Format: counter

No_a10_socket

Description no a10 socket

Type: number

Format: counter

No_congest_wnd

Description No congestion window

Type: number

Format: counter

No_next_scid

Description No_next_scid

Type: number

Format: counter

No_other_side_socket

Description no other side socket

Type: number

Format: counter

No_tx_queue

Description No tx queue

Type: number

Format: counter

No_w_engine

Description no w engine

Type: number

Format: counter

No_w_socket

Description no w socket

Type: number

Format: counter

Packet_drop

Description Packet drop

Type: number

Format: counter

Packet_loop_limited

Description Packet loop limited

Type: number

Format: counter

Packet_lost

Description Packet lost

Type: number

Format: counter

Packet_out_of_order

Description Packet out of order

Type: number

Format: counter

Packet_retransmit

Description Packet retransmit

Type: number

Format: counter

Packet_rx

Description Packet receive

Type: number

Format: counter

Packet_too_short

Description Packet_too_short

Type: number

Format: counter

Packet_tx

Description Packet send

Type: number

Format: counter

Packet_tx_failed

Description Packet send failed

Type: number

Format: counter

Parse_error

Description Parse error

Type: number

Format: counter

Pkt_acked_failed

Description Pkt_acked_failed

Type: number

Format: counter

Pn_delete_failed

Description Pn delete failed

Type: number

Format: counter

Pn_insert_failed

Description Pn insert failed

Type: number

Format: counter

Quic_packet_drop

Description Quic packet drop

Type: number

Format: counter

RETRY_rx

Description RETRY receive

Type: number

Format: counter

RETRY_tx

Description RETRY send

Type: number

Format: counter

RTT_0_rx

Description RTT_0 receive

Type: number

Format: counter

RTT_0_tx

Description RTT_0 send

Type: number

Format: counter

RTT_updated

Description RTT updated

Type: number

Format: counter

Receive_wnd_limited

Description Receive window limited

Type: number

Format: counter

Server_receive_new_token

Description Server_receive_new_token

Type: number

Format: counter

Server_rx_handshake_done

Description Server_rx_handshake_done

Type: number

Format: counter

Stateless_reset

Description Stateless resert

Type: number

Format: counter

Stream_blocked

Description Stream_blocked

Type: number

Format: counter

Stream_id_mismatch

Description Stream_id_mismatch

Type: number

Format: counter

Token_len_too_long

Description Token_len_too_long

Type: number

Format: counter

Too_noisy_fuzzing

Description Too_noisy_fuzzing

Type: number

Format: counter

Tx_buffer_deq

Description Tx buffer dequeued

Type: number

Format: counter

Tx_buffer_enq

Description Tx buffer enqueued

Type: number

Format: counter

Unknown_scid

Description Unknown scid

Type: number

Format: counter

VER_rx

Description Version receive

Type: number

Format: counter

VER_tx

Description Version send

Type: number

Format: counter

Zero_frame_packet

Description Zero_frame_packet

Type: number

Format: counter

a10_socket_closed

Description a10 socket closed

Type: number

Format: counter

a10_socket_created

Description a10 socket created

Type: number

Format: counter

ack_alarm

Description ack timeout

Type: number

Format: counter

ack_ecn_frame_rx

Description ack enc frame receive

Type: number

Format: counter

ack_ecn_frame_tx

Description ack enc frame send

Type: number

Format: counter

ack_frame_rx

Description ack frame receive

Type: number

Format: counter

ack_frame_tx

Description ack frame send

Type: number

Format: counter

app_conn_close_frame_rx

Description app conn close frame receive

Type: number

Format: counter

app_conn_close_frame_tx

Description app conn close frame send

Type: number

Format: counter

bi_stream_data_blocked_frame_rx

Description bi stream data blocked frame receive

Type: number

Format: counter

bi_stream_data_blocked_frame_tx

Description bi stream data blocked frame send

Type: number

Format: counter

cid_cpu_hash

Description CID CPU Hash

Type: number

Format: counter

cid_zero

Description CID Zero

Type: number

Format: counter

client_conn_attempted

Description Client connection attempted

server-list

server-list is **JSON List** of *server attributes*

server-list : [

{ *server attributes* },

{ *server attributes* },

...

]

server attributes

action

Description 'enable': Enable this Real Server; 'disable': Disable this Real Server; 'disable-with-health-check': disable real server, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

alternate-server

Type: List

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

conn-resume

Description Connection Resume (Connection Resume (min active conn before resume taking new conn))

Type: number

Range: 1-1000000

ethernet

Description ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

extended-stats

Description Enable extended statistics on real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-ip

Description External IP address for NAT of GSLB

Type: string

Format: ipv4-address

fqdn-name

Description Server hostname

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fqdn-name, server-ipv6-addr, and host are mutually exclusive

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check, shared-partition-health-check, and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable,health-check, shared-partition-health-check, and health-check-shared are mutually exclusive

health-check-shared

Description Health Check Monitor (Health monitor name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check-shared and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

host

Description IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: host, server-ipv6-addr, and fqdn-name are mutually exclusive

ipv6

Description IPv6 address Mapping of GSLB

Type: string

Format: ipv6-address

l2-health-check-path

Description L2 health check path

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/system/path*

name

Description Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-list

Type: List

Reference Object: */axapi/v3/slb/server/{name}/port/{port-number}+{protocol}*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: server-ipv6-addr, host, and fqdn-name are mutually exclusive

service-list

Type: List

Reference Object: */axapi/v3/slb/server/{name}/service/{port-number}+{protocol}+{label}*

shared-partition-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-health-check, health-check, and health-check-disable are mutually exclusive

shared-partition-server-template

Description Reference a server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-server-template and template-server are mutually exclusive

slow-start

Description Slowly ramp up the connection number after server is up (start from 128, then double every 10 sec till 4096)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spoofing-cache

Description This server is a spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server; 'stats-data-disable': Disable statistical data collection for real server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

template-link-cost

Description Link-Cost template (Link-Cost template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/link-cost*

template-server

Description Server template (Server template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-server and shared-partition-server-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/server*

template-server-shared

Description Server Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server*

trunk

Description trunk interface

Type: number

Range: 1-4096

Reference Object: */axapi/v3/interface/trunk*

use-aam-server

Description Using aam server. For health check, please configure it in aam server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight for this Real Server (Connection Weight)

Type: number

Range: 1-1000

Default: 1

port-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': enable; 'disable': disable; 'disable-with-health-check': disable port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

alternate-port

Type: List

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *port-list_auth-cfg*

Type: Object

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

conn-resume

Description Connection Resume

Type: number

Range: 1-1000000

extended-stats

Description Enable extended statistics on real server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

follow-port-protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

health-check

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check,shared-rport-health-check, health-check-follow-port, and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable,health-check, shared-rport-health-check, rport-health-check-shared, and health-check-follow-port are mutually exclusive

health-check-follow-port

Description Specify which port to follow for health status (Port Number)

Type: number

Range: 1-65534

Mutual Exclusion: health-check-follow-port, health-check, and health-check-disable are mutually exclusive

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-ssl

Description No SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

only

Description Force using HTTP/2 with Prior Knowledge all the time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/slb-port-tmpl*

port-number

Description Port Number

Type: number

Range: 0-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

range

Description Port range (Port range value - used for vip-to-rport-mapping and vport-rport range mapping)

Type: number

Range: 0-254

Default: 0

rport-health-check-shared

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: rport-health-check-shared and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

sampling-enable

Type: List

shared-partition-port-template

Description Reference a port template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-port-template and template-port are mutually exclusive

shared-rport-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-rport-health-check, health-check, and health-check-disable are mutually exclusive

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server port; 'stats-data-disable': Disable statistical data collection for real server port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

support-http2

Description Starting HTTP/2 with Prior Knowledge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-port

Description Port template (Port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-port and shared-partition-port-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/port*

template-port-shared

Description Port Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/port*

template-server-ssl

Description Server side SSL template (Server side SSL Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Port Weight (Connection Weight)

Type: number

Range: 1-1000

Default: 1

port-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_req': Current requests; 'total_req': Total Requests; 'total_req_succ': Total requests succ; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_conn': Total connections; 'last_total_conn': Last total connections; 'peak_conn': Peak connections; 'es_resp_200': Response status 200; 'es_resp_300': Response status 300; 'es_resp_400': Response status 400; 'es_resp_500': Response status 500; 'es_resp_other': Response status other; 'es_req_count': Total proxy requests; 'es_resp_count': Total proxy response; 'es_resp_invalid_http': Total non-http response; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_good_status_code': Total reverse packets with good status code inspected; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'resp-count': Total Response Count; 'resp-1xx': Response status 1xx; 'resp-2xx': Response status 2xx; 'resp-3xx': Response status 3xx; 'resp-4xx': Response status 4xx; 'resp-5xx': Response status 5xx; 'resp-other': Response status Other; 'resp-latency': Time to First Response Byte; 'curr_pconn': Current persistent connections;

Type: string

Supported Values: all, curr_req, total_req, total_req_succ, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, last_total_conn, peak_conn, es_resp_200, es_resp_300, es_resp_400, es_resp_500, es_resp_other, es_req_count, es_resp_count, es_resp_invalid_http, total_rev_pkts_inspected, total_rev_pkts_inspected_good_status_code, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, resp-count, resp-1xx, resp-2xx, resp-3xx, resp-4xx, resp-5xx, resp-other, resp-latency, curr_pconn

port-list_alternate-port

Specification	Value
Type	*list*
Block object keys	

alternate

Description Alternate Server Number

Type: number

Range: 1-16

alternate-name

Description Alternate Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

alternate-server-port

Description Port (Alternate Server Port Value)

Type: number

Range: 1-65535

port-list_auth-cfg

Specification	Value
Type	*object*

service-principal-name

Description Service Principal Name (Kerberos principal name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

alternate-server

Specification	Value

port attributes

port-list

port-list is **JSON List** of *port attributes*

port-list : [

{ *port attributes* },

{ *port attributes* },

…

]

port attributes

action

Description 'enable': enable; 'disable': disable; 'disable-with-health-check': disable port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

alternate-port

Type: List

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *auth-cfg*

Type: Object

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

conn-resume

Description Connection Resume

Type: number

Range: 1-1000000

extended-stats

Description Enable extended statistics on real server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

follow-port-protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

health-check

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check,shared-rport-health-check, health-check-follow-port, and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable,health-check, shared-rport-health-check, rport-health-check-shared, and health-check-follow-port are mutually exclusive

health-check-follow-port

Description Specify which port to follow for health status (Port Number)

Type: number

Range: 1-65534

Mutual Exclusion: health-check-follow-port, health-check, and health-check-disable are mutually exclusive

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-ssl

Description No SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

only

Description Force using HTTP/2 with Prior Knowledge all the time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/slb-port-tmpl*

port-number

Description Port Number

Type: number

Range: 0-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

range

Description Port range (Port range value - used for vip-to-rport-mapping and vport-rport range mapping)

Type: number

Range: 0-254

Default: 0

rport-health-check-shared

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: rport-health-check-shared and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

sampling-enable

Type: List

shared-partition-port-template

Description Reference a port template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-port-template and template-port are mutually exclusive

shared-rport-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-rport-health-check, health-check, and health-check-disable are mutually exclusive

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server port; 'stats-data-disable': Disable statistical data collection for real server port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

support-http2

Description Starting HTTP/2 with Prior Knowledge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-port

Description Port template (Port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-port and shared-partition-port-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/port*

template-port-shared

Description Port Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/port*

template-server-ssl

Description Server side SSL template (Server side SSL Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Port Weight (Connection Weight)

Type: number

Range: 1-1000

Default: 1

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_req': Current requests; 'total_req': Total Requests; 'total_req_succ': Total requests succ; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_conn': Total connections; 'last_total_conn': Last total connections; 'peak_conn': Peak connections; 'es_resp_200': Response status 200; 'es_resp_300': Response status 300; 'es_resp_400': Response status 400; 'es_resp_500': Response status 500; 'es_resp_other': Response status other; 'es_req_count': Total proxy requests; 'es_resp_count': Total proxy response; 'es_resp_invalid_http': Total non-http response; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_good_status_code': Total reverse packets with good status code inspected; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'resp-count': Total Response Count; 'resp-1xx': Response status 1xx; 'resp-2xx': Response status 2xx; 'resp-3xx': Response status 3xx; 'resp-4xx': Response status 4xx; 'resp-5xx': Response status 5xx; 'resp-other': Response status Other; 'resp-latency': Time to First Response Byte; 'curr_pconn': Current persistent connections;

Type: string

Supported Values: all, curr_req, total_req, total_req_succ, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, last_total_conn, peak_conn, es_resp_200, es_resp_300, es_resp_400, es_resp_500, es_resp_other, es_req_count, es_resp_count, es_resp_invalid_http, total_rev_pkts_inspected, total_rev_pkts_inspected_good_status_code, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, resp-count, resp-1xx, resp-2xx, resp-3xx, resp-4xx, resp-5xx, resp-other, resp-latency, curr_pconn

alternate-port

Specification	Value
Type	*list*
Block object keys	

alternate

service attributes

action

Description 'enable': enable; 'disable': disable; 'disable-with-health-check': disable port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

health-check

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

label

Description Service Label

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/slb-service-tmpl*

port-number

Description Port Number

Type: number

Range: 0-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*

oper

Specification	Value
Type	*object*

cert-vfy

Description Sent certificate verify for authentication

Type: number

cumulative-sessions

Description Cumulative SSL sessions

Type: number

downgraded

Description TLS version downgraded

Type: number

hs-avg-time

Description Average handshake time in milliseconds

Type: number

hs-failures

Description Total handshake failures

Type: number

kex-dhe-1024-failures

Description Failed 1024-bit DHE key exchanges

Type: number

kex-dhe-1024-successes

Description Successful 1024-bit DHE key exchanges

Type: number

kex-dhe-2048-failures

Description Failed 2048-bit DHE key exchanges

Type: number

kex-dhe-2048-successes

Description Successful 2048-bit DHE key exchanges

Type: number

kex-dhe-512-failures

Description Failed 512-bit DHE key exchanges

Type: number

kex-dhe-512-successes

Description Successful 512-bit DHE key exchanges

Type: number

kex-ecdhe-secp256r1-failures

Description Failed secp256r1 ECDHE key exchanges

Type: number

kex-ecdhe-secp256r1-successes

Description Successful secp256r1 ECDHE key exchanges

Type: number

kex-ecdhe-secp384r1-failures

Description Failed secp384r1 ECDHE key exchanges

Type: number

kex-ecdhe-secp384r1-successes

Description Successful secp384r1 ECDHE key exchanges

Type: number

kex-ecdhe-secp521r1-failures

Description Failed secp521r1 ECDHE key exchanges

Type: number

kex-ecdhe-secp521r1-successes

Description Successful secp521r1 ECDHE key exchanges

Type: number

kex-ecdhe-sm2-failures

Description Failed sm2p256v1 ECDHE key exchanges

Type: number

kex-ecdhe-sm2-successes

Description Successful sm2p256v1 ECDHE key exchanges

Type: number

kex-ecdhe-x25519-failures

Description Failed x25519 ECDHE key exchanges

Type: number

kex-ecdhe-x25519-successes

Description Successful x25519 ECDHE key exchanges

Type: number

kex-ecdhe-x448-failures

Description Failed x448 ECDHE key exchanges

Type: number

kex-ecdhe-x448-successes

Description Successful x448 ECDHE key exchanges

Type: number

kex-rsa-1024-failures

Description Failed 1024-bit RSA key exchanges

Type: number

kex-rsa-1024-successes

Description Successful 1024-bit RSA key exchanges

Type: number

kex-rsa-2048-failures

Description Failed 2048-bit RSA key exchanges

Type: number

kex-rsa-2048-successes

Description Successful 2048-bit RSA key exchanges

Type: number

kex-rsa-4096-failures

Description Failed 4096-bit RSA key exchanges

Type: number

kex-rsa-4096-successes

Description Successful 4096-bit RSA key exchanges

Type: number

kex-rsa-512-failures

Description Failed 512-bit RSA key exchanges

Type: number

kex-rsa-512-successes

Description Successful 512-bit RSA key exchanges

Type: number

port

Description Virtual Port

Type: number

renego-ssl2-failures

Description Failed SSL2 renegotiations

Type: number

renego-ssl2-successes

Description Successful SSL2 renegotiations

Type: number

renego-ssl3-failures

Description Failed SSL3 renegotiations

Type: number

renego-ssl3-successes

Description Successful SSL3 renegotiations

Type: number

renego-tls10-failures

Description Failed TLS1.0 renegotiations

Type: number

renego-tls10-successes

Description Successful TLS1.0 renegotiations

Type: number

renego-tls11-failures

Description Failed TLS1.1 renegotiations

Type: number

renego-tls11-successes

Description Successful TLS1.1 renegotiations

Type: number

renego-tls12-failures

Description Failed TLS1.2 renegotiations

Type: number

renego-tls12-successes

Description Successful TLS1.2 renegotiations

Type: number

renego-tls13-failures

Description Failed TLS1.3 renegotiations

Type: number

renego-tls13-successes

Description Successful TLS1.3 renegotiations

Type: number

renegotiation-total

Description Total renegotiations

Type: number

sess-cache-curr-conn

Description Session cache current connections

Type: number

sess-cache-hit

Description Session cache hits

Type: number

sess-cache-miss

Description Session cache misses

Type: number

sess-cache-new

Description Session cache new entries

Type: number

sess-cache-timeout

Description Session cache timeouts

Type: number

ssl2-failures

Description Failed SSL2 connections

Type: number

ssl2-successes

Description Successful SSL2 connections

Type: number

ssl3-failures

Description Failed SSL3 connections

Type: number

ssl3-rsa-des-192-cbc3-sha-failures

Description SSL3_RSA_DES_192_CBC3_SHA Failures

Type: number

ssl3-rsa-des-192-cbc3-sha-id

Description SSL3_RSA_DES_192_CBC3_SHA Cipher ID

Type: string

ssl3-rsa-des-192-cbc3-sha-successes

Description SSL3_RSA_DES_192_CBC3_SHA Successes

Type: number

ssl3-rsa-des-40-cbc-sha-failures

Description SSL3_RSA_DES_40_CBC_SHA Failures

Type: number

ssl3-rsa-des-40-cbc-sha-id

Description SSL3_RSA_DES_40_CBC_SHA Cipher ID

Type: string

ssl3-rsa-des-40-cbc-sha-successes

Description SSL3_RSA_DES_40_CBC_SHA Successes

Type: number

ssl3-rsa-des-64-cbc-sha-failures

Description SSL3_RSA_DES_64_CBC_SHA Failures

Type: number

ssl3-rsa-des-64-cbc-sha-id

Description SSL3_RSA_DES_64_CBC_SHA Cipher ID

Type: string

ssl3-rsa-des-64-cbc-sha-successes

Description SSL3_RSA_DES_64_CBC_SHA Successes

Type: number

ssl3-rsa-rc4-128-md5-failures

Description SSL3_RSA_RC4_128_MD5 Failures

Type: number

ssl3-rsa-rc4-128-md5-id

Description SSL3_RSA_RC4_128_MD5 Cipher ID

Type: string

ssl3-rsa-rc4-128-md5-successes

Description SSL3_RSA_RC4_128_MD5 Successes

Type: number

ssl3-rsa-rc4-128-sha-failures

Description SSL3_RSA_RC4_128_SHA Failures

Type: number

ssl3-rsa-rc4-128-sha-id

Description SSL3_RSA_RC4_128_SHA Cipher ID

Type: string

ssl3-rsa-rc4-128-sha-successes

Description SSL3_RSA_RC4_128_SHA Successes

Type: number

ssl3-rsa-rc4-40-md5-failures

Description SSL3_RSA_RC4_40_MD5 Failures

Type: number

ssl3-rsa-rc4-40-md5-id

Description SSL3_RSA_RC4_40_MD5 Cipher ID

Type: string

ssl3-rsa-rc4-40-md5-successes

Description SSL3_RSA_RC4_40_MD5 Successes

Type: number

ssl3-successes

Description Successful SSL3 connections

Type: number

tls1-dhe-rsa-aes-128-gcm-sha256-failures

Description TLS1_DHE_RSA_AES_128_GCM_SHA256 Failures

Type: number

tls1-dhe-rsa-aes-128-gcm-sha256-id

Description TLS1_DHE_RSA_AES_128_GCM_SHA256 Cipher ID

Type: string

tls1-dhe-rsa-aes-128-gcm-sha256-successes

Description TLS1_DHE_RSA_AES_128_GCM_SHA256 Successes

Type: number

tls1-dhe-rsa-aes-128-sha-failures

Description TLS1_DHE_RSA_AES_128_SHA Failures

Type: number

tls1-dhe-rsa-aes-128-sha-id

Description TLS1_DHE_RSA_AES_128_SHA Cipher ID

Type: string

tls1-dhe-rsa-aes-128-sha-successes

Description TLS1_DHE_RSA_AES_128_SHA Successes

Type: number

tls1-dhe-rsa-aes-128-sha256-failures

Description TLS1_DHE_RSA_AES_128_SHA256 Failures

Type: number

tls1-dhe-rsa-aes-128-sha256-id

Description TLS1_DHE_RSA_AES_128_SHA256 Cipher ID

Type: string

tls1-dhe-rsa-aes-128-sha256-successes

Description TLS1_DHE_RSA_AES_128_SHA256 Successes

Type: number

tls1-dhe-rsa-aes-256-gcm-sha384-failures

Description TLS1_DHE_RSA_AES_256_GCM_SHA384 Failures

Type: number

tls1-dhe-rsa-aes-256-gcm-sha384-id

Description TLS1_DHE_RSA_AES_256_GCM_SHA384 Cipher ID

Type: string

tls1-dhe-rsa-aes-256-gcm-sha384-successes

Description TLS1_DHE_RSA_AES_256_GCM_SHA384 Successes

Type: number

tls1-dhe-rsa-aes-256-sha-failures

Description TLS1_DHE_RSA_AES_256_SHA Failures

Type: number

tls1-dhe-rsa-aes-256-sha-id

Description TLS1_DHE_RSA_AES_256_SHA Cipher ID

Type: string

tls1-dhe-rsa-aes-256-sha-successes

Description TLS1_DHE_RSA_AES_256_SHA Successes

Type: number

tls1-dhe-rsa-aes-256-sha256-failures

Description TLS1_DHE_RSA_AES_256_SHA256 Failures

Type: number

tls1-dhe-rsa-aes-256-sha256-id

Description TLS1_DHE_RSA_AES_256_SHA256 Cipher ID

Type: string

tls1-dhe-rsa-aes-256-sha256-successes

Description TLS1_DHE_RSA_AES_256_SHA256 Successes

Type: number

tls1-dhe-rsa-chacha20-poly1305-sha256-failures

Description TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256 Cipher failures

Type: number

tls1-dhe-rsa-chacha20-poly1305-sha256-id

Description TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256 Cipher ID

Type: string

tls1-dhe-rsa-chacha20-poly1305-sha256-successes

Description TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256 Cipher successes

Type: number

tls1-ecdhe-ecdsa-aes-128-gcm-sha256-failures

Description TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256 Failures

Type: number

tls1-ecdhe-ecdsa-aes-128-gcm-sha256-id

Description TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256 Cipher ID

Type: string

tls1-ecdhe-ecdsa-aes-128-gcm-sha256-successes

Description TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256 Successes

Type: number

tls1-ecdhe-ecdsa-aes-128-sha-failures

Description TLS1_ECDHE_ECDSA_AES_128_SHA Failures

Type: number

tls1-ecdhe-ecdsa-aes-128-sha-id

Description TLS1_ECDHE_ECDSA_AES_128_SHA Cipher ID

Type: string

tls1-ecdhe-ecdsa-aes-128-sha-successes

Description TLS1_ECDHE_ECDSA_AES_128_SHA Successes

Type: number

tls1-ecdhe-ecdsa-aes-128-sha256-failures

Description TLS1_ECDHE_ECDSA_AES_128_SHA256 Failures

Type: number

tls1-ecdhe-ecdsa-aes-128-sha256-id

Description TLS1_ECDHE_ECDSA_AES_128_SHA256 Cipher ID

Type: string

tls1-ecdhe-ecdsa-aes-128-sha256-successes

Description TLS1_ECDHE_ECDSA_AES_128_SHA256 Successes

Type: number

tls1-ecdhe-ecdsa-aes-256-gcm-sha384-failures

Description TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384 Failures

Type: number

tls1-ecdhe-ecdsa-aes-256-gcm-sha384-id

Description TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384 Cipher ID

Type: string

tls1-ecdhe-ecdsa-aes-256-gcm-sha384-successes

Description TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384 Successes

Type: number

tls1-ecdhe-ecdsa-aes-256-sha-failures

Description TLS1_ECDHE_ECDSA_AES_256_SHA Failures

Type: number

tls1-ecdhe-ecdsa-aes-256-sha-id

Description TLS1_ECDHE_ECDSA_AES_256_SHA Cipher ID

Type: string

tls1-ecdhe-ecdsa-aes-256-sha-successes

Description TLS1_ECDHE_ECDSA_AES_256_SHA Successes

Type: number

tls1-ecdhe-ecdsa-aes-256-sha384-failures

Description TLS1_ECDHE_ECDSA_AES_256_SHA384 Failures

Type: number

tls1-ecdhe-ecdsa-aes-256-sha384-id

Description TLS1_ECDHE_ECDSA_AES_256_SHA384 Cipher ID

Type: string

tls1-ecdhe-ecdsa-aes-256-sha384-successes

Description TLS1_ECDHE_ECDSA_AES_256_SHA384 Successes

Type: number

tls1-ecdhe-ecdsa-chacha20-poly1305-sha256-failures

Description TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256 Cipher failures

Type: number

tls1-ecdhe-ecdsa-chacha20-poly1305-sha256-id

Description TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256 Cipher ID

Type: string

tls1-ecdhe-ecdsa-chacha20-poly1305-sha256-successes

Description TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256 Cipher successes

Type: number

tls1-ecdhe-rsa-aes-128-gcm-sha256-failures

Description TLS1_ECDHE_RSA_AES_128_GCM_SHA256 Failures

Type: number

tls1-ecdhe-rsa-aes-128-gcm-sha256-id

Description TLS1_ECDHE_RSA_AES_128_GCM_SHA256 Cipher ID

Type: string

tls1-ecdhe-rsa-aes-128-gcm-sha256-successes

Description TLS1_ECDHE_RSA_AES_128_GCM_SHA256 Successes

Type: number

tls1-ecdhe-rsa-aes-128-sha-failures

Description TLS1_ECDHE_RSA_AES_128_SHA Failures

Specification	Value
Type	*list*
Block object keys	

port-number

Description Port Number

Type: number

Range: 0-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

stats

Description: stats is a **JSON Block**. Please see below for *port-list_stats*

Type: Object

port-list_stats

Specification	Value
Type	*object*

curr_conn

Description Current connections

Type: number

Format: counter

curr_pconn

Description Current persistent connections

Type: number

Format: counter

curr_req

Description Current requests

Type: number

Format: counter

curr_ssl_conn

Description Current SSL connections

Type: number

Format: counter

es_req_count

Description Total proxy requests

Type: number

Format: counter

es_resp_200

Description Response status 200

Type: number

Format: counter

es_resp_300

Description Response status 300

Type: number

Format: counter

es_resp_400

Description Response status 400

Type: number

Format: counter

es_resp_500

Description Response status 500

Type: number

Format: counter

es_resp_count

Description Total proxy response

Type: number

Format: counter

es_resp_invalid_http

Description Total non-http response

Type: number

Format: counter

es_resp_other

Description Response status other

Type: number

Format: counter

fastest_rsp_time

Description Fastest response time

Type: number

Format: counter

last_total_conn

Description Last total connections

Type: number

Format: counter

peak_conn

Description Peak connections

Type: number

Format: counter

resp-1xx

Description Response status 1xx

Type: number

Format: counter

resp-2xx

Description Response status 2xx

Type: number

Format: counter

resp-3xx

Description Response status 3xx

Type: number

Format: counter

resp-4xx

Description Response status 4xx

Type: number

Format: counter

resp-5xx

Description Response status 5xx

Type: number

Format: counter

resp-count

Description Total Response Count

Type: number

Format: counter

resp-latency

Description Time to First Response Byte

Type: number

Format: counter

resp-other

Description Response status Other

Type: number

Format: counter

response_time

Description Response time

Type: number

Format: counter

slowest_rsp_time

Description Slowest response time

Type: number

Format: counter

total_conn

Description Total connections

Type: number

Format: counter

total_fwd_bytes

Description Bytes processed in forward direction

Type: number

Format: counter

total_fwd_pkts

Description Packets processed in forward direction

Type: number

Format: counter

total_req

Description Total Requests

Type: number

Format: counter

total_req_succ

Description Total requests succ

Type: number

Format: counter

total_rev_bytes

Description Bytes processed in reverse direction

Type: number

Format: counter

total_rev_pkts

Description Packets processed in reverse direction

Type: number

Format: counter

total_rev_pkts_inspected

Description Total reverse packets inspected

Type: number

Format: counter

total_rev_pkts_inspected_good_status_code

Description Total reverse packets with good status code inspected

Type: number

Format: counter

total_ssl_conn

Description Total SSL connections

Type: number

Format: counter

stats

Specification	Value
Type	*object*

curr-conn

Description Current established connections

Type: number

Format: counter

curr_ssl_conn

Description Current SSL connections established

Type: number

Format: counter

fwd-pkt

Description Forward Packets Processed

Type: number

Format: counter

ip_only_lb_fwd_bytes

Description IP-Only-LB Bytes processed in forward direction

Type: number

Format: counter

ip_only_lb_fwd_pkts

Description IP-Only-LB Packets processed in forward direction

Type: number

Format: counter

ip_only_lb_rev_bytes

Description IP-Only-LB Bytes processed in reverse direction

Type: number

Format: counter

ip_only_lb_rev_pkts

Description IP-Only-LB Packets processed in reverse direction

Type: number

Format: counter

peak-conn

Description Peak number of established connections

Type: number

Format: counter

rev-pkt

Description Reverse Packets Processed

Type: number

Format: counter

total-conn

Description Total established connections

Type: number

Format: counter

total_fwd_bytes

Description Bytes processed in forward direction

Type: number

Format: counter

total_fwd_pkts

Description Packets processed in forward direction

Type: number

Format: counter

total_req

Description Total Requests processed

Type: number

Format: counter

total_req_succ

Description Total Requests succeeded

Type: number

Format: counter

total_rev_bytes

Description Bytes processed in reverse direction

Type: number

Format: counter

total_rev_pkts

Description Packets processed in reverse direction

Type: number

Format: counter

total_ssl_conn

Description Total SSL connections established

Type: number

Format: counter

service-list

Specification	Value
Type	*list*
Block object keys	

label

Description Service Label

total_rev_pkts

Description Packets processed in reverse direction

Type: number

Format: counter

total_rev_pkts_inspected

Description Total reverse packets inspected

Type: number

Format: counter

total_rev_pkts_inspected_good_status_code

Description Total reverse packets with good status code inspected

Type: number

Format: counter

total_ssl_conn

Description Total SSL connections

Type: number

Format: counter

2.120.169 slb service-group

Service Group

service-group Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*service-group-list*
Collection URI	/axapi/v3/slb/service-group
Element Name	service-group
Element URI	/axapi/v3/slb/service-group/{name}
Element Attributes	service-group_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/slb/service-group/{name}/stats
Operational Data URI	/axapi/v3/slb/service-group/{name}/oper
Schema	`service-group schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/service-group

service-group attributes

```
POST /axapi/v3/slb/service-group/
Payload:
{
    "service-group": {
        "protocol": "tcp",
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/slb/service-group

service-group attributes

Get Object

GET

/axapi/v3/slb/service-group/{name}

service-group attributes

```
GET /axapi/v3/slb/service-group/a
Reponse:
{
    "service-group": {
        "name": "a",
        "protocol": "tcp",
        "lb-method": "round-robin",
        "stateless-auto-switch": 0,
        "reset-on-server-selection-fail": 0,
        "priority-affinity": 0,
        "backup-server-event-log": 0,
        "strict-select": 0,
        "stats-data-action": "stats-data-enable",
        "extended-stats": 0,
        "traffic-replication-mirror": 0,
        "sample-rsp-time": 0,
        "persist-scoring": "global",
        "uuid": "0a41aef2-b639-11ef-816c-ae71681635d0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/slb/service-group/a"
    }
}
```

Get List

GET

/axapi/v3/slb/service-group

service-group-list

Modify Object

POST

/axapi/v3/slb/service-group/{name}

service-group attributes

Replace Object

PUT

/axapi/v3/slb/service-group/{name}

service-group attributes

```
PUT /axapi/v3/slb/service-group/a
Payload:
{
    "service-group": {
        "protocol": "tcp",
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/slb/service-group

