAP-E domain name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/cgnv6-encap-domain-tmpl*

sampling-enable

Type: List

tunnel-endpoint-address

Description Tunnel Endpoint Address for MAP-E domain

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

map_encapsulation_domain-list_basic-mapping-rule

Specification	Value
Type	*object*

ea-length

Description Length of Embedded Address (EA) bits

Type: number

Range: 0-23

port-start

Description Starting Port, Must be Power of 2 value or zero

Type: number

Range: 0-32768

prefix-rule-list

Type: List

Reference Object: */axapi/v3/cgnv6/map/encapsulation/domain/{name}/basic-mapping-rule/prefix-rule/{name}*

rule-ipv4-address-port-settings

Description 'prefix-addr': Each CE is assigned an IPv4 prefix; 'single-addr': Each CE is assigned an IPv4 address; 'shared-addr': Each CE is assigned a shared IPv4 address;

Type: string

Supported Values: prefix-addr, single-addr, shared-addr

share-ratio

Description Port sharing ratio for each NAT IP. Must be Power of 2 value

Type: number

Range: 1-65536

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

map_encapsulation_domain-list_basic-mapping-rule_prefix-rule-list

Specification	Value
Type	*list*
Block object keys	

ea-length

Description Length of Embedded Address (EA) bits

Type: number

Range: 0-23

ipv4-address-port-settings

Description 'prefix-addr': Each CE is assigned an IPv4 prefix; 'single-addr': Each CE is assigned an IPv4 address; 'shared-addr': Each CE is assigned a shared IPv4 address;

Type: string

Supported Values: prefix-addr, single-addr, shared-addr

ipv4-netmask

Description Subnet mask (subnet bigger than /8 is not allowed)

Type: string

Format: ipv4-netmask-brief

name

Description MAP BMR prefix rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-start

Description Starting Port, Must be Power of 2 value or zero

Type: number

Range: 0-32768

rule-ipv4-prefix

Description IPv4 prefix of BMR

Type: string

Format: ipv4-address

rule-ipv6-prefix

Description IPv6 prefix of BMR

Type: string

Format: ipv6-address-plen

share-ratio

Description Port sharing ratio for each NAT IP. Must be Power of 2 value

Type: number

Range: 1-65536

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

map_encapsulation_domain-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'inbound_packet_received': Inbound IPv4 Packets Received; 'inbound_frag_packet_received': Inbound IPv4 Fragment Packets Received; 'inbound_addr_port_validation_failed': Inbound IPv4 Destination Address Port Validation Failed; 'inbound_rev_lookup_failed': Inbound IPv4 Reverse Route Lookup Failed; 'inbound_dest_unreachable': Inbound IPv6 Destination Address Unreachable; 'outbound_packet_received': Outbound IPv6 Packets Received; 'outbound_frag_packet_received': Outbound IPv6 Fragment Packets Received; 'outbound_addr_validation_failed': Outbound IPv6 Source Address Validation Failed; 'outbound_rev_lookup_failed': Outbound IPv6 Reverse Route Lookup Failed; 'outbound_dest_unreachable': Outbound IPv4 Destination Address Unreachable; 'packet_mtu_exceeded': Packet Exceeded MTU; 'frag_icmp_sent': ICMP Packet Too Big Sent; 'interface_not_configured': Interfaces not Configured Dropped; 'bmr_prefixrules_configured': BMR prefix rules configured; 'helper_count': Helper Count; 'active_dhcpv6_leases': Active DHCPv6 leases;

Type: string

Supported Values: all, inbound_packet_received, inbound_frag_packet_received, inbound_addr_port_validation_failed, inbound_rev_lookup_failed, inbound_dest_unreachable, outbound_packet_received, outbound_frag_packet_received, outbound_addr_validation_failed, outbound_rev_lookup_failed, outbound_dest_unreachable, packet_mtu_exceeded, frag_icmp_sent, interface_not_configured, bmr_prefixrules_configured, helper_count, active_dhcpv6_leases

map_encapsulation_domain-list_health-check-gateway

Specification	Value
Type	*object*

address-list

Type: List

ipv6-address-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

withdraw-route

Description 'all-link-failure': Withdraw routes on health-check failure of all IPv4 gateways or all IPv6 gateways; 'any-link-failure': Withdraw routes on health-check failure of any gateway (default);

Type: string

Supported Values: all-link-failure, any-link-failure

Default: any-link-failure

map_encapsulation_domain-list_health-check-gateway_ipv6-address-list

Specification	Value
Type	*list*
Block object keys	

ipv6-gateway

Description IPv6 Gateway

Type: string

Format: ipv6-address

map_encapsulation_domain-list_health-check-gateway_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-gateway

Description IPv4 Gateway

Type: string

Format: ipv4-address

map_translation

Specification	Value
Type	*object*

default-domain

Description: default-domain is a **JSON Block**. Please see below for *map_translation_default-domain*

Type: Object

Supported Values: all, inbound_packet_received, inbound_frag_packet_received, inbound_addr_port_validation_failed, inbound_rev_lookup_failed, inbound_dest_unreachable, outbound_packet_received, outbound_frag_packet_received, outbound_addr_validation_failed, outbound_rev_lookup_failed, outbound_dest_unreachable, packet_mtu_exceeded, frag_icmp_sent, interface_not_configured, bmr_prefixrules_configured, helper_count, active_dhcpv6_leases

map_translation_domain-list_tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *map_translation_domain-list_tcp_mss-clamp*

Type: Object

map_translation_domain-list_tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: 516))

Type: number

Range: 0-1440

Default: 516

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping(default); 'subtract': Specify the value to subtract from the TCP MSS;

Type: string

Supported Values: fixed, none, subtract

Default: none

mss-subtract

Description Specify the value to subtract from the TCP MSS

Type: number

Range: 0-1440

mss-value

Description The max value allowed for the TCP MSS

Type: number

Range: 0-1440

map_translation_domain-list_health-check-gateway

Specification	Value

address-list

Type: List

ipv6-address-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

withdraw-route

Description 'all-link-failure': Withdraw routes on health-check failure of all IPv4 gateways or all IPv6 gateways; 'any-link-failure': Withdraw routes on health-check failure of any gateway (default);

Type: string

Supported Values: all-link-failure, any-link-failure

Default: any-link-failure

map_translation_domain-list_health-check-gateway_ipv6-address-list

Specification	Value
Type	*list*
Block object keys	

ipv6-gateway

Description IPv6 Gateway

Type: string

Format: ipv6-address

map_translation_domain-list_health-check-gateway_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-gateway

Description IPv4 Gateway

Type: string

Format: ipv4-address

map_translation_domain-list_basic-mapping-rule

Specification	Value
Type	*object*

ea-length

Description Length of Embedded Address (EA) bits

Type: number

Range: 0-23

port-start

Description Starting Port, Must be Power of 2 value or zero

Type: number

Range: 0-32768

prefix-rule-list

Type: List

Reference Object: */axapi/v3/cgnv6/map/translation/domain/{name}/basic-mapping-rule/prefix-rule/{name}*

rule-ipv4-address-port-settings

Description 'prefix-addr': Each CE is assigned an IPv4 prefix; 'single-addr': Each CE is assigned an IPv4 address; 'shared-addr': Each CE is assigned a shared IPv4 address;

Type: string

Supported Values: prefix-addr, single-addr, shared-addr

share-ratio

Description Port sharing ratio for each NAT IP. Must be Power of 2 value

Type: number

Range: 1-65536

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

map_translation_domain-list_basic-mapping-rule_prefix-rule-list

Specification	Value
Type	*list*
Block object keys	

ipv4-netmask

Description Subnet mask (subnet bigger than /8 is not allowed)

Type: string

Format: ipv4-netmask-brief

name

Description MAP BMR prefix rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-ipv4-prefix

Description IPv4 prefix of BMR

Type: string

Format: ipv4-address

rule-ipv6-prefix

Description IPv6 prefix of BMR

Type: string

Format: ipv6-address-plen

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

map_translation_default-domain

Specification	Value
Type	*object*

name

Description MAP-T domain name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/map/translation/domain*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template

Specification	Value
Type	*object*

dns-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/dns/{name}*

http-alg-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/http-alg/{name}*

logging-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/logging/{name}*

pcp-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/pcp/{name}*

policy-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/policy/{name}*

template_policy-list

Specification	Value
Type	*list*
Block object keys	

class-list

Description: class-list is a **JSON Block**. Please see below for *template_policy-list_class-list*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/policy/{name}/class-list*

name

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_class-list

Specification	Value
Type	*object*

client-ip-l3-dest

Description Use destination IP as client IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l3-dest and client-ip-l7-header are mutually exclusive

client-ip-l7-header

Description Use extract client IP address from L7 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l7-header and client-ip-l3-dest are mutually exclusive

header-name

Description Specify L7 header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lid-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/policy/{name}/class-list/lid/{lidnum}*

name

Description Class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

dns64

Description: dns64 is a **JSON Block**. Please see below for *template_policy-list_class-list_lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 0-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_class-list_lid-list_dns64

Specification	Value
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

template_logging-list

Specification	Value
Type	*list*
Block object keys	

batched-logging-disable

Description Disable multiple logs per packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom

Description: custom is a **JSON Block**. Please see below for *template_logging-list_custom*

Type: Object

disable-log-by-destination

Description: disable-log-by-destination is a **JSON Block**. Please see below for *template_logging-list_disable-log-by-destination*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination*

enable-log-by-destination

Description: enable-log-by-destination is a **JSON Block**. Please see below for *template_logging-list_enable-log-by-destination*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/enable-log-by-destination*

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'binary': Binary logging format; 'compact': Compact ASCII logging format (Hex format with compact representation); 'custom': Arbitrary custom logging format; 'default': Default A10 logging format (ASCII); 'rfc5424': RFC5424 compliant logging format; 'cef': Common Event Format for logging;

Type: string

Supported Values: binary, compact, custom, default, rfc5424, cef

Default: default

include-destination

Description Include the destination IP and port in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http

Description: include-http is a **JSON Block**. Please see below for *template_logging-list_include-http*

Type: Object

include-inside-user-mac

Description Include the inside user MAC address in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-partition-name

Description Include partition name in logging events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-port-block-account

Description include bytes accounting information in port-batch-v2 port-mapping and fixed-nat user-ports messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-radius-attribute

Description: include-radius-attribute is a **JSON Block**. Please see below for *template_logging-list_include-radius-attribute*

Type: Object

include-session-byte-count

Description include byte count in session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-year

Description including the 4-digit year in CEF, compact and default logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *template_logging-list_log*

Type: Object

log-receiver

Description: log-receiver is a **JSON Block**. Please see below for *template_logging-list_log-receiver*

Type: Object

name

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resolution

Description 'seconds': Logging timestamp resolution in seconds (default); '10-milliseconds': Logging timestamp resolution in 10s of milli-seconds;

Type: string

Supported Values: seconds, 10-milliseconds

Default: seconds

rfc-custom

Description: rfc-custom is a **JSON Block**. Please see below for *template_logging-list_rfc-custom*

Type: Object

rule

Description: rule is a **JSON Block**. Please see below for *template_logging-list_rule*

Type: Object

service-group

Description Set NAT logging service-group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

severity

Description: severity is a **JSON Block**. Please see below for *template_logging-list_severity*

Type: Object

shared

Description Service group is in shared patition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-address

Description: source-address is a **JSON Block**. Please see below for *template_logging-list_source-address*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/source-address*

source-port

Description: source-port is a **JSON Block**. Please see below for *template_logging-list_source-port*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_include-http

Specification	Value
Type	*object*

file-extension

Description HTTP file extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-cfg

Type: List

l4-session-info

Description Log the L4 session information of the HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description Log the HTTP Request Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-number

Description HTTP Request Number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_include-http_header-cfg

Specification	Value
Type	*list*
Block object keys	

custom-header-name

Description Header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

custom-max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

http-header

Description 'cookie': Log HTTP Cookie Header; 'referer': Log HTTP Referer Header; 'user-agent': Log HTTP User-Agent Header; 'header1': Log HTTP Header 1; 'header2': Log HTTP Header 2; 'header3': Log HTTP Header 3;

Type: string

Supported Values: cookie, referer, user-agent, header1, header2, header3

max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

template_logging-list_enable-log-by-destination

Specification	Value
Type	*object*

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/enable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/enable-log-by-destination/ip6/{ipv6-addr}*

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_enable-log-by-destination_ip-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_enable-log-by-destination_ip-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_enable-log-by-destination_ip-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_enable-log-by-destination_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_enable-log-by-destination_ip6-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_enable-log-by-destination_ip6-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_enable-log-by-destination_ip6-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_enable-log-by-destination_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_severity

Specification	Value
Type	*object*

severity-string

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: debug

Mutual Exclusion: severity-string and severity-val are mutually exclusive

severity-val

Description Logging severity level

Type: number

Range: 0-7

Default: 7

Mutual Exclusion: severity-val and severity-string are mutually exclusive

template_logging-list_custom

Specification	Value
Type	*object*

custom-header

Description 'use-syslog-header': Use syslog header as custom log header;

Type: string

Supported Values: use-syslog-header

custom-message

Description: custom-message is a **JSON Block**. Please see below for *template_logging-list_custom_custom-message*

Type: Object

custom-time-stamp-format

Description Customize the time stamp format (Customize the time-stamp format. Default:%Y%m%d%H%M%S)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

template_logging-list_custom_custom-message

Specification	Value
Type	*object*

custom-dhcpv6-map-prefix-assigned

Description MAP DHCPv6 prefix assigned

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-dhcpv6-map-prefix-released

Description MAP DHCPv6 prefix released

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-dhcpv6-map-prefix-renewed

Description MAP DHCPv6 prefix renewed

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-allocated

Description Fixed-NAT allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-freed

Description Fixed-NAT freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-interim-update

Description Fixed-NAT interim update (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-http-request-got

Description HTTP request got (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-allocated

Description Port allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-allocated

Description Port Batch allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-freed

Description Port Batch freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-allocated

Description Port Batch v2 allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-freed

Description Port Batch v2 freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-interim-update

Description Port Batch v2 interim update (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-freed

Description Port freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-created

Description Session created (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-deleted

Description Session deleted (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

template_logging-list_source-address

Specification	Value
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_source-port

Specification	Value
Type	*object*

any

Description Use any source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and source-port-num are mutually exclusive

source-port-num

Description Set source port for sending NAT syslogs (default: 514)

Type: number

Range: 1-65535

Default: 514

Mutual Exclusion: source-port-num and any are mutually exclusive

template_logging-list_log

Specification	Value
Type	*object*

fixed-nat

Description: fixed-nat is a **JSON Block**. Please see below for *template_logging-list_log_fixed-nat*

Type: Object

http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

map-dhcpv6

Description: map-dhcpv6 is a **JSON Block**. Please see below for *template_logging-list_log_map-dhcpv6*

Type: Object

merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-to-one-nat

Description: one-to-one-nat is a **JSON Block**. Please see below for *template_logging-list_log_one-to-one-nat*

Type: Object

port-mappings

Description 'creation': Log only creation of NAT mappings; 'disable': Disable Log creation and deletion of NAT mappings; 'both': Log creation and deletion of NAT mappings;

Type: string

Supported Values: creation, disable, both

Default: both

port-overloading

Description Force logging of all port-overloading sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sessions

Description Log all data sessions created using NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-data

Description Log LSN Subscriber Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_log_one-to-one-nat

Specification	Value
Type	*object*

one-to-one-merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-to-one-nat-sessions

Description Log all One-to-One NAT sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_log_map-dhcpv6

Specification	Value
Type	*object*

map-dhcpv6-msg-type

Type: List

map-dhcpv6-prefix-all

Description Log MAP DHCPv6 prefix assignment/renewal/release

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: map-dhcpv6-prefix-all and map-dhcpv6-msg-type are mutually exclusive

template_logging-list_log_map-dhcpv6_map-dhcpv6-msg-type

Specification	Value
Type	*list*
Block object keys	

map-dhcpv6-msg-type

Description 'prefix-assignment': Log MAP DHCPv6 prefix assignment; 'prefix-renewal': Log MAP DHCPv6 prefix renewal; 'prefix-release': Log MAP DHCPv6 prefix release;

Type: string

Supported Values: prefix-assignment, prefix-renewal, prefix-release

Mutual Exclusion: map-dhcpv6-msg-type and map-dhcpv6-prefix-all are mutually exclusive

template_logging-list_log_fixed-nat

Specification	Value
Type	*object*

fixed-nat-http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

fixed-nat-merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mappings

Description 'both': Log creation and deletion of NAT mappings; 'creation': Log creation of NAT mappings;

Type: string

Supported Values: both, creation

fixed-nat-sessions

Description Log all Fixed NAT sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-ports

Description: user-ports is a **JSON Block**. Please see below for *template_logging-list_log_fixed-nat_user-ports*

Type: Object

template_logging-list_log_fixed-nat_user-ports

Specification	Value
Type	*object*

days

Description Specify period in days

Type: number

Range: 1-30

start-time

Description Time when periodic logging starts (Specify start time(hh:mm))

Type: string

Format: time-hhmm

user-ports

Description Log Fixed NAT User Ports Configured

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_log-receiver

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

radius

Description Use RADIUS server for NAT logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

template_logging-list_include-radius-attribute

Specification	Value
Type	*object*

attr-cfg

Type: List

framed-ipv6-prefix

Description Include radius attributes for the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-if-not-existing

Description Configure what string is to be inserted for custom RADIUS attributes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-quote

Description No quotation marks for RADIUS attributes in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

zero-in-custom-attr

Description Insert 0000 for standard and custom attributes in log string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_include-radius-attribute_attr-cfg

Specification	Value
Type	*list*
Block object keys	

attr

Description 'imei': Include IMEI; 'imsi': Include IMSI; 'msisdn': Include MSISDN; 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

attr-event

Description 'http-requests': Include in HTTP request logs; 'port-mappings': Include in port-mapping logs; 'sessions': Include in session logs; 'user-data': Include in user-data logs;

Type: string

Supported Values: http-requests, port-mappings, sessions, user-data

template_logging-list_rule

Specification	Value
Type	*object*

interim-update-interval

Description Log interim update of NAT mappings (Interim update interval in minutes(Interval is floored to a multiple of 5))

Type: number

Range: 15-120

rule-http-requests

Description: rule-http-requests is a **JSON Block**. Please see below for *template_logging-list_rule_rule-http-requests*

Type: Object

template_logging-list_rule_rule-http-requests

Specification	Value
Type	*object*

dest-port

Type: List

disable-sequence-check

Description Disable http packet sequence check and don't drop out of order packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-all-headers

Description Include all configured headers despite of absence in HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-every-http-request

Description Log every HTTP request in an HTTP 1.1 session (Default: Log the first HTTP request in a session)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-url-len

Description Max length of URL log (Max URL length (Default: 128 char))

Type: number

Range: 100-1000

Default: 128

template_logging-list_rule_rule-http-requests_dest-port

Specification	Value
Type	*list*
Block object keys	

dest-port-number

Description

Type: number

Range: 1-65535

include-byte-count

Description Include the byte count of HTTP Request/Response in CGN session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_disable-log-by-destination

Specification	Value
Type	*object*

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_disable-log-by-destination_ip-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_disable-log-by-destination_ip-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_disable-log-by-destination_ip-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_disable-log-by-destination_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_disable-log-by-destination_ip6-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_disable-log-by-destination_ip6-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_disable-log-by-destination_ip6-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_disable-log-by-destination_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_rfc-custom

Specification	Value
Type	*object*

header

Description: header is a **JSON Block**. Please see below for *template_logging-list_rfc-custom_header*

Type: Object

message

Description: message is a **JSON Block**. Please see below for *template_logging-list_rfc-custom_message*

Type: Object

template_logging-list_rfc-custom_header

Specification	Value
Type	*object*

use-alternate-timestamp

Description Use alternate non-RFC5424 compliant timestamp. Ex: 1990 Jan 15 12:30:30

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_rfc-custom_message

Specification	Value
Type	*object*

dhcpv6-map-prefix-assigned

Description MAP DHCPv6 prefix assigned

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

dhcpv6-map-prefix-released

Description MAP DHCPv6 prefix released

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

dhcpv6-map-prefix-renewed

Description MAP DHCPv6 prefix renewed

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-request-got

Description HTTP request got (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ipv6-tech

Type: List

session-created

Description Session created (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

session-deleted

Description Session deleted (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

template_logging-list_rfc-custom_message_ipv6-tech

Specification	Value
Type	*list*
Block object keys	

fixed-nat-allocated

Description Fixed-NAT allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

fixed-nat-freed

Description Fixed-NAT freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-allocated

Description Port allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-allocated

Description Port Batch allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-freed

Description Port Batch freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-v2-allocated

Description Port Batch v2 allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-v2-freed

Description Port Batch v2 freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-freed

Description Port freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

tech-type

Description 'lsn': LSN; 'nat64': NAT64; 'ds-lite': DS-Lite; 'sixrd-nat64': 6rd-NAT64;

Type: string

Supported Values: lsn, nat64, ds-lite, sixrd-nat64

template_pcp-list

Specification	Value
Type	*list*
Block object keys	

allow-third-party-from-lan

Description Allow third party request coming from LAN (default is disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-third-party-from-wan

Description Allow third party request coming from WAN (default is disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

announce

Description PCP ANNOUNCE Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

check-client-nonce

Description To validate NONCE value in PCP request (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-map-filter

Description To disable processing of FILTER options in MAP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map

Description PCP MAP Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum

Description To set maximum lifetime of PCP mappings (default 1440 minutes)

Type: number

Range: 2-1440

Default: 1440

minimum

Description To set minimum lifetime of PCP mappings (default 2 minutes)

Type: number

Range: 2-1440

Default: 2

name

Description PCP Template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

pcp-server-port

Description PCP server listening port (default 5351) (PCP UDP destination port)

Type: number

Range: 1024-65535

Default: 5351

peer

Description PCP PEER Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-ip

Description Specify source IP address for IPv4 ANNOUNCE message

Type: string

Format: ipv4-address

source-ipv6

Description Specify source IPv6 address for IPv6 ANNOUNCE message

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_http-alg-list

Specification	Value
Type	*list*
Block object keys	

header-name-client-ip

Description Header name (default: X-Forwarded-For)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: X-Forwarded-For

header-name-msisdn

Description Header name (default: X-MSISDN)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: X-MSISDN

include-tunnel-ip

Description Include the tunnel IP (applies to DS-Lite and 6RD-NAT64 sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description 'append': Append if there is already a header (default); 'replace': Replace if there is already a header;

Type: string

Supported Values: append, replace

Default: append

name

Description HTTP-ALG template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

request-insert-client-ip

Description Insert Client IP into HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-insert-msisdn

Description Insert MSISDN into HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list

Specification	Value
Type	*list*
Block object keys	

class-list

Description: class-list is a **JSON Block**. Please see below for *template_dns-list_class-list*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/dns/{name}/class-list*

default-policy

Description 'nocache': Cache disable; 'cache': Cache enable;

Type: string

Supported Values: nocache, cache

Default: nocache

disable-dns-template

Description Disable DNS template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns64

Description: dns64 is a **JSON Block**. Please see below for *template_dns-list_dns64*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/dns/{name}/dns64*

drop

Description Drop the malformed query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop and forward are mutually exclusive

forward

Description Forward to service group (Service group name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: forward and drop are mutually exclusive

max-cache-size

Description Define maximum cache size (Maximum cache entry per VIP)

Type: number

name

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Period in minutes

Type: number

Range: 1-10000

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_class-list

Specification	Value
Type	*object*

lid-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *template_dns-list_class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_class-list_lid-list_dns

Specification	Value
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

template_dns-list_dns64

Specification	Value
Type	*object*

answer-only-disable

Description Disable Only translate the Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-data

Description Set AA flag in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Use a cached A-query response to provide AAAA query responses for the same hostname

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-query

Description Always change incoming AAAA DNS Query to A

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compress-disable

Description Disable Always try DNS Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-qr

Description Check DNS Question Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-rr-disable

Description Disable Check DNS Response Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-cname-disable

Description Disable Drop DNS CNAME Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

edns-append

Description Append EDNS Record when send A Query to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable DNS64 (Need to config this option before config any other dns64 options)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-append

Description Append translated Records when original Response only has Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-rcode3-disable

Description Disable Ignore DNS error Response with rcode 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-qr-length

Description Max Question Record Length, default is 128

Type: number

Range: 1-1023

Default: 128

parallel-query

Description Forward AAAA Query & generate A Query in parallel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passive-query-disable

Description Disable Generate A query upon empty or error Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retry

Description Retry count, default is 3 (Retry Number)

Type: number

Range: 0-15

Default: 3

single-response-disable

Description Disable Single Response which is used to avoid ambiguity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout to send additional Queries, unit: second, default is 1

Type: number

Range: 0-15

Default: 1

trans-ptr

Description Translate DNS PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trans-ptr-query

Description Translate DNS PTR Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify Max TTL in DNS Response, unit: second

Type: number

Range: 1-1000000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-list-list

Specification	Value
Type	*list*
Block object keys	

name

Description Specify name of the port list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-config

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-list-list_port-config

Specification	Value
Type	*list*
Block object keys	

original-port

Description Original port to be translated

Type: number

Range: 0-65535

translated-port

Description Port after translation

Type: number

Range: 0-65535

nat64

Specification	Value
Type	*object*

alg

Description: alg is a **JSON Block**. Please see below for *nat64_alg*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/alg*

enhanced-user-tracking

Description: enhanced-user-tracking is a **JSON Block**. Please see below for *nat64_enhanced-user-tracking*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/enhanced-user-tracking*

fragmentation

Description: fragmentation is a **JSON Block**. Please see below for *nat64_fragmentation*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/fragmentation*

full-cone-session

Description: full-cone-session is a **JSON Block**. Please see below for *nat64_full-cone-session*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/full-cone-session*

global

Description: global is a **JSON Block**. Please see below for *nat64_global*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/global*

hw-accelerate

Description: hw-accelerate is a **JSON Block**. Please see below for *nat64_hw-accelerate*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/hw-accelerate*

prefix-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat64/prefix/{prefix-val}*

user-quota-session

Description: user-quota-session is a **JSON Block**. Please see below for *nat64_user-quota-session*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/user-quota-session*

nat64_fragmentation

Specification	Value
Type	*object*

df-bit-transparency

Description: df-bit-transparency is a **JSON Block**. Please see below for *nat64_fragmentation_df-bit-transparency*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/fragmentation/df-bit-transparency*

inbound

Description: inbound is a **JSON Block**. Please see below for *nat64_fragmentation_inbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/fragmentation/inbound*

outbound

Description: outbound is a **JSON Block**. Please see below for *nat64_fragmentation_outbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/fragmentation/outbound*

nat64_fragmentation_inbound

Specification	Value
Type	*object*

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 fragmentation; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv6, send-icmp

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv6

Default: ipv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_fragmentation_outbound

Specification	Value
Type	*object*

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation (default); 'send-icmpv6': Send ICMPv6 Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_fragmentation_df-bit-transparency

Specification	Value
Type	*object*

df-bit-value

Description 'enable': Add an empty IPv6 fragmentation header if IPv4 DF bit is zero;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_full-cone-session

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg

Specification	Value
Type	*object*

esp

Description: esp is a **JSON Block**. Please see below for *nat64_alg_esp*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/alg/esp*

ftp

Description: ftp is a **JSON Block**. Please see below for *nat64_alg_ftp*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/alg/ftp*

h323

Description: h323 is a **JSON Block**. Please see below for *nat64_alg_h323*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/alg/h323*

mgcp

Description: mgcp is a **JSON Block**. Please see below for *nat64_alg_mgcp*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/alg/mgcp*

pptp

Description: pptp is a **JSON Block**. Please see below for *nat64_alg_pptp*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/alg/pptp*

rtsp

Description: rtsp is a **JSON Block**. Please see below for *nat64_alg_rtsp*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/alg/rtsp*

sip

Description: sip is a **JSON Block**. Please see below for *nat64_alg_sip*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/alg/sip*

tftp

Description: tftp is a **JSON Block**. Please see below for *nat64_alg_tftp*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat64/alg/tftp*

nat64_alg_ftp

Specification	Value
Type	*object*

ftp-enable

Description 'disable': Disable NAT64 FTP ALG;

Type: string

Supported Values: disable

trans-eprt-to-port

Description 'disable': disable;

Type: string

Supported Values: disable

trans-epsv-to-pasv

Description 'disable': disable;

Type: string

Supported Values: disable

trans-lprt-to-port

Description 'disable': disable;

Type: string

Supported Values: disable

trans-lpsv-to-pasv

Description 'disable': disable;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

xlat-no-trans-pasv

Description 'enable': enable;

Type: string

Supported Values: enable

nat64_alg_sip

Specification	Value
Type	*object*

sip-enable

Description 'enable': Enable NAT64 SIP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg_esp

Specification	Value
Type	*object*

esp-enable

Description 'enable': Enable NAT64 ESP ALG; 'enable-with-ctrl': Enable ESP NAT64 ALG with control session;

Type: string

Supported Values: enable, enable-with-ctrl

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg_esp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-created': ESP Sessions Created; 'nat-ip-conflict': NAT IP Conflict;

Type: string

Supported Values: all, session-created, nat-ip-conflict

nat64_alg_pptp

Specification	Value
Type	*object*

pptp-enable

Description 'enable': Enable NAT64 PPTP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg_rtsp

Specification	Value
Type	*object*

rtsp-enable

Description 'enable': Enable NAT64 RTSP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg_h323

Specification	Value
Type	*object*

h323-enable

Description 'enable': Enable NAT64 H323 ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg_tftp

Specification	Value
Type	*object*

tftp-enable

Description 'enable': Enable NAT64 TFTP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg_mgcp

Specification	Value
Type	*object*

mgcp-enable

Description 'enable': Enable NAT64 MGCP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_global

Specification	Value
Type	*object*

all

Description All packet sizes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force-non-zero-ipv4-id

Description Enable non-zero ID field in IPv4 header if no IPv6 fragment & IPv4 pkt size is more than 88 & less than or equal to 1280 bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp

Description: icmp is a **JSON Block**. Please see below for *nat64_global_icmp*

Type: Object

inside

Description: inside is a **JSON Block**. Please see below for *nat64_global_inside*

Type: Object

sampling-enable

Type: List

tcp

Description: tcp is a **JSON Block**. Please see below for *nat64_global_tcp*

Type: Object

user-quota-prefix-length

Description User Quota Prefix Length (Default: 128)

Type: number

Range: 1-128

Default: 128

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_global_inside

Specification	Value
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *nat64_global_inside_source*