service-group-list

Delete Object

DELETE

/axapi/v3/slb/service-group/{name}

service-group attributes

```
DELETE /axapi/v3/slb/service-group/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

service-group-list

service-group-list is **JSON List** of *service-group attributes*

service-group-list : [

{ *service-group attributes* },

{ *service-group attributes* },

...

]

service-group attributes

backup-server-event-log

Description Send log info on back up server events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate

Description Dynamically enable stateless method by conn-rate (Rate to trigger stateless method(conn/sec))

Type: number

Range: 1-16000000

Mutual Exclusion: conn-rate and l4-session-usage are mutually exclusive

conn-rate-duration

Description Period that trigger condition consistently happens(seconds)

Type: number

Range: 1-600

conn-rate-grace-period

Description Define the grace period during transition (Define the grace period during transition(seconds))

Type: number

Range: 1-600

conn-rate-log

Description Send log if transition happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-revert-duration

Description Period that revert condition consistently happens(seconds)

Type: number

Range: 1-600

conn-revert-rate

Description Rate to revert to statelful method (conn/sec)

Type: number

Range: 1-16000000

extended-stats

Description Enable extended statistics on service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check, shared-partition-svcgrp-health-check, and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable,health-check, shared-partition-svcgrp-health-check, and svcgrp-health-check-shared are mutually exclusive

l4-session-revert-duration

Description Period that revert condition consistently happens(seconds)

Type: number

Range: 1-600

l4-session-usage

Description Dynamically enable stateless method by session usage (Usage to trigger stateless method)

Type: number

Range: 1-100

Mutual Exclusion: l4-session-usage and conn-rate are mutually exclusive

l4-session-usage-duration

Description Period that trigger condition consistently happens(seconds)

Type: number

Range: 1-600

l4-session-usage-grace-period

Description Define the grace period during transition (Define the grace period during transition(seconds))

Type: number

Range: 1-600

l4-session-usage-log

Description Send log if transition happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4-session-usage-revert-rate

Description Usage to revert to statelful method

Type: number

Range: 1-100

lb-method

Description 'dst-ip-hash': Load-balancing based on only Dst IP and Port hash; 'dst-ip-only-hash': Load-balancing based on only Dst IP hash; 'fastest-response': Fastest response time on service port level; 'least-request': Least request on service port level; 'src-ip-hash': Load-balancing based on only Src IP and Port hash; 'src-ip-only-hash': Load-balancing based on only Src IP hash; 'weighted-rr': Weighted round robin on server level; 'service-weighted-rr': Weighted round robin on service port level; 'round-robin': Round robin on server level; 'round-robin-strict': Strict mode round robin on server level; 'odd-even-hash': odd/even hash based of client src-ip;

Type: string

Supported Values: dst-ip-hash, dst-ip-only-hash, fastest-response, least-request, weighted-least-request, service-weighted-least-request, src-ip-hash, src-ip-only-hash, weighted-rr, service-weighted-rr, round-robin, round-robin-strict, odd-even-hash

Default: round-robin

Mutual Exclusion: lb-method,lrprr-method, lc-method, stateless-lb-method, llb-method, and lclb-method are mutually exclusive

lc-method

Description 'least-connection': Least connection on server level; 'service-least-connection': Least connection on service port level; 'weighted-least-connection': Weighted least connection on server level; 'service-weighted-least-connection': Weighted least connection on service port level;

Type: string

Supported Values: least-connection, service-least-connection, weighted-least-connection, service-weighted-least-connection

Mutual Exclusion: lc-method,lb-method, lrprr-method, stateless-lb-method, llb-method, and lclb-method are mutually exclusive

lclb-method

Description 'link-cost-load-balance': Link cost load balance;

Type: string

Supported Values: link-cost-load-balance

Mutual Exclusion: lclb-method,lb-method, lrprr-method, lc-method, stateless-lb-method, and llb-method are mutually exclusive

link-probe-template

Description Link Probe template (Link Probe template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/link-probe*

llb-method

Description 'next-hop-link': Server selection w/ link probe template on service port level;

Type: string

Supported Values: next-hop-link

Mutual Exclusion: llb-method,lb-method, lrprr-method, lc-method, stateless-lb-method, and lclb-method are mutually exclusive

lrprr-method

Description 'service-least-request-pseudo-round-robin': Least request on service port level and select the oldest node for sub-select;

Type: string

Supported Values: service-least-request-pseudo-round-robin

Mutual Exclusion: lrprr-method,lb-method, lc-method, stateless-lb-method, llb-method, and lclb-method are mutually exclusive

member-list

Type: List

Reference Object: */axapi/v3/slb/service-group/{name}/member/{name}+{port}*

min-active-member

Description Minimum Active Member Per Priority (Minimum Active Member before Action)

Type: number

Range: 1-1024

min-active-member-action

Description 'dynamic-priority': dynamic change member priority to met the min-active-member requirement; 'skip-pri-set': Skip Current Priority Set If Min not met;

Type: string

Supported Values: dynamic-priority, skip-pri-set

name

Description SLB Service Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

persist-scoring

Description 'global': Use Global Configuration; 'enable': Enable persist-scoring; 'disable': Disable persist-scoring;

Type: string

Supported Values: global, enable, disable

Default: global

priorities

Type: List

priority-affinity

Description Priority affinity. Persist to the same priority if possible.

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': TCP LB service; 'udp': UDP LB service;

Type: string

Supported Values: tcp, udp

pseudo-round-robin

Description PRR, select the oldest node for sub-select

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

report-delay

Description Reporting frequency (in minutes)

Type: number

Range: 1-7200

reset

Description: reset is a **JSON Block**. Please see below for *reset*

Type: Object

Reference Object: */axapi/v3/slb/service-group/{name}/reset*

reset-on-server-selection-fail

Description Send reset to client if server selection fails

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-priority-affinity

Description Reset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpt-ext-server

Description Report top 10 fastest/slowest servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sample-rsp-time

Description sample server response time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-svcgrp-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-svcgrp-health-check, health-check, and health-check-disable are mutually exclusive

stateless-auto-switch

Description Enable auto stateless method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateless-lb-method

Description 'stateless-dst-ip-hash': Stateless load-balancing based on Dst IP and Dst port hash; 'stateless-per-pkt-round-robin': Stateless load-balancing using per-packet round-robin; 'stateless-src-dst-ip-hash': Stateless load-balancing based on IP and port hash for both Src and Dst; 'stateless-src-dst-ip-only-hash': Stateless load-balancing based on only IP hash for both Src and Dst; 'stateless-src-ip-hash': Stateless load-balancing based on Src IP and Src port hash; 'stateless-src-ip-only-hash': Stateless load-balancing based on only Src IP hash; 'stateless-per-pkt-weighted-rr': Stateless load-balancing using per-packet weighted round robin on server level; 'stateless-per-pkt-service-weighted-rr': Stateless load-balancing using per-packet weighted round robin on service port level;

Type: string

Supported Values: stateless-dst-ip-hash, stateless-per-pkt-round-robin, stateless-src-dst-ip-hash, stateless-src-dst-ip-only-hash, stateless-src-ip-hash, stateless-src-ip-only-hash, stateless-per-pkt-weighted-rr, stateless-per-pkt-service-weighted-rr

Mutual Exclusion: stateless-lb-method,lb-method, lrprr-method, lc-method, llb-method, and lclb-method are mutually exclusive

stateless-lb-method2

Description 'stateless-dst-ip-hash': Stateless load-balancing based on Dst IP and Dst port hash; 'stateless-per-pkt-round-robin': Stateless load-balancing using per-packet round-robin; 'stateless-src-dst-ip-hash': Stateless load-balancing based on IP and port hash for both Src and Dst; 'stateless-src-dst-ip-only-hash': Stateless load-balancing based on only IP hash for both Src and Dst; 'stateless-src-ip-hash': Stateless load-balancing based on Src IP and Src port hash; 'stateless-src-ip-only-hash': Stateless load-balancing based on only Src IP hash; 'stateless-per-pkt-weighted-rr': Stateless load-balancing using per-packet weighted round robin on server level; 'stateless-per-pkt-service-weighted-rr': Stateless load-balancing using per-packet weighted round robin on service port level;

Type: string

Supported Values: stateless-dst-ip-hash, stateless-per-pkt-round-robin, stateless-src-dst-ip-hash, stateless-src-dst-ip-only-hash, stateless-src-ip-hash, stateless-src-ip-only-hash, stateless-per-pkt-weighted-rr, stateless-per-pkt-service-weighted-rr

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for service group; 'stats-data-disable': Disable statistical data collection for service group;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

strict-select

Description strict selection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

svcgrp-health-check-shared

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: svcgrp-health-check-shared and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

template-policy

Description Policy template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/policy*

template-port

Description Port template (Port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/port*

top-fastest

Description Report top 10 fastest servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

top-slowest

Description Report top 10 slowest servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-replication-mirror

Description Mirror Bi-directional Packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror,traffic-replication-mirror-da-repl, traffic-replication-mirror-ip-repl, traffic-replication-mirror-sa-da-repl, and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-da-repl

Description Replace Destination MAC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-da-repl,traffic-replication-mirror, traffic-replication-mirror-ip-repl, traffic-replication-mirror-sa-da-repl, and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-ip-repl

Description Replaces IP with server-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-ip-repl,traffic-replication-mirror, traffic-replication-mirror-da-repl, traffic-replication-mirror-sa-da-repl, and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-sa-da-repl

Description Replace Source MAC and Destination MAC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-sa-da-repl,traffic-replication-mirror, traffic-replication-mirror-da-repl, traffic-replication-mirror-ip-repl, and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-sa-repl

Description Replace Source MAC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-sa-repl,traffic-replication-mirror, traffic-replication-mirror-da-repl, traffic-replication-mirror-ip-repl, and traffic-replication-mirror-sa-da-repl are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

member-list

Specification	Value
Type	*list*
Block object keys	

fqdn-name

Description Server hostname - Not applicable if real server is already defined

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

host

Description IP Address - Not applicable if real server is already defined

Type: string

Format: ipv4-address

member-priority

Description Priority of Port in the Group (Priority of Port in the Group, default is 1)

Type: number

Range: 1-16

Default: 1

member-state

Description 'enable': Enable member service port; 'disable': Disable member service port; 'disable-with-health-check': disable member service port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

member-stats-data-disable

Description Disable statistical data collection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

member-template

Description Real server port template (Real server port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/port*

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/server*

port

Description Port number

Type: number

Range: 0-65534

Default: 65534

Reference Object: */axapi/v3/slb/server/port*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 Address - Not applicable if real server is already defined

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

member-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_conn': Total established connections; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_status_code_2xx': Total reverse packets inspected status code 2xx; 'total_rev_pkts_inspected_status_code_non_5xx': Total reverse packets inspected status code non 5xx; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total requests successful; 'peak_conn': Peak connections; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections;

'curr_conn_overflow': Current connection counter overflow count; 'state_flaps': State flaps count;

Type: string

Supported Values: all, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, total_rev_pkts_inspected, total_rev_pkts_inspected_status_code_2xx, total_rev_pkts_inspected_status_code_non_5xx, curr_req, total_req, total_req_succ, peak_conn, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, curr_conn_overflow, state_flaps

reset

Specification	Value
Type	*object*

auto-switch

Description Reset auto stateless state

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priorities

Specification	Value
Type	*list*
Block object keys	

priority

Description Priority option. Define different action for each priority node. (Priority in the Group)

Type: number

Range: 1-16

priority-action

Description 'drop': Drop request when all priority nodes fail; 'drop-if-exceed-limit': Drop request when connection over limit; 'proceed': Proceed to next priority when all priority nodes fail(default); 'reset': Send client reset when all priority nodes fail; 'reset-if-exceed-limit': Send client reset when connection over limit;

Type: string

Supported Values: drop, drop-if-exceed-limit, proceed, reset, reset-if-exceed-limit

Default: proceed

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'server_selection_fail_drop': Drops due to Service selection failure; 'server_selection_fail_reset': Resets sent out for Service selection failure; 'service_peak_conn': Peak connection count for the Service Group; 'service_healthy_host': Service Group healthy host count; 'service_unhealthy_host': Service Group unhealthy host count; 'service_req_count': Service Group request count; 'service_resp_count': Service Group response count; 'service_resp_2xx': Service Group response 2xx count; 'service_resp_3xx': Service Group response 3xx count; 'service_resp_4xx': Service Group response 4xx count; 'service_resp_5xx': Service Group response 5xx count; 'service_curr_conn_overflow': Current connection counter overflow count;

Type: string

Supported Values: all, server_selection_fail_drop, server_selection_fail_reset, service_peak_conn, service_healthy_host, service_unhealthy_host, service_req_count, service_resp_count, service_resp_2xx, service_resp_3xx, service_resp_4xx, service_resp_5xx, service_curr_conn_overflow

2.120.170 slb service-group member

Service Group Member

member Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name, port*
Collection Name	*member-list*
Collection URI	/axapi/v3/slb/service-group/{name}/member
Element Name	member
Element URI	/axapi/v3/slb/service-group/{name}/member/{name}+{port}
Element Attributes	member_attributes

/axapi/v3/slb/service-group/{name}/member/{name}+{port}

member attributes

member-list

member-list is **JSON List** of *member attributes*

member-list : [

{ *member attributes* },

{ *member attributes* },

...

]

member attributes

fqdn-name

Description Server hostname - Not applicable if real server is already defined

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

host

Description IP Address - Not applicable if real server is already defined

Type: string

Format: ipv4-address

member-priority

Description Priority of Port in the Group (Priority of Port in the Group, default is 1)

Type: number

Range: 1-16

Default: 1

member-state

Description 'enable': Enable member service port; 'disable': Disable member service port; 'disable-with-health-check': disable member service port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

member-stats-data-disable

Description Disable statistical data collection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

member-template

Description Real server port template (Real server port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/port*

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/server*

port

Description Port number

Type: number

Range: 0-65534

Default: 65534

Reference Object: */axapi/v3/slb/server/port*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 Address - Not applicable if real server is already defined

Type: string

Format: ipv6-address

bad-ssl-filetype

Description bad ssl filetype

Type: number

bad-ssl-session-id-length

Description bad ssl session id length

Type: number

bad-state

Description bad state

Type: number

bad-write-retry

Description bad write retry

Type: number

bio-not-set

Description bio not set

Type: number

block-cipher-pad-is-wrong

Description block cipher pad is wrong

Type: number

bn-lib

Description bn lib

Type: number

ca-dn-length-mismatch

Description ca dn length mismatch

Type: number

ca-dn-too-long

Description ca dn too long

Type: number

ccs-received-early

Description ccs received early

Type: number

cert-length-mismatch

Description cert length mismatch

Type: number

certificate-verify-failed

Description certificate verify failed

Type: number

challenge-is-different

Description challenge is different

Type: number

cipher-code-wrong-length

Description cipher code wrong length

Type: number

cipher-or-hash-unavailable

Description cipher or hash unavailable

Type: number

cipher-table-src-error

Description cipher table src error

Type: number

clienthello-tlsext

Description clienthello tlsext

Type: number

compressed-length-too-long

Description compressed length too long

Type: number

compression-failure

Description compression failure

Type: number

compression-library-error

Description compression library error

Type: number

connection-id-is-different

Description connection id is different

Type: number

connection-type-not-set

Description connection type not set

Type: number

cookie-mismatch

Description cookie mismatch

Type: number

data-between-ccs-and-finished

Description data between ccs and finished

Type: number

data-length-too-long

Description data length too long

Type: number

decryption-failed

Description decryption failed

Type: number

decryption-failed-or-bad-record-mac

Description decryption failed or bad record mac

Type: number

dh-public-value-length-is-wrong

Description dh public value length is wrong

Type: number

digest-check-failed

Description digest check failed

Type: number

encrypted-length-too-long

Description encrypted length too long

Type: number

error-generating-tmp-rsa-key

Description error generating tmp rsa key

Type: number

error-in-received-cipher-list

Description error in received cipher list

Type: number

excessive-message-size

Description excessive message size

Type: number

extra-data-in-message

Description extra data in message

Type: number

got-a-fin-before-a-ccs

Description got a fin before a ccs

Type: number

http-request

Description http request

Type: number

https-proxy-request

Description https proxy request

Type: number

illegal-padding

Description illegal padding

Type: number

inappropriate-fallback

Description inappropriate fallback

invalid-challenge-length

Description invalid challenge length

Type: number

invalid-command

Description invalid command

Type: number

invalid-purpose

Description invalid purpose

Type: number

invalid-status-response

Description invalid status response

Type: number

invalid-trust

Description invalid trust

Type: number

key-arg-too-long

Description key arg too long

Type: number

krb5

Description krb5

Type: number

krb5-client-cc-principal

Description krb5 client cc principal

Type: number

krb5-client-get-cred

Description krb5 client get cred

Type: number

krb5-client-init

Description krb5 client init

Type: number

krb5-client-mk-req

Description krb5 client mk_req

Type: number

krb5-server-bad-ticket

Description krb5 server bad ticket

Type: number

krb5-server-init

Description krb5 server init

Type: number

krb5-server-rd-req

Description krb5 server rd_req

Type: number

krb5-server-tkt-expired

Description krb5 server tkt expired

Type: number

krb5-server-tkt-not-yet-valid

Description krb5 server tkt not yet valid

Type: number

krb5-server-tkt-skew

Description krb5 server tkt skew

Type: number

length-mismatch

Description length mismatch

Type: number

length-too-short

Description length too short

Type: number

library-bug

Description library bug

Type: number

library-has-no-ciphers

Description library has no ciphers

Type: number

mast-key-too-long

Description mast key too long

Type: number

message-too-long

Description message too long

Type: number

missing-dh-dsa-cert

Description missing dh dsa cert

Type: number

missing-dh-key

Description missing dh key

Type: number

missing-dh-rsa-cert

Description missing dh rsa cert

Type: number

missing-dsa-signing-cert

Description missing dsa signing cert

Type: number

missing-export-tmp-dh-key

Description missing export tmp dh key

Type: number

missing-export-tmp-rsa-key

Description missing export tmp rsa key

Type: number

missing-rsa-certificate

Description missing rsa certificate

Type: number

missing-rsa-encrypting-cert

Description missing rsa encrypting cert

Type: number

missing-rsa-signing-cert

Description missing rsa signing cert

Type: number

missing-tmp-dh-key

Description missing tmp dh key

Type: number

missing-tmp-rsa-key

Description missing tmp rsa key

Type: number

missing-tmp-rsa-pkey

Description missing tmp rsa pkey

Type: number

missing-verify-message

Description missing verify message

Type: number

multiple-sgc-restarts

Description multiple sgc restarts

Type: number

no-certificate-assigned

Description no certificate assigned

Type: number

no-certificate-returned

Description no certificate returned

Type: number

no-certificate-set

Description no certificate set

Type: number

no-certificate-specified

Description no certificate specified

Type: number

no-certificates-returned

Description no certificates returned

Type: number

no-cipher-list

Description no cipher list

Type: number

no-cipher-match

Description no cipher match

Type: number

no-ciphers-available

Description no ciphers available

Type: number

no-ciphers-passed

Description no ciphers passed

Type: number

no-ciphers-specified

Description no ciphers specified

Type: number

no-client-cert-received

Description no client cert received

Type: number

no-compression-specified

Description no compression specified

Type: number

no-method-specified

Description no method specified

Type: number

no-private-key-assigned

Description no private key assigned

Type: number

no-privatekey

Description no privatekey

Type: number

no-protocols-available

Description no protocols available

Type: number

no-publickey

Description no publickey

Type: number

no-required-digest

Description no required digest

Type: number

no-shared-cipher

Description no shared cipher

Type: number

no-verify-callback

Description no verify callback

Type: number

non-sslv2-initial-packet

Description non sslv2 initial packet

Type: number

null-ssl-ctx

Description null ssl ctx

Type: number

null-ssl-method-passed

Description null ssl method passed

Type: number

old-session-cipher-not-returned

Description old session cipher not returned

Type: number

packet-length-too-long

Description packet length too long

Type: number

parse-tlsext

Description parse tlsext

Type: number

path-too-long

Description path too long

Type: number

peer-did-not-return-a-certificate

Description peer did not return a certificate

Type: number

peer-error

Description peer error

Type: number

peer-error-certificate

Description peer error certificate

Type: number

peer-error-no-certificate

Description peer error no certificate

Type: number

peer-error-no-cipher

Description peer error no cipher

Type: number

peer-error-unsupported-certificate-type

Description peer error unsupported certificate type

Type: number

pre-mac-length-too-long

Description pre mac length too long

Type: number

problems-mapping-cipher-functions

Description problems mapping cipher functions

Type: number

protocol-is-shutdown

Description protocol is shutdown

Type: number

public-key-encrypt-error

Description public key encrypt error

Type: number

public-key-is-not-rsa

Description public key is not rsa

Type: number

public-key-not-rsa

Description public key not rsa

Type: number

read-bio-not-set

Description read bio not set

Type: number

read-wrong-packet-type

Description read wrong packet type

Type: number

record-length-mismatch

Description record length mismatch

Type: number

record-too-large

Description record too large

Type: number

record-too-small

Description record too small

Type: number

required-cipher-missing

Description required cipher missing

Type: number

reuse-cert-length-not-zero

Description reuse cert length not zero

Type: number

reuse-cert-type-not-zero

Description reuse cert type not zero

Type: number

reuse-cipher-list-not-zero

Description reuse cipher list not zero

Type: number

scsv-received-when-renegotiating

Description scsv received when renegotiating

Type: number

serverhello-tlsext

Description serverhello tlsext

Type: number

session-id-context-uninitialized

Description session id context uninitialized

Type: number

short-read

Description short read

Type: number

signature-for-non-signing-certificate

Description signature for non signing certificate

Type: number

ssl-ctx-has-no-default-ssl-version

Description ssl ctx has no default ssl version

Type: number

ssl-handshake-failure

Description ssl handshake failure

Type: number

ssl-library-has-no-ciphers

Description ssl library has no ciphers

Type: number

ssl-session-id-callback-failed

Description ssl session id callback failed

Type: number

ssl-session-id-conflict

Description ssl session id conflict

Type: number

ssl-session-id-context-too-long

Description ssl session id context too long

Type: number

ssl-session-id-has-bad-length

Description ssl session id has bad length

Type: number

ssl-session-id-is-different

Description ssl session id is different

Type: number

ssl2-connection-id-too-long

Description ssl2 connection id too long

Type: number

ssl23-doing-session-id-reuse

Description ssl23 doing session id reuse

Type: number

ssl3-ext-invalid-servername

Description ssl3 ext invalid servername

Type: number

ssl3-ext-invalid-servername-type

Description ssl3 ext invalid servername type

Type: number

ssl3-session-id-too-long

Description ssl3 session id too long

Type: number

ssl3-session-id-too-short

Description ssl3 session id too short

Type: number

sslv3-alert-bad-certificate

Description sslv3 alert bad certificate

Type: number

sslv3-alert-bad-record-mac

Description sslv3 alert bad record mac

Type: number

sslv3-alert-certificate-expired

Description sslv3 alert certificate expired

Type: number

sslv3-alert-certificate-revoked

Description sslv3 alert certificate revoked

Type: number

sslv3-alert-certificate-unknown

Description sslv3 alert certificate unknown

Type: number

sslv3-alert-decompression-failure

Description sslv3 alert decompression failure

Type: number

sslv3-alert-handshake-failure

Description sslv3 alert handshake failure

Type: number

sslv3-alert-illegal-parameter

Description sslv3 alert illegal parameter

Type: number

sslv3-alert-no-certificate

Description sslv3 alert no certificate

Type: number

sslv3-alert-peer-error-cert

Description sslv3 alert peer error cert

Type: number

sslv3-alert-peer-error-no-cert

Description sslv3 alert peer error no cert

Type: number

sslv3-alert-peer-error-no-cipher

Description sslv3 alert peer error no cipher

Type: number

sslv3-alert-peer-error-unsupp-cert-type

Description sslv3 alert peer error unsupp cert type

Type: number

sslv3-alert-unexpected-msg

Description sslv3 alert unexpected msg

Type: number

sslv3-alert-unknown-remote-err-type

Description sslv3 alert unknown remote err type

Type: number

sslv3-alert-unspported-cert

Description sslv3 alert unspported cert

Type: number

tls-client-cert-req-with-anon-cipher

Description tls client cert req with anon cipher

Type: number

tls-invalid-ecpointformat-list

Description tls invalid ecpointformat list

Type: number

tls-peer-did-not-respond-with-cert-list

Description tls peer did not respond with cert list

Type: number

tls-rsa-encrypted-value-length-is-wrong

Description tls rsa encrypted value length is wrong

Type: number

tlsv1-alert-access-denied

Description tlsv1 alert access denied

Type: number

tlsv1-alert-decode-error

Description tlsv1 alert decode error

Type: number

tlsv1-alert-decrypt-error

Description tlsv1 alert decrypt error

Type: number

tlsv1-alert-decryption-failed

Description tlsv1 alert decryption failed

Type: number

tlsv1-alert-export-restriction

Description tlsv1 alert export restriction

Type: number

tlsv1-alert-insufficient-security

Description tlsv1 alert insufficient security

Type: number

tlsv1-alert-internal-error

Description tlsv1 alert internal error

Type: number

tlsv1-alert-no-renegotiation

Description tlsv1 alert no renegotiation

Type: number

tlsv1-alert-protocol-version

Description tlsv1 alert protocol version

Type: number

tlsv1-alert-record-overflow

Description tlsv1 alert record overflow

Type: number

tlsv1-alert-unknown-ca

Description tlsv1 alert unknown ca

Type: number

tlsv1-alert-user-cancelled

Description tlsv1 alert user cancelled

Type: number

tried-to-use-unsupported-cipher

Description tried to use unsupported cipher

Type: number

unable-to-decode-dh-certs

Description unable to decode dh certs

Type: number

unable-to-extract-public-key

Description unable to extract public key

Type: number

unable-to-find-dh-parameters

Description unable to find dh parameters

Type: number

unable-to-find-public-key-parameters

Description unable to find public key parameters

Type: number

unable-to-find-ssl-method

Description unable to find ssl method

Type: number

unable-to-load-ssl2-md5-routines

Description unable to load ssl2 md5 routines

Type: number

unable-to-load-ssl3-md5-routines

Description unable to load ssl3 md5 routines

Type: number

unable-to-load-ssl3-sha1-routines

Description unable to load ssl3 sha1 routines

Type: number

unexpected-message

Description unexpected message

Type: number

unexpected-record

Description unexpected record

Type: number

uninitialized

Description uninitialized

Type: number

unknown-alert-type

Description unknown alert type

Type: number

unknown-certificate-type

Description unknown certificate type

Type: number

unknown-cipher-returned

Description unknown cipher returned

Type: number

unknown-cipher-type

Description unknown cipher type

Type: number

unknown-key-exchange-type

Description unknown key exchange type

Type: number

unknown-pkey-type

Description unknown pkey type

Type: number

unknown-protocol

Description unknown protocol

Type: number

unknown-remote-error-type

Description unknown remote error type

Type: number

unknown-ssl-version

Description unknown ssl version

Type: number

unknown-state

Description unknown state

Type: number

unsupported-cipher

Description unsupported cipher

Type: number

unsupported-compression-algorithm

Description unsupported compression algorithm

Type: number

unsupported-digest-type

Description unsupported digest type

Type: number

unsupported-elliptic-curve

Description unsupported elliptic curve

Type: number

unsupported-option

Description unsupported option

Type: number

unsupported-protocol

Description unsupported protocol

Type: number

unsupported-ssl-version

Description unsupported ssl version

Type: number

unsupported-status-type

Description unsupported status type

Type: number

write-bio-not-set

Description write bio not set

Type: number

wrong-cipher-returned

Description wrong cipher returned

Type: number

wrong-message-type

Description wrong message type

Type: number

wrong-number-of-key-bits

Description wrong number of key bits

Type: number

wrong-signature-length

Description wrong signature length

Type: number

wrong-signature-size

Description wrong signature size

Type: number

wrong-ssl-version

Description wrong ssl version

Type: number

wrong-version-number

Description wrong version number

Type: number

x509-lib

Description x509 lib

Type: number

x509-verification-setup-problems

Description x509 verification setup problems

Type: number

2.120.207 slb ssl-error stats

Statistics for the object ssl-error

ssl-error Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ssl-error
Element URI	/axapi/v3/slb/ssl-error/stats
Element Attributes	ssl-error_attributes
Partition Visibility	None
Schema	`ssl-error schema`

Operations Allowed:

Create Object

POST

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

app-data-in-handshake

Description app data in handshake

Type: number

Format: counter

attempt-to-reuse-sess-in-diff-context

Description attempt to reuse sess in diff context

Type: number

Format: counter

bad-alert-record

Description bad alert record

Type: number

Format: counter

bad-authentication-type

Description bad authentication type

Type: number

Format: counter

bad-change-cipher-spec

Description bad change cipher spec

Type: number

Format: counter

bad-checksum

Description bad checksum

Type: number

Format: counter

bad-data-returned-by-callback

Description bad data returned by callback

Type: number

Format: counter

bad-decompression

Description bad decompression

Type: number

Format: counter

bad-dh-g-length

Description bad dh g length

Type: number

Format: counter

bad-dh-p-length

Description bad dh p length

Type: number

Format: counter

bad-dh-pub-key-length

Description bad dh pub key length

Type: number

Format: counter

bad-digest-length

Description bad digest length

Type: number

Format: counter

bad-dsa-signature

Description bad dsa signature

Type: number

Format: counter

bad-ecc-cert

Description bad ecc cert

Type: number

Format: counter

bad-ecdsa-sig

Description bad ecdsa sig

Type: number

Format: counter

bad-ecpoint

Description bad ecpoint

Type: number

Format: counter

bad-handshake-length

Description bad handshake length

Type: number

Format: counter

bad-hello-request

Description bad hello request

Type: number

Format: counter

bad-length

Description bad length

Type: number

Format: counter

bad-mac-decode

Description bad mac decode

Type: number

Format: counter

bad-message-type

Description bad message type

Type: number

Format: counter

bad-packet-length

Description bad packet length

Type: number

Format: counter

bad-protocol-version-counter

Description bad protocol version counter

Type: number

Format: counter

bad-response-argument

Description bad response argument

Type: number

Format: counter

bad-rsa-decrypt

Description bad rsa decrypt

Type: number

Format: counter

bad-rsa-e-length

Description bad rsa e length

Type: number

Format: counter

bad-rsa-encrypt

Description bad rsa encrypt

Type: number

Format: counter

bad-rsa-modulus-length

Description bad rsa modulus length

Type: number

Format: counter

bad-rsa-signature

Description bad rsa signature

Type: number

Format: counter

bad-signature

Description bad signature

Type: number

Format: counter

bad-ssl-filetype

Description bad ssl filetype

Type: number

Format: counter

bad-ssl-session-id-length

Description bad ssl session id length

Type: number

Format: counter

bad-state

Description bad state

Type: number

Format: counter

bad-write-retry

Description bad write retry

Type: number

Format: counter

bio-not-set

Description bio not set

Type: number

Format: counter

block-cipher-pad-is-wrong

Description block cipher pad is wrong

Type: number

Format: counter

bn-lib

Description bn lib

Type: number

Format: counter

ca-dn-length-mismatch

Description ca dn length mismatch

Type: number

Format: counter

ca-dn-too-long

Description ca dn too long

Type: number

Format: counter

ccs-received-early

Description ccs received early

Type: number

Format: counter

cert-length-mismatch

Description cert length mismatch

Type: number

Format: counter

certificate-verify-failed

Description certificate verify failed

Type: number

Format: counter

challenge-is-different

Description challenge is different

Type: number

Format: counter

cipher-code-wrong-length

Description cipher code wrong length

Type: number

Format: counter

cipher-or-hash-unavailable

Description cipher or hash unavailable

Type: number

Format: counter

cipher-table-src-error

Description cipher table src error

Type: number

Format: counter

clienthello-tlsext

Description clienthello tlsext

Type: number

Format: counter

compressed-length-too-long

Description compressed length too long

Type: number

Format: counter

compression-failure

Description compression failure

Type: number

Format: counter

compression-library-error

Description compression library error

Type: number

Format: counter

connection-id-is-different

Description connection id is different

Type: number

Format: counter

connection-type-not-set

Description connection type not set

Type: number

Format: counter

cookie-mismatch

Description cookie mismatch

Type: number

Format: counter

data-between-ccs-and-finished

Description data between ccs and finished

Type: number

Format: counter

data-length-too-long

Description data length too long

Type: number

Format: counter

decryption-failed

Description decryption failed

Type: number

Format: counter

decryption-failed-or-bad-record-mac

Description decryption failed or bad record mac

Type: number

Format: counter

dh-public-value-length-is-wrong

Description dh public value length is wrong

Type: number

Format: counter

digest-check-failed

Description digest check failed

Type: number

Format: counter

encrypted-length-too-long

Description encrypted length too long

Type: number

Format: counter

error-generating-tmp-rsa-key

Description error generating tmp rsa key

Type: number

Format: counter

error-in-received-cipher-list

Description error in received cipher list

Type: number

Format: counter

excessive-message-size

Description excessive message size

Type: number

Format: counter

extra-data-in-message

Description extra data in message

Type: number

Format: counter

got-a-fin-before-a-ccs

Description got a fin before a ccs

Type: number

Format: counter

http-request

Description http request

Type: number

Format: counter

https-proxy-request

Description https proxy request

Type: number

Format: counter

illegal-padding

Description illegal padding

Type: number

Format: counter

inappropriate-fallback

Description inappropriate fallback

Type: number

Format: counter

invalid-challenge-length

Description invalid challenge length

Type: number

Format: counter

invalid-command

Description invalid command

Type: number

Format: counter

invalid-purpose

Description invalid purpose

Type: number

Format: counter

invalid-status-response

Description invalid status response

Type: number

Format: counter

invalid-trust

Description invalid trust

Type: number

Format: counter

key-arg-too-long

Description key arg too long

Type: number

Format: counter

krb5

Description krb5

Type: number

Format: counter

krb5-client-cc-principal

Description krb5 client cc principal

Type: number

Format: counter

krb5-client-get-cred

Description krb5 client get cred

Type: number

Format: counter

krb5-client-init

Description krb5 client init

Type: number

Format: counter

krb5-client-mk-req

Description krb5 client mk_req

Type: number

Format: counter

krb5-server-bad-ticket

Description krb5 server bad ticket

Type: number

Format: counter

krb5-server-init

Description krb5 server init

Type: number

Format: counter

krb5-server-rd-req

Description krb5 server rd_req

Type: number

Format: counter

krb5-server-tkt-expired

Description krb5 server tkt expired

Type: number

Format: counter

krb5-server-tkt-not-yet-valid

Description krb5 server tkt not yet valid

Type: number

Format: counter

krb5-server-tkt-skew

Description krb5 server tkt skew

Type: number

Format: counter

length-mismatch

Description length mismatch

Type: number

Format: counter

length-too-short

Description length too short

Type: number

Format: counter

library-bug

Description library bug

Type: number

Format: counter

library-has-no-ciphers

Description library has no ciphers

Type: number

Format: counter

mast-key-too-long

Description mast key too long

Type: number

Format: counter

message-too-long

Description message too long

Type: number

Format: counter

missing-dh-dsa-cert

Description missing dh dsa cert

Type: number

Format: counter

missing-dh-key

Description missing dh key

Type: number

Format: counter

missing-dh-rsa-cert

Description missing dh rsa cert

Type: number

Format: counter

missing-dsa-signing-cert

Description missing dsa signing cert

Type: number

Format: counter

missing-export-tmp-dh-key

Description missing export tmp dh key

Type: number

Format: counter

missing-export-tmp-rsa-key

Description missing export tmp rsa key

Type: number

Format: counter

missing-rsa-certificate

Description missing rsa certificate

Type: number

Format: counter

missing-rsa-encrypting-cert

Description missing rsa encrypting cert

Type: number

Format: counter

missing-rsa-signing-cert

Description missing rsa signing cert

Type: number

Format: counter

missing-tmp-dh-key

Description missing tmp dh key

Type: number

Format: counter

missing-tmp-rsa-key

Description missing tmp rsa key

Type: number

Format: counter

missing-tmp-rsa-pkey

Description missing tmp rsa pkey

Type: number

Format: counter

missing-verify-message

Description missing verify message

Type: number

Format: counter

multiple-sgc-restarts

Description multiple sgc restarts

Type: number

Format: counter

no-certificate-assigned

Description no certificate assigned

Type: number

Format: counter

no-certificate-returned

Description no certificate returned

Type: number

Format: counter

no-certificate-set

Description no certificate set

Type: number

Format: counter

no-certificate-specified

Description no certificate specified

Type: number

Format: counter

no-certificates-returned

Description no certificates returned

Type: number

Format: counter

no-cipher-list

Description no cipher list

Type: number

Format: counter

no-cipher-match

Description no cipher match

Type: number

Format: counter

no-ciphers-available

Description no ciphers available

Type: number

Format: counter

no-ciphers-passed

Description no ciphers passed

Type: number

Format: counter

no-ciphers-specified

Description no ciphers specified

Type: number

Format: counter

no-client-cert-received

Description no client cert received

Type: number

Format: counter

no-compression-specified

Description no compression specified

Type: number

Format: counter

no-method-specified

Description no method specified

Type: number

Format: counter

no-private-key-assigned

Description no private key assigned

Type: number

Format: counter

no-privatekey

Description no privatekey

Type: number

Format: counter

no-protocols-available

Description no protocols available

Type: number

Format: counter

no-publickey

Description no publickey

Type: number

Format: counter

no-required-digest

Description no required digest

Type: number

Format: counter

no-shared-cipher

Description no shared cipher

Type: number

Format: counter

no-verify-callback

Description no verify callback

Type: number

Format: counter

non-sslv2-initial-packet

Description non sslv2 initial packet

Type: number

Format: counter

null-ssl-ctx

Description null ssl ctx

Type: number

Format: counter

null-ssl-method-passed

Description null ssl method passed

Type: number

Format: counter

old-session-cipher-not-returned

Description old session cipher not returned

Type: number

Format: counter

packet-length-too-long

Description packet length too long

Type: number

Format: counter

parse-tlsext

Description parse tlsext

Type: number

Format: counter

path-too-long

Description path too long

Type: number

Format: counter

peer-did-not-return-a-certificate

Description peer did not return a certificate

Type: number

Format: counter

peer-error

Description peer error

Type: number

Format: counter

peer-error-certificate

Description peer error certificate

Type: number

Format: counter

peer-error-no-certificate

Description peer error no certificate

Type: number

Format: counter

peer-error-no-cipher

Description peer error no cipher

Type: number

Format: counter

peer-error-unsupported-certificate-type

Description peer error unsupported certificate type

Type: number

Format: counter

pre-mac-length-too-long

Description pre mac length too long

Type: number

Format: counter

problems-mapping-cipher-functions

Description problems mapping cipher functions

Type: number

Format: counter

protocol-is-shutdown

Description protocol is shutdown

Type: number

Format: counter

public-key-encrypt-error

Description public key encrypt error

Type: number

Format: counter

public-key-is-not-rsa

Description public key is not rsa

Type: number

Format: counter

public-key-not-rsa

Description public key not rsa

Type: number

Format: counter

read-bio-not-set

Description read bio not set

Type: number

Format: counter

read-wrong-packet-type

Description read wrong packet type

Type: number

Format: counter

record-length-mismatch

Description record length mismatch

Type: number

Format: counter

record-too-large

Description record too large

Type: number

Format: counter

record-too-small

Description record too small

Type: number

Format: counter

required-cipher-missing

Description required cipher missing

Type: number

Format: counter

reuse-cert-length-not-zero

Description reuse cert length not zero

Type: number

Format: counter

reuse-cert-type-not-zero

Description reuse cert type not zero

Type: number

Format: counter

reuse-cipher-list-not-zero

Description reuse cipher list not zero

Type: number

Format: counter

scsv-received-when-renegotiating

Description scsv received when renegotiating

Type: number

Format: counter

serverhello-tlsext

Description serverhello tlsext

Type: number

Format: counter

session-id-context-uninitialized

Description session id context uninitialized

Type: number

Format: counter

short-read

Description short read

Type: number

Format: counter

signature-for-non-signing-certificate

Description signature for non signing certificate

Type: number

Format: counter

ssl-ctx-has-no-default-ssl-version

Description ssl ctx has no default ssl version

Type: number

Format: counter

ssl-handshake-failure

Description ssl handshake failure

Type: number

Format: counter

ssl-library-has-no-ciphers

Description ssl library has no ciphers

Type: number

Format: counter

ssl-session-id-callback-failed

Description ssl session id callback failed

Type: number

Format: counter

ssl-session-id-conflict

Description ssl session id conflict

Type: number

Format: counter

ssl-session-id-context-too-long

Description ssl session id context too long

Type: number

Format: counter

ssl-session-id-has-bad-length

Description ssl session id has bad length

Type: number

Format: counter

ssl-session-id-is-different

Description ssl session id is different

Type: number

Format: counter

ssl2-connection-id-too-long

Description ssl2 connection id too long

Type: number

Format: counter

ssl23-doing-session-id-reuse

Description ssl23 doing session id reuse

Type: number

Format: counter

ssl3-ext-invalid-servername

Description ssl3 ext invalid servername

Type: number

Format: counter

ssl3-ext-invalid-servername-type

Description ssl3 ext invalid servername type

Type: number

Format: counter

ssl3-session-id-too-long

Description ssl3 session id too long

Type: number

Format: counter

ssl3-session-id-too-short

Description ssl3 session id too short

Type: number

Format: counter

tlsv1-alert-internal-error

Description tlsv1 alert internal error

Type: number

Format: counter

tlsv1-alert-no-renegotiation

Description tlsv1 alert no renegotiation

Type: number

Format: counter

tlsv1-alert-protocol-version

Description tlsv1 alert protocol version

Type: number

Format: counter

tlsv1-alert-record-overflow

Description tlsv1 alert record overflow

Type: number

Format: counter

tlsv1-alert-unknown-ca

Description tlsv1 alert unknown ca

Type: number

Format: counter

tlsv1-alert-user-cancelled

Description tlsv1 alert user cancelled

Type: number

Format: counter

tried-to-use-unsupported-cipher

Description tried to use unsupported cipher

Type: number

Format: counter

unable-to-decode-dh-certs

Description unable to decode dh certs

Type: number

Format: counter

unable-to-extract-public-key

Description unable to extract public key

Type: number

Format: counter

unable-to-find-dh-parameters

Description unable to find dh parameters

Type: number

Format: counter

unable-to-find-public-key-parameters

Description unable to find public key parameters

Type: number

Format: counter

unable-to-find-ssl-method

Description unable to find ssl method

Type: number

Format: counter

unable-to-load-ssl2-md5-routines

Description unable to load ssl2 md5 routines

Type: number

Format: counter

unable-to-load-ssl3-md5-routines

Description unable to load ssl3 md5 routines

Type: number

Format: counter

unable-to-load-ssl3-sha1-routines

Description unable to load ssl3 sha1 routines

Type: number

Format: counter

unexpected-message

Description unexpected message

Type: number

Format: counter

unexpected-record

Description unexpected record

Type: number

Format: counter

uninitialized

Description uninitialized

Type: number

Format: counter

unknown-alert-type

Description unknown alert type

Type: number

Format: counter

unknown-certificate-type

Description unknown certificate type

Type: number

Format: counter

unknown-cipher-returned

Description unknown cipher returned

Type: number

Format: counter

unknown-cipher-type

Description unknown cipher type

Type: number

Format: counter

unknown-key-exchange-type

Description unknown key exchange type

Type: number

Format: counter

unknown-pkey-type

Description unknown pkey type

Type: number

Format: counter

unknown-protocol

Description unknown protocol

Type: number

Format: counter

unknown-remote-error-type

Description unknown remote error type

Type: number

Format: counter

unknown-ssl-version

Description unknown ssl version

Type: number

Format: counter

unknown-state

Description unknown state

Type: number

Format: counter

unsupported-cipher

Description unsupported cipher

Type: number

Format: counter

unsupported-compression-algorithm

Description unsupported compression algorithm

Type: number

Format: counter

unsupported-digest-type

Description unsupported digest type

Type: number

Format: counter

unsupported-elliptic-curve

Description unsupported elliptic curve

Type: number

Format: counter

unsupported-option

Description unsupported option

Type: number

Format: counter

unsupported-protocol

Description unsupported protocol

Type: number

Format: counter

unsupported-ssl-version

Description unsupported ssl version

Type: number

Format: counter

unsupported-status-type

Description unsupported status type

Type: number

Format: counter

write-bio-not-set

Description write bio not set

Type: number

Format: counter

wrong-cipher-returned

Description wrong cipher returned

Type: number

Format: counter

wrong-counter-of-key-bits

Description wrong counter of key bits

Type: number

Format: counter

wrong-message-type

Description wrong message type

Type: number

Format: counter

wrong-signature-length

Description wrong signature length

Type: number

Format: counter

wrong-signature-size

Description wrong signature size

Type: number

Format: counter

wrong-ssl-version

Description wrong ssl version

Type: number

Format: counter

wrong-version-counter

Description wrong version counter

Type: number

before

Description The number of days in advance notice before expiration, default is 5

Type: number

Range: 1-60

Default: 5

exception

Description: exception is a **JSON Block**. Please see below for *exception*

Type: Object

Reference Object: */axapi/v3/slb/ssl-expire-check/exception*

expire-address1

Description Email address for certificate expiration check

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

interval-days

Description The interval of days notice after expiration, default is 2

Type: number

Range: 1-5

Default: 2

ssl-expire-email-address

Description Config Email address for certificate expiration check

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

exception

Specification	Value
Type	*object*

action

Description 'add': Add an exception; 'delete': Delete an exception; 'clean': Delete all exception;

Type: string

Supported Values: add, delete, clean

certificate-name

Description The certificate name

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Type: number

Format: counter

dev_link_down_arp_drop

Description ARP PKT dropped due to interface is down

Type: number

Format: counter

fpga_error_pkt1

Description FPGA Error PKT1

Type: number

Format: counter

fpga_error_pkt2

Description FPGA Error PKT2

Type: number

Format: counter

fw_smp_zone_mismatch

Description FW SMP Zone Mismatch

Type: number

Format: counter

fwlb

Description FWLB

Type: number

Format: counter

inactive_nat_pool_arp_drop

Description ARP PKT dropped due to inactive nat pool

Type: number

Format: counter

inactive_static_nat_pool_arp_drop

Description ARP PKT dropped due to inactive static nat pool

Type: number

Format: counter

incorrect_len_drop

Description Incorrect Length Drop

Type: number

Format: counter

invalid_rx_arp_pkt

Description Invalid ARP PKT Rcvd

Type: number

Format: counter

invalid_sender_mac_arp_drop

Description ARP PKT dropped due to invalid sender MAC

Type: number

Format: counter

ip_defrag

Description IP Defrag

Type: number

Format: counter

ip_defrag_invalid_len

Description IP Invalid Length Frag

Type: number

Format: counter

ip_frag_oversize

Description IP Fragment oversize

Type: number

Format: counter

ip_frag_sent

Description IP frag sent

Type: number

Format: counter

ip_frag_too_many

Description IP Fragment too many

Type: number

Format: counter

ip_icmp_error_drop

Description IP ICMP Error Drop

Type: number

Format: counter

ip_not_found_arp_drop

Description ARP PKT dropped due to IP not found

Type: number

Format: counter

ipfrag_esp

Description IP(ESP) Fragment Rcvd

Type: number

Format: counter

ipfrag_icmp

Description IP(ICMP) Fragment Rcvd

Type: number

Format: counter

ipfrag_ipip_dropped

Description IP Frag IPIP Drop

Type: number

Format: counter

ipfrag_ospf

Description IP(OSPF) Fragment Rcvd

Type: number

Format: counter

ipfrag_overlap

Description IP Fragment Overlap

Type: number

Format: counter

ipfrag_overload

Description IP Frag Overload Drops

Type: number

Format: counter

ipfrag_reasmfails

Description IP Fragment Reasm Fails

Type: number

Format: counter

ipfrag_reasmoks

Description IP Fragment Reasm OKs

Type: number

Format: counter

ipfrag_tcp

Description IP(TCP) Fragment Rcvd

Type: number

Format: counter

ipfrag_tcp_dropped

Description IP Frag TCP Dropped

Type: number

Format: counter

ipfrag_timeout

Description IP Fragment Timeout

Type: number

Format: counter

ipfrag_udp

Description IP(UDP) Fragment Rcvd

Type: number

Format: counter

ipfrag_udp_dropped

Description IP Frag UDP Dropped

Type: number

Format: counter

ipipv6_jumbo_frag_drop

Description IPIPv6 Jumbo Frag Drop

Type: number

Format: counter

ipsec_drop

Description IPSec Drop

Type: number

Format: counter

ipv4_frag_6rd_drop

Description IPv4 Frag 6RD Dropped

Type: number

Format: counter

ipv4_frag_6rd_ok

Description IPv4 Frag 6RD OK

Type: number

Format: counter

ipv4_noroute_drop

Description IPv4 No Route Drop

Type: number

Format: counter

ipv4_novlanfwd_drop

Description IPv4 No L3 VLAN FWD Drop

Type: number

Format: counter

ipv6_jumbo_frag_drop

Description IPv6 Jumbo Frag Drop

Type: number

Format: counter

ipv6_ndisc_dad_adverts

Description IPv6 DAD on Adverts

Type: number

Format: counter

ipv6_ndisc_dad_prefix_mismatch_drop

Description IPv6 DAD on Advertise drop for prefix mismatch

Type: number

Format: counter

ipv6_ndisc_dad_solicits

Description IPv6 DAD on Solicits

Type: number

Format: counter

ipv6_ndisc_mac_changes

Description IPv6 DAD MAC Changed

Type: number

Format: counter

ipv6_ndisc_out_of_memory

Description IPv6 DAD Out-of-memory

Type: number

Format: counter

ipv6_noroute_drop

Description IPv6 No Route Drop

Type: number

Format: counter

ipv6_novlanfwd_drop

Description IPv6 No L3 VLAN FWD Drop

Type: number

Format: counter

ipv6frag_esp

Description IPv6 Frag ESP

Type: number

Format: counter

ipv6frag_gre_dropped

Description IPv6 Frag gre Drop

Type: number

Format: counter

ipv6frag_icmp

Description IPv6 Frag ICMP

Type: number

Format: counter

ipv6frag_ipip_dropped

Description IPv6 Frag IPIP Drop

Type: number

Format: counter

ipv6frag_ipip_ok

Description IPv6 Frag IPIP OKs

Type: number

Format: counter

ipv6frag_ospf

Description IPv6 Frag OSPF

Type: number

Format: counter

ipv6frag_tcp

Description IPv6 Frag TCP

Type: number

Format: counter

ipv6frag_tcp_dropped

Description IPv6 Frag TCP Dropped

Type: number

Format: counter

ipv6frag_udp

Description IPv6 Frag UDP

Type: number

Format: counter

ipv6frag_udp_dropped

Description IPv6 Frag UDP Dropped

Type: number

Format: counter

jumbo_frag_drop

Description Jumbo Frag Drop

Type: number

Format: counter

l2_def_vlan_drop

Description L2 Default Vlan FWD Drop

Type: number

Format: counter

l2_forward

Description L2 Forward

Type: number

Format: counter

l3_forward_ip

Description L3 IP Forward

Type: number

Format: counter

l3_forward_ipv6

Description L3 IPv6 Forward

Type: number

Format: counter

l4_in_ctrl_cpu

Description L4 In Ctrl CPU

Type: number

Format: counter

l4_process

Description L4 Process

Type: number

Format: counter

lacp_tx_intf_err_drop

Description LACP interface error corrected

Type: number

Format: counter

licexpire_drop

Description License Expire Drop

Type: number

Format: counter

linkdown_drop

Description Link Down Drop

Type: number

Format: counter

mac_movement

Description MAC movement

Type: number

Format: counter

max_arp_drop

Description Max ARP Drop

Type: number

Format: counter

mgmt_svc_drop

Description Management Service Drop

Type: number

Format: counter

no_ip_drop

Description No IP Drop

Type: number

Format: counter

ppsl_drop_egr

Description Packet-Per-Sec Limit Drop at egress

Type: number

Format: counter

ppsl_drop_ing

Description Packet-Per-Sec Limit Drop at ingress

Type: number

Format: counter

ppsl_ignore_limit

Description Packet-Per-Sec Limit ignored packets count

Type: number

Format: counter

prot_down_drop

Description Prot Down Drop

Type: number

Format: counter

redirect_fwd_fail

Description Redirect failed in the fwd direction

Type: number

Format: counter

redirect_fwd_sent

Description Redirect succeeded in the fwd direction

Type: number

Format: counter

redirect_rev_fail

Description Redirect failed in the rev direction

Type: number

Format: counter

redirect_rev_sent

Description Redirect succeeded in the rev direction

Type: number

Format: counter

redirect_setup_fail

Description Redirect connection setup failed

Type: number

Format: counter

rx_arp_req

Description ARP REQ Rcvd

Type: number

Format: counter

rx_arp_resp

Description ARP RESP Rcvd

Type: number

Format: counter

rx_kernel

Description Received kernel

Type: number

Format: counter

scaleout_arp_drop

Description ARP PKT dropped due to scaleout checks

Type: number

Format: counter

scaleout_hairpin_arp_drop

Description ARP PKT dropped due to scaleout hairpin checks

Type: number

Format: counter

self_grat_arp_drop

Description Self generated grat ARP PKT dropped

Type: number

Format: counter

self_grat_nat_ip_arp_drop

Description Self generated grat ARP PKT dropped for NAT IP

Type: number

Format: counter

service_chain_rcvd

Description Service Chain Packets Rcvd

Type: number

Format: counter

service_chain_sent

Description Service Chain Packets Sent

Type: number

Format: counter

sp_non_ctrl_pkt_drop

Description Shared IP mode non ctrl packet to linux drop

Type: number

Format: counter

sport_drop

Description SPORT Drop

Type: number

Format: counter

tls12_drop_req

Description TLS12-Request-Per-Sec Limit Drop at ingress

Type: number

Format: counter

tls12_ignore_req

Description TLS12-Request-Per-Sec Limit ignored packets count

Type: number

Format: counter

tls12_tls13_drop_req

Description TLS12–TLS13-Request-Per-Sec Limit Drop at ingress

Type: number

Format: counter

tls12_tls13_ignore_req

Description TLS12-TLS13-Request-Per-Sec Limit ignored packets count

Type: number

Format: counter

tls13_drop_req

Description TLS13-Request-Per-Sec Limit Drop at ingress

Type: number

Format: counter

tls13_ignore_req

Description TLS13-Request-Per-Sec Limit ignored packets count

Type: number

Format: counter

ttl_exceeded_drop

Description TTL Exceeded Drop

Type: number

Format: counter

unknown_prot_drop

Description Unknown Prot Drop

Type: number

Format: counter

unnumbered_nat_error

Description Unnumbered NAT error

Type: number

Format: counter

unnumbered_unsupported_drop

Description Unsupported protocol for unnumbered

Type: number

Format: counter

urpf_pkt_drop

Description URPF check packet drop

Type: number

Format: counter

virtual_ip_not_found_arp_drop

Description ARP PKT dropped due to virtual IP not found

Type: number

Format: counter

vlan_flood

Description VLAN Flood

Type: number

Format: counter

2.120.222 slb telemetry-log

telemetry logs to be sent out

telemetry-log Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	telemetry-log
Element URI	/axapi/v3/slb/telemetry-log
Element Attributes	telemetry-log_attributes
Partition Visibility	None
Schema	`telemetry-log schema`

Operations Allowed:

Get Object

GET

/axapi/v3/slb/telemetry-log

telemetry-log_attributes

telemetry-log attributes

2.120.223 slb template

Define an SLB template

template Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	template
Element URI	/axapi/v3/slb/template
Element Attributes	template_attributes
Partition Visibility	shared
Schema	`template schema`

Operations Allowed:

Get Object

GET

/axapi/v3/slb/template

template_attributes

template attributes

cache-list

Type: List

Reference Object: */axapi/v3/slb/template/cache/{name}*

cipher-list

Type: List

virtual-server-list

Type: List

Reference Object: */axapi/v3/slb/template/virtual-server/{name}*

logging-list

Specification	Value
Type	*list*
Block object keys	

auto

Description 'auto': Configure auto NAT for logging, default is auto enabled;

Type: string

Supported Values: auto

Default: auto

Mutual Exclusion: auto and pool are mutually exclusive

format

Description Specify a format string for web logging (format string(less than 250 characters) for web logging)

Type: string

Format: string-rlx

Maximum Length: 250 characters

Maximum Length: 1 characters

keep-end

Description Number of unmasked characters at the end (default: 0)

Type: number

Range: 0-65535

Default: 0

keep-start

Description Number of unmasked characters at the beginning (default: 0)

Type: number

Range: 0-65535

Default: 0

local-logging

Description 1 to enable local logging (1 to enable local logging, default 0)

Type: number

Range: 0-1

Default: 0

mask

Description Character to mask the matched pattern (default: X)

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: X

name

Description Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pcre-mask

Description Mask matched PCRE pattern in the log

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: pool, shared-partition-pool, and auto are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

pool-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

service-group

Description Bind a Service Group to the logging template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

shared-partition-pool

Description Reference a NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and pool are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cache-list

Specification	Value
Type	*list*
Block object keys	

accept-reload-req

Description Accept reload requests via cache-control directives in HTTP headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

age

Description Specify duration in seconds cached content valid, default is 3600 seconds (seconds that the cached content is valid (default 3600 seconds))

Type: number

Range: 1-999999

Default: 3600

default-policy-nocache

Description Specify default policy to be to not cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-insert-age

Description Disable insertion of age header in response served from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-insert-via

Description Disable insertion of via header in response served from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-uri-policy

Type: List

logging

Description Specify logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

max-cache-size

Description Specify maximum cache size in megabytes, default is 80MB (RAM cache size in megabytes (default 80MB))

Type: number

Range: 1-4096

Default: 80

max-content-size

Description Maximum size (bytes) of response that can be cached - default 81920 (80KB)

Type: number

Range: 0-268435455

Default: 81920

min-content-size

Description Minimum size (bytes) of response that can be cached - default 512

Type: number

Range: 0-268435455

Default: 512

name

Description Specify cache template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/slb-templ-cache-tmpl*

remove-cookies

Description Remove cookies in response and cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

replacement-policy

Description 'LFU': LFU;

Type: string

Supported Values: LFU

Default: LFU

sampling-enable

Type: List

uri-policy

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-host

Description Verify request using host before sending response from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-list_local-uri-policy

Specification	Value
Type	*list*
Block object keys	

local-uri

Description Specify Local URI for caching (Specify URI pattern that the policy should be applied to, maximum 63 charaters)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cache-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Cache hits; 'miss': Cache misses; 'bytes_served': Bytes served from cache; 'total_req': Total requests received; 'caching_req': Total requests to cache; 'nc_req_header': slbTemplateCacheNcReqHeader, help nc_req_header; 'nc_res_header': slbTemplateCacheNcResHeader, help nc_res_header; 'rv_success': some help string; 'rv_failure': slbTemplateCacheRvFailure, help rv_failure; 'ims_request': some help string; 'nm_response': some help string; 'rsp_type_CL': some help string; 'rsp_type_CE': some help string; 'rsp_type_304': some help string; 'rsp_type_other': some help string; 'rsp_no_compress': some help string; 'rsp_gzip': some help string; 'rsp_deflate': some help string; 'rsp_other': some help string; 'nocache_match': some help string; 'match': some help string; 'invalidate_match': some help string; 'content_toobig': slbTemplateCacheContentToobig, help content_toobig; 'content_toosmall': slbTemplateCacheContentToosmall, help content_toosmall; 'entry_create_failures': slbTemplateCacheEntryCreateFailures, help entry_create_failures; 'mem_size': some help string; 'entry_num': some help string; 'replaced_entry': some help string; 'aging_entry': some help string; 'cleaned_entry': some help string; 'rsp_type_stream': some help string; 'header_save_error': some help string; 'rsp_br': rsp_br;

Type: string

Supported Values: all, hits, miss, bytes_served, total_req, caching_req, nc_req_header, nc_res_header, rv_success, rv_failure, ims_request, nm_response, rsp_type_CL, rsp_type_CE, rsp_type_304, rsp_type_other, rsp_no_compress, rsp_gzip, rsp_deflate, rsp_other, nocache_match, match, invalidate_match, content_toobig, content_toosmall, entry_create_failures, mem_size, entry_num, replaced_entry, aging_entry, cleaned_entry, rsp_type_stream, header_save_error, rsp_br

cache-list_uri-policy

Specification	Value
Type	*list*
Block object keys	

cache-action

Description 'cache': Specify if certain URIs should be cached; 'nocache': Specify if certain URIs should not be cached;

Type: string

Supported Values: cache, nocache

cache-value

Description Specify seconds that content should be cached, default is age specified in cache template

Type: number

Range: 1-999999

invalidate

Description Specify if URI should invalidate cache entries matching pattern (pattern that would match entries to be invalidated (64 chars max))

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uri

Description Specify URI for cache policy (Specify URI pattern that the policy should be applied to, maximum 63 charaters)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Specification	Value
Type	*list*
Block object keys	

add

Description Slow start connection limit add by a number every interval (Add by this number every interval)

Type: number

Range: 1-4095

Mutual Exclusion: add and times are mutually exclusive

bw-rate-limit

Description Configure bandwidth rate limit on real server port (Bandwidth rate limit in Kbps)

Type: number

Range: 1-16777216

bw-rate-limit-duration

Description Duration in seconds the observed rate needs to honor

Type: number

Range: 1-250

bw-rate-limit-no-logging

Description Do not log bandwidth rate limit related state transitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Resume server selection after bandwidth drops below this threshold (in Kbps) (Bandwidth rate limit resume threshold (in Kbps))

Type: number

Range: 1-16777216

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-flaps

Description service dampening flaps count (max-flaps allowed in flap period)

Type: number

Range: 1-255

decrement

Description Decrease after every round of DNS query (default is 0)

Type: number

Range: 0-7

Default: 0

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-nat

Description Destination NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

down-grace-period

Description Port down grace period (Down grace period in seconds)

Type: number

Range: 1-86400

down-timer

Description The timer to bring the marked down server/port to up (default is 0, never bring up) (The timer to bring up server (in second, default is 0))

Type: number

Range: 0-255

Default: 0

dscp

Description Differentiated Services Code Point (DSCP to Real Server IP Mapping Value)

Type: number

Range: 1-63

dynamic-member-priority

Description Set dynamic member's priority (Initial priority (default is 16))

Type: number

Range: 1-16

Default: 16

every

Description Slow start connection limit increment interval (default 10)

Type: number

Range: 1-60

Default: 10

extended-stats

Description Enable extended statistics on real server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

flap-period

Description take service out of rotation if max-flaps exceeded within time in seconds

Type: number

Range: 1-255

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

inband-health-check

Description Use inband traffic to detect port's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

initial-slow-start

Description Initial slow start connection limit (default 128)

Type: number

Range: 1-4095

Default: 128

name

Description Port template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

no-ssl

Description No SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

reassign

Description Maximum reassign times before declear the server/port down (default is 25) (The maximum reassign number)

Type: number

Range: 0-255

Default: 25

request-rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

request-rate-limit

Description Request rate limit

Type: number

Range: 1-1048575

request-rate-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resel-on-reset

Description When receiving reset from server, do the server/port reselection (default is 0, don't do reselection)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restore-svc-time

Description put the service back to the rotation after time in seconds

Type: number

Range: 1-4095

resume

Description Resume accepting new connection after connection number drops below threshold (Connection resume threshold)

Type: number

Range: 1-1048575

retry

Description Maximum retry times before reassign this connection to another server/port (default is 2) (The maximum retry number)

Type: number

Range: 0-7

Default: 2

shared-partition-pool

Description Reference a NAT pool or pool-group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and source-nat are mutually exclusive

slow-start

Description Slowly ramp up the connection number after port is up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-nat

Description Source NAT (IP NAT Pool or pool group name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: source-nat and shared-partition-pool are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server port; 'stats-data-disable': Disable statistical data collection for real server port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

sub-group

Description Divide service group members into different sub groups (Sub group ID (default is 0))

Type: number

Range: 0-15

Default: 0

template-port-pool-shared

Description Source NAT (IP NAT Pool or pool group name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

till

Description Slow start ends when slow start connection limit reaches a number (default 4096) (Slow start ends when connection limit reaches this number)

Type: number

Range: 1-65535

Default: 4096

times

Description Slow start connection limit multiply by a number every interval (default 2) (Multiply by this number every interval)

Type: number

Range: 2-10

Default: 2

Mutual Exclusion: times and add are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight (port weight)

Type: number

Range: 1-1000

Default: 1

connection-reuse-list

Specification	Value
Type	*list*
Block object keys	

add-header

Description Insert HTTP Connection: keep-alive header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

keep-alive-conn

Description Keep a number of server connections open

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit-per-server

Description Max Server Connections allowed (Connections per Server Port (default 1000))

Type: number

Range: 0-65535

Default: 1000

name

Description Connection Reuse Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

num-conn-per-port

Description Connections per Server Port (default 100)

Type: number

Range: 1-1024

Default: 100

preopen

Description Preopen server connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout in seconds. Multiple of 60 (default 2400)

Type: number

Range: 60-3600

Default: 2400

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-cost-list

Specification	Value
Type	*list*
Block object keys	

bandwidth-interval

Description Interval duration in seconds

Type: number

Range: 1-60

Default: 5

name

Description Server Link-Cost Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

overage-bandwidth-cost

Description Configure overage bandwidth cost on real server (Overage bandwidth cost per Mbpi)

Type: number

Range: 0-4294967295

Default: 0

prepaid-bandwidth

Description Configure prepaid bandwidth on real server (Prepaid Bandwidth in Mbpi)

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-cost-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'link_total_fwd_bytes': Total bytes fwd for link; 'interval_fwd_bytes': Link Cost bytes processed in forward direction per interval; 'link_total_conn': Link Cost total connection; 'interval_avg_throughput': Link Cost average throughput per interval; 'interval_max_throughput': Link Cost max throughput per interval;

Type: string

Supported Values: all, link_total_fwd_bytes, interval_fwd_bytes, link_total_conn, interval_avg_throughput, interval_max_throughput

reqmod-icap-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

allowed-http-methods

Description List of allowed HTTP methods. Default is "Allow All". (List of HTTP methods allowed (default "Allow All"))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

bypass-ip-cfg

Type: List

disable-http-server-reset

Description Don't reset http server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-close

Description When template sg is down mark vport down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

include-protocol-in-uri

Description Include protocol and port in HTTP URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-only-allowed-method

Description Only log allowed HTTP method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description logging template (Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

min-payload-size

Description min-payload-size value 0 - 65535, default is 0

Type: number

Range: 0-65535

Default: 0

name

Description Reqmod ICAP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

preview

Description Preview value 1 - 32768, default is 32768

Type: number

Range: 1-32768

Default: 32768

server-ssl

Description Server SSL template (Server SSL template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

service-url

Description URL to send to ICAP server (Service URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

x-auth-url

Description Use URL format for authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reqmod-icap-list_bypass-ip-cfg

Specification	Value
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass reqmod-icap service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

smpp-list

Specification	Value
Type	*list*
Block object keys	

client-enquire-link

Description Respond client ENQUIRE_LINK packet directly instead of forwarding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SMPP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password

Description Configure the password used to bind

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-enquire-link

Description Send server ENQUIRE_LINK packet for every persist connection when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-enquire-link-val

Description Set interval of keep-alive packet for each persistent connection (second, default is 30)

Type: number

Range: 5-300

Default: 30

server-selection-per-request

Description Force server selection on every SMPP request when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user

Description Configure the user to bind (The name used to bind)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

smtp-list

Specification	Value
Type	*list*
Block object keys	

LF-to-CRLF

Description Change the LF to CRLF for smtp end of line

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-domain-switching

Type: List

client-starttls-type

Description 'optional': STARTTLS is optional requirement; 'enforced': Must issue START-TLS command before mail transaction;

Type: string

Supported Values: optional, enforced

command-disable

Type: List

error-code-to-client

Description Would transfer error code(554) to client, when getting it from connection establishing with real-server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SMTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-domain

Description Config the domain of the email servers (Server's domain, default is "mail-server-domain")

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

Default: mail-server-domain

server-starttls-type

Description 'optional': STARTTLS is optional requirement; 'enforced': Must issue START-TLS command before mail transaction;

Type: string

Supported Values: optional, enforced

service-ready-msg

Description Set SMTP service ready message (SMTP service ready message, default is "ESMTP mail service ready")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: ESMTP mail service ready

template

Description: template is a **JSON Block**. Please see below for *smtp-list_template*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

smtp-list_client-domain-switching

Specification	Value
Type	*list*
Block object keys	

match-string

Description Domain name string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

service-group

Description Select service group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

switching-type

Description 'contains': Specify domain name string if domain contains another string; 'ends-with': Specify domain name string if domain ends with another string; 'starts-with': Specify domain string if domain starts with another string;

Type: string

Supported Values: contains, ends-with, starts-with

smtp-list_template

Specification	Value
Type	*object*

logging

Description Logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

smtp-list_command-disable

Specification	Value
Type	*list*
Block object keys	

disable-type

Description 'expn': Disable SMTP EXPN commands; 'turn': Disable SMTP TURN commands; 'vrfy': Disable SMTP VRFY commands;

Type: string

Supported Values: expn, turn, vrfy

external-service-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

bypass-ip-cfg

Type: List

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

name

Description External Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

request-header-forward-list

Type: List

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

type

Description 'skyfire-icap': Skyfire ICAP service; 'url-filter': URL filtering service;

Type: string

Supported Values: skyfire-icap, url-filter

Default: url-filter

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

external-service-list_bypass-ip-cfg

Specification	Value
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass external service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

external-service-list_request-header-forward-list

Specification	Value
Type	*list*
Block object keys	

request-header-forward

Description Request header to be forwarded to external service (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp-list

Specification	Value
Type	*list*
Block object keys	

alive-if-active

Description keep connection alive if active traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description send reset to client when server is disabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and down are mutually exclusive

down

Description send reset to client when server is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: down and disable are mutually exclusive

force-delete-timeout

Description The maximum time that a session can stay in the system before being delete (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being delete (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default off (half close idle timeout in second, default off)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default off (half open idle timeout in second, default off)

Type: number

Range: 1-60

idle-timeout

Description Idle Timeout value (Interval of 60 seconds), default 120 seconds (idle timeout in second, default 120)

Type: number

Range: 1-2097151

Default: 120

initial-window-size

Description Set the initial window size (number)

Type: number

Range: 1-65535

insert-client-ip

Description Insert client ip into TCP option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lan-fast-ack

Description Enable fast TCP ack on LAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description 'init': init only log; 'term': termination only log; 'both': both initial and termination log;

Type: string

Supported Values: init, term, both

name

Description Fast TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

proxy-header

Description: proxy-header is a **JSON Block**. Please see below for *tcp-list_proxy-header*

Type: Object

qos

Description QOS level (number)

Type: number

Range: 1-63

re-select-if-server-down

Description re-select another server if service port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-follow-fin

Description send reset to client or server upon receiving first fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-fwd

Description send reset to server if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-rev

Description send reset to client if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp-list_proxy-header

Specification	Value
Type	*object*

proxy-header-action

Description 'insert': Insert proxy header;

Type: string

Supported Values: insert

proxy-header-version

Description 'v1': version 1; 'v2': version 2;

Type: string

Supported Values: v1, v2

diameter-list

Specification	Value
Type	*list*
Block object keys	

avp-code

Description avp code

Type: number

Range: 1-2147483647

avp-list

Type: List

avp-string

Description pattern to be matched in the avp string name, max length 127 bytes

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

customize-cea

Description customizing cea response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dwr-time

Description dwr health-check timer interval (in 100 milli second unit, default is 100, 0 means unset this option)

Type: number

Range: 0-2147483647

Default: 100

dwr-up-retry

Description number of successful dwr health-check before declaring target up

Type: number

Range: 1-7

Default: 3

forward-to-latest-server

Description Forward client message to the latest server that sends message with the same session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-unknown-session-id

Description Forward server message even it has unknown session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

idle-timeout

Description user sesison idle timeout (in minutes, default is 5)

Type: number

Range: 1-65535

Default: 5

load-balance-on-session-id

Description Load balance based on the session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-code-list

Type: List

multiple-origin-host

Description allowing multiple origin-host to a single server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description diameter template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

origin-host

Description: origin-host is a **JSON Block**. Please see below for *diameter-list_origin-host*

Type: Object

Reference Object: */axapi/v3/slb/template/diameter/{name}/origin-host*

origin-realm

Description origin-realm name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

product-name

Description product name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

relaxed-origin-host

Description Relaxed Origin-Host Format

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-name

Description service group name, this is the service group that the message needs to be copied to

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

session-age

Description user session age allowed (default 10), this is not idle-time (in minutes)

Type: number

Range: 1-65535

Default: 10

terminate-on-cca-t

Description remove diameter session when receiving CCA-T message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vendor-id

Description vendor-id avp (Vendor Id)

Type: number

Range: 0-2147483647

Default: 0

diameter-list_message-code-list

Specification	Value
Type	*list*
Block object keys	

message-code

Description

Type: number

Range: 1-2147483647

diameter-list_avp-list

Specification	Value
Type	*list*
Block object keys	

avp

Description customize avps for cer to the server (avp number)

Type: number

Range: 0-2147483647

int32

Description 32 bits integer

Type: number

Range: 0-2147483647

Mutual Exclusion: int32, int64, and string are mutually exclusive

int64

Description 64 bits integer

Type: number

Range: 0-2147483647

Mutual Exclusion: int64, int32, and string are mutually exclusive

mandatory

Description mandatory avp

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

string

Description String (string name, max length 127 bytes)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: string, int32, and int64 are mutually exclusive

diameter-list_origin-host

Specification	Value
Type	*object*

origin-host-name

Description origin-host name avp

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udp-list

Specification	Value
Type	*list*
Block object keys	

age

Description short age (in sec), default is 31

Type: number

Range: 1-31

avp

Description '4': NAS-IP-address; '8': Framed-IP-Address;

Type: string

Supported Values: 4, 8

disable-clear-session

Description Disable immediate clearing of session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

idle-timeout

Description Idle Timeout value (Interval of 60 seconds), default 120 seconds (idle timeout in second, default 120)

Type: number

Range: 1-2097151

Default: 120

immediate

Description Immediate Removal after Transaction

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: immediate and short are mutually exclusive

name

Description Fast UDP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

qos

Description QOS level (number)

Type: number

Range: 1-63

radius-lb-method-hash-type

Description 'ip': IP-Hash;

Type: string

Supported Values: ip, ipv6

re-select-if-server-down

Description re-select another server if service port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

short

Description Short lived session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: short and immediate are mutually exclusive

stateless-conn-timeout

Description Stateless Current Connection Timeout value (5 - 120 seconds) (idle timeout in second, default 120)

Type: number

Range: 5-120

Default: 120

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v6avp

Description '168': Framed-IPv6-Address; '97': Framed-IPv6-PrefixFramed-IPv6-Prefix;

Type: string

Supported Values: 168, 97

link-down-on-restart

Specification	Value
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-policy-list

Specification	Value
Type	*list*
Block object keys	

cookie-name

Description name of cookie to match (Cookie Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

geo-location-match

Type: List

http-policy-match

Type: List

multi-match-rule-list

Type: List

Reference Object: */axapi/v3/slb/template/http-policy/{name}/multi-match-rule/{multi-match}*

name

Description http-policy template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-policy-list_http-policy-match

Specification	Value
Type	*list*
Block object keys	

match-string

Description URL String, use "[no-name]" for empty query-param-name match, use "[no-value]" for empty query-param-value match

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

match-type

Description 'contains': Select service group if URL string contains another string; 'ends-with': Select service group if URL string ends with another string; 'equals': Select service group if URL string equals another string; 'starts-with': Select service group if URL string starts with another string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

type

Description 'cookie': cookie value match; 'host': hostname match; 'url': URL match; 'header-name': header name match; 'header-value': header value match; 'query-param-name': query parameter name; 'query-param-value': query parameter value;

Type: string

Supported Values: cookie, host, url, header-name, header-value, query-param-name, query-param-value

http-policy-list_multi-match-rule-list

Specification	Value
Type	*list*
Block object keys	

cookie-name-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-contains-type

Description 'contains': Cookie name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-name-contains-type,cookie-name-equals-type, cookie-name-starts-with-type, and cookie-name-ends-with-type are mutually exclusive

cookie-name-ends-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-ends-with-type

Description 'ends-with': Cookie name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-name-ends-with-type,cookie-name-equals-type, cookie-name-contains-type, and cookie-name-starts-with-type are mutually exclusive

cookie-name-equals-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-equals-type

Description 'equals': Cookie name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-name-equals-type,cookie-name-contains-type, cookie-name-starts-with-type, and cookie-name-ends-with-type are mutually exclusive

cookie-name-starts-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-starts-with-type

Description 'starts-with': Cookie name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-name-starts-with-type,cookie-name-equals-type, cookie-name-contains-type, and cookie-name-ends-with-type are mutually exclusive

cookie-name-value-match

Description When enabled, the rule will match only when both cookie-name and cookie-value matches with same cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cookie-value-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-contains-type

Description 'contains': Cookie value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-value-contains-type,cookie-value-equals-type, cookie-value-starts-with-type, and cookie-value-ends-with-type are mutually exclusive

cookie-value-ends-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-ends-with-type

Description 'ends-with': Cookie value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-value-ends-with-type,cookie-value-equals-type, cookie-value-contains-type, and cookie-value-starts-with-type are mutually exclusive

cookie-value-equals-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-equals-type

Description 'equals': Cookie value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-value-equals-type,cookie-value-contains-type, cookie-value-starts-with-type, and cookie-value-ends-with-type are mutually exclusive

cookie-value-starts-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-starts-with-type

Description 'starts-with': Cookie value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-value-starts-with-type,cookie-value-equals-type, cookie-value-contains-type, and cookie-value-ends-with-type are mutually exclusive

header-name-contains-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-contains-type

Description 'contains': Header name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-name-contains-type,header-name-equals-type, header-name-starts-with-type, and header-name-ends-with-type are mutually exclusive

header-name-ends-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-ends-with-type

Description 'ends-with': Header name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-name-ends-with-type,header-name-equals-type, header-name-contains-type, and header-name-starts-with-type are mutually exclusive

header-name-equals-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-equals-type

Description 'equals': Header name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-name-equals-type,header-name-contains-type, header-name-starts-with-type, and header-name-ends-with-type are mutually exclusive

header-name-starts-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-starts-with-type

Description 'starts-with': Header name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-name-starts-with-type,header-name-equals-type, header-name-contains-type, and header-name-ends-with-type are mutually exclusive

header-name-value-match

Description When enabled, the rule will match only when both header-name and header-value matches with same header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-value-contains-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-contains-type

Description 'contains': Header value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-value-contains-type,header-value-equals-type, header-value-starts-with-type, and header-value-ends-with-type are mutually exclusive

header-value-ends-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-ends-with-type

Description 'ends-with': Header value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-value-ends-with-type,header-value-equals-type, header-value-contains-type, and header-value-starts-with-type are mutually exclusive

header-value-equals-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-equals-type

Description 'equals': Header value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-value-equals-type,header-value-contains-type, header-value-starts-with-type, and header-value-ends-with-type are mutually exclusive

header-value-starts-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-starts-with-type

Description 'starts-with': Header value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-value-starts-with-type,header-value-equals-type, header-value-contains-type, and header-value-ends-with-type are mutually exclusive

host-contains-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-contains-type

Description 'contains': Host contains string;

Type: string

Supported Values: contains

Mutual Exclusion: host-contains-type,host-equals-type, host-starts-with-type, and host-ends-with-type are mutually exclusive

host-ends-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-ends-with-type

Description 'ends-with': Host ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: host-ends-with-type,host-equals-type, host-contains-type, and host-starts-with-type are mutually exclusive

host-equals-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-equals-type

Description 'equals': Host equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: host-equals-type,host-contains-type, host-starts-with-type, and host-ends-with-type are mutually exclusive

host-starts-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-starts-with-type

Description 'starts-with': Host starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: host-starts-with-type,host-equals-type, host-contains-type, and host-ends-with-type are mutually exclusive

multi-match

Description Specify a multi-match-rule name

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

query-param-name-contains-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-contains-type

Description 'contains': query parameter name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-name-contains-type,query-param-name-equals-type, query-param-name-starts-with-type, and query-param-name-ends-with-type are mutually exclusive

query-param-name-ends-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-ends-with-type

Description 'ends-with': query parameter name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-name-ends-with-type,query-param-name-equals-type, query-param-name-contains-type, and query-param-name-starts-with-type are mutually exclusive

query-param-name-equals-string

Description query parameter name string, use "[no-name]" for empty query-param-name match

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-equals-type

Description 'equals': query parameter name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-name-equals-type,query-param-name-contains-type, query-param-name-starts-with-type, and query-param-name-ends-with-type are mutually exclusive

query-param-name-starts-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-starts-with-type

Description 'starts-with': query parameter name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-name-starts-with-type,query-param-name-equals-type, query-param-name-contains-type, and query-param-name-ends-with-type are mutually exclusive

query-param-value-contains-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-contains-type

Description 'contains': query parameter value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-value-contains-type,query-param-value-equals-type, query-param-value-starts-with-type, and query-param-value-ends-with-type are mutually exclusive

query-param-value-ends-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-ends-with-type

Description 'ends-with': query parameter value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-value-ends-with-type,query-param-value-equals-type, query-param-value-contains-type, and query-param-value-starts-with-type are mutually exclusive

query-param-value-equals-string

Description query parameter value string, use "[no-value]" for empty query-param-value match

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-equals-type

Description 'equals': query parameter value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-value-equals-type,query-param-value-contains-type, query-param-value-starts-with-type, and query-param-value-ends-with-type are mutually exclusive

query-param-value-starts-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-starts-with-type

Description 'starts-with': query parameter value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-value-starts-with-type,query-param-value-equals-type, query-param-value-contains-type, and query-param-value-ends-with-type are mutually exclusive

seq-num

Description Specify a sequence number

Type: number

Range: 1-8192

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

url-contains-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-contains-type

Description 'contains': URL contains string;

Type: string

Supported Values: contains

Mutual Exclusion: url-contains-type,url-equals-type, url-starts-with-type, and url-ends-with-type are mutually exclusive

url-ends-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-ends-with-type

Description 'ends-with': URL ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: url-ends-with-type,url-equals-type, url-contains-type, and url-starts-with-type are mutually exclusive

url-equals-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-equals-type

Description 'equals': URL equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: url-equals-type,url-contains-type, url-starts-with-type, and url-ends-with-type are mutually exclusive

url-starts-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-starts-with-type

Description 'starts-with': URL starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: url-starts-with-type,url-equals-type, url-contains-type, and url-ends-with-type are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-policy-list_geo-location-match

Specification	Value
Type	*list*
Block object keys	

geo-location

Description Geolocation name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

geo-location-service-group

Description Service Group to be used (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

link-probe-list

Specification	Value
Type	*list*
Block object keys	

destination

Description: destination is a **JSON Block**. Please see below for *link-probe-list_destination*

Type: Object

Reference Object: */axapi/v3/slb/template/link-probe/{name}/destination*

disable

Description Disable Probe template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

expected-status-code

Description Specify response code range (e.g. 200,400-430), default is 200 (Format is xx,xx-xx (xx between [100, 899]), default is 200)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: 200

name

Description probe template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

probe-interval

Description Time between each probe that needs to be sent out (in seconds, default is 5)

Type: number

Range: 1-7200

Default: 5

probes-per-test

Description Total number of probes to be sent out for each test

Type: number

Range: 1-10

Default: 5

rtt-method

Description 'http-rtt': Calculate Round Trip Time between HTTP request and response; 'tcp-srtt': Use TCP Smoothed round trip time in the HTTP connection;

Type: string

Supported Values: http-rtt, tcp-srtt

Default: http-rtt

selection-rule

Description 'threshold': Use all links below a threshold before selecting the fastest link; 'fastest-link-always': Always use the link with the lowest average latency;

Type: string

Supported Values: threshold, fastest-link-always

Default: fastest-link-always

test-interval

Description time interval between subsequent tests (in seconds, default is 60)

Type: number

Range: 1-7200

Default: 60

threshold-value

Description Use all links below a threshold before selecting the fastest link (RTT in milliseconds)

Type: number

Range: 0-65534

Default: 0

url

Description Specify URL to which probes should be sent out. Default is /

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Default: /

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-probe-list_destination

Specification	Value
Type	*object*

hostname

Description Target Hostname

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve the configured hostname; 'resolve-to-ipv6': Use AAAA Query only to resolve the configured hostname;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6

Mutual Exclusion: resolve-as, static-ipv4-addr, and static-ipv6-addr are mutually exclusive

static-ipv4-addr

Description Target IPv4 Address

Type: string

Format: ipv4-address

Mutual Exclusion: static-ipv4-addr, resolve-as, and static-ipv6-addr are mutually exclusive

static-ipv6-addr

Description Target IPv6 Address

Type: string

Format: ipv6-address

Mutual Exclusion: static-ipv6-addr, resolve-as, and static-ipv4-addr are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

client-ssl-list

Specification	Value
Type	*list*
Block object keys	

ad-group-list

Description Forward proxy bypass if ad-group matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

alert-type

Description 'fatal': Log fatal alerts;

Type: string

Supported Values: fatal

auth-sg

Description Specify authorization LDAP service group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: auth-sg and authen-name are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

auth-sg-dn

Description Use Subject DN as LDAP search base DN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-sg-filter

Description Specify LDAP search filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

auth-username

Description Specify the Username Field in the Client Certificate(If multi-fields are specificed, prior one has higher priority)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-username-attribute

Description Specify attribute name of username for client SSL authorization

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

authen-name

Description Specify authorization LDAP server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: authen-name and auth-sg are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/ldap*

authorization

Description Specify LDAP server for client SSL authorizaiton

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bypass-cert-issuer-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-issuer-class-list-name and bypass-cert-issuer-multi-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

bypass-cert-issuer-multi-class-list

Type: List

bypass-cert-san-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-san-class-list-name and bypass-cert-san-multi-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

bypass-cert-san-multi-class-list

Type: List

bypass-cert-subject-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-subject-class-list-name and bypass-cert-subject-multi-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

bypass-cert-subject-multi-class-list

Type: List

ca-certs

Type: List

cache-persistence-list-name

Description Class List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

case-insensitive

Description Case insensitive forward proxy bypass

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

central-cert-pin-list

Description Forward proxy bypass if SNI string is contained in central updated cert-pinning-candidate list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cert-revoke-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection; 'block': block the connection with a warning page;

Type: string

Supported Values: bypass, continue, drop, block

Default: bypass

cert-unknown-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection; 'block': block the connection with a warning page;

Type: string

Supported Values: bypass, continue, drop, block

Default: bypass

certificate-issuer-contains-list

Type: List

certificate-issuer-ends-with-list

Type: List

certificate-issuer-equals-list

Type: List

certificate-issuer-starts-with-list

Type: List

certificate-list

Type: List

Reference Object: */axapi/v3/slb/template/client-ssl/{name}/certificate/{cert}*

certificate-san-contains-list

Type: List

certificate-san-ends-with-list

Type: List

certificate-san-equals-list

Type: List

certificate-san-starts-with-list

Type: List

certificate-subject-contains-list

Type: List

certificate-subject-ends-with-list

Type: List

certificate-subject-equals-list

Type: List

certificate-subject-starts-with-list

Type: List

chain-cert

Description Chain Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-cert and chain-cert-shared-str are mutually exclusive

chain-cert-shared-str

Description Chain Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-cert-shared-str and chain-cert are mutually exclusive

cipher-without-prio-list

Type: List

class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: class-list-name and multi-clist-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

client-auth-case-insensitive

Description Case insensitive forward proxy client auth bypass

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-auth-class-list

Description Forward proxy client auth bypass if SNI string matches class-list (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-auth-contains-list

Type: List

client-auth-ends-with-list

Type: List

client-auth-equals-list

Type: List

client-auth-starts-with-list

Type: List

client-certificate

Description 'Ignore': Don't request client certificate; 'Require': Require client certificate; 'Request': Request client certificate;

Type: string

Supported Values: Ignore, Require, Request

Default: Ignore

client-ipv4-list

Type: List

client-ipv6-list

Type: List

close-notify

Description Send close notification when terminate connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

contains-list

Type: List

crl-certs

Type: List

dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 30-34

Default: 31

dh-type

Description '1024': 1024; '1024-dsa': 1024-dsa; '2048': 2048;

Type: string

Supported Values: 1024, 1024-dsa, 2048

direct-client-server-auth

Description Let backend server does SSL client authentication directly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv3

Description Reject Client requests for SSL version 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

early-data

Description Enable TLS 1.3 early data (0-RTT)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Type: List

enable-ssli-ftp-alg

Description Enable SSLi FTP over TLS support at which port

Type: number

Range: 1-65535

enable-tls-alert-logging

Description Enable TLS alert logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ends-with-list

Type: List

equals-list

Type: List

exception-ad-group-list

Description Exceptions to forward proxy bypass if ad-group matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-certificate-issuer-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-certificate-san-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-certificate-subject-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-client-ipv4-list

Type: List

exception-client-ipv6-list

Type: List

exception-server-ipv4-list

Type: List

exception-server-ipv6-list

Type: List

exception-sni-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-user-name-list

Description Exceptions to forward proxy bypass if user-name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-web-category

Description: exception-web-category is a **JSON Block**. Please see below for *client-ssl-list_exception-web-category*

Type: Object

exception-web-reputation

Description: exception-web-reputation is a **JSON Block**. Please see below for *client-ssl-list_exception-web-reputation*

Type: Object

expire-hours

Description Certificate lifetime in hours

Type: number

Range: 1-168

forward-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: forward-encrypted and fp-ca-certificate are mutually exclusive

forward-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-passphrase and fp-ca-certificate are mutually exclusive

forward-proxy-alt-sign

Description Forward proxy alternate signing cert and key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-block-message

Description Message to be included on the block page (Message, enclose in quotes if spaces are present)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

forward-proxy-ca-cert

Description CA Certificate for forward proxy (SSL forward proxy CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-proxy-ca-cert,fp-ca-certificate, fp-ca-key, fp-ca-key-pass-phrase, fp-ca-key-passphrase, fp-ca-key-encrypted, fp-ca-chain-cert, and fp-ca-certificate-shared are mutually exclusive

forward-proxy-ca-key

Description CA Private Key for forward proxy (SSL forward proxy CA Key Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-proxy-ca-key,fp-ca-certificate, fp-ca-key, fp-ca-key-pass-phrase, fp-ca-key-passphrase, fp-ca-key-encrypted, fp-ca-chain-cert, and fp-ca-certificate-shared are mutually exclusive

forward-proxy-cert-cache-limit

Description Certificate cache size limit, default is 524288 (set to 0 for unlimited size)

Type: number

Range: 0-2147483647

Default: 524288

forward-proxy-cert-cache-timeout

Description Certificate cache timeout, default is 1 hour (seconds, set to 0 for never timeout)

Type: number

Range: 0-2147483647

Default: 3600

forward-proxy-cert-expiry

Description Adjust certificate expiry relative to the time when it is created on the device

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-cert-not-ready-action

Description 'bypass': bypass the connection; 'reset': reset the connection; 'intercept': wait for cert and then inspect the connection;

Type: string

Supported Values: bypass, reset, intercept

Default: bypass

forward-proxy-cert-revoke-action

Description Action taken if a certificate is irreversibly revoked, bypass SSLi processing by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-cert-unknown-action

Description Action taken if a certificate revocation status is unknown, bypass SSLi processing by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-crl-disable

Description Disable Certificate Revocation List checking for forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-decrypted-dscp

Description Apply a DSCP to decrypted and bypassed traffic (DSCP to apply to decrypted traffic)

Type: number

Range: 1-63

forward-proxy-decrypted-dscp-bypass

Description DSCP to apply to bypassed traffic

Type: number

Range: 1-63

forward-proxy-enable

Description Enable SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward-proxy-enable and ssli-inbound-enable are mutually exclusive

forward-proxy-esni-action

Description Action taken if receiving encrypted server name indication extension in client hello MSG, bypass the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-failsafe-disable

Description Disable Failsafe for SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-hash-persistence-interval

Description Set the time interval to save the hash persistence certs (Interval value, in minutes)

Type: number

Range: 1-720

Default: 30

forward-proxy-log-disable

Description Disable SSL forward proxy logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-no-shared-cipher-action

Description Action taken if handshake fails due to no shared ciper, close the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-no-sni-action

Description 'intercept': intercept in no SNI case; 'bypass': bypass in no SNI case; 'reset': reset in no SNI case;

Type: string

Supported Values: intercept, bypass, reset

Default: intercept

forward-proxy-ocsp-disable

Description Disable ocsp-stapling for forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-require-sni-cert-matched

Description 'no-match-action-inspect': Inspected if not matched; 'no-match-action-drop': Dropped if not matched;

Type: string

Supported Values: no-match-action-inspect, no-match-action-drop

forward-proxy-selfsign-redir

Description Redirect connections to pages with self signed certs to a warning page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-ssl-version

Description TLS/SSL version, default is TLS1.2 (TLS/SSL version: 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 31-34

Default: 33

forward-proxy-trusted-ca-lists

Type: List

forward-proxy-verify-cert-fail-action

Description Action taken if certificate verification fails, close the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fp-alt-cert

Description CA Certificate for forward proxy alternate signing (Certificate name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

fp-alt-key

Description CA Private Key for forward proxy alternate signing (Key name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

fp-alt-shared

Description Alternate CA Certificate and Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-ca-certificate

Description CA Certificate for forward proxy (SSL forward proxy CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-certificate,forward-proxy-ca-cert, fp-ca-shared, forward-proxy-ca-key, forward-passphrase, forward-encrypted, and fp-ca-key-shared are mutually exclusive

fp-ca-certificate-shared

Description CA Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-certificate-shared, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-chain-cert, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-key

Description CA Private Key for forward proxy (SSL forward proxy CA Key Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-key, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: fp-ca-key-encrypted, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-key-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-key-passphrase, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-key-shared

Description CA Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-key-shared and fp-ca-certificate are mutually exclusive

fp-ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-shared and fp-ca-certificate are mutually exclusive

fp-cert-ext-aia-ca-issuers

Description CA Issuers (Authority Information Access URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-ext-aia-ca-issuers and fp-cert-ext-aia-ocsp are mutually exclusive

fp-cert-ext-aia-ocsp

Description OCSP (Authority Information Access URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-ext-aia-ocsp and fp-cert-ext-aia-ca-issuers are mutually exclusive

fp-cert-ext-crldp

Description CRL Distribution Point (CRL Distribution Point URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

fp-cert-fetch-autonat

Description 'auto': Configure auto NAT for server certificate fetching;

Type: string

Supported Values: auto

Mutual Exclusion: fp-cert-fetch-autonat and fp-cert-fetch-natpool-name are mutually exclusive

fp-cert-fetch-autonat-precedence

Description Set this NAT pool as higher precedence than other source NAT like configued under template policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-cert-fetch-natpool-name

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-fetch-natpool-name, shared-partition-pool, and fp-cert-fetch-autonat are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

fp-cert-fetch-natpool-name-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

fp-cert-fetch-natpool-precedence

Description Set this NAT pool as higher precedence than other source NAT like configued under template policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-esni-action

Description 'bypass': bypass SSLi processing; 'drop': close the connection;

Type: string

Supported Values: bypass, drop

Default: bypass

handshake-logging-enable

Description Enable SSL handshake logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hsm-type

Description 'thales-embed': Thales embed key; 'thales-hwcrhk': Thales hwcrhk Key;

Type: string

Supported Values: thales-embed, thales-hwcrhk

inspect-certificate-issuer-cl-name

Description Forward proxy Inspect if Certificate issuer matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

inspect-certificate-san-cl-name

Description Forward proxy Inspect if Certificate Subject Alternative Name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

inspect-certificate-subject-cl-name

Description Forward proxy Inspect if Certificate Subject matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

inspect-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

ja3-enable

Description Enable JA3 features

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ja3-insert-http-header

Description Insert the JA3 hash into this request as a HTTP header (HTTP Header Name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ja3-reject-class-list

Description Drop request if the JA3 hash matches this class-list (type string-case-insensitive) (Class-List Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

ja3-reject-max-number-per-host

Description Drop request if numbers of JA3 of this client address exceeded

Type: number

Range: 1-256

ja3-ttl

Description seconds to keep each JA3 record

Type: number

Range: 1-86400

Default: 600

ja4-enable

Description Enable JA4 features

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ja4-insert-http-header

Description Insert the JA4 hash into this request as a HTTP header (HTTP Header Name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ja4-reject-class-list

Description Drop request if the JA4 hash matches this class-list (type string-case-insensitive) (Class-List Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

ja4-reject-max-number-per-host

Description Drop request if numbers of JA4 of this client address exceeded

Type: number

Range: 1-256

ja4-ttl

Description seconds to keep each JA4 record

Type: number

Range: 1-86400

Default: 600

ldap-base-dn-from-cert

Description Use Subject DN as LDAP search base DN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-search-filter

Description Specify LDAP search filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

local-cert-pin-list

Description: local-cert-pin-list is a **JSON Block**. Please see below for *client-ssl-list_local-cert-pin-list*

Type: Object

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-class-list

Type: List

name

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-anti-replay

Description Disable anti-replay protection for TLS 1.3 early data (0-RTT data)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-shared-cipher-action

Description 'bypass': bypass SSLi processing; 'drop': close the connection;

Type: string

Supported Values: bypass, drop

Default: drop

non-ssl-bypass-l4session

Description Handle the non-ssl session as L4 for performance optimization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

non-ssl-bypass-service-group

Description Service Group for Bypass non-ssl traffic (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

notafter

Description notAfter date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notafterday

Description Day

Type: number

Range: 1-31

notaftermonth

Description Month

Type: number

Range: 1-12

notafteryear

Description Year

Type: number

Range: 2005-2035

notbefore

Description notBefore date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notbeforeday

Description Day

Type: number

Range: 1-31

notbeforemonth

Description Month

Type: number

Range: 1-12

notbeforeyear

Description Year

Type: number

Range: 2005-2035

ocsp-stapling

Description Config OCSP stapling support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocspst-ca-cert

Description CA certificate

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

ocspst-ocsp

Description Specify OCSP Authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocspst-sg

Description Specify authentication service group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: ocspst-sg and ocspst-srvr are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

ocspst-sg-days

Description Specify update period, in days

Type: number

Range: 1-31

Mutual Exclusion: ocspst-sg-days, ocspst-sg-hours, and ocspst-sg-minutes are mutually exclusive

ocspst-sg-hours

Description Specify update period, in hours

Type: number

Range: 1-23

Default: 1

Mutual Exclusion: ocspst-sg-hours, ocspst-sg-days, and ocspst-sg-minutes are mutually exclusive

ocspst-sg-minutes

Description Specify update period, in minutes

Type: number

Range: 1-59

Mutual Exclusion: ocspst-sg-minutes, ocspst-sg-days, and ocspst-sg-hours are mutually exclusive

ocspst-sg-timeout

Description Specify retry timeout (Default is 30 mins)

Type: number

Range: 1-44640

Default: 30

ocspst-srvr

Description Specify OCSP authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ocspst-srvr and ocspst-sg are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/ocsp*

ocspst-srvr-days

Description Specify update period, in days

Type: number

Range: 1-31

Mutual Exclusion: ocspst-srvr-days, ocspst-srvr-hours, and ocspst-srvr-minutes are mutually exclusive

ocspst-srvr-hours

Description Specify update period, in hours

Type: number

Range: 1-23

Default: 1

Mutual Exclusion: ocspst-srvr-hours, ocspst-srvr-days, and ocspst-srvr-minutes are mutually exclusive

ocspst-srvr-minutes

Description Specify update period, in minutes

Type: number

Range: 1-59

Mutual Exclusion: ocspst-srvr-minutes, ocspst-srvr-days, and ocspst-srvr-hours are mutually exclusive

ocspst-srvr-timeout

Description Specify retry timeout (Default is 30 mins)

Type: number

Range: 1-44640

Default: 30

renegotiation-disable

Description Disable SSL renegotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-ca-lists

Type: List

require-sni-cert-matched

Description SNI is required to match configured certificate subject or SAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

require-web-category

Description Wait for web category to be resolved before taking bypass decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

server-ipv4-list

Type: List

server-ipv6-list

Type: List

server-name-auto-map

Description Enable automatic mapping of server name indication in Client hello extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-list

Type: List

session-cache-size

Description Session Cache Size (Maximum cache size. Default value 0 (Session ID reuse disabled))

Type: number

session-cache-timeout

Description Session Cache Timeout (Timeout value, in seconds. Default value 0 (Session cache timeout disabled))

Type: number

Range: 0-604800

Default: 0

session-key-logging-enable

Description Enable SSL session key logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-ticket-disable

Description Disable client side session ticket support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-ticket-lifetime

Description Session ticket lifetime in seconds from stateless session resumption (Lifetime value in seconds. Default value 0 (Session ticket lifetime is 7200 seconds))

Type: number

Range: 0-2147483647

Default: 0

shared-partition-cipher-template

Description Reference a cipher template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cipher-template, template-cipher, and cipher-wo-prio are mutually exclusive

shared-partition-pool

Description Reference a NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and fp-cert-fetch-natpool-name are mutually exclusive

sni-bypass-enable-log

Description Enable logging when bypass event happens, disabled by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-bypass-expired-cert

Description Bypass when certificate expired

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-bypass-explicit-list

Description Bypass when matched explicit bypass list (Specify class list name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

sni-bypass-missing-cert

Description Bypass when missing cert/key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-enable-log

Description Enable logging of sni-auto-map failures. Disable by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-false-start-disable

Description disable SSL False Start

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssli-inbound-enable

Description Enable inbound SSLi

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ssli-inbound-enable and forward-proxy-enable are mutually exclusive

ssli-logging

Description SSLi logging level, default is error logging only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sslilogging

Description 'disable': Disable all logging; 'all': enable all logging(error, info);

Type: string

Supported Values: disable, all

sslv2-bypass-service-group

Description Service Group for Bypass SSLV2 (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

starts-with-list

Type: List

template-cipher

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-cipher, shared-partition-cipher-template, and cipher-wo-prio are mutually exclusive

Reference Object: */axapi/v3/slb/template/cipher*

template-cipher-shared

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/cipher*

template-hsm

Description HSM Template (HSM Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/hsm/template*

user-name-list

Description Forward proxy bypass if user-name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-cert-fail-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection; 'block': block the connection with a warning page;

Type: string

Supported Values: bypass, continue, drop, block

Default: drop

version

Description TLS/SSL version, default is the highest number supported (TLS/SSL version: 30-SSLv3.0, 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 1-34

web-category

Description: web-category is a **JSON Block**. Please see below for *client-ssl-list_web-category*

Type: Object

web-reputation

Description: web-reputation is a **JSON Block**. Please see below for *client-ssl-list_web-reputation*

Type: Object

client-ssl-list_bypass-cert-subject-multi-class-list

Specification	Value
Type	*list*
Block object keys	

bypass-cert-subject-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-subject-multi-class-list-name and bypass-cert-subject-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

client-ssl-list_certificate-san-contains-list

Specification	Value
Type	*list*
Block object keys	

certificate-san-contains

Description Forward proxy bypass if Certificate SAN contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_equals-list

Specification	Value
Type	*list*
Block object keys	

equals

Description Forward proxy bypass if SNI string equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_client-ipv6-list

Specification	Value
Type	*list*
Block object keys	

client-ipv6-list-name

Description IPV6 client class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

client-ssl-list_forward-proxy-trusted-ca-lists

Specification	Value
Type	*list*
Block object keys	

forward-proxy-trusted-ca

Description Forward proxy trusted CA file (CA file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

fp-trusted-ca-shared

Description Trusted CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ssl-list_ec-list

Specification	Value
Type	*list*
Block object keys	

ec

Description 'secp256r1': X9_62_prime256v1; 'secp384r1': secp384r1;

Type: string

Supported Values: secp256r1, secp384r1, secp521r1, x25519

client-ssl-list_contains-list

Specification	Value
Type	*list*
Block object keys	

contains

Description Forward proxy bypass if SNI string contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_ends-with-list

Specification	Value
Type	*list*
Block object keys	

ends-with

Description Forward proxy bypass if SNI string ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_ca-certs

Specification	Value
Type	*list*
Block object keys	

ca-cert

Description CA Certificate (CA Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ocsp

Description Specify ocsp authentication server(s) for client certificate verification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ocsp-sg

Description Specify service-group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/service-group*

client-ocsp-srvr

Description Specify authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/server/ocsp/instance*

client-ssl-list_client-auth-contains-list

Specification	Value
Type	*list*
Block object keys	

client-auth-contains

Description Forward proxy bypass if SNI string contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_certificate-subject-contains-list

Specification	Value
Type	*list*
Block object keys	

certificate-subject-contains

Description Forward proxy bypass if Certificate Subject contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_req-ca-lists

Specification	Value
Type	*list*
Block object keys	

client-cert-req-ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-certificate-Request-CA

Description Send CA lists in certificate request (CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

client-ssl-list_certificate-subject-starts-with-list

Specification	Value
Type	*list*
Block object keys	

certificate-subject-starts

Description Forward proxy bypass if Certificate Subject starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_web-reputation

Specification	Value
Type	*object*

bypass-low-risk

Description Bypass when reputation score is greater than or equal to 61

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-low-risk,bypass-trustworthy, bypass-moderate-risk, bypass-suspicious, bypass-malicious, and bypass-threshold are mutually exclusive

bypass-malicious

Description Bypass when reputation score is greater than or equal to 1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-malicious,bypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-suspicious, and bypass-threshold are mutually exclusive

bypass-moderate-risk

Description Bypass when reputation score is greater than or equal to 41

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-moderate-risk,bypass-trustworthy, bypass-low-risk, bypass-suspicious, bypass-malicious, and bypass-threshold are mutually exclusive

bypass-suspicious

Description Bypass when reputation score is greater than or equal to 21

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-suspicious,bypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-malicious, and bypass-threshold are mutually exclusive

bypass-threshold

Description Bypass when reputation score is greater than or equal to the customized score (1-100)

Type: number

Range: 1-100

Mutual Exclusion: bypass-threshold,bypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-suspicious, and bypass-malicious are mutually exclusive

bypass-trustworthy

Description Bypass when reputation score is greater than or equal to 81

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-trustworthy,bypass-low-risk, bypass-moderate-risk, bypass-suspicious, bypass-malicious, and bypass-threshold are mutually exclusive

client-ssl-list_bypass-cert-issuer-multi-class-list

Specification	Value
Type	*list*
Block object keys	

bypass-cert-issuer-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-issuer-multi-class-list-name and bypass-cert-issuer-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

client-ssl-list_client-auth-equals-list

Specification	Value
Type	*list*
Block object keys	

client-auth-equals

Description Forward proxy bypass if SNI string equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_certificate-issuer-equals-list

Specification	Value
Type	*list*
Block object keys	

certificate-issuer-equals

Description Forward proxy bypass if Certificate issuer equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_certificate-san-ends-with-list

Specification	Value
Type	*list*
Block object keys	

certificate-san-ends-with

Description Forward proxy bypass if Certificate SAN ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_crl-certs

Specification	Value
Type	*list*
Block object keys	

crl

Description Certificate Revocation Lists (Certificate Revocation Lists file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

crl-shared

Description Certificate Revocation Lists Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ssl-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'real-estate': real estate category; 'computer-and-internet-security': computer and internet security category; 'financial-services': financial services category; 'business-and-economy': business and economy category; 'computer-and-internet-info': computer and internet info category; 'auctions': auctions category; 'shopping': shopping category; 'cult-and-occult': cult and occult category; 'travel': travel category; 'drugs': drugs category; 'adult-and-pornography': adult and pornography category; 'home-and-garden': home and garden category; 'military': military category; 'social-network': social network category; 'dead-sites': dead sites category; 'stock-advice-and-tools': stock advice and tools category; 'training-and-tools': training and tools category; 'dating': dating category; 'sex-education': sex education category; 'religion': religion category; 'entertainment-and-arts': entertainment and arts category; 'personal-sites-and-blogs': personal sites and blogs category; 'legal': legal category; 'local-information': local information category; 'streaming-media': streaming media category;

'job-search': job search category; 'gambling': gambling category; 'translation': translation category; 'reference-and-research': reference and research category; 'shareware-and-freeware': shareware and freeware category; 'peer-to-peer': peer to peer category; 'marijuana': marijuana category; 'hacking': hacking category; 'games': games category; 'philosophy-and-politics': philosophy and politics category; 'weapons': weapons category; 'pay-to-surf': pay to surf category; 'hunting-and-fishing': hunting and fishing category; 'society': society category; 'educational-institutions': educational institutions category; 'online-greeting-cards': online greeting cards category; 'sports': sports category; 'swimsuits-and-intimate-apparel': swimsuits and intimate apparel category; 'questionable': questionable category; 'kids': kids category; 'hate-and-racism': hate and racism category; 'personal-storage': personal storage category; 'violence': violence category; 'keyloggers-and-monitoring': keyloggers and monitoring category; 'search-engines': search engines category; 'internet-portals': internet portals category; 'web-advertisements': web advertisements category; 'cheating': cheating category; 'gross': gross category; 'web-based-email': web based email category; 'malware-sites': malware sites category; 'phishing-and-other-fraud': phishing and other fraud category; 'proxy-avoid-and-anonymizers': proxy avoid and anonymizers category; 'spyware-and-adware': spyware and adware category; 'music': music category; 'government': government category; 'nudity': nudity category; 'news-and-media': news and media category; 'illegal': illegal category; 'CDNs': content delivery networks category; 'internet-communications': internet communications category; 'bot-nets': bot nets category; 'abortion': abortion category; 'health-and-medicine': health and medicine category; 'confirmed-SPAM-sources': confirmed SPAM sources category; 'SPAM-URLs': SPAM URLs category; 'unconfirmed-SPAM-sources': unconfirmed SPAM sources category; 'open-HTTP-proxies': open HTTP proxies category; 'dynamically-generated-content': dynamically generated content category; 'parked-domains': parked domains category; 'alcohol-and-tobacco': alcohol and tobacco category; 'private-IP-addresses': private IP addresses category; 'image-and-video-search': image and video search category; 'fashion-and-beauty': fashion and beauty category; 'recreation-and-hobbies': recreation and hobbies category; 'motor-vehicles': motor vehicles category; 'web-hosting-sites': web hosting sites category; 'food-and-dining': food and dining category; 'dummy-item': dummy item category; 'self-harm': self harm category; 'dns-over-https': dns over https category; 'low-thc-cannabis-products': low-thc cannabis products; 'generative-ai': generative ai category; 'nudity-artistic': artistic nudity; 'illegal-pornography': illegal pornography eg. child sexual abuse; 'uncategorised': uncategorised; 'other-category': other category; 'trustworthy': Trustworthy level(81-100); 'low-risk': Low-risk level(61-80); 'moderate-risk': Moderate-risk level(41-60); 'suspicious': Suspicious level(21-40); 'malicious': Malicious level(1-20);

Type: string

Supported Values: all, real-estate, computer-and-internet-security, financial-services, business-and-economy, computer-and-internet-info, auctions, shopping, cult-and-occult, travel, drugs, adult-and-pornography, home-and-garden, military, social-network, dead-sites, stock-advice-and-tools, training-and-tools, dating, sex-education, religion, entertainment-and-arts, personal-sites-and-blogs, legal, local-information, streaming-media, job-search, gambling, translation, reference-and-research, shareware-and-freeware, peer-to-peer, marijuana, hacking, games, philosophy-and-politics, weapons, pay-to-surf, hunting-and-fishing, society, educational-institutions, online-greeting-cards, sports, swimsuits-and-intimate-apparel, questionable, kids, hate-and-racism, personal-storage, violence, keyloggers-and-monitoring, search-engines, internet-portals, web-advertisements, cheating, gross, web-based-email, malware-sites, phishing-and-other-fraud, proxy-avoid-and-anonymizers, spyware-and-adware, music, government, nudity, news-and-media, illegal, CDNs, internet-communications, bot-nets, abortion, health-and-medicine, confirmed-SPAM-sources, SPAM-URLs, unconfirmed-SPAM-sources, open-HTTP-proxies, dynamically-generated-content, parked-domains, alcohol-and-tobacco, private-IP-addresses, image-and-video-search, fashion-and-beauty, recreation-and-hobbies, motor-vehicles, web-hosting-sites, food-and-dining, dummy-item, self-harm, dns-over-https, low-thc-cannabis-products, generative-ai, nudity-

artistic, illegal-pornography, uncategorised, other-category, trustworthy, low-risk, moderate-risk, suspicious, malicious

client-ssl-list_certificate-list

Specification	Value
Type	*list*
Block object keys	

cert

Description Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

key

Description Server Private Key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description Server Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

client-ssl-list_client-ipv4-list

Specification	Value
Type	*list*
Block object keys	

client-ipv4-list-name

Description IPV4 client class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

client-ssl-list_multi-class-list

Specification	Value
Type	*list*
Block object keys	

multi-clist-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: multi-clist-name and class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

client-ssl-list_certificate-issuer-ends-with-list

Specification	Value
Type	*list*
Block object keys	

certificate-issuer-ends-with

Description Forward proxy bypass if Certificate issuer ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_exception-server-ipv4-list

Specification	Value
Type	*list*

Block object keys	

server-cert

Description Server Certificate associated to SNI (Server Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-cert-regex

Description Server Certificate associated to SNI regex (Server Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-chain

Description Server Certificate Chain associated to SNI (Server Certificate Chain Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-chain-regex

Description Server Certificate Chain associated to SNI regex (Server Certificate Chain Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

server-encrypted-regex

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

server-key

Description Server Private Key associated to SNI (Server Private Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-key-regex

Description Server Private Key associated to SNI regex (Server Private Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-name

Description Server name indication in Client hello extension (Server name String)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server-name-alternate

Description Specific the second certifcate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-regex

Description Server name indication in Client hello extension with regular expression (Server name String with regex)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-name-regex-alternate

Description Specific the second certifcate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-passphrase

Description help Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

server-passphrase-regex

Description help Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

server-shared

Description Server Name Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-shared-regex

Description Server Name Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-regex-shared-partition-client-ssl-template

Description Reference a Client SSL template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-regex-template

Description Template associated to SNI regex

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-regex-template-client-ssl

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

sni-regex-template-client-ssl-shared-name

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

sni-shared-partition-client-ssl-template

Description Reference a Client SSL template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-template

Description Template associated to SNI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-template-client-ssl

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

sni-template-client-ssl-shared-name

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

client-ssl-list_exception-web-category

Specification	Value
Type	*object*

exception-category

Description 'uncategorized': Uncategorized URLs; 'real-estate': Category Real Estate; 'computer-and-internet-security': Category Computer and Internet Security; 'financial-services': Category Financial Services; 'business-and-economy': Category Business and Economy; 'computer-and-internet-info': Category Computer and Internet Info; 'auctions': Category Auctions; 'shopping': Category Shopping; 'cult-and-occult': Category Cult and Occult; 'travel': Category Travel; 'drugs': Category Abused Drugs; 'adult-and-pornography': Category Adult and Pornography; 'home-and-garden': Category Home and Garden; 'military': Category Military; 'social-network': Category Social Network; 'dead-sites': Category Dead Sites (db Ops only); 'stock-advice-and-tools': Category Stock Advice and Tools; 'training-and-tools': Category Training and Tools; 'dating': Category Dating; 'sex-education': Category Sex Education; 'religion': Category Religion; 'entertainment-and-arts': Category Entertainment and Arts; 'personal-sites-and-blogs': Category Personal sites and Blogs; 'legal': Category Legal; 'local-information': Category Local Information; 'streaming-media': Category Streaming Media; 'job-search': Category Job Search; 'gambling': Category Gambling; 'translation': Category Translation; 'reference-and-research': Category Reference and Research; 'shareware-and-freeware': Category Shareware and Freeware; 'peer-to-peer': Category Peer to Peer; 'marijuana': Category Marijuana; 'hacking': Category Hacking; 'games': Category Games; 'philosophy-and-politics': Category Philosophy and Political Advocacy; 'weapons': Category Weapons; 'pay-to-surf': Category Pay to Surf; 'hunting-and-fishing': Category Hunting and Fishing; 'society': Category Society; 'educational-institutions': Category Educational Institutions; 'online-greeting-cards': Category Online Greeting cards; 'sports': Category Sports; 'swimsuits-and-intimate-apparel': Category Swimsuits and Intimate Apparel; 'questionable': Category Questionable; 'kids': Category Kids; 'hate-and-racism': Category Hate and Racism; 'personal-storage': Category Personal Storage; 'violence': Category Violence; 'keyloggers-and-monitoring': Category Keyloggers and Monitoring; 'search-engines': Category Search Engines; 'internet-portals': Category Internet Portals; 'web-advertisements': Category Web Advertisements; 'cheating': Category Cheating; 'gross': Category Gross; 'web-based-email': Category Web based email; 'malware-sites': Category Malware Sites; 'phishing-and-other-fraud': Category Phishing and Other Frauds; 'proxy-avoid-and-anonymizers': Category Proxy Avoid and Anonymizers; 'spyware-and-adware': Category Spyware and Adware; 'music': Category Music; 'government': Category Government; 'nudity': Category Nudity; 'news-and-media': Category News and Media; 'illegal': Category Illegal; 'cdns': Category CDNs; 'internet-communications': Category Internet Communications; 'bot-nets': Category Bot Nets; 'abortion': Category Abortion; 'health-and-medicine': Category Health and Medicine; 'spam-urls': Category SPAM URLs; 'dynamically-generated-content': Category Dynamically Generated Content; 'parked-domains': Category Parked Domains; 'alcohol-and-tobacco': Category Alcohol and Tobacco; 'image-and-video-search': Category Image and Video Search; 'fashion-and-beauty': Category Fashion and Beauty; 'recreation-and-hobbies': Category Recreation and Hobbies; 'motor-vehicles': Category Motor Vehicles; 'web-hosting-sites': Category Web Hosting Sites; 'self-harm': Category Self Harm; 'dns-over-https': Category DNS over HTTPs; 'low-thc-cannabis-products': Category Low-THC Cannabis Products; 'generative-ai': Category Generative AI; 'nudity-artistic': Category Artistic Nudity; 'illegal-pornography': Category Illegal Pornography eg. Child Sexual Abuse;

Type: string

Supported Values: uncategorized, real-estate, computer-and-internet-security, financial-

services, business-and-economy, computer-and-internet-info, auctions, shopping, cult-and-occult, travel, drugs, adult-and-pornography, home-and-garden, military, social-network, dead-sites, stock-advice-and-tools, training-and-tools, dating, sex-education, religion, entertainment-and-arts, personal-sites-and-blogs, legal, local-information, streaming-media, job-search, gambling, translation, reference-and-research, shareware-and-freeware, peer-to-peer, marijuana, hacking, games, philosophy-and-politics, weapons, pay-to-surf, hunting-and-fishing, society, educational-institutions, online-greeting-cards, sports, swimsuits-and-intimate-apparel, questionable, kids, hate-and-racism, personal-storage, violence, keyloggers-and-monitoring, search-engines, internet-portals, web-advertisements, cheating, gross, web-based-email, malware-sites, phishing-and-other-fraud, proxy-avoid-and-anonymizers, spyware-and-adware, music, government, nudity, news-and-media, illegal, cdns, internet-communications, botnets, abortion, health-and-medicine, spam-urls, dynamically-generated-content, parked-domains, alcohol-and-tobacco, image-and-video-search, fashion-and-beauty, recreation-and-hobbies, motor-vehicles, web-hosting-sites, self-harm, dns-over-https, low-thc-cannabis-products, generative-ai, nudity-artistic, illegal-pornography

client-ssl-list_exception-server-ipv6-list

Specification	Value
Type	*list*
Block object keys	

exception-server-ipv6-list-name

Description IPV6 exception server class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

client-ssl-list_certificate-issuer-starts-with-list

Specification	Value
Type	*list*
Block object keys	

certificate-issuer-starts

Description Forward proxy bypass if Certificate issuer starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_certificate-san-starts-with-list

Specification	Value
Type	*list*
Block object keys	

certificate-san-starts

Description Forward proxy bypass if Certificate SAN starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_server-ipv4-list

Specification	Value
Type	*list*
Block object keys	

server-ipv4-list-name

Description IPV4 server class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

client-ssl-list_client-auth-ends-with-list

Specification	Value
Type	*list*
Block object keys	

client-auth-ends-with

Description Forward proxy bypass if SNI string ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_exception-client-ipv6-list

Specification	Value
Type	*list*
Block object keys	

exception-client-ipv6-list-name

Description IPV6 exception client class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

client-ssl-list_exception-web-reputation

Specification	Value
Type	*object*

exception-low-risk

Description Intercept when reputation score is less than or equal to 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-low-risk,exception-trustworthy, exception-moderate-risk, exception-suspicious, exception-malicious, and exception-threshold are mutually exclusive

exception-malicious

Description Intercept when reputation score is less than or equal to 20

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-malicious,exception-trustworthy, exception-low-risk, exception-moderate-risk, exception-suspicious, and exception-threshold are mutually exclusive

exception-moderate-risk

Description Intercept when reputation score is less than or equal to 60

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-moderate-risk,exception-trustworthy, exception-low-risk, exception-suspicious, exception-malicious, and exception-threshold are mutually exclusive

exception-suspicious

Description Intercept when reputation score is less than or equal to 40

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-suspicious,exception-trustworthy, exception-low-risk, exception-moderate-risk, exception-malicious, and exception-threshold are mutually exclusive

exception-threshold

Description Intercept when reputation score is less than or equal to a customized value (1-100)

Type: number

Range: 1-100

Mutual Exclusion: exception-threshold,exception-trustworthy, exception-low-risk, exception-moderate-risk, exception-suspicious, and exception-malicious are mutually exclusive

exception-trustworthy

Description Intercept when reputation score is less than or equal to 100

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-trustworthy,exception-low-risk, exception-moderate-risk, exception-suspicious, exception-malicious, and exception-threshold are mutually exclusive

client-ssl-list_local-cert-pin-list

Specification	Value
Type	*object*

local-cert-pin-list-bypass-fail-count

Description Set the connection fail count as bypass criteria (Bypass when connection failure count is greater than the criteria (1-65536))

Type: number

Range: 1-65536

client-ssl-list_server-ipv6-list

Specification	Value
Type	*list*
Block object keys	

server-ipv6-list-name

Description IPV6 server class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

client-ssl-list_certificate-subject-equals-list

Specification	Value
Type	*list*
Block object keys	

certificate-subject-equals

Description Forward proxy bypass if Certificate Subject equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_cipher-without-prio-list

Specification	Value
Type	*list*
Block object keys	

cipher-wo-prio

Description 'SSL3_RSA_DES_192_CBC3_SHA': TLS_RSA_WITH_3DES_EDE_CBC_SHA (0x000A); 'SSL3_RSA_RC4_128_MD5': TLS_RSA_WITH_RC4_128_MD5 (0x0004); 'SSL3_RSA_RC4_128_SHA': TLS_RSA_WITH_RC4_128_SHA (0x0005); 'TLS1_RSA_AES_128_SHA': TLS_RSA_WITH_AES_128_CBC_SHA (0x002F); 'TLS1_RSA_AES_256_SHA': TLS_RSA_WITH_AES_256_CBC_SHA (0x0035); 'TLS1_RSA_AES_128_SHA256': TLS_RSA_WITH_AES_128_CBC_SHA256 (0x003C); 'TLS1_RSA_AES_256_SHA256': TLS_RSA_WITH_AES_256_CBC_SHA256 (0x003D); 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS_DHE_RSA_WITH_AES_128_GCM_SHA256

(0x009E); 'TLS1_DHE_RSA_AES_128_SHA': TLS_DHE_RSA_WITH_AES_128_CBC_SHA (0x0033); 'TLS1_DHE_RSA_AES_128_SHA256': TLS_DHE_RSA_WITH_AES_128_CBC_SHA256 (0x0067); 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS_DHE_RSA_WITH_AES_256_GCM_SHA384 (0x009F); 'TLS1_DHE_RSA_AES_256_SHA': TLS_DHE_RSA_WITH_AES_256_CBC_SHA (0x0039); 'TLS1_DHE_RSA_AES_256_SHA256': TLS_DHE_RSA_WITH_AES_256_CBC_SHA256 (0x006B); 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256 (0xC02B); 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA (0xC009); 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256 (0xC023); 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384 (0xC02C); 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA (0xC00A); 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256 (0xC02F); 'TLS1_ECDHE_RSA_AES_128_SHA': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA (0xC013); 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256 (0xC027); 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 (0xC030); 'TLS1_ECDHE_RSA_AES_256_SHA': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA (0xC014); 'TLS1_RSA_AES_128_GCM_SHA256': TLS_RSA_WITH_AES_128_GCM_SHA256 (0x009C); 'TLS1_RSA_AES_256_GCM_SHA384': TLS_RSA_WITH_AES_256_GCM_SHA384 (0x009D); 'TLS1_ECDHE_RSA_AES_256_SHA384': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384 (0xC028); 'TLS1_ECDHE_ECDSA_AES_256_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384 (0xC024); 'TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA8); 'TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_ECDSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA9); 'TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256': TLS_DHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCAA);

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256

Mutual Exclusion: cipher-wo-prio, template-cipher, and shared-partition-cipher-template are mutually exclusive

client-ssl-list_starts-with-list

Specification	Value
Type	*list*
Block object keys	

starts-with

Description Forward proxy bypass if SNI string starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

quic-list

Specification	Value
Type	*list*
Block object keys	

burst-len

Description Number of burst packet, default 16

Type: number

Range: 16-360

connection-id-length

Description Connection id length in byte, default 8 bytes

Type: number

Range: 1-20

idle-timeout

Description Idle Timeout (interval of 60 seconds), default 120 seconds (idle timeout in second, default 120)

Type: number

Range: 1-3600

initial-wnd

Description Initial window size in byte, default 10000 (Initial window size, default 10000)

Type: number

Range: 10000-100000

key-update-to-client

Description Initiate key update on the client-side

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-update-to-server

Description Initiate key update on the server-side

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description QUIC Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

receive-buffer

Description Receive buffer size in byte, default 200000 (Receive buffer size, default 200000)

Type: number

Range: 30000-400000

server-retry

Description Enable server retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-block-as-down

Specification	Value
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dynamic-service-list

Specification	Value
Type	*list*
Block object keys	

class-list-list

Type: List

Reference Object: */axapi/v3/slb/template/dynamic-service/{name}/class-list/{dns-class-list}*

dns-server

Type: List

name

Description Dynamic Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dynamic-service-list_dns-server

Specification	Value
Type	*list*
Block object keys	

ipv4-dns-server

Description DNS Server IPv4 Address

Type: string

Format: ipv4-address

ipv6-dns-server

Description DNS Server IPv6 Address

Type: string

Format: ipv6-address

dynamic-service-list_class-list-list

Specification	Value
Type	*list*
Block object keys	

dns-class-list

Description Name of Aho-Corasick class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dns-server

Type: List

priority

Description Priority of the class-list(the larger number, the higher priority)

Type: number

Range: 1-64

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dynamic-service-list_class-list-list_dns-server

Specification	Value
Type	*list*
Block object keys	

ipv4-dns-server

Description DNS Server IPv4 Address

Type: string

Format: ipv4-address

ipv6-dns-server

Description DNS Server IPv6 Address

Type: string

Format: ipv6-address

dblb-list

Specification	Value
Type	*list*
Block object keys	

calc-sha1

Description: calc-sha1 is a **JSON Block**. Please see below for *dblb-list_calc-sha1*

Type: Object

Reference Object: */axapi/v3/slb/template/dblb/{name}/calc-sha1*

class-list

Description Specify user/password string class list (Class list name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description DBLB template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-version

Description 'MSSQL2008': MSSQL server 2008 or 2008 R2; 'MSSQL2012': MSSQL server 2012; 'MySQL': MySQL server (any version);

Type: string

Supported Values: MSSQL2008, MSSQL2012, MySQL

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dblb-list_calc-sha1

Specification	Value
Type	*object*

sha1-value

Description Cleartext password

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fix-list

Specification	Value
Type	*list*
Block object keys	

insert-client-ip

Description Insert client ip to tag 11447

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description 'init': init only log; 'term': termination only log; 'both': both initial and termination log;

Type: string

Supported Values: init, term, both

name

Description FIX Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

tag-switching

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fix-list_tag-switching

Specification	Value
Type	*list*
Block object keys	

equals

Description Equals (Tag String)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

switching-type

Description 'sender-comp-id': Select service group based on SenderCompID; 'target-comp-id': Select service group based on TargetCompID;

Type: string

Supported Values: sender-comp-id, target-comp-id

persist

Specification	Value
Type	*object*

cookie-list

Type: List

Reference Object: */axapi/v3/slb/template/persist/cookie/{name}*

destination-ip-list

Type: List

Reference Object: */axapi/v3/slb/template/persist/destination-ip/{name}*

source-ip-list

Type: List

Reference Object: */axapi/v3/slb/template/persist/source-ip/{name}*

ssl-sid-list

Type: List

Reference Object: */axapi/v3/slb/template/persist/ssl-sid/{name}*

persist_destination-ip-list

Specification	Value
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of destination IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Destination IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

persist_source-ip-list

Specification	Value
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforce-higher-priority

Description Enforce to use high priority node if available

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of source IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-dst-ip

Description Include destination IP on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-sport

Description Include source port on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Source IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

primary-port

Description Primary port to create the persist session

Type: number

Range: 1-65534

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-4321

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

persist_cookie-list

Specification	Value
Type	*list*
Block object keys	

cookie-name

Description Set cookie name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: sto-id

domain

Description Set cookie domain

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypt-level

Description Encryption level for cookie name / value

Type: number

Range: 0-1

Default: 1

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

expire

Description Set cookie expiration time (Expiration in seconds)

Type: number

Range: 0-31536000

Default: 31536000

httponly

Description Enable HttpOnly attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-always

Description Insert persist cookie to every reponse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persist for server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pass-phrase

Description Set passphrase for encryption

Type: string

Format: password

Maximum Length: 8 characters

Maximum Length: 8 characters

Default: ACOS4KEY

pass-thru

Description Pass thru mode - Server sends the persist cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

path

Description Set cookie path (Cookie path, default is "/")

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: /

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute;

Type: string

Supported Values: host, secure

samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

scan-all-members

Description Persist within the same server SCAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secure

Description Enable secure attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

server-service-group

Description Persist to the same server and within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

use-attribute

Description 'max-age': Use the Max-Age attribute; 'expires': Use the Expires attribute; 'all': Use all attributes;

Type: string

Supported Values: max-age, expires, all

Default: expires

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

persist_ssl-sid-list

Specification	Value
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SSL session ID persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

doh-list

Specification	Value
Type	*list*
Block object keys	

conn-reuse

Description 'enable': Enable Connection Reuse; 'disable': Disable Connection-Reuse (Default);

Type: string

Supported Values: enable, disable

Default: disable

dns

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dns and shared-partition-dns-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/dns*

dns-retry

Description: dns-retry is a **JSON Block**. Please see below for *doh-list_dns-retry*

Type: Object

Reference Object: */axapi/v3/slb/template/doh/{name}/dns-retry*

forwarder

Description: forwarder is a **JSON Block**. Please see below for *doh-list_forwarder*

Type: Object

Reference Object: */axapi/v3/slb/template/doh/{name}/forwarder*

name

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

non-dns-request

Description 'allow': Forward Non-DoH request to http server bound to vport; 'reject': Reject Non-DoH requests with HTTP 400 Bad Request (Default);

Type: string

Supported Values: allow, reject

Default: reject

reject-status-code

Description '400': Status Code 400 BAD Request (Default); '500': Status Code 500 Internal Server Error; '501': Status Code 501 Not Implemented;

Type: string

Supported Values: 400, 500, 501

Default: 400

shared-partition-dns-template

Description Reference a DNS template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dns-template and dns are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

snat-pool

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

source-nat

Description 'auto': Perform Source NAT Auto for service-group(Default) (Not supported with forwarding-ip); 'disable': Don't perform source-nat for server side DNS queries; 'pool': Perform Source NAT with specific pool;

Type: string

Supported Values: auto, disable, pool

Default: auto

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-dns-shared

Description DNS Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dns*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

doh-list_forwarder

Specification	Value
Type	*object*

bypass-doh

Description Forward valid DoH HTTP request as is, no DNS packet extraction (Bypass DoH)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-doh,forwarding-ipv4, forwarding-ipv6, tcp-service-group, and udp-service-group are mutually exclusive

forwarding-ipv4

Description SLB VIP IPv4 address to forward DOH query (IP address)

Type: string

Format: ipv4-address

Mutual Exclusion: forwarding-ipv4,forwarding-ipv6, tcp-service-group, udp-service-group, and bypass-doh are mutually exclusive

forwarding-ipv6

Description SLB VIP IPv6 address to forward DOH query (IP address)

Type: string

Format: ipv6-address

Mutual Exclusion: forwarding-ipv6,forwarding-ipv4, tcp-service-group, udp-service-group, and bypass-doh are mutually exclusive

tcp-service-group

Description Bind a TCP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-service-group,forwarding-ipv4, forwarding-ipv6, and bypass-doh are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

udp-service-group

Description Bind a UDP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: udp-service-group,forwarding-ipv4, forwarding-ipv6, and bypass-doh are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v4-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v4-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

v6-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v6-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

doh-list_dns-retry

Specification	Value
Type	*object*

after-timeout

Description 'close': Close client side connection; 'retry-with-tcp': Retry DNS query to server using TCP (If UDP was tried initially. Close after.);

Type: string

Supported Values: close, retry-with-tcp

Default: close

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sip-list

Specification	Value
Type	*list*
Block object keys	

acl-id

Description ACL id

Type: number

Range: 100-199

Mutual Exclusion: acl-id and acl-name-value are mutually exclusive

Reference Object: */axapi/v3/access-list/standard*

acl-name-value

Description IPv4 Access List Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-value and acl-id are mutually exclusive

Reference Object: */axapi/v3/ip/access-list*

alg-dest-nat

Description Translate VIP to real server IP in SIP message when destination NAT is used

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

alg-source-nat

Description Translate source IP to NAT IP in SIP message when source NAT is used

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

call-id-persist-disable

Description Disable call-ID persistence

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-keep-alive

Description Respond client keep-alive packet directly instead of forwarding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-request-header

Type: List

client-response-header

Type: List

dialog-aware

Description Permit system processes dialog session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-when-client-fail

Description Drop current SIP message when select client fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop-when-client-fail and failed-client-selection-message are mutually exclusive

drop-when-server-fail

Description Drop current SIP message when select server fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop-when-server-fail and failed-server-selection-message are mutually exclusive

exclude-translation

Type: List

failed-client-selection

Description Define action when select client fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failed-client-selection-message

Description Send SIP message (includs status code) to server when select client fail(Format: 3 digits(1XX~6XX) space reason)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: failed-client-selection-message and drop-when-client-fail are mutually exclusive

failed-server-selection

Description Define action when select server fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failed-server-selection-message

Description Send SIP message (includs status code) to client when select server fail(Format: 3 digits(1XX~6XX) space reason)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: failed-server-selection-message and drop-when-server-fail are mutually exclusive

insert-client-ip

Description Insert Client IP address into SIP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description The interval of keep-alive packet for each persist connection (second)

Type: number

Range: 5-300

Default: 30

keep-server-ip-if-match-acl

Description Use Real Server IP for addresses matching the ACL for a Call-Id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SIP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pstn-gw

Description configure pstn gw host name for tel: uri translate to sip: uri (Hostname String, default is "pstn")

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: pstn

server-keep-alive

Description Send server keep-alive packet for every persist connection when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-request-header

Type: List

server-response-header

Type: List

server-selection-per-request

Description Force server selection on every SIP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description service group name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

smp-call-id-rtp-session

Description Create the across cpu call-id rtp session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Time in minutes

Type: number

Range: 1-250

Default: 30

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sip-list_server-request-header

Specification	Value
Type	*list*
Block object keys	

insert-condition-server-request

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

server-request-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-request-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-request-header-insert

Description Insert a SIP header (Header Content (Format: "name:value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sip-list_server-response-header

Specification	Value
Type	*list*
Block object keys	

insert-condition-server-response

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

server-response-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-response-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-response-header-insert

Description Insert a SIP header (Header Content (Format: "name:value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sip-list_client-request-header

Specification	Value
Type	*list*
Block object keys	

client-request-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-request-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-request-header-insert

Description Insert a SIP header (Header Content (Format: “name:value”))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

insert-condition-client-request

Description ‘insert-if-not-exist’: Only insert the header when it does not exist; ‘insert-always’: Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

sip-list_client-response-header

Specification	Value
Type	*list*
Block object keys	

client-response-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-response-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-response-header-insert

Description Insert a SIP header (Header Content (Format: “name:value”))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

insert-condition-client-response

Description ‘insert-if-not-exist’: Only insert the header when it does not exist; ‘insert-always’: Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

sip-list_exclude-translation

Specification	Value
Type	*list*
Block object keys	

header-string

Description SIP header name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

translation-value

Description 'start-line': SIP request line or status line; 'header': SIP message headers; 'body': SIP message body;

Type: string

Supported Values: start-line, header, body

respmod-icap-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

bypass-ip-cfg

Type: List

disable-http-server-reset

Description Don't reset http server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-close

Description When template sg is down mark vport down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

include-protocol-in-uri

Description Include protocol and port in HTTP URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-only-allowed-method

Description Only log allowed HTTP method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description logging template (Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

min-payload-size

Description min-payload-size value 0 - 65535, default is 0

Type: number

Range: 0-65535

Default: 0

name

Description Reqmod ICAP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

preview

Description Preview value 1 - 32768, default is 32768

Type: number

Range: 1-32768

Default: 32768

server-ssl

Description Server SSL template (Server SSL template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

service-url

Description URL to send to ICAP server (Service URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

x-auth-url

Description Use URL format for authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

respmod-icap-list_bypass-ip-cfg

Specification	Value
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass respmod-icap service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

virtual-server-list

Specification	Value
Type	*list*
Block object keys	

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit-reset

Description Send client reset when connection over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit-reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-when-all-ports-down

Description Disable Virtual Server when all member ports are down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-when-all-ports-down and disable-when-any-port-down are mutually exclusive

disable-when-any-port-down

Description Disable Virtual Server when any member port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-when-any-port-down and disable-when-all-ports-down are mutually exclusive

icmp-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmp-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmp-rate-limit

Description ICMP rate limit (Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit)

Type: number

Range: 1-65535

icmpv6-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmpv6-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmpv6-rate-limit

Description ICMPv6 rate limit (Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit)

Type: number

Range: 1-65535

name

Description Virtual server template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

subnet-gratuitous-arp

Description Send gratuitous ARP for every IP in the subnet virtual server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-stack-tfo-active-conn-limit

Description The allowed active layer 7 tcp fast-open connection limit, default is zero (number)

Type: number

Range: 0-10000

Default: 0

tcp-stack-tfo-backoff-time

Description The time tcp stack will wait before allowing new fast-open requests after security condition, default 600 seconds (number)

Type: number

Range: 1-14400

Default: 600

tcp-stack-tfo-cookie-time-limit

Description The time limit (in seconds) that a layer 7 tcp fast-open cookie is valid, default is 60 seconds (number)

Type: number

Range: 1-14400

Default: 60

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

client-ssh-list

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

forward-proxy-enable

Description Enable SSH forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-hostkey

Description Specify private-key (Key Name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

name

Description Client SSH Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssli-list

Specification	Value
Type	*list*
Block object keys	

name

Description SSLi Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

type

Description 'http': HTTP service; 'xmpp': XMPP service; 'smtp': SMTP service; 'pop': POP service; 'ldap': LDAP service; 'ftp': FTP service;

Type: string

Supported Values: http, xmpp, smtp, pop, ldap, ftp

Default: http

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-ssh-list

Specification	Value
Type	*list*
Block object keys	

forward-proxy-enable

Description Enable SSH forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Server SSH Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list

Specification	Value
Type	*list*
Block object keys	

add-padding-to-client

Description 'block-length': Block-Length Padding; 'random-block-length': Random-Block-Length Padding;

Type: string

Supported Values: block-length, random-block-length

cache-hitcount-enable

Description Enable DNS cache entry hit count

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-record-serving-policy

Description 'global': Follow global cofiguration (Default); 'no-change': No change in record order; 'round-robin': Round-robin;

Type: string

Supported Values: global, no-change, round-robin

cache-ttl-adjustment-enable

Description enable the ttl adjustment for dns cache response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