Type: Object

nat64_global_inside_source

Specification	Value
Type	*object*

class-list

Description Class-list to match for NAT64

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat64_global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_tcp_allocated': Total TCP Ports Allocated; 'total_tcp_freed': Total TCP Ports Freed; 'total_udp_allocated': Total UDP Ports Allocated; 'total_udp_freed': Total UDP Ports Freed; 'total_icmp_allocated': Total ICMP Ports Allocated; 'total_icmp_freed': Total ICMP Ports Freed; 'data_session_created': Data Session Created; 'data_session_freed': Data Session Freed; 'user_quota_created': User-Quota Created; 'user_quota_put_in_del_q': User-Quota Freed; 'user_quota_failure': User-Quota Creation Failed; 'nat_port_unavailable_tcp': TCP NAT Port Unavailable; 'nat_port_unavailable_udp': UDP NAT Port Unavailable; 'nat_port_unavailable_icmp': ICMP NAT Port Unavailable; 'new_user_resource_unavailable': New User NAT Resource Unavailable; 'tcp_user_quota_exceeded': TCP User-Quota Exceeded; 'udp_user_quota_exceeded': UDP User-Quota Exceeded; 'icmp_user_quota_exceeded': ICMP User-Quota Exceeded; 'extended_quota_matched': Extended User-Quota Matched; 'extended_quota_exceeded': Extended User-Quota Exceeded; 'data_sesn_user_quota_exceeded': Data Session User-Quota Exceeded; 'data_sesn_rate_user_quota_exceeded': Conn Rate User-Quota Exceeded; 'tcp_fullcone_created': TCP Full-cone Session Created; 'tcp_fullcone_freed': TCP Full-cone Session Freed; 'udp_fullcone_created': UDP Full-cone Session Created; 'udp_fullcone_freed': UDP Full-cone Session Freed; 'fullcone_failure': Full-cone Session Creation Failed; 'hairpin': Hairpin Session Created; 'fullcone_self_hairpinning_drop': Self-Hairpinning Drop; 'endpoint_indep_map_match': Endpoint-Independent Mapping Matched; 'endpoint_indep_filter_match': Endpoint-Independent Filtering Matched; 'inbound_filtered': Endpoint-Dependent Filtering Drop; 'eif_limit_exceeded': Endpoint-Independent Filtering Inbound Limit Exceeded; 'total_tcp_overloaded': TCP Port Overloaded; 'total_udp_overloaded': UDP Port Overloaded; 'port_overloading_smp_inserted_tcp': TCP Port Overloading Session Created; 'port_overloading_smp_inserted_udp': UDP Port Overloading Session Created; 'port_overloading_smp_free_tcp': TCP Port Overloading Session Freed; 'port_overloading_smp_free_udp': UDP Port Overloading Session Freed; 'nat_pool_unusable': NAT Pool Unusable; 'ha_nat_pool_unusable': HA NAT Pool Unusable; 'ha_nat_pool_batch_type_mismatch': HA NAT Pool Batch Type Mismatch; 'no_radius_profile_match': No RADIUS Profile Match; 'l3': Layer 3 Forwarded Packets; 'source_matches_prefix': Source Address Prefix Match Drop; 'lid_drop': LSN LID Drop; 'lid_pass_through': LSN LID Pass-through; 'no_class_list_match': No Class-List Match; 'user_quota_mem_allocated': User-Quota Memory Allocated; 'user_quota_mem_freed': User-Quota Memory Freed; 'user_quota_created_shadow': Total User-Quota Created; 'quota_marked_deleted': User-Quota Marked Deleted; 'quota_delete_not_in_bucket': User-Quota Delete Not In Bucket; 'user_quota_put_in_del_q_shadow': Total User-Quota Put In Del Q; 'prefix_quota_created': Total Prefix Quota Created; 'prefix_quota_put_in_del_q': Total Prefix Quota Freed; 'prefix_quota_failure': Total Prefix Quota Failure; 'total_user_quota_created': Total Quota Structure Created; 'total_user_quota_put_in_del_q': Total Quota Structure Freed; 'total_user_quota_failure': Total Quota Structure Failure; 'tcp_out_of_state_rst_sent': Total Out of State TCP RST sent; 'tcp_out_of_state_rst_dropped': Total Out of State TCP RST dropped; 'icmp_out_of_state_uqe_admin_filtered_sent': Total User Quota Exceeded ICMP admin filtered sent; 'icmp_out_of_state_uqe_host_unreachable_sent': Total User Quota Exceeded ICMP host unreachable sent; 'icmp_out_of_state_uqe_dropped': Total User Queue Exceeded ICMP notification dropped; 'user_quota_not_found':

nat64_global_tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *nat64_global_tcp_mss-clamp*

Type: Object

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *nat64_global_tcp_reset-on-error*

Type: Object

nat64_global_tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: 476))

Type: number

Range: 0-1420

Default: 476

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 20);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 20)

Type: number

Range: 0-1420

Default: 20

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

nat64_global_tcp_reset-on-error

Specification	Value
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

nat64_global_icmp

Specification	Value
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

nat64_hw-accelerate

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_hw-accelerate_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'entry-create': HW Entries Created; 'entry-create-failure': HW Entry Creation Failed; 'entry-create-fail-server-down': HW Entry Creation Failed - server down; 'entry-create-fail-max-entry': HW Entry Creation Failed - max entries exceeded; 'entry-free': HW Entries Freed; 'entry-free-opp-entry': HW Entries Freed - opposite tuple entry aged-out; 'entry-free-no-hw-prog': HW Entry Freed - no HW prog; 'entry-free-no-conn': HW Entry Freed - no matched conn; 'entry-free-no-sw-entry': HW Entry Freed - no software entry; 'entry-counter': HW Entries Count; 'entry-age-out': HW Entries Aged Out; 'entry-age-out-idle': HW Entries Aged Out - idle timeout; 'entry-age-out-tcp-fin': HW Entries Aged Out - TCP FIN; 'entry-age-out-tcp-rst': HW Entries Aged Out - TCP RST; 'entry-age-out-invalid-dst': HW Entries Aged Out - invalid dst; 'entry-force-hw-invalidate': HW Entries Force HW Invalidate; 'entry-invalidate-server-down': HW Entries Invalidate due to server down; 'tcam-create': TCAM Flows Created; 'tcam-free': TCAM Flows Freed; 'tcam-counter': TCAM Flow Count;

Type: string

Supported Values: all, entry-create, entry-create-failure, entry-create-fail-server-down, entry-create-fail-max-entry, entry-free, entry-free-opp-entry, entry-free-no-hw-prog, entry-free-no-conn, entry-free-no-sw-entry, entry-counter, entry-age-out, entry-age-out-idle, entry-age-out-tcp-fin, entry-age-out-tcp-rst, entry-age-out-invalid-dst, entry-force-hw-invalidate, entry-invalidate-server-down, tcam-create, tcam-free, tcam-counter

nat64_prefix-list

Specification	Value
Type	*list*
Block object keys	

class-list

Description Class-list to match for NAT64

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

prefix-val

Description NAT64 Prefix

Type: string

Format: ipv6-address-plen

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat64_user-quota-session

Specification	Value
Type	*object*

ds-lite_fragmentation_inbound

Specification	Value
Type	*object*

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv4': Use IPv4 Fragmentation; 'ipv6': Use IPv6 fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv4, ipv6, send-icmp

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets; 'ipv6': Use IPv6 fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv4, ipv6

Default: ipv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ds-lite_fragmentation_outbound

Specification	Value
Type	*object*

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv4': Use IPv4 Fragmentation; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmp, send-icmpv6

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets (default); 'send-icmpv6': Send ICMPv6 Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ds-lite_alg_h323

Specification	Value
Type	*object*

h323-enable

Description 'enable': Enable ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ds-lite_alg_tftp

Specification	Value
Type	*object*

tftp-enable

Description 'enable': Enable ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ds-lite_alg_mgcp

Specification	Value
Type	*object*

mgcp-enable

Description 'enable': Enable ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ds-lite_global

Specification	Value
Type	*object*

icmp

Description: icmp is a **JSON Block**. Please see below for *ds-lite_global_icmp*

Type: Object

inside

Description: inside is a **JSON Block**. Please see below for *ds-lite_global_inside*

Type: Object

ip-checksum-error

Description 'fix': Fix the bad checksum (default); 'drop': Drop packets with a bad checksum;

Type: string

Supported Values: fix, drop

Default: fix

l4-checksum-error

Description 'propagate': Propagate the bad checksum (default); 'fix': Fix the bad checksum; 'drop': Drop packets with a bad checksum;

Type: string

Supported Values: propagate, fix, drop

Default: propagate

sampling-enable

Type: List

tcp

Description: tcp is a **JSON Block**. Please see below for *ds-lite_global_tcp*

Type: Object

user-quota-prefix-length

Description User Quota Prefix Length (Default: 128)

Type: number

Range: 1-128

Default: 128

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ds-lite_global_inside

Specification	Value
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *ds-lite_global_inside_source*

Type: Object

ds-lite_global_inside_source

Specification	Value
Type	*object*

class-list

Description Class-list to match for DS-Lite

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ds-lite_global_tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *ds-lite_global_tcp_mss-clamp*

Type: Object

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *ds-lite_global_tcp_reset-on-error*

Type: Object

ds-lite_global_tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60 - 40))))

Type: number

Range: 0-1420

Default: 416

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 40);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 40)

Type: number

Range: 0-1420

Default: 40

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

ds-lite_global_tcp_reset-on-error

Specification	Value
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

ds-lite_global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

ds-lite_global_icmp

Specification	Value
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

ds-lite_port-reservation-list

Specification	Value
Type	*list*
Block object keys	

inside

Description Inside User Address and Port Range (DS-Lite Inside User's Tunnel Source IPv6 Address)

Type: string

Format: ipv6-address

inside-addr

Description Inside User IP address

Type: string

Format: ipv4-address

inside-end-port

Description Inside End Port

Type: number

Range: 1-65535

inside-start-port

Description Inside Start Port

Type: number

Range: 1-65535

nat

Description NAT Port Range (NAT IP address)

Type: string

Format: ipv4-address

nat-end-port

Description NAT End Port

Type: number

Range: 1-65535

nat-start-port

Description NAT Start Port

Type: number

Range: 1-65535

tunnel-dest-address

Description DS-Lite Inside User's Tunnel Destination IPv6 Address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ds-lite_user-quota-session

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ds-lite_port-reservation-entries

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns64-virtualserver-list

Specification	Value
Type	*list*
Block object keys	

enable-disable-action

Description 'enable': Enable Virtual Server (default); 'disable': Disable Virtual Server;

Type: string

Supported Values: enable, disable

Default: enable

ethernet

Description Ethernet interface

Type: number

Format: interface

ip-address

Description IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address, ipv6-address, and use-if-ip are mutually exclusive

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address, ip-address, and use-if-ip are mutually exclusive

name

Description CGNV6 Virtual Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask-brief

policy

Description Policy template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-list

Type: List

Reference Object: */axapi/v3/cgnv6/dns64-virtualserver/{name}/port/{port-number}+{protocol}*

template-policy

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/policy*

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip, ipv6-address, and ip-address are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a vrrp group (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

dns64-virtualserver-list_port-list

Specification	Value
Type	*list*
Block object keys	

acl-id-list

Type: List

acl-name-list

Type: List

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

auto

Description Configure auto NAT for the vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/cgnv6-dns64-vs-port-tmpl*

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

port-number

Description Port

Type: number

Range: 0-65534

precedence

Description Set auto NAT pool as higher precedence for source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'dns-udp': DNS service over UDP;

Type: string

Supported Values: dns-udp

sampling-enable

Type: List

service-group

Description Bind a Service Group to this Virtual Server (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/service-group*

template-dns

Description DNS template (DNS template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/dns*

template-policy

Description Policy Template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/policy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns64-virtualserver-list_port-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connection; 'total_l4_conn': Total L4 connections; 'total_l7_conn': Total L7 connections; 'toatal_tcp_conn': Total TCP connections; 'total_conn': Total connections; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_dns_pkts': Total DNS packets; 'total_mf_dns_pkts': Total MF DNS packets; 'es_total_failure_actions': Total failure actions; 'compression_bytes_before': Data into compression engine; 'compression_bytes_after': Data out of compression engine; 'compression_hit': Number of requests compressed; 'compression_miss': Number of requests NOT compressed; 'compression_miss_no_client': Compression miss no client; 'compression_miss_template_exclusion': Compression miss template exclusion; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total successful requests; 'peak_conn': Peak connections; 'curr_conn_rate': Current connection rate; 'last_rsp_time': Last response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time;

Type: string

Supported Values: all, curr_conn, total_l4_conn, total_l7_conn, toatal_tcp_conn, total_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_dns_pkts, total_mf_dns_pkts, es_total_failure_actions, compression_bytes_before, compression_bytes_after, compression_hit, compression_miss, compression_miss_no_client, compression_miss_template_exclusion, curr_req, total_req, total_req_succ, peak_conn, curr_conn_rate, last_rsp_time, fastest_rsp_time, slowest_rsp_time

dns64-virtualserver-list_port-list_acl-name-list

Specification	Value
Type	*list*
Block object keys	

acl-name

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

dns64-virtualserver-list_port-list_acl-id-list

Specification	Value
Type	*list*
Block object keys	

acl-id

Description ACL id VPORT

Type: number

Range: 1-199

acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

scaleout

Specification	Value
Type	*object*

address-mapping

Description: address-mapping is a **JSON Block**. Please see below for *scaleout_address-mapping*

Type: Object

Reference Object: */axapi/v3/cgnv6/scaleout/address-mapping*

nat-ip-hashing-scheme

Description: nat-ip-hashing-scheme is a **JSON Block**. Please see below for *scaleout_nat-ip-hashing-scheme*

Type: Object

Reference Object: */axapi/v3/cgnv6/scaleout/nat-ip-hashing-scheme*

scaleout_address-mapping

Specification	Value
Type	*object*

inside-user-or-nat-ip

Description: inside-user-or-nat-ip is a **JSON Block**. Please see below for *scaleout_address-mapping_inside-user-or-nat-ip*

Type: Object

Reference Object: */axapi/v3/cgnv6/scaleout/address-mapping/inside-user-or-nat-ip*

nat-pool-or-fixed-nat

Description: nat-pool-or-fixed-nat is a **JSON Block**. Please see below for *scaleout_address-mapping_nat-pool-or-fixed-nat*

Type: Object

Reference Object: */axapi/v3/cgnv6/scaleout/address-mapping/nat-pool-or-fixed-nat*

scaleout_address-mapping_nat-pool-or-fixed-nat

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

scaleout_address-mapping_inside-user-or-nat-ip

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

scaleout_nat-ip-hashing-scheme

Specification	Value
Type	*object*

hashing-type

Description 'route-aggregation': Chunk contiguous NAT IPs for route aggregation(default); 'mod-user-groups': Hash NAT IPs by taking mod of user-groups;

Type: string

Supported Values: route-aggregation, mod-user-groups

Default: route-aggregation

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nptv6

Specification	Value
Type	*object*

common

Description: common is a **JSON Block**. Please see below for *nptv6_common*

Type: Object

Reference Object: */axapi/v3/cgnv6/nptv6/common*

domain-list

Type: List

Reference Object: */axapi/v3/cgnv6/nptv6/domain/{name}*

nptv6_domain-list

Specification	Value
Type	*list*
Block object keys	

inside-prefix

Description Configure inside network prefix (Inside IPv6 network prefix)

Type: string

Format: ipv6-address-plen

name

Description Name of NPTv6 domain

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

outside-prefix

Description Configure outside network prefix (Outside IPv6 network prefix)

Type: string

Format: ipv6-address-plen

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nptv6_domain-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'outbound-packets': Outbound Packets; 'inbound-packets': Inbound Packets; 'hairpin-packets': Hairpin Packets; 'address-not-valid-for-translation': Address Not Valid For Translation; 'inbound-packets-no-map': Inbound Packets No Map; 'packets-dest-unreachable': Packets Destination Unreachable;

Type: string

Supported Values: all, outbound-packets, inbound-packets, hairpin-packets, address-not-valid-for-translation, inbound-packets-no-map, packets-dest-unreachable

nptv6_common

Specification	Value
Type	*object*

send-icmpv6-on-error

Description 'disable': Disable to send ICMPv6 when error discovered;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-usage

Specification	Value
Type	*object*

fixed-nat-inside-user-count

Description Total configurable CGNV6 Fixed NAT inside users

Type: number

fixed-nat-ip-addr-count

Description Total configurable CGNV6 Fixed NAT addresses

Type: number

lsn-nat-addr-count

Description Total configurable CGNV6 NAT Pool addresses

Type: number

radius-table-size

Description Total configurable CGNV6 RADIUS Table entries

Type: number

stateless-entries

Description: stateless-entries is a **JSON Block**. Please see below for *resource-usage_stateless-entries*

Type: Object

Reference Object: */axapi/v3/cgnv6/resource-usage/stateless-entries*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-usage_stateless-entries

Specification	Value
Type	*object*

l4-session-count

Description Helper size for CGN Stateless Technologies

Type: number

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one

Specification	Value
Type	*object*

global

Description: global is a **JSON Block**. Please see below for *one-to-one_global*

Type: Object

Reference Object: */axapi/v3/cgnv6/one-to-one/global*

mapping

Description: mapping is a **JSON Block**. Please see below for *one-to-one_mapping*

Type: Object

Reference Object: */axapi/v3/cgnv6/one-to-one/mapping*

pool-group-list

Type: List

Reference Object: */axapi/v3/cgnv6/one-to-one/pool-group/{pool-group-name}*

pool-list

Type: List

Reference Object: */axapi/v3/cgnv6/one-to-one/pool/{pool-name}*

shared-pool

Description: shared-pool is a **JSON Block**. Please see below for *one-to-one_shared-pool*

Type: Object

Reference Object: */axapi/v3/cgnv6/one-to-one/shared-pool*

shared-pool-group

Description: shared-pool-group is a **JSON Block**. Please see below for *one-to-one_shared-pool-group*

Type: Object

Reference Object: */axapi/v3/cgnv6/one-to-one/shared-pool-group*

one-to-one_shared-pool

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one_pool-group-list

Specification	Value
Type	*list*
Block object keys	

member-list

Type: List

Reference Object: */axapi/v3/cgnv6/one-to-one/pool-group/{pool-group-name}/member/{pool-name}*

pool-group-name

Description Specify pool group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid

Type: number

Range: 1-31

one-to-one_pool-group-list_member-list

Specification	Value
Type	*list*
Block object keys	

pool-name

Description Specify CGNv6 one-to-one pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one_global

Specification	Value
Type	*object*

mapping-timeout

Description Configure timeout for the one-to-one NAT mapping (Timeout in minutes (default: 10 minutes))

Type: number

Range: 0-180

Default: 10

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one_global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total-map-allocated': Total One-to-One Address Mapping Allocated; 'total-map-freed': Total One-to-One Address Mapping Freed; 'map-alloc-failure': One-to-One Address Mapping Allocation Failure; 'map-dbl-free': Address Mapping Double Free; 'alloc-map-race': Mapping Exists When Allocating Address Mapping; 'map-not-found': Mapping to be Released Not Found; 'ha-map-mismatch': HA Standby Mapping Mismatch; 'ha-select-addr-failure': HA Standby Allocate Address Failure; 'ha-alloc-map-conflicts': HA Standby Allocate Mapping Conflicts;

Type: string

Supported Values: all, total-map-allocated, total-map-freed, map-alloc-failure, map-dbl-free, alloc-map-race, map-not-found, ha-map-mismatch, ha-select-addr-failure, ha-alloc-map-conflicts

one-to-one_mapping

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one_shared-pool-group

Specification	Value
Type	*object*

members

Description: members is a **JSON Block**. Please see below for *one-to-one_shared-pool-group_members*

Type: Object

Reference Object: */axapi/v3/cgnv6/one-to-one/shared-pool-group/members*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one_shared-pool-group_members

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one_pool-list

Specification	Value
Type	*list*
Block object keys	

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

group

Description Share with a partition group (Partition Group Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

partition

Description Share with a single partition (Partition Name)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Share this pool with other partitions (default: not shared)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

logging

Specification	Value
Type	*object*

nat-quota-exceeded

Description: nat-quota-exceeded is a **JSON Block**. Please see below for *logging_nat-quota-exceeded*

Type: Object

Reference Object: */axapi/v3/cgnv6/logging/nat-quota-exceeded*

nat-resource-exhausted

Description: nat-resource-exhausted is a **JSON Block**. Please see below for *logging_nat-resource-exhausted*

Type: Object

Reference Object: */axapi/v3/cgnv6/logging/nat-resource-exhausted*

pool-based-log

Description: pool-based-log is a **JSON Block**. Please see below for *logging_pool-based-log*

Type: Object

Reference Object: */axapi/v3/cgnv6/logging/pool-based-log*

sampling-enable

Type: List

source-address

Description: source-address is a **JSON Block**. Please see below for *logging_source-address*

Type: Object

Reference Object: */axapi/v3/cgnv6/logging/source-address*

tcp-svr-status

Description: tcp-svr-status is a **JSON Block**. Please see below for *logging_tcp-svr-status*

Type: Object

Reference Object: */axapi/v3/cgnv6/logging/tcp-svr-status*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging_tcp-svr-status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging_source-address

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging_nat-quota-exceeded

Specification	Value
Type	*object*

level

Description 'warning': Log level Warning (Default); 'critical': Log level Critical; 'notice': Log level Notice;

Type: string

Supported Values: warning, critical, notice

Default: warning

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'tcp-session-created': TCP Session Created; 'tcp-session-deleted': TCP Session Deleted; 'tcp-port-allocated': TCP Port Allocated; 'tcp-port-freed': TCP Port Freed; 'tcp-port-batch-allocated': TCP Port Batch Allocated; 'tcp-port-batch-freed': TCP Port Batch Freed; 'udp-session-created': UDP Session Created; 'udp-session-deleted': UDP Session Deleted; 'udp-port-allocated': UDP Port Allocated; 'udp-port-freed': UDP Port Freed; 'udp-port-batch-allocated': UDP Port Batch Allocated; 'udp-port-batch-freed': UDP Port Batch Freed; 'icmp-session-created': ICMP Session Created; 'icmp-session-deleted': ICMP Session Deleted; 'icmp-resource-allocated': ICMP Resource Allocated; 'icmp-resource-freed': ICMP Resource Freed; 'icmpv6-session-created': ICMPV6 Session Created; 'icmpv6-session-deleted': ICMPV6 Session Deleted; 'icmpv6-resource-allocated': ICMPV6 Resource Allocated; 'icmpv6-resource-freed': ICMPV6 Resource Freed; 'gre-session-created': GRE Session Created; 'gre-session-deleted': GRE Session Deleted; 'gre-resource-allocated': GRE Resource Allocated; 'gre-resource-freed': GRE Resource Freed; 'esp-session-created': ESP Session Created; 'esp-session-deleted': ESP Session Deleted; 'esp-resource-allocated': ESP Resource Allocated; 'esp-resource-freed': ESP Resource Freed; 'fixed-nat-user-ports': Fixed NAT Inside User Port Mapping; 'fixed-nat-disable-config-logged': Fixed NAT Periodic Configs Logged; 'fixed-nat-disable-config-logs-sent': Fixed NAT Periodic Config Logs Sent; 'fixed-nat-periodic-config-logs-sent': Fixed NAT Disabled Configs Logged; 'fixed-nat-periodic-config-logged': Fixed NAT Disabled Config Logs Sent; 'fixed-nat-interim-updated': Fixed NAT Interim Updated; 'enhanced-user-log': Enhanced User Log; 'log-sent': Log Packets Sent; 'log-dropped': Log Packets Dropped; 'conn-tcp-established': TCP Connection Established; 'conn-tcp-dropped': TCP Connection Lost; 'tcp-port-overloading-allocated': TCP Port

Overloading Allocated; 'tcp-port-overloading-freed': TCP Port Overloading Freed; 'udp-port-overloading-allocated': UDP Port Overloading Allocated; 'udp-port-overloading-freed': UDP Port Overloading Freed; 'http-request-logged': HTTP Request Logged; 'reduced-logs-by-destination': Reduced Logs by Destination Protocol and Port; 'out-of-buffers': Out of Buffers; 'add-msg-failed': Add Message to Buffer Failed; 'rtsp-port-allocated': RTSP UDP Port Allocated; 'rtsp-port-freed': RTSP UDP Port Freed; 'conn-tcp-create-failed': TCP Connection Failed; 'ipv4-frag-applied': IPv4 Fragmentation Applied; 'ipv4-frag-failed': IPv4 Fragmentation Failed; 'ipv6-frag-applied': IPv6 Fragmentation Applied; 'ipv6-frag-failed': IPv6 Fragmentation Failed; 'interim-update-scheduled': Port Allocation Interim Update Scheduled; 'interim-update-schedule-failed': Port Allocation Interim Update Failed; 'interim-update-terminated': Port Allocation Interim Update Terminated; 'interim-update-memory-freed': Port Allocation Interim Update Memory Freed; 'interim-update-no-buff-retried': Port Allocation Interim Update Memory Freed; 'tcp-port-batch-interim-updated': TCP Port Batch Interim Updated; 'udp-port-batch-interim-updated': UDP Port Batch Interim Updated; 'port-block-accounting-freed': Port Allocation Accounting Freed; 'port-block-accounting-allocated': Port Allocation Accounting Allocated; 'log-message-too-long': Log message too long; 'http-out-of-order-dropped': HTTP out-of-order dropped; 'http-alloc-failed': HTTP Request Info Allocation Failed; 'http-frag-merge-failed-dropped': HTTP frag merge failed dropped; 'http-malloc': HTTP mem allocate; 'http-mfree': HTTP mem free; 'http-spm-alloc-type0': HTTP Conn SPM Type 0 allocate; 'http-spm-alloc-type1': HTTP Conn SPM Type 1 allocate; 'http-spm-alloc-type2': HTTP Conn SPM Type 2 allocate; 'http-spm-alloc-type3': HTTP Conn SPM Type 3 allocate; 'http-spm-alloc-type4': HTTP Conn SPM Type 4 allocate; 'http-spm-free-type0': HTTP Conn SPM Type 0 free; 'http-spm-free-type1': HTTP Conn SPM Type 1 free; 'http-spm-free-type2': HTTP Conn SPM Type 2 free; 'http-spm-free-type3': HTTP Conn SPM Type 3 free; 'http-spm-free-type4': HTTP Conn SPM Type 4 free; 'iddos-l3-entry-create': iDDoS L3 Entry Created; 'iddos-l3-entry-delete': iDDoS L3 Entry Deleted; 'iddos-l4-entry-create': iDDoS L4 Entry Created; 'iddos-l4-entry-delete': iDDoS L4 Entry Deleted;

Type: string

Supported Values: all, tcp-session-created, tcp-session-deleted, tcp-port-allocated, tcp-port-freed, tcp-port-batch-allocated, tcp-port-batch-freed, udp-session-created, udp-session-deleted, udp-port-allocated, udp-port-freed, udp-port-batch-allocated, udp-port-batch-freed, icmp-session-created, icmp-session-deleted, icmp-resource-allocated, icmp-resource-freed, icmpv6-session-created, icmpv6-session-deleted, icmpv6-resource-allocated, icmpv6-resource-freed, gre-session-created, gre-session-deleted, gre-resource-allocated, gre-resource-freed, esp-session-created, esp-session-deleted, esp-resource-allocated, esp-resource-freed, fixed-nat-user-ports, fixed-nat-disable-config-logged, fixed-nat-disable-config-logs-sent, fixed-nat-periodic-config-logs-sent, fixed-nat-periodic-config-logged, fixed-nat-interim-updated, enhanced-user-log, log-sent, log-dropped, conn-tcp-established, conn-tcp-dropped, tcp-port-overloading-allocated, tcp-port-overloading-freed, udp-port-overloading-allocated, udp-port-overloading-freed, http-request-logged, reduced-logs-by-destination, out-of-buffers, add-msg-failed, rtsp-port-allocated, rtsp-port-freed, conn-tcp-create-failed, ipv4-frag-applied, ipv4-frag-failed, ipv6-frag-applied, ipv6-frag-failed, interim-update-scheduled, interim-update-schedule-failed, interim-update-terminated, interim-update-memory-freed, interim-update-no-buff-retried, tcp-port-batch-interim-updated, udp-port-batch-interim-updated, port-block-accounting-freed, port-block-accounting-allocated, log-message-too-long, http-out-of-order-dropped, http-alloc-failed, http-frag-merge-failed-dropped, http-malloc, http-mfree, http-spm-alloc-type0, http-spm-alloc-type1, http-spm-alloc-type2, http-spm-alloc-type3, http-spm-alloc-type4, http-spm-free-type0, http-spm-free-type1, http-spm-free-type2, http-spm-free-type3, http-spm-free-type4, iddos-l3-entry-create, iddos-l3-entry-delete, iddos-l4-entry-create, iddos-l4-entry-delete

logging_pool-based-log

Specification	Value
Type	*object*

cycle

Description Logging cycle

Type: number

Range: 0-1800

Default: 30

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging_nat-resource-exhausted

Specification	Value
Type	*object*

level

Description 'warning': Log level Warning; 'critical': Log level Critical (Default); 'notice': Log level Notice;

Type: string

Supported Values: warning, critical, notice

Default: critical

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-rule-list-list

Specification	Value
Type	*list*
Block object keys	

default

Description: default is a **JSON Block**. Please see below for *lsn-rule-list-list_default*

Type: Object

Reference Object: */axapi/v3/cgnv6/lsn-rule-list/{name}/default*

domain-ip

Description: domain-ip is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-ip*

Type: Object

Reference Object: */axapi/v3/cgnv6/lsn-rule-list/{name}/domain-ip*

domain-list-name-list

Type: List

Reference Object: */axapi/v3/cgnv6/lsn-rule-list/{name}/domain-list-name/{name-domain-list}*

domain-name-list

Type: List

Reference Object: */axapi/v3/cgnv6/lsn-rule-list/{name}/domain-name/{name-domain}*

http-match-domain-name

Description Enable match domain name in http request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Reference Object: */axapi/v3/cgnv6/lsn-rule-list/{name}/ip/{ipv4-addr}*

name

Description LSN Rule-List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-rule-list-list_default_rule-cfg

Specification	Value
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_default_rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_default_rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protocol; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocol; 'dscp': Match DSCP Value; 'default': Default Action;

Type: string

Supported Values: tcp, udp, icmp, others, dscp, default

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_default_rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_default_rule-cfg_udp-cfg*

Type: Object

lsn-rule-list-list_default_rule-cfg_dscp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14':