category-lookup-bypass

Description DNS type class-lists for bypassing category lookup

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

category-lookup-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/category-lookup/{category-name}*

category-lookup-online-lookup

Description Enable online webroot lookup

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

class-list

Description: class-list is a **JSON Block**. Please see below for *dns-list_class-list*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/class-list*

default-policy

Description 'nocache': Cache disable; 'cache': Cache enable;

Type: string

Supported Values: nocache, cache

Default: nocache

disable-dns-template

Description Disable DNS template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-ra-cached-resp

Description Disable DNS recursive available flag in cached response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-rpz-attach-soa

Description Disable attaching SOA due to RPZ

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cookie-cache-policy

Description 'served-by-cache': Answer from cache for requests with cookie; 'served-by-backend': Answer from server for requests with cookie;

Type: string

Supported Values: served-by-cache, served-by-backend

dns-logging

Description dns logging template (DNS Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dns-logging*

dns64

Description: dns64 is a **JSON Block**. Please see below for *dns-list_dns64*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/dns64*

dnssec-service-group

Description Use different service group if DNSSEC DO bit set (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

drop

Description Drop the malformed query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop and forward are mutually exclusive

enable-cache-sharing

Description Enable DNS cache sharing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward

Description Forward to service group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: forward and drop are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

insert-ipv4

Description prefix-length to insert for IPv4

Type: number

Range: 0-32

insert-ipv6

Description prefix-length to insert for IPv6

Type: number

Range: 0-128

label-count-filter

Description: label-count-filter is a **JSON Block**. Please see below for *dns-list_label-count-filter*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/label-count-filter*

label-length-filter

Description: label-length-filter is a **JSON Block**. Please see below for *dns-list_label-length-filter*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/label-length-filter*

local-dns-resolution

Description: local-dns-resolution is a **JSON Block**. Please see below for *dns-list_local-dns-resolution*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/local-dns-resolution*

max-cache-entry-size

Description Define maximum cache entry size (Maximum cache entry size per VIP (default 1024))

Type: number

Range: 1-4096

Default: 1024

max-cache-size

Description Define maximum cache size (Maximum cache entry per VIP)

Type: number

max-query-length

Description Define Maximum DNS Query Length, default is unlimited (Specify Maximum Length)

Type: number

Range: 1-4095

name

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

negative-dns-cache

Description: negative-dns-cache is a **JSON Block**. Please see below for *dns-list_negative-dns-cache*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/negative-dns-cache*

period

Description Period in minutes

Type: number

Range: 1-10000

qps-log-high

Description high threshold for QPS logging (queries per second)

Type: number

Range: 1-64000000

qps-log-low

Description low threshold for QPS logging (queries per second)

Type: number

Range: 1-63999999

qps-threshold-log

Description enable threshold log for DNS QPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-class-filter

Description: query-class-filter is a **JSON Block**. Please see below for *dns-list_query-class-filter*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/query-class-filter*

query-id-switch

Description Use DNS query ID to create sesion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-type-filter

Description: query-type-filter is a **JSON Block**. Please see below for *dns-list_query-type-filter*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/query-type-filter*

recursive-dns-resolution

Description: recursive-dns-resolution is a **JSON Block**. Please see below for *dns-list_recursive-dns-resolution*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution*

redirect-to-tcp-port

Description Direct the client to retry with TCP for DNS UDP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-aa-flag

Description Make answers created from cache non-authoritative

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-csubnet

Description Remove EDNS(0) client subnet from client queries

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-padding-to-server

Description Remove EDNS(0) padding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-rate-limiting

Description: response-rate-limiting is a **JSON Block**. Please see below for *dns-list_response-rate-limiting*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting*

rpz-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/rpz/{seq-id}*

tld-filter-log-enable

Description Enable dns tld filter logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tld-filter-white-list

Description white-list class-list name (string-insensitive type)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

udp-retransmit

Description: udp-retransmit is a **JSON Block**. Please see below for *dns-list_udp-retransmit*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/udp-retransmit*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_response-rate-limiting

Specification	Value
Type	*object*

TC-rate

Description Every n'th response that would be rate-limited will respond with TC bit

Type: number

Range: 2-10

Mutual Exclusion: TC-rate and slip-rate are mutually exclusive

action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filter-response-rate

Description Maximum allowed request rate for the filter. This should match average traffic. (default 10 per seconds)

Type: number

Range: 1-1000

Default: 10

match-subnet

Description IP subnet mask (response rate by IP subnet mask)

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

match-subnet-v6

Description IPV6 subnet mask (response rate by IPv6 subnet mask)

Type: number

Range: 1-128

Default: 128

nx-response-rate

Description Queries from entries whose NX Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

rrl-class-list-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}*

slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

Mutual Exclusion: slip-rate and TC-rate are mutually exclusive

src-ip-only

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

dns-list_response-rate-limiting_rrl-class-list-list

Specification	Value
Type	*list*
Block object keys	

lid-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}/lid/{lidnum}*

name

Description Class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_response-rate-limiting_rrl-class-list-list_lid-list

Specification	Value
Type	*list*
Block object keys	

lid-action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

lid-enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lid-match-subnet

Description IP subnet mask (response rate by IP subnet mask)

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

lid-match-subnet-v6

Description IPV6 subnet mask (response rate by IPv6 subnet mask)

Type: number

Range: 1-128

Default: 128

lid-nx-response-rate

Description Queries from entries whose NX Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-16000000

Default: 5

lid-response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 0-16000000

Default: 5

lid-slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

Mutual Exclusion: lid-slip-rate and lid-tc-rate are mutually exclusive

lid-src-ip-only

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lid-tc-rate

Description Every n'th response that would be rate-limited will respond with TC bit

Type: number

Range: 2-10

Mutual Exclusion: lid-tc-rate and lid-slip-rate are mutually exclusive

lid-window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_recursive-dns-resolution

Specification	Value
Type	*object*

csubnet-retry

Description retry when server REFUSED AX inserted EDNS(0) subnet, works only when insert-client-subnet is configured

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-recursive

Description Default recursive mode, forward query to bound service-group if hostnames matched

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dnssec-validation

Description 'enabled': Enable DNSSEC validation; 'disabled': Disable DNSSEC validation;

Type: string

Supported Values: enabled, disabled

Default: disabled

fast-ns-selection

Description 'enabled': Enable fast NS selection; 'disabled': Disable fast NS selection;

Type: string

Supported Values: enabled, disabled

Default: enabled

force-cname-resolution

Description 'enabled': Force CNAME resolution always; 'disabled': Use answer record in CNAME response if it exists, else resolve;

Type: string

Supported Values: enabled, disabled

Default: enabled

full-response

Description Serve all records (authority and additional) when applicable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-health-check

Description: gateway-health-check is a **JSON Block**. Please see below for *dns-list_recursive-dns-resolution_gateway-health-check*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution/gateway-health-check*

host-list-cfg

Type: List

ipv4-nat-pool

Description IPv4 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

ipv6-nat-pool

Description IPv6 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/nat/pool*

lookup-order

Description: lookup-order is a **JSON Block**. Please see below for *dns-list_recursive-dns-resolution_lookup-order*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution/lookup-order*

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 255

Type: number

Range: 1-255

Default: 255

ns-cache-lookup

Description 'disabled': Disable NS Cache Lookup; 'enabled': Enable NS Cache Lookup;

Type: string

Supported Values: disabled, enabled

Default: enabled

ns-longest-match

Description 'disabled': Look up NS of top level label, do a nearly-full resolution; 'enabled': Enable NS cache longest match;

Type: string

Supported Values: disabled, enabled

Default: enabled

parallel-queries

Description Number of parallel queries to send to servers

Type: number

Range: 1-15

Default: 1

request-for-pending-resolution

Description 'drop': Drop of the request during ongoing; 'respond-with-servfail': Respond with SERVFAIL of the request during ongoing; 'start-new-resolution': Start new resolution of the request during ongoing;

Type: string

Supported Values: drop, respond-with-servfail, start-new-resolution

Default: respond-with-servfail

retries-per-level

Description Number of DNS query retries at each server level before closing client connection, default 6

Type: number

Range: 1-6

Default: 6

udp-initial-interval

Description UDP DNS Retry Interval value 1-6, default is 5 sec (1-6, default is 5sec)

Type: number

Range: 1-6

Default: 5

udp-retry-interval

Description UDP DNS Retry Interval value 1-6, default is 1 sec (1-6 , default is 1 sec)

Type: number

Range: 1-6

Default: 1

use-client-qid

Description Use client side query id for recursive query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-service-group-response

Description 'disabled': Start Recursive Resolver if Server response doesnt have final answer; 'enabled': Forward Backend Server response to client and dont start recursive resolver;

Type: string

Supported Values: disabled, enabled

Default: enabled

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_recursive-dns-resolution_gateway-health-check

Specification	Value
Type	*object*

gwhc-ns-cache-lookup

Description 'disabled': Disable NS Cache Lookup; 'enabled': Enable NS Cache Lookup;

Type: string

Supported Values: disabled, enabled

Default: disabled

interval

Description Specify the health check interval, default is 10 sec (Interval value, in seconds (default 10))

Type: number

Range: 1-300

Default: 10

num-query-type

Description Other record type value

Type: number

Range: 1-65535

Mutual Exclusion: num-query-type and str-query-type are mutually exclusive

query-name

Description Specify the query name used in probe queries, default "a10networks.com"

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Default: a10networks.com

retry

Description Maximum number of DNS query retries at each server level before health check fails, default 6 (Retry count (default 6))

Type: number

Range: 1-6

Default: 6

retry-multi

Description Specify number of times that health check consecutively fails before declaring gateway DOWN, default 1 (retry-multi count (default 1))

Type: number

Range: 1-10

Default: 1

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT

Default: A

Mutual Exclusion: str-query-type and num-query-type are mutually exclusive

timeout

Description Specify the health check timeout before retrying or finish, default is 5 sec (Timeout value, in seconds (default 5))

Type: number

Range: 1-6

Default: 5

up-retry

Description Specify number of times that health check consecutively passes before declaring gateway UP, default 1 (up-retry count (default 1))

Type: number

Range: 1-10

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_recursive-dns-resolution_lookup-order

Specification	Value
Type	*object*

query-type

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_recursive-dns-resolution_lookup-order_query-type

Specification	Value
Type	*list*
Block object keys	

num-query-type

Description Other query type value

Type: number

Range: 1-65535

order

Description 'ipv4-precede-ipv6': Recursive lookup via IPv4 then IPv6; 'ipv6-precede-ipv4': Recursive lookup via IPv6 then IPv4;

Type: string

Supported Values: ipv4-precede-ipv6, ipv6-precede-ipv4

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record; 'ANY': All cached record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT, ANY

dns-list_recursive-dns-resolution_host-list-cfg

Specification	Value
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (dns type), perform resolution while query name matched

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

dns-list_label-length-filter

Specification	Value
Type	*object*

drop-log-enable

Description enable the log when hit the rule

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fqdn-label-length

Type: List

label-length-filter-action

Description 'drop': drop; 'ignore': ignore;

Type: string

Supported Values: drop, ignore

Default: drop

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_label-length-filter_fqdn-label-length

Specification	Value
Type	*list*
Block object keys	

length

Description fqdn label length

Type: number

Range: 1-63

suffix

Description

Type: number

Range: 1-5

dns-list_class-list

Specification	Value
Type	*object*

lid-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *dns-list_class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_class-list_lid-list_dns

Specification	Value
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

honor-server-response-ttl

Description Honor the server reponse TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

dns-list_dns64

Specification	Value
Type	*object*

cache

Description Use a cached A-query response to provide AAAA query responses for the same hostname

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-query

Description Always change incoming AAAA DNS Query to A

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable DNS64 (Need to config this option before config any other dns64 options)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parallel-query

Description Forward AAAA Query & generate A Query in parallel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retry

Description Retry count, default is 3 (Retry Number)

Type: number

Range: 0-15

Default: 3

single-response-disable

Description Disable Single Response which is used to avoid ambiguity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout to send additional Queries, unit: second, default is 1

Type: number

Range: 0-15

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_udp-retransmit

Specification	Value
Type	*object*

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_query-class-filter

Specification	Value
Type	*object*

query-class

Type: List

query-class-action

Description 'allow': Allow only certain DNS query classes; 'deny': Deny only certain DNS query classes;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_query-class-filter_query-class

Specification	Value
Type	*list*
Block object keys	

num-query-class

Description Other query class value

Type: number

Range: 1-65535

str-query-class

Description 'INTERNET': INTERNET query class; 'CHAOS': CHAOS query class; 'HESIOD': HESIOD query class; 'NONE': NONE query class; 'ANY': ANY query class;

Type: string

Supported Values: INTERNET, CHAOS, HESIOD, NONE, ANY

dns-list_category-lookup-list

Specification	Value
Type	*list*
Block object keys	

category-name

Description category-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

drop

Description Deny matching DNS domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop,permit, respond, respond-nxdomain, respond-ip-addr, respond-ipv6-addr, and respond-cname-str are mutually exclusive

permit

Description Permit matching DNS domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit,drop, respond, respond-nxdomain, respond-ip-addr, respond-ipv6-addr, and respond-cname-str are mutually exclusive

respond

Description Respond to matching DNS domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: respond, permit, and drop are mutually exclusive

respond-cname-str

Description CNAME to respond (Canonical name)

Type: string

Maximum Length: 256 characters

Maximum Length: 1 characters

Mutual Exclusion: respond-cname-str,permit, drop, and respond-nxdomain are mutually exclusive

respond-ip-addr

Description Type A record to respond (IPv4 address)

Type: string

Format: ipv4-address

Mutual Exclusion: respond-ip-addr,permit, drop, and respond-nxdomain are mutually exclusive

respond-ipv6-addr

Description TYPE AAAA record to respond (IPv6 address)

Type: string

Format: ipv6-address

Mutual Exclusion: respond-ipv6-addr,permit, drop, and respond-nxdomain are mutually exclusive

respond-nxdomain

Description Respond with NXDOMAIN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: respond-nxdomain,permit, drop, respond-ip-addr, respond-ipv6-addr, and respond-cname-str are mutually exclusive

response-ttl

Description Set response TTL in seconds (TTL value in seconds)

Type: number

Range: 1-259200

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_local-dns-resolution

Specification	Value
Type	*object*

host-list-cfg

Type: List

local-resolver-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_local-dns-resolution_host-list-cfg

Specification	Value
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (dns type)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

dns-list_local-dns-resolution_local-resolver-cfg

Specification	Value
Type	*list*
Block object keys	

local-resolver

Description Local dns servers (address)

Type: string

Format: ipv4-address

dns-list_label-count-filter

Specification	Value
Type	*object*

drop-log-enable

Description enable the log when hit the rule

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

label-count-filter-action

Description 'drop': drop; 'ignore': ignore;

Type: string

Supported Values: drop, ignore

Default: drop

max-fqdn-label-count

Description Maximum number of FQDN labels per FQDN

Type: number

Range: 1-31

min-fqdn-label-count

Description Minimum number of FQDN labels per FQDN

Type: number

Range: 1-7

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_negative-dns-cache

Specification	Value
Type	*object*

bypass-query-threshold

Description the threshold bypass the query, default is 100

Type: number

Range: 1-65535

Default: 100

cache-non-valid

Description Enable caching non-valid negative response, otherwise will only cache valid negative response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-negative-dns-cache

Description Enable DNS negative cache (Need to turn-on the dns-cache for this feature)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-negative-cache-ttl

Description Max negative cache ttl, default is 2 hours

Type: number

Range: 0-604800

Default: 7200

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_query-type-filter

Specification	Value
Type	*object*

query-type

Type: List

query-type-action

Description 'allow': Allow only certain DNS query types; 'deny': Deny only certain DNS query types;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_query-type-filter_query-type

Specification	Value
Type	*list*
Block object keys	

num-query-type

Description Other record type value

Type: number

Range: 1-65535

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record; 'ANY': All cached record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT, ANY

dns-list_rpz-list

Specification	Value
Type	*list*
Block object keys	

logging

Description: logging is a **JSON Block**. Please see below for *dns-list_rpz-list_logging*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/rpz/{seq-id}/logging*

name

Description Specify a Response Policy Zone name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-id

Description sequential id of RPZ

Type: number

Range: 1-8

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_rpz-list_logging

Specification	Value
Type	*object*

enable

Description Log RPZ triggered action

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpz-action

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_rpz-list_logging_rpz-action

Specification	Value
Type	*list*
Block object keys	

str-rpz-action

Description 'drop': Log RPZ due to drop action; 'pass-thru': Log RPZ due to pass-thru action; 'nxdomain': Log RPZ due to nxdomain action; 'nodata': Log RPZ due to nodata action; 'tcp-only': Log RPZ due to tcp-only action; 'local-data': Log RPZ due to local-data action;

Type: string

Supported Values: drop, pass-thru, nxdomain, nodata, tcp-only, local-data

http-list

Specification	Value
Type	*list*
Block object keys	

100-cont-wait-for-req-complete

Description When REQ has Expect 100 and response is not 100, then wait for whole request to be sent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowed-methods

Description Enable allowed-method check (List of allowed HTTP methods)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: allowed-methods and disallowed-methods are mutually exclusive

allowed-methods-action

Description 'drop': Respond 400 directly;

Type: string

Supported Values: drop

Default: drop

bypass-sg

Description Select service group for non-http traffic (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

client-idle-timeout

Description Client session timeout if the next request is not received (timeout in seconds. 0 means disable, default is 0)

Type: number

Range: 0-120

Default: 0

client-ip-hdr-replace

Description Replace the existing header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-port-hdr-replace

Description Replace the existing header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-auto-disable-on-high-cpu

Description Auto-disable software compression on high cpu usage (Disable compression if cpu usage is above threshold. Default is off.)

Type: number

Range: 1-100

compression-br-level

Description brotli compression level, default 1 (brotli compression level value, default is 1)

Type: number

Range: 1-9

Default: 1

compression-br-sliding-window-size

Description brotli compression sliding window size, default 10 (brotli compression sliding window size in the form of log (i.e., 10 means 1k-16MB bytes))

Type: number

Range: 10-24

compression-content-type

Type: List

compression-enable

Description Enable Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-exclude-content-type

Type: List

compression-exclude-uri

Type: List

compression-keep-accept-encoding

Description Keep accept encoding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-keep-accept-encoding-enable

Description Enable Server Accept Encoding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-level

Description gzip compression level, default 1 (gzip compression level value, default is 1)

Type: number

Range: 1-9

Default: 1

compression-method-order

Description Method Order (Order to decide which compression algorithm to be applied when multiple algorithms are acceptable)

Type: string

Format: string-rlx

Maximum Length: 11 characters

Maximum Length: 11 characters

compression-minimum-content-length

Description Minimum Content Length (Minimum content length for compression in bytes. Default is 120.)

Type: number

Range: 1-2147483647

Default: 120

cookie-format

Description 'rfc6265': Follow rfc6265;

Type: string

Supported Values: rfc6265

cookie-samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

default-charset

Description 'iso-8859-1': Use ISO-8859-1 as the default charset; 'utf-8': Use UTF-8 as the default charset; 'us-ascii': Use US-ASCII as the default charset;

Type: string

Supported Values: iso-8859-1, utf-8, us-ascii

Default: utf-8

disallowed-methods

Description Enable disallowed-method check (List of disallowed HTTP methods)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: disallowed-methods and allowed-methods are mutually exclusive

disallowed-methods-action

Description 'drop': Respond 400 directly;

Type: string

Supported Values: drop

Default: drop

failover-url

Description Failover to this URL (Failover URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

frame-limit

Description Limit the number of CONTINUATION, PING, PRIORITY, RESET, SETTINGS and empty frames in one HTTP2 connection, default 10000

Type: number

Range: 0-65535

Default: 10000

host-switching

Type: List

http-protocol-check

Description: http-protocol-check is a **JSON Block**. Please see below for *http-list_http-protocol-check*

Type: Object

Reference Object: */axapi/v3/slb/template/http/{name}/http-protocol-check*

http2-client-no-snat

Description Set max-concurrent-stream = 1 when the client side is HTTP2 and no source-nat configuration is under vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-ip

Description Insert Client IP address into HTTP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-ip-header-name

Description HTTP Header Name for inserting Client IP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

insert-client-port

Description Insert Client Port address into HTTP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-port-header-name

Description HTTP Header Name for inserting Client Port

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

keep-client-alive

Description Keep client alive

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-retry

Description log when HTTP request retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-concurrent-streams

Description (http2 only) Max concurrent streams, default 50

Type: number

Range: 1-1000

Default: 50

max-transaction-allowed

Description Max transactions allowed, default 0 (no limit)

Type: number

Range: 0-65535

Default: 0

name

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

non-http-bypass

Description Bypass non-http traffic instead of dropping

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

persist-on-401

Description Persist to the same server if the response code is 401

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute; 'check': check server prefix and enforce prefix format;

Type: string

Supported Values: host, secure, check

rd-port

Description Port (Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: rd-port and rd-simple-loc are mutually exclusive

rd-resp-code

Description '301': Moved Permanently; '302': Found; '303': See Other; '307': Temporary Redirect;

Type: string

Supported Values: 301, 302, 303, 307

rd-secure

Description Use HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rd-secure and rd-simple-loc are mutually exclusive

rd-simple-loc

Description Redirect location tag absolute URI string

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: rd-simple-loc, rd-secure, and rd-port are mutually exclusive

redirect

Description Automatically send a redirect response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirect-rewrite

Description: redirect-rewrite is a **JSON Block**. Please see below for *http-list_redirect-rewrite*

Type: Object

req-hdr-wait-time

Description HTTP request header wait time before abort connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-hdr-wait-time-val

Description Number of seconds wait for client request header (default is 7)

Type: number

Range: 1-31

Default: 7

request-header-erase-list

Type: List

request-header-insert-list

Type: List

request-line-case-insensitive

Description Parse http request line as case insensitive

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-timeout

Description Request timeout if response not received (timeout in seconds)

Type: number

Range: 1-120

response-content-replace-list

Type: List

response-header-erase-list

Type: List

response-header-insert-list

Type: List

retry-on-5xx

Description Retry http request on HTTP 5xx code and request timeout

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: retry-on-5xx and retry-on-5xx-per-req are mutually exclusive

retry-on-5xx-per-req

Description Retry http request on HTTP 5xx code for each request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: retry-on-5xx-per-req and retry-on-5xx are mutually exclusive

retry-on-5xx-per-req-val

Description Number of times to retry (default is 3)

Type: number

Range: 1-3

Default: 3

retry-on-5xx-val

Description Number of times to retry (default is 3)

Type: number

Range: 1-3

Default: 3

server-support-http2-only

Description Notify the vport regarding whether server supports http2 only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-support-http2-only-value

Description 'auto-detect': Commuincate with the server via HTTP/2 when an support-http2-only rport is detected; 'force': Communicate with the server via HTTP/2 when possible;

Type: string

Supported Values: auto-detect, force

Default: auto-detect

stream-cancellation-limit

Description cancellation limit, default 0 (accumulated cancellation limit value, default is 0)

Type: number

Range: 0-1000

Default: 0

stream-cancellation-rate

Description cancellation rate, default 10 (cancellation rate value, default is 10)

Type: number

Range: 0-1000

Default: 10

strict-transaction-switch

Description Force server selection on every HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template

Description: template is a **JSON Block**. Please see below for *http-list_template*

Type: Object

term-11client-hdr-conn-close

Description Terminate HTTP 1.1 client when req has Connection: close

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

url-hash-first

Description Use the begining part of URL to calculate hash value (URL string length to calculate hash value)

Type: number

Range: 4-128

Mutual Exclusion: url-hash-first and url-hash-last are mutually exclusive

url-hash-last

Description Use the end part of URL to calculate hash value (URL string length to calculate hash value)

Type: number

Range: 4-128

Mutual Exclusion: url-hash-last and url-hash-first are mutually exclusive

url-hash-offset

Description Skip part of URL to calculate hash value (Offset of the URL string)

Type: number

Range: 0-255

url-hash-persist

Description Use URL's hash value to select server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

url-switching

Type: List

use-server-status

Description Use Server-Status header to do URL hashing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-list_request-header-erase-list

Specification	Value
Type	*list*
Block object keys	

request-header-erase

Description Erase a header from HTTP request (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-list_redirect-rewrite

Specification	Value
Type	*object*

match-list

Type: List

redirect-secure

Description Use HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirect-secure-port

Description Port (Port Number)

Type: number

Range: 1-65535

Default: 443

http-list_redirect-rewrite_match-list

Specification	Value
Type	*list*
Block object keys	

redirect-match

Description URL Matching (Pattern URL String)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rewrite-to

Description Rewrite to Destination URL String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-list_response-header-insert-list

Specification	Value
Type	*list*
Block object keys	

response-header-insert

Description Insert a header into HTTP response (Header Content (Format: "[name]:[value]"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-header-insert-type

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

http-list_response-header-erase-list

Specification	Value
Type	*list*
Block object keys	

response-header-erase

Description Erase a header from HTTP response (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-list_template

Specification	Value
Type	*object*

logging

Description Logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

http-list_url-switching

Specification	Value
Type	*list*
Block object keys	

url-match-string

Description URL String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

url-switching-type

Description 'contains': Select service group if URL string contains another string; 'ends-with': Select service group if URL string ends with another string; 'equals': Select service group if URL string equals another string; 'starts-with': Select service group if URL string starts with another string; 'regex-match': Select service group if URL string matches with regular expression; 'url-case-insensitive': Case insensitive URL switching; 'url-hits-enable': Enables URL Hits;

Type: string

Supported Values: contains, ends-with, equals, starts-with, regex-match, url-case-insensitive, url-hits-enable

http-list_response-content-replace-list

Specification	Value
Type	*list*
Block object keys	

response-content-replace

Description replace the data from HTTP response content (String in the http content need to be replaced)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-new-string

Description String will be in the http content

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

http-list_http-protocol-check

Specification	Value
Type	*object*

get-and-payload

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

h2up-content-length-alias

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

h2up-with-host-and-auth

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

h2up-with-transfer-encoding

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

header-filter-rule-list

Type: List

Reference Object: */axapi/v3/slb/template/http/{name}/http-protocol-check/header-filter-rule/{seq-num}*

malformed-h2up-header-value

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

malformed-h2up-scheme-value

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

multiple-content-length

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

multiple-transfer-encoding

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

transfer-encoding-and-content-length

Description 'drop': Drop the request and Send 400 to the client side;

Type: string

Supported Values: drop

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-list_http-protocol-check_header-filter-rule-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'drop': Drop the request;

Type: string

Supported Values: drop

header-name-value

Description Header name value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-value

Description Header value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

match-type-value

Description 'full-text': Full text match; 'pcre': PCRE match;

Type: string

Supported Values: full-text, pcre

seq-num

Description Specify a sequence number

Type: number

Range: 0-4

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-list_request-header-insert-list

Specification	Value
Type	*list*
Block object keys	

request-header-insert

Description Insert a header into HTTP request (Header Content (Format: "[name]:[value]"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

request-header-insert-type

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

http-list_host-switching

Specification	Value
Type	*list*
Block object keys	

host-match-string

Description Hostname String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

host-switching-type

Description 'contains': Select service group if hostname contains another string; 'ends-with': Select service group if hostname ends with another string; 'equals': Select service group if hostname equals another string; 'starts-with': Select service group if hostname starts with another string; 'regex-match': Select service group if URL string matches with regular expression; 'host-hits-enable': Enables Host Hits counters;

Type: string

Supported Values: contains, ends-with, equals, starts-with, regex-match, host-hits-enable

http-list_compression-content-type

Specification	Value
Type	*list*
Block object keys	

content-type

Description Compression content-type

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-list_compression-exclude-uri

Specification	Value
Type	*list*
Block object keys	

exclude-uri

Description Compression exclude uri

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-list_compression-exclude-content-type

Specification	Value
Type	*list*
Block object keys	

exclude-content-type

Description Compression exclude content-type (Compression exclude content type)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

dns-logging-list

Specification	Value
Type	*list*
Block object keys	

custom-log-list

Type: List

Reference Object: */axapi/v3/slb/template/dns-logging/{name}/custom-log/{trigger-reason}*

disable

Description Disable DNS Logging template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-logging-protocol

Description 'both': Log DNS over tcp and udp; 'tcp': Log DNS over tcp; 'udp': Log DNS over udp;

Type: string

Supported Values: both, tcp, udp

dns-logging-request-section

Description 'all': Log DNS header and question section; 'header': Log DNS header information; 'question': Log DNS question section;

Type: string

Supported Values: all, header, question

dns-logging-response-section

Description 'all': Log DNS header information, answer, authority, additional section content; 'header': Log DNS header information; 'answer': Log DNS header information and answer section content;

Type: string

Supported Values: all, header, answer

dns-logging-type

Description 'query': DNS Query Logging; 'response': DNS Response Logging; 'both': DNS Query and Response Logging;

Type: string

Supported Values: query, response, both

name

Description DNS Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-include-rcode

Description Log DNS Rcode with Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-type

Description: response-type is a **JSON Block**. Please see below for *dns-logging-list_response-type*

Type: Object

Reference Object: */axapi/v3/slb/template/dns-logging/{name}/response-type*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-logging-list_response-type

Specification	Value
Type	*object*

config

Description start config the response type detail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

type-list

Type: List

Reference Object: */axapi/v3/slb/template/dns-logging/{name}/response-type/type/{response-type-name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-logging-list_response-type_type-list

Specification	Value
Type	*list*
Block object keys	

caa-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: caa-type-limit-num and caa-type-no-limit are mutually exclusive

caa-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: caa-type-no-limit and caa-type-limit-num are mutually exclusive

digest

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dnskey-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: dnskey-type-limit-num and dnskey-type-no-limit are mutually exclusive

dnskey-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dnskey-type-no-limit and dnskey-type-limit-num are mutually exclusive

ds-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: ds-type-limit-num and ds-type-no-limit are mutually exclusive

ds-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ds-type-no-limit and ds-type-limit-num are mutually exclusive

length-limit-flag

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

naptr-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: naptr-type-limit-num and naptr-type-no-limit are mutually exclusive

naptr-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: naptr-type-no-limit and naptr-type-limit-num are mutually exclusive

opt-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: opt-type-limit-num and opt-type-no-limit are mutually exclusive

opt-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: opt-type-no-limit and opt-type-limit-num are mutually exclusive

other-data

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

public-key

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rdata-field

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-type-name

Description 'TXT': TXT; 'RRSIG': RRSIG; 'TSIG': TSIG; 'DNSKEY': DNSKEY; 'DS': DS; 'CAA': CAA; 'NAPTR': NAPTR; 'OPT': OPT;

Type: string

Supported Values: TXT, RRSIG, TSIG, DNSKEY, DS, CAA, NAPTR, OPT

rrsig-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: rrsig-type-limit-num and rrsig-type-no-limit are mutually exclusive

rrsig-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rrsig-type-no-limit and rrsig-type-limit-num are mutually exclusive

service-field

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

signature

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tsig-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: tsig-type-limit-num and tsig-type-no-limit are mutually exclusive

tsig-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tsig-type-no-limit and tsig-type-limit-num are mutually exclusive

txt-data

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

txt-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: txt-type-limit-num and txt-type-no-limit are mutually exclusive

txt-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: txt-type-no-limit and txt-type-limit-num are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value-field

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-logging-list_custom-log-list

Specification	Value
Type	*list*
Block object keys	

enable

Description Enable this log

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

format

Description Request Message (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

trigger-reason

Description 'request': log when request comes from client; 'response': log when response to client;

Type: string

Supported Values: request, response

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-port-list

Specification	Value
Type	*list*
Block object keys	

aflow

Description Use aFlow to eliminate the traffic surge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-syn-otherflags

Description Allow initial SYN packet with other flags

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-vip-to-rport-mapping

Description Allow mapping of VIP to real port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit-reset

Description Send client reset when connection over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit-reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-unknown-conn

Description Drop conection if receives TCP packet without SYN or RST flag and it does not belong to any existing connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dscp

Description Differentiated Services Code Point (DSCP to Real Server IP Mapping Value)

Type: number

Range: 1-63

ignore-tcp-msl

Description reclaim TCP resource immediately without MSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-options

Description 'no-logging': Do not log over limit event; 'no-repeat-logging': log once for over limit event. Default is log once per minute;

Type: string

Supported Values: no-logging, no-repeat-logging

name

Description Virtual port template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

non-syn-initiation

Description Allow initial TCP packet to be non-SYN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pkt-rate-interval

Description '100ms': Source IP and port rate limit per 100ms; 'second': Source IP and port rate limit per second (default);

Type: string

Supported Values: 100ms, second

Default: second

pkt-rate-limit-reset

Description send client-side reset (reset after packet limit)

Type: number

Range: 0-1048575

Default: 0

pkt-rate-type

Description 'src-ip-port': Source IP and port rate limit; 'src-port': Source port rate limit;

Type: string

Supported Values: src-ip-port, src-port

rate

Description Source IP and port rate limit (Packet rate limit)

Type: number

Range: 1-1048575

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

reset-l7-on-failover

Description Send reset to L7 client and server connection upon a failover

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-unknown-conn

Description Send reset back if receives TCP packet without SYN or RST flag and it does not belong to any existing connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-msl

Description Source NAT MSL (Source NAT MSL value (seconds))

Type: number

Range: 1-1800

snat-port-preserve

Description Source NAT Port Preservation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

when-rr-enable

Description Only do rate limit if CPU RR triggered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mqtt-list

Specification	Value
Type	*list*
Block object keys	

clientid-hash-first

Description Use the begining part of client ID to calculate hash value (client ID string length to calculate hash value)

Type: number

Range: 4-128

clientid-hash-last

Description Use the end part of Client ID to calculate hash value (Client ID length to calculate hash value)

Type: number

Range: 4-128

clientid-hash-offset

Description Skip part of Client ID to calculate hash value (Offset of the Client ID)

Type: number

Range: 0-255

clientid-hash-persist

Description Use Client ID's hash value to select server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description MQTT Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cipher-list

Specification	Value
Type	*list*
Block object keys	

cipher-cfg

Type: List

cipher13-cfg

Type: List

name

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cipher-list_cipher13-cfg

Specification	Value
Type	*list*
Block object keys	

cipher13-suite

Description 'TLS_AES_256_GCM_SHA384': TLS_AES_256_GCM_SHA384 (0x1302); 'TLS_CHACHA20_POLY1305_SHA256': TLS_CHACHA20_POLY1305_SHA256 (0x1303); 'TLS_AES_128_GCM_SHA256': TLS_AES_128_GCM_SHA256 (0x1301);

Type: string

Supported Values: TLS_AES_256_GCM_SHA384, TLS_CHACHA20_POLY1305_SHA256, TLS_AES_128_GCM_SHA256

priority

Description Cipher priority (Cipher priority (default 1))

Type: number

Range: 1-100

Default: 1

cipher-list_cipher-cfg

Specification	Value
Type	*list*
Block object keys	

cipher-suite

Description 'SSL3_RSA_DES_192_CBC3_SHA': TLS_RSA_WITH_3DES_EDE_CBC_SHA (0x000A); 'SSL3_RSA_RC4_128_MD5': TLS_RSA_WITH_RC4_128_MD5 (0x0004); 'SSL3_RSA_RC4_128_SHA': TLS_RSA_WITH_RC4_128_SHA (0x0005); 'TLS1_RSA_AES_128_SHA': TLS_RSA_WITH_AES_128_CBC_SHA (0x002F); 'TLS1_RSA_AES_256_SHA': TLS_RSA_WITH_AES_256_CBC_SHA (0x0035); 'TLS1_RSA_AES_128_SHA256': TLS_RSA_WITH_AES_128_CBC_SHA256 (0x003C); 'TLS1_RSA_AES_256_SHA256': TLS_RSA_WITH_AES_256_CBC_SHA256 (0x003D); 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS_DHE_RSA_WITH_AES_128_GCM_SHA256 (0x009E); 'TLS1_DHE_RSA_AES_128_SHA': TLS_DHE_RSA_WITH_AES_128_CBC_SHA (0x0033); 'TLS1_DHE_RSA_AES_128_SHA256': TLS_DHE_RSA_WITH_AES_128_CBC_SHA256 (0x0067); 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS_DHE_RSA_WITH_AES_256_GCM_SHA384 (0x009F); 'TLS1_DHE_RSA_AES_256_SHA': TLS_DHE_RSA_WITH_AES_256_CBC_SHA (0x0039); 'TLS1_DHE_RSA_AES_256_SHA256': TLS_DHE_RSA_WITH_AES_256_CBC_SHA256 (0x006B); 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256 (0xC02B); 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA (0xC009); 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256 (0xC023); 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384 (0xC02C); 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA

(0xC00A); 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256 (0xC02F); 'TLS1_ECDHE_RSA_AES_128_SHA': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA (0xC013); 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256 (0xC027); 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 (0xC030); 'TLS1_ECDHE_RSA_AES_256_SHA': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA (0xC014); 'TLS1_RSA_AES_128_GCM_SHA256': TLS_RSA_WITH_AES_128_GCM_SHA256 (0x009C); 'TLS1_RSA_AES_256_GCM_SHA384': TLS_RSA_WITH_AES_256_GCM_SHA384 (0x009D); 'TLS1_ECDHE_RSA_AES_256_SHA384': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384 (0xC028); 'TLS1_ECDHE_ECDSA_AES_256_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384 (0xC024); 'TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA8); 'TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_ECDSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA9); 'TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256': TLS_DHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCAA); 'TLS1_ECDHE_SM2_WITH_SMS4_SM3': TLS_ECDHE_SM2_WITH_SMS4_SM3 (0xE102); 'TLS1_ECDHE_SM2_WITH_SMS4_SHA256': TLS_ECDHE_SM2_WITH_SMS4_SHA256 (0xE105); 'TLS1_ECDHE_SM2_WITH_SMS4_GCM_SM3': TLS_ECDHE_SM2_WITH_SMS4_GCM_SM3 (0xE107);

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_SM2_WITH_SMS4_SM3, TLS1_ECDHE_SM2_WITH_SMS4_SHA256, TLS1_ECDHE_SM2_WITH_SMS4_GCM_SM3

priority

Description Cipher priority (Cipher priority (default 1))

Type: number

Range: 1-100

Default: 1

policy-list

Specification	Value
Type	*list*

class-list

Description: class-list is a **JSON Block**. Please see below for *policy-list_class-list*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/class-list*

forward-policy

Description: forward-policy is a **JSON Block**. Please see below for *policy-list_forward-policy*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy*

full-domain-tree

Description Share counters between geo-location and sub regions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Log interval (minute)

Type: number

Range: 1-255

name

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

over-limit

Description Specify operation in case over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-lockup

Description Don't accept any new connection for certain time (Lockup duration (minute))

Type: number

Range: 1-127

over-limit-logging

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-reset

Description Reset the connection when it exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

overlap

Description Use overlap mode for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

share

Description Share counters between virtual ports and virtual servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Define timeout value of PBSLB dynamic entry (Timeout value (minute, default is 5))

Type: number

Range: 1-127

Default: 5

use-destination-ip

Description Use destination IP to match the policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_forward-policy

Specification	Value
Type	*object*

acos-event-log

Description Enable acos event logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/action/{name}*

dual-stack-action-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/dual-stack-action/{name}*

enable-adv-match

Description Enable adv-match rules and deactive all the other kinds of destination rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filtering

Type: List

forward-http-connect-to-icap

Description Forward HTTP CONNECT request to ICAP server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-client-conn-reuse

Description Inspects only first request of a connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reqmod-icap

Description ICAP reqmod template (Reqmod ICAP Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/reqmod-icap*

require-web-category

Description Wait for web category to be resolved before taking proxy decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

san-filtering

Type: List

source-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_forward-policy_filtering

Specification	Value
Type	*list*
Block object keys	

ssli-url-filtering

Description 'bypassed-sni-disable': Disable SNI filtering for bypassed URL's(enabled by default); 'intercepted-sni-enable': Enable SNI filtering for intercepted URL's(disabled by default); 'intercepted-http-disable': Disable HTTP(host/URL) filtering for intercepted URL's(enabled by default); 'no-sni-allow': Allow connection if SNI filtering is enabled and SNI header is not present(Drop by default);

Type: string

Supported Values: bypassed-sni-disable, intercepted-sni-enable, intercepted-http-disable, no-sni-allow

policy-list_forward-policy_san-filtering

Specification	Value
Type	*list*
Block object keys	

ssli-url-filtering-san

Description 'enable-san': Enable SAN filtering(disabled by default); 'bypassed-san-disable': Disable SAN filtering for bypassed URL's(enabled by default); 'intercepted-san-enable': Enable SAN filtering for intercepted URL's(disabled by default); 'no-san-allow': Allow connection if SAN filtering is enabled and SAN field is not present(Drop by default);

Type: string

Supported Values: enable-san, bypassed-san-disable, intercepted-san-enable, no-san-allow

policy-list_forward-policy_action-list

Specification	Value
Type	*list*
Block object keys	

action1

Description 'forward-to-internet': Forward request to Internet; 'forward-to-service-group': Forward request to service group; 'forward-to-proxy': Forward request to HTTP proxy server; 'drop': Drop request;

Type: string

Supported Values: forward-to-internet, forward-to-service-group, forward-to-proxy, drop

drop-message

Description drop-message sent to the client as webpage(html tags are included and quotation marks are required for white spaces)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-message and drop-redirect-url are mutually exclusive

drop-redirect-url

Description Specify URL to which client request is redirected upon being dropped

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-redirect-url, drop-response-code, and drop-message are mutually exclusive

drop-response-code

Description Specify response code for drop action

Type: number

Range: 100-599

Mutual Exclusion: drop-response-code and drop-redirect-url are mutually exclusive

fake-sg

Description service group to forward the packets to Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back

Description Fallback service group for Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back-snat

Description Source NAT pool or pool group for fallback server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fall-back-snat and fall-back-snat-pt-only are mutually exclusive

fall-back-snat-pt-only

Description Source port translation only for fallback server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fall-back-snat-pt-only and fall-back-snat are mutually exclusive

forward-snat

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-snat and forward-snat-pt-only are mutually exclusive

forward-snat-pt-only

Description Source port translation only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward-snat-pt-only and forward-snat are mutually exclusive

http-status-code

Description '301': Moved permanently; '302': Found;

Type: string

Supported Values: 301, 302

Default: 302

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action policy name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

proxy-chaining

Description Enable proxy chaining feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-chaining-bypass

Description Forward all https packets to upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

real-sg

Description service group to forward the packets

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-cert-fetch

Description Fetch server certificate by upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_forward-policy_action-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

policy-list_forward-policy_dual-stack-action-list

Specification	Value
Type	*list*
Block object keys	

fall-back

Description Fallback service group

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

fall-back-snat

Description Source NAT pool or pool group for fallback

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

ipv4

Description IPv4 service group to forward

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

ipv4-snat

Description IPv4 source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

ipv6

Description IPv6 service group to forward

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

ipv6-snat

Description IPv6 source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/nat/pool*

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_forward-policy_dual-stack-action-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests forward by this action;

Type: string

Supported Values: all, hits

policy-list_forward-policy_source-list

Specification	Value
Type	*list*
Block object keys	

destination

Description: destination is a **JSON Block**. Please see below for *policy-list_forward-policy_source-list_destination*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination*

match-any

Description Match any source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: match-any and match-class-list are mutually exclusive

match-authorize-policy

Description Authorize-policy for user and group based policy

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authorization/policy*

match-class-list

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: match-class-list and match-any are mutually exclusive

name

Description source destination match rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority of the source(higher the number higher the priority, default 0)

Type: number

Range: 1-2000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_forward-policy_source-list_destination

Specification	Value
Type	*object*

adv-match-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/adv-match/{priority}*

any

Description: any is a **JSON Block**. Please see below for *policy-list_forward-policy_source-list_destination_any*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/any*

class-list-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/class-list/{dest-class-list}*

web-category-list-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/web-category-list/{web-category-list}*

web-reputation-scope-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/web-reputation-scope/{web-reputation-scope}*

policy-list_forward-policy_source-list_destination_class-list-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dest-class-list

Description Destination Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': Match URL; 'ip': Match destination IP address;

Type: string

Supported Values: host, url, ip

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_forward-policy_source-list_destination_web-category-list-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-category-list

Description Destination Web Category List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

policy-list_forward-policy_source-list_destination_any

Specification	Value
Type	*object*

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: action and dual-stack-action are mutually exclusive

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dual-stack-action and action are mutually exclusive

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_forward-policy_source-list_destination_any_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

policy-list_forward-policy_source-list_destination_adv-match-list

Specification	Value
Type	*list*
Block object keys	

action

Description Forwading action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: action and dual-stack-action are mutually exclusive

disable-reqmod-icap

Description Disable REQMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-respmod-icap

Description Disable RESPMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dual-stack-action

Description Forwarding action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dual-stack-action and action are mutually exclusive

match-host

Description Match request host (HTTP stage) or SNI/SAN (SSL stage)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-encoding

Description Match the value of HTTP header "Content-Encoding"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-length-range-begin

Description Match the value of HTTP header "Content-Length" with an inclusive range

Type: number

Range: 0-2147483647

match-http-content-length-range-end

Description End of the "Content-Length" range

Type: number

Range: 0-2147483647

match-http-content-type

Description Match the value of HTTP header "Content-Type"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-header

Description Matching the name of all request headers

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-method-connect

Description Match HTTP request method CONNECT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-delete

Description Match HTTP request method DELETE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-get

Description Match HTTP request method GET

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-head

Description Match HTTP request method HEAD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-options

Description Match HTTP request method OPTIONS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-patch

Description Match HTTP request method PATCH

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-post

Description Match HTTP request method POST

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-put

Description Match HTTP request method PUT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-trace

Description Match HTTP request method TRACE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-request-file-extension

Description Match file extension of URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url

Description Match URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url-regex

Description Match URI in HTTP request line by given regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-http-user-agent

Description Matching the value of HTTP header "User-Agent"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-server-address

Description Match target server IP address

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-server-port

Description Match target server port number

Type: number

Range: 1-65535

Mutual Exclusion: match-server-port and match-server-port-range-begin are mutually exclusive

match-server-port-range-begin

Description Math targer server port range inclusively

Type: number

Range: 1-65535

Mutual Exclusion: match-server-port-range-begin and match-server-port are mutually exclusive

match-server-port-range-end

Description End of port range

Type: number

Range: 1-65535

match-time-range

Description Enable rule in this time-range

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/forward-proxy/time-range*

match-web-category-list

Description Match web-category list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

match-web-reputation-scope

Description Match web-reputation scope

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/reputation-scope*

notify-page

Description Send notify-page to client

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/forward-proxy/notify-page*

priority

Description Rule priority (1000 is highest)

Type: number

Range: 1-1000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_forward-policy_source-list_destination_adv-match-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests hit this rule;

Type: string

Supported Values: all, hits

policy-list_forward-policy_source-list_destination_web-reputation-scope-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-reputation-scope

Description Destination Web Reputation Scope Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/reputation-scope*

policy-list_forward-policy_source-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this source rule; 'destination-match-not-found': Number of requests without matching destination rule; 'no-host-info': Failed to parse ip or host information from request;

Type: string

Supported Values: all, hits, destination-match-not-found, no-host-info

policy-list_class-list

Specification	Value
Type	*object*

client-ip-l3-dest

Description Use destination IP as client IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l3-dest and client-ip-l7-header are mutually exclusive

client-ip-l7-header

Description Use extract client IP address from L7 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l7-header and client-ip-l3-dest are mutually exclusive

header-name

Description Specify L7 header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lid-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/class-list/lid/{lidnum}*

name

Description Class list name or geo-location-class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

bw-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

bw-rate-limit

Description Specify bandwidth rate limit (Bandwidth rate limit in bytes)

Type: number

Range: 1-2147483647

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

direct-action

Description Set action when match the lid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

direct-action-value

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: direct-action-value and direct-service-group are mutually exclusive

direct-fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-pbslb-interval

Description Specify logging interval in minutes(default is 3)

Type: number

Range: 0-60

Default: 3

direct-pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: direct-service-group and direct-action-value are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

dns64

Description: dns64 is a **JSON Block**. Please see below for *policy-list_class-list_lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 1-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

response-code-rate-limit

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_class-list_lid-list_dns64

Specification	Value
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

policy-list_class-list_lid-list_response-code-rate-limit

Specification	Value
Type	*list*
Block object keys	

code-range-end

Description server response code range end

Type: number

Range: 100-600

code-range-start

Description server response code range start

Type: number

Range: 100-600

period

Description seconds

Type: number

Range: 1-127

threshold

Description the times of getting the response code

Type: number

Range: 1-15

policy-list_bw-list-id

Specification	Value
Type	*list*
Block object keys	

action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

bw-list-action

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: bw-list-action and service-group are mutually exclusive

fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

id

Description Specify id that maps to service group (The id number)

Type: number

Range: 0-1023

logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pbslb-interval

Description Specify logging interval in minutes

Type: number

Range: 0-60

Default: 3

pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group and bw-list-action are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

policy-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'fwd-policy-dns-unresolved': Forward-policy unresolved DNS queries; 'fwd-policy-dns-outstanding': Forward-policy current DNS outstanding requests; 'fwd-policy-snat-fail': Forward-policy source-nat translation failure; 'fwd-policy-hits': Number of forward-policy requests for this policy template; 'fwd-policy-forward-to-internet': Number of forward-policy requests forwarded to internet; 'fwd-policy-forward-to-service-group': Number of forward-policy requests forwarded to service group; 'fwd-policy-forward-to-proxy': Number of forward-policy requests forwarded to proxy; 'fwd-policy-policy-drop': Number of forward-policy requests dropped; 'fwd-policy-source-match-not-found': Forward-policy requests without matching source rule; 'exp-client-hello-not-found': Expected Client HELLO requests not found;

Type: string

Supported Values: all, fwd-policy-dns-unresolved, fwd-policy-dns-outstanding, fwd-policy-snat-fail, fwd-policy-hits, fwd-policy-forward-to-internet, fwd-policy-forward-to-service-group, fwd-policy-forward-to-proxy, fwd-policy-policy-drop, fwd-policy-source-match-not-found, exp-client-hello-not-found

server-list

Specification	Value
Type	*list*
Block object keys	

add

Description Slow start connection limit add by a number every interval (Add by this number every interval)

Type: number

Range: 1-4095

Mutual Exclusion: add and times are mutually exclusive

bw-rate-limit

Description Configure bandwidth rate limit on real server (Bandwidth rate limit in Kbps)

Type: number

Range: 1-16777216

bw-rate-limit-acct

Description 'to-server-only': Only account for traffic sent to server; 'from-server-only': Only account for traffic received from server; 'all': Account for all traffic sent to and received from server;

Type: string

Supported Values: to-server-only, from-server-only, all

Default: all

bw-rate-limit-duration

Description Duration in seconds the observed rate needs to honor

Type: number

Range: 1-250

bw-rate-limit-no-logging

Description Do not log bandwidth rate limit related state transitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Resume server selection after bandwidth drops below this threshold (in Kbps) (Bandwidth rate limit resume threshold (in Kbps))

Type: number

Range: 1-16777216

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-fail-interval

Description The interval to retry when DNS failed to query (DNS failure interval (in second, default is 30))

Type: number

Range: 0-1800

Default: 30

dns-query-interval

Description The interval to query DNS server for the hostname (DNS query interval (in minute, default is 10))

Type: number

Range: 1-1440

Default: 10

dynamic-server-prefix

Description Prefix of dynamic server (Prefix of dynamic server (default is “DRS”))

Type: string

Maximum Length: 3 characters

Maximum Length: 1 characters

Default: DRS

every

Description Slow start connection limit increment interval (default 10)

Type: number

Range: 1-60

Default: 10

extended-stats

Description Enable extended statistics on real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

initial-slow-start

Description Initial slow start connection limit (default 128)

Type: number

Range: 1-4095

Default: 128

log-selection-failure

Description Enable real-time logging for server selection failure event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-dynamic-server

Description Maximum dynamic server number (Maximum dynamic server number (default is 255))

Type: number

Range: 1-1023

Default: 255

min-ttl-ratio

Description Minimum TTL to DNS query interval ratio (Minimum TTL ratio (default is 2))

Type: number

Range: 1-15

Default: 2

name

Description Server template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

resume

Description Resume accepting new connection after connection number drops below threshold (Connection resume threshold)

Type: number

Range: 1-1048575

slow-start

Description Slowly ramp up the connection number after server is up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spoofing-cache

Description Servers under the template are spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server; 'stats-data-disable': Disable statistical data collection for real server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

till

Description Slow start ends when slow start connection limit reaches a number (default 4096) (Slow start ends when connection limit reaches this number)

Type: number

Range: 1-65535

Default: 4096

times

Description Slow start connection limit multiply by a number every interval (default 2) (Multiply by this number every interval)

Type: number

Range: 2-10

Default: 2

Mutual Exclusion: times and add are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight for the Real Servers (Connection Weight (default is 1))

Type: number

Range: 1-1000

Default: 1

monitor-list

Specification	Value
Type	*list*
Block object keys	

clear-cfg

Type: List

id

Description Monitor template ID Number

Type: number

Range: 1-16

link-disable-cfg

Type: List

link-down-cfg

Type: List

link-enable-cfg

Type: List

link-up-cfg

Type: List

monitor-relation

Description 'monitor-and': Configures the monitors in current template to work with AND logic; 'monitor-or': Configures the monitors in current template to work with OR logic;

Type: string

Supported Values: monitor-and, monitor-or

Default: monitor-and

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_clear-cfg

Specification	Value
Type	*list*
Block object keys	

clear-all-partition

Description Partition name to clear

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

clear-all-partition-all

Description Clear all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clear-all-sequence

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

clear-partition

Description Partition name to clear

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

clear-partition-all

Description Clear all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clear-sequence

Description Specify the port physical port number

Type: number

Range: 1-16

sessions

Description 'all': Clear all sessions; 'sequence': Sequence number;

Type: string

Supported Values: all, sequence

monitor-list_link-enable-cfg

Specification	Value
Type	*list*
Block object keys	

ena-sequence

Description Sequence number (Specify the physical port number)

Type: number

Range: 1-16

enaeth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

monitor-list_link-up-cfg

Specification	Value
Type	*list*
Block object keys	

link-up-sequence1

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-up-sequence2

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-up-sequence3

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

linkup-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

monitor-list_link-down-cfg

Specification	Value
Type	*list*
Block object keys	

link-down-sequence1

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-down-sequence2

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-down-sequence3

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

linkdown-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

monitor-list_link-disable-cfg

Specification	Value
Type	*list*
Block object keys	

dis-sequence

Description Sequence number (Specify the physical port number)

Type: number

Range: 1-16

diseth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

tcp-proxy-list

Specification	Value
Type	*list*
Block object keys	

ack-aggressiveness

Description 'low': Delayed ACK; 'medium': Delayed ACK, with ACK on each packet with PUSH flag; 'high': ACK on each packet;

Type: string

Supported Values: low, medium, high

Default: low

alive-if-active

Description keep connection alive if active traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

backend-wscale

Description The TCP window scale used for the server side, default is off (number)

Type: number

Range: 1-14

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description send reset to client when server is disabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and down are mutually exclusive

disable-abc

Description Appropriate Byte Counting RFC 3465 Disabled, default is enabled (Appropriate Byte Counting (ABC) is enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sack

Description disable Selective Ack Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-tcp-timestamps

Description disable TCP Timestamps Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-window-scale

Description disable TCP Window-Scale Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

down

Description send reset to client when server is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: down and disable are mutually exclusive

dynamic-buffer-allocation

Description Optimally adjust the transmit and receive buffer sizes of TCP proxy while keeping their sum constant

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

early-retransmit

Description Configure the Early-Retransmit Algorithm (RFC 5827) (Early-Retransmit is disabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin-timeout

Description FIN timeout (sec), default is disabled (number)

Type: number

Range: 1-60

force-delete-timeout

Description The maximum time that a session can stay in the system before being deleted, default is off (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being deleted, default is off (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default is off (cmd is deprecated, use fin-timeout instead) (number)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default is off (number)

Type: number

Range: 1-60

idle-timeout

Description Idle Timeout (Interval of 60 seconds), default is 600 (idle timeout in second, default 600)

Type: number

Range: 1-2097151

Default: 600

init-cwnd

Description The initial congestion control window size (packets), default is 10 (init-cwnd in packets, default 10)

Type: number

Range: 1-15

Default: 10

initial-window-size

Description Set the initial window size, default is off (number)

Type: number

Range: 1-65535

insert-client-ip

Description Insert client ip into TCP option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

invalid-rate-limit

Description Invalid Packet Response Rate Limit (ms), default is 500 (number default 500 challenges)

Type: number

Range: 0-60000000

Default: 500

keepalive-interval

Description Interval between keepalive probes (sec), default is off (number (seconds))

Type: number

Range: 60-12000

keepalive-probes

Description Number of keepalive probes sent, default is off

Type: number

Range: 2-10

limited-slowstart

Description RFC 3742 Limited Slow-Start for TCP with Large Congestion Windows (number)

Type: number

Range: 0-2147483647

Default: 0

maxburst

Description The max packet count sent per transmission event (number)

Type: number

Range: 1-100

Default: 25

min-rto

Description The minmum retransmission timeout, default is 200ms (number)

Type: number

Range: 100-1000

Default: 200

mss

Description Responding MSS to use if client MSS is large, default is off (number)

Type: number

Range: 128-9000

Default: 1460

nagle

Description Enable Nagle Algorithm

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

naked-ack-on-handshake

Description Send naked ack before data during 3-way handshake

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

proxy-header

Description: proxy-header is a **JSON Block**. Please see below for *tcp-proxy-list_proxy-header*

Type: Object

psh-flag-optimization

Description Enable Optimized PSH Flag Use

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

qos

Description QOS level (number)

Type: number

Range: 1-63

reassembly-limit

Description The reassembly queuing limit, default is 25 segments (number)

Type: number

Range: 1-500

Default: 25

reassembly-timeout

Description The reassembly timeout, default is 30sec (number)

Type: number

Range: 1-300

Default: 30

receive-buffer

Description TCP Receive Buffer (default 200k) (number default 200000 bytes)

Type: number

Range: 1-2147483647

Default: 200000

reno

Description Enable Reno Congestion Control Algorithm

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-fwd

Description send reset to server if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-rev

Description send reset to client if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-retries

Description Number of Retries for Retransmit, default is 5

Type: number

Range: 1-20

Default: 5

server-down-action

Description 'FIN': FIN Connection; 'RST': Reset Connection;

Type: string

Supported Values: FIN, RST

syn-retries

Description SYN Retry Numbers, default is 5

Type: number

Range: 1-20

Default: 5

tcp-do-newsack

Description 'enable': Enable fast sack loss recovery; 'disable': Disable fast sack loss recovery; 'auto-select': Auto select fast sack loss recovery (disable);

Type: string

Supported Values: enable, disable, auto-select

Default: auto-select

timewait

Description Timewait Threshold (sec), default 5 (number)

Type: number

Range: 1-60

Default: 5

transmit-buffer

Description TCP Transmit Buffer (default 200k) (number default 200000 bytes)

Type: number

Range: 1-2147483647

Default: 200000

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp-proxy-list_proxy-header

Specification	Value
Type	*object*

proxy-header-action

Description 'insert': Insert proxy header;

Type: string

Supported Values: insert

version

Description 'v1': version 1; 'v2': version 2;

Type: string

Supported Values: v1, v2

ftp-list

Specification	Value
Type	*list*
Block object keys	

active-mode-port

Description Non-Standard FTP Active mode port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-mode-port-val

Description Non-Standard FTP Active mode port

Type: number

Range: 1-65534

Mutual Exclusion: active-mode-port-val and any are mutually exclusive

any

Description Allow any FTP Active mode port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and active-mode-port-val are mutually exclusive

name

Description FTP template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

to

Description End range of FTP Active mode port

Type: number

Range: 1-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

imap-pop3-list

Specification	Value
Type	*list*
Block object keys	

logindisabled

Description Disable Login before STARTTLS.Works only for imap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description IMAP-POP3 Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

starttls

Description 'disabled': Disable STARTTLS; 'optional': STARTTLS is optional requirement; 'enforced': Must issue STARTTLS command before imap transaction;

Type: string

Supported Values: disabled, optional, enforced

Default: disabled

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-ssl-list

Specification	Value
Type	*list*
Block object keys	

alert-type

Description 'fatal': Log fatal alerts;

Type: string

Supported Values: fatal

ca-certs

Type: List

certificate

Description: certificate is a **JSON Block**. Please see below for *server-ssl-list_certificate*

Type: Object

Reference Object: */axapi/v3/slb/template/server-ssl/{name}/certificate*

cipher-template

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: cipher-template, cipher-wo-prio, and shared-partition-cipher-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/cipher*

cipher-without-prio-list

Type: List

close-notify

Description Send close notification when terminate connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

crl-certs

Type: List

dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 30-34

Default: 31

dh-type

Description '1024': 1024; '1024-dsa': 1024-dsa; '2048': 2048;

Type: string

Supported Values: 1024, 1024-dsa, 2048

early-data

Description Enable TLS 1.3 early data (0-RTT)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Type: List

enable-ssli-ftp-alg

Description Enable SSLi FTP over TLS support at which port

Type: number

Range: 1-65535

enable-tls-alert-logging

Description Enable TLS alert logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-enable

Description Enable SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

handshake-logging-enable

Description Enable SSL handshake logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Server SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ocsp-stapling

Description Enable ocsp-stapling support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

renegotiation-disable

Description Disable SSL renegotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-certificate-error

Type: List

server-name

Description Specify Server Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

session-cache-size

Description Session Cache Size (Maximum cache size. Default value 0 (Session ID reuse disabled))

Type: number

Range: 0-128

Default: 0

session-cache-timeout

Description Session Cache Timeout (Timeout value, in seconds. Default no timeout.)

Type: number

Range: 1-7200

session-key-logging-enable

Description Enable SSL session key logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-ticket-enable

Description Enable server side session ticket support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-cipher-template

Description Reference a cipher template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cipher-template, cipher-wo-prio, and cipher-template are mutually exclusive

ssli-logging

Description SSLi logging level, default is error logging only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sslilogging

Description 'disable': Disable all logging; 'all': enable all logging(error, info);

Type: string

Supported Values: disable, all

template-cipher-shared

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/cipher*

use-client-sni

Description use client SNI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description TLS/SSL version, default is the highest number supported (TLS/SSL version: 30-SSLv3.0, 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 30-34

Default: 33

server-ssl-list_crl-certs

Specification	Value
Type	*list*
Block object keys	

crl

Description Certificate Revocation Lists (Certificate Revocation Lists file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

crl-partition-shared

Description Certificate Revocation Lists Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ssl-list_certificate

Specification	Value
Type	*object*

cert

Description Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key

Description Client private-key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description Client Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-ssl-list_ec-list

Specification	Value
Type	*list*
Block object keys	

ec

Description 'secp256r1': X9_62_prime256v1; 'secp384r1': secp384r1;

Type: string

Supported Values: secp256r1, secp384r1, secp521r1, x25519

server-ssl-list_server-certificate-error

Specification	Value
Type	*list*
Block object keys	

error-type

Description 'email': Notify the error via email; 'ignore': Ignore the error, which mean the connection can continue; 'logging': Log the error; 'trap': Notify the error by SNMP trap;

Type: string

Supported Values: email, ignore, logging, trap

server-ssl-list_ca-certs

Specification	Value
Type	*list*
Block object keys	

ca-cert

Description Specify CA certificate

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-cert-partition-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ocsp-sg

Description Specify service-group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/service-group*

server-ocsp-srvr

Description Specify authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/server/ocsp*

server-ssl-list_cipher-without-prio-list

Specification	Value
Type	*list*
Block object keys	

cipher-wo-prio

Description 'SSL3_RSA_DES_192_CBC3_SHA': TLS_RSA_WITH_3DES_EDE_CBC_SHA (0x000A); 'SSL3_RSA_RC4_128_MD5': TLS_RSA_WITH_RC4_128_MD5 (0x0004); 'SSL3_RSA_RC4_128_SHA': TLS_RSA_WITH_RC4_128_SHA (0x0005); 'TLS1_RSA_AES_128_SHA': TLS_RSA_WITH_AES_128_CBC_SHA (0x002F); 'TLS1_RSA_AES_256_SHA': TLS_RSA_WITH_AES_256_CBC_SHA (0x0035); 'TLS1_RSA_AES_128_SHA256': TLS_RSA_WITH_AES_128_CBC_SHA256 (0x003C); 'TLS1_RSA_AES_256_SHA256': TLS_RSA_WITH_AES_256_CBC_SHA256 (0x003D); 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS_DHE_RSA_WITH_AES_128_GCM_SHA256 (0x009E); 'TLS1_DHE_RSA_AES_128_SHA': TLS_DHE_RSA_WITH_AES_128_CBC_SHA (0x0033); 'TLS1_DHE_RSA_AES_128_SHA256': TLS_DHE_RSA_WITH_AES_128_CBC_SHA256 (0x0067); 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS_DHE_RSA_WITH_AES_256_GCM_SHA384 (0x009F); 'TLS1_DHE_RSA_AES_256_SHA': TLS_DHE_RSA_WITH_AES_256_CBC_SHA (0x0039); 'TLS1_DHE_RSA_AES_256_SHA256': TLS_DHE_RSA_WITH_AES_256_CBC_SHA256 (0x006B); 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256 (0xC02B); 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA (0xC009); 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256 (0xC023); 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384 (0xC02C); 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA (0xC00A); 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256 (0xC02F); 'TLS1_ECDHE_RSA_AES_128_SHA': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA

(0xC013); 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256 (0xC027); 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 (0xC030); 'TLS1_ECDHE_RSA_AES_256_SHA': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA (0xC014); 'TLS1_RSA_AES_128_GCM_SHA256': TLS_RSA_WITH_AES_128_GCM_SHA256 (0x009C); 'TLS1_RSA_AES_256_GCM_SHA384': TLS_RSA_WITH_AES_256_GCM_SHA384 (0x009D); 'TLS1_ECDHE_RSA_AES_256_SHA384': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384 (0xC028); 'TLS1_ECDHE_ECDSA_AES_256_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384 (0xC024); 'TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA8); 'TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_ECDSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA9); 'TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256': TLS_DHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCAA);

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256

Mutual Exclusion: cipher-wo-prio, cipher-template, and shared-partition-cipher-template are mutually exclusive

2.120.224 slb template cache

RAM caching template

cache Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*cache-list*
Collection URI	/axapi/v3/slb/template/cache
Element Name	cache
Element URI	/axapi/v3/slb/template/cache/{name}
Element Attributes	cache_attributes
Partition Visibility	shared
Schema	`cache schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/cache

cache attributes

```
POST /axapi/v3/slb/template/cache/
Payload:
{
    "cache": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/slb/template/cache

cache attributes

Get Object

GET

/axapi/v3/slb/template/cache/{name}

cache attributes

```
GET /axapi/v3/slb/template/cache/a
Reponse:
{
    "cache": {
        "name": "a",
        "accept-reload-req": 0,
        "age": 3600,
        "default-policy-nocache": 0,
        "disable-insert-age": 0,
        "disable-insert-via": 0,
        "max-cache-size": 80,
        "min-content-size": 512,
        "max-content-size": 81920,
        "remove-cookies": 0,
        "replacement-policy": "LFU",
        "verify-host": 0,
        "uuid": "91215ea8-b63f-11ef-816c-ae71681635d0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/slb/template/cache/a"
    }
}
```

Get List

GET

/axapi/v3/slb/template/cache

cache-list

Modify Object

POST

/axapi/v3/slb/template/cache/{name}

cache attributes

Replace Object

PUT

/axapi/v3/slb/template/cache/{name}

cache attributes

```
PUT /axapi/v3/slb/template/cache/a
Payload:
{
    "cache": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/slb/template/cache

cache-list

Delete Object

DELETE

/axapi/v3/slb/template/cache/{name}

cache attributes

```
DELETE /axapi/v3/slb/template/cache/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

cache-list

cache-list is **JSON List** of *cache attributes*

cache-list : [

{ *cache attributes* },

{ *cache attributes* },

...