001110; ‘15’: 001111; ‘16’: 010000; ‘17’: 010001; ‘18’: 010010; ‘19’: 010011; ‘20’: 010100; ‘21’: 010101; ‘22’: 010110; ‘23’: 010111; ‘24’: 011000; ‘25’: 011001; ‘26’: 011010; ‘27’: 011011; ‘28’: 011100; ‘29’: 011101; ‘30’: 011110; ‘31’: 011111; ‘32’: 100000; ‘33’: 100001; ‘34’: 100010; ‘35’: 100011; ‘36’: 100100; ‘37’: 100101; ‘38’: 100110; ‘39’: 100111; ‘40’: 101000; ‘41’: 101001; ‘42’: 101010; ‘43’: 101011; ‘44’: 101100; ‘45’: 101101; ‘46’: 101110; ‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description ‘default’: Default dscp (000000); ‘af11’: AF11 (001010); ‘af12’: AF12 (001100); ‘af13’: AF13 (001110); ‘af21’: AF21 (010010); ‘af22’: AF22 (010100); ‘af23’: AF23 (010110); ‘af31’: AF31 (011010); ‘af32’: AF32 (011100); ‘af33’: AF33 (011110); ‘af41’: AF41 (100010); ‘af42’: AF42 (100100); ‘af43’: AF43 (100110); ‘cs1’: CS1 (001000); ‘cs2’: CS2 (010000); ‘cs3’: CS3 (011000); ‘cs4’: CS4 (100000); ‘cs5’: CS5 (101000); ‘cs6’: CS6 (110000); ‘cs7’: CS7 (111000); ‘ef’: EF (101110); ‘0’: 000000; ‘1’: 000001; ‘2’: 000010; ‘3’: 000011; ‘4’: 000100; ‘5’: 000101; ‘6’: 000110; ‘7’: 000111; ‘8’: 001000; ‘9’: 001001; ‘10’: 001010; ‘11’: 001011; ‘12’: 001100; ‘13’: 001101; ‘14’: 001110; ‘15’: 001111; ‘16’: 010000; ‘17’: 010001; ‘18’: 010010; ‘19’: 010011; ‘20’: 010100; ‘21’: 010101; ‘22’: 010110; ‘23’: 010111; ‘24’: 011000; ‘25’: 011001; ‘26’: 011010; ‘27’: 011011; ‘28’: 011100; ‘29’: 011101; ‘30’: 011110; ‘31’: 011111; ‘32’: 100000; ‘33’: 100001; ‘34’: 100010; ‘35’: 100011; ‘36’: 100100; ‘37’: 100101; ‘38’: 100110; ‘39’: 100111; ‘40’: 101000; ‘41’: 101001; ‘42’: 101010; ‘43’: 101011; ‘44’: 101100; ‘45’: 101101; ‘46’: 101110; ‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

lsn-rule-list-list_default_rule-cfg_tcp-cfg

Specification	Value
Type	*object*

action-cfg

Description ‘action’: LSN Rule-List Action; ‘no-action’: Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_default_rule-cfg_udp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

lsn-rule-list-list_ip-list_rule-cfg_tcp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template; 'idle-timeout': Configure idle timeout;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template, idle-timeout

domain

Description DNAT Using IP of a Domain (Domain Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: domain and ipv4-list are mutually exclusive

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6

(110000); ‘cs7’: CS7 (111000); ‘ef’: EF (101110); ‘0’: 000000; ‘1’: 000001; ‘2’: 000010; ‘3’: 000011; ‘4’: 000100; ‘5’: 000101; ‘6’: 000110; ‘7’: 000111; ‘8’: 001000; ‘9’: 001001; ‘10’: 001010; ‘11’: 001011; ‘12’: 001100; ‘13’: 001101; ‘14’: 001110; ‘15’: 001111; ‘16’: 010000; ‘17’: 010001; ‘18’: 010010; ‘19’: 010011; ‘20’: 010100; ‘21’: 010101; ‘22’: 010110; ‘23’: 010111; ‘24’: 011000; ‘25’: 011001; ‘26’: 011010; ‘27’: 011011; ‘28’: 011100; ‘29’: 011101; ‘30’: 011110; ‘31’: 011111; ‘32’: 100000; ‘33’: 100001; ‘34’: 100010; ‘35’: 100011; ‘36’: 100100; ‘37’: 100101; ‘38’: 100110; ‘39’: 100111; ‘40’: 101000; ‘41’: 101001; ‘42’: 101010; ‘43’: 101011; ‘44’: 101100; ‘45’: 101101; ‘46’: 101110; ‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

fast

Description ‘fast’: Fast Aging;

Type: string

Supported Values: fast

Mutual Exclusion: fast and timeout-val are mutually exclusive

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv4-list and domain are mutually exclusive

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

timeout-val

Description Timeout in seconds

Type: number

Range: 2-129600

Mutual Exclusion: timeout-val and fast are mutually exclusive

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_ip-list_rule-cfg_udp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'idle-timeout': Configure idle timeout;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, idle-timeout

domain

Description DNAT Using IP of a Domain (Domain Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: domain and ipv4-list are mutually exclusive

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55':

110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

fast

Description ‘fast’: Fast Aging;

Type: string

Supported Values: fast

Mutual Exclusion: fast and timeout-val are mutually exclusive

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv4-list and domain are mutually exclusive

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

timeout-val

Description Timeout in seconds

Type: number

Range: 2-129600

Mutual Exclusion: timeout-val and fast are mutually exclusive

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_ip-list_rule-cfg_icmp-others-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

domain

Description DNAT Using IP of a Domain (Domain Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: domain and ipv4-list are mutually exclusive

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv4-list and domain are mutually exclusive

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_domain-list-name-list

Specification	Value
Type	*list*
Block object keys	

name-domain-list

Description Configure a Specific Rule-Set (Domain List Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-rule-list-list_domain-list-name-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': some help string;

Type: string

Supported Values: all, placeholder

lsn-rule-list-list_domain-list-name-list_rule-cfg

Specification	Value
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-list-name-list_rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-list-name-list_rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protocol; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocol; 'dscp': Match DSCP Value; 'default': Default Action;

Type: string

Supported Values: tcp, udp, icmp, others, dscp, default

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-list-name-list_rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-list-name-list_rule-cfg_udp-cfg*

Type: Object

lsn-rule-list-list_domain-list-name-list_rule-cfg_dscp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110;

'47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

lsn-rule-list-list_domain-list-name-list_rule-cfg_tcp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_domain-list-name-list_rule-cfg_udp-cfg

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_domain-list-name-list_rule-cfg_icmp-others-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_domain-name-list

Specification	Value
Type	*list*
Block object keys	

name-domain

Description Configure a Specific Rule-Set (Domain Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-rule-list-list_domain-name-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': some help string;

Type: string

Supported Values: all, placeholder

lsn-rule-list-list_domain-name-list_rule-cfg

Specification	Value
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-name-list_rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-name-list_rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protocol; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocol; 'dscp': Match DSCP Value; 'default': Default Action;

Type: string

Supported Values: tcp, udp, icmp, others, dscp, default

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-name-list_rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-name-list_rule-cfg_udp-cfg*

Type: Object

lsn-rule-list-list_domain-name-list_rule-cfg_dscp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

lsn-rule-list-list_domain-name-list_rule-cfg_tcp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_domain-name-list_rule-cfg_udp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_domain-name-list_rule-cfg_icmp-others-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

service-group-list

Specification	Value
Type	*list*
Block object keys	

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/health/monitor*

member-list

Type: List

Reference Object: */axapi/v3/cgnv6/service-group/{name}/member/{name}+{port}*

name

Description CGNV6 Service Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/cgnv6-serv-group-tmpl*

protocol

Description 'tcp': TCP LB service; 'udp': UDP LB service;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

shared

Description Share with partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-group

Description Share with a partition group (Partition Group Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: shared-group and shared-partition are mutually exclusive

shared-partition

Description Share with a single partition (Partition Name)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: shared-partition and shared-group are mutually exclusive

traffic-replication-mirror-ip-repl

Description Replaces IP with server-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'server_selection_fail_drop': Service selection fail drop; 'server_selection_fail_reset': Service selection fail reset; 'service_peak_conn': Service peak connection;

Type: string

Supported Values: all, server_selection_fail_drop, server_selection_fail_reset, service_peak_conn

service-group-list_member-list

Specification	Value
Type	*list*
Block object keys	

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/server*

port

Description Port number

Type: number

Range: 0-65534

Default: 65534

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_member-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connections; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_conn': Total connections; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_status_code_2xx': Total reverse packets inspected status code 2xx; 'total_rev_pkts_inspected_status_code_non_5xx': Total reverse packets inspected status code non 5xx; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total requests success; 'peak_conn': Peak connections; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'curr_conn_overflow': Current connection counter overflow count; 'state_flaps': State flaps count;

Type: string

Supported Values: all, curr_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, total_rev_pkts_inspected, total_rev_pkts_inspected_status_code_2xx, total_rev_pkts_inspected_status_code_non_5xx, curr_req, total_req, total_req_succ, peak_conn, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, curr_conn_overflow, state_flaps

http-alg

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-alg_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-processed': HTTP Request Processed; 'request-insert-msisdn-performed': HTTP MSISDN Insertion Performed; 'request-insert-client-ip-performed': HTTP Client IP Insertion Performed; 'request-insert-msisdn-unavailable': Inserted MSISDN is 0000 (MSISDN Unavailable); 'queued-session-too-many': Queued Session Exceed Drop; 'radius-query-succeed': MSISDN Query Succeed; 'radius-query-failed': MSISDN Query Failed; 'radius-requst-sent': Query Request Sent; 'radius-requst-dropped': Query Request Dropped; 'radius-response-received': Query Response Received; 'radius-response-dropped': Query Response Dropped; 'out-of-memory-dropped': Out-of-Memory Dropped; 'queue-len-exceed-dropped': Queue Length Exceed Dropped; 'out-of-order-dropped': Packet Out-of-Order Dropped; 'buff-resent': Packet Resent from Queue; 'buff-spilt-failed': Buff Split Failed; 'header-insertion-failed': Buff Insertion Failed; 'header-removal-failed': Buff Removal Failed; 'no-queue': No Queue;

Type: string

Supported Values: all, request-processed, request-insert-msisdn-performed, request-insert-client-ip-performed, request-insert-msisdn-unavailable, queued-session-too-many, radius-query-succeed, radius-query-failed, radius-requst-sent, radius-requst-dropped, radius-response-received, radius-response-dropped, out-of-memory-dropped, queue-len-exceed-dropped, out-of-order-dropped, buff-resent, buff-spilt-failed, header-insertion-failed, header-removal-failed, no-queue

ecmp

Specification	Value
Type	*object*

hashing-type

Description '4-tuple-hash': Hash on Src IP , Src Port, Dest IP and Dest Port;

Type: string

Supported Values: 4-tuple-hash

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-radius-profile-list

Specification	Value
Type	*list*
Block object keys	

lid-profile-index

Description LSN RADIUS Profile Index

Type: number

Range: 1-16

radius

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-radius-profile-list_radius

Specification	Value
Type	*list*
Block object keys	

attribute

Description 'custom1': Configure RADIUS Attribute Custom 1; 'custom2': Configure RADIUS Attribute Custom 2; 'custom3': Configure RADIUS Attribute Custom 3; 'custom4': Configure RADIUS Attribute Custom 4; 'custom5': Configure RADIUS Attribute Custom 5; 'custom6': Configure RADIUS Attribute Custom 6; 'imei': Configure RADIUS Attribute IMEI; 'imsi': Configure RADIUS Attribute IMSI; 'msisdn': Configure RADIUS Attribute MSISDN; 'default': Configure default;

Type: string

Supported Values: custom1, custom2, custom3, custom4, custom5, custom6, imei, imsi, msisdn, default

default-lsn-lid

Description LSN Limit ID (LID index)

Type: number

Range: 1-1023

exact-value

Description Value of the attribute

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

exact-value-lsn-lid

Description LSN Limit ID (LID index)

Type: number

Range: 1-1023

starts-with

Description Value of the attribute

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

starts-with-lsn-lid

Description LSN Limit ID (LID index)

Type: number

Range: 1-1023

server-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': Enable this Real Server; 'disable': Disable this Real Server;

Type: string

Supported Values: enable, disable

Default: enable

fqdn-name

Description Server hostname

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

host

Description IP Address

Type: string

Format: ipv4-address

name

Description Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

port-list

Type: List

Reference Object: */axapi/v3/cgnv6/server/{name}/port/{port-number}+{protocol}*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 address

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-list_port-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

follow-port-protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check, health-check-follow-port, and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-follow-port

Description Specify which port to follow for health status (Port Number)

Type: number

Range: 1-65534

Mutual Exclusion: health-check-follow-port and health-check are mutually exclusive

port-number

Description Port Number

Type: number

Range: 0-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-list_port-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connections; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total request success; 'total_fwd_bytes': Forward bytes; 'total_fwd_pkts': Forward packets; 'total_rev_bytes': Reverse bytes; 'total_rev_pkts': Reverse packets; 'total_conn': Total connections; 'last_total_conn': Last total connections; 'peak_conn': Peak connections; 'es_resp_200': Response status 200; 'es_resp_300': Response status 300; 'es_resp_400': Response status 400; 'es_resp_500': Response status 500; 'es_resp_other': Response status other; 'es_req_count': Total proxy request; 'es_resp_count': Total proxy Response; 'es_resp_invalid_http': Total non-http response; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_good_status_code': Total reverse packets with good status code inspected; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time;

Type: string

Supported Values: all, curr_conn, curr_req, total_req, total_req_succ, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, last_total_conn, peak_conn, es_resp_200, es_resp_300, es_resp_400, es_resp_500, es_resp_other,

es_req_count, es_resp_count, es_resp_invalid_http, total_rev_pkts_inspected, total_rev_pkts_inspected_good_status_code, response_time, fastest_rsp_time, slowest_rsp_time

hairpinning

Description 'filter-all': Disable all Hairpinning; 'filter-none': Allow all Hairpinning (default); 'filter-self-ip': Block Hairpinning to same IP; 'filter-self-ip-port': Block hairpinning to same IP and Port combination;

Type: string

Supported Values: filter-all, filter-none, filter-self-ip, filter-self-ip-port

Default: filter-none

icmp-inbound

Description 'drop': Drop Inbound ICMP packets; 'handle': Handle Inbound ICMP packets(default);

Type: string

Supported Values: drop, handle

Default: handle

inside-src-access-list

Description Access List for inside IPv4 addresses (ACL ID)

Type: number

Range: 1-199

nat-prefix-list

Description Configure LW-4over6 NAT Prefix List (LW-4over6 NAT Prefix Class-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

no-forward-match

Description: no-forward-match is a **JSON Block**. Please see below for *lw-4o6_global_no-forward-match*

Maximum Length: 64 characters

Maximum Length: 1 characters

ddos-protection_l4-entries

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ddos-protection_packets-per-second

Specification	Value
Type	*object*

action

Description: action is a **JSON Block**. Please see below for *ddos-protection_packets-per-second_action*

Type: Object

include-existing-session

Description Count traffic associated with existing session into the packets-per-second (Default: Disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description Configure packets-per-second threshold per IP(default 3000000)

Type: number

Range: 0-30000000

Default: 3000000

other

Description Configure packets-per-second threshold for other L4 protocols(default 10000)

Type: number

Range: 0-30000000

Default: 10000

other-action

Description: other-action is a **JSON Block**. Please see below for *ddos-protection_packets-per-second_other-action*

Type: Object

tcp

Description Configure packets-per-second threshold per TCP port (default: 3000)

Type: number

Range: 0-30000000

Default: 3000

tcp-action

Description: tcp-action is a **JSON Block**. Please see below for *ddos-protection_packets-per-second_tcp-action*

Type: Object

udp

Description Configure packets-per-second threshold per UDP port (default: 3000)

Type: number

Range: 0-30000000

Default: 3000

udp-action

Description: udp-action is a **JSON Block**. Please see below for *ddos-protection_packets-per-second_udp-action*

Type: Object

ddos-protection_packets-per-second_other-action

Specification	Value
Type	*object*

other-action-type

Description 'log': Log the event only; 'drop': Log, and drop all packets (default);

Type: string

Supported Values: log, drop

Default: drop

other-expiration

Description To specify time to revert the action after pps is decreased to below threshold (Expiration time, in seconds (default is 30 seconds))

Type: number

Range: 10-65535

Default: 30

ddos-protection_packets-per-second_udp-action

Specification	Value
Type	*object*

udp-action-type

Description 'log': Log the event only; 'drop': Log, and drop all packets (default);

Type: string

Supported Values: log, drop

Default: drop

udp-expiration

Description To specify time to revert the action after pps is decreased to below threshold (Expiration time, in seconds (default is 30 seconds))

Type: number

Range: 10-65535

Default: 30

ddos-protection_packets-per-second_tcp-action

Specification	Value
Type	*object*

tcp-action-type

Description 'log': Log the event only; 'drop': Log, and drop all packets (default);

Type: string

Supported Values: log, drop

Default: drop

tcp-expiration

Description To specify time to revert the action after pps is decreased to below threshold (Expiration time, in seconds (default is 30 seconds))

Type: number

Range: 10-65535

Default: 30

ddos-protection_packets-per-second_action

Specification	Value
Type	*object*

action-type

Description 'log': Log the event only; 'drop': Log, and drop all packets (default); 'redistribute-route': Log, Drop, and Notify upstream router to reroute the packets;

Type: string

Supported Values: log, drop, redistribute-route

Default: drop

expiration

Description To specify time to revert the action after pps is decreased to below threshold (Expiration time, in minutes (default is 3600 seconds))

Type: number

Range: 10-8640000

Default: 3600

expiration-route

Description To specify time to revert the action after pps is decreased to below threshold (Expiration time, in seconds (default is 3600 seconds))

Type: number

Range: 10-8640000

Default: 3600

forward

Description Continue forward traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-wait-timer

Description Time after which IP will be removed from blackhole

Type: number

Range: 0-300

Default: 300

route-map

Description Route map name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

timer-multiply-max

Description To specify max value of timer multiplier for attacks lasted long time (Max value of timer multiplier (default is 6))

Type: number

Range: 1-100

Default: 6

ddos-protection_syn-cookie

Specification	Value
Type	*object*

syn-cookie-enable

Description Enable CGNv6 Syn-Cookie Protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie-on-threshold

Description on-threshold for Syn-cookie (Decimal number)

Type: number

Range: 1-1000000

syn-cookie-on-timeout

Description on-timeout for Syn-cookie (Timeout in seconds, default is 120 seconds (2 minutes))

Type: number

Range: 1-300000

Default: 120

lsn-lid-list

Specification	Value
Type	*list*
Block object keys	

conn-rate-limit

Description: conn-rate-limit is a **JSON Block**. Please see below for *lsn-lid-list_conn-rate-limit*

Type: Object

ds-lite

Description: ds-lite is a **JSON Block**. Please see below for *lsn-lid-list_ds-lite*

Type: Object

extended-user-quota

Description: extended-user-quota is a **JSON Block**. Please see below for *lsn-lid-list_extended-user-quota*

Type: Object

lid-number

Description LSN Lid

Type: number

Range: 1-1023

lsn-rule-list

Description: lsn-rule-list is a **JSON Block**. Please see below for *lsn-lid-list_lsn-rule-list*

Type: Object

name

Description LSN Lid Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

override

Description 'none': Apply source NAT if configured (default); 'drop': Drop packets that match this LSN lid; 'pass-through': Layer-3 route packets that match this LSN lid and do not apply source NAT;

Type: string

Supported Values: none, drop, pass-through

Default: none

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-nat-pool

Description: source-nat-pool is a **JSON Block**. Please see below for *lsn-lid-list_source-nat-pool*

Type: Object

user-quota

Description: user-quota is a **JSON Block**. Please see below for *lsn-lid-list_user-quota*

Type: Object

user-quota-prefix-length

Description NAT64/DS-Lite user quota prefix length (Prefix Length (Default: Uses the global NAT64/DS-Lite configured value))

Type: number

Range: 1-128

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-lid-list_extended-user-quota

Specification	Value
Type	*object*

tcp

Type: List

udp

Type: List

lsn-lid-list_extended-user-quota_udp

Specification	Value
Type	*list*
Block object keys	

udp-service-port

Description Port (Port Value)

Type: number

Range: 1-65535

udp-sessions

Description Number of Extended Quota sessions allowed for this service

Type: number

Range: 1-255

lsn-lid-list_extended-user-quota_tcp

Specification	Value
Type	*list*
Block object keys	

tcp-service-port

Description Port (Port Value)

Type: number

Range: 1-65535

tcp-sessions

Description Number of Extended Quota sessions allowed for this service

Type: number

Range: 1-255

lsn-lid-list_ds-lite

Specification	Value
Type	*object*

inside-src-permit-list

Description Class-List of IPv4 addresses permitted (Class-list to match for DS-Lite)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

lsn-lid-list_user-quota

Specification	Value
Type	*object*

icmp

Description User Quota for ICMP identifiers (NAT port quota per user (default: not configured))

Type: number

Range: 1-64000

quota-tcp

Description: quota-tcp is a **JSON Block**. Please see below for *lsn-lid-list_user-quota_quota-tcp*

Type: Object

quota-udp

Description: quota-udp is a **JSON Block**. Please see below for *lsn-lid-list_user-quota_quota-udp*

Type: Object

session

Description User Quota for number of data sessions

Type: number

Range: 1-2147483647

session-tcp

Description User Quota for number of TCP sessions

Type: number

Range: 1-2147483647

session-udp

Description User Quota for number of UDP sessions

Type: number

Range: 1-2147483647

lsn-lid-list_user-quota_quota-udp

Specification	Value
Type	*object*

udp-quota

Description NAT port quota per user (default: not configured)

Type: number

Range: 1-64000

udp-reserve

Description Number of ports to reserve per user (default: same as user-quota value) (Reserved quota per user (default: same as user-quota value))

Type: number

Range: 0-64000

lsn-lid-list_user-quota_quota-tcp

Specification	Value
Type	*object*

tcp-quota

Description NAT port quota per user (default: not configured)

Type: number

Range: 1-64000

tcp-reserve

Description Number of ports to reserve per user (default: same as user-quota value) (Reserved quota per user (default: same as user-quota value))

Type: number

Range: 0-64000

lsn-lid-list_source-nat-pool

Specification	Value
Type	*object*

pool-name

Description Source NAT Pool or Pool-Group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Use a shared source NAT pool or pool-group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lsn-lid-list_conn-rate-limit

Specification	Value
Type	*object*

conn-rate-limit-val

Description Maximum connections per second (Default: No limit)

Type: number

Range: 1-65535

lsn-lid-list_lsn-rule-list

Specification	Value
Type	*object*

destination

Description Apply LSN Rule-List on Destination (LSN Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/lsn-rule-list*

sixrd

Specification	Value
Type	*object*

domain-list

Type: List

Reference Object: */axapi/v3/cgnv6/sixrd/domain/{name}*

fragmentation

Description: fragmentation is a **JSON Block**. Please see below for *sixrd_fragmentation*

Type: Object

Reference Object: */axapi/v3/cgnv6/sixrd/fragmentation*

sixrd_domain-list

Specification	Value
Type	*list*
Block object keys	

br-ipv4-address

Description 6rd BR IPv4 address

Type: string

Format: ipv4-address

ce-ipv4-netmask

Description Mask length

Type: string

Format: ipv4-netmask-brief

ce-ipv4-network

Description Customer Edge IPv4 network

Type: string

Format: ipv4-address

ipv6-prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

mtu

Description Tunnel MTU

Type: number

Range: 1280-1480

name

Description 6rd Domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sixrd_domain-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'outbound-tcp-packets-received': Outbound TCP packets received; 'outbound-udp-packets-received': Outbound UDP packets received; 'outbound-icmp-packets-received': Outbound ICMP packets received; 'outbound-other-packets-received': Outbound other packets received; 'outbound-packets-drop': Outbound packets dropped; 'outbound-ipv6-dest-unreachable': Outbound IPv6 destination unreachable; 'outbound-fragment-ipv6': Outbound Fragmented IPv6; 'inbound-tcp-packets-received': Inbound TCP packets received; 'inbound-udp-packets-received': Inbound UDP packets received; 'inbound-icmp-packets-received': Inbound ICMP packets received; 'inbound-other-packets-received': Inbound other packets received; 'inbound-packets-drop': Inbound packets dropped; 'inbound-ipv4-dest-unreachable': Inbound IPv4 destination unreachable; 'inbound-fragment-ipv4': Inbound Fragmented IPv4; 'inbound-tunnel-fragment-ipv6': Inbound Fragmented IPv6 in tunnel; 'vport-matched': Traffic match SLB virtual port; 'unknown-delegated-prefix': Unknown 6rd delegated prefix; 'packet-too-big': Packet too big; 'not-local-ip': Not local IP; 'fragment-error': Fragment processing errors; 'other-error': Other errors;

Type: string

Supported Values: all, outbound-tcp-packets-received, outbound-udp-packets-received, outbound-icmp-packets-received, outbound-other-packets-received, outbound-packets-drop, outbound-ipv6-dest-unreachable, outbound-fragment-ipv6, inbound-tcp-packets-received, inbound-udp-packets-received, inbound-icmp-packets-received, inbound-other-packets-received, inbound-packets-drop, inbound-ipv4-dest-unreachable, inbound-fragment-ipv4, inbound-tunnel-fragment-ipv6, vport-matched, unknown-delegated-prefix, packet-too-big, not-local-ip, fragment-error, other-error

sixrd_fragmentation

Specification	Value
Type	*object*

inbound

Description: inbound is a **JSON Block**. Please see below for *sixrd_fragmentation_inbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/sixrd/fragmentation/inbound*

outbound

Description: outbound is a **JSON Block**. Please see below for *sixrd_fragmentation_outbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/sixrd/fragmentation/outbound*

sixrd_fragmentation_inbound

Specification	Value
Type	*object*

action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets; 'ipv6': Use IPv6 Fragmentation for oversize packets; 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big) (default);

Type: string

Supported Values: drop, ipv4, ipv6, send-icmpv6

Default: send-icmpv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sixrd_fragmentation_outbound

Specification	Value
Type	*object*

action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets (default); 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv6, send-icmp, send-icmpv6

Default: ipv6

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv6, send-icmp, send-icmpv6

Default: send-icmp

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.26.2 cgnv6 ddos-protection

Configure CGNV6 DDoS Protection

ddos-protection Specification

disable-nat-ip-by-bgp

Description: disable-nat-ip-by-bgp is a **JSON Block**. Please see below for *disable-nat-ip-by-bgp*

Type: Object

Reference Object: */axapi/v3/cgnv6/ddos-protection/disable-nat-ip-by-bgp*

enable-action

Description 'local': Enable local logs only; 'remote': Enable logging to remote server & IP-FIX; 'both': Enable both local & remote logs;

Type: string

Supported Values: local, remote, both

Default: local

ip-entries

Description: ip-entries is a **JSON Block**. Please see below for *ip-entries*

Type: Object

Reference Object: */axapi/v3/cgnv6/ddos-protection/ip-entries*

l4-entries

Description: l4-entries is a **JSON Block**. Please see below for *l4-entries*

Type: Object

Reference Object: */axapi/v3/cgnv6/ddos-protection/l4-entries*

logging-action

Description 'enable': enable CGN DDoS protection logging; 'disable': Disable both local & remote CGN DDoS protection logging;

Type: string

Supported Values: enable, disable

Default: enable

max-hw-entries

Description Configure maximum HW entries

Type: number

Range: 0-262144

Default: 262144

packets-per-second

Description: packets-per-second is a **JSON Block**. Please see below for *packets-per-second*

Type: Object

sampling-enable

Type: List

syn-cookie

Description: syn-cookie is a **JSON Block**. Please see below for *syn-cookie*

Type: Object

toggle

Description 'enable': Enable CGNV6 NAT pool DDoS protection (default); 'disable': Disable CGNV6 NAT pool DDoS protection;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone

Description Disable NAT IP based on DDoS zone name set in BGP

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Type: Object

include-existing-session

Description Count traffic associated with existing session into the packets-per-second (Default: Disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description Configure packets-per-second threshold per IP(default 3000000)

Type: number

Range: 0-30000000

Default: 3000000

other

Description Configure packets-per-second threshold for other L4 protocols(default 10000)

Type: number

Range: 0-30000000

Default: 10000

other-action

Description: other-action is a **JSON Block**. Please see below for *packets-per-second_other-action*

Type: Object

tcp

Description Configure packets-per-second threshold per TCP port (default: 3000)

Type: number

Range: 0-30000000

Default: 3000

tcp-action

Description: tcp-action is a **JSON Block**. Please see below for *packets-per-second_tcp-action*

Type: Object

udp

Description Configure packets-per-second threshold per UDP port (default: 3000)

Type: number

Range: 0-30000000

Default: 3000

udp-action

Description: udp-action is a **JSON Block**. Please see below for *packets-per-second_udp-action*

Type: Object

packets-per-second_other-action

Specification	Value
Type	*object*

other-action-type

Description 'log': Log the event only; 'drop': Log, and drop all packets (default);

Type: string

Supported Values: log, drop

Default: drop

other-expiration

Description To specify time to revert the action after pps is decreased to below threshold (Expiration time, in seconds (default is 30 seconds))

Type: number

Range: 10-65535

Default: 30

packets-per-second_udp-action

Specification	Value
Type	*object*

udp-action-type

Description 'log': Log the event only; 'drop': Log, and drop all packets (default);

Type: string

Supported Values: log, drop

Default: drop

udp-expiration

Description To specify time to revert the action after pps is decreased to below threshold (Expiration time, in seconds (default is 30 seconds))

Type: number

Range: 10-65535

Default: 30

packets-per-second_tcp-action

Specification	Value
Type	*object*

tcp-action-type

Description 'log': Log the event only; 'drop': Log, and drop all packets (default);

Type: string

Supported Values: log, drop

Default: drop

tcp-expiration

Description To specify time to revert the action after pps is decreased to below threshold (Expiration time, in seconds (default is 30 seconds))

Type: number

Range: 10-65535

Default: 30

packets-per-second_action

Specification	Value
Type	*object*

action-type

Description 'log': Log the event only; 'drop': Log, and drop all packets (default); 'redistribute-route': Log, Drop, and Notify upstream router to reroute the packets;

Type: string

Supported Values: log, drop, redistribute-route

Default: drop

expiration

Description To specify time to revert the action after pps is decreased to below threshold (Expiration time, in minutes (default is 3600 seconds))

Type: number

Range: 10-8640000

Default: 3600

expiration-route

Description To specify time to revert the action after pps is decreased to below threshold (Expiration time, in seconds (default is 3600 seconds))

Type: number

Range: 10-8640000

Default: 3600

forward

Description Continue forward traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-wait-timer

Description Time after which IP will be removed from blackhole

Type: number

Range: 0-300

Default: 300

route-map

Description Route map name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

timer-multiply-max

Description To specify max value of timer multiplier for attacks lasted long time (Max value of timer multiplier (default is 6))