]

cache attributes

accept-reload-req

Description Accept reload requests via cache-control directives in HTTP headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

age

Description Specify duration in seconds cached content valid, default is 3600 seconds (seconds that the cached content is valid (default 3600 seconds))

Type: number

Range: 1-999999

Default: 3600

default-policy-nocache

Description Specify default policy to be to not cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-insert-age

Description Disable insertion of age header in response served from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-insert-via

Description Disable insertion of via header in response served from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-uri-policy

Type: List

logging

Description Specify logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

max-cache-size

Description Specify maximum cache size in megabytes, default is 80MB (RAM cache size in megabytes (default 80MB))

Type: number

Range: 1-4096

Default: 80

max-content-size

Description Maximum size (bytes) of response that can be cached - default 81920 (80KB)

Type: number

Range: 0-268435455

Default: 81920

min-content-size

Description Minimum size (bytes) of response that can be cached - default 512

Type: number

Range: 0-268435455

Default: 512

name

Description Specify cache template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/slb-templ-cache-tmpl*

remove-cookies

Description Remove cookies in response and cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

replacement-policy

Description 'LFU': LFU;

Type: string

Supported Values: LFU

Default: LFU

sampling-enable

Type: List

uri-policy

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-host

Description Verify request using host before sending response from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-uri-policy

Specification	Value
Type	*list*
Block object keys	

local-uri

Description Specify Local URI for caching (Specify URI pattern that the policy should be applied to, maximum 63 charaters)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Cache hits; 'miss': Cache misses; 'bytes_served': Bytes served from cache; 'total_req': Total requests received; 'caching_req': Total requests to cache; 'nc_req_header': slbTemplateCacheNcReqHeader, help nc_req_header; 'nc_res_header': slbTemplateCacheNcResHeader, help nc_res_header; 'rv_success': some help string; 'rv_failure': slbTemplateCacheRvFailure, help rv_failure; 'ims_request': some help string; 'nm_response': some help string; 'rsp_type_CL': some help string; 'rsp_type_CE': some help string; 'rsp_type_304': some help string; 'rsp_type_other': some help string; 'rsp_no_compress': some help string; 'rsp_gzip': some help string; 'rsp_deflate': some help string; 'rsp_other': some help string; 'nocache_match': some help string; 'match': some help string; 'invalidate_match': some help string; 'content_toobig': slbTemplateCacheContentToobig, help content_toobig; 'content_toosmall': slbTemplateCacheContentToosmall, help content_toosmall; 'entry_create_failures': slbTemplateCacheEntryCreateFailures, help entry_create_failures; 'mem_size': some help string; 'entry_num': some help string; 'replaced_entry': some help string; 'aging_entry': some help string; 'cleaned_entry': some help string; 'rsp_type_stream': some help string; 'header_save_error': some help string; 'rsp_br': rsp_br;

Type: string

Supported Values: all, hits, miss, bytes_served, total_req, caching_req, nc_req_header, nc_res_header, rv_success, rv_failure, ims_request, nm_response, rsp_type_CL, rsp_type_CE, rsp_type_304, rsp_type_other, rsp_no_compress, rsp_gzip, rsp_deflate, rsp_other, nocache_match, match, invalidate_match, content_toobig, content_toosmall, entry_create_failures, mem_size, entry_num, replaced_entry, aging_entry, cleaned_entry, rsp_type_stream, header_save_error, rsp_br

uri-policy

Specification	Value
Type	*list*
Block object keys	

cache-action

Description 'cache': Specify if certain URIs should be cached; 'nocache': Specify if certain URIs should not be cached;

Type: string

Supported Values: cache, nocache

cache-value

Description Specify seconds that content should be cached, default is age specified in cache template

Type: number

Range: 1-999999

invalidate

Description Specify if URI should invalidate cache entries matching pattern (pattern that would match entries to be invalidated (64 chars max))

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uri

Description Specify URI for cache policy (Specify URI pattern that the policy should be applied to, maximum 63 charaters)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

2.120.225 slb template cache stats

Statistics for the object cache

cache Specification

Parameter	Value
Type	*Collection*
Collection Name	*cache-list*
Collection URI	/axapi/v3/slb/template/cache/{name}
Element Name	cache
Element URI	/axapi/v3/slb/template/cache/{name}/stats
Element Attributes	cache_attributes
Partition Visibility	None
Schema	`cache schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/cache/{name}

cache attributes

Create List

POST

/axapi/v3/slb/template/cache/{name}

cache attributes

Get Object

GET

/axapi/v3/slb/template/cache/{name}/stats

cache attributes

Get List

GET

/axapi/v3/slb/template/cache/{name}

DELETE

/axapi/v3/slb/template/cache/{name}/stats

cache attributes

cache-list

cache-list is **JSON List** of *cache attributes*

cache-list : [

{ *cache attributes* },

{ *cache attributes* },

…

]

cache attributes

name

Description Specify cache template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

aging_entry

Description some help string

Type: number

Format: counter

bytes_served

Description Bytes served from cache

Type: number

Format: counter

caching_req

Description Total requests to cache

Type: number

Format: counter

cleaned_entry

Description some help string

Type: number

Format: counter

content_toobig

Description slbTemplateCacheContentToobig, help content_toobig

Type: number

Format: counter

content_toosmall

Description slbTemplateCacheContentToosmall, help content_toosmall

Type: number

Format: counter

entry_create_failures

Description slbTemplateCacheEntryCreateFailures, help entry_create_failures

Type: number

Format: counter

entry_num

Description some help string

Type: number

Format: counter

header_save_error

Description some help string

Type: number

Format: counter

hits

Description Cache hits

Type: number

Format: counter

ims_request

Description some help string

Type: number

Format: counter

invalidate_match

Description some help string

Type: number

Format: counter

match

Description some help string

Type: number

Format: counter

mem_size

Description some help string

Type: number

Format: counter

miss

Description Cache misses

Type: number

Format: counter

nc_req_header

Description slbTemplateCacheNcReqHeader, help nc_req_header

Type: number

Format: counter

nc_res_header

Description slbTemplateCacheNcResHeader, help nc_res_header

Type: number

Format: counter

nm_response

Description some help string

Type: number

Format: counter

nocache_match

Description some help string

Type: number

Format: counter

replaced_entry

Description some help string

Type: number

Format: counter

rsp_br

Description

Type: number

Format: counter

rsp_deflate

Description some help string

Type: number

Format: counter

rsp_gzip

Description some help string

Type: number

Format: counter

rsp_no_compress

Description some help string

Type: number

Format: counter

rsp_other

Description some help string

Type: number

Format: counter

rsp_type_304

Description some help string

Type: number

Format: counter

rsp_type_CE

Description some help string

Type: number

Format: counter

rsp_type_CL

Description some help string

Type: number

Format: counter

rsp_type_other

Description some help string

Type: number

Format: counter

rsp_type_stream

Description some help string

Type: number

Format: counter

rv_failure

Description slbTemplateCacheRvFailure, help rv_failure

Type: number

Format: counter

rv_success

Description some help string

Type: number

Format: counter

total_req

Description Total requests received

Type: number

Format: counter

2.120.226 slb template cipher

SSL Cipher Template

cipher Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*

Description 'SSL3_RSA_DES_192_CBC3_SHA': TLS_RSA_WITH_3DES_EDE_CBC_SHA (0x000A); 'SSL3_RSA_RC4_128_MD5': TLS_RSA_WITH_RC4_128_MD5 (0x0004); 'SSL3_RSA_RC4_128_SHA': TLS_RSA_WITH_RC4_128_SHA (0x0005); 'TLS1_RSA_AES_128_SHA': TLS_RSA_WITH_AES_128_CBC_SHA (0x002F); 'TLS1_RSA_AES_256_SHA': TLS_RSA_WITH_AES_256_CBC_SHA (0x0035); 'TLS1_RSA_AES_128_SHA256': TLS_RSA_WITH_AES_128_CBC_SHA256 (0x003C); 'TLS1_RSA_AES_256_SHA256': TLS_RSA_WITH_AES_256_CBC_SHA256 (0x003D); 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS_DHE_RSA_WITH_AES_128_GCM_SHA256 (0x009E); 'TLS1_DHE_RSA_AES_128_SHA': TLS_DHE_RSA_WITH_AES_128_CBC_SHA (0x0033); 'TLS1_DHE_RSA_AES_128_SHA256': TLS_DHE_RSA_WITH_AES_128_CBC_SHA256 (0x0067); 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS_DHE_RSA_WITH_AES_256_GCM_SHA384 (0x009F); 'TLS1_DHE_RSA_AES_256_SHA': TLS_DHE_RSA_WITH_AES_256_CBC_SHA (0x0039); 'TLS1_DHE_RSA_AES_256_SHA256': TLS_DHE_RSA_WITH_AES_256_CBC_SHA256 (0x006B); 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256 (0xC02B); 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA (0xC009); 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256 (0xC023); 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384 (0xC02C); 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA

(0xC00A); 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256 (0xC02F); 'TLS1_ECDHE_RSA_AES_128_SHA': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA (0xC013); 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256 (0xC027); 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 (0xC030); 'TLS1_ECDHE_RSA_AES_256_SHA': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA (0xC014); 'TLS1_RSA_AES_128_GCM_SHA256': TLS_RSA_WITH_AES_128_GCM_SHA256 (0x009C); 'TLS1_RSA_AES_256_GCM_SHA384': TLS_RSA_WITH_AES_256_GCM_SHA384 (0x009D); 'TLS1_ECDHE_RSA_AES_256_SHA384': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384 (0xC028); 'TLS1_ECDHE_ECDSA_AES_256_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384 (0xC024); 'TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA8); 'TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_ECDSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA9); 'TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256': TLS_DHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCAA); 'TLS1_ECDHE_SM2_WITH_SMS4_SM3': TLS_ECDHE_SM2_WITH_SMS4_SM3 (0xE102); 'TLS1_ECDHE_SM2_WITH_SMS4_SHA256': TLS_ECDHE_SM2_WITH_SMS4_SHA256 (0xE105); 'TLS1_ECDHE_SM2_WITH_SMS4_GCM_SM3': TLS_ECDHE_SM2_WITH_SMS4_GCM_SM3 (0xE107);

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_SM2_WITH_SMS4_SM3, TLS1_ECDHE_SM2_WITH_SMS4_SHA256, TLS1_ECDHE_SM2_WITH_SMS4_GCM_SM3

priority

Description Cipher priority (Cipher priority (default 1))

Type: number

Range: 1-100

Default: 1

2.120.227 slb template client-ssh

Client Side SSH Template

client-ssh Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*client-ssh-list*
Collection URI	/axapi/v3/slb/template/client-ssh
Element Name	client-ssh
Element URI	/axapi/v3/slb/template/client-ssh/{name}
Element Attributes	client-ssh_attributes
Partition Visibility	shared
Schema	`client-ssh schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/client-ssh

client-ssh attributes

```
POST /axapi/v3/slb/template/client-ssh/
Payload:
{
    "client-ssh": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/slb/template/client-ssh

client-ssh attributes

Get Object

GET

/axapi/v3/slb/template/client-ssh/{name}

client-ssh attributes

```
GET /axapi/v3/slb/template/client-ssh/a
Reponse:
{
```

/axapi/v3/slb/template/client-ssh

client-ssh-list

Modify Object

POST

/axapi/v3/slb/template/client-ssh/{name}

client-ssh attributes

Replace Object

PUT

/axapi/v3/slb/template/client-ssh/{name}

client-ssh attributes

```
PUT /axapi/v3/slb/template/client-ssh/a
Payload:
{
    "client-ssh": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/slb/template/client-ssh

client-ssh-list

Delete Object

DELETE

/axapi/v3/slb/template/client-ssh/{name}

client-ssh attributes

```
DELETE /axapi/v3/slb/template/client-ssh/a
```

(continues on next page)

(continued from previous page)

```
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

client-ssh-list

client-ssh-list is **JSON List** of *client-ssh attributes*

client-ssh-list : [

{ *client-ssh attributes* },

{ *client-ssh attributes* },

...

]

client-ssh attributes

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

forward-proxy-enable

Description Enable SSH forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-hostkey

Description Specify private-key (Key Name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

name

Description Client SSH Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.228 slb template client-ssh stats

Statistics for the object client-ssh

client-ssh Specification

Parameter	Value
Type	*Collection*
Collection Name	*client-ssh-list*
Collection URI	/axapi/v3/slb/template/client-ssh/{name}
Element Name	client-ssh
Element URI	/axapi/v3/slb/template/client-ssh/{name}/stats
Element Attributes	client-ssh_attributes
Partition Visibility	None
Schema	`client-ssh schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/client-ssh/{name}

client-ssh attributes

Create List

POST

/axapi/v3/slb/template/client-ssh/{name}

client-ssh attributes

Get Object

Delete Object

DELETE

/axapi/v3/slb/template/client-ssh/{name}/stats

client-ssh attributes

client-ssh-list

client-ssh-list is **JSON List** of *client-ssh attributes*

```
client-ssh-list : [
        { client-ssh attributes },
        { client-ssh attributes },
        ...
    ]
```

client-ssh attributes

name

Description Client SSH Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

failed_handshakes

Description some help string

Type: number

Format: counter

forwarding_errors

Description some help string

Type: number

Format: counter

successful_handshakes

Description some help string

Type: number

Format: counter

2.120.229 slb template client-ssl

Client SSL Template

client-ssl Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*client-ssl-list*
Collection URI	/axapi/v3/slb/template/client-ssl
Element Name	client-ssl
Element URI	/axapi/v3/slb/template/client-ssl/{name}
Element Attributes	client-ssl_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/slb/template/client-ssl/{name}/oper
Schema	`client-ssl schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/client-ssl

client-ssl attributes

```
POST /axapi/v3/slb/template/client-ssl/a/certificate/
Payload:
{
    "certificate": {
        "cert": "a",
        "key": "a",
        "passphrase": "a",
        "chain-cert": "a"
    }
}

client-ssl-list

Delete Object

DELETE

/axapi/v3/slb/template/client-ssl/{name}

client-ssl attributes

client-ssl-list

client-ssl-list is **JSON List** of *client-ssl attributes*

client-ssl-list : [

{ *client-ssl attributes* },

{ *client-ssl attributes* },

...

]

client-ssl attributes

ad-group-list

Description Forward proxy bypass if ad-group matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

alert-type

Description 'fatal': Log fatal alerts;

Type: string

Supported Values: fatal

auth-sg

Description Specify authorization LDAP service group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: auth-sg and authen-name are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

auth-sg-dn

Description Use Subject DN as LDAP search base DN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-sg-filter

Description Specify LDAP search filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

auth-username

Description Specify the Username Field in the Client Certificate(If multi-fields are specificed, prior one has higher priority)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-username-attribute

Description Specify attribute name of username for client SSL authorization

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

authen-name

Description Specify authorization LDAP server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: authen-name and auth-sg are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/ldap*

authorization

Description Specify LDAP server for client SSL authorizaiton

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bypass-cert-issuer-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-issuer-class-list-name and bypass-cert-issuer-multi-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

bypass-cert-issuer-multi-class-list

Type: List

bypass-cert-san-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-san-class-list-name and bypass-cert-san-multi-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

bypass-cert-san-multi-class-list

Type: List

bypass-cert-subject-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-subject-class-list-name and bypass-cert-subject-multi-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

bypass-cert-subject-multi-class-list

Type: List

ca-certs

Type: List

cache-persistence-list-name

Description Class List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

case-insensitive

Description Case insensitive forward proxy bypass

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

central-cert-pin-list

Description Forward proxy bypass if SNI string is contained in central updated cert-pinning-candidate list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cert-revoke-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection; 'block': block the connection with a warning page;

Type: string

Supported Values: bypass, continue, drop, block

Default: bypass

cert-unknown-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection; 'block': block the connection with a warning page;

Type: string

Supported Values: bypass, continue, drop, block

Default: bypass

certificate-issuer-contains-list

Type: List

certificate-issuer-ends-with-list

Type: List

certificate-issuer-equals-list

Type: List

certificate-issuer-starts-with-list

Type: List

certificate-list

Type: List

Reference Object: */axapi/v3/slb/template/client-ssl/{name}/certificate/{cert}*

certificate-san-contains-list

Type: List

certificate-subject-starts-with-list

Type: List

chain-cert

Description Chain Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-cert and chain-cert-shared-str are mutually exclusive

chain-cert-shared-str

Description Chain Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-cert-shared-str and chain-cert are mutually exclusive

cipher-without-prio-list

Type: List

class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: class-list-name and multi-clist-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

client-auth-case-insensitive

Description Case insensitive forward proxy client auth bypass

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-auth-class-list

Description Forward proxy client auth bypass if SNI string matches class-list (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-auth-contains-list

Type: List

client-auth-ends-with-list

Type: List

client-auth-equals-list

Type: List

client-auth-starts-with-list

Type: List

client-certificate

Description 'Ignore': Don't request client certificate; 'Require': Require client certificate; 'Request': Request client certificate;

Type: string

Supported Values: Ignore, Require, Request

Default: Ignore

client-ipv4-list

Type: List

client-ipv6-list

Type: List

close-notify

Description Send close notification when terminate connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

contains-list

Type: List

crl-certs

Type: List

dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 30-34

Default: 31

dh-type

Description '1024': 1024; '1024-dsa': 1024-dsa; '2048': 2048;

Type: string

Supported Values: 1024, 1024-dsa, 2048

direct-client-server-auth

Description Let backend server does SSL client authentication directly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv3

Description Reject Client requests for SSL version 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

early-data

Description Enable TLS 1.3 early data (0-RTT)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Type: List

enable-ssli-ftp-alg

Description Enable SSLi FTP over TLS support at which port

Type: number

Range: 1-65535

enable-tls-alert-logging

Description Enable TLS alert logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ends-with-list

Type: List

equals-list

Type: List

exception-ad-group-list

Description Exceptions to forward proxy bypass if ad-group matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-certificate-issuer-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-certificate-san-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-certificate-subject-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-client-ipv4-list

Type: List

exception-client-ipv6-list

Type: List

exception-server-ipv4-list

Type: List

exception-server-ipv6-list

Type: List

exception-sni-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-user-name-list

Description Exceptions to forward proxy bypass if user-name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-web-category

Description: exception-web-category is a **JSON Block**. Please see below for *exception-web-category*

Type: Object

exception-web-reputation

Description: exception-web-reputation is a **JSON Block**. Please see below for *exception-web-reputation*

Type: Object

expire-hours

Description Certificate lifetime in hours

Type: number

Range: 1-168

forward-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: forward-encrypted and fp-ca-certificate are mutually exclusive

forward-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-passphrase and fp-ca-certificate are mutually exclusive

forward-proxy-alt-sign

Description Forward proxy alternate signing cert and key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-block-message

Description Message to be included on the block page (Message, enclose in quotes if spaces are present)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

forward-proxy-ca-cert

Description CA Certificate for forward proxy (SSL forward proxy CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-proxy-ca-cert,fp-ca-certificate, fp-ca-key, fp-ca-key-pass-phrase, fp-ca-key-passphrase, fp-ca-key-encrypted, fp-ca-chain-cert, and fp-ca-certificate-shared are mutually exclusive

forward-proxy-ca-key

Description CA Private Key for forward proxy (SSL forward proxy CA Key Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-proxy-ca-key,fp-ca-certificate, fp-ca-key, fp-ca-key-pass-phrase, fp-ca-key-passphrase, fp-ca-key-encrypted, fp-ca-chain-cert, and fp-ca-certificate-shared are mutually exclusive

forward-proxy-cert-cache-limit

Description Certificate cache size limit, default is 524288 (set to 0 for unlimited size)

Type: number

Range: 0-2147483647

Default: 524288

forward-proxy-cert-cache-timeout

Description Certificate cache timeout, default is 1 hour (seconds, set to 0 for never timeout)

Type: number

Range: 0-2147483647

Default: 3600

forward-proxy-cert-expiry

Description Adjust certificate expiry relative to the time when it is created on the device

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-cert-not-ready-action

Description 'bypass': bypass the connection; 'reset': reset the connection; 'intercept': wait for cert and then inspect the connection;

Type: string

Supported Values: bypass, reset, intercept

Default: bypass

forward-proxy-cert-revoke-action

Description Action taken if a certificate is irreversibly revoked, bypass SSLi processing by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-cert-unknown-action

Description Action taken if a certificate revocation status is unknown, bypass SSLi processing by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-crl-disable

Description Disable Certificate Revocation List checking for forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-decrypted-dscp

Description Apply a DSCP to decrypted and bypassed traffic (DSCP to apply to decrypted traffic)

Type: number

Range: 1-63

forward-proxy-decrypted-dscp-bypass

Description DSCP to apply to bypassed traffic

Type: number

Range: 1-63

forward-proxy-enable

Description Enable SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward-proxy-enable and ssli-inbound-enable are mutually exclusive

forward-proxy-esni-action

Description Action taken if receiving encrypted server name indication extension in client hello MSG, bypass the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-failsafe-disable

Description Disable Failsafe for SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-hash-persistence-interval

Description Set the time interval to save the hash persistence certs (Interval value, in minutes)

Type: number

Range: 1-720

Default: 30

forward-proxy-log-disable

Description Disable SSL forward proxy logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-no-shared-cipher-action

Description Action taken if handshake fails due to no shared ciper, close the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-no-sni-action

Description 'intercept': intercept in no SNI case; 'bypass': bypass in no SNI case; 'reset': reset in no SNI case;

Type: string

Supported Values: intercept, bypass, reset

Default: intercept

forward-proxy-ocsp-disable

Description Disable ocsp-stapling for forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-require-sni-cert-matched

Description 'no-match-action-inspect': Inspected if not matched; 'no-match-action-drop': Dropped if not matched;

Type: string

Supported Values: no-match-action-inspect, no-match-action-drop

forward-proxy-selfsign-redir

Description Redirect connections to pages with self signed certs to a warning page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-ssl-version

Description TLS/SSL version, default is TLS1.2 (TLS/SSL version: 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 31-34

Default: 33

forward-proxy-trusted-ca-lists

Type: List

forward-proxy-verify-cert-fail-action

Description Action taken if certificate verification fails, close the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fp-alt-cert

Description CA Certificate for forward proxy alternate signing (Certificate name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

fp-alt-key

Description CA Private Key for forward proxy alternate signing (Key name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

fp-alt-shared

Description Alternate CA Certificate and Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-ca-certificate

Description CA Certificate for forward proxy (SSL forward proxy CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-certificate,forward-proxy-ca-cert, fp-ca-shared, forward-proxy-ca-key, forward-passphrase, forward-encrypted, and fp-ca-key-shared are mutually exclusive

fp-ca-certificate-shared

Description CA Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-certificate-shared, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-chain-cert, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-key

Description CA Private Key for forward proxy (SSL forward proxy CA Key Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-key, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: fp-ca-key-encrypted, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-key-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-key-passphrase, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-key-shared

Description CA Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-key-shared and fp-ca-certificate are mutually exclusive

fp-ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-shared and fp-ca-certificate are mutually exclusive

fp-cert-ext-aia-ca-issuers

Description CA Issuers (Authority Information Access URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-ext-aia-ca-issuers and fp-cert-ext-aia-ocsp are mutually exclusive

fp-cert-ext-aia-ocsp

Description OCSP (Authority Information Access URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-ext-aia-ocsp and fp-cert-ext-aia-ca-issuers are mutually exclusive

fp-cert-ext-crldp

Description CRL Distribution Point (CRL Distribution Point URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

fp-cert-fetch-autonat

Description 'auto': Configure auto NAT for server certificate fetching;

Type: string

Supported Values: auto

Mutual Exclusion: fp-cert-fetch-autonat and fp-cert-fetch-natpool-name are mutually exclusive

fp-cert-fetch-autonat-precedence

Description Set this NAT pool as higher precedence than other source NAT like configued under template policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-cert-fetch-natpool-name

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-fetch-natpool-name, shared-partition-pool, and fp-cert-fetch-autonat are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

fp-cert-fetch-natpool-name-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

fp-cert-fetch-natpool-precedence

Description Set this NAT pool as higher precedence than other source NAT like configued under template policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-esni-action

Description 'bypass': bypass SSLi processing; 'drop': close the connection;

Type: string

Supported Values: bypass, drop

Default: bypass

handshake-logging-enable

Description Enable SSL handshake logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hsm-type

Description 'thales-embed': Thales embed key; 'thales-hwcrhk': Thales hwcrhk Key;

Type: string

Supported Values: thales-embed, thales-hwcrhk

inspect-certificate-issuer-cl-name

Description Forward proxy Inspect if Certificate issuer matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

inspect-certificate-san-cl-name

Description Forward proxy Inspect if Certificate Subject Alternative Name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

inspect-certificate-subject-cl-name

Description Forward proxy Inspect if Certificate Subject matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

inspect-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

ja3-enable

Description Enable JA3 features

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ja3-insert-http-header

Description Insert the JA3 hash into this request as a HTTP header (HTTP Header Name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ja3-reject-class-list

Description Drop request if the JA3 hash matches this class-list (type string-case-insensitive) (Class-List Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

ja3-reject-max-number-per-host

Description Drop request if numbers of JA3 of this client address exceeded

Type: number

Range: 1-256

ja3-ttl

Description seconds to keep each JA3 record

Type: number

Range: 1-86400

Default: 600

ja4-enable

Description Enable JA4 features

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ja4-insert-http-header

Description Insert the JA4 hash into this request as a HTTP header (HTTP Header Name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ja4-reject-class-list

Description Drop request if the JA4 hash matches this class-list (type string-case-insensitive) (Class-List Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

ja4-reject-max-number-per-host

Description Drop request if numbers of JA4 of this client address exceeded

Type: number

Range: 1-256

ja4-ttl

Description seconds to keep each JA4 record

Type: number

Range: 1-86400

Default: 600

ldap-base-dn-from-cert

Description Use Subject DN as LDAP search base DN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-search-filter

Description Specify LDAP search filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

local-cert-pin-list

Description: local-cert-pin-list is a **JSON Block**. Please see below for *local-cert-pin-list*

Type: Object

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-class-list

Type: List

name

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-anti-replay

Description Disable anti-replay protection for TLS 1.3 early data (0-RTT data)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-shared-cipher-action

Description 'bypass': bypass SSLi processing; 'drop': close the connection;

Type: string

Supported Values: bypass, drop

Default: drop

non-ssl-bypass-l4session

Description Handle the non-ssl session as L4 for performance optimization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

non-ssl-bypass-service-group

Description Service Group for Bypass non-ssl traffic (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

notafter

Description notAfter date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notafterday

Description Day

Type: number

Range: 1-31

notaftermonth

Description Month

Type: number

Range: 1-12

notafteryear

Description Year

Type: number

Range: 2005-2035

notbefore

Description notBefore date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notbeforeday

Description Day

Type: number

Range: 1-31

notbeforemonth

Description Month

Type: number

Range: 1-12

notbeforeyear

Description Year

Type: number

Range: 2005-2035

ocsp-stapling

Description Config OCSP stapling support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocspst-ca-cert

Description CA certificate

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

ocspst-ocsp

Description Specify OCSP Authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocspst-sg

Description Specify authentication service group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: ocspst-sg and ocspst-srvr are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

ocspst-sg-days

Description Specify update period, in days

Type: number

Range: 1-31

Mutual Exclusion: ocspst-sg-days, ocspst-sg-hours, and ocspst-sg-minutes are mutually exclusive

ocspst-sg-hours

Description Specify update period, in hours

Type: number

Range: 1-23

Default: 1

Mutual Exclusion: ocspst-sg-hours, ocspst-sg-days, and ocspst-sg-minutes are mutually exclusive

ocspst-sg-minutes

Description Specify update period, in minutes

Type: number

Range: 1-59

Mutual Exclusion: ocspst-sg-minutes, ocspst-sg-days, and ocspst-sg-hours are mutually exclusive

ocspst-sg-timeout

Description Specify retry timeout (Default is 30 mins)

Type: number

Range: 1-44640

Default: 30

ocspst-srvr

Description Specify OCSP authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ocspst-srvr and ocspst-sg are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/ocsp*

ocspst-srvr-days

Description Specify update period, in days

Type: number

Range: 1-31

Mutual Exclusion: ocspst-srvr-days, ocspst-srvr-hours, and ocspst-srvr-minutes are mutually exclusive

ocspst-srvr-hours

Description Specify update period, in hours

Type: number

Range: 1-23

Default: 1

Mutual Exclusion: ocspst-srvr-hours, ocspst-srvr-days, and ocspst-srvr-minutes are mutually exclusive

ocspst-srvr-minutes

Description Specify update period, in minutes

Type: number

Range: 1-59

Mutual Exclusion: ocspst-srvr-minutes, ocspst-srvr-days, and ocspst-srvr-hours are mutually exclusive

ocspst-srvr-timeout

Description Specify retry timeout (Default is 30 mins)

Type: number

Range: 1-44640

Default: 30

renegotiation-disable

Description Disable SSL renegotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-ca-lists

Type: List

require-sni-cert-matched

Description SNI is required to match configured certificate subject or SAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

require-web-category

Description Wait for web category to be resolved before taking bypass decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

server-ipv4-list

Type: List

server-ipv6-list

Type: List

server-name-auto-map

Description Enable automatic mapping of server name indication in Client hello extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-list

Type: List

session-cache-size

Description Session Cache Size (Maximum cache size. Default value 0 (Session ID reuse disabled))

Type: number

session-cache-timeout

Description Session Cache Timeout (Timeout value, in seconds. Default value 0 (Session cache timeout disabled))

Type: number

Range: 0-604800

Default: 0

session-key-logging-enable

Description Enable SSL session key logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-ticket-disable

Description Disable client side session ticket support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-ticket-lifetime

Description Session ticket lifetime in seconds from stateless session resumption (Lifetime value in seconds. Default value 0 (Session ticket lifetime is 7200 seconds))

Type: number

Range: 0-2147483647

Default: 0

shared-partition-cipher-template

Description Reference a cipher template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cipher-template, template-cipher, and cipher-wo-prio are mutually exclusive

shared-partition-pool

Description Reference a NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and fp-cert-fetch-natpool-name are mutually exclusive

sni-bypass-enable-log

Description Enable logging when bypass event happens, disabled by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-bypass-expired-cert

Description Bypass when certificate expired

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-bypass-explicit-list

Description Bypass when matched explicit bypass list (Specify class list name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

sni-bypass-missing-cert

Description Bypass when missing cert/key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-enable-log

Description Enable logging of sni-auto-map failures. Disable by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-false-start-disable

Description disable SSL False Start

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssli-inbound-enable

Description Enable inbound SSLi

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ssli-inbound-enable and forward-proxy-enable are mutually exclusive

ssli-logging

Description SSLi logging level, default is error logging only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sslilogging

Description 'disable': Disable all logging; 'all': enable all logging(error, info);

Type: string

Supported Values: disable, all

sslv2-bypass-service-group

Description Service Group for Bypass SSLV2 (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

starts-with-list

Type: List

template-cipher

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-cipher, shared-partition-cipher-template, and cipher-wo-prio are mutually exclusive

Reference Object: */axapi/v3/slb/template/cipher*

template-cipher-shared

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/cipher*

template-hsm

Description HSM Template (HSM Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/hsm/template*

user-name-list

Description Forward proxy bypass if user-name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-cert-fail-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection; 'block': block the connection with a warning page;

Type: string

Supported Values: bypass, continue, drop, block

Default: drop

version

Description TLS/SSL version, default is the highest number supported (TLS/SSL version: 30-SSLv3.0, 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 1-34

web-category

Description: web-category is a **JSON Block**. Please see below for *web-category*

Type: Object

web-reputation

Description: web-reputation is a **JSON Block**. Please see below for *web-reputation*

Type: Object

bypass-cert-subject-multi-class-list

Specification	Value
Type	*list*
Block object keys	

bypass-cert-subject-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-subject-multi-class-list-name and bypass-cert-subject-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

certificate-san-contains-list

Specification	Value
Type	*list*
Block object keys	

certificate-san-contains

Description Forward proxy bypass if Certificate SAN contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

equals-list

Specification	Value
Type	*list*
Block object keys	

equals

Description Forward proxy bypass if SNI string equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ipv6-list

Specification	Value
Type	*list*
Block object keys	

client-ipv6-list-name

Description IPV6 client class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

forward-proxy-trusted-ca-lists

Specification	Value
Type	*list*
Block object keys	

forward-proxy-trusted-ca

Description Forward proxy trusted CA file (CA file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

fp-trusted-ca-shared

Description Trusted CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Specification	Value
Type	*list*
Block object keys	

ec

Description 'secp256r1': X9_62_prime256v1; 'secp384r1': secp384r1;

Type: string

Supported Values: secp256r1, secp384r1, secp521r1, x25519

contains-list

Specification	Value
Type	*list*
Block object keys	

contains

Description Forward proxy bypass if SNI string contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ends-with-list

Specification	Value
Type	*list*
Block object keys	

ends-with

Description Forward proxy bypass if SNI string ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ca-certs

Specification	Value
Type	*list*
Block object keys	

ca-cert

Description CA Certificate (CA Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ocsp

Description Specify ocsp authentication server(s) for client certificate verification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ocsp-sg

Description Specify service-group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/service-group*

client-ocsp-srvr

Description Specify authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/server/ocsp/instance*

client-auth-contains-list

Specification	Value
Type	*list*
Block object keys	

client-auth-contains

Description Forward proxy bypass if SNI string contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

certificate-subject-contains-list

Specification	Value
Type	*list*
Block object keys	

certificate-subject-contains

Description Forward proxy bypass if Certificate Subject contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

req-ca-lists

Specification	Value
Type	*list*
Block object keys	

client-cert-req-ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-certificate-Request-CA

Description Send CA lists in certificate request (CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

certificate-subject-starts-with-list

Specification	Value
Type	*list*
Block object keys	

certificate-subject-starts

Description Forward proxy bypass if Certificate Subject starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

web-reputation

Specification	Value
Type	*object*

bypass-low-risk

Description Bypass when reputation score is greater than or equal to 61

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-low-risk,bypass-trustworthy, bypass-moderate-risk, bypass-suspicious, bypass-malicious, and bypass-threshold are mutually exclusive

bypass-malicious

Description Bypass when reputation score is greater than or equal to 1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-malicious,bypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-suspicious, and bypass-threshold are mutually exclusive

bypass-moderate-risk

Description Bypass when reputation score is greater than or equal to 41

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-moderate-risk,bypass-trustworthy, bypass-low-risk, bypass-suspicious, bypass-malicious, and bypass-threshold are mutually exclusive

bypass-suspicious

Description Bypass when reputation score is greater than or equal to 21

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-suspicious,bypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-malicious, and bypass-threshold are mutually exclusive

bypass-threshold

Description Bypass when reputation score is greater than or equal to the customized score (1-100)

Type: number

Range: 1-100

Mutual Exclusion: bypass-threshold,bypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-suspicious, and bypass-malicious are mutually exclusive

bypass-trustworthy

Description Bypass when reputation score is greater than or equal to 81

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-trustworthy,bypass-low-risk, bypass-moderate-risk, bypass-suspicious, bypass-malicious, and bypass-threshold are mutually exclusive

bypass-cert-issuer-multi-class-list

Specification	Value
Type	*list*
Block object keys	

bypass-cert-issuer-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-issuer-multi-class-list-name and bypass-cert-issuer-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

client-auth-equals-list

Specification	Value
Type	*list*
Block object keys	

client-auth-equals

Description Forward proxy bypass if SNI string equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

certificate-issuer-equals-list

Specification	Value
Type	*list*
Block object keys	

certificate-issuer-equals

Description Forward proxy bypass if Certificate issuer equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

certificate-san-ends-with-list

Specification	Value
Type	*list*
Block object keys	

certificate-san-ends-with

Description Forward proxy bypass if Certificate SAN ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

crl-certs

Specification	Value
Type	*list*
Block object keys	

crl

Description Certificate Revocation Lists (Certificate Revocation Lists file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

crl-shared

Description Certificate Revocation Lists Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'real-estate': real estate category; 'computer-and-internet-security': computer and internet security category; 'financial-services': financial services category; 'business-and-economy': business and economy category; 'computer-and-internet-info': computer and internet info category; 'auctions': auctions category; 'shopping': shopping category; 'cult-and-occult': cult and occult category; 'travel': travel category; 'drugs': drugs category; 'adult-and-pornography': adult and pornography category; 'home-and-garden': home and garden category; 'military': military category; 'social-network': social network category; 'dead-sites': dead sites category; 'stock-advice-and-tools': stock advice and tools category; 'training-and-tools': training and tools category; 'dating': dating category; 'sex-education': sex education category; 'religion': religion category; 'entertainment-and-arts': entertainment and arts category; 'personal-sites-and-blogs': personal sites and blogs category; 'legal': legal category; 'local-information': local information category; 'streaming-media': streaming media category; 'job-search': job search category; 'gambling': gambling category; 'translation': translation category; 'reference-and-research': reference and research category; 'shareware-and-freeware': shareware and freeware category; 'peer-to-peer': peer to peer category; 'marijuana': marijuana category; 'hacking': hacking category; 'games': games category; 'philosophy-and-politics': philosophy and politics category; 'weapons': weapons category; 'pay-to-surf': pay to surf category; 'hunting-and-fishing': hunting and fishing category; 'society': society category; 'educational-institutions': educational institutions category; 'online-greeting-cards': online greeting cards category; 'sports': sports category; 'swimsuits-and-intimate-apparel': swimsuits and intimate apparel category; 'questionable': questionable category; 'kids': kids category; 'hate-and-racism': hate and racism category; 'personal-storage': personal storage category; 'violence': violence category; 'keyloggers-and-monitoring': keyloggers and monitoring category; 'search-engines': search engines category; 'internet-portals': internet portals category; 'web-advertisements': web advertisements category; 'cheating': cheating category; 'gross': gross category; 'web-based-email': web based email category; 'malware-sites': malware sites category; 'phishing-and-other-fraud': phishing and other fraud category; 'proxy-avoid-and-anonymizers': proxy avoid and anonymizers category; 'spyware-and-adware': spyware and adware category; 'music': music category; 'government': government category; 'nudity': nudity category; 'news-and-media': news and media category; 'illegal': illegal category; 'CDNs': content delivery networks category; 'internet-communications': internet communications category; 'bot-nets': bot nets category; 'abortion': abortion category; 'health-and-medicine': health and medicine category; 'confirmed-SPAM-sources': confirmed SPAM sources category; 'SPAM-URLs': SPAM URLs category; 'unconfirmed-SPAM-sources': unconfirmed SPAM sources category; 'open-HTTP-proxies': open HTTP proxies category; 'dynamically-generated-content': dynamically generated content category; 'parked-domains': parked domains category; 'alcohol-and-tobacco': alcohol and tobacco category; 'private-IP-addresses': private IP addresses category; 'image-and-video-search': image and video search category; 'fashion-and-beauty': fashion and beauty category; 'recreation-and-hobbies': recreation and hobbies category; 'motor-vehicles': motor vehicles category; 'web-hosting-sites': web hosting sites category; 'food-and-dining': food and dining category; 'dummy-item': dummy item category; 'self-harm': self harm category; 'dns-over-https': dns over https category; 'low-thc-cannabis-products': low-thc cannabis products; 'generative-ai': generative ai category; 'nudity-artistic': artistic nudity; 'illegal-pornography': illegal pornography eg. child sexual abuse; 'uncategorised': uncategorised; 'other-category': other category; 'trustworthy': Trustworthy level(81-100); 'low-risk': Low-risk level(61-80); 'moderate-risk': Moderate-risk level(41-60); 'suspicious': Suspicious level(21-40); 'malicious': Malicious level(1-20);

Type	*list*
Block object keys	

server-cert

Description Server Certificate associated to SNI (Server Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-cert-regex

Description Server Certificate associated to SNI regex (Server Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-chain

Description Server Certificate Chain associated to SNI (Server Certificate Chain Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-chain-regex

Description Server Certificate Chain associated to SNI regex (Server Certificate Chain Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

server-encrypted-regex

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

server-key

Description Server Private Key associated to SNI (Server Private Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-key-regex

Description Server Private Key associated to SNI regex (Server Private Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-name

Description Server name indication in Client hello extension (Server name String)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server-name-alternate

Description Specific the second certifcate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-regex

Description Server name indication in Client hello extension with regular expression (Server name String with regex)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-name-regex-alternate

Description Specific the second certifcate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-passphrase

Description help Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

server-passphrase-regex

Description help Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

server-shared

Description Server Name Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-shared-regex

Description Server Name Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-regex-shared-partition-client-ssl-template

Description Reference a Client SSL template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-regex-template

Description Template associated to SNI regex

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-regex-template-client-ssl

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

sni-regex-template-client-ssl-shared-name

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

sni-shared-partition-client-ssl-template

Description Reference a Client SSL template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-template

Description Template associated to SNI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-template-client-ssl

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

sni-template-client-ssl-shared-name

exception-web-reputation

Specification	Value
Type	*object*

exception-low-risk

Description Intercept when reputation score is less than or equal to 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-low-risk,exception-trustworthy, exception-moderate-risk, exception-suspicious, exception-malicious, and exception-threshold are mutually exclusive

exception-malicious

Description Intercept when reputation score is less than or equal to 20

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-malicious,exception-trustworthy, exception-low-risk, exception-moderate-risk, exception-suspicious, and exception-threshold are mutually exclusive

exception-moderate-risk

Description Intercept when reputation score is less than or equal to 60

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-moderate-risk,exception-trustworthy, exception-low-risk, exception-suspicious, exception-malicious, and exception-threshold are mutually exclusive

exception-suspicious

Description Intercept when reputation score is less than or equal to 40

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-suspicious,exception-trustworthy, exception-low-risk, exception-moderate-risk, exception-malicious, and exception-threshold are mutually exclusive

exception-threshold

Description Intercept when reputation score is less than or equal to a customized value (1-100)

Type: number

Range: 1-100

Mutual Exclusion: exception-threshold,exception-trustworthy, exception-low-risk, exception-moderate-risk, exception-suspicious, and exception-malicious are mutually exclusive

exception-trustworthy

Description Intercept when reputation score is less than or equal to 100

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-trustworthy,exception-low-risk, exception-moderate-risk, exception-suspicious, exception-malicious, and exception-threshold are mutually exclusive

local-cert-pin-list

Specification	Value
Type	*object*

local-cert-pin-list-bypass-fail-count

Description Set the connection fail count as bypass criteria (Bypass when connection failure count is greater than the criteria (1-65536))

Type: number

Range: 1-65536

server-ipv6-list

Specification	Value
Type	*list*
Block object keys	

server-ipv6-list-name

Description IPV6 server class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

certificate-subject-equals-list

Specification	Value
Type	*list*
Block object keys	

certificate-subject-equals

Description Forward proxy bypass if Certificate Subject equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cipher-without-prio-list

Specification	Value
Type	*list*
Block object keys	

cipher-wo-prio

Description 'SSL3_RSA_DES_192_CBC3_SHA': TLS_RSA_WITH_3DES_EDE_CBC_SHA (0x000A); 'SSL3_RSA_RC4_128_MD5': TLS_RSA_WITH_RC4_128_MD5 (0x0004); 'SSL3_RSA_RC4_128_SHA': TLS_RSA_WITH_RC4_128_SHA (0x0005); 'TLS1_RSA_AES_128_SHA': TLS_RSA_WITH_AES_128_CBC_SHA (0x002F); 'TLS1_RSA_AES_256_SHA': TLS_RSA_WITH_AES_256_CBC_SHA (0x0035); 'TLS1_RSA_AES_128_SHA256': TLS_RSA_WITH_AES_128_CBC_SHA256 (0x003C); 'TLS1_RSA_AES_256_SHA256': TLS_RSA_WITH_AES_256_CBC_SHA256 (0x003D); 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS_DHE_RSA_WITH_AES_128_GCM_SHA256 (0x009E); 'TLS1_DHE_RSA_AES_128_SHA': TLS_DHE_RSA_WITH_AES_128_CBC_SHA (0x0033); 'TLS1_DHE_RSA_AES_128_SHA256': TLS_DHE_RSA_WITH_AES_128_CBC_SHA256 (0x0067); 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS_DHE_RSA_WITH_AES_256_GCM_SHA384 (0x009F); 'TLS1_DHE_RSA_AES_256_SHA': TLS_DHE_RSA_WITH_AES_256_CBC_SHA (0x0039); 'TLS1_DHE_RSA_AES_256_SHA256': TLS_DHE_RSA_WITH_AES_256_CBC_SHA256 (0x006B); 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256 (0xC02B); 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA (0xC009); 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256 (0xC023); 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384 (0xC02C); 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA (0xC00A); 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256 (0xC02F); 'TLS1_ECDHE_RSA_AES_128_SHA': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA (0xC013); 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256 (0xC027); 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 (0xC030); 'TLS1_ECDHE_RSA_AES_256_SHA': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA (0xC014); 'TLS1_RSA_AES_128_GCM_SHA256': TLS_RSA_WITH_AES_128_GCM_SHA256 (0x009C); 'TLS1_RSA_AES_256_GCM_SHA384': TLS_RSA_WITH_AES_256_GCM_SHA384 (0x009D); 'TLS1_ECDHE_RSA_AES_256_SHA384': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384 (0xC028); 'TLS1_ECDHE_ECDSA_AES_256_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384 (0xC024); 'TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA8); 'TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_ECDSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA9); 'TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256': TLS_DHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCAA);

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA,

TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256

Mutual Exclusion: cipher-wo-prio, template-cipher, and shared-partition-cipher-template are mutually exclusive

starts-with-list

Specification	Value
Type	*list*
Block object keys	

starts-with

Description Forward proxy bypass if SNI string starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

calc-sha1

Description: calc-sha1 is a **JSON Block**. Please see below for *calc-sha1*

Type: Object

Reference Object: */axapi/v3/slb/template/dblb/{name}/calc-sha1*

class-list

Description Specify user/password string class list (Class list name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description DBLB template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-version

Description 'MSSQL2008': MSSQL server 2008 or 2008 R2; 'MSSQL2012': MSSQL server 2012; 'MySQL': MySQL server (any version);

Type: string

Supported Values: MSSQL2008, MSSQL2012, MySQL

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

calc-sha1

Specification	Value
Type	*object*

sha1-value

Description Cleartext password

diameter-list

diameter-list is **JSON List** of *diameter attributes*

diameter-list : [

{ *diameter attributes* },

{ *diameter attributes* },

...