Type: number

Range: 1-100

Default: 6

syn-cookie

Specification	Value
Type	*object*

syn-cookie-enable

Description Enable CGNv6 Syn-Cookie Protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie-on-threshold

Description on-threshold for Syn-cookie (Decimal number)

Type: number

Range: 1-1000000

syn-cookie-on-timeout

Description on-timeout for Syn-cookie (Timeout in seconds, default is 120 seconds (2 minutes))

Type: number

Range: 1-300000

Default: 120

]

dns64-virtualserver attributes

enable-disable-action

Description 'enable': Enable Virtual Server (default); 'disable': Disable Virtual Server;

Type: string

Supported Values: enable, disable

Default: enable

ethernet

Description Ethernet interface

Type: number

Format: interface

ip-address

Description IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address, ipv6-address, and use-if-ip are mutually exclusive

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address, ip-address, and use-if-ip are mutually exclusive

name

Description CGNV6 Virtual Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask-brief

policy

Description Policy template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-list

Type: List

Reference Object: */axapi/v3/cgnv6/dns64-virtualserver/{name}/port/{port-number}+{protocol}*

template-policy

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/policy*

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip, ipv6-address, and ip-address are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a vrrp group (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

port-list

Specification	Value
Type	*list*
Block object keys	

acl-id-list

Type: List

acl-name-list

Type: List

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

auto

Description Configure auto NAT for the vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/cgnv6-dns64-vs-port-tmpl*

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

port-number

Description Port

Type: number

Range: 0-65534

precedence

Description Set auto NAT pool as higher precedence for source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'dns-udp': DNS service over UDP;

Type: string

Supported Values: dns-udp

sampling-enable

Type: List

service-group

Description Bind a Service Group to this Virtual Server (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/service-group*

template-dns

Description DNS template (DNS template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/dns*

template-policy

Description Policy Template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/policy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-list_sampling-enable

Specification	Value

counters1

Description 'all': all; 'curr_conn': Current connection; 'total_l4_conn': Total L4 connections; 'total_l7_conn': Total L7 connections; 'toatal_tcp_conn': Total TCP connections; 'total_conn': Total connections; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_dns_pkts': Total DNS packets; 'total_mf_dns_pkts': Total MF DNS packets; 'es_total_failure_actions': Total failure actions; 'compression_bytes_before': Data into compression engine; 'compression_bytes_after': Data out of compression engine; 'compression_hit': Number of requests compressed; 'compression_miss': Number of requests NOT compressed; 'compression_miss_no_client': Compression miss no client; 'compression_miss_template_exclusion': Compression miss template exclusion; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total successful requests; 'peak_conn':

Peak connections; 'curr_conn_rate': Current connection rate; 'last_rsp_time': Last response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time;

Type: string

Supported Values: all, curr_conn, total_l4_conn, total_l7_conn, toatal_tcp_conn, total_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_dns_pkts, total_mf_dns_pkts, es_total_failure_actions, compression_bytes_before, compression_bytes_after, compression_hit, compression_miss, compression_miss_no_client, compression_miss_template_exclusion, curr_req, total_req, total_req_succ, peak_conn, curr_conn_rate, last_rsp_time, fastest_rsp_time, slowest_rsp_time

port-list_acl-name-list

Specification	Value
Type	*list*
Block object keys	

acl-name

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

port-list_acl-id-list

Specification	Value
Type	*list*
Block object keys	

acl-id

Description ACL id VPORT

Type: number

Range: 1-199

Reference Object: */axapi/v3/access-list/standard*

acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/cgnv6-dns64-vs-port-tmpl*

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

port-number

Description Port

Type: number

Range: 0-65534

precedence

Description Set auto NAT pool as higher precedence for source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'dns-udp': DNS service over UDP;

Type: string

Supported Values: dns-udp

sampling-enable

Type: List

service-group

Description Bind a Service Group to this Virtual Server (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/service-group*

template-dns

Description DNS template (DNS template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/dns*

template-policy

Description Policy Template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/policy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connection; 'total_l4_conn': Total L4 connections; 'total_l7_conn': Total L7 connections; 'toatal_tcp_conn': Total TCP connections; 'total_conn': Total connections; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_dns_pkts': Total DNS packets; 'total_mf_dns_pkts': Total MF DNS packets; 'es_total_failure_actions': Total failure actions; 'compression_bytes_before': Data into compression engine; 'compression_bytes_after': Data out of compression engine; 'compression_hit': Number of requests compressed; 'compression_miss': Number of requests

NOT compressed; 'compression_miss_no_client': Compression miss no client; 'compression_miss_template_exclusion': Compression miss template exclusion; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total successful requests; 'peak_conn': Peak connections; 'curr_conn_rate': Current connection rate; 'last_rsp_time': Last response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time;

Type: string

Supported Values: all, curr_conn, total_l4_conn, total_l7_conn, toatal_tcp_conn, total_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_dns_pkts, total_mf_dns_pkts, es_total_failure_actions, compression_bytes_before, compression_bytes_after, compression_hit, compression_miss, compression_miss_no_client, compression_miss_template_exclusion, curr_req, total_req, total_req_succ, peak_conn, curr_conn_rate, last_rsp_time, fastest_rsp_time, slowest_rsp_time

acl-name-list

Specification	Value
Type	*list*
Block object keys	

acl-name

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

acl-id-list

Specification	Value
Type	*list*
Block object keys	

acl-id

Description ACL id VPORT

Type: number

Range: 1-199

Reference Object: */axapi/v3/access-list/standard*

acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

Description 'drop': Drop Silently; 'ipv4': Use IPv4 Fragmentation; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmp, send-icmpv6

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets (default); 'send-icmpv6': Send ICMPv6 Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

full-cone-session

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg

Specification	Value
Type	*object*

ftp

Description: ftp is a **JSON Block**. Please see below for *alg_ftp*

Type: Object

Reference Object: */axapi/v3/cgnv6/ds-lite/alg/ftp*

h323

Description: h323 is a **JSON Block**. Please see below for *alg_h323*

Type: Object

Reference Object: */axapi/v3/cgnv6/ds-lite/alg/h323*

mgcp

Description: mgcp is a **JSON Block**. Please see below for *alg_mgcp*

Type: Object

Reference Object: */axapi/v3/cgnv6/ds-lite/alg/mgcp*

pptp

Description: pptp is a **JSON Block**. Please see below for *alg_pptp*

Type: Object

Reference Object: */axapi/v3/cgnv6/ds-lite/alg/pptp*

rtsp

Description: rtsp is a **JSON Block**. Please see below for *alg_rtsp*

Type: Object

Reference Object: */axapi/v3/cgnv6/ds-lite/alg/rtsp*

sip

Description: sip is a **JSON Block**. Please see below for *alg_sip*

Type: Object

Reference Object: */axapi/v3/cgnv6/ds-lite/alg/sip*

tftp

Description: tftp is a **JSON Block**. Please see below for *alg_tftp*

Type: Object

Reference Object: */axapi/v3/cgnv6/ds-lite/alg/tftp*

alg_ftp

Specification	Value
Type	*object*

ftp-enable

Description 'disable': Disable ALG;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_sip

Specification	Value
Type	*object*

sip-enable

Description 'enable': Enable ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_pptp

Specification	Value
Type	*object*

pptp-enable

Description 'enable': Enable ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_rtsp

Specification	Value
Type	*object*

rtsp-enable

Description 'enable': Enable ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_h323

Specification	Value
Type	*object*

h323-enable

Description 'enable': Enable ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_tftp

Specification	Value
Type	*object*

tftp-enable

Description 'enable': Enable ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_mgcp

Specification	Value
Type	*object*

mgcp-enable

Description 'enable': Enable ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global

Specification	Value
Type	*object*

icmp

Description: icmp is a **JSON Block**. Please see below for *global_icmp*

Type: Object

inside

Description: inside is a **JSON Block**. Please see below for *global_inside*

Type: Object

ip-checksum-error

Description 'fix': Fix the bad checksum (default); 'drop': Drop packets with a bad checksum;

Type: string

Supported Values: fix, drop

Default: fix

l4-checksum-error

Description 'propagate': Propagate the bad checksum (default); 'fix': Fix the bad checksum; 'drop': Drop packets with a bad checksum;

Type: string

Supported Values: propagate, fix, drop

Default: propagate

sampling-enable

Type: List

tcp

Description: tcp is a **JSON Block**. Please see below for *global_tcp*

Type: Object

user-quota-prefix-length

Description User Quota Prefix Length (Default: 128)

Type: number

Range: 1-128

Default: 128

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_inside

Specification	Value
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *global_inside_source*

Type: Object

global_inside_source

Specification	Value
Type	*object*

class-list

Description Class-list to match for DS-Lite

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

global_tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *global_tcp_mss-clamp*

Type: Object

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *global_tcp_reset-on-error*

Type: Object

global_tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60 - 40))))

Type: number

Range: 0-1420

Default: 416

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 40);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 40)

Type: number

Range: 0-1420

Default: 40

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

global_tcp_reset-on-error

Specification	Value
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

global attributes

icmp

Description: icmp is a **JSON Block**. Please see below for *icmp*

Type: Object

inside

Description: inside is a **JSON Block**. Please see below for *inside*

Type: Object

ip-checksum-error

Description 'fix': Fix the bad checksum (default); 'drop': Drop packets with a bad checksum;

Type: string

Supported Values: fix, drop

Default: fix

l4-checksum-error

Description 'propagate': Propagate the bad checksum (default); 'fix': Fix the bad checksum; 'drop': Drop packets with a bad checksum;

Type: string

Supported Values: propagate, fix, drop

Default: propagate

sampling-enable

Type: List

tcp

Description: tcp is a **JSON Block**. Please see below for *tcp*

Type: Object

user-quota-prefix-length

Description User Quota Prefix Length (Default: 128)

Type: number

Range: 1-128

Default: 128

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside

Specification	Value
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *inside_source*

Type: Object

inside_source

Specification	Value
Type	*object*

class-list

Description Class-list to match for DS-Lite

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *tcp_mss-clamp*

Type: Object

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *tcp_reset-on-error*

Type: Object

tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60 - 40))))

Type: number

Range: 0-1420

Default: 416

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 40);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 40)

Type: number

Range: 0-1420

Default: 40

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

tcp_reset-on-error

Specification	Value
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Specification	Value
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-ip-list

Description Name of IP List used to specify Inside Users

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *inside_iplist-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-config-template

Description Scaleout service-config template to bind (Scaleout service-config template name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *inside_iplist-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

inside_iplist-list_usable-nat-ports

Specification	Value
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

inside_iplist-list_offset

Specification	Value
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

inside_ipv4address-list

Specification	Value
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv4 Inside User End Address

Type: string

Format: ipv4-address

inside-netmask

Description IPv4 Netmask

Type: string

Format: ipv4-netmask-brief

inside-start-address

Description IPv4 Inside User Start Address

Type: string

Format: ipv4-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *inside_ipv4address-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-config-template

Description Scaleout service-config template to bind (Scaleout service-config template name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

entry-create-failure

Description HW Entry Creation Failed

Type: number

Format: counter

entry-force-hw-invalidate

Description HW Entries Force HW Invalidate

Type: number

Format: counter

entry-free

Description HW Entries Freed

Type: number

Format: counter

entry-free-no-conn

Description HW Entry Freed - no matched conn

Type: number

Format: counter

entry-free-no-hw-prog

Description HW Entry Freed - no HW prog

Type: number

Format: counter

entry-free-no-sw-entry

Description HW Entry Freed - no software entry

Type: number

Format: counter

entry-free-opp-entry

Description HW Entries Freed - opposite tuple entry aged-out

Type: number

Format: counter

entry-invalidate-server-down

Description HW Entries Invalidate due to server down

Type: number

Format: counter

tcam-counter

Description TCAM Flow Count

Type: number

Format: counter

tcam-create

Description TCAM Flows Created

Type: number

Format: counter

tcam-free

Description TCAM Flows Freed

Type: number

Format: counter

2.26.69 cgnv6 fixed-nat inside

Fixed NAT Inside Users

inside Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	inside
Element URI	/axapi/v3/cgnv6/fixed-nat/inside
Element Attributes	inside_attributes
Partition Visibility	shared
Schema	`inside schema`

Operations Allowed:

Get Object

GET

/axapi/v3/cgnv6/fixed-nat/inside

inside_attributes

inside attributes

iplist-list

Type: List

Reference Object: */axapi/v3/cgnv6/fixed-nat/inside/iplist/{inside-ip-list}+{partition}*

Type: List

Reference Object: */axapi/v3/cgnv6/fixed-nat/inside/ipv4address/{inside-start-address}+{inside-end-address}+{inside-netmask}+{partition}*

ipv6address-list

Type: List

Reference Object: */axapi/v3/cgnv6/fixed-nat/inside/ipv6address/{inside-start-address}+{inside-end-address}+{inside-netmask}+{partition}*

iplist-list

Specification	Value
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-ip-list

Description Name of IP List used to specify Inside Users

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *iplist-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-config-template

Description Scaleout service-config template to bind (Scaleout service-config template name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *iplist-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

iplist-list_usable-nat-ports

Specification	Value
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

iplist-list_offset

Specification	Value
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

ipv4address-list

Specification	Value
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv4 Inside User End Address

Type: string

Format: ipv4-address

inside-netmask

Description IPv4 Netmask

Type: string

Format: ipv4-netmask-brief

inside-start-address

Description IPv4 Inside User Start Address

Type: string

Format: ipv4-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *ipv4address-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-config-template

Description Scaleout service-config template to bind (Scaleout service-config template name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *ipv4address-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

ipv4address-list_usable-nat-ports

Specification	Value
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

ipv4address-list_offset

Specification	Value
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

ipv6address-list

Specification	Value
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv6 Inside User End Address

Type: string

Format: ipv6-address

inside-netmask

Description Inside User IPv6 Netmask

Type: number

Range: 64-128

inside-start-address

Description IPv6 Inside User Start Address

Type: string

Format: ipv6-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *ipv6address-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-config-template

Description Scaleout service-config template to bind (Scaleout service-config template name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *ipv6address-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

ipv6address-list_usable-nat-ports

Specification	Value
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

ipv6address-list_offset

Specification	Value
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

2.26.70 cgnv6 fixed-nat inside iplist

Configure Fixed NAT with Inside IP List

iplist Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*inside-ip-list, partition*
Collection Name	*iplist-list*
Collection URI	/axapi/v3/cgnv6/fixed-nat/inside/iplist
Element Name	iplist
Element URI	/axapi/v3/cgnv6/fixed-nat/inside/iplist/{inside-ip-list}+{partition}
Element Attributes	iplist_attributes
Partition Visibility	shared
Schema	`iplist schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/fixed-nat/inside/iplist

iplist attributes

```
POST /axapi/v3/cgnv6/fixed-nat/inside/iplist/
Payload:
{
    "iplist": {
        "partition": "a",
        "inside-ip-list": "a",
        "nat-ip-list": "test1",
        "vrid": 1
    }
}
```

Create List

POST

/axapi/v3/cgnv6/fixed-nat/inside/iplist

iplist attributes

Get Object

GET

/axapi/v3/cgnv6/fixed-nat/inside/iplist/{inside-ip-list}+{partition}

iplist attributes

```
GET /axapi/v3/cgnv6/fixed-nat/inside/iplist/a+a
Reponse:
{
    "iplist": {
        "inside-ip-list": "a",
        "partition": "a",
        "nat-ip-list": "test1",
        "vrid": 1,
        "dynamic-pool-size": 0,
        "method": "use-least-nat-ips",
        "offset": {
            "random": 0
        },
        "respond-to-user-mac": 0,
        "uuid": "1fe2110c-089b-11f0-951d-a9cf5715f49c",
        "a10-url": "/axapi/v3/cgnv6/fixed-nat/inside/iplist/a+a"
    }
}
```

Get List

DELETE

/axapi/v3/cgnv6/fixed-nat/inside/iplist/{inside-ip-list}+{partition}

iplist attributes

```
DELETE /axapi/v3/cgnv6/fixed-nat/inside/iplist/a+a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

iplist-list

iplist-list is **JSON List** of *iplist attributes*

iplist-list : [

{ *iplist attributes* },

{ *iplist attributes* },

...

]

iplist attributes

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-ip-list

Description Name of IP List used to specify Inside Users

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-config-template

Description Scaleout service-config template to bind (Scaleout service-config template name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

usable-nat-ports

Specification	Value
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

offset

Specification	Value
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

2.26.71 cgnv6 fixed-nat inside ipv4address

Configure Fixed NAT

ipv4address Specification

Parameter	Value
Type	*Collection*

```

ipv4address-list

ipv4address-list is **JSON List** of *ipv4address attributes*

ipv4address-list : [

{ *ipv4address attributes* },

{ *ipv4address attributes* },

...

]

ipv4address attributes

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv4 Inside User End Address

Type: string

Format: ipv4-address

inside-netmask

Description IPv4 Netmask

Type: string

Format: ipv4-netmask-brief

inside-start-address

Description IPv4 Inside User Start Address

Type: string

Format: ipv4-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-config-template

Description Scaleout service-config template to bind (Scaleout service-config template name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

usable-nat-ports

Specification	Value
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

offset

Specification	Value
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

2.26.72 cgnv6 fixed-nat inside ipv6address

Configure Fixed NAT

ipv6address Specification

Parameter	Value
Type	*Collection*

ipv6address-list

ipv6address-list is **JSON List** of *ipv6address attributes*

ipv6address-list : [

{ *ipv6address attributes* },

{ *ipv6address attributes* },

...

]

ipv6address attributes

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv6 Inside User End Address

Type: string

Format: ipv6-address

inside-netmask

Description Inside User IPv6 Netmask

Type: number

Range: 64-128

inside-start-address

Description IPv6 Inside User Start Address

Type: string

Format: ipv6-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-config-template

Description Scaleout service-config template to bind (Scaleout service-config template name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

usable-nat-ports

Specification	Value
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

offset

Specification	Value
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

2.26.73 cgnv6 fixed-nat per-instance

Dynamic Fixed-NAT per VRID/UserGroup counters

per-instance Specification

Parameter	Value

server

Description: server is a **JSON Block**. Please see below for *radius_server*

Type: Object

Reference Object: */axapi/v3/cgnv6/lsn/radius/server*

radius_server

Specification	Value
Type	*object*

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default); 'delete-entry-and-sessions': Delete the entry and data sessions associated;

Type: string

Supported Values: ignore, delete-entry, delete-entry-and-sessions

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI;

Type: string

Supported Values: msisdn, imei, imsi

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

disable-reply

Description Toggle option for RADIUS reply packet(Default: Accounting response will be sent)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (Port number)

Type: number

Range: 1024-65535

remote

Description: remote is a **JSON Block**. Please see below for *radius_server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

radius_server_remote

Specification	Value
Type	*object*

ip-list

Type: List

radius_server_remote_ip-list

Specification	Value
Type	*list*
Block object keys	

ip-list-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

ip-list-name

Description IP-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ip-list-secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list-secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

radius_server_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'request-bad-secret-dropped': RADIUS Request Bad Secret Dropped; 'request-no-key-vap-dropped': RADIUS Request No Key Attribute Dropped;

'request-malformed-dropped': RADIUS Request Malformed Dropped; 'request-ignored': RADIUS Request Ignored; 'radius-table-full': RADIUS Request Dropped (Table Full); 'secret-not-configured-dropped': RADIUS Secret Not Configured Dropped; 'ha-standby-dropped': HA Standby Dropped; 'ipv6-prefix-length-mismatch': Framed IPV6 Prefix Length Mismatch; 'invalid-key': Radius Request has Invalid Key Field; 'smp-created': RADIUS SMP Created; 'smp-deleted': RADIUS SMP Deleted; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-in-rml': RADIUS SMP in RML; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received; 'acct-on-filters-full': RADIUS Acct On Request Ignored(Filters Full); 'acct-on-dup-request': Duplicate RADIUS Acct On Request; 'ip-mismatch-delete': Radius Entry IP Mismatch Delete; 'ip-add-race-drop': Radius Entry IP Add Race Drop; 'ha-sync-no-key-vap-dropped': HA Record Sync No key dropped; 'inter-card-msg-fail-drop': Inter-Card Message Fail Drop; 'radius-packets-redirected': RADIUS packets redirected (SO); 'radius-packets-redirect-fail-dropped': RADIUS packets dropped due to redirect failure (SO); 'radius-packets-process-local': RADIUS packets processed locally without redirection (SO); 'radius-packets-dropped-not-lo': RADIUS packets dropped dest not loopback (SO); 'radius-inter-card-dup-redir': RADIUS packet dropped as redirected by other blade (SO);

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-created, smp-deleted, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-in-rml, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

radius_server_attribute

Specification	Value
Type	*list*
Block object keys	

attribute-value

Description 'inside-ipv6-prefix': Framed IPv6 Prefix; 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

endpoint-independent-mapping

Type	*object*

rtp-stun-timeout

Description RTP/RTCP STUN timeout in minutes (Default is 5 minutes)

Type: number

Range: 2-10

Default: 5

sampling-enable

Type: List

sip-value

Description 'enable': Enable SIP ALG for LSN;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_sip_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'method-register': SIP Method REGISTER; 'method-invite': SIP Method INVITE; 'method-ack': SIP Method ACK; 'method-cancel': SIP Method CANCEL; 'method-bye': SIP Method BYE; 'method-options': SIP Method OPTIONS; 'method-prack': SIP Method PRACK; 'method-subscribe': SIP Method SUBSCRIBE; 'method-notify': SIP Method NOTIFY; 'method-publish': SIP Method PUBLISH; 'method-info': SIP Method INFO; 'method-refer': SIP Method REFER; 'method-message': SIP Method MESSAGE; 'method-update': SIP Method UPDATE; 'method-unknown': SIP Method UNKNOWN; 'parse-error': SIP Message Parse Error; 'req-uri-op-failrue': SIP Operate Request Uri Failure; 'via-hdr-op-failrue': SIP Operate Via Header Failure; 'contact-hdr-op-failrue': SIP Operate Contact Header Failure; 'from-hdr-op-failrue': SIP Operate From Header Failure; 'to-hdr-op-failrue': SIP Operate To Header Failure; 'route-hdr-op-failrue': SIP Operate Route Header Failure; 'record-route-hdr-op-failrue': SIP Operate Record-Route Header

Failure; 'content-length-hdr-op-failrue': SIP Operate Content-Length Failure; 'third-party-registration': SIP Third-Party Registration; 'conn-ext-creation-failure': SIP Create Connection Extension Failure; 'alloc-contact-port-failure': SIP Alloc Contact Port Failure; 'outside-contact-port-mismatch': SIP Outside Contact Port Mismatch NAT Port; 'inside-contact-port-mismatch': SIP Inside Contact Port Mismatch; 'third-party-sdp': SIP Third-Party SDP; 'sdp-process-candidate-failure': SIP Operate SDP Media Candidate Attribute Failure; 'sdp-op-failure': SIP Operate SDP Failure; 'sdp-alloc-port-map-success': SIP Alloc SDP Port Map Success; 'sdp-alloc-port-map-failure': SIP Alloc SDP Port Map Failure; 'modify-failure': SIP Message Modify Failure; 'rewrite-failure': SIP Message Rewrite Failure; 'tcp-out-of-order-drop': TCP Out-of-Order Drop; 'smp-conn-alloc-failure': SMP Helper Conn Alloc Failure; 'helper-found': SMP Helper Conn Found; 'helper-created': SMP Helper Conn Created; 'helper-deleted': SMP Helper Conn Already Deleted; 'helper-freed': SMP Helper Conn Freed; 'helper-failure': SMP Helper Failure;

Type: string

Supported Values: all, method-register, method-invite, method-ack, method-cancel, method-bye, method-options, method-prack, method-subscribe, method-notify, method-publish, method-info, method-refer, method-message, method-update, method-unknown, parse-error, req-uri-op-failrue, via-hdr-op-failrue, contact-hdr-op-failrue, from-hdr-op-failrue, to-hdr-op-failrue, route-hdr-op-failrue, record-route-hdr-op-failrue, content-length-hdr-op-failrue, third-party-registration, conn-ext-creation-failure, alloc-contact-port-failure, outside-contact-port-mismatch, inside-contact-port-mismatch, third-party-sdp, sdp-process-candidate-failure, sdp-op-failure, sdp-alloc-port-map-success, sdp-alloc-port-map-failure, modify-failure, rewrite-failure, tcp-out-of-order-drop, smp-conn-alloc-failure, helper-found, helper-created, helper-deleted, helper-freed, helper-failure

alg_esp

Specification	Value
Type	*object*

esp-value

Description 'enable': Enable ESP ALG for LSN; 'enable-with-ctrl': Enable ESP ALG for LSN with control session;

Type: string

Supported Values: enable, enable-with-ctrl

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_esp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-created': ESP Sessions Created; 'placeholder-debug': Placeholder Debug; 'nat-ip-conflict': NAT IP Conflict;

Type: string

Supported Values: all, session-created, placeholder-debug, nat-ip-conflict

alg_pptp

Specification	Value
Type	*object*

pptp-value

Description 'enable': Enable PPTP ALG for LSN;

Type: string

Supported Values: enable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_pptp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'calls-established': Calls Established; 'mismatched-pns-call-id': Mismatched PNS Call ID; 'gre-sessions-created': GRE Sessions Created; 'gre-sessions-freed': GRE Sessions Freed; 'no-gre-session-match': No Matching GRE Session; 'smp-sessions-created': SMP Sessions Created; 'smp-sessions-freed': SMP Sessions Freed; 'smp-session-creation-failure': SMP Session Creation Failures; 'extension-creation-failure': Extension Creation Failures; 'ha-sent': HA Info Sent; 'ha-rcv': HA Info Received; 'ha-no-mem': HA

Memory Allocation Failure; 'ha-conflict': HA Call ID Conflicts; 'ha-overwrite': HA Call ID Overwrites; 'ha-call-sent': HA Call Sent; 'ha-call-rcv': HA Call Received; 'ha-smp-conflict': HA SMP Conflicts; 'ha-smp-in-del-q': HA SMP Deleted; 'smp-app-type-mismatch': SMP ALG App Type Mismatch; 'quota-inc': Quota Incremented; 'quota-dec': Quota Decremented; 'quota-inc-not-found': Quota Not Found on Increment; 'quota-dec-not-found': Quota Not Found on Decrement; 'call-req-pns-call-id-mismatch': Call ID Mismatch on Call Request; 'call-reply-pns-call-id-mismatch': Call ID Mismatch on Call Reply; 'call-req-retransmit': Call Request Retransmit; 'call-req-new': Call Request New; 'call-req-ext-alloc-failure': Call Request Ext Alloc Failure; 'call-reply-call-id-unknown': Call Reply Unknown Client Call ID; 'call-reply-retransmit': Call Reply Retransmit; 'call-reply-retransmit-wrong-control': Call Reply Retransmit Wrong Control; 'call-reply-retransmit-acquired': Call Reply Retransmit Acquired; 'call-reply-ext-alloc-failure': Call Request Ext Alloc Failure; 'smp-client-call-id-mismatch': SMP Client Call ID Mismatch; 'smp-alloc-failure': SMP Session Alloc Failure; 'gre-conn-creation-failure': GRE Conn Alloc Failure; 'gre-conn-ext-creation-failure': GRE Conn Ext Alloc Failure; 'gre-no-fwd-route': GRE No Fwd Route; 'gre-no-rev-route': GRE No Rev Route; 'gre-no-control-conn': GRE No Control Conn; 'gre-conn-already-exists': GRE Conn Already Exists; 'gre-free-no-ext': GRE Free No Ext; 'gre-free-no-smp': GRE Free No SMP; 'gre-free-smp-app-type-mismatch': GRE Free SMP App Type Mismatch; 'control-freed': Control Session Freed; 'control-free-no-ext': Control Free No Ext; 'control-free-no-smp': Control Free No SMP; 'control-free-smp-app-type-mismatch': Control Free SMP App Type Mismatch;

Type: string

Supported Values: all, calls-established, mismatched-pns-call-id, gre-sessions-created, gre-sessions-freed, no-gre-session-match, smp-sessions-created, smp-sessions-freed, smp-session-creation-failure, extension-creation-failure, ha-sent, ha-rcv, ha-no-mem, ha-conflict, ha-overwrite, ha-call-sent, ha-call-rcv, ha-smp-conflict, ha-smp-in-del-q, smp-app-type-mismatch, quota-inc, quota-dec, quota-inc-not-found, quota-dec-not-found, call-req-pns-call-id-mismatch, call-reply-pns-call-id-mismatch, call-req-retransmit, call-req-new, call-req-ext-alloc-failure, call-reply-call-id-unknown, call-reply-retransmit, call-reply-retransmit-wrong-control, call-reply-retransmit-acquired, call-reply-ext-alloc-failure, smp-client-call-id-mismatch, smp-alloc-failure, gre-conn-creation-failure, gre-conn-ext-creation-failure, gre-no-fwd-route, gre-no-rev-route, gre-no-control-conn, gre-conn-already-exists, gre-free-no-ext, gre-free-no-smp, gre-free-smp-app-type-mismatch, control-freed, control-free-no-ext, control-free-no-smp, control-free-smp-app-type-mismatch

alg_rtsp

Specification	Value
Type	*object*

rtsp-value

Description 'enable': Enable RTSP ALG for LSN;

Type: string

Supported Values: enable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_rtsp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'streams-created': Streams Created; 'streams-freed': Streams Freed; 'stream-creation-failure': Stream Creation Failures; 'ports-allocated': Stream Client Ports Allocated; 'ports-freed': Stream Client Ports Freed; 'port-allocation-failure': Stream Client Port Allocation Failures; 'unknown-client-port-from-server': Server Replies With Unknown Client Ports; 'data-session-created': Data Session Created; 'data-session-freed': Data Session Freed; 'no-session-mem': Data Session Creation Failures; 'ha-sent': HA Sent; 'ha-rcv': HA RCV; 'smp-inserted': SMP Session Inserted; 'smp-removed': SMP Session Removed; 'smp-reused': SMP Session Reused; 'nat-pool-standby': New Session NAT Pool Standby; 'smp-deleted': New Session SMP Already Deleted; 'control-closed': New Session Closed; 'data-session-exists': New Session Already Exists; 'data-session-creation-failure': New Data Session Creation Failure; 'rtp-reversed': RTP Reverse Creation; 'rtcp-reversed': RTCP Reverse Creation; 'cross-cpu-sent': Cross CPU Sent; 'cross-cpu-rcv': Cross CPU Received; 'cross-cpu-no-session': Cross CPU No Session Found; 'cross-cpu-created': Cross CPU Creation; 'cross-cpu-rcv-failure': Cross CPU Receive Failure; 'data-free-smp-retry-lookup': Data Session Free SMP Retry Lookup; 'data-free-smp-not-found': Data Session Free SMP Not Found; 'ha-streams-sent': HA Streams Sent; 'ha-streams-rcv': HA Streams Received; 'ha-stream-incompatible': HA Incompatible Streams Received; 'ha-stream-exists': HA Stream Already Exists; 'ha-port-allocation-failure': HA Stream Port Allocation Failure; 'ha-data-session-sent': HA Data Session Sent; 'ha-data-session-rcv': HA Data Session Received; 'ha-data-no-smp': HA Data Session SMP Not Found; 'ha-control-closed': HA New Data Control Session Closed; 'ha-data-exists': HA New Data Session Already Exists; 'ha-extension-failure': HA Conn Extension Failure; 'ha-stream-smp-reused': HA SMP Session Reused; 'ha-stream-smp-acquire-failure': HA SMP Session Acquire Failure; 'smp-app-type-mismatch': SMP ALG App Type Mismatch;

Type: string

Supported Values: all, streams-created, streams-freed, stream-creation-failure, ports-allocated, ports-freed, port-allocation-failure, unknown-client-port-from-server, data-session-created, data-session-freed, no-session-mem, ha-sent, ha-rcv, smp-inserted, smp-removed, smp-reused, nat-pool-standby, smp-deleted, control-closed, data-session-exists, data-session-creation-failure, rtp-reversed, rtcp-reversed, cross-cpu-sent, cross-cpu-rcv, cross-cpu-no-session, cross-cpu-created, cross-cpu-rcv-failure, data-free-smp-retry-lookup, data-free-smp-not-found, ha-streams-sent, ha-streams-rcv, ha-stream-incompatible, ha-stream-exists, ha-port-allocation-failure, ha-data-session-sent, ha-data-session-rcv, ha-data-no-smp, ha-control-closed, ha-data-exists, ha-extension-failure, ha-stream-smp-reused, ha-stream-smp-acquire-failure, smp-app-type-mismatch

alg_h323

Specification	Value
Type	*object*

h323-value

Description 'enable': Enable H323 ALG for LSN;

Type: string

Supported Values: enable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_h323_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'h225ras-message': H323 H225 RAS Message; 'h225cs-message': H323 H225 Call Signaling Message; 'h245ctl-message': H323 H245 Media Control Message; 'h245-tunneled': H323 H245 Tunnelled Message; 'fast-start': H323 FastStart; 'parse-error': Message Parse Error; 'message-cross-multi-packets': H323 Message Cross Multiple Packets; 'conn-ext-creation-failure': H323 Packet Rewrite Failure; 'rewrite-failure': H323 Message Rewrite Failure; 'tcp-out-of-order-drop': TCP Out-of-Order Drop; 'h245-dynamic-addr-exceed': H323 H245 Dynamic Address Exceed;

Type: string

Supported Values: all, h225ras-message, h225cs-message, h245ctl-message, h245-tunneled, fast-start, parse-error, message-cross-multi-packets, conn-ext-creation-failure, rewrite-failure, tcp-out-of-order-drop, h245-dynamic-addr-exceed

alg_rtp

Specification	Value
Type	*object*

rtp-stun-timeout

Description RTP/RTCP STUN timeout (default: 5 minutes)}

Type: number

Range: 2-10

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_dns

Specification	Value
Type	*object*

dns-value

Description 'disable': Disable DNS ALG for LSN;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_tftp

Specification	Value
Type	*object*

sampling-enable

Type: List

tftp-value

Description 'enable': Enable TFTP ALG for LSN;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_tftp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-created': TFTP Client Sessions Created; 'helper-created': TFTP Helper Sessions created; 'helper-freed': TFTP Helper Sessions freed; 'helper-freed-used': TFTP Helper Sessions freed used; 'helper-freed-unused': TFTP Helper Sessions freed unused; 'helper-already-used': TFTP Helper Session already used; 'helper-in-rml': TFTP Helper Session in Remove List;

Type: string

Supported Values: all, session-created, helper-created, helper-freed, helper-freed-used, helper-freed-unused, helper-already-used, helper-in-rml

alg_mgcp

Specification	Value
Type	*object*

mgcp-value

Description 'enable': Enable MGCP ALG for LSN;

Type: string

Supported Values: enable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_mgcp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'auep': MGCP AUEP; 'aucx': MGCP AUCX; 'crcx': MGCP CRCX; 'dlcx': MGCP DLCX; 'epcf': MGCP EPCF; 'mdcx': MGCP MDCX; 'ntfy': MGCP NTFY; 'rqnt': MGCP RQNT; 'rsip': MGCP RSIP; 'parse-error': MGCP Message Parse Error; 'conn-ext-creation-failure': MGCP Create Connection Extension Failure; 'third-party-sdp': MGCP Third-Party SDP; 'sdp-process-candidate-failure': MGCP Operate SDP Media Candidate Attribute Failure; 'sdp-op-failure': MGCP Operate SDP Failure; 'sdp-alloc-port-map-success': MGCP Alloc SDP Port Map Success; 'sdp-alloc-port-map-failure': MGCP Alloc SDP Port Map Failure; 'modify-failure': MGCP Message Modify Failure; 'rewrite-failure': MGCP Message Rewrite Failure; 'tcp-out-of-order-drop': TCP Out-of-Order Drop;

Type: string

Supported Values: all, auep, aucx, crcx, dlcx, epcf, mdcx, ntfy, rqnt, rsip, parse-error, conn-ext-creation-failure, third-party-sdp, sdp-process-candidate-failure, sdp-op-failure, sdp-alloc-port-map-success, sdp-alloc-port-map-failure, modify-failure, rewrite-failure, tcp-out-of-order-drop

inside

Specification	Value
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *inside_source*

Type: Object

Reference Object: */axapi/v3/cgnv6/lsn/inside/source*

inside_source

Specification	Value
Type	*object*

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global

Specification	Value
Type	*object*

attempt-port-preservation

Description 'disable': Don't attempt port preservation for NAT allocation;

Type: string

Supported Values: disable

enhanced-user-tracking

Description Enable enhanced user tracking and visibility (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hairpinning

Description 'filter-none': Allow self-hairpinning (default). Warning: Only applies to UDP. TCP will use filter-self-ip-port; 'filter-self-ip': Block hairpinning to the user's own IP; 'filter-self-ip-port': Block hairpinning to the user's same IP and port combination;

Type: string

Supported Values: filter-none, filter-self-ip, filter-self-ip-port

Default: filter-none

half-close-timeout

Description Set LSN Half close timeout (Half close timeout in seconds (default not set))

Type: number

Range: 2-3000

icmp

Description: icmp is a **JSON Block**. Please see below for *global_icmp*

Type: Object

inbound-refresh

Description 'enable': Enable NAT Inbound Refresh Behavior; 'disable': Disable NAT Inbound Refresh Behavior;

Type: string

Supported Values: enable, disable

Default: enable

inbound-refresh-full-cone

Description 'enable': Enable NAT full cone refresh for inbound flows; 'disable': Disable NAT full cone refresh for inbound flows;

Type: string

Supported Values: enable, disable

Default: enable

ip-selection

Description 'random': Random (long-run uniformly distributed) NAT IP selection (default); 'round-robin': Round-robin; 'least-used-strict': Fewest NAT ports used; 'least-udp-used-strict': Fewest UDP NAT ports used; 'least-tcp-used-strict': Fewest TCP NAT ports used; 'least-reserved-strict': Fewest NAT ports reserved; 'least-udp-reserved-strict': Fewest UDP NAT ports reserved; 'least-tcp-reserved-strict': Fewest TCP NAT ports reserved; 'least-users-strict': Fewest number of users;

Type: string

Supported Values: random, round-robin, least-used-strict, least-udp-used-strict, least-tcp-used-strict, least-reserved-strict, least-udp-reserved-strict, least-tcp-reserved-strict, least-users-strict

Default: random

logging

Description: logging is a **JSON Block**. Please see below for *global_logging*

Type: Object

port-batching

Description: port-batching is a **JSON Block**. Please see below for *global_port-batching*

Type: Object

sampling-enable

Type: List

strictly-sticky-nat

Description Strictly adheres to sticky-nat (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-timeout

Description Set LSN SYN timeout (SYN idle-timeout in seconds (default: 4 seconds))

Type: number

Range: 2-30

Default: 4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_icmp

Specification	Value
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

global_logging

Specification	Value
Type	*object*

default-template

Description Bind the default NAT logging template for LSN (Bind a NAT logging template)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/logging*

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-name and shared are mutually exclusive

Reference Object: */axapi/v3/partition*

pool

Type: List

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared and partition-name are mutually exclusive

global_logging_pool

Specification	Value
Type	*list*
Block object keys	

pool-name

Description NAT pool

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/nat/pool*

template

Description Bind a NAT logging template

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/logging*

global_port-batching

Specification	Value
Type	*object*

size

Description '1': Allocate 1 port at a time (default); '8': Allocate 8 ports at a time; '16': Allocate 16 ports at a time; '32': Allocate 32 ports at a time; '64': Allocate 64 ports at a time; '128': Allocate 128 ports at a time; '256': Allocate 256 ports at a time; '512': Allocate 512 ports at a time;

Type: string

Supported Values: 1, 8, 16, 32, 64, 128, 256, 512

Default: 1

tcp-time-wait-interval

Description Minutes before TCP NAT ports can be reused (default: 2)

Type: number

Range: 0-10

Default: 2

global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60))))

Type: number

Range: 0-1460

Default: 456

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'subtract': Specify the value to subtract from the TCP MSS; 'none': No TCP MSS clamping (default);

Type: string

Supported Values: fixed, subtract, none

Default: none

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: not configured)

Type: number

Range: 0-1460

mss-value

Description The max value allowed for the TCP MSS (default: not configured)},

Type: number

Range: 0-1460

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_reset-on-error

Specification	Value
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

data-sessions

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global attributes

attempt-port-preservation

Description 'disable': Don't attempt port preservation for NAT allocation;

Type: string

Supported Values: disable

enhanced-user-tracking

Description Enable enhanced user tracking and visibility (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hairpinning

Description 'filter-none': Allow self-hairpinning (default). Warning: Only applies to UDP. TCP will use filter-self-ip-port; 'filter-self-ip': Block hairpinning to the user's own IP; 'filter-self-ip-port': Block hairpinning to the user's same IP and port combination;

Type: string

Supported Values: filter-none, filter-self-ip, filter-self-ip-port

Default: filter-none

half-close-timeout

Description Set LSN Half close timeout (Half close timeout in seconds (default not set))

Type: number

Range: 2-3000

icmp

Description: icmp is a **JSON Block**. Please see below for *icmp*

Type: Object

inbound-refresh

Description 'enable': Enable NAT Inbound Refresh Behavior; 'disable': Disable NAT Inbound Refresh Behavior;

Type: string

Supported Values: enable, disable

Default: enable

inbound-refresh-full-cone

Description 'enable': Enable NAT full cone refresh for inbound flows; 'disable': Disable NAT full cone refresh for inbound flows;

Type: string

Supported Values: enable, disable

Default: enable

ip-selection

Description 'random': Random (long-run uniformly distributed) NAT IP selection (default); 'round-robin': Round-robin; 'least-used-strict': Fewest NAT ports used; 'least-udp-used-strict': Fewest UDP NAT ports used; 'least-tcp-used-strict': Fewest TCP NAT ports used; 'least-reserved-strict': Fewest NAT ports reserved; 'least-udp-reserved-strict': Fewest UDP NAT ports reserved; 'least-tcp-reserved-strict': Fewest TCP NAT ports reserved; 'least-users-strict': Fewest number of users;

Type: string

Supported Values: random, round-robin, least-used-strict, least-udp-used-strict, least-tcp-used-strict, least-reserved-strict, least-udp-reserved-strict, least-tcp-reserved-strict, least-users-strict

Default: random

logging

Supported Values: true, false, 1, 0

Default: 0

syn-timeout

Description Set LSN SYN timeout (SYN idle-timeout in seconds (default: 4 seconds))

Type: number

Range: 2-30

Default: 4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp

Specification	Value
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

logging

Specification	Value
Type	*object*

default-template

Description Bind the default NAT logging template for LSN (Bind a NAT logging template)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/logging*

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-name and shared are mutually exclusive

Reference Object: */axapi/v3/partition*

pool

Type: List

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared and partition-name are mutually exclusive

logging_pool

Specification	Value
Type	*list*
Block object keys	

pool-name

Description NAT pool

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/nat/pool*

template

Description Bind a NAT logging template

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/logging*

port-batching

Specification	Value
Type	*object*

size

Description '1': Allocate 1 port at a time (default); '8': Allocate 8 ports at a time; '16': Allocate 16 ports at a time; '32': Allocate 32 ports at a time; '64': Allocate 64 ports at a time; '128': Allocate 128 ports at a time; '256': Allocate 256 ports at a time; '512': Allocate 512 ports at a time;

Type: string

Supported Values: 1, 8, 16, 32, 64, 128, 256, 512

Default: 1

tcp-time-wait-interval

Description Minutes before TCP NAT ports can be reused (default: 2)

Type: number

Range: 0-10

Default: 2

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

lsn-lid-list

lsn-lid-list is **JSON List** of *lsn-lid attributes*

lsn-lid-list : [

{ *lsn-lid attributes* },

{ *lsn-lid attributes* },

...

]

lsn-lid attributes

conn-rate-limit

Description: conn-rate-limit is a **JSON Block**. Please see below for *conn-rate-limit*

Type: Object

ds-lite

Description: ds-lite is a **JSON Block**. Please see below for *ds-lite*

Type: Object

extended-user-quota

Description: extended-user-quota is a **JSON Block**. Please see below for *extended-user-quota*

Type: Object

lid-number

Description LSN Lid

Type: number

Range: 1-1023

lsn-rule-list

Description: lsn-rule-list is a **JSON Block**. Please see below for *lsn-rule-list*

Type: Object

name

Description LSN Lid Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

override

Description 'none': Apply source NAT if configured (default); 'drop': Drop packets that match this LSN lid; 'pass-through': Layer-3 route packets that match this LSN lid and do not apply source NAT;

Type: string

Supported Values: none, drop, pass-through

Default: none

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-nat-pool

Description: source-nat-pool is a **JSON Block**. Please see below for *source-nat-pool*

Type: Object

user-quota

Description: user-quota is a **JSON Block**. Please see below for *user-quota*

Type: Object

user-quota-prefix-length

Description NAT64/DS-Lite user quota prefix length (Prefix Length (Default: Uses the global NAT64/DS-Lite configured value))

Type: number

Range: 1-128

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

extended-user-quota

Specification	Value
Type	*object*

tcp

Type: List

udp

Type: List

extended-user-quota_udp

Specification	Value
Type	*list*
Block object keys	

udp-service-port

Description Port (Port Value)

Type: number

Range: 1-65535

udp-sessions

Description Number of Extended Quota sessions allowed for this service

Type: number

Range: 1-255

extended-user-quota_tcp

Specification	Value
Type	*list*
Block object keys	

tcp-service-port

Description Port (Port Value)

Type: number

Range: 1-65535

tcp-sessions

Description Number of Extended Quota sessions allowed for this service

Type: number

Range: 1-255

ds-lite

Specification	Value
Type	*object*

inside-src-permit-list

Description Class-List of IPv4 addresses permitted (Class-list to match for DS-Lite)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-quota

Specification	Value
Type	*object*

icmp

Description User Quota for ICMP identifiers (NAT port quota per user (default: not configured))

Type: number

Range: 1-64000

quota-tcp

Description: quota-tcp is a **JSON Block**. Please see below for *user-quota_quota-tcp*

Type: Object

quota-udp

Description: quota-udp is a **JSON Block**. Please see below for *user-quota_quota-udp*

Type: Object

session

Description User Quota for number of data sessions

Type: number

Range: 1-2147483647

session-tcp

Description User Quota for number of TCP sessions

Type: number

Range: 1-2147483647

session-udp

Description User Quota for number of UDP sessions

Type: number

Range: 1-2147483647

user-quota_quota-udp

Specification	Value
Type	*object*

udp-quota

Description NAT port quota per user (default: not configured)

Type: number

Range: 1-64000

udp-reserve

Description Number of ports to reserve per user (default: same as user-quota value) (Reserved quota per user (default: same as user-quota value))

Type: number

Range: 0-64000

user-quota_quota-tcp

Specification	Value
Type	*object*

tcp-quota

Description NAT port quota per user (default: not configured)

Type: number

Range: 1-64000

tcp-reserve

Description Number of ports to reserve per user (default: same as user-quota value) (Reserved quota per user (default: same as user-quota value))

Type: number

Range: 0-64000

source-nat-pool

Specification	Value
Type	*object*

pool-name

Description Source NAT Pool or Pool-Group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Use a shared source NAT pool or pool-group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Specification	Value
Type	*object*

conn-rate-limit-val

Description Maximum connections per second (Default: No limit)

Type: number

Range: 1-65535

lsn-rule-list

Specification	Value
Type	*object*

destination

Description Apply LSN Rule-List on Destination (LSN Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/lsn-rule-list*

2.26.141 cgnv6 lsn per-instance

Dynamic LSN per VRID/UserGroup counters

per-instance Specification

Parameter	Value
Type	*Configuration Resource*

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default); 'delete-entry-and-sessions': Delete the entry and data sessions associated;

Type: string

Supported Values: ignore, delete-entry, delete-entry-and-sessions

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI;

Type: string

Supported Values: msisdn, imei, imsi

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

disable-reply

Description Toggle option for RADIUS reply packet(Default: Accounting response will be sent)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (Port number)

Type: number

Range: 1024-65535

remote

Description: remote is a **JSON Block**. Please see below for *server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

disable-reply

Description Toggle option for RADIUS reply packet(Default: Accounting response will be sent)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (Port number)

Type: number

Range: 1024-65535

remote

Description: remote is a **JSON Block**. Please see below for *remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

remote

Specification	Value
Type	*object*

ip-list

Type: List

remote_ip-list

Specification	Value
Type	*list*
Block object keys	

ip-list-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

ip-list-name

Description IP-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ip-list-secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list-secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'request-bad-secret-dropped': RADIUS Request Bad Secret Dropped; 'request-no-key-vap-dropped': RADIUS Request No Key Attribute Dropped; 'request-malformed-dropped': RADIUS Request Malformed Dropped; 'request-ignored': RADIUS Request Ignored; 'radius-table-full': RADIUS Request Dropped (Table Full); 'secret-not-configured-dropped': RADIUS Secret Not Configured Dropped; 'ha-standby-dropped': HA Standby Dropped; 'ipv6-prefix-length-mismatch': Framed IPV6 Prefix Length Mismatch; 'invalid-key': Radius Request has Invalid Key Field; 'smp-created': RADIUS SMP Created; 'smp-deleted': RADIUS SMP Deleted; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-in-rml': RADIUS SMP in RML; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received; 'acct-on-filters-full': RADIUS Acct On Request Ignored(Filters Full); 'acct-on-dup-request': Duplicate RADIUS Acct On Request; 'ip-mismatch-delete': Radius Entry IP Mismatch Delete; 'ip-add-race-drop': Radius Entry IP Add Race Drop; 'ha-sync-no-key-vap-dropped': HA Record Sync No key dropped; 'inter-card-msg-fail-drop': Inter-Card Message Fail Drop; 'radius-packets-redirected': RADIUS packets redirected (SO); 'radius-packets-redirect-fail-dropped': RADIUS packets dropped due to redirect failure (SO); 'radius-packets-process-local': RADIUS packets processed locally without redirection (SO); 'radius-packets-dropped-not-lo': RADIUS packets dropped dest not loopback (SO); 'radius-inter-card-dup-redir': RADIUS packet dropped as redirected by other blade (SO);

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-created, smp-deleted, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-in-rml, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

attribute

Specification	Value
Type	*list*
Block object keys	

attribute-value

Description 'inside-ipv6-prefix': Framed IPv6 Prefix; 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

default_rule-cfg_tcp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

default_rule-cfg_udp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29':

011101; ‘30’: 011110; ‘31’: 011111; ‘32’: 100000; ‘33’: 100001; ‘34’: 100010; ‘35’: 100011; ‘36’: 100100; ‘37’: 100101; ‘38’: 100110; ‘39’: 100111; ‘40’: 101000; ‘41’: 101001; ‘42’: 101010; ‘43’: 101011; ‘44’: 101100; ‘45’: 101101; ‘46’: 101110; ‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

default_rule-cfg_icmp-others-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

ip-list

Specification	Value
Type	*list*
Block object keys	

ipv4-addr

Description Configure a Specific Rule-Set (IP Network Address)

Type: string

Format: ipv4-cidr

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': some help string;

Type: string

Supported Values: all, placeholder

ip-list_rule-cfg

Specification	Value
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *ip-list_rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *ip-list_rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protocol; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocol; 'dscp': Match DSCP Value; 'default': Default Action;

Type: string

Supported Values: tcp, udp, icmp, others, dscp, default

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *ip-list_rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *ip-list_rule-cfg_udp-cfg*

Type: Object

ip-list_rule-cfg_dscp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ip-list_rule-cfg_tcp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template; 'idle-timeout': Configure idle timeout;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template, idle-timeout

domain

Description DNAT Using IP of a Domain (Domain Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: domain and ipv4-list are mutually exclusive

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000;

‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

fast

Description ‘fast’: Fast Aging;

Type: string

Supported Values: fast

Mutual Exclusion: fast and timeout-val are mutually exclusive

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv4-list and domain are mutually exclusive

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

timeout-val

Description Timeout in seconds

Type: number

Range: 2-129600

Mutual Exclusion: timeout-val and fast are mutually exclusive

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

ip-list_rule-cfg_udp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'idle-timeout': Configure idle timeout;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, idle-timeout

domain

Description DNAT Using IP of a Domain (Domain Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: domain and ipv4-list are mutually exclusive

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55':

110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

fast

Description ‘fast’: Fast Aging;

Type: string

Supported Values: fast

Mutual Exclusion: fast and timeout-val are mutually exclusive

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv4-list and domain are mutually exclusive

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

timeout-val

Description Timeout in seconds

Type: number

Range: 2-129600

Mutual Exclusion: timeout-val and fast are mutually exclusive

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

ip-list_rule-cfg_icmp-others-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

domain

Description DNAT Using IP of a Domain (Domain Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: domain and ipv4-list are mutually exclusive

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv4-list and domain are mutually exclusive

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

domain-list-name-list

Specification	Value
Type	*list*
Block object keys	

name-domain-list

Description Configure a Specific Rule-Set (Domain List Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-list-name-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': some help string;

Type: string

Supported Values: all, placeholder

domain-list-name-list_rule-cfg

Specification	Value
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *domain-list-name-list_rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *domain-list-name-list_rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protocol; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocol; 'dscp': Match DSCP Value; 'default': Default Action;

Type: string

Supported Values: tcp, udp, icmp, others, dscp, default

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *domain-list-name-list_rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *domain-list-name-list_rule-cfg_udp-cfg*

Type: Object

domain-list-name-list_rule-cfg_dscp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110;

‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description ‘default’: Default dscp (000000); ‘af11’: AF11 (001010); ‘af12’: AF12 (001100); ‘af13’: AF13 (001110); ‘af21’: AF21 (010010); ‘af22’: AF22 (010100); ‘af23’: AF23 (010110); ‘af31’: AF31 (011010); ‘af32’: AF32 (011100); ‘af33’: AF33 (011110); ‘af41’: AF41 (100010); ‘af42’: AF42 (100100); ‘af43’: AF43 (100110); ‘cs1’: CS1 (001000); ‘cs2’: CS2 (010000); ‘cs3’: CS3 (011000); ‘cs4’: CS4 (100000); ‘cs5’: CS5 (101000); ‘cs6’: CS6 (110000); ‘cs7’: CS7 (111000); ‘ef’: EF (101110); ‘0’: 000000; ‘1’: 000001; ‘2’: 000010; ‘3’: 000011; ‘4’: 000100; ‘5’: 000101; ‘6’: 000110; ‘7’: 000111; ‘8’: 001000; ‘9’: 001001; ‘10’: 001010; ‘11’: 001011; ‘12’: 001100; ‘13’: 001101; ‘14’: 001110; ‘15’: 001111; ‘16’: 010000; ‘17’: 010001; ‘18’: 010010; ‘19’: 010011; ‘20’: 010100; ‘21’: 010101; ‘22’: 010110; ‘23’: 010111; ‘24’: 011000; ‘25’: 011001; ‘26’: 011010; ‘27’: 011011; ‘28’: 011100; ‘29’: 011101; ‘30’: 011110; ‘31’: 011111; ‘32’: 100000; ‘33’: 100001; ‘34’: 100010; ‘35’: 100011; ‘36’: 100100; ‘37’: 100101; ‘38’: 100110; ‘39’: 100111; ‘40’: 101000; ‘41’: 101001; ‘42’: 101010; ‘43’: 101011; ‘44’: 101100; ‘45’: 101101; ‘46’: 101110; ‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

domain-list-name-list_rule-cfg_tcp-cfg

Specification	Value
Type	*object*

action-cfg

Description ‘action’: LSN Rule-List Action; ‘no-action’: Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description ‘dnat’: Apply Dest NAT; ‘drop’: Drop the Packets; ‘one-to-one-snat’: Apply one-to-one source NAT for the packets; ‘pass-through’: Pass the Packets Through; ‘snat’: Redirect the Packets to a Different Source NAT Pool; ‘set-dscp’: To set dscp value for the packets; ‘template’: Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

domain-list-name-list_rule-cfg_udp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

domain-list-name-list_rule-cfg_icmp-others-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

domain-name-list

Specification	Value
Type	*list*
Block object keys	

name-domain

Description Configure a Specific Rule-Set (Domain Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-name-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': some help string;

Type: string

Supported Values: all, placeholder

domain-name-list_rule-cfg

Specification	Value
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *domain-name-list_rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *domain-name-list_rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protocol; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocol; 'dscp': Match DSCP Value; 'default': Default Action;

Type: string

Supported Values: tcp, udp, icmp, others, dscp, default

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *domain-name-list_rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *domain-name-list_rule-cfg_udp-cfg*

Type: Object

domain-name-list_rule-cfg_dscp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

domain-name-list_rule-cfg_tcp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

domain-name-list_rule-cfg_udp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

domain-name-list_rule-cfg_icmp-others-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41':

AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

rule-cfg_tcp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41':

AF41 (100010); ‘af42’: AF42 (100100); ‘af43’: AF43 (100110); ‘cs1’: CS1 (001000); ‘cs2’: CS2 (010000); ‘cs3’: CS3 (011000); ‘cs4’: CS4 (100000); ‘cs5’: CS5 (101000); ‘cs6’: CS6 (110000); ‘cs7’: CS7 (111000); ‘ef’: EF (101110); ‘0’: 000000; ‘1’: 000001; ‘2’: 000010; ‘3’: 000011; ‘4’: 000100; ‘5’: 000101; ‘6’: 000110; ‘7’: 000111; ‘8’: 001000; ‘9’: 001001; ‘10’: 001010; ‘11’: 001011; ‘12’: 001100; ‘13’: 001101; ‘14’: 001110; ‘15’: 001111; ‘16’: 010000; ‘17’: 010001; ‘18’: 010010; ‘19’: 010011; ‘20’: 010100; ‘21’: 010101; ‘22’: 010110; ‘23’: 010111; ‘24’: 011000; ‘25’: 011001; ‘26’: 011010; ‘27’: 011011; ‘28’: 011100; ‘29’: 011101; ‘30’: 011110; ‘31’: 011111; ‘32’: 100000; ‘33’: 100001; ‘34’: 100010; ‘35’: 100011; ‘36’: 100100; ‘37’: 100101; ‘38’: 100110; ‘39’: 100111; ‘40’: 101000; ‘41’: 101001; ‘42’: 101010; ‘43’: 101011; ‘44’: 101100; ‘45’: 101101; ‘46’: 101110; ‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_udp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_icmp-others-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

rule-cfg_tcp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_udp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_icmp-others-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_icmp-others-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

2.26.171 cgnv6 lsn-rule-list domain-name oper

Operational Status for the object domain-name

domain-name Specification

Parameter	Value
Type	*Collection*
Collection Name	*domain-name-list*

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41':

AF41 (100010); ‘af42’: AF42 (100100); ‘af43’: AF43 (100110); ‘cs1’: CS1 (001000); ‘cs2’: CS2 (010000); ‘cs3’: CS3 (011000); ‘cs4’: CS4 (100000); ‘cs5’: CS5 (101000); ‘cs6’: CS6 (110000); ‘cs7’: CS7 (111000); ‘ef’: EF (101110); ‘0’: 000000; ‘1’: 000001; ‘2’: 000010; ‘3’: 000011; ‘4’: 000100; ‘5’: 000101; ‘6’: 000110; ‘7’: 000111; ‘8’: 001000; ‘9’: 001001; ‘10’: 001010; ‘11’: 001011; ‘12’: 001100; ‘13’: 001101; ‘14’: 001110; ‘15’: 001111; ‘16’: 010000; ‘17’: 010001; ‘18’: 010010; ‘19’: 010011; ‘20’: 010100; ‘21’: 010101; ‘22’: 010110; ‘23’: 010111; ‘24’: 011000; ‘25’: 011001; ‘26’: 011010; ‘27’: 011011; ‘28’: 011100; ‘29’: 011101; ‘30’: 011110; ‘31’: 011111; ‘32’: 100000; ‘33’: 100001; ‘34’: 100010; ‘35’: 100011; ‘36’: 100100; ‘37’: 100101; ‘38’: 100110; ‘39’: 100111; ‘40’: 101000; ‘41’: 101001; ‘42’: 101010; ‘43’: 101011; ‘44’: 101100; ‘45’: 101101; ‘46’: 101110; ‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

rule-cfg_tcp-cfg

Specification	Value
Type	*object*

action-cfg

Description ‘action’: LSN Rule-List Action; ‘no-action’: Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description ‘dnat’: Apply Dest NAT; ‘drop’: Drop the Packets; ‘one-to-one-snat’: Apply one-to-one source NAT for the packets; ‘pass-through’: Pass the Packets Through; ‘snat’: Redirect the Packets to a Different Source NAT Pool; ‘set-dscp’: To set dscp value for the packets; ‘template’: Template; ‘idle-timeout’: Configure idle timeout;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template, idle-timeout

domain

Description DNAT Using IP of a Domain (Domain Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: domain and ipv4-list are mutually exclusive

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

fast

Description 'fast': Fast Aging;

Type: string

Supported Values: fast

Mutual Exclusion: fast and timeout-val are mutually exclusive

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv4-list and domain are mutually exclusive