]

diameter attributes

avp-code

Description avp code

Type: number

Range: 1-2147483647

avp-list

Type: List

avp-string

Description pattern to be matched in the avp string name, max length 127 bytes

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

customize-cea

Description customizing cea response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dwr-time

Description dwr health-check timer interval (in 100 milli second unit, default is 100, 0 means unset this option)

Type: number

Range: 0-2147483647

Default: 100

dwr-up-retry

Description number of successful dwr health-check before declaring target up

Type: number

Range: 1-7

Default: 3

forward-to-latest-server

Description Forward client message to the latest server that sends message with the same session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-unknown-session-id

Description Forward server message even it has unknown session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

idle-timeout

Description user sesison idle timeout (in minutes, default is 5)

Type: number

Range: 1-65535

Default: 5

load-balance-on-session-id

Description Load balance based on the session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-code-list

Type: List

multiple-origin-host

Description allowing multiple origin-host to a single server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description diameter template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

origin-host

Description: origin-host is a **JSON Block**. Please see below for *origin-host*

Type: Object

Reference Object: */axapi/v3/slb/template/diameter/{name}/origin-host*

origin-realm

Description origin-realm name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

product-name

Description product name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

relaxed-origin-host

Description Relaxed Origin-Host Format

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-name

Description service group name, this is the service group that the message needs to be copied to

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

session-age

Description user session age allowed (default 10), this is not idle-time (in minutes)

Type: number

Range: 1-65535

Default: 10

terminate-on-cca-t

Description remove diameter session when receiving CCA-T message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vendor-id

Description vendor-id avp (Vendor Id)

Type: number

Range: 0-2147483647

Default: 0

message-code-list

Specification	Value
Type	*list*
Block object keys	

message-code

Description

Type: number

Range: 1-2147483647

avp-list

Specification	Value
Type	*list*
Block object keys	

avp

Description customize avps for cer to the server (avp number)

Type: number

Range: 0-2147483647

int32

Description 32 bits integer

Type: number

Range: 0-2147483647

Mutual Exclusion: int32, int64, and string are mutually exclusive

int64

Description 64 bits integer

Type: number

Range: 0-2147483647

Mutual Exclusion: int64, int32, and string are mutually exclusive

mandatory

Description mandatory avp

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

string

Description String (string name, max length 127 bytes)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: string, int32, and int64 are mutually exclusive

origin-host

Specification	Value
Type	*object*

origin-host-name

Description origin-host name avp

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.236 slb template diameter origin-host

origin host name avp

origin-host Specification

Parameter	Value

```

dns-list

dns-list is **JSON List** of *dns attributes*

dns-list : [

{ *dns attributes* },

{ *dns attributes* },

...

]

dns attributes

add-padding-to-client

Description 'block-length': Block-Length Padding; 'random-block-length': Random-Block-Length Padding;

Type: string

Supported Values: block-length, random-block-length

cache-hitcount-enable

Description Enable DNS cache entry hit count

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-record-serving-policy

Description 'global': Follow global cofiguration (Default); 'no-change': No change in record order; 'round-robin': Round-robin;

Type: string

Supported Values: global, no-change, round-robin

cache-ttl-adjustment-enable

Description enable the ttl adjustment for dns cache response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

category-lookup-bypass

Description DNS type class-lists for bypassing category lookup

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

category-lookup-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/category-lookup/{category-name}*

category-lookup-online-lookup

Description Enable online webroot lookup

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

class-list

Description: class-list is a **JSON Block**. Please see below for *class-list*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/class-list*

default-policy

Description 'nocache': Cache disable; 'cache': Cache enable;

Type: string

Supported Values: nocache, cache

Default: nocache

disable-dns-template

Description Disable DNS template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-ra-cached-resp

Description Disable DNS recursive available flag in cached response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-rpz-attach-soa

Description Disable attaching SOA due to RPZ

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cookie-cache-policy

Description 'served-by-cache': Answer from cache for requests with cookie; 'served-by-backend': Answer from server for requests with cookie;

Type: string

Supported Values: served-by-cache, served-by-backend

dns-logging

Description dns logging template (DNS Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dns-logging*

dns64

Description: dns64 is a **JSON Block**. Please see below for *dns64*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/dns64*

dnssec-service-group

Description Use different service group if DNSSEC DO bit set (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

drop

Description Drop the malformed query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop and forward are mutually exclusive

enable-cache-sharing

Description Enable DNS cache sharing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward

Description Forward to service group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: forward and drop are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

insert-ipv4

Description prefix-length to insert for IPv4

Type: number

Range: 0-32

insert-ipv6

Description prefix-length to insert for IPv6

Type: number

Range: 0-128

label-count-filter

Description: label-count-filter is a **JSON Block**. Please see below for *label-count-filter*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/label-count-filter*

label-length-filter

Description: label-length-filter is a **JSON Block**. Please see below for *label-length-filter*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/label-length-filter*

local-dns-resolution

Description: local-dns-resolution is a **JSON Block**. Please see below for *local-dns-resolution*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/local-dns-resolution*

max-cache-entry-size

Description Define maximum cache entry size (Maximum cache entry size per VIP (default 1024))

Type: number

Range: 1-4096

Default: 1024

max-cache-size

Description Define maximum cache size (Maximum cache entry per VIP)

Type: number

max-query-length

Description Define Maximum DNS Query Length, default is unlimited (Specify Maximum Length)

Type: number

Range: 1-4095

name

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

negative-dns-cache

Description: negative-dns-cache is a **JSON Block**. Please see below for *negative-dns-cache*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/negative-dns-cache*

period

Description Period in minutes

Type: number

Range: 1-10000

qps-log-high

Description high threshold for QPS logging (queries per second)

Type: number

Range: 1-64000000

qps-log-low

Description low threshold for QPS logging (queries per second)

Type: number

Range: 1-63999999

qps-threshold-log

Description enable threshold log for DNS QPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-class-filter

Description: query-class-filter is a **JSON Block**. Please see below for *query-class-filter*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/query-class-filter*

query-id-switch

Description Use DNS query ID to create sesion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-type-filter

Description: query-type-filter is a **JSON Block**. Please see below for *query-type-filter*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/query-type-filter*

recursive-dns-resolution

Description: recursive-dns-resolution is a **JSON Block**. Please see below for *recursive-dns-resolution*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution*

redirect-to-tcp-port

Description Direct the client to retry with TCP for DNS UDP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-aa-flag

Description Make answers created from cache non-authoritative

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-csubnet

Description Remove EDNS(0) client subnet from client queries

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-padding-to-server

Description Remove EDNS(0) padding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-rate-limiting

Description: response-rate-limiting is a **JSON Block**. Please see below for *response-rate-limiting*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting*

rpz-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/rpz/{seq-id}*

tld-filter-log-enable

Description Enable dns tld filter logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tld-filter-white-list

Description white-list class-list name (string-insensitive type)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

udp-retransmit

Description: udp-retransmit is a **JSON Block**. Please see below for *udp-retransmit*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/udp-retransmit*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

response-rate-limiting

Specification	Value
Type	*object*

TC-rate

Description Every n'th response that would be rate-limited will respond with TC bit

Type: number

Range: 2-10

Mutual Exclusion: TC-rate and slip-rate are mutually exclusive

action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filter-response-rate

Description Maximum allowed request rate for the filter. This should match average traffic. (default 10 per seconds)

Type: number

Range: 1-1000

Default: 10

match-subnet

Description IP subnet mask (response rate by IP subnet mask)

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

match-subnet-v6

Description IPV6 subnet mask (response rate by IPv6 subnet mask)

Type: number

Range: 1-128

Default: 128

nx-response-rate

Description Queries from entries whose NX Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

rrl-class-list-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}*

slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

Mutual Exclusion: slip-rate and TC-rate are mutually exclusive

src-ip-only

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

response-rate-limiting_rrl-class-list-list

Specification	Value
Type	*list*
Block object keys	

lid-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}/lid/{lidnum}*

name

Description Class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

response-rate-limiting_rrl-class-list-list_lid-list

Specification	Value
Type	*list*
Block object keys	

lid-action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

lid-enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lid-match-subnet

Description IP subnet mask (response rate by IP subnet mask)

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

lid-match-subnet-v6

Description IPV6 subnet mask (response rate by IPv6 subnet mask)

Type: number

Range: 1-128

Default: 128

lid-nx-response-rate

Description Queries from entries whose NX Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-16000000

Default: 5

lid-response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 0-16000000

Default: 5

lid-slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

Mutual Exclusion: lid-slip-rate and lid-tc-rate are mutually exclusive

lid-src-ip-only

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lid-tc-rate

Description Every n'th response that would be rate-limited will respond with TC bit

Type: number

Range: 2-10

Mutual Exclusion: lid-tc-rate and lid-slip-rate are mutually exclusive

lid-window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

recursive-dns-resolution

Specification	Value
Type	*object*

csubnet-retry

Description retry when server REFUSED AX inserted EDNS(0) subnet, works only when insert-client-subnet is configured

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-recursive

Description Default recursive mode, forward query to bound service-group if hostnames matched

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dnssec-validation

Description 'enabled': Enable DNSSEC validation; 'disabled': Disable DNSSEC validation;

Type: string

Supported Values: enabled, disabled

Default: disabled

fast-ns-selection

Description 'enabled': Enable fast NS selection; 'disabled': Disable fast NS selection;

Type: string

Supported Values: enabled, disabled

Default: enabled

force-cname-resolution

Description 'enabled': Force CNAME resolution always; 'disabled': Use answer record in CNAME response if it exists, else resolve;

Type: string

Supported Values: enabled, disabled

Default: enabled

full-response

Description Serve all records (authority and additional) when applicable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-health-check

Description: gateway-health-check is a **JSON Block**. Please see below for *recursive-dns-resolution_gateway-health-check*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution/gateway-health-check*

host-list-cfg

Type: List

ipv4-nat-pool

Description IPv4 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

ipv6-nat-pool

Description IPv6 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/nat/pool*

lookup-order

Description: lookup-order is a **JSON Block**. Please see below for *recursive-dns-resolution_lookup-order*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution/lookup-order*

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 255

Type: number

Range: 1-255

Default: 255

ns-cache-lookup

Description 'disabled': Disable NS Cache Lookup; 'enabled': Enable NS Cache Lookup;

Type: string

Supported Values: disabled, enabled

Default: enabled

ns-longest-match

Description 'disabled': Look up NS of top level label, do a nearly-full resolution; 'enabled': Enable NS cache longest match;

Type: string

Supported Values: disabled, enabled

Default: enabled

parallel-queries

Description Number of parallel queries to send to servers

Type: number

Range: 1-15

Default: 1

request-for-pending-resolution

Description 'drop': Drop of the request during ongoing; 'respond-with-servfail': Respond with SERVFAIL of the request during ongoing; 'start-new-resolution': Start new resolution of the request during ongoing;

Type: string

Supported Values: drop, respond-with-servfail, start-new-resolution

Default: respond-with-servfail

retries-per-level

Description Number of DNS query retries at each server level before closing client connection, default 6

Type: number

Range: 1-6

Default: 6

udp-initial-interval

Description UDP DNS Retry Interval value 1-6, default is 5 sec (1-6, default is 5sec)

Type: number

Range: 1-6

Default: 5

udp-retry-interval

Description UDP DNS Retry Interval value 1-6, default is 1 sec (1-6 , default is 1 sec)

Type: number

Range: 1-6

Default: 1

use-client-qid

Description Use client side query id for recursive query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-service-group-response

Description 'disabled': Start Recursive Resolver if Server response doesnt have final answer; 'enabled': Forward Backend Server response to client and dont start recursive resolver;

Type: string

Supported Values: disabled, enabled

Default: enabled

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

recursive-dns-resolution_gateway-health-check

Specification	Value
Type	*object*

gwhc-ns-cache-lookup

Description 'disabled': Disable NS Cache Lookup; 'enabled': Enable NS Cache Lookup;

Type: string

Supported Values: disabled, enabled

Default: disabled

interval

Description Specify the health check interval, default is 10 sec (Interval value, in seconds (default 10))

Type: number

Range: 1-300

Default: 10

num-query-type

Description Other record type value

Type: number

Range: 1-65535

Mutual Exclusion: num-query-type and str-query-type are mutually exclusive

query-name

Description Specify the query name used in probe queries, default "a10networks.com"

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Default: a10networks.com

retry

Description Maximum number of DNS query retries at each server level before health check fails, default 6 (Retry count (default 6))

Type: number

Range: 1-6

Default: 6

retry-multi

Description Specify number of times that health check consecutively fails before declaring gateway DOWN, default 1 (retry-multi count (default 1))

Type: number

Range: 1-10

Default: 1

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT

Default: A

Mutual Exclusion: str-query-type and num-query-type are mutually exclusive

timeout

Description Specify the health check timeout before retrying or finish, default is 5 sec (Timeout value, in seconds (default 5))

Type: number

Range: 1-6

Default: 5

up-retry

Description Specify number of times that health check consecutively passes before declaring gateway UP, default 1 (up-retry count (default 1))

Type: number

Range: 1-10

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

recursive-dns-resolution_lookup-order

Specification	Value
Type	*object*

query-type

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

recursive-dns-resolution_lookup-order_query-type

Specification	Value
Type	*list*
Block object keys	

num-query-type

Description Other query type value

Type: number

Range: 1-65535

order

Description 'ipv4-precede-ipv6': Recursive lookup via IPv4 then IPv6; 'ipv6-precede-ipv4': Recursive lookup via IPv6 then IPv4;

Type: string

Supported Values: ipv4-precede-ipv6, ipv6-precede-ipv4

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record; 'ANY': All cached record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT, ANY

recursive-dns-resolution_host-list-cfg

Specification	Value
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (dns type), perform resolution while query name matched

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

label-length-filter

Specification	Value
Type	*object*

drop-log-enable

Description enable the log when hit the rule

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fqdn-label-length

Type: List

label-length-filter-action

Description 'drop': drop; 'ignore': ignore;

Type: string

Supported Values: drop, ignore

Default: drop

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

label-length-filter_fqdn-label-length

Specification	Value
Type	*list*
Block object keys	

length

Description fqdn label length

Type: number

Range: 1-63

suffix

Description

Type: number

Range: 1-5

class-list

Specification	Value
Type	*object*

lid-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list_dns

Specification	Value
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

honor-server-response-ttl

Description Honor the server reponse TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

dns64

Specification	Value
Type	*object*

cache

Description Use a cached A-query response to provide AAAA query responses for the same hostname

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-query

Description Always change incoming AAAA DNS Query to A

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable DNS64 (Need to config this option before config any other dns64 options)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parallel-query

Description Forward AAAA Query & generate A Query in parallel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retry

Description Retry count, default is 3 (Retry Number)

Type: number

Range: 0-15

Default: 3

single-response-disable

Description Disable Single Response which is used to avoid ambiguity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout to send additional Queries, unit: second, default is 1

Type: number

Range: 0-15

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udp-retransmit

Specification	Value
Type	*object*

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

query-class-filter

Specification	Value
Type	*object*

query-class

Type: List

query-class-action

Description 'allow': Allow only certain DNS query classes; 'deny': Deny only certain DNS query classes;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

query-class-filter_query-class

Specification	Value
Type	*list*
Block object keys	

num-query-class

Description Other query class value

Type: number

Range: 1-65535

str-query-class

Description 'INTERNET': INTERNET query class; 'CHAOS': CHAOS query class; 'HESIOD': HESIOD query class; 'NONE': NONE query class; 'ANY': ANY query class;

Type: string

Supported Values: INTERNET, CHAOS, HESIOD, NONE, ANY

category-lookup-list

Specification	Value
Type	*list*
Block object keys	

category-name

Description category-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

drop

Description Deny matching DNS domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop,permit, respond, respond-nxdomain, respond-ip-addr, respond-ipv6-addr, and respond-cname-str are mutually exclusive

permit

Description Permit matching DNS domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit,drop, respond, respond-nxdomain, respond-ip-addr, respond-ipv6-addr, and respond-cname-str are mutually exclusive

respond

Description Respond to matching DNS domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: respond, permit, and drop are mutually exclusive

respond-cname-str

Description CNAME to respond (Canonical name)

Type: string

Maximum Length: 256 characters

Maximum Length: 1 characters

Mutual Exclusion: respond-cname-str,permit, drop, and respond-nxdomain are mutually exclusive

respond-ip-addr

Description Type A record to respond (IPv4 address)

Type: string

Format: ipv4-address

Mutual Exclusion: respond-ip-addr,permit, drop, and respond-nxdomain are mutually exclusive

respond-ipv6-addr

Description TYPE AAAA record to respond (IPv6 address)

Type: string

Format: ipv6-address

Mutual Exclusion: respond-ipv6-addr,permit, drop, and respond-nxdomain are mutually exclusive

respond-nxdomain

Description Respond with NXDOMAIN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: respond-nxdomain,permit, drop, respond-ip-addr, respond-ipv6-addr, and respond-cname-str are mutually exclusive

response-ttl

Description Set response TTL in seconds (TTL value in seconds)

Type: number

Range: 1-259200

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-dns-resolution

Specification	Value
Type	*object*

host-list-cfg

Type: List

local-resolver-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-dns-resolution_host-list-cfg

Specification	Value
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (dns type)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

local-dns-resolution_local-resolver-cfg

Specification	Value
Type	*list*
Block object keys	

local-resolver

Description Local dns servers (address)

Type: string

Format: ipv4-address

label-count-filter

Specification	Value
Type	*object*

drop-log-enable

Description enable the log when hit the rule

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

label-count-filter-action

Description 'drop': drop; 'ignore': ignore;

Type: string

Supported Values: drop, ignore

Default: drop

max-fqdn-label-count

Description Maximum number of FQDN labels per FQDN

Type: number

Range: 1-31

min-fqdn-label-count

Description Minimum number of FQDN labels per FQDN

Type: number

Range: 1-7

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

negative-dns-cache

Specification	Value
Type	*object*

bypass-query-threshold

Description the threshold bypass the query, default is 100

Type: number

Range: 1-65535

Default: 100

cache-non-valid

Description Enable caching non-valid negative response, otherwise will only cache valid negative response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-negative-dns-cache

Description Enable DNS negative cache (Need to turn-on the dns-cache for this feature)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-negative-cache-ttl

Description Max negative cache ttl, default is 2 hours

Type: number

Range: 0-604800

Default: 7200

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

query-type-filter

Specification	Value
Type	*object*

query-type

Type: List

query-type-action

Description 'allow': Allow only certain DNS query types; 'deny': Deny only certain DNS query types;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

query-type-filter_query-type

Specification	Value
Type	*list*
Block object keys	

num-query-type

Description Other record type value

Type: number

Range: 1-65535

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record; 'ANY': All cached record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT, ANY

rpz-list

Specification	Value
Type	*list*
Block object keys	

logging

Description: logging is a **JSON Block**. Please see below for *rpz-list_logging*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/rpz/{seq-id}/logging*

name

Description Specify a Response Policy Zone name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-id

Description sequential id of RPZ

Type: number

Range: 1-8

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rpz-list_logging

Specification	Value
Type	*object*

enable

Description Log RPZ triggered action

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpz-action

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rpz-list_logging_rpz-action

Specification	Value
Type	*list*
Block object keys	

str-rpz-action

Description 'drop': Log RPZ due to drop action; 'pass-thru': Log RPZ due to pass-thru action; 'nxdomain': Log RPZ due to nxdomain action; 'nodata': Log RPZ due to nodata action; 'tcp-only': Log RPZ due to tcp-only action; 'local-data': Log RPZ due to local-data action;

Type: string

Supported Values: drop, pass-thru, nxdomain, nodata, tcp-only, local-data

2.120.238 slb template dns category-lookup

Configure web-category list for DNS domains matching (Up to 8 lists)

category-lookup Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*category-name*
Collection Name	*category-lookup-list*
Collection URI	/axapi/v3/slb/template/dns/{name}/category-lookup
Element Name	category-lookup
Element URI	/axapi/v3/slb/template/dns/{name}/category-lookup/{category-name}
Element Attributes	category-lookup_attributes
Partition Visibility	shared
Schema	`category-lookup schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/dns/{name}/category-lookup

category-lookup attributes

Create List

POST

/axapi/v3/slb/template/dns/{name}/category-lookup

category-lookup attributes

Get Object

GET

/axapi/v3/slb/template/dns/{name}/category-lookup/{category-name}

category-lookup-list

Delete Object

DELETE

/axapi/v3/slb/template/dns/{name}/category-lookup/{category-name}

category-lookup attributes

category-lookup-list

category-lookup-list is **JSON List** of *category-lookup attributes*

```
category-lookup-list : [
        { category-lookup attributes },
        { category-lookup attributes },
        ...
    ]
```

category-lookup attributes

category-name

Description category-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

drop

Description Deny matching DNS domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop,permit, respond, respond-nxdomain, respond-ip-addr, respond-ipv6-addr, and respond-cname-str are mutually exclusive

permit

Description Permit matching DNS domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit,drop, respond, respond-nxdomain, respond-ip-addr, respond-ipv6-addr, and respond-cname-str are mutually exclusive

respond

Description Respond to matching DNS domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: respond, permit, and drop are mutually exclusive

respond-cname-str

Description CNAME to respond (Canonical name)

Type: string

Maximum Length: 256 characters

Maximum Length: 1 characters

Mutual Exclusion: respond-cname-str,permit, drop, and respond-nxdomain are mutually exclusive

respond-ip-addr

Description Type A record to respond (IPv4 address)

Type: string

Format: ipv4-address

Mutual Exclusion: respond-ip-addr,permit, drop, and respond-nxdomain are mutually exclusive

respond-ipv6-addr

Description TYPE AAAA record to respond (IPv6 address)

Type: string

Format: ipv6-address

Mutual Exclusion: respond-ipv6-addr,permit, drop, and respond-nxdomain are mutually exclusive

respond-nxdomain

Description Respond with NXDOMAIN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: respond-nxdomain,permit, drop, respond-ip-addr, respond-ipv6-addr, and respond-cname-str are mutually exclusive

response-ttl

Description Set response TTL in seconds (TTL value in seconds)

Type: number

Range: 1-259200

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.239 slb template dns class-list

Classification list

class-list Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	class-list

    "class-list": {
        "name": "a"
    }
}
```

Delete Object

DELETE

/axapi/v3/slb/template/dns/{name}/class-list

class-list attributes

```
DELETE /axapi/v3/slb/template/dns/a/class-list
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

class-list attributes

lid-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lid-list_dns

Specification	Value
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

honor-server-response-ttl

Description Honor the server reponse TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

dns64 attributes

dns64 attributes

cache

Description Use a cached A-query response to provide AAAA query responses for the same hostname

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-query

Description Always change incoming AAAA DNS Query to A

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable DNS64 (Need to config this option before config any other dns64 options)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parallel-query

Description Forward AAAA Query & generate A Query in parallel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retry

Description Retry count, default is 3 (Retry Number)

Type: number

Range: 0-15

Default: 3

single-response-disable

Description Disable Single Response which is used to avoid ambiguity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout to send additional Queries, unit: second, default is 1

Type: number

Range: 0-15

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.242 slb template dns label-count-filter

fqdn label count filter

label-count-filter Specification

Parameter	Value

label-count-filter attributes

label-count-filter attributes

drop-log-enable

Description enable the log when hit the rule

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

label-count-filter-action

Description 'drop': drop; 'ignore': ignore;

Type: string

Supported Values: drop, ignore

Default: drop

max-fqdn-label-count

Description Maximum number of FQDN labels per FQDN

Type: number

Range: 1-31

min-fqdn-label-count

Description Minimum number of FQDN labels per FQDN

Type: number

Range: 1-7

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.243 slb template dns label-length-filter

query-type-filter attributes

query-type

Type: List

query-type-action

Description 'allow': Allow only certain DNS query types; 'deny': Deny only certain DNS query types;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

query-type

Specification	Value
Type	*list*
Block object keys	

num-query-type

Description Other record type value

Type: number

Range: 1-65535

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record; 'ANY': All cached record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT, ANY

recursive-dns-resolution attributes

csubnet-retry

Description retry when server REFUSED AX inserted EDNS(0) subnet, works only when insert-client-subnet is configured

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-recursive

Description Default recursive mode, forward query to bound service-group if hostnames matched

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dnssec-validation

Description 'enabled': Enable DNSSEC validation; 'disabled': Disable DNSSEC validation;

Type: string

Supported Values: enabled, disabled

Default: disabled

fast-ns-selection

Description 'enabled': Enable fast NS selection; 'disabled': Disable fast NS selection;

Type: string

Supported Values: enabled, disabled

Default: enabled

force-cname-resolution

Description 'enabled': Force CNAME resolution always; 'disabled': Use answer record in CNAME response if it exists, else resolve;

Type: string

Supported Values: enabled, disabled

Default: enabled

full-response

Description Serve all records (authority and additional) when applicable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-health-check

Description: gateway-health-check is a **JSON Block**. Please see below for *gateway-health-check*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution/gateway-health-check*

host-list-cfg

Type: List

ipv4-nat-pool

Description IPv4 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

ipv6-nat-pool

Description IPv6 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/nat/pool*

lookup-order

Description: lookup-order is a **JSON Block**. Please see below for *lookup-order*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution/lookup-order*

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 255

Type: number

Range: 1-255

Default: 255

ns-cache-lookup

Description 'disabled': Disable NS Cache Lookup; 'enabled': Enable NS Cache Lookup;

Type: string

Supported Values: disabled, enabled

Default: enabled

ns-longest-match

Description 'disabled': Look up NS of top level label, do a nearly-full resolution; 'enabled': Enable NS cache longest match;

Type: string

Supported Values: disabled, enabled

Default: enabled

parallel-queries

Description Number of parallel queries to send to servers

Type: number

Range: 1-15

Default: 1

request-for-pending-resolution

Description 'drop': Drop of the request during ongoing; 'respond-with-servfail': Respond with SERVFAIL of the request during ongoing; 'start-new-resolution': Start new resolution of the request during ongoing;

Type: string

Supported Values: drop, respond-with-servfail, start-new-resolution

Default: respond-with-servfail

retries-per-level

Description Number of DNS query retries at each server level before closing client connection, default 6

Type: number

Range: 1-6

Default: 6

udp-initial-interval

Description UDP DNS Retry Interval value 1-6, default is 5 sec (1-6, default is 5sec)

Type: number

Range: 1-6

Default: 5

udp-retry-interval

Description UDP DNS Retry Interval value 1-6, default is 1 sec (1-6 , default is 1 sec)

Type: number

Range: 1-6

Default: 1

use-client-qid

Description Use client side query id for recursive query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-service-group-response

Description 'disabled': Start Recursive Resolver if Server response doesnt have final answer; 'enabled': Forward Backend Server response to client and dont start recursive resolver;

Type: string

Supported Values: disabled, enabled

Default: enabled

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

gateway-health-check

Specification	Value
Type	*object*

gwhc-ns-cache-lookup

Description 'disabled': Disable NS Cache Lookup; 'enabled': Enable NS Cache Lookup;

Type: string

Supported Values: disabled, enabled

Default: disabled

interval

Description Specify the health check interval, default is 10 sec (Interval value, in seconds (default 10))

Type: number

Range: 1-300

Default: 10

num-query-type

Description Other record type value

Type: number

Range: 1-65535

Mutual Exclusion: num-query-type and str-query-type are mutually exclusive

query-name

Description Specify the query name used in probe queries, default "a10networks.com"

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Default: a10networks.com

retry

Description Maximum number of DNS query retries at each server level before health check fails, default 6 (Retry count (default 6))

Type: number

Range: 1-6

Default: 6

retry-multi

Description Specify number of times that health check consecutively fails before declaring gateway DOWN, default 1 (retry-multi count (default 1))

Type: number

Range: 1-10

Default: 1

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT

Default: A

Mutual Exclusion: str-query-type and num-query-type are mutually exclusive

timeout

Description Specify the health check timeout before retrying or finish, default is 5 sec (Timeout value, in seconds (default 5))

Type: number

Range: 1-6

Default: 5

up-retry

Description Specify number of times that health check consecutively passes before declaring gateway UP, default 1 (up-retry count (default 1))

Type: number

Range: 1-10

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lookup-order

Specification	Value
Type	*object*

query-type

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lookup-order_query-type

Specification	Value
Type	*list*
Block object keys	

num-query-type

Description Other query type value

Type: number

Range: 1-65535

order

Description 'ipv4-precede-ipv6': Recursive lookup via IPv4 then IPv6; 'ipv6-precede-ipv4': Recursive lookup via IPv6 then IPv4;

Type: string

Supported Values: ipv4-precede-ipv6, ipv6-precede-ipv4

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record; 'ANY': All cached record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT, ANY

host-list-cfg

Specification	Value
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (dns type), perform resolution while query name matched

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

```

response-rate-limiting attributes

TC-rate

Description Every n'th response that would be rate-limited will respond with TC bit

Type: number

Range: 2-10

Mutual Exclusion: TC-rate and slip-rate are mutually exclusive

action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filter-response-rate

Description Maximum allowed request rate for the filter. This should match average traffic. (default 10 per seconds)

Type: number

Range: 1-1000

Default: 10

match-subnet

Description IP subnet mask (response rate by IP subnet mask)

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

match-subnet-v6

Description IPV6 subnet mask (response rate by IPv6 subnet mask)

Type: number

Range: 1-128

Default: 128

nx-response-rate

Description Queries from entries whose NX Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

rrl-class-list-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}*

slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

Mutual Exclusion: slip-rate and TC-rate are mutually exclusive

src-ip-only

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

rrl-class-list-list

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

lid-enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lid-match-subnet

Description IP subnet mask (response rate by IP subnet mask)

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

lid-match-subnet-v6

Description IPV6 subnet mask (response rate by IPv6 subnet mask)

Type: number

Range: 1-128

Default: 128

lid-nx-response-rate

Description Queries from entries whose NX Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-16000000

Default: 5

lid-response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 0-16000000

Default: 5

lid-slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

Mutual Exclusion: lid-slip-rate and lid-tc-rate are mutually exclusive

lid-src-ip-only

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lid-tc-rate

Description Every n'th response that would be rate-limited will respond with TC bit

Type: number

Range: 2-10

Mutual Exclusion: lid-tc-rate and lid-slip-rate are mutually exclusive

lid-window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Maximum Length: 127 characters

Maximum Length: 1 characters

non-dns-request

Description 'allow': Forward Non-DoH request to http server bound to vport; 'reject': Reject Non-DoH requests with HTTP 400 Bad Request (Default);

Type: string

Supported Values: allow, reject

Default: reject

reject-status-code

Description '400': Status Code 400 BAD Request (Default); '500': Status Code 500 Internal Server Error; '501': Status Code 501 Not Implemented;

Type: string

Supported Values: 400, 500, 501

Default: 400

shared-partition-dns-template

Description Reference a DNS template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dns-template and dns are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

snat-pool

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

source-nat

Description 'auto': Perform Source NAT Auto for service-group(Default) (Not supported with forwarding-ip); 'disable': Don't perform source-nat for server side DNS queries; 'pool': Perform Source NAT with specific pool;

Type: string

Supported Values: auto, disable, pool

Default: auto

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-dns-shared

Description DNS Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dns*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forwarder

Specification	Value
Type	*object*

bypass-doh

Description Forward valid DoH HTTP request as is, no DNS packet extraction (Bypass DoH)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-doh,forwarding-ipv4, forwarding-ipv6, tcp-service-group, and udp-service-group are mutually exclusive

forwarding-ipv4

Description SLB VIP IPv4 address to forward DOH query (IP address)

Type: string

Format: ipv4-address

Mutual Exclusion: forwarding-ipv4,forwarding-ipv6, tcp-service-group, udp-service-group, and bypass-doh are mutually exclusive

forwarding-ipv6

Description SLB VIP IPv6 address to forward DOH query (IP address)

Type: string

Format: ipv6-address

Mutual Exclusion: forwarding-ipv6,forwarding-ipv4, tcp-service-group, udp-service-group, and bypass-doh are mutually exclusive

tcp-service-group

Description Bind a TCP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-service-group,forwarding-ipv4, forwarding-ipv6, and bypass-doh are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

udp-service-group

Description Bind a UDP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: udp-service-group,forwarding-ipv4, forwarding-ipv6, and bypass-doh are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v4-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v4-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

v6-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v6-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

dns-retry

Specification	Value
Type	*object*

after-timeout

Description 'close': Close client side connection; 'retry-with-tcp': Retry DNS query to server using TCP (If UDP was tried initially. Close after.);

Type: string

Supported Values: close, retry-with-tcp

Default: close

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.263 slb template doh dns-retry

DNS over HTTP(s) template retry policy

dns-retry Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	dns-retry
Element URI	/axapi/v3/slb/template/doh/{name}/dns-retry
Element Attributes	dns-retry_attributes
Partition Visibility	shared
Schema	`dns-retry schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/doh/{name}/dns-retry

dns-retry attributes

```
POST /axapi/v3/slb/template/doh/a/dns-retry
Payload:

        "status": "OK",
        "msg": "Success"
    }
}
```

forwarder attributes

bypass-doh

Description Forward valid DoH HTTP request as is, no DNS packet extraction (Bypass DoH)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-doh,forwarding-ipv4, forwarding-ipv6, tcp-service-group, and udp-service-group are mutually exclusive

forwarding-ipv4

Description SLB VIP IPv4 address to forward DOH query (IP address)

Type: string

Format: ipv4-address

Mutual Exclusion: forwarding-ipv4,forwarding-ipv6, tcp-service-group, udp-service-group, and bypass-doh are mutually exclusive

forwarding-ipv6

Description SLB VIP IPv6 address to forward DOH query (IP address)

Type: string

Format: ipv6-address

Mutual Exclusion: forwarding-ipv6,forwarding-ipv4, tcp-service-group, udp-service-group, and bypass-doh are mutually exclusive

tcp-service-group

Description Bind a TCP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-service-group,forwarding-ipv4, forwarding-ipv6, and bypass-doh are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

udp-service-group

Description Bind a UDP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: udp-service-group,forwarding-ipv4, forwarding-ipv6, and bypass-doh are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v4-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v4-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

v6-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v6-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

2.120.265 slb template dynamic-service

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

type

Description 'skyfire-icap': Skyfire ICAP service; 'url-filter': URL filtering service;

Type: string

Supported Values: skyfire-icap, url-filter

Default: url-filter

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bypass-ip-cfg

Specification	Value
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass external service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

request-header-forward-list

Specification	Value
Type	*list*
Block object keys	

request-header-forward

Description Request header to be forwarded to external service (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

2.120.268 slb template fix

FIX template

fix Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*fix-list*
Collection URI	/axapi/v3/slb/template/fix
Element Name	fix
Element URI	/axapi/v3/slb/template/fix/{name}
Element Attributes	fix_attributes
Partition Visibility	shared
Schema	`fix schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/fix

fix attributes

```
POST /axapi/v3/slb/template/fix/
Payload:
{
    "fix": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/slb/template/fix

fix attributes

Get Object

GET

/axapi/v3/slb/template/fix/{name}

fix attributes

```
GET /axapi/v3/slb/template/fix/a
Reponse:
{
    "fix": {
        "name": "a",
        "insert-client-ip": 0,
        "uuid": "22992014-b64f-11ef-816c-ae71681635d0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/slb/template/fix/a"
    }
}
```

Get List

GET

/axapi/v3/slb/template/fix

fix-list

Modify Object

POST

/axapi/v3/slb/template/fix/{name}

fix attributes

Replace Object

PUT

/axapi/v3/slb/template/fix/{name}

fix attributes

```
PUT /axapi/v3/slb/template/fix/a
Payload:
{
    "fix": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

fix-list

Delete Object

DELETE

/axapi/v3/slb/template/fix/{name}

fix attributes

```
DELETE /axapi/v3/slb/template/fix/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

fix-list

fix-list is **JSON List** of *fix attributes*

fix-list : [

{ *fix attributes* },

{ *fix attributes* },

...

]

fix attributes

insert-client-ip

Description Insert client ip to tag 11447

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description 'init': init only log; 'term': termination only log; 'both': both initial and termination log;

Type: string

Supported Values: init, term, both

name

Description FIX Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

tag-switching

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tag-switching

Specification	Value
Type	*list*
Block object keys	

equals

Description Equals (Tag String)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

switching-type

Description 'sender-comp-id': Select service group based on SenderCompID; 'target-comp-id': Select service group based on TargetCompID;

Type: string

Supported Values: sender-comp-id, target-comp-id

2.120.269 slb template ftp

FTP template

ftp Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*ftp-list*

        "status": "OK",
        "msg": "Success"
    }
}
```

ftp-list

ftp-list is **JSON List** of *ftp attributes*

ftp-list : [

{ *ftp attributes* },

{ *ftp attributes* },

...

]

ftp attributes

active-mode-port

Description Non-Standard FTP Active mode port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-mode-port-val

Description Non-Standard FTP Active mode port

Type: number

Range: 1-65534

Mutual Exclusion: active-mode-port-val and any are mutually exclusive

any

Description Allow any FTP Active mode port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and active-mode-port-val are mutually exclusive

name

Description FTP template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

to

Description End range of FTP Active mode port

Type: number

Range: 1-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.270 slb template http

HTTP

http Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*

http-list

http-list is **JSON List** of *http attributes*

http-list : [

{ *http attributes* },

{ *http attributes* },

...

]

http attributes

100-cont-wait-for-req-complete

Description When REQ has Expect 100 and response is not 100, then wait for whole request to be sent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowed-methods

Description Enable allowed-method check (List of allowed HTTP methods)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: allowed-methods and disallowed-methods are mutually exclusive

allowed-methods-action

Description 'drop': Respond 400 directly;

Type: string

Supported Values: drop

Default: drop

bypass-sg

Description Select service group for non-http traffic (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

client-idle-timeout

Description Client session timeout if the next request is not received (timeout in seconds. 0 means disable, default is 0)

Type: number

Range: 0-120

Default: 0

client-ip-hdr-replace

Description Replace the existing header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-port-hdr-replace

Description Replace the existing header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-auto-disable-on-high-cpu

Description Auto-disable software compression on high cpu usage (Disable compression if cpu usage is above threshold. Default is off.)

Type: number

Range: 1-100

compression-br-level

Description brotli compression level, default 1 (brotli compression level value, default is 1)

Type: number

Range: 1-9

Default: 1

compression-br-sliding-window-size

Description brotli compression sliding window size, default 10 (brotli compression sliding window size in the form of log (i.e., 10 means 1k-16MB bytes))

Type: number

Range: 10-24

compression-content-type

Type: List

compression-enable

Description Enable Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-exclude-content-type

Type: List

compression-exclude-uri

Type: List

compression-keep-accept-encoding

Description Keep accept encoding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-keep-accept-encoding-enable

Description Enable Server Accept Encoding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-level

Description gzip compression level, default 1 (gzip compression level value, default is 1)

Type: number

Range: 1-9

Default: 1

compression-method-order

Description Method Order (Order to decide which compression algorithm to be applied when multiple algorithms are acceptable)

Type: string

Format: string-rlx

Maximum Length: 11 characters

Maximum Length: 11 characters

compression-minimum-content-length

Description Minimum Content Length (Minimum content length for compression in bytes. Default is 120.)

Type: number

Range: 1-2147483647

Default: 120

cookie-format

Description 'rfc6265': Follow rfc6265;

Type: string

Supported Values: rfc6265

cookie-samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

default-charset

Description 'iso-8859-1': Use ISO-8859-1 as the default charset; 'utf-8': Use UTF-8 as the default charset; 'us-ascii': Use US-ASCII as the default charset;

Type: string

Supported Values: iso-8859-1, utf-8, us-ascii

Default: utf-8

disallowed-methods

Description Enable disallowed-method check (List of disallowed HTTP methods)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: disallowed-methods and allowed-methods are mutually exclusive

disallowed-methods-action

Description 'drop': Respond 400 directly;

Type: string

Supported Values: drop

Default: drop

failover-url

Description Failover to this URL (Failover URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

frame-limit

Description Limit the number of CONTINUATION, PING, PRIORITY, RESET, SETTINGS and empty frames in one HTTP2 connection, default 10000

Type: number

Range: 0-65535

Default: 10000

host-switching

Type: List

http-protocol-check

Description: http-protocol-check is a **JSON Block**. Please see below for *http-protocol-check*

Type: Object

Reference Object: */axapi/v3/slb/template/http/{name}/http-protocol-check*

http2-client-no-snat

Description Set max-concurrent-stream = 1 when the client side is HTTP2 and no source-nat configuration is under vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-ip

Description Insert Client IP address into HTTP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-ip-header-name

Description HTTP Header Name for inserting Client IP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

insert-client-port

Description Insert Client Port address into HTTP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-port-header-name

Description HTTP Header Name for inserting Client Port

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

keep-client-alive

Description Keep client alive

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-retry

Description log when HTTP request retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-concurrent-streams

Description (http2 only) Max concurrent streams, default 50

Type: number

Range: 1-1000

Default: 50

max-transaction-allowed

Description Max transactions allowed, default 0 (no limit)

Type: number

Range: 0-65535

Default: 0

name

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

non-http-bypass

Description Bypass non-http traffic instead of dropping

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

persist-on-401

Description Persist to the same server if the response code is 401

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute; 'check': check server prefix and enforce prefix format;

Type: string

Supported Values: host, secure, check

rd-port

Description Port (Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: rd-port and rd-simple-loc are mutually exclusive

rd-resp-code

Description '301': Moved Permanently; '302': Found; '303': See Other; '307': Temporary Redirect;

Type: string

Supported Values: 301, 302, 303, 307

rd-secure

Description Use HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rd-secure and rd-simple-loc are mutually exclusive

rd-simple-loc

Description Redirect location tag absolute URI string

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: rd-simple-loc, rd-secure, and rd-port are mutually exclusive

redirect

Description Automatically send a redirect response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirect-rewrite

Description: redirect-rewrite is a **JSON Block**. Please see below for *redirect-rewrite*

Type: Object

req-hdr-wait-time

Description HTTP request header wait time before abort connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-hdr-wait-time-val

Description Number of seconds wait for client request header (default is 7)

Type: number

Range: 1-31

Default: 7

request-header-erase-list

Type: List

request-header-insert-list

Type: List

request-line-case-insensitive

Description Parse http request line as case insensitive

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-timeout

Description Request timeout if response not received (timeout in seconds)

Type: number

Range: 1-120

response-content-replace-list

Type: List

response-header-erase-list

Type: List

response-header-insert-list

Type: List

retry-on-5xx

Description Retry http request on HTTP 5xx code and request timeout

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: retry-on-5xx and retry-on-5xx-per-req are mutually exclusive

retry-on-5xx-per-req

Description Retry http request on HTTP 5xx code for each request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: retry-on-5xx-per-req and retry-on-5xx are mutually exclusive

retry-on-5xx-per-req-val

Description Number of times to retry (default is 3)

Type: number

Range: 1-3

Default: 3

retry-on-5xx-val

Description Number of times to retry (default is 3)

Type: number

Range: 1-3

Default: 3

server-support-http2-only

Description Notify the vport regarding whether server supports http2 only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-support-http2-only-value

Description 'auto-detect': Commuincate with the server via HTTP/2 when an support-http2-only rport is detected; 'force': Communicate with the server via HTTP/2 when possible;

Type: string

Supported Values: auto-detect, force

Default: auto-detect

stream-cancellation-limit

Description cancellation limit, default 0 (accumulated cancellation limit value, default is 0)

Type: number

Range: 0-1000

Default: 0

stream-cancellation-rate

Description cancellation rate, default 10 (cancellation rate value, default is 10)

Type: number

Range: 0-1000

Default: 10

strict-transaction-switch

Description Force server selection on every HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template

Description: template is a **JSON Block**. Please see below for *template*

Type: Object

term-11client-hdr-conn-close

Description Terminate HTTP 1.1 client when req has Connection: close

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

url-hash-first

Description Use the begining part of URL to calculate hash value (URL string length to calculate hash value)

Type: number

Range: 4-128

Mutual Exclusion: url-hash-first and url-hash-last are mutually exclusive

url-hash-last

Description Use the end part of URL to calculate hash value (URL string length to calculate hash value)

Type: number

Range: 4-128

Mutual Exclusion: url-hash-last and url-hash-first are mutually exclusive

url-hash-offset

Description Skip part of URL to calculate hash value (Offset of the URL string)

Type: number

Range: 0-255

url-hash-persist

Description Use URL's hash value to select server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

url-switching

Type: List

use-server-status

Description Use Server-Status header to do URL hashing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

request-header-erase-list

Specification	Value
Type	*list*
Block object keys	

request-header-erase

Description Erase a header from HTTP request (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

redirect-rewrite

Specification	Value
Type	*object*

match-list

Type: List

redirect-secure

Description Use HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirect-secure-port

Description Port (Port Number)

Type: number

Range: 1-65535

Default: 443

redirect-rewrite_match-list

Specification	Value
Type	*list*
Block object keys	

redirect-match

Description URL Matching (Pattern URL String)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rewrite-to

Description Rewrite to Destination URL String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

response-header-insert-list

Specification	Value
Type	*list*
Block object keys	

response-header-insert

Description Insert a header into HTTP response (Header Content (Format: "[name]:[value]"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-header-insert-type

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

response-header-erase-list

Specification	Value
Type	*list*
Block object keys	

response-header-erase

Description Erase a header from HTTP response (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template

Specification	Value
Type	*object*

logging

Description Logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

url-switching

Specification	Value
Type	*list*
Block object keys	

url-match-string

Description URL String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

url-switching-type

Description 'contains': Select service group if URL string contains another string; 'ends-with': Select service group if URL string ends with another string; 'equals': Select service group if URL string equals another string; 'starts-with': Select service group if URL string starts with another string; 'regex-match': Select service group if URL string matches with regular expression; 'url-case-insensitive': Case insensitive URL switching; 'url-hits-enable': Enables URL Hits;

Type: string

Supported Values: contains, ends-with, equals, starts-with, regex-match, url-case-insensitive, url-hits-enable

response-content-replace-list

Specification	Value
Type	*list*
Block object keys	

response-content-replace

Description replace the data from HTTP response content (String in the http content need to be replaced)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-new-string

Description String will be in the http content

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

http-protocol-check

Specification	Value
Type	*object*

get-and-payload

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

h2up-content-length-alias

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

h2up-with-host-and-auth

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

h2up-with-transfer-encoding

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

header-filter-rule-list

Type: List

Reference Object: */axapi/v3/slb/template/http/{name}/http-protocol-check/header-filter-rule/{seq-num}*

malformed-h2up-header-value

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

malformed-h2up-scheme-value

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

multiple-content-length

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

multiple-transfer-encoding

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

transfer-encoding-and-content-length

Description 'drop': Drop the request and Send 400 to the client side;

Type: string

Supported Values: drop

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-protocol-check_header-filter-rule-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'drop': Drop the request;

Type: string

Supported Values: drop

header-name-value

Description Header name value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-value

Description Header value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

match-type-value

Description 'full-text': Full text match; 'pcre': PCRE match;

Type: string

Supported Values: full-text, pcre

seq-num

Description Specify a sequence number

Type: number

Range: 0-4

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

request-header-insert-list

Specification	Value
Type	*list*
Block object keys	

request-header-insert

Description Insert a header into HTTP request (Header Content (Format: "[name]:[value]"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

request-header-insert-type

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

host-switching

Specification	Value
Type	*list*
Block object keys	

host-match-string

Description Hostname String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

host-switching-type

Description 'contains': Select service group if hostname contains another string; 'ends-with': Select service group if hostname ends with another string; 'equals': Select service group if hostname equals another string; 'starts-with': Select service group if hostname starts with another string; 'regex-match': Select service group if URL string matches with regular expression; 'host-hits-enable': Enables Host Hits counters;

Type: string

Supported Values: contains, ends-with, equals, starts-with, regex-match, host-hits-enable

compression-content-type

Specification	Value
Type	*list*
Block object keys	

content-type

Description Compression content-type

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

compression-exclude-uri

Specification	Value
Type	*list*
Block object keys	

exclude-uri

Description Compression exclude uri

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

compression-exclude-content-type

Specification	Value
Type	*list*
Block object keys	

exclude-content-type

Description Compression exclude content-type (Compression exclude content type)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

2.120.271 slb template http http-protocol-check

HTTP protocol compliance check

http-protocol-check Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	http-protocol-check
Element URI	/axapi/v3/slb/template/http/{name}/http-protocol-check
Element Attributes	http-protocol-check_attributes
Partition Visibility	shared
Schema	`http-protocol-check schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/http/{name}/http-protocol-check

http-protocol-check attributes

```
POST /axapi/v3/slb/template/http/a/http-protocol-check
Payload:
{
    "http-protocol-check": {
        "h2up-content-length-alias": "drop"
    }
}
```