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

timeout-val

Description Timeout in seconds

Type: number

Range: 2-129600

Mutual Exclusion: timeout-val and fast are mutually exclusive

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_udp-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'idle-timeout': Configure idle timeout;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, idle-timeout

domain

Description DNAT Using IP of a Domain (Domain Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: domain and ipv4-list are mutually exclusive

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

fast

Description 'fast': Fast Aging;

Type: string

Supported Values: fast

Mutual Exclusion: fast and timeout-val are mutually exclusive

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv4-list and domain are mutually exclusive

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

timeout-val

Description Timeout in seconds

Type: number

Range: 2-129600

Mutual Exclusion: timeout-val and fast are mutually exclusive

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_icmp-others-cfg

Specification	Value
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

domain

Description DNAT Using IP of a Domain (Domain Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: domain and ipv4-list are mutually exclusive

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv4-list and domain are mutually exclusive

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.26.182 cgnv6 lsn tcp mss-clamp

LSN TCP MSS Clamping

mss-clamp Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	mss-clamp
Element URI	/axapi/v3/cgnv6/lsn/tcp/mss-clamp
Element Attributes	mss-clamp_attributes
Partition Visibility	shared
Schema	`mss-clamp schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/lsn/tcp/mss-clamp

mss-clamp attributes

```
POST /axapi/v3/cgnv6/lsn/tcp/mss-clamp
Payload:
{
    "mss-clamp": {
        "mss-clamp-type": "fixed",
        "mss-value": 0
    }
}
```

Get Object

GET

/axapi/v3/cgnv6/lsn/tcp/mss-clamp

mss-clamp attributes

```
GET /axapi/v3/cgnv6/lsn/tcp/mss-clamp
Reponse:
{
    "mss-clamp": {
        "mss-clamp-type": "fixed",
        "mss-value": 0,
        "uuid": "c5ed13a4-0890-11f0-a250-a9cf5715f49c",
        "a10-url": "/axapi/v3/cgnv6/lsn/tcp/mss-clamp"
    }
}
```

Modify Object

POST

/axapi/v3/cgnv6/lsn/tcp/mss-clamp

mss-clamp attributes

Replace Object

PUT

/axapi/v3/cgnv6/lsn/tcp/mss-clamp

mss-clamp attributes

```
PUT /axapi/v3/cgnv6/lsn/tcp/mss-clamp
Payload:
{
    "mss-clamp": {
        "mss-clamp-type": "fixed",
        "mss-value": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/cgnv6/lsn/tcp/mss-clamp

mss-clamp attributes

```
DELETE /axapi/v3/cgnv6/lsn/tcp/mss-clamp
Reponse:
{
    "response": {
        "http-status": 200,
```

(continues on next page)

(continued from previous page)

```
        "status": "OK",
        "msg": "Success"
    }
}
```

mss-clamp attributes

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60))))

Type: number

Range: 0-1460

Default: 456

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'subtract': Specify the value to subtract from the TCP MSS; 'none': No TCP MSS clamping (default);

Type: string

Supported Values: fixed, subtract, none

Default: none

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: not configured)

Type: number

Range: 0-1460

mss-value

Description The max value allowed for the TCP MSS (default: not configured)},

Type: number

Range: 0-1460

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.26.183 cgnv6 lsn tcp reset-on-error

Send TCP resets for invalid sessions (Default: enabled)

reset-on-error Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	reset-on-error
Element URI	/axapi/v3/cgnv6/lsn/tcp/reset-on-error
Element Attributes	reset-on-error_attributes
Partition Visibility	shared
Schema	`reset-on-error schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/lsn/tcp/reset-on-error

reset-on-error attributes

```
POST /axapi/v3/cgnv6/lsn/tcp/reset-on-error
Payload:
{
    "reset-on-error": {
        "outbound": "disable"
    }
}
```

Get Object

GET

/axapi/v3/cgnv6/lsn/tcp/reset-on-error

reset-on-error attributes

```
GET /axapi/v3/cgnv6/lsn/tcp/reset-on-error
Reponse:
{
    "reset-on-error": {
        "outbound": "disable",
        "uuid": "616821fc-08aa-11f0-951d-a9cf5715f49c",
        "a10-url": "/axapi/v3/cgnv6/lsn/tcp/reset-on-error"
    }
}
```

Modify Object

POST

/axapi/v3/cgnv6/lsn/tcp/reset-on-error

reset-on-error attributes

Replace Object

PUT

/axapi/v3/cgnv6/lsn/tcp/reset-on-error

reset-on-error attributes

```
PUT /axapi/v3/cgnv6/lsn/tcp/reset-on-error
Payload:

    }
}
```

global attributes

hairpinning

Description 'filter-all': Disable all Hairpinning; 'filter-none': Allow all Hairpinning (default); 'filter-self-ip': Block Hairpinning to same IP; 'filter-self-ip-port': Block hairpinning to same IP and Port combination;

Type: string

Supported Values: filter-all, filter-none, filter-self-ip, filter-self-ip-port

Default: filter-none

icmp-inbound

Description 'drop': Drop Inbound ICMP packets; 'handle': Handle Inbound ICMP packets(default);

Type: string

Supported Values: drop, handle

Default: handle

inside-src-access-list

Description Access List for inside IPv4 addresses (ACL ID)

Type: number

Range: 1-199

nat-prefix-list

Description Configure LW-4over6 NAT Prefix List (LW-4over6 NAT Prefix Class-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

no-forward-match

Description: no-forward-match is a **JSON Block**. Please see below for *no-forward-match*

Type: Object

no-reverse-match

Description: no-reverse-match is a **JSON Block**. Please see below for *no-reverse-match*

Type: Object

sampling-enable

Type: List

use-binding-table

Description Bind LW-4over6 binding table for use (LW-4over6 Binding Table Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

no-forward-match

Specification	Value
Type	*object*

send-icmpv6

Description Send ICMPv6 Type 1 Code 5

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'entry_count': Total Entries Configured; 'self_hairpinning_drop': Self-Hairpinning Drops; 'all_hairpinning_drop': All Hairpinning Drops; 'no_match_icmpv6_sent': No-Forward-Match ICMPv6 Sent; 'no_match_icmp_sent': No-Reverse-Match ICMP Sent; 'icmp_inbound_drop': Inbound ICMP Drops; 'fwd_lookup_failed': Forward Route Lookup Failed; 'rev_lookup_failed': Reverse Route Lookup Failed; 'interface_not_configured': LW-4over6 Interfaces not Configured Drops; 'no_binding_table_matches_fwd': No Forward Binding Table Entry Match Drops; 'no_binding_table_matches_rev': No Reverse Binding Table Entry Match Drops; 'session_count': LW-4over6 Session Count; 'system_address_drop': LW-4over6 System Address Drops;

Type: string

Supported Values: all, entry_count, self_hairpinning_drop, all_hairpinning_drop, no_match_icmpv6_sent, no_match_icmp_sent, icmp_inbound_drop, fwd_lookup_failed, rev_lookup_failed, interface_not_configured, no_binding_table_matches_fwd, no_binding_table_matches_rev, session_count, system_address_drop

no-reverse-match

Specification	Value
Type	*object*

send-icmp

Description Send ICMP Type 3 Code 1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.26.197 cgnv6 lw-4o6 global stats

Statistics for the object global

Description

Type: string

2.26.202 cgnv6 map

Mapping of Address and Port with Translation (MAP)

map Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	map
Element URI	/axapi/v3/cgnv6/map
Element Attributes	map_attributes
Partition Visibility	shared
Schema	`map schema`

Operations Allowed:

Get Object

GET

/axapi/v3/cgnv6/map

map_attributes

map attributes

encapsulation

Description: encapsulation is a **JSON Block**. Please see below for *encapsulation*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/encapsulation*

translation

Description: translation is a **JSON Block**. Please see below for *translation*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/translation*

encapsulation

Specification	Value
Type	*object*

domain-list

Type: List

Reference Object: */axapi/v3/cgnv6/map/encapsulation/domain/{name}*

fragmentation

Description: fragmentation is a **JSON Block**. Please see below for *encapsulation_fragmentation*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/encapsulation/fragmentation*

encapsulation_fragmentation

Specification	Value
Type	*object*

inbound

Description: inbound is a **JSON Block**. Please see below for *encapsulation_fragmentation_inbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/encapsulation/fragmentation/inbound*

outbound

Description: outbound is a **JSON Block**. Please see below for *encapsulation_fragmentation_outbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/encapsulation/fragmentation/outbound*

encapsulation_fragmentation_inbound

Specification	Value
Type	*object*

df-set

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets; 'ipv6': Use IPv6 fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv4, ipv6, send-icmp

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets; 'ipv6': Use IPv6 fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv4, ipv6

Default: ipv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

encapsulation_fragmentation_outbound

Specification	Value
Type	*object*

df-set

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set)(default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmp, send-icmpv6

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

encapsulation_domain-list

Specification	Value
Type	*list*
Block object keys	

basic-mapping-rule

Description: basic-mapping-rule is a **JSON Block**. Please see below for *encapsulation_domain-list_basic-mapping-rule*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/encapsulation/domain/{name}/basic-mapping-rule*

description

Description MAP-E domain description

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

format

Description 'draft-03': Construct IPv6 Interface Identifier according to draft-03;

Type: string

Supported Values: draft-03

health-check-gateway

Description: health-check-gateway is a **JSON Block**. Please see below for *encapsulation_domain-list_health-check-gateway*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/encapsulation/domain/{name}/health-check-gateway*

name

Description MAP-E domain name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/cgnv6-encap-domain-tmpl*

sampling-enable

Type: List

tunnel-endpoint-address

Description Tunnel Endpoint Address for MAP-E domain

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

encapsulation_domain-list_basic-mapping-rule

Specification	Value
Type	*object*

ea-length

Description Length of Embedded Address (EA) bits

Type: number

Range: 0-23

port-start

Description Starting Port, Must be Power of 2 value or zero

Type: number

Range: 0-32768

prefix-rule-list

Type: List

Reference Object: */axapi/v3/cgnv6/map/encapsulation/domain/{name}/basic-mapping-rule/prefix-rule/{name}*

rule-ipv4-address-port-settings

Description 'prefix-addr': Each CE is assigned an IPv4 prefix; 'single-addr': Each CE is assigned an IPv4 address; 'shared-addr': Each CE is assigned a shared IPv4 address;

Type: string

Supported Values: prefix-addr, single-addr, shared-addr

share-ratio

Description Port sharing ratio for each NAT IP. Must be Power of 2 value

Type: number

Range: 1-65536

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

encapsulation_domain-list_basic-mapping-rule_prefix-rule-list

Specification	Value
Type	*list*
Block object keys	

ea-length

Description Length of Embedded Address (EA) bits

Type: number

Range: 0-23

ipv4-address-port-settings

Description 'prefix-addr': Each CE is assigned an IPv4 prefix; 'single-addr': Each CE is assigned an IPv4 address; 'shared-addr': Each CE is assigned a shared IPv4 address;

Type: string

Supported Values: prefix-addr, single-addr, shared-addr

ipv4-netmask

Description Subnet mask (subnet bigger than /8 is not allowed)

Type: string

Format: ipv4-netmask-brief

name

Description MAP BMR prefix rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-start

Description Starting Port, Must be Power of 2 value or zero

Type: number

Range: 0-32768

rule-ipv4-prefix

Description IPv4 prefix of BMR

Type: string

Format: ipv4-address

rule-ipv6-prefix

Description IPv6 prefix of BMR

Type: string

Format: ipv6-address-plen

share-ratio

Description Port sharing ratio for each NAT IP. Must be Power of 2 value

Type: number

Range: 1-65536

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

encapsulation_domain-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'inbound_packet_received': Inbound IPv4 Packets Received; 'inbound_frag_packet_received': Inbound IPv4 Fragment Packets Received; 'inbound_addr_port_validation_failed': Inbound IPv4 Destination Address Port Validation Failed; 'inbound_rev_lookup_failed': Inbound IPv4 Reverse Route Lookup Failed; 'inbound_dest_unreachable': Inbound IPv6 Destination Address Unreachable; 'outbound_packet_received': Outbound IPv6 Packets Received; 'outbound_frag_packet_received': Outbound IPv6 Fragment Packets Received; 'outbound_addr_validation_failed': Outbound IPv6 Source Address Validation Failed; 'outbound_rev_lookup_failed': Outbound IPv6 Reverse Route Lookup Failed; 'outbound_dest_unreachable': Outbound IPv4 Destination Address Unreachable; 'packet_mtu_exceeded': Packet Exceeded MTU; 'frag_icmp_sent': ICMP Packet Too Big Sent; 'interface_not_configured': Interfaces not Configured Dropped; 'bmr_prefixrules_configured': BMR prefix rules configured; 'helper_count': Helper Count; 'active_dhcpv6_leases': Active DHCPv6 leases;

Type: string

Supported Values: all, inbound_packet_received, inbound_frag_packet_received, inbound_addr_port_validation_failed, inbound_rev_lookup_failed, inbound_dest_unreachable, outbound_packet_received, outbound_frag_packet_received, outbound_addr_validation_failed, outbound_rev_lookup_failed, outbound_dest_unreachable, packet_mtu_exceeded, frag_icmp_sent, interface_not_configured, bmr_prefixrules_configured, helper_count, active_dhcpv6_leases

encapsulation_domain-list_health-check-gateway

Specification	Value
Type	*object*

address-list

Type: List

ipv6-address-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

withdraw-route

Description 'all-link-failure': Withdraw routes on health-check failure of all IPv4 gateways or all IPv6 gateways; 'any-link-failure': Withdraw routes on health-check failure of any gateway (default);

Type: string

Supported Values: all-link-failure, any-link-failure

Default: any-link-failure

encapsulation_domain-list_health-check-gateway_ipv6-address-list

Specification	Value
Type	*list*
Block object keys	

ipv6-gateway

Description IPv6 Gateway

Type: string

Format: ipv6-address

encapsulation_domain-list_health-check-gateway_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-gateway

Description IPv4 Gateway

Type: string

Format: ipv4-address

translation

Specification	Value
Type	*object*

default-domain

Description: default-domain is a **JSON Block**. Please see below for *translation_default-domain*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/translation/default-domain*

domain-list

Type: List

Reference Object: */axapi/v3/cgnv6/map/translation/domain/{name}*

fragmentation

Description: fragmentation is a **JSON Block**. Please see below for *translation_fragmentation*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/translation/fragmentation*

translation_fragmentation

Specification	Value
Type	*object*

inbound

Description: inbound is a **JSON Block**. Please see below for *translation_fragmentation_inbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/translation/fragmentation/inbound*

outbound

Description: outbound is a **JSON Block**. Please see below for *translation_fragmentation_outbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/translation/fragmentation/outbound*

translation_fragmentation_inbound

Specification	Value
Type	*object*

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv6, send-icmp

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv6

Default: ipv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation_fragmentation_outbound

Specification	Value
Type	*object*

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation_domain-list

Specification	Value
Type	*list*
Block object keys	

basic-mapping-rule

Description: basic-mapping-rule is a **JSON Block**. Please see below for *translation_domain-list_basic-mapping-rule*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/translation/domain/{name}/basic-mapping-rule*

default-mapping-rule

Description: default-mapping-rule is a **JSON Block**. Please see below for *translation_domain-list_default-mapping-rule*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/translation/domain/{name}/default-mapping-rule*

description

Description MAP-T domain description

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

health-check-gateway

Description: health-check-gateway is a **JSON Block**. Please see below for *translation_domain-list_health-check-gateway*

Type: Object

Reference Object: */axapi/v3/cgnv6/map/translation/domain/{name}/health-check-gateway*

mtu

Description Domain MTU

Type: number

name

Description MAP-T domain name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/cgnv6-map-trans-domain-tmpl*

sampling-enable

Type: List

tcp

Description: tcp is a **JSON Block**. Please see below for *translation_domain-list_tcp*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation_domain-list_default-mapping-rule

Specification	Value
Type	*object*

rule-ipv6-prefix

Description Rule IPv6 prefix

Type: string

Format: ipv6-address-plen

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation_domain-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'inbound_packet_received': Inbound IPv4 Packets Received; 'inbound_frag_packet_received': Inbound IPv4 Fragment Packets Received; 'inbound_addr_port_validation_failed': Inbound IPv4 Destination Address Port Validation Failed; 'inbound_rev_lookup_failed': Inbound IPv4 Reverse Route Lookup Failed; 'inbound_dest_unreachable': Inbound IPv6 Destination Address Unreachable; 'outbound_packet_received': Outbound IPv6 Packets Received; 'outbound_frag_packet_received': Outbound IPv6 Fragment Packets Received; 'outbound_addr_validation_failed': Outbound IPv6 Source Address Validation Failed; 'outbound_rev_lookup_failed': Outbound IPv6 Reverse Route Lookup Failed; 'outbound_dest_unreachable': Outbound IPv4 Destination Address Unreachable; 'packet_mtu_exceeded': Packet Exceeded MTU; 'frag_icmp_sent': ICMP Packet Too Big Sent; 'interface_not_configured': Interfaces not Configured Dropped; 'bmr_prefixrules_configured': BMR prefix rules configured; 'helper_count': Helper Count; 'active_dhcpv6_leases': Active DHCPv6 leases;

Type: string

Supported Values: all, inbound_packet_received, inbound_frag_packet_received, inbound_addr_port_validation_failed, inbound_rev_lookup_failed, inbound_dest_unreachable, outbound_packet_received, outbound_frag_packet_received, outbound_addr_validation_failed, outbound_rev_lookup_failed, outbound_dest_unreachable, packet_mtu_exceeded, frag_icmp_sent, interface_not_configured, bmr_prefixrules_configured, helper_count, active_dhcpv6_leases

translation_domain-list_tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *translation_domain-list_tcp_mss-clamp*

Type: Object

translation_domain-list_tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: 516))

Type: number

Range: 0-1440

Default: 516

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping(default); 'subtract': Specify the value to subtract from the TCP MSS;

Type: string

Supported Values: fixed, none, subtract

Default: none

mss-subtract

Description Specify the value to subtract from the TCP MSS

Type: number

Range: 0-1440

mss-value

Description The max value allowed for the TCP MSS

Type: number

Range: 0-1440

translation_domain-list_health-check-gateway

Specification	Value
Type	*object*

address-list

Type: List

ipv6-address-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

withdraw-route

Description 'all-link-failure': Withdraw routes on health-check failure of all IPv4 gateways or all IPv6 gateways; 'any-link-failure': Withdraw routes on health-check failure of any gateway (default);

Type: string

Supported Values: all-link-failure, any-link-failure

Default: any-link-failure

translation_domain-list_health-check-gateway_ipv6-address-list

Specification	Value
Type	*list*
Block object keys	

ipv6-gateway

Description IPv6 Gateway

Type: string

Format: ipv6-address

translation_domain-list_health-check-gateway_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-gateway

Description IPv4 Gateway

Type: string

Format: ipv4-address

translation_domain-list_basic-mapping-rule

Specification	Value
Type	*object*

ea-length

Description Length of Embedded Address (EA) bits

Type: number

Range: 0-23

port-start

Description Starting Port, Must be Power of 2 value or zero

Type: number

Range: 0-32768

prefix-rule-list

Type: List

Reference Object: */axapi/v3/cgnv6/map/translation/domain/{name}/basic-mapping-rule/prefix-rule/{name}*

rule-ipv4-address-port-settings

Description 'prefix-addr': Each CE is assigned an IPv4 prefix; 'single-addr': Each CE is assigned an IPv4 address; 'shared-addr': Each CE is assigned a shared IPv4 address;

Type: string

Supported Values: prefix-addr, single-addr, shared-addr

share-ratio

Description Port sharing ratio for each NAT IP. Must be Power of 2 value

Type: number

Range: 1-65536

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation_domain-list_basic-mapping-rule_prefix-rule-list

Specification	Value
Type	*list*
Block object keys	

ipv4-netmask

Description Subnet mask (subnet bigger than /8 is not allowed)

Type: string

Format: ipv4-netmask-brief

name

Description MAP BMR prefix rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-ipv4-prefix

Description IPv4 prefix of BMR

Type: string

Format: ipv4-address

rule-ipv6-prefix

Description IPv6 prefix of BMR

Type: string

Format: ipv6-address-plen

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation_default-domain

Specification	Value
Type	*object*

name

Description MAP-T domain name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/map/translation/domain*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.26.203 cgnv6 map encapsulation

MAP Encapsulation (MAP-E)

encapsulation Specification

Parameter	Value

2.26.210 cgnv6 map encapsulation fragmentation inbound

MAP-E fragmentation rules for inbound oversize packets

inbound Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	inbound
Element URI	/axapi/v3/cgnv6/map/encapsulation/fragmentation/inbound
Element Attributes	inbound_attributes
Partition Visibility	shared
Schema	`inbound schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/map/encapsulation/fragmentation/inbound

inbound attributes

```
POST /axapi/v3/cgnv6/map/encapsulation/fragmentation/inbound
Payload:
{
    "inbound": {
        "df-set": "drop"
    }
}
```

Get Object

GET

/axapi/v3/cgnv6/map/encapsulation/fragmentation/inbound

inbound attributes

```
GET /axapi/v3/cgnv6/map/encapsulation/fragmentation/inbound
Reponse:
{
    "inbound": {
        "df-set": "drop",
        "frag-action": "ipv6",
        "uuid": "c5edb016-0890-11f0-a250-a9cf5715f49c",
        "a10-url": "/axapi/v3/cgnv6/map/encapsulation/fragmentation/inbound"
    }
}
```

Modify Object

POST

/axapi/v3/cgnv6/map/encapsulation/fragmentation/inbound

inbound attributes

Replace Object

PUT

/axapi/v3/cgnv6/map/encapsulation/fragmentation/inbound

inbound attributes

```
PUT /axapi/v3/cgnv6/map/encapsulation/fragmentation/inbound
Payload:
{
    "inbound": {
        "df-set": "ipv4"
    }
}
```

Delete Object

DELETE

/axapi/v3/cgnv6/map/encapsulation/fragmentation/inbound

Maximum Length: 1 characters

domain-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'inbound_packet_received': Inbound IPv4 Packets Received; 'inbound_frag_packet_received': Inbound IPv4 Fragment Packets Received; 'inbound_addr_port_validation_failed': Inbound IPv4 Destination Address Port Validation Failed; 'inbound_rev_lookup_failed': Inbound IPv4 Reverse Route Lookup Failed; 'inbound_dest_unreachable': Inbound IPv6 Destination Address Unreachable; 'outbound_packet_received': Outbound IPv6 Packets

Received; 'outbound_frag_packet_received': Outbound IPv6 Fragment Packets Received; 'outbound_addr_validation_failed': Outbound IPv6 Source Address Validation Failed; 'outbound_rev_lookup_failed': Outbound IPv6 Reverse Route Lookup Failed; 'outbound_dest_unreachable': Outbound IPv4 Destination Address Unreachable; 'packet_mtu_exceeded': Packet Exceeded MTU; 'frag_icmp_sent': ICMP Packet Too Big Sent; 'interface_not_configured': Interfaces not Configured Dropped; 'bmr_prefixrules_configured': BMR prefix rules configured; 'helper_count': Helper Count; 'active_dhcpv6_leases': Active DHCPv6 leases;

Type: string

Supported Values: all, inbound_packet_received, inbound_frag_packet_received, inbound_addr_port_validation_failed, inbound_rev_lookup_failed, inbound_dest_unreachable, outbound_packet_received, outbound_frag_packet_received, outbound_addr_validation_failed, outbound_rev_lookup_failed, outbound_dest_unreachable, packet_mtu_exceeded, frag_icmp_sent, interface_not_configured, bmr_prefixrules_configured, helper_count, active_dhcpv6_leases

domain-list_tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *domain-list_tcp_mss-clamp*

Type: Object

domain-list_tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: 516))

Type: number

Range: 0-1440

Default: 516

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping(default); 'subtract': Specify the value to subtract from the TCP MSS;

Type: string

Supported Values: fixed, none, subtract

Default: none

mss-subtract

Description Specify the value to subtract from the TCP MSS

Type: number

Range: 0-1440

mss-value

Description The max value allowed for the TCP MSS

Type: number

Range: 0-1440

domain-list_health-check-gateway

Specification	Value
Type	*object*

address-list

Type: List

ipv6-address-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

withdraw-route

Description 'all-link-failure': Withdraw routes on health-check failure of all IPv4 gateways or all IPv6 gateways; 'any-link-failure': Withdraw routes on health-check failure of any gateway (default);

Type: string

Supported Values: all-link-failure, any-link-failure

Default: any-link-failure

domain-list_health-check-gateway_ipv6-address-list

Specification	Value
Type	*list*
Block object keys	

ipv6-gateway

Description IPv6 Gateway

ipv4-gateway

Description IPv4 Gateway

Type: string

Format: ipv4-address

domain-list_basic-mapping-rule

Specification	Value
Type	*object*

ea-length

Description Length of Embedded Address (EA) bits

Type: number

Range: 0-23

port-start

Description Starting Port, Must be Power of 2 value or zero

Type: number

Range: 0-32768

prefix-rule-list

Type: List

Reference Object: */axapi/v3/cgnv6/map/translation/domain/{name}/basic-mapping-rule/prefix-rule/{name}*

rule-ipv4-address-port-settings

Description 'prefix-addr': Each CE is assigned an IPv4 prefix; 'single-addr': Each CE is assigned an IPv4 address; 'shared-addr': Each CE is assigned a shared IPv4 address;

Type: string

Supported Values: prefix-addr, single-addr, shared-addr

share-ratio

Description Port sharing ratio for each NAT IP. Must be Power of 2 value

Type: number

Range: 1-65536

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-list_basic-mapping-rule_prefix-rule-list

Specification	Value
Type	*list*
Block object keys	

ipv4-netmask

Description Subnet mask (subnet bigger than /8 is not allowed)

Type: string

Format: ipv4-netmask-brief

name

Description MAP BMR prefix rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-ipv4-prefix

Description IPv4 prefix of BMR

Type: string

Format: ipv4-address

rule-ipv6-prefix

Description IPv6 prefix of BMR

Type: string

Format: ipv6-address-plen

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

default-domain

Specification	Value
Type	*object*

name

Description MAP-T domain name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

prefix-rule-list

Type: List

Reference Object: */axapi/v3/cgnv6/map/translation/domain/{name}/basic-mapping-rule/prefix-rule/{name}*

rule-ipv4-address-port-settings

Description 'prefix-addr': Each CE is assigned an IPv4 prefix; 'single-addr': Each CE is assigned an IPv4 address; 'shared-addr': Each CE is assigned a shared IPv4 address;

Type: string

Supported Values: prefix-addr, single-addr, shared-addr

share-ratio

Description Port sharing ratio for each NAT IP. Must be Power of 2 value

Type: number

Range: 1-65536

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

basic-mapping-rule_prefix-rule-list

Specification	Value
Type	*list*
Block object keys	

ipv4-netmask

Description Subnet mask (subnet bigger than /8 is not allowed)

Type: string

Format: ipv4-netmask-brief

name

Description MAP BMR prefix rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-ipv4-prefix

Description IPv4 prefix of BMR

Type: string

Format: ipv4-address

rule-ipv6-prefix

Description IPv6 prefix of BMR

Type: string

Format: ipv6-address-plen

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.26.215 cgnv6 map translation domain basic-mapping-rule

Basic mapping rule (BMR)

basic-mapping-rule Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	basic-mapping-rule
Element URI	/axapi/v3/cgnv6/map/translation/domain/{name}/basic-mapping-rule
Element Attributes	basic-mapping-rule_attributes
Partition Visibility	shared
Schema	`basic-mapping-rule schema`

Operations Allowed:

Reference Object: */axapi/v3/cgnv6/nat/histogram*

icmp

Description: icmp is a **JSON Block**. Please see below for *icmp*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/icmp*

icmpv6

Description: icmpv6 is a **JSON Block**. Please see below for *icmpv6*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/icmpv6*

inside

Description: inside is a **JSON Block**. Please see below for *inside*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/inside*

pool-group-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat/pool-group/{pool-group-name}*

pool-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat/pool/{pool-name}*

range-list-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat/range-list/{name}+{partition}*

shared-pool

Description: shared-pool is a **JSON Block**. Please see below for *shared-pool*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/shared-pool*

shared-pool-group

Description: shared-pool-group is a **JSON Block**. Please see below for *shared-pool-group*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/shared-pool-group*

shared-pool

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

shared-pool-group

Specification	Value
Type	*object*

members

Description: members is a **JSON Block**. Please see below for *shared-pool-group_members*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/shared-pool-group/members*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

shared-pool-group_members

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pool-group-list

Specification	Value
Type	*list*
Block object keys	

member-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat/pool-group/{pool-group-name}/member/{pool-name}*

pool-group-name

Description Specify pool group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid

Type: number

Range: 1-31

pool-group-list_member-list

Specification	Value
Type	*list*
Block object keys	

pool-name

Description Specify CGNv6 NAT pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

histogram

Specification	Value
Type	*object*

bin-count

Description Number of bins in the histogram (default: 50)

Type: number

Range: 10-100

Default: 50

bin-skew

Description Percentage of bins that represent the upper bound (default: 75)

Type: number

Range: 50-80

Default: 75

data-skew

Description Percentage of data that represents the upper bound (default: 25)

Type: number

Range: 5-50

Default: 25

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmpv6

Specification	Value
Type	*object*

respond-to-ping

Description Respond to ICMPv6 echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

range-list-list

Specification	Value
Type	*list*
Block object keys	

global-netmaskv4

Description Mask for this Address range

Type: string

Format: ipv4-netmask

global-start-ipv4-addr

Description Global Start IPv4 Address of this list

Type: string

Format: ipv4-address

local-netmaskv4

Description Mask for this Address range

Type: string

Format: ipv4-netmask

local-start-ipv4-addr

Description Local Start IPv4 Address of this list

Type: string

Format: ipv4-address

name

Description Name for this Static List

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-count

Description Number of addresses to be translated in this range

Type: number

Range: 1-200000

v4-vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

exclude-port

Specification	Value
Type	*object*

tcp

Description: tcp is a **JSON Block**. Please see below for *exclude-port_tcp*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/exclude-port/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *exclude-port_udp*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/exclude-port/udp*

exclude-port_udp

Specification	Value
Type	*object*

port-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

exclude-port_udp_port-list

Specification	Value
Type	*list*
Block object keys	

port

Description Single Port or Port Range Start

Type: number

port-end

Description Port Range End

Type: number

exclude-port_tcp

Specification	Value
Type	*object*

port-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

exclude-port_tcp_port-list

Specification	Value
Type	*list*
Block object keys	

port

Description Single Port or Port Range Start

Type: number

port-end

Description Port Range End

Type: number

icmp

Specification	Value
Type	*object*

always-source-nat-errors

Description Source NAT intermediate routers' IPs for ICMP errors (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

respond-to-ping

Description Respond to ICMP echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside

Specification	Value
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *inside_source*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/inside/source*

inside_source

Specification	Value
Type	*object*

static-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat/inside/source/static/{src-address}+{partition}*

statistics

Description: statistics is a **JSON Block**. Please see below for *inside_source_statistics*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat/inside/source/statistics*

inside_source_statistics

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside_source_static-list

Specification	Value
Type	*list*
Block object keys	

nat-address

Description NAT Address

Type: string

Format: ipv4-address

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

src-address

Description Original Source Address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

pool-list

Specification	Value
Type	*list*
Block object keys	

all

Description Share with all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

exclude-ip

Type: List

group

Description Share with a partition group (Partition Group Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

max-users-per-ip

Description Number of users that can be assigned to a NAT IP

Type: number

Range: 1-64512

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

partition

Description Share with a single partition (Partition Name)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

per-batch-port-usage-warning-threshold

Description Configure warning log threshold for per batch port usage (default: disabled) (Number of ports)

Type: number

Range: 32-4096

pool-name

Description Specify pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-batch-v2-size

Description '64': Allocate 64 ports at a time; '128': Allocate 128 ports at a time; '256': Allocate 256 ports at a time; '512': Allocate 512 ports at a time; '1024': Allocate 1024 ports at a time; '2048': Allocate 2048 ports at a time; '4096': Allocate 4096 ports at a time;

Type: string

Supported Values: 64, 128, 256, 512, 1024, 2048, 4096

service-config-template

Description Service-template name to bind

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description Share this pool with other partitions (default: not shared)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

simultaneous-batch-allocation

Description Allocate same TCP and UDP batches at once

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

tcp-time-wait-interval

Description Minutes before TCP NAT ports can be reused

Type: number

Range: 0-10

usable-nat-ports

Description Configure usable NAT ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports-end

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-nat-ports-start

Description Start Port of Usable NAT Ports (needs to be even)

Type: number

Range: 1024-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

pool-list_exclude-ip

Specification	Value
Type	*list*
Block object keys	

exclude-ip-end

Description Address range end

Type: string

Format: ipv4-address

exclude-ip-start

Description Single IP address or IP address range start

Type: string

Format: ipv4-address

2.26.224 cgnv6 nat46-stateless

Configure Stateless NAT46

nat46-stateless Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	nat46-stateless
Element URI	/axapi/v3/cgnv6/nat46-stateless
Element Attributes	nat46-stateless_attributes
Partition Visibility	shared
Schema	`nat46-stateless schema`

Operations Allowed:

Get Object

GET

/axapi/v3/cgnv6/nat46-stateless

nat46-stateless_attributes

nat46-stateless attributes

fragmentation

Description: fragmentation is a **JSON Block**. Please see below for *fragmentation*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat46-stateless/fragmentation*

global

Description: global is a **JSON Block**. Please see below for *global*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat46-stateless/global*

partition-prefix-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat46-stateless/partition-prefix/{partition}*

prefix

Description: prefix is a **JSON Block**. Please see below for *prefix*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat46-stateless/prefix*

static-dest-mapping-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat46-stateless/static-dest-mapping/{v4-address}+{v6-address}*

static-dest-mapping-list

Specification	Value
Type	*list*
Block object keys	

count

Description Set number of consecutive mappings (Number of mappings)

Type: number

shared

Description Share/Expose this mapping with other partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

to-shared

Description Send NATed traffic through shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-address

Description IPv4 address

Type: string

Format: ipv4-address

v6-address

Description IPv6 address

Type: string

Format: ipv6-address

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

fragmentation

Specification	Value
Type	*object*

inbound

Description: inbound is a **JSON Block**. Please see below for *fragmentation_inbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat46-stateless/fragmentation/inbound*

outbound

Description: outbound is a **JSON Block**. Please see below for *fragmentation_outbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/nat46-stateless/fragmentation/outbound*

fragmentation_inbound

Specification	Value
Type	*object*

action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fragmentation_outbound

Specification	Value
Type	*object*

action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv6

Default: ipv6

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv6, send-icmp

Default: send-icmp

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global

Specification	Value
Type	*object*

sampling-enable

Type: List

tcp

Description: tcp is a **JSON Block**. Please see below for *global_tcp*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'outbound_ipv4_received': Outbound IPv4 packets received; 'outbound_ipv4_drop': Outbound IPv4 packets dropped; 'outbound_ipv4_fragment_received': Outbound IPv4 fragment packets received; 'outbound_ipv6_unreachable': Outbound IPv6 destination unreachable; 'outbound_ipv6_fragmented': Outbound IPv6 packets fragmented; 'inbound_ipv6_received': Inbound IPv6 packets received; 'inbound_ipv6_drop': Inbound IPv6 packets dropped; 'inbound_ipv6_fragment_received': Inbound IPv6 fragment packets received; 'inbound_ipv4_unreachable': Inbound IPv4 destination unreachable; 'inbound_ipv4_fragmented': Inbound IPv4 packets fragmented; 'packet_too_big': Packet too big; 'fragment_error': Fragment processing errors; 'icmpv6_to_icmp': ICMPv6 to ICMP; 'icmpv6_to_icmp_error': ICMPv6 to ICMP errors; 'icmp_to_icmpv6': ICMP to ICMPv6; 'icmp_to_icmpv6_error': ICMP to ICMPv6 errors; 'ha_standby': HA is standby; 'other_error': Other errors; 'conn_count': conn count;

Type: string

Supported Values: all, outbound_ipv4_received, outbound_ipv4_drop, outbound_ipv4_fragment_received, outbound_ipv6_unreachable, outbound_ipv6_fragmented, inbound_ipv6_received, inbound_ipv6_drop, inbound_ipv6_fragment_received, inbound_ipv4_unreachable, inbound_ipv4_fragmented, packet_too_big, fragment_error, icmpv6_to_icmp, icmpv6_to_icmp_error, icmp_to_icmpv6, icmp_to_icmpv6_error, ha_standby, other_error, conn_count

global_tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *global_tcp_mss-clamp*

Type: Object

global_tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60))))

Type: number

Range: 0-1420

Default: 456

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 20);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 20)

Type: number

Range: 0-1420

Default: 20

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

prefix

Specification	Value
Type	*object*

ipv6-prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

partition-prefix-list

Specification	Value
Type	*list*
Block object keys	

ipv6-prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

partition

Description Partition Name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

2.26.225 cgnv6 nat46-stateless fragmentation

Stateless NAT46 parameters

fragmentation Specification

Parameter	Value

global attributes

sampling-enable

Type: List

tcp

Description: tcp is a **JSON Block**. Please see below for *tcp*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'outbound_ipv4_received': Outbound IPv4 packets received; 'outbound_ipv4_drop': Outbound IPv4 packets dropped; 'outbound_ipv4_fragment_received': Outbound IPv4 fragment packets received; 'outbound_ipv6_unreachable': Outbound IPv6 destination unreachable; 'outbound_ipv6_fragmented': Outbound IPv6 packets fragmented; 'inbound_ipv6_received': Inbound IPv6 packets received; 'inbound_ipv6_drop': Inbound IPv6 packets dropped; 'inbound_ipv6_fragment_received': Inbound IPv6 fragment packets received; 'inbound_ipv4_unreachable': Inbound IPv4 destination unreachable; 'inbound_ipv4_fragmented': Inbound IPv4 packets fragmented; 'packet_too_big': Packet too big; 'fragment_error': Fragment processing errors; 'icmpv6_to_icmp': ICMPv6 to ICMP; 'icmpv6_to_icmp_error': ICMPv6 to ICMP errors; 'icmp_to_icmpv6': ICMP to ICMPv6; 'icmp_to_icmpv6_error': ICMP to ICMPv6 errors; 'ha_standby': HA is standby; 'other_error': Other errors; 'conn_count': conn count;

Type: string

Supported Values: all, outbound_ipv4_received, outbound_ipv4_drop, outbound_ipv4_fragment_received, outbound_ipv6_unreachable, outbound_ipv6_fragmented, inbound_ipv6_received, inbound_ipv6_drop, inbound_ipv6_fragment_received, inbound_ipv4_unreachable, inbound_ipv4_fragmented, packet_too_big, fragment_error, icmpv6_to_icmp, icmpv6_to_icmp_error, icmp_to_icmpv6, icmp_to_icmpv6_error, ha_standby, other_error, conn_count

tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *tcp_mss-clamp*

Type: Object

tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60))))

Type: number

Range: 0-1420

Default: 456

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 20);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 20)

Type: number

Range: 0-1420

Default: 20

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

2.26.229 cgnv6 nat46-stateless global stats

Statistics for the object global

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

conn_count

Description conn count

Type: number

Format: counter

fragment_error

Description Fragment processing errors

Type: number

Format: counter

ha_standby

Description HA is standby

Type: number

Format: counter

icmp_to_icmpv6

Description ICMP to ICMPv6

Type: number

Format: counter

icmp_to_icmpv6_error

Description ICMP to ICMPv6 errors

Type: number

Format: counter

icmpv6_to_icmp

Description ICMPv6 to ICMP

Type: number

Format: counter

icmpv6_to_icmp_error

Description ICMPv6 to ICMP errors

Type: number

Format: counter

inbound_ipv4_fragmented

Description Inbound IPv4 packets fragmented

Type: number

Format: counter

inbound_ipv4_unreachable

Description Inbound IPv4 destination unreachable

Type: number

Format: counter

inbound_ipv6_drop

Description Inbound IPv6 packets dropped

Type: number

Format: counter

inbound_ipv6_fragment_received

Description Inbound IPv6 fragment packets received

Type: number

Format: counter

inbound_ipv6_received

Description Inbound IPv6 packets received

Type: number

Format: counter

other_error

Description Other errors

Type: number

Format: counter

outbound_ipv4_drop

Description Outbound IPv4 packets dropped

Type: number

Format: counter

outbound_ipv4_fragment_received

Description Outbound IPv4 fragment packets received

Type: number

Format: counter

outbound_ipv4_received

Description Outbound IPv4 packets received

Type: number

Format: counter

outbound_ipv6_fragmented

Description Outbound IPv6 packets fragmented

Type: number

Format: counter

outbound_ipv6_unreachable

Description Outbound IPv6 destination unreachable

Type: number

Format: counter

packet_too_big

Description Packet too big

Type: number

Format: counter

2.26.230 cgnv6 nat46-stateless partition-prefix

Configure NAT46 prefix for a L3V partition traffic

partition-prefix Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*partition*
Collection Name	*partition-prefix-list*
Collection URI	/axapi/v3/cgnv6/nat46-stateless/partition-prefix
Element Name	partition-prefix
Element URI	/axapi/v3/cgnv6/nat46-stateless/partition-prefix/{partition}
Element Attributes	partition-prefix_attributes
Partition Visibility	shared
Schema	`partition-prefix schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/nat46-stateless/partition-prefix

partition-prefix attributes

```
POST /axapi/v3/cgnv6/nat46-stateless/partition-prefix/
Payload:
{
    "partition-prefix": {
        "partition": "a",
        "ipv6-prefix": "2003::1/96"
    }
}
```

Create List

POST

/axapi/v3/cgnv6/nat46-stateless/partition-prefix

partition-prefix attributes

Get Object

        "status": "OK",
        "msg": "Success"
    }
}
```

partition-prefix-list

partition-prefix-list is **JSON List** of *partition-prefix attributes*

partition-prefix-list : [

{ *partition-prefix attributes* },

{ *partition-prefix attributes* },

...

]

partition-prefix attributes

ipv6-prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

partition

Description Partition Name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

2.26.231 cgnv6 nat46-stateless prefix

Enable Stateless NAT46 IPv6 source address

prefix Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	prefix
Element URI	/axapi/v3/cgnv6/nat46-stateless/prefix

```

static-dest-mapping-list

static-dest-mapping-list is **JSON List** of *static-dest-mapping attributes*

static-dest-mapping-list : [

{ *static-dest-mapping attributes* },

{ *static-dest-mapping attributes* },

...

]

static-dest-mapping attributes

count

Description Set number of consecutive mappings (Number of mappings)

Type: number

shared

Description Share/Expose this mapping with other partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

to-shared

Description Send NATed traffic through shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-address

Description IPv4 address

Type: string

Format: ipv4-address

v6-address

Description IPv6 address

Type: string

Format: ipv6-address

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_esp

Specification	Value
Type	*object*

esp-enable

Description 'enable': Enable NAT64 ESP ALG; 'enable-with-ctrl': Enable ESP NAT64 ALG with control session;

Type: string

Supported Values: enable, enable-with-ctrl

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_esp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-created': ESP Sessions Created; 'nat-ip-conflict': NAT IP Conflict;

Type: string

Supported Values: all, session-created, nat-ip-conflict

alg_pptp

Specification	Value
Type	*object*

pptp-enable

Description 'enable': Enable NAT64 PPTP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_rtsp

Specification	Value
Type	*object*

rtsp-enable

Description 'enable': Enable NAT64 RTSP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_h323

Specification	Value
Type	*object*

h323-enable

Description 'enable': Enable NAT64 H323 ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_tftp

Specification	Value
Type	*object*

tftp-enable

Description 'enable': Enable NAT64 TFTP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_mgcp

Specification	Value
Type	*object*

mgcp-enable

Description 'enable': Enable NAT64 MGCP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global

Specification	Value
Type	*object*

all

Description All packet sizes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force-non-zero-ipv4-id

Description Enable non-zero ID field in IPv4 header if no IPv6 fragment & IPv4 pkt size is more than 88 & less than or equal to 1280 bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp

Description: icmp is a **JSON Block**. Please see below for *global_icmp*

Type: Object

inside

Description: inside is a **JSON Block**. Please see below for *global_inside*

Type: Object

sampling-enable

Type: List

tcp

Description: tcp is a **JSON Block**. Please see below for *global_tcp*

Type: Object

user-quota-prefix-length

Description User Quota Prefix Length (Default: 128)

Type: number

Range: 1-128

Default: 128

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_inside

Specification	Value
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *global_inside_source*

Type: Object

global_inside_source

Specification	Value
Type	*object*

class-list

Description Class-list to match for NAT64

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_tcp_allocated': Total TCP Ports Allocated; 'total_tcp_freed': Total TCP Ports Freed; 'total_udp_allocated': Total UDP Ports Allocated; 'total_udp_freed': Total UDP Ports Freed; 'total_icmp_allocated': Total ICMP Ports Allocated; 'total_icmp_freed': Total ICMP Ports Freed; 'data_session_created': Data Session Created; 'data_session_freed': Data Session Freed; 'user_quota_created': User-Quota Created; 'user_quota_put_in_del_q': User-Quota Freed; 'user_quota_failure': User-Quota Creation Failed; 'nat_port_unavailable_tcp': TCP NAT Port Unavailable; 'nat_port_unavailable_udp': UDP NAT Port Unavailable; 'nat_port_unavailable_icmp': ICMP NAT Port Unavailable; 'new_user_resource_unavailable': New User NAT Resource Unavailable; 'tcp_user_quota_exceeded': TCP User-Quota Exceeded; 'udp_user_quota_exceeded': UDP User-Quota Exceeded; 'icmp_user_quota_exceeded': ICMP User-Quota Exceeded; 'extended_quota_matched': Extended User-Quota Matched; 'extended_quota_exceeded': Extended User-Quota Exceeded; 'data_sesn_user_quota_exceeded': Data Session User-Quota Exceeded; 'data_sesn_rate_user_quota_exceeded': Conn Rate User-Quota Exceeded; 'tcp_fullcone_created': TCP Full-cone Session Created; 'tcp_fullcone_freed': TCP Full-cone Session Freed; 'udp_fullcone_created': UDP Full-cone Session Created; 'udp_fullcone_freed': UDP Full-cone Session Freed; 'fullcone_failure': Full-cone Session Creation Failed; 'hairpin': Hairpin Session Created; 'fullcone_self_hairpinning_drop': Self-Hairpinning Drop; 'endpoint_indep_map_match': Endpoint-Independent Mapping Matched; 'endpoint_indep_filter_match': Endpoint-Independent Filtering Matched; 'inbound_filtered': Endpoint-Dependent Filtering Drop; 'eif_limit_exceeded': Endpoint-Independent Filtering Inbound Limit Exceeded; 'total_tcp_overloaded': TCP Port Overloaded; 'total_udp_overloaded': UDP Port Overloaded; 'port_overloading_smp_inserted_tcp': TCP Port Overloading Session Created; 'port_overloading_smp_inserted_udp': UDP Port Overloading Session Created; 'port_overloading_smp_free_tcp': TCP Port Overloading Session Freed; 'port_overloading_smp_free_udp': UDP Port Overloading Session Freed; 'nat_pool_unusable': NAT Pool Unusable; 'ha_nat_pool_unusable': HA NAT Pool Unusable; 'ha_nat_pool_batch_type_mismatch': HA NAT Pool Batch Type Mismatch; 'no_radius_profile_match': No RADIUS Profile Match; 'l3': Layer 3 Forwarded Packets; 'source_matches_prefix': Source Address Prefix Match Drop; 'lid_drop': LSN LID Drop; 'lid_pass_through': LSN LID Pass-through; 'no_class_list_match': No Class-List Match; 'user_quota_mem_allocated': User-Quota Memory Allocated; 'user_quota_mem_freed': User-Quota Memory Freed; 'user_quota_created_shadow': Total User-Quota Created; 'quota_marked_deleted': User-Quota Marked Deleted; 'quota_delete_not_in_bucket': User-Quota Delete Not In Bucket; 'user_quota_put_in_del_q_shadow': Total User-Quota Put In Del Q; 'prefix_quota_created': Total Prefix Quota Created; 'prefix_quota_put_in_del_q': Total Prefix Quota Freed; 'prefix_quota_failure': Total Prefix Quota Failure; 'total_user_quota_created': Total Quota Structure Created; 'total_user_quota_put_in_del_q': Total Quota Structure Freed; 'total_user_quota_failure': Total Quota Structure Failure; 'tcp_out_of_state_rst_sent': Total Out of State TCP RST sent; 'tcp_out_of_state_rst_dropped': Total Out of State TCP RST dropped; 'icmp_out_of_state_uqe_admin_filtered_sent': Total User Quota Exceeded ICMP admin filtered sent; 'icmp_out_of_state_uqe_host_unreachable_sent': Total User Quota Exceeded ICMP host unreachable sent; 'icmp_out_of_state_uqe_dropped': Total User Queue Exceeded ICMP notification dropped; 'user_quota_not_found':

global_tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *global_tcp_mss-clamp*

Type: Object

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *global_tcp_reset-on-error*

Type: Object

global_tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: 476))

Type: number

Range: 0-1420

Default: 476

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 20);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 20)

Type: number

Range: 0-1420

Default: 20

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

global_tcp_reset-on-error

Specification	Value
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

global_icmp

Specification	Value
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

hw-accelerate

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

hw-accelerate_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'entry-create': HW Entries Created; 'entry-create-failure': HW Entry Creation Failed; 'entry-create-fail-server-down': HW Entry Creation Failed - server down; 'entry-create-fail-max-entry': HW Entry Creation Failed - max entries exceeded; 'entry-free': HW Entries Freed; 'entry-free-opp-entry': HW Entries Freed - opposite tuple entry aged-out; 'entry-free-no-hw-prog': HW Entry Freed - no HW prog; 'entry-free-no-conn': HW Entry Freed - no matched conn; 'entry-free-no-sw-entry': HW Entry Freed - no software entry; 'entry-counter': HW Entries Count; 'entry-age-out': HW Entries Aged Out; 'entry-age-out-idle': HW Entries Aged Out - idle timeout; 'entry-age-out-tcp-fin': HW Entries Aged Out - TCP FIN; 'entry-age-out-tcp-rst': HW Entries Aged Out - TCP RST; 'entry-age-out-invalid-dst': HW Entries Aged Out - invalid dst; 'entry-force-hw-invalidate': HW Entries Force HW Invalidate; 'entry-invalidate-server-down': HW Entries Invalidate due to server down; 'tcam-create': TCAM Flows Created; 'tcam-free': TCAM Flows Freed; 'tcam-counter': TCAM Flow Count;

Type: string

Supported Values: all, entry-create, entry-create-failure, entry-create-fail-server-down, entry-create-fail-max-entry, entry-free, entry-free-opp-entry, entry-free-no-hw-prog, entry-free-no-conn, entry-free-no-sw-entry, entry-counter, entry-age-out, entry-age-out-idle, entry-age-out-tcp-fin, entry-age-out-tcp-rst, entry-age-out-invalid-dst, entry-force-hw-invalidate, entry-invalidate-server-down, tcam-create, tcam-free, tcam-counter

prefix-list

Specification	Value
Type	*list*
Block object keys	

class-list

Description Class-list to match for NAT64

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

prefix-val

Description NAT64 Prefix

Type: string

Format: ipv6-address-plen

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

user-quota-session

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enhanced-user-tracking

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

}
```

inbound attributes

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 fragmentation; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv6, send-icmp

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv6

Default: ipv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Specification	Value
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *tcp_mss-clamp*

Type: Object

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *tcp_reset-on-error*

Type: Object

tcp_mss-clamp

Specification	Value
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: 476))

Type: number

Range: 0-1420

Default: 476

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 20);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 20)

Type: number

Range: 0-1420

Default: 20

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

tcp_reset-on-error

Specification	Value
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

icmp

Specification	Value
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

entry-age-out

Description HW Entries Aged Out

Type: number

Format: counter

entry-age-out-idle

Description HW Entries Aged Out - idle timeout

Type: number

Format: counter

entry-age-out-invalid-dst

Description HW Entries Aged Out - invalid dst

Type: number

Format: counter

entry-age-out-tcp-fin

Description HW Entries Aged Out - TCP FIN

Type: number

Format: counter

entry-age-out-tcp-rst

Description HW Entries Aged Out - TCP RST

Type: number

Format: counter

entry-counter

Description HW Entries Count

Type: number

Format: counter

entry-create

Description HW Entries Created

Type: number

Format: counter

entry-create-fail-max-entry

Description HW Entry Creation Failed - max entries exceeded

Type: number

Format: counter

entry-create-fail-server-down

Description HW Entry Creation Failed - server down

Type: number

Format: counter

entry-create-failure

Description HW Entry Creation Failed

Type: number

Format: counter

entry-force-hw-invalidate

Description HW Entries Force HW Invalidate

Type: number

Format: counter

entry-free

Description HW Entries Freed

Type: number

Format: counter

entry-free-no-conn

Description HW Entry Freed - no matched conn

Type: number

Format: counter

entry-free-no-hw-prog

Description HW Entry Freed - no HW prog

Type: number

Format: counter

entry-free-no-sw-entry

Description HW Entry Freed - no software entry

Type: number

Format: counter

entry-free-opp-entry

Description HW Entries Freed - opposite tuple entry aged-out

Type: number

Format: counter

entry-invalidate-server-down

Description HW Entries Invalidate due to server down

Type: number

Format: counter

tcam-counter

Description TCAM Flow Count

Type: number

Format: counter

tcam-create

Description TCAM Flows Created

Type: number

Format: counter

tcam-free

Description TCAM Flows Freed

DELETE /axapi/v3/cgnv6/nat/pool/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

pool-list

pool-list is **JSON List** of *pool attributes*

pool-list : [

{ *pool attributes* },

{ *pool attributes* },

...

]

pool attributes

all

Description Share with all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

exclude-ip

Type: List

group

Description Share with a partition group (Partition Group Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

max-users-per-ip

Description Number of users that can be assigned to a NAT IP

Type: number

Range: 1-64512

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

partition

Description Share with a single partition (Partition Name)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

per-batch-port-usage-warning-threshold

Description Configure warning log threshold for per batch port usage (default: disabled) (Number of ports)

Type: number

Range: 32-4096

pool-name

Description Specify pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-batch-v2-size

Description '64': Allocate 64 ports at a time; '128': Allocate 128 ports at a time; '256': Allocate 256 ports at a time; '512': Allocate 512 ports at a time; '1024': Allocate 1024 ports at a time; '2048': Allocate 2048 ports at a time; '4096': Allocate 4096 ports at a time;

Type: string

Supported Values: 64, 128, 256, 512, 1024, 2048, 4096

service-config-template

Description Service-template name to bind

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description Share this pool with other partitions (default: not shared)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

simultaneous-batch-allocation

Description Allocate same TCP and UDP batches at once

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

tcp-time-wait-interval

Description Minutes before TCP NAT ports can be reused

Type: number

Range: 0-10

usable-nat-ports

Description Configure usable NAT ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports-end

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-nat-ports-start

Description Start Port of Usable NAT Ports (needs to be even)

Type: number

Range: 1024-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

exclude-ip

Specification	Value
Type	*list*
Block object keys	

exclude-ip-end

Description Address range end

Type: string

Format: ipv4-address

exclude-ip-start

Description Single IP address or IP address range start

Type: string

Format: ipv4-address

2.26.271 cgnv6 nat pool-group

Configure CGNv6 NAT pool group

pool-group Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*pool-group-name*
Collection Name	*pool-group-list*
Collection URI	/axapi/v3/cgnv6/nat/pool-group
Element Name	pool-group
Element URI	/axapi/v3/cgnv6/nat/pool-group/{pool-group-name}
Element Attributes	pool-group_attributes
Partition Visibility	shared
Schema	`pool-group schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/nat/pool-group

pool-group attributes

```
POST /axapi/v3/cgnv6/nat/pool-group/
Payload:
{
    "pool-group": {
        "pool-group-name": "a"
    }
}
```

Create List

POST

/axapi/v3/cgnv6/nat/pool-group

pool-group attributes

Get Object

GET

/axapi/v3/cgnv6/nat/pool-group/{pool-group-name}

pool-group attributes

```
GET /axapi/v3/cgnv6/nat/pool-group/a
Reponse:
{
    "pool-group": {
        "pool-group-name": "a",
        "uuid": "d4aa5e56-08b3-11f0-951d-a9cf5715f49c",
        "a10-url": "/axapi/v3/cgnv6/nat/pool-group/a"
    }
}
```

Get List

GET

/axapi/v3/cgnv6/nat/pool-group

pool-group-list

Modify Object

POST

/axapi/v3/cgnv6/nat/pool-group/{pool-group-name}

pool-group attributes

Replace Object

PUT

/axapi/v3/cgnv6/nat/pool-group/{pool-group-name}

pool-group attributes

```
PUT /axapi/v3/cgnv6/nat/pool-group/a
Payload:
{
    "pool-group": {
        "pool-group-name": "a"
    }
}
```

Replace List

PUT

/axapi/v3/cgnv6/nat/pool-group

Delete Object

DELETE

/axapi/v3/cgnv6/nat/pool-group/{pool-group-name}

pool-group attributes

```
DELETE /axapi/v3/cgnv6/nat/pool-group/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

pool-group-list

pool-group-list is **JSON List** of *pool-group attributes*

pool-group-list : [

{ *pool-group attributes* },

{ *pool-group attributes* },

...

]

pool-group attributes

member-list

Type: List

Reference Object: */axapi/v3/cgnv6/nat/pool-group/{pool-group-name}/member/{pool-name}*

pool-group-name

Description Specify pool group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid

Type: number

Range: 1-31

member-list

Specification	Value
Type	*list*
Block object keys	

pool-name

Description Specify CGNv6 NAT pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.26.272 cgnv6 nat pool-group member

Add a CGNv6 NAT pool to this pool-group

member Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*pool-name*
Collection Name	*member-list*
Collection URI	/axapi/v3/cgnv6/nat/pool-group/{pool-group-name}/member
Element Name	member
Element URI	/axapi/v3/cgnv6/nat/pool-group/{pool-group-name}/member/{pool-name}
Element Attributes	member_attributes
Partition Visibility	shared
Schema	`member schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/nat/pool-group/{pool-group-name}/member

member attributes

Create List

POST

Specification	Value
Type	*list*
Block object keys	

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

group

Description Share with a partition group (Partition Group Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

partition

Description Share with a single partition (Partition Name)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Share this pool with other partitions (default: not shared)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

DELETE

/axapi/v3/cgnv6/sixrd/domain/{name}/stats

domain attributes

domain-list

domain-list is **JSON List** of *domain attributes*

domain-list : [

{ *domain attributes* },

{ *domain attributes* },

…

]

domain attributes

name

Description 6rd Domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

fragment-error

Description Fragment processing errors

Type: number

Format: counter

inbound-fragment-ipv4

Description Inbound Fragmented IPv4

Type: number

Format: counter

inbound-icmp-packets-received

Description Inbound ICMP packets received

Type: number

Format: counter

inbound-ipv4-dest-unreachable

Description Inbound IPv4 destination unreachable

Type: number

Format: counter

inbound-other-packets-received

Description Inbound other packets received

Type: number

Format: counter

inbound-packets-drop

Description Inbound packets dropped

Type: number

Format: counter

inbound-tcp-packets-received

Description Inbound TCP packets received

Type: number

Format: counter

inbound-tunnel-fragment-ipv6

Description Inbound Fragmented IPv6 in tunnel

Type: number

Format: counter

inbound-udp-packets-received

Description Inbound UDP packets received

Type: number

Format: counter

not-local-ip

Description Not local IP

Type: number

Format: counter

other-error

Description Other errors

Type: number

Format: counter

outbound-fragment-ipv6

Description Outbound Fragmented IPv6

Type: number

Format: counter

outbound-icmp-packets-received

Description Outbound ICMP packets received

Type: number

Format: counter

outbound-ipv6-dest-unreachable

Description Outbound IPv6 destination unreachable

Type: number

Format: counter

outbound-other-packets-received

Description Outbound other packets received

Type: number

Format: counter

outbound-packets-drop

Description Outbound packets dropped

Type: number

Format: counter

outbound-tcp-packets-received

Description Outbound TCP packets received

Type: number

Format: counter

outbound-udp-packets-received

Description Outbound UDP packets received

Type: number

Format: counter

packet-too-big

Description Packet too big

Type: number

Format: counter

unknown-delegated-prefix

Description Unknown 6rd delegated prefix

Type: number

Format: counter

vport-matched

Description Traffic match SLB virtual port

Type: number

Format: counter

2.26.340 cgnv6 sixrd fragmentation

sixrd fragmentation parameters

fragmentation Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	fragmentation
Element URI	/axapi/v3/cgnv6/sixrd/fragmentation
Element Attributes	fragmentation_attributes
Partition Visibility	shared
Schema	`fragmentation schema`

Operations Allowed:

Get Object

GET

/axapi/v3/cgnv6/sixrd/fragmentation

fragmentation_attributes

fragmentation attributes

inbound

Description: inbound is a **JSON Block**. Please see below for *inbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/sixrd/fragmentation/inbound*

outbound

Description: outbound is a **JSON Block**. Please see below for *outbound*

Type: Object

Reference Object: */axapi/v3/cgnv6/sixrd/fragmentation/outbound*

inbound

Specification	Value
Type	*object*

action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets; 'ipv6': Use IPv6 Fragmentation for oversize packets; 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big) (default);

Type: string

Supported Values: drop, ipv4, ipv6, send-icmpv6

Default: send-icmpv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

outbound

Specification	Value
Type	*object*

action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets (default); 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv6, send-icmp, send-icmpv6

Default: ipv6

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv6, send-icmp, send-icmpv6

Default: send-icmp

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.26.341 cgnv6 sixrd fragmentation inbound

6rd fragmentation rules for inbound oversize packets (default: send-icmpv6)

inbound Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	inbound
Element URI	/axapi/v3/cgnv6/sixrd/fragmentation/inbound
Element Attributes	inbound_attributes
Partition Visibility	shared
Schema	`inbound schema`

Operations Allowed:

        "a10-url": "/axapi/v3/cgnv6/stateful-firewall/vrid"
    }
}
```

Modify Object

POST

/axapi/v3/cgnv6/stateful-firewall/vrid

vrid attributes

Replace Object

PUT

/axapi/v3/cgnv6/stateful-firewall/vrid

vrid attributes

```
PUT /axapi/v3/cgnv6/stateful-firewall/vrid
Payload:
{
    "vrid": {
        "vrid-value": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/cgnv6/stateful-firewall/vrid

vrid attributes

```
DELETE /axapi/v3/cgnv6/stateful-firewall/vrid
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "(warning) stateful-firewall is an obsoleted feature that will be removed␣
↪soon"
    }
}
```

vrid attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid-value

Description Set VRRP-A vrid for stateful firewall (IPv4 and IPv6)

Type: number

Range: 1-31

2.26.370 cgnv6 template

Define a CGNv6 template

template Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	template
Element URI	/axapi/v3/cgnv6/template
Element Attributes	template_attributes
Partition Visibility	shared
Schema	`template schema`

Operations Allowed:

Get Object

GET

/axapi/v3/cgnv6/template

template_attributes

template attributes

dns-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/dns/{name}*

http-alg-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/http-alg/{name}*

logging-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/logging/{name}*

pcp-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/pcp/{name}*

policy-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/policy/{name}*

policy-list

Specification	Value
Type	*list*
Block object keys	

class-list

Description: class-list is a **JSON Block**. Please see below for *policy-list_class-list*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/policy/{name}/class-list*

name

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_class-list

Specification	Value
Type	*object*

client-ip-l3-dest

Description Use destination IP as client IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l3-dest and client-ip-l7-header are mutually exclusive

client-ip-l7-header

Description Use extract client IP address from L7 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l7-header and client-ip-l3-dest are mutually exclusive

header-name

Description Specify L7 header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lid-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/policy/{name}/class-list/lid/{lidnum}*

name

Description Class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

dns64

Description: dns64 is a **JSON Block**. Please see below for *policy-list_class-list_lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 0-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_class-list_lid-list_dns64

Specification	Value
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

logging-list

Specification	Value
Type	*list*
Block object keys	

batched-logging-disable

Description Disable multiple logs per packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom

Description: custom is a **JSON Block**. Please see below for *logging-list_custom*

Type: Object

disable-log-by-destination

Description: disable-log-by-destination is a **JSON Block**. Please see below for *logging-list_disable-log-by-destination*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination*

enable-log-by-destination

Description: enable-log-by-destination is a **JSON Block**. Please see below for *logging-list_enable-log-by-destination*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/enable-log-by-destination*

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use

3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'binary': Binary logging format; 'compact': Compact ASCII logging format (Hex format with compact representation); 'custom': Arbitrary custom logging format; 'default': Default A10 logging format (ASCII); 'rfc5424': RFC5424 compliant logging format; 'cef': Common Event Format for logging;

Type: string

Supported Values: binary, compact, custom, default, rfc5424, cef

Default: default

include-destination

Description Include the destination IP and port in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http

Description: include-http is a **JSON Block**. Please see below for *logging-list_include-http*

Type: Object

include-inside-user-mac

Description Include the inside user MAC address in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-partition-name

Description Include partition name in logging events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-port-block-account

Description include bytes accounting information in port-batch-v2 port-mapping and fixed-nat user-ports messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-radius-attribute

Description: include-radius-attribute is a **JSON Block**. Please see below for *logging-list_include-radius-attribute*

Type: Object

include-session-byte-count

Description include byte count in session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-year

Description including the 4-digit year in CEF, compact and default logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *logging-list_log*

Type: Object

log-receiver

Description: log-receiver is a **JSON Block**. Please see below for *logging-list_log-receiver*

Type: Object

name

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resolution

Description 'seconds': Logging timestamp resolution in seconds (default); '10-milliseconds': Logging timestamp resolution in 10s of milli-seconds;

Type: string

Supported Values: seconds, 10-milliseconds

Default: seconds

rfc-custom

Description: rfc-custom is a **JSON Block**. Please see below for *logging-list_rfc-custom*

Type: Object

rule

Description: rule is a **JSON Block**. Please see below for *logging-list_rule*

Type: Object

service-group

Description Set NAT logging service-group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

severity

Description: severity is a **JSON Block**. Please see below for *logging-list_severity*

Type: Object

shared

Description Service group is in shared patition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-address

Description: source-address is a **JSON Block**. Please see below for *logging-list_source-address*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/source-address*

source-port

Description: source-port is a **JSON Block**. Please see below for *logging-list_source-port*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_include-http

Specification	Value
Type	*object*

file-extension

Description HTTP file extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-cfg

Type: List

l4-session-info

Description Log the L4 session information of the HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description Log the HTTP Request Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-number

Description HTTP Request Number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_include-http_header-cfg

Specification	Value
Type	*list*
Block object keys	

custom-header-name

Description Header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

custom-max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

http-header

Description 'cookie': Log HTTP Cookie Header; 'referer': Log HTTP Referer Header; 'user-agent': Log HTTP User-Agent Header; 'header1': Log HTTP Header 1; 'header2': Log HTTP Header 2; 'header3': Log HTTP Header 3;

Type: string

Supported Values: cookie, referer, user-agent, header1, header2, header3

max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

logging-list_enable-log-by-destination

Specification	Value
Type	*object*

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/enable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/enable-log-by-destination/ip6/{ipv6-addr}*

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_enable-log-by-destination_ip-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_enable-log-by-destination_ip-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_enable-log-by-destination_ip-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_enable-log-by-destination_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_enable-log-by-destination_ip6-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_enable-log-by-destination_ip6-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_enable-log-by-destination_ip6-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_enable-log-by-destination_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_severity

Specification	Value
Type	*object*

severity-string

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: debug

Mutual Exclusion: severity-string and severity-val are mutually exclusive

severity-val

Description Logging severity level

Type: number

Range: 0-7

Default: 7

Mutual Exclusion: severity-val and severity-string are mutually exclusive

logging-list_custom

Specification	Value
Type	*object*

custom-header

Description 'use-syslog-header': Use syslog header as custom log header;

Type: string

Supported Values: use-syslog-header

custom-message

Description: custom-message is a **JSON Block**. Please see below for *logging-list_custom_custom-message*

Type: Object

custom-time-stamp-format

Description Customize the time stamp format (Customize the time-stamp format. Default:%Y%m%d%H%M%S)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

logging-list_custom_custom-message

Specification	Value
Type	*object*

custom-dhcpv6-map-prefix-assigned

Description MAP DHCPv6 prefix assigned

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-dhcpv6-map-prefix-released

Description MAP DHCPv6 prefix released

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-dhcpv6-map-prefix-renewed

Description MAP DHCPv6 prefix renewed

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-allocated

Description Fixed-NAT allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-freed

Description Fixed-NAT freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-interim-update

Description Fixed-NAT interim update (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-http-request-got

Description HTTP request got (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-allocated

Description Port allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-allocated

Description Port Batch allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-freed

Description Port Batch freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-allocated

Description Port Batch v2 allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-freed

Description Port Batch v2 freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-interim-update

Description Port Batch v2 interim update (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-freed

Description Port freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-created

Description Session created (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-deleted

Description Session deleted (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

logging-list_source-address

Specification	Value
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_source-port

Specification	Value
Type	*object*

any

Description Use any source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and source-port-num are mutually exclusive

source-port-num

Description Set source port for sending NAT syslogs (default: 514)

Type: number

Range: 1-65535

Default: 514

Mutual Exclusion: source-port-num and any are mutually exclusive

logging-list_log

Specification	Value
Type	*object*

fixed-nat

Description: fixed-nat is a **JSON Block**. Please see below for *logging-list_log_fixed-nat*

Type: Object

http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

map-dhcpv6

Description: map-dhcpv6 is a **JSON Block**. Please see below for *logging-list_log_map-dhcpv6*

Type: Object

merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-to-one-nat

Description: one-to-one-nat is a **JSON Block**. Please see below for *logging-list_log_one-to-one-nat*

Type: Object

port-mappings

Description 'creation': Log only creation of NAT mappings; 'disable': Disable Log creation and deletion of NAT mappings; 'both': Log creation and deletion of NAT mappings;

Type: string

Supported Values: creation, disable, both

Default: both

port-overloading

Description Force logging of all port-overloading sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sessions

Description Log all data sessions created using NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-data

Description Log LSN Subscriber Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_log_one-to-one-nat

Specification	Value
Type	*object*

one-to-one-merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-to-one-nat-sessions

Description Log all One-to-One NAT sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_log_map-dhcpv6

Specification	Value
Type	*object*

map-dhcpv6-msg-type

Type: List

map-dhcpv6-prefix-all

Description Log MAP DHCPv6 prefix assignment/renewal/release

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: map-dhcpv6-prefix-all and map-dhcpv6-msg-type are mutually exclusive

logging-list_log_map-dhcpv6_map-dhcpv6-msg-type

Specification	Value
Type	*list*
Block object keys	

map-dhcpv6-msg-type

Description 'prefix-assignment': Log MAP DHCPv6 prefix assignment; 'prefix-renewal': Log MAP DHCPv6 prefix renewal; 'prefix-release': Log MAP DHCPv6 prefix release;

Type: string

Supported Values: prefix-assignment, prefix-renewal, prefix-release

Mutual Exclusion: map-dhcpv6-msg-type and map-dhcpv6-prefix-all are mutually exclusive

logging-list_log_fixed-nat

Specification	Value
Type	*object*

fixed-nat-http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

fixed-nat-merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mappings

Description 'both': Log creation and deletion of NAT mappings; 'creation': Log creation of NAT mappings;

Type: string

Supported Values: both, creation

fixed-nat-sessions

Description Log all Fixed NAT sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-ports

Description: user-ports is a **JSON Block**. Please see below for *logging-list_log_fixed-nat_user-ports*

Type: Object

logging-list_log_fixed-nat_user-ports

Specification	Value
Type	*object*

days

Description Specify period in days

Type: number

Range: 1-30

start-time

Description Time when periodic logging starts (Specify start time(hh:mm))

Type: string

Format: time-hhmm

user-ports

Description Log Fixed NAT User Ports Configured

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_log-receiver

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

radius

Description Use RADIUS server for NAT logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

logging-list_include-radius-attribute

Specification	Value
Type	*object*

attr-cfg

Type: List

framed-ipv6-prefix

Description Include radius attributes for the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-if-not-existing

Description Configure what string is to be inserted for custom RADIUS attributes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-quote

Description No quotation marks for RADIUS attributes in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

zero-in-custom-attr

Description Insert 0000 for standard and custom attributes in log string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_include-radius-attribute_attr-cfg

Specification	Value
Type	*list*
Block object keys	

attr

Description 'imei': Include IMEI; 'imsi': Include IMSI; 'msisdn': Include MSISDN; 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

attr-event

Description 'http-requests': Include in HTTP request logs; 'port-mappings': Include in port-mapping logs; 'sessions': Include in session logs; 'user-data': Include in user-data logs;

Type: string

Supported Values: http-requests, port-mappings, sessions, user-data

logging-list_rule

Specification	Value
Type	*object*

interim-update-interval

Description Log interim update of NAT mappings (Interim update interval in minutes(Interval is floored to a multiple of 5))

Type: number

Range: 15-120

rule-http-requests

Description: rule-http-requests is a **JSON Block**. Please see below for *logging-list_rule_rule-http-requests*

Type: Object

logging-list_rule_rule-http-requests

Specification	Value
Type	*object*

dest-port

Type: List

disable-sequence-check

Description Disable http packet sequence check and don't drop out of order packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-all-headers

Description Include all configured headers despite of absence in HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-every-http-request

Description Log every HTTP request in an HTTP 1.1 session (Default: Log the first HTTP request in a session)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-url-len

Description Max length of URL log (Max URL length (Default: 128 char))

Type: number

Range: 100-1000

Default: 128

logging-list_rule_rule-http-requests_dest-port

Specification	Value
Type	*list*
Block object keys	

dest-port-number

Description

Type: number

Range: 1-65535

include-byte-count

Description Include the byte count of HTTP Request/Response in CGN session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_disable-log-by-destination

Specification	Value
Type	*object*

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_disable-log-by-destination_ip-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_disable-log-by-destination_ip-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_ip-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_ip6-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_disable-log-by-destination_ip6-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_ip6-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_rfc-custom

Specification	Value
Type	*object*

header

Description: header is a **JSON Block**. Please see below for *logging-list_rfc-custom_header*

Type: Object

message

Description: message is a **JSON Block**. Please see below for *logging-list_rfc-custom_message*

Type: Object

logging-list_rfc-custom_header

Specification	Value
Type	*object*

use-alternate-timestamp

Description Use alternate non-RFC5424 compliant timestamp. Ex: 1990 Jan 15 12:30:30

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_rfc-custom_message

Specification	Value
Type	*object*

dhcpv6-map-prefix-assigned

Description MAP DHCPv6 prefix assigned

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

dhcpv6-map-prefix-released

Description MAP DHCPv6 prefix released

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

dhcpv6-map-prefix-renewed

Description MAP DHCPv6 prefix renewed

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-request-got

Description HTTP request got (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ipv6-tech

Type: List

session-created

Description Session created (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

session-deleted

Description Session deleted (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

logging-list_rfc-custom_message_ipv6-tech

Specification	Value
Type	*list*
Block object keys	

fixed-nat-allocated

Description Fixed-NAT allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

fixed-nat-freed

Description Fixed-NAT freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-allocated

Description Port allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-allocated

Description Port Batch allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-freed

Description Port Batch freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-v2-allocated

Description Port Batch v2 allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-v2-freed

Description Port Batch v2 freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-freed

Description Port freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

tech-type

Description 'lsn': LSN; 'nat64': NAT64; 'ds-lite': DS-Lite; 'sixrd-nat64': 6rd-NAT64;

Type: string

Supported Values: lsn, nat64, ds-lite, sixrd-nat64

pcp-list

Specification	Value
Type	*list*
Block object keys	

allow-third-party-from-lan

Description Allow third party request coming from LAN (default is disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-third-party-from-wan

Description Allow third party request coming from WAN (default is disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

announce

Description PCP ANNOUNCE Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

check-client-nonce

Description To validate NONCE value in PCP request (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-map-filter

Description To disable processing of FILTER options in MAP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map

Description PCP MAP Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum

Description To set maximum lifetime of PCP mappings (default 1440 minutes)

Type: number

Range: 2-1440

Default: 1440

minimum

Description To set minimum lifetime of PCP mappings (default 2 minutes)

Type: number

Range: 2-1440

Default: 2

name

Description PCP Template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

pcp-server-port

Description PCP server listening port (default 5351) (PCP UDP destination port)

Type: number

Range: 1024-65535

Default: 5351

peer

Description PCP PEER Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-ip

Description Specify source IP address for IPv4 ANNOUNCE message

Type: string

Format: ipv4-address

source-ipv6

Description Specify source IPv6 address for IPv6 ANNOUNCE message

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-alg-list

Specification	Value
Type	*list*
Block object keys	

header-name-client-ip

Description Header name (default: X-Forwarded-For)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: X-Forwarded-For

header-name-msisdn

Description Header name (default: X-MSISDN)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: X-MSISDN

include-tunnel-ip

Description Include the tunnel IP (applies to DS-Lite and 6RD-NAT64 sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description 'append': Append if there is already a header (default); 'replace': Replace if there is already a header;

Type: string

Supported Values: append, replace

Default: append

name

Description HTTP-ALG template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

request-insert-client-ip

Description Insert Client IP into HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-insert-msisdn

Description Insert MSISDN into HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list

Specification	Value
Type	*list*
Block object keys	

class-list

Description: class-list is a **JSON Block**. Please see below for *dns-list_class-list*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/dns/{name}/class-list*

default-policy

Description 'nocache': Cache disable; 'cache': Cache enable;

Type: string

Supported Values: nocache, cache

Default: nocache

disable-dns-template

Description Disable DNS template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns64

Description: dns64 is a **JSON Block**. Please see below for *dns-list_dns64*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/dns/{name}/dns64*

drop

Description Drop the malformed query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop and forward are mutually exclusive

forward

Description Forward to service group (Service group name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: forward and drop are mutually exclusive

max-cache-size

Description Define maximum cache size (Maximum cache entry per VIP)

Type: number

name

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Period in minutes

Type: number

Range: 1-10000

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_class-list

Specification	Value
Type	*object*

lid-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *dns-list_class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_class-list_lid-list_dns

Specification	Value
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

dns-list_dns64

Specification	Value
Type	*object*

answer-only-disable

Description Disable Only translate the Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-data

Description Set AA flag in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Use a cached A-query response to provide AAAA query responses for the same hostname

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-query

Description Always change incoming AAAA DNS Query to A

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compress-disable

Description Disable Always try DNS Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-qr

Description Check DNS Question Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-rr-disable

Description Disable Check DNS Response Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-cname-disable

Description Disable Drop DNS CNAME Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

edns-append

Description Append EDNS Record when send A Query to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable DNS64 (Need to config this option before config any other dns64 options)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-append

Description Append translated Records when original Response only has Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-rcode3-disable

Description Disable Ignore DNS error Response with rcode 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-qr-length

Description Max Question Record Length, default is 128

Type: number

Range: 1-1023

Default: 128

parallel-query

Description Forward AAAA Query & generate A Query in parallel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passive-query-disable

Description Disable Generate A query upon empty or error Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retry

Description Retry count, default is 3 (Retry Number)

Type: number

Range: 0-15

Default: 3

single-response-disable

Description Disable Single Response which is used to avoid ambiguity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout to send additional Queries, unit: second, default is 1

Type: number

Range: 0-15

Default: 1

trans-ptr

Description Translate DNS PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trans-ptr-query

Description Translate DNS PTR Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify Max TTL in DNS Response, unit: second

Type: number

Range: 1-1000000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.26.371 cgnv6 template dns

DNS template

dns Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*dns-list*
Collection URI	/axapi/v3/cgnv6/template/dns
Element Name	dns
Element URI	/axapi/v3/cgnv6/template/dns/{name}
Element Attributes	dns_attributes
Partition Visibility	shared
Schema	`dns schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/template/dns

dns attributes

```
POST /axapi/v3/cgnv6/template/dns/
Payload:
{
    "dns": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/cgnv6/template/dns

dns attributes

Get Object

GET

/axapi/v3/cgnv6/template/dns/{name}

dns attributes

```
GET /axapi/v3/cgnv6/template/dns/a
Reponse:
{
    "dns": {
        "name": "a",
        "default-policy": "nocache",
        "disable-dns-template": 0,
        "drop": 0,
        "uuid": "9c358df4-08bb-11f0-951d-a9cf5715f49c",
        "user-tag": "a",
        "a10-url": "/axapi/v3/cgnv6/template/dns/a"
    }
}
```

Get List

GET

/axapi/v3/cgnv6/template/dns

dns-list

Modify Object

POST

/axapi/v3/cgnv6/template/dns/{name}

dns attributes

Replace Object

PUT

/axapi/v3/cgnv6/template/dns/{name}

dns attributes

```
PUT /axapi/v3/cgnv6/template/dns/a
Payload:
{
    "dns": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/cgnv6/template/dns

dns-list

Delete Object

DELETE

/axapi/v3/cgnv6/template/dns/{name}

dns attributes

```
DELETE /axapi/v3/cgnv6/template/dns/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

dns-list

dns-list is **JSON List** of *dns attributes*

dns-list : [

{ *dns attributes* },

{ *dns attributes* },

...

]

dns attributes

class-list

Description: class-list is a **JSON Block**. Please see below for *class-list*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/dns/{name}/class-list*

default-policy

Description 'nocache': Cache disable; 'cache': Cache enable;

Type: string

Supported Values: nocache, cache

Default: nocache

disable-dns-template

Description Disable DNS template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns64

Description: dns64 is a **JSON Block**. Please see below for *dns64*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/dns/{name}/dns64*

drop

Description Drop the malformed query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop and forward are mutually exclusive

forward

Description Forward to service group (Service group name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: forward and drop are mutually exclusive

max-cache-size

Description Define maximum cache size (Maximum cache entry per VIP)

Type: number

name

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Period in minutes

Type: number

Range: 1-10000

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list

Specification	Value
Type	*object*

lid-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list_dns

Specification	Value
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

dns64

Specification	Value
Type	*object*

answer-only-disable

Description Disable Only translate the Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-data

Description Set AA flag in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Use a cached A-query response to provide AAAA query responses for the same hostname

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-query

Description Always change incoming AAAA DNS Query to A

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compress-disable

Description Disable Always try DNS Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-qr

Description Check DNS Question Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-rr-disable

Description Disable Check DNS Response Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-cname-disable

Description Disable Drop DNS CNAME Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

edns-append

Description Append EDNS Record when send A Query to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable DNS64 (Need to config this option before config any other dns64 options)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-append

Description Append translated Records when original Response only has Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-rcode3-disable

Description Disable Ignore DNS error Response with rcode 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-qr-length

Description Max Question Record Length, default is 128

Type: number

Range: 1-1023

Default: 128

parallel-query

Description Forward AAAA Query & generate A Query in parallel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passive-query-disable

Description Disable Generate A query upon empty or error Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retry

Description Retry count, default is 3 (Retry Number)

Type: number

Range: 0-15

Default: 3

single-response-disable

Description Disable Single Response which is used to avoid ambiguity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout to send additional Queries, unit: second, default is 1

Type: number

Range: 0-15

Default: 1

trans-ptr

Description Translate DNS PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trans-ptr-query

Description Translate DNS PTR Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify Max TTL in DNS Response, unit: second

Type: number

Range: 1-1000000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.26.372 cgnv6 template dns class-list

Classification list

class-list Specification

Parameter	Value

    }
}
```

class-list attributes

lid-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lid-list_dns

Specification	Value
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

```

dns64 attributes

answer-only-disable

Description Disable Only translate the Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-data

Description Set AA flag in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Use a cached A-query response to provide AAAA query responses for the same hostname

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-query

Description Always change incoming AAAA DNS Query to A

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compress-disable

Description Disable Always try DNS Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-qr

Description Check DNS Question Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-rr-disable

Description Disable Check DNS Response Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-cname-disable

Description Disable Drop DNS CNAME Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

edns-append

Description Append EDNS Record when send A Query to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable DNS64 (Need to config this option before config any other dns64 options)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-append

Description Append translated Records when original Response only has Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-rcode3-disable

Description Disable Ignore DNS error Response with rcode 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-qr-length

Description Max Question Record Length, default is 128

Type: number

Range: 1-1023

Default: 128

parallel-query

Description Forward AAAA Query & generate A Query in parallel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passive-query-disable

Description Disable Generate A query upon empty or error Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retry

Description Retry count, default is 3 (Retry Number)

Type: number

Range: 0-15

Default: 3

single-response-disable

Description Disable Single Response which is used to avoid ambiguity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout to send additional Queries, unit: second, default is 1

Type: number

Range: 0-15

Default: 1

trans-ptr

Description Translate DNS PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trans-ptr-query

Description Translate DNS PTR Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify Max TTL in DNS Response, unit: second

Type: number

Range: 1-1000000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

]

http-alg attributes

header-name-client-ip

Description Header name (default: X-Forwarded-For)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: X-Forwarded-For

header-name-msisdn

Description Header name (default: X-MSISDN)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: X-MSISDN

include-tunnel-ip

Description Include the tunnel IP (applies to DS-Lite and 6RD-NAT64 sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description 'append': Append if there is already a header (default); 'replace': Replace if there is already a header;

Type: string

Supported Values: append, replace

Default: append

name

Description HTTP-ALG template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

request-insert-client-ip

Description Insert Client IP into HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-insert-msisdn

Description Insert MSISDN into HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

```

logging-list

logging-list is **JSON List** of *logging attributes*

logging-list : [

{ *logging attributes* },

{ *logging attributes* },

...

]

logging attributes

batched-logging-disable

Description Disable multiple logs per packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom

Description: custom is a **JSON Block**. Please see below for *custom*

Type: Object

disable-log-by-destination

Description: disable-log-by-destination is a **JSON Block**. Please see below for *disable-log-by-destination*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination*

enable-log-by-destination

Description: enable-log-by-destination is a **JSON Block**. Please see below for *enable-log-by-destination*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/enable-log-by-destination*

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'binary': Binary logging format; 'compact': Compact ASCII logging format (Hex format with compact representation); 'custom': Arbitrary custom logging format; 'default': Default A10 logging format (ASCII); 'rfc5424': RFC5424 compliant logging format; 'cef': Common Event Format for logging;

Type: string

Supported Values: binary, compact, custom, default, rfc5424, cef

Default: default

include-destination

Description Include the destination IP and port in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http

Description: include-http is a **JSON Block**. Please see below for *include-http*

Type: Object

include-inside-user-mac

Description Include the inside user MAC address in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-partition-name

Description Include partition name in logging events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-port-block-account

Description include bytes accounting information in port-batch-v2 port-mapping and fixed-nat user-ports messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-radius-attribute

Description: include-radius-attribute is a **JSON Block**. Please see below for *include-radius-attribute*

Type: Object

include-session-byte-count

Description include byte count in session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-year

Description including the 4-digit year in CEF, compact and default logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *log*

Type: Object

log-receiver

Description: log-receiver is a **JSON Block**. Please see below for *log-receiver*

Type: Object

name

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resolution

Description 'seconds': Logging timestamp resolution in seconds (default); '10-milliseconds': Logging timestamp resolution in 10s of milli-seconds;

Type: string

Supported Values: seconds, 10-milliseconds

Default: seconds

rfc-custom

Description: rfc-custom is a **JSON Block**. Please see below for *rfc-custom*

Type: Object

rule

Description: rule is a **JSON Block**. Please see below for *rule*

Type: Object

service-group

Description Set NAT logging service-group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

severity

Description: severity is a **JSON Block**. Please see below for *severity*

Type: Object

shared

Description Service group is in shared patition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-address

Description: source-address is a **JSON Block**. Please see below for *source-address*

Type: Object

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/source-address*

source-port

Description: source-port is a **JSON Block**. Please see below for *source-port*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

include-http

Specification	Value
Type	*object*

file-extension

Description HTTP file extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-cfg

Type: List

l4-session-info

Description Log the L4 session information of the HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description Log the HTTP Request Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-number

Description HTTP Request Number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http_header-cfg

Specification	Value
Type	*list*
Block object keys	

custom-header-name

Description Header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

custom-max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

http-header

Description 'cookie': Log HTTP Cookie Header; 'referer': Log HTTP Referer Header; 'user-agent': Log HTTP User-Agent Header; 'header1': Log HTTP Header 1; 'header2': Log HTTP Header 2; 'header3': Log HTTP Header 3;

Type: string

Supported Values: cookie, referer, user-agent, header1, header2, header3

max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

enable-log-by-destination

Specification	Value
Type	*object*

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/enable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Reference Object: */axapi/v3/cgnv6/template/logging/{name}/enable-log-by-destination/ip6/{ipv6-addr}*

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable-log-by-destination_ip-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable-log-by-destination_ip-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

enable-log-by-destination_ip-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

enable-log-by-destination_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

enable-log-by-destination_ip6-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable-log-by-destination_ip6-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

enable-log-by-destination_ip6-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

enable-log-by-destination_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

severity

Specification	Value
Type	*object*

severity-string

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: debug

Mutual Exclusion: severity-string and severity-val are mutually exclusive

severity-val

Description Logging severity level

Type: number

Range: 0-7

Default: 7

Mutual Exclusion: severity-val and severity-string are mutually exclusive

custom

Specification	Value
Type	*object*

custom-header

Description 'use-syslog-header': Use syslog header as custom log header;

Type: string

Supported Values: use-syslog-header

custom-message

Description: custom-message is a **JSON Block**. Please see below for *custom_custom-message*

Type: Object

custom-time-stamp-format

Description Customize the time stamp format (Customize the time-stamp format. Default:%Y%m%d%H%M%S)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

custom_custom-message

Specification	Value
Type	*object*

custom-dhcpv6-map-prefix-assigned

Description MAP DHCPv6 prefix assigned

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-dhcpv6-map-prefix-released

Description MAP DHCPv6 prefix released

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-dhcpv6-map-prefix-renewed

Description MAP DHCPv6 prefix renewed

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-allocated

Description Fixed-NAT allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-freed

Description Fixed-NAT freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-interim-update

Description Fixed-NAT interim update (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-http-request-got

Description HTTP request got (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-allocated

Description Port allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-allocated

Description Port Batch allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-freed

Description Port Batch freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-allocated

Description Port Batch v2 allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-freed

Description Port Batch v2 freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-interim-update

Description Port Batch v2 interim update (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-freed

Description Port freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-created

Description Session created (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-deleted

Description Session deleted (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

source-address

Specification	Value
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

source-port

Specification	Value
Type	*object*

any

Description Use any source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and source-port-num are mutually exclusive

source-port-num

Description Set source port for sending NAT syslogs (default: 514)

Type: number

Range: 1-65535

Default: 514

Mutual Exclusion: source-port-num and any are mutually exclusive

log

Specification	Value
Type	*object*

fixed-nat

Description: fixed-nat is a **JSON Block**. Please see below for *log_fixed-nat*

Type: Object

http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

map-dhcpv6

Description: map-dhcpv6 is a **JSON Block**. Please see below for *log_map-dhcpv6*

Type: Object

merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-to-one-nat

Description: one-to-one-nat is a **JSON Block**. Please see below for *log_one-to-one-nat*

Type: Object

port-mappings

Description 'creation': Log only creation of NAT mappings; 'disable': Disable Log creation and deletion of NAT mappings; 'both': Log creation and deletion of NAT mappings;

Type: string

Supported Values: creation, disable, both

Default: both

port-overloading

Description Force logging of all port-overloading sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sessions

Description Log all data sessions created using NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-data

Description Log LSN Subscriber Information

Type: boolean