Get Object

GET

/axapi/v3/slb/template/http/{name}/http-protocol-check

http-protocol-check attributes

```
GET /axapi/v3/slb/template/http/a/http-protocol-check
Reponse:
{
    "http-protocol-check": {
        "h2up-content-length-alias": "drop",

Reference Object: */axapi/v3/slb/template/http-policy/{name}/multi-match-rule/{multi-match}*

name

Description http-policy template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-policy-match

Specification	Value
Type	*list*
Block object keys	

match-string

Description URL String, use "[no-name]" for empty query-param-name match, use "[no-value]" for empty query-param-value match

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

match-type

Description 'contains': Select service group if URL string contains another string; 'ends-with': Select service group if URL string ends with another string; 'equals': Select service group if URL string equals another string; 'starts-with': Select service group if URL string starts with another string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

type

Description 'cookie': cookie value match; 'host': hostname match; 'url': URL match; 'header-name': header name match; 'header-value': header value match; 'query-param-name': query parameter name; 'query-param-value': query parameter value;

Type: string

Supported Values: cookie, host, url, header-name, header-value, query-param-name, query-param-value

multi-match-rule-list

Specification	Value
Type	*list*
Block object keys	

cookie-name-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-contains-type

Description 'contains': Cookie name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-name-contains-type,cookie-name-equals-type, cookie-name-starts-with-type, and cookie-name-ends-with-type are mutually exclusive

cookie-name-ends-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-ends-with-type

Description 'ends-with': Cookie name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-name-ends-with-type,cookie-name-equals-type, cookie-name-contains-type, and cookie-name-starts-with-type are mutually exclusive

cookie-name-equals-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-equals-type

Description 'equals': Cookie name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-name-equals-type,cookie-name-contains-type, cookie-name-starts-with-type, and cookie-name-ends-with-type are mutually exclusive

cookie-name-starts-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-starts-with-type

Description 'starts-with': Cookie name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-name-starts-with-type,cookie-name-equals-type, cookie-name-contains-type, and cookie-name-ends-with-type are mutually exclusive

cookie-name-value-match

Description When enabled, the rule will match only when both cookie-name and cookie-value matches with same cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cookie-value-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-contains-type

Description 'contains': Cookie value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-value-contains-type,cookie-value-equals-type, cookie-value-starts-with-type, and cookie-value-ends-with-type are mutually exclusive

cookie-value-ends-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-ends-with-type

Description 'ends-with': Cookie value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-value-ends-with-type,cookie-value-equals-type, cookie-value-contains-type, and cookie-value-starts-with-type are mutually exclusive

cookie-value-equals-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-equals-type

Description 'equals': Cookie value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-value-equals-type,cookie-value-contains-type, cookie-value-starts-with-type, and cookie-value-ends-with-type are mutually exclusive

cookie-value-starts-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-starts-with-type

Description 'starts-with': Cookie value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-value-starts-with-type,cookie-value-equals-type, cookie-value-contains-type, and cookie-value-ends-with-type are mutually exclusive

header-name-contains-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-contains-type

Description 'contains': Header name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-name-contains-type,header-name-equals-type, header-name-starts-with-type, and header-name-ends-with-type are mutually exclusive

header-name-ends-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-ends-with-type

Description 'ends-with': Header name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-name-ends-with-type,header-name-equals-type, header-name-contains-type, and header-name-starts-with-type are mutually exclusive

header-name-equals-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-equals-type

Description 'equals': Header name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-name-equals-type,header-name-contains-type, header-name-starts-with-type, and header-name-ends-with-type are mutually exclusive

header-name-starts-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-starts-with-type

Description 'starts-with': Header name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-name-starts-with-type,header-name-equals-type, header-name-contains-type, and header-name-ends-with-type are mutually exclusive

header-name-value-match

Description When enabled, the rule will match only when both header-name and header-value matches with same header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-value-contains-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-contains-type

Description 'contains': Header value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-value-contains-type,header-value-equals-type, header-value-starts-with-type, and header-value-ends-with-type are mutually exclusive

header-value-ends-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-ends-with-type

Description 'ends-with': Header value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-value-ends-with-type,header-value-equals-type, header-value-contains-type, and header-value-starts-with-type are mutually exclusive

header-value-equals-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-equals-type

Description 'equals': Header value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-value-equals-type,header-value-contains-type, header-value-starts-with-type, and header-value-ends-with-type are mutually exclusive

header-value-starts-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-starts-with-type

Description 'starts-with': Header value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-value-starts-with-type,header-value-equals-type, header-value-contains-type, and header-value-ends-with-type are mutually exclusive

host-contains-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-contains-type

Description 'contains': Host contains string;

Type: string

Supported Values: contains

Mutual Exclusion: host-contains-type,host-equals-type, host-starts-with-type, and host-ends-with-type are mutually exclusive

host-ends-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-ends-with-type

Description 'ends-with': Host ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: host-ends-with-type,host-equals-type, host-contains-type, and host-starts-with-type are mutually exclusive

host-equals-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-equals-type

Description 'equals': Host equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: host-equals-type,host-contains-type, host-starts-with-type, and host-ends-with-type are mutually exclusive

host-starts-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-starts-with-type

Description 'starts-with': Host starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: host-starts-with-type,host-equals-type, host-contains-type, and host-ends-with-type are mutually exclusive

multi-match

Description Specify a multi-match-rule name

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

query-param-name-contains-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-contains-type

Description 'contains': query parameter name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-name-contains-type,query-param-name-equals-type, query-param-name-starts-with-type, and query-param-name-ends-with-type are mutually exclusive

query-param-name-ends-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-ends-with-type

Description 'ends-with': query parameter name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-name-ends-with-type,query-param-name-equals-type, query-param-name-contains-type, and query-param-name-starts-with-type are mutually exclusive

query-param-name-equals-string

Description query parameter name string, use "[no-name]" for empty query-param-name match

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-equals-type

Description 'equals': query parameter name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-name-equals-type,query-param-name-contains-type, query-param-name-starts-with-type, and query-param-name-ends-with-type are mutually exclusive

query-param-name-starts-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-starts-with-type

Description 'starts-with': query parameter name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-name-starts-with-type,query-param-name-equals-type, query-param-name-contains-type, and query-param-name-ends-with-type are mutually exclusive

query-param-value-contains-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-contains-type

Description 'contains': query parameter value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-value-contains-type,query-param-value-equals-type, query-param-value-starts-with-type, and query-param-value-ends-with-type are mutually exclusive

query-param-value-ends-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-ends-with-type

Description 'ends-with': query parameter value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-value-ends-with-type,query-param-value-equals-type, query-param-value-contains-type, and query-param-value-starts-with-type are mutually exclusive

query-param-value-equals-string

Description query parameter value string, use "[no-value]" for empty query-param-value match

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-equals-type

Description 'equals': query parameter value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-value-equals-type,query-param-value-contains-type, query-param-value-starts-with-type, and query-param-value-ends-with-type are mutually exclusive

query-param-value-starts-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-starts-with-type

Description 'starts-with': query parameter value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-value-starts-with-type,query-param-value-equals-type, query-param-value-contains-type, and query-param-value-ends-with-type are mutually exclusive

seq-num

Description Specify a sequence number

Type: number

Range: 1-8192

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

url-contains-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-contains-type

Description 'contains': URL contains string;

Type: string

Supported Values: contains

Mutual Exclusion: url-contains-type,url-equals-type, url-starts-with-type, and url-ends-with-type are mutually exclusive

url-ends-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-ends-with-type

Description 'ends-with': URL ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: url-ends-with-type,url-equals-type, url-contains-type, and url-starts-with-type are mutually exclusive

url-equals-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-equals-type

Description 'equals': URL equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: url-equals-type,url-contains-type, url-starts-with-type, and url-ends-with-type are mutually exclusive

url-starts-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-starts-with-type

Description 'starts-with': URL starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: url-starts-with-type,url-equals-type, url-contains-type, and url-ends-with-type are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-match

Specification	Value
Type	*list*
Block object keys	

geo-location

Description Geolocation name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

geo-location-service-group

Description Service Group to be used (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

2.120.274 slb template http-policy multi-match-rule

Multi-match-rule block

multi-match-rule Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*multi-match*
Collection Name	*multi-match-rule-list*

cookie-name-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-contains-type

Description 'contains': Cookie name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-name-contains-type,cookie-name-equals-type, cookie-name-starts-with-type, and cookie-name-ends-with-type are mutually exclusive

cookie-name-ends-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-ends-with-type

Description 'ends-with': Cookie name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-name-ends-with-type,cookie-name-equals-type, cookie-name-contains-type, and cookie-name-starts-with-type are mutually exclusive

cookie-name-equals-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-equals-type

Description 'equals': Cookie name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-name-equals-type,cookie-name-contains-type, cookie-name-starts-with-type, and cookie-name-ends-with-type are mutually exclusive

cookie-name-starts-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-starts-with-type

Description 'starts-with': Cookie name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-name-starts-with-type,cookie-name-equals-type, cookie-name-contains-type, and cookie-name-ends-with-type are mutually exclusive

cookie-name-value-match

Description When enabled, the rule will match only when both cookie-name and cookie-value matches with same cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cookie-value-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-contains-type

Description 'contains': Cookie value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-value-contains-type,cookie-value-equals-type, cookie-value-starts-with-type, and cookie-value-ends-with-type are mutually exclusive

cookie-value-ends-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-ends-with-type

Description 'ends-with': Cookie value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-value-ends-with-type,cookie-value-equals-type, cookie-value-contains-type, and cookie-value-starts-with-type are mutually exclusive

cookie-value-equals-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-equals-type

Description 'equals': Cookie value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-value-equals-type,cookie-value-contains-type, cookie-value-starts-with-type, and cookie-value-ends-with-type are mutually exclusive

cookie-value-starts-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-starts-with-type

Description 'starts-with': Cookie value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-value-starts-with-type,cookie-value-equals-type, cookie-value-contains-type, and cookie-value-ends-with-type are mutually exclusive

header-name-contains-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-contains-type

Description 'contains': Header name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-name-contains-type,header-name-equals-type, header-name-starts-with-type, and header-name-ends-with-type are mutually exclusive

header-name-ends-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-ends-with-type

Description 'ends-with': Header name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-name-ends-with-type,header-name-equals-type, header-name-contains-type, and header-name-starts-with-type are mutually exclusive

header-name-equals-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-equals-type

Description 'equals': Header name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-name-equals-type,header-name-contains-type, header-name-starts-with-type, and header-name-ends-with-type are mutually exclusive

header-name-starts-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-starts-with-type

Description 'starts-with': Header name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-name-starts-with-type,header-name-equals-type, header-name-contains-type, and header-name-ends-with-type are mutually exclusive

header-name-value-match

Description When enabled, the rule will match only when both header-name and header-value matches with same header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-value-contains-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-contains-type

Description 'contains': Header value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-value-contains-type,header-value-equals-type, header-value-starts-with-type, and header-value-ends-with-type are mutually exclusive

header-value-ends-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-ends-with-type

Description 'ends-with': Header value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-value-ends-with-type,header-value-equals-type, header-value-contains-type, and header-value-starts-with-type are mutually exclusive

header-value-equals-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-equals-type

Description 'equals': Header value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-value-equals-type,header-value-contains-type, header-value-starts-with-type, and header-value-ends-with-type are mutually exclusive

header-value-starts-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-starts-with-type

Description 'starts-with': Header value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-value-starts-with-type,header-value-equals-type, header-value-contains-type, and header-value-ends-with-type are mutually exclusive

host-contains-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-contains-type

Description 'contains': Host contains string;

Type: string

Supported Values: contains

Mutual Exclusion: host-contains-type,host-equals-type, host-starts-with-type, and host-ends-with-type are mutually exclusive

host-ends-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-ends-with-type

Description 'ends-with': Host ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: host-ends-with-type,host-equals-type, host-contains-type, and host-starts-with-type are mutually exclusive

host-equals-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-equals-type

Description 'equals': Host equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: host-equals-type,host-contains-type, host-starts-with-type, and host-ends-with-type are mutually exclusive

host-starts-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-starts-with-type

Description 'starts-with': Host starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: host-starts-with-type,host-equals-type, host-contains-type, and host-ends-with-type are mutually exclusive

multi-match

Description Specify a multi-match-rule name

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

query-param-name-contains-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-contains-type

Description 'contains': query parameter name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-name-contains-type,query-param-name-equals-type, query-param-name-starts-with-type, and query-param-name-ends-with-type are mutually exclusive

query-param-name-ends-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-ends-with-type

Description 'ends-with': query parameter name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-name-ends-with-type,query-param-name-equals-type, query-param-name-contains-type, and query-param-name-starts-with-type are mutually exclusive

query-param-name-equals-string

Description query parameter name string, use "[no-name]" for empty query-param-name match

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-equals-type

Description 'equals': query parameter name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-name-equals-type,query-param-name-contains-type, query-param-name-starts-with-type, and query-param-name-ends-with-type are mutually exclusive

query-param-name-starts-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-starts-with-type

Description 'starts-with': query parameter name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-name-starts-with-type,query-param-name-equals-type, query-param-name-contains-type, and query-param-name-ends-with-type are mutually exclusive

query-param-value-contains-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-contains-type

Description 'contains': query parameter value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-value-contains-type,query-param-value-equals-type, query-param-value-starts-with-type, and query-param-value-ends-with-type are mutually exclusive

query-param-value-ends-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-ends-with-type

Description 'ends-with': query parameter value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-value-ends-with-type,query-param-value-equals-type, query-param-value-contains-type, and query-param-value-starts-with-type are mutually exclusive

query-param-value-equals-string

Description query parameter value string, use "[no-value]" for empty query-param-value match

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-equals-type

Description 'equals': query parameter value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-value-equals-type,query-param-value-contains-type, query-param-value-starts-with-type, and query-param-value-ends-with-type are mutually exclusive

query-param-value-starts-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-starts-with-type

Description 'starts-with': query parameter value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-value-starts-with-type,query-param-value-equals-type, query-param-value-contains-type, and query-param-value-ends-with-type are mutually exclusive

seq-num

Description Specify a sequence number

Type: number

Range: 1-8192

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

url-contains-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-contains-type

Description 'contains': URL contains string;

Type: string

Supported Values: contains

Mutual Exclusion: url-contains-type,url-equals-type, url-starts-with-type, and url-ends-with-type are mutually exclusive

url-ends-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-ends-with-type

Description 'ends-with': URL ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: url-ends-with-type,url-equals-type, url-contains-type, and url-starts-with-type are mutually exclusive

url-equals-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-equals-type

Description 'equals': URL equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: url-equals-type,url-contains-type, url-starts-with-type, and url-ends-with-type are mutually exclusive

url-starts-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-starts-with-type

Description 'starts-with': URL starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: url-starts-with-type,url-equals-type, url-contains-type, and url-ends-with-type are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

imap-pop3 attributes

logindisabled

Description Disable Login before STARTTLS.Works only for imap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description IMAP-POP3 Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

starttls

Description 'disabled': Disable STARTTLS; 'optional': STARTTLS is optional requirement; 'enforced': Must issue STARTTLS command before imap transaction;

Type: string

Supported Values: disabled, optional, enforced

Default: disabled

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.276 slb template link-block-as-down

LACP Link-block will be treated as Link-down template

link-block-as-down Specification

Parameter	Value

bandwidth-interval

Description Interval duration in seconds

Type: number

Range: 1-60

Default: 5

name

Description Server Link-Cost Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

overage-bandwidth-cost

Description Configure overage bandwidth cost on real server (Overage bandwidth cost per Mbpi)

Type: number

Range: 0-4294967295

Default: 0

prepaid-bandwidth

Description Configure prepaid bandwidth on real server (Prepaid Bandwidth in Mbpi)

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'link_total_fwd_bytes': Total bytes fwd for link; 'interval_fwd_bytes': Link Cost bytes processed in forward direction per interval; 'link_total_conn': Link Cost total connection; 'interval_avg_throughput': Link Cost average throughput per interval; 'interval_max_throughput': Link Cost max throughput per interval;

Type: string

Supported Values: all, link_total_fwd_bytes, interval_fwd_bytes, link_total_conn, interval_avg_throughput, interval_max_throughput

link-probe attributes

destination

Description: destination is a **JSON Block**. Please see below for *destination*

Type: Object

Reference Object: */axapi/v3/slb/template/link-probe/{name}/destination*

disable

Description Disable Probe template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

expected-status-code

Description Specify response code range (e.g. 200,400-430), default is 200 (Format is xx,xx-xx (xx between [100, 899]), default is 200)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: 200

name

Description probe template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

probe-interval

Description Time between each probe that needs to be sent out (in seconds, default is 5)

Type: number

Range: 1-7200

Default: 5

probes-per-test

Description Total number of probes to be sent out for each test

Type: number

Range: 1-10

Default: 5

rtt-method

Description 'http-rtt': Calculate Round Trip Time between HTTP request and response; 'tcp-srtt': Use TCP Smoothed round trip time in the HTTP connection;

Type: string

Supported Values: http-rtt, tcp-srtt

Default: http-rtt

selection-rule

Description 'threshold': Use all links below a threshold before selecting the fastest link; 'fastest-link-always': Always use the link with the lowest average latency;

Type: string

Supported Values: threshold, fastest-link-always

Default: fastest-link-always

test-interval

Description time interval between subsequent tests (in seconds, default is 60)

Type: number

Range: 1-7200

Default: 60

threshold-value

Description Use all links below a threshold before selecting the fastest link (RTT in milliseconds)

Type: number

Range: 0-65534

Default: 0

url

Description Specify URL to which probes should be sent out. Default is /

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Default: /

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

destination

Specification	Value
Type	*object*

hostname

Description Target Hostname

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve the configured hostname; 'resolve-to-ipv6': Use AAAA Query only to resolve the configured hostname;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6

Mutual Exclusion: resolve-as, static-ipv4-addr, and static-ipv6-addr are mutually exclusive

static-ipv4-addr

Description Target IPv4 Address

Type: string

Format: ipv4-address

Mutual Exclusion: static-ipv4-addr, resolve-as, and static-ipv6-addr are mutually exclusive

static-ipv6-addr

Description Target IPv6 Address

Type: string

Format: ipv6-address

Mutual Exclusion: static-ipv6-addr, resolve-as, and static-ipv4-addr are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

}
```

logging-list

logging-list is **JSON List** of *logging attributes*

logging-list : [

{ *logging attributes* },

{ *logging attributes* },

...

]

logging attributes

auto

Description 'auto': Configure auto NAT for logging, default is auto enabled;

Type: string

Supported Values: auto

Default: auto

Mutual Exclusion: auto and pool are mutually exclusive

format

Description Specify a format string for web logging (format string(less than 250 characters) for web logging)

Type: string

Format: string-rlx

Maximum Length: 250 characters

Maximum Length: 1 characters

keep-end

Description Number of unmasked characters at the end (default: 0)

Type: number

Range: 0-65535

Default: 0

keep-start

Description Number of unmasked characters at the beginning (default: 0)

Type: number

Range: 0-65535

Default: 0

local-logging

Description 1 to enable local logging (1 to enable local logging, default 0)

Type: number

Range: 0-1

Default: 0

mask

Description Character to mask the matched pattern (default: X)

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: X

name

Description Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pcre-mask

Description Mask matched PCRE pattern in the log

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: pool, shared-partition-pool, and auto are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

pool-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

service-group

Description Bind a Service Group to the logging template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

shared-partition-pool

Description Reference a NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and pool are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.283 slb template monitor

Monitor template

monitor Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*id*
Collection Name	*monitor-list*
Collection URI	/axapi/v3/slb/template/monitor
Element Name	monitor
Element URI	/axapi/v3/slb/template/monitor/{id}
Element Attributes	monitor_attributes
Partition Visibility	shared
Schema	`monitor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/monitor

monitor attributes

```
POST /axapi/v3/slb/template/monitor/
Payload:
{
    "monitor": {
        "id": 1,
        "user-tag": "a"
    }
}
```

]

monitor attributes

clear-cfg

Type: List

id

Description Monitor template ID Number

Type: number

Range: 1-16

link-disable-cfg

Type: List

link-down-cfg

Type: List

link-enable-cfg

Type: List

link-up-cfg

Type: List

monitor-relation

Description 'monitor-and': Configures the monitors in current template to work with AND logic; 'monitor-or': Configures the monitors in current template to work with OR logic;

Type: string

Supported Values: monitor-and, monitor-or

Default: monitor-and

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

clear-cfg

Specification	Value
Type	*list*
Block object keys	

clear-all-partition

Description Partition name to clear

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

clear-all-partition-all

Description Clear all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clear-all-sequence

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

clear-partition

Description Partition name to clear

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

clear-partition-all

Description Clear all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clear-sequence

Description Specify the port physical port number

Type: number

Range: 1-16

sessions

Description 'all': Clear all sessions; 'sequence': Sequence number;

Type: string

Supported Values: all, sequence

link-enable-cfg

Specification	Value
Type	*list*
Block object keys	

ena-sequence

Description Sequence number (Specify the physical port number)

Type: number

Range: 1-16

enaeth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

link-up-cfg

Specification	Value
Type	*list*
Block object keys	

link-up-sequence1

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-up-sequence2

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-up-sequence3

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

linkup-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

link-down-cfg

Specification	Value
Type	*list*
Block object keys	

link-down-sequence1

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-down-sequence2

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-down-sequence3

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

linkdown-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

link-disable-cfg

Specification	Value
Type	*list*
Block object keys	

dis-sequence

Description Sequence number (Specify the physical port number)

Type: number

Range: 1-16

diseth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

2.120.284 slb template mqtt

MQTT template

mqtt Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*mqtt-list*
Collection URI	/axapi/v3/slb/template/mqtt

clientid-hash-first

Description Use the begining part of client ID to calculate hash value (client ID string length to calculate hash value)

Type: number

Range: 4-128

clientid-hash-last

Description Use the end part of Client ID to calculate hash value (Client ID length to calculate hash value)

Type: number

Range: 4-128

clientid-hash-offset

Description Skip part of Client ID to calculate hash value (Offset of the Client ID)

Type: number

Range: 0-255

clientid-hash-persist

Description Use Client ID's hash value to select server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description MQTT Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.285 slb template persist

Persistence

persist Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	persist
Element URI	/axapi/v3/slb/template/persist
Element Attributes	persist_attributes
Partition Visibility	shared
Schema	`persist schema`

Operations Allowed:

Get Object

GET

/axapi/v3/slb/template/persist

persist_attributes

persist attributes

cookie-list

Type: List

Reference Object: */axapi/v3/slb/template/persist/cookie/{name}*

destination-ip-list

Type: List

Reference Object: */axapi/v3/slb/template/persist/destination-ip/{name}*

source-ip-list

Type: List

Reference Object: */axapi/v3/slb/template/persist/source-ip/{name}*

ssl-sid-list

Type: List

Reference Object: */axapi/v3/slb/template/persist/ssl-sid/{name}*

destination-ip-list

Specification	Value
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of destination IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Destination IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

source-ip-list

Specification	Value
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforce-higher-priority

Description Enforce to use high priority node if available

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of source IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-dst-ip

Description Include destination IP on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-sport

Description Include source port on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Source IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

primary-port

Description Primary port to create the persist session

Type: number

Range: 1-65534

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-4321

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cookie-list

Specification	Value
Type	*list*
Block object keys	

cookie-name

Description Set cookie name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: sto-id

domain

Description Set cookie domain

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypt-level

Description Encryption level for cookie name / value

Type: number

Range: 0-1

Default: 1

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

expire

Description Set cookie expiration time (Expiration in seconds)

Type: number

Range: 0-31536000

Default: 31536000

httponly

Description Enable HttpOnly attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-always

Description Insert persist cookie to every reponse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persist for server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pass-phrase

Description Set passphrase for encryption

Type: string

Format: password

Maximum Length: 8 characters

Maximum Length: 8 characters

Default: ACOS4KEY

pass-thru

Description Pass thru mode - Server sends the persist cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

path

Description Set cookie path (Cookie path, default is "/")

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: /

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute;

Type: string

Supported Values: host, secure

samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

scan-all-members

Description Persist within the same server SCAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secure

Description Enable secure attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

server-service-group

Description Persist to the same server and within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

use-attribute

Description 'max-age': Use the Max-Age attribute; 'expires': Use the Expires attribute; 'all': Use all attributes;

Type: string

Supported Values: max-age, expires, all

Default: expires

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-sid-list

Specification	Value
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SSL session ID persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.286 slb template persist cookie

Cookie persistence

cookie Specification

Maximum Length: 1 characters

Default: /

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute;

Type: string

Supported Values: host, secure

samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

scan-all-members

Description Persist within the same server SCAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secure

Description Enable secure attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

server-service-group

Description Persist to the same server and within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

use-attribute

Description 'max-age': Use the Max-Age attribute; 'expires': Use the Expires attribute; 'all': Use all attributes;

Type: string

Supported Values: max-age, expires, all

Default: expires

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.287 slb template persist destination-ip

Destination IP persistence

destination-ip Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*destination-ip-list*
Collection URI	/axapi/v3/slb/template/persist/destination-ip
Element Name	destination-ip
Element URI	/axapi/v3/slb/template/persist/destination-ip/{name}
Element Attributes	destination-ip_attributes
Partition Visibility	shared
Schema	`destination-ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/persist/destination-ip

destination-ip attributes

```
POST /axapi/v3/slb/template/persist/destination-ip/
Payload:
{
    "destination-ip": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/slb/template/persist/destination-ip

destination-ip attributes

Get Object

GET

/axapi/v3/slb/template/persist/destination-ip/{name}

destination-ip-list : [

{ *destination-ip attributes* },

{ *destination-ip attributes* },

...

]

destination-ip attributes

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of destination IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Destination IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

]

source-ip attributes

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforce-higher-priority

Description Enforce to use high priority node if available

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of source IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-dst-ip

Description Include destination IP on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-sport

Description Include source port on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Source IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

primary-port

Description Primary port to create the persist session

Type: number

Range: 1-65534

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-4321

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.289 slb template persist ssl-sid

SSL session ID persistence

forward-policy

Description: forward-policy is a **JSON Block**. Please see below for *forward-policy*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy*

full-domain-tree

Description Share counters between geo-location and sub regions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Log interval (minute)

Type: number

Range: 1-255

name

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

over-limit

Description Specify operation in case over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-lockup

Description Don't accept any new connection for certain time (Lockup duration (minute))

Type: number

Range: 1-127

over-limit-logging

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-reset

Description Reset the connection when it exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

overlap

Description Use overlap mode for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

share

Description Share counters between virtual ports and virtual servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Define timeout value of PBSLB dynamic entry (Timeout value (minute, default is 5))

Type: number

Range: 1-127

Default: 5

use-destination-ip

Description Use destination IP to match the policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy

Specification	Value
Type	*object*

acos-event-log

Description Enable acos event logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/action/{name}*

dual-stack-action-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/dual-stack-action/{name}*

enable-adv-match

Description Enable adv-match rules and deactive all the other kinds of destination rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filtering

Type: List

forward-http-connect-to-icap

Description Forward HTTP CONNECT request to ICAP server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-client-conn-reuse

Description Inspects only first request of a connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reqmod-icap

Description ICAP reqmod template (Reqmod ICAP Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/reqmod-icap*

require-web-category

Description Wait for web category to be resolved before taking proxy decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

san-filtering

Type: List

source-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy_filtering

Specification	Value
Type	*list*
Block object keys	

ssli-url-filtering

Description 'bypassed-sni-disable': Disable SNI filtering for bypassed URL's(enabled by default); 'intercepted-sni-enable': Enable SNI filtering for intercepted URL's(disabled by default); 'intercepted-http-disable': Disable HTTP(host/URL) filtering for intercepted URL's(enabled by default); 'no-sni-allow': Allow connection if SNI filtering is enabled and SNI header is not present(Drop by default);

Type: string

Supported Values: bypassed-sni-disable, intercepted-sni-enable, intercepted-http-disable, no-sni-allow

forward-policy_san-filtering

Specification	Value
Type	*list*
Block object keys	

ssli-url-filtering-san

Description 'enable-san': Enable SAN filtering(disabled by default); 'bypassed-san-disable': Disable SAN filtering for bypassed URL's(enabled by default); 'intercepted-san-enable': Enable SAN filtering for intercepted URL's(disabled by default); 'no-san-allow': Allow connection if SAN filtering is enabled and SAN field is not present(Drop by default);

Type: string

Supported Values: enable-san, bypassed-san-disable, intercepted-san-enable, no-san-allow

forward-policy_action-list

Specification	Value
Type	*list*
Block object keys	

action1

Description 'forward-to-internet': Forward request to Internet; 'forward-to-service-group': Forward request to service group; 'forward-to-proxy': Forward request to HTTP proxy server; 'drop': Drop request;

Type: string

Supported Values: forward-to-internet, forward-to-service-group, forward-to-proxy, drop

drop-message

Description drop-message sent to the client as webpage(html tags are included and quotation marks are required for white spaces)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-message and drop-redirect-url are mutually exclusive

drop-redirect-url

Description Specify URL to which client request is redirected upon being dropped

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-redirect-url, drop-response-code, and drop-message are mutually exclusive

drop-response-code

Description Specify response code for drop action

Type: number

Range: 100-599

Mutual Exclusion: drop-response-code and drop-redirect-url are mutually exclusive

fake-sg

Description service group to forward the packets to Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back

Description Fallback service group for Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back-snat

Description Source NAT pool or pool group for fallback server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fall-back-snat and fall-back-snat-pt-only are mutually exclusive

fall-back-snat-pt-only

Description Source port translation only for fallback server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fall-back-snat-pt-only and fall-back-snat are mutually exclusive

forward-snat

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-snat and forward-snat-pt-only are mutually exclusive

forward-snat-pt-only

Description Source port translation only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward-snat-pt-only and forward-snat are mutually exclusive

http-status-code

Description '301': Moved permanently; '302': Found;

Type: string

Supported Values: 301, 302

Default: 302

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action policy name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

proxy-chaining

Description Enable proxy chaining feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-chaining-bypass

Description Forward all https packets to upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

real-sg

Description service group to forward the packets

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-cert-fetch

Description Fetch server certificate by upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy_action-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

forward-policy_dual-stack-action-list

Specification	Value
Type	*list*
Block object keys	

fall-back

Description Fallback service group

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

fall-back-snat

Description Source NAT pool or pool group for fallback

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

ipv4

Description IPv4 service group to forward

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

ipv4-snat

Description IPv4 source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

ipv6

Description IPv6 service group to forward

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

ipv6-snat

Description IPv6 source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/nat/pool*

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy_dual-stack-action-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests forward by this action;

Type: string

Supported Values: all, hits

forward-policy_source-list

Specification	Value
Type	*list*
Block object keys	

destination

Description: destination is a **JSON Block**. Please see below for *forward-policy_source-list_destination*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination*

match-any

Description Match any source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: match-any and match-class-list are mutually exclusive

match-authorize-policy

Description Authorize-policy for user and group based policy

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authorization/policy*

match-class-list

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: match-class-list and match-any are mutually exclusive

name

Description source destination match rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority of the source(higher the number higher the priority, default 0)

Type: number

Range: 1-2000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy_source-list_destination

Specification	Value
Type	*object*

adv-match-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/adv-match/{priority}*

any

Description: any is a **JSON Block**. Please see below for *forward-policy_source-list_destination_any*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/any*

class-list-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/class-list/{dest-class-list}*

web-category-list-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/web-category-list/{web-category-list}*

web-reputation-scope-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/web-reputation-scope/{web-reputation-scope}*

forward-policy_source-list_destination_class-list-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dest-class-list

Description Destination Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': Match URL; 'ip': Match destination IP address;

Type: string

Supported Values: host, url, ip

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy_source-list_destination_web-category-list-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-category-list

Description Destination Web Category List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

forward-policy_source-list_destination_any

Specification	Value
Type	*object*

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: action and dual-stack-action are mutually exclusive

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dual-stack-action and action are mutually exclusive

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy_source-list_destination_any_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

forward-policy_source-list_destination_adv-match-list

Specification	Value
Type	*list*
Block object keys	

action

Description Forwading action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: action and dual-stack-action are mutually exclusive

disable-reqmod-icap

Description Disable REQMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-respmod-icap

Description Disable RESPMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dual-stack-action

Description Forwarding action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dual-stack-action and action are mutually exclusive

match-host

Description Match request host (HTTP stage) or SNI/SAN (SSL stage)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-encoding

Description Match the value of HTTP header "Content-Encoding"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-length-range-begin

Description Match the value of HTTP header "Content-Length" with an inclusive range

Type: number

Range: 0-2147483647

match-http-content-length-range-end

Description End of the "Content-Length" range

Type: number

Range: 0-2147483647

match-http-content-type

Description Match the value of HTTP header "Content-Type"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-header

Description Matching the name of all request headers

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-method-connect

Description Match HTTP request method CONNECT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-delete

Description Match HTTP request method DELETE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-get

Description Match HTTP request method GET

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-head

Description Match HTTP request method HEAD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-options

Description Match HTTP request method OPTIONS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-patch

Description Match HTTP request method PATCH

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-post

Description Match HTTP request method POST

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-put

Description Match HTTP request method PUT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-trace

Description Match HTTP request method TRACE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-request-file-extension

Description Match file extension of URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url

Description Match URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url-regex

Description Match URI in HTTP request line by given regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-http-user-agent

Description Matching the value of HTTP header "User-Agent"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-server-address

Description Match target server IP address

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-server-port

Description Match target server port number

Type: number

Range: 1-65535

Mutual Exclusion: match-server-port and match-server-port-range-begin are mutually exclusive

match-server-port-range-begin

Description Math targer server port range inclusively

Type: number

Range: 1-65535

Mutual Exclusion: match-server-port-range-begin and match-server-port are mutually exclusive

match-server-port-range-end

Description End of port range

Type: number

Range: 1-65535

match-time-range

Description Enable rule in this time-range

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/forward-proxy/time-range*

match-web-category-list

Description Match web-category list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

match-web-reputation-scope

Description Match web-reputation scope

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/reputation-scope*

notify-page

Description Send notify-page to client

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/forward-proxy/notify-page*

priority

Description Rule priority (1000 is highest)

Type: number

Range: 1-1000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy_source-list_destination_adv-match-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests hit this rule;

Type: string

Supported Values: all, hits

forward-policy_source-list_destination_web-reputation-scope-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-reputation-scope

Description Destination Web Reputation Scope Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/reputation-scope*

forward-policy_source-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this source rule; 'destination-match-not-found': Number of requests without matching destination rule; 'no-host-info': Failed to parse ip or host information from request;

Type: string

Supported Values: all, hits, destination-match-not-found, no-host-info

class-list

Specification	Value
Type	*object*

client-ip-l3-dest

Description Use destination IP as client IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l3-dest and client-ip-l7-header are mutually exclusive

client-ip-l7-header

Description Use extract client IP address from L7 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l7-header and client-ip-l3-dest are mutually exclusive

header-name

Description Specify L7 header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lid-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/class-list/lid/{lidnum}*

name

Description Class list name or geo-location-class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

bw-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

bw-rate-limit

Description Specify bandwidth rate limit (Bandwidth rate limit in bytes)

Type: number

Range: 1-2147483647

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

direct-action

Description Set action when match the lid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

direct-action-value

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: direct-action-value and direct-service-group are mutually exclusive

direct-fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-pbslb-interval

Description Specify logging interval in minutes(default is 3)

Type: number

Range: 0-60

Default: 3

direct-pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: direct-service-group and direct-action-value are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

dns64

Description: dns64 is a **JSON Block**. Please see below for *class-list_lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 1-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

response-code-rate-limit

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list_dns64

Specification	Value
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

class-list_lid-list_response-code-rate-limit

Specification	Value
Type	*list*
Block object keys	

code-range-end

Description server response code range end

Type: number

Range: 100-600

code-range-start

Description server response code range start

Type: number

Range: 100-600

period

Description seconds

Type: number

Range: 1-127

threshold

Description the times of getting the response code

Type: number

Range: 1-15

bw-list-id

Specification	Value
Type	*list*
Block object keys	

action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

bw-list-action

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: bw-list-action and service-group are mutually exclusive

fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

id

Description Specify id that maps to service group (The id number)

Type: number

Range: 0-1023

logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pbslb-interval

Description Specify logging interval in minutes

Type: number

Range: 0-60

Default: 3

pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group and bw-list-action are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'fwd-policy-dns-unresolved': Forward-policy unresolved DNS queries; 'fwd-policy-dns-outstanding': Forward-policy current DNS outstanding requests; 'fwd-policy-snat-fail': Forward-policy source-nat translation failure; 'fwd-policy-hits': Number of forward-policy requests for this policy template; 'fwd-policy-forward-to-internet': Number of forward-policy requests forwarded to internet; 'fwd-policy-forward-to-service-group': Number of forward-policy requests forwarded to service group; 'fwd-policy-forward-to-proxy': Number of forward-policy requests forwarded to proxy; 'fwd-policy-policy-drop': Number of forward-policy requests dropped; 'fwd-policy-source-match-not-found': Forward-policy requests without matching source rule; 'exp-client-hello-not-found': Expected Client HELLO requests not found;

Type: string

Supported Values: all, fwd-policy-dns-unresolved, fwd-policy-dns-outstanding, fwd-policy-snat-fail, fwd-policy-hits, fwd-policy-forward-to-internet, fwd-policy-forward-to-service-group, fwd-policy-forward-to-proxy, fwd-policy-policy-drop, fwd-policy-source-match-not-found, exp-client-hello-not-found

2.120.291 slb template policy class-list

Configure classification list

class-list Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	class-list
Element URI	/axapi/v3/slb/template/policy/{name}/class-list
Element Attributes	class-list_attributes
Partition Visibility	shared
Schema	`class-list schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/policy/{name}/class-list

class-list attributes

```
POST /axapi/v3/slb/template/policy/a/class-list
Payload:
```

(continues on next page)

(continued from previous page)

```
{

    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

class-list attributes

client-ip-l3-dest

Description Use destination IP as client IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l3-dest and client-ip-l7-header are mutually exclusive

client-ip-l7-header

Description Use extract client IP address from L7 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l7-header and client-ip-l3-dest are mutually exclusive

header-name

Description Specify L7 header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lid-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/class-list/lid/{lidnum}*

name

Description Class list name or geo-location-class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

bw-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

bw-rate-limit

Description Specify bandwidth rate limit (Bandwidth rate limit in bytes)

Type: number

Range: 1-2147483647

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

direct-action

Description Set action when match the lid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

direct-action-value

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: direct-action-value and direct-service-group are mutually exclusive

direct-fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-pbslb-interval

Description Specify logging interval in minutes(default is 3)

Type: number

Range: 0-60

Default: 3

direct-pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: direct-service-group and direct-action-value are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

dns64

Description: dns64 is a **JSON Block**. Please see below for *lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 1-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

response-code-rate-limit

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lid-list_dns64

Specification	Value
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

lid-list_response-code-rate-limit

Specification	Value
Type	*list*
Block object keys	

code-range-end

Description server response code range end

Type: number

Range: 100-600

code-range-start

Description server response code range start

Type: number

Range: 100-600

period

Description seconds

Type: number

Range: 1-127

threshold

Description the times of getting the response code

Type: number

Range: 1-15

2.120.292 slb template policy class-list lid

Limit ID

lid Specification

Parameter	Value

        "msg": "Success"
    }
}
```

forward-policy attributes

acos-event-log

Description Enable acos event logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/action/{name}*

dual-stack-action-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/dual-stack-action/{name}*

enable-adv-match

Description Enable adv-match rules and deactive all the other kinds of destination rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filtering

Type: List

forward-http-connect-to-icap

Description Forward HTTP CONNECT request to ICAP server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-client-conn-reuse

Description Inspects only first request of a connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reqmod-icap

Description ICAP reqmod template (Reqmod ICAP Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/reqmod-icap*

require-web-category

Description Wait for web category to be resolved before taking proxy decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

san-filtering

Type: List

source-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

filtering

Specification	Value
Type	*list*
Block object keys	

ssli-url-filtering

Description 'bypassed-sni-disable': Disable SNI filtering for bypassed URL's(enabled by default); 'intercepted-sni-enable': Enable SNI filtering for intercepted URL's(disabled by default); 'intercepted-http-disable': Disable HTTP(host/URL) filtering for intercepted URL's(enabled by default); 'no-sni-allow': Allow connection if SNI filtering is enabled and SNI header is not present(Drop by default);

Type: string

Supported Values: bypassed-sni-disable, intercepted-sni-enable, intercepted-http-disable, no-sni-allow

san-filtering

Specification	Value
Type	*list*
Block object keys	

ssli-url-filtering-san

Description 'enable-san': Enable SAN filtering(disabled by default); 'bypassed-san-disable': Disable SAN filtering for bypassed URL's(enabled by default); 'intercepted-san-enable': Enable SAN filtering for intercepted URL's(disabled by default); 'no-san-allow': Allow connection if SAN filtering is enabled and SAN field is not present(Drop by default);

Type: string

Supported Values: enable-san, bypassed-san-disable, intercepted-san-enable, no-san-allow

action-list

Specification	Value
Type	*list*
Block object keys	

action1

Description 'forward-to-internet': Forward request to Internet; 'forward-to-service-group': Forward request to service group; 'forward-to-proxy': Forward request to HTTP proxy server; 'drop': Drop request;

Type: string

Supported Values: forward-to-internet, forward-to-service-group, forward-to-proxy, drop

drop-message

Description drop-message sent to the client as webpage(html tags are included and quotation marks are required for white spaces)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-message and drop-redirect-url are mutually exclusive

drop-redirect-url

Description Specify URL to which client request is redirected upon being dropped

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-redirect-url, drop-response-code, and drop-message are mutually exclusive

drop-response-code

Description Specify response code for drop action

Type: number

Range: 100-599

Mutual Exclusion: drop-response-code and drop-redirect-url are mutually exclusive

fake-sg

Description service group to forward the packets to Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back

Description Fallback service group for Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back-snat

Description Source NAT pool or pool group for fallback server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fall-back-snat and fall-back-snat-pt-only are mutually exclusive

fall-back-snat-pt-only

Description Source port translation only for fallback server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fall-back-snat-pt-only and fall-back-snat are mutually exclusive

forward-snat

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-snat and forward-snat-pt-only are mutually exclusive

forward-snat-pt-only

Description Source port translation only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward-snat-pt-only and forward-snat are mutually exclusive

http-status-code

Description '301': Moved permanently; '302': Found;

Type: string

Supported Values: 301, 302

Default: 302

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action policy name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

proxy-chaining

Description Enable proxy chaining feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-chaining-bypass

Description Forward all https packets to upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

real-sg

Description service group to forward the packets

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-cert-fetch

Description Fetch server certificate by upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

dual-stack-action-list

Specification	Value
Type	*list*
Block object keys	

fall-back

Description Fallback service group

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

fall-back-snat

Description Source NAT pool or pool group for fallback

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

ipv4

Description IPv4 service group to forward

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

ipv4-snat

Description IPv4 source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

ipv6

Description IPv6 service group to forward

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

ipv6-snat

Description IPv6 source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/nat/pool*

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dual-stack-action-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests forward by this action;

Type: string

Supported Values: all, hits

source-list

Specification	Value
Type	*list*
Block object keys	

destination

Description: destination is a **JSON Block**. Please see below for *source-list_destination*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination*

match-any

Description Match any source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: match-any and match-class-list are mutually exclusive

match-authorize-policy

Description Authorize-policy for user and group based policy

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authorization/policy*

match-class-list

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: match-class-list and match-any are mutually exclusive

name

Description source destination match rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority of the source(higher the number higher the priority, default 0)

Type: number

Range: 1-2000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

source-list_destination

Specification	Value
Type	*object*

adv-match-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/adv-match/{priority}*

any

Description: any is a **JSON Block**. Please see below for *source-list_destination_any*

source-list_destination_class-list-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dest-class-list

Description Destination Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': Match URL; 'ip': Match destination IP address;

Type: string

Supported Values: host, url, ip

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

source-list_destination_web-category-list-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-category-list

Description Destination Web Category List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

source-list_destination_any

Specification	Value
Type	*object*

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: action and dual-stack-action are mutually exclusive

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dual-stack-action and action are mutually exclusive

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

source-list_destination_any_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Supported Values: all, hits

source-list_destination_adv-match-list

Specification	Value
Type	*list*
Block object keys	

action

Description Forwading action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: action and dual-stack-action are mutually exclusive

disable-reqmod-icap

Description Disable REQMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-respmod-icap

Description Disable RESPMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dual-stack-action

Description Forwarding action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dual-stack-action and action are mutually exclusive

match-host

Description Match request host (HTTP stage) or SNI/SAN (SSL stage)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-encoding

Description Match the value of HTTP header "Content-Encoding"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-length-range-begin

Description Match the value of HTTP header "Content-Length" with an inclusive range

Type: number

Range: 0-2147483647

match-http-content-length-range-end

Description End of the "Content-Length" range

Type: number

Range: 0-2147483647

match-http-content-type

Description Match the value of HTTP header "Content-Type"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-header

Description Matching the name of all request headers

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-method-connect

Description Match HTTP request method CONNECT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-delete

Description Match HTTP request method DELETE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-get

Description Match HTTP request method GET

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-head

Description Match HTTP request method HEAD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-options

Description Match HTTP request method OPTIONS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-patch

Description Match HTTP request method PATCH

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-post

Description Match HTTP request method POST

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-put

Description Match HTTP request method PUT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-trace

Description Match HTTP request method TRACE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-request-file-extension

Description Match file extension of URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url

Description Match URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url-regex

Description Match URI in HTTP request line by given regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-http-user-agent

Description Matching the value of HTTP header “User-Agent”

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-server-address

Description Match target server IP address

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-server-port

Description Match target server port number

Type: number

Range: 1-65535

Mutual Exclusion: match-server-port and match-server-port-range-begin are mutually exclusive

match-server-port-range-begin

Description Math targer server port range inclusively

Type: number

Range: 1-65535

Mutual Exclusion: match-server-port-range-begin and match-server-port are mutually exclusive

match-server-port-range-end

Description End of port range

Type: number

Range: 1-65535

match-time-range

Description Enable rule in this time-range

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/forward-proxy/time-range*

match-web-category-list

Description Match web-category list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

match-web-reputation-scope

Description Match web-reputation scope

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/reputation-scope*

notify-page

Description Send notify-page to client

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/forward-proxy/notify-page*

priority

Description Rule priority (1000 is highest)

Type: number

Range: 1-1000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

source-list_destination_adv-match-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests hit this rule;

Type: string

Supported Values: all, hits

source-list_destination_web-reputation-scope-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-reputation-scope

Description Destination Web Reputation Scope Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/reputation-scope*

source-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this source rule; 'destination-match-not-found': Number of requests without matching destination rule; 'no-host-info': Failed to parse ip or host information from request;

Type: string

Supported Values: all, hits, destination-match-not-found, no-host-info

2.120.294 slb template policy forward-policy action

action list

action Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*action-list*
Collection URI	/axapi/v3/slb/template/policy/{name}/forward-policy/action
Element Name	action
Element URI	/axapi/v3/slb/template/policy/{name}/forward-policy/action/{name}
Element Attributes	action_attributes
Partition Visibility	shared
Schema	`action schema`

Operations Allowed:

action attributes

action-list

action-list is **JSON List** of *action attributes*

action-list : [

{ *action attributes* },

{ *action attributes* },

...

]

action attributes

action1

Description 'forward-to-internet': Forward request to Internet; 'forward-to-service-group': Forward request to service group; 'forward-to-proxy': Forward request to HTTP proxy server; 'drop': Drop request;

Type: string

Supported Values: forward-to-internet, forward-to-service-group, forward-to-proxy, drop

drop-message

Description drop-message sent to the client as webpage(html tags are included and quotation marks are required for white spaces)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-message and drop-redirect-url are mutually exclusive

drop-redirect-url

Description Specify URL to which client request is redirected upon being dropped

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-redirect-url, drop-response-code, and drop-message are mutually exclusive

drop-response-code

Description Specify response code for drop action

Type: number

Range: 100-599

Mutual Exclusion: drop-response-code and drop-redirect-url are mutually exclusive

fake-sg

Description service group to forward the packets to Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back

Description Fallback service group for Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back-snat

Description Source NAT pool or pool group for fallback server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fall-back-snat and fall-back-snat-pt-only are mutually exclusive

fall-back-snat-pt-only

Description Source port translation only for fallback server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fall-back-snat-pt-only and fall-back-snat are mutually exclusive

forward-snat

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-snat and forward-snat-pt-only are mutually exclusive

forward-snat-pt-only

Description Source port translation only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward-snat-pt-only and forward-snat are mutually exclusive

http-status-code

Description '301': Moved permanently; '302': Found;

Type: string

Supported Values: 301, 302

Default: 302

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action policy name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

proxy-chaining

Description Enable proxy chaining feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-chaining-bypass

Description Forward all https packets to upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

real-sg

Description service group to forward the packets

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-cert-fetch

Description Fetch server certificate by upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

2.120.295 slb template policy forward-policy action stats

Statistics for the object action

action Specification

Parameter	Value
Type	*Collection*
Collection Name	*action-list*
Collection URI	/axapi/v3/slb/template/policy/{name}/forward-policy/action/{name}
Element Name	action
Element URI	/axapi/v3/slb/template/policy/{name}/forward-policy/action/{name}/stats

dual-stack-action attributes

fall-back

Description Fallback service group

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

fall-back-snat

Description Source NAT pool or pool group for fallback

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

ipv4

Description IPv4 service group to forward

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

ipv4-snat

Description IPv4 source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

ipv6

Description IPv6 service group to forward

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

ipv6-snat

Description IPv6 source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/nat/pool*

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests forward by this action;

Type: string

Supported Values: all, hits

2.120.297 slb template policy forward-policy dual-stack-action stats

Description: destination is a **JSON Block**. Please see below for *destination*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination*

match-any

Description Match any source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: match-any and match-class-list are mutually exclusive

match-authorize-policy

Description Authorize-policy for user and group based policy

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authorization/policy*

match-class-list

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: match-class-list and match-any are mutually exclusive

name

Description source destination match rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority of the source(higher the number higher the priority, default 0)

Type: number

Range: 1-2000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

destination

Specification	Value
Type	*object*

Specification	Value
Type	*list*
Block object keys	

action

Description Forwading action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: action and dual-stack-action are mutually exclusive

disable-reqmod-icap

Description Disable REQMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-respmod-icap

Description Disable RESPMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dual-stack-action

Description Forwarding action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dual-stack-action and action are mutually exclusive

match-host

Description Match request host (HTTP stage) or SNI/SAN (SSL stage)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-encoding

Description Match the value of HTTP header “Content-Encoding”

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-length-range-begin

Description Match the value of HTTP header “Content-Length” with an inclusive range

Type: number

Range: 0-2147483647

match-http-content-length-range-end

Description End of the “Content-Length” range

Type: number

Range: 0-2147483647

match-http-content-type

Description Match the value of HTTP header "Content-Type"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-header

Description Matching the name of all request headers

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-method-connect

Description Match HTTP request method CONNECT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-delete

Description Match HTTP request method DELETE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-get

Description Match HTTP request method GET

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-head

Description Match HTTP request method HEAD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-options

Description Match HTTP request method OPTIONS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-patch

Description Match HTTP request method PATCH

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-post

Description Match HTTP request method POST

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-put

Description Match HTTP request method PUT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-trace

Description Match HTTP request method TRACE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-request-file-extension

Description Match file extension of URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url

Description Match URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url-regex

Description Match URI in HTTP request line by given regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-http-user-agent

Description Matching the value of HTTP header "User-Agent"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-server-address

Description Match target server IP address

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-server-port

Description Match target server port number

Type: number

Range: 1-65535

Mutual Exclusion: match-server-port and match-server-port-range-begin are mutually exclusive

match-server-port-range-begin

Description Math targer server port range inclusively

Type: number

Range: 1-65535

Mutual Exclusion: match-server-port-range-begin and match-server-port are mutually exclusive

match-server-port-range-end

Description End of port range

Type: number

Range: 1-65535

match-time-range

Description Enable rule in this time-range

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/forward-proxy/time-range*

match-web-category-list

Description Match web-category list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

match-web-reputation-scope

Description Match web-reputation scope

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/reputation-scope*

notify-page

Description Send notify-page to client

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/forward-proxy/notify-page*

priority

Description Rule priority (1000 is highest)

Type: number

Range: 1-1000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

destination_adv-match-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests hit this rule;

Type: string

Supported Values: all, hits

destination_web-reputation-scope-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-reputation-scope

Description Destination Web Reputation Scope Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/reputation-scope*

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this source rule; 'destination-match-not-found': Number of requests without matching destination rule; 'no-host-info': Failed to parse ip or host information from request;

Type: string

Supported Values: all, hits, destination-match-not-found, no-host-info

adv-match-list

Specification	Value
Type	*list*
Block object keys	

action

Description Forwading action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: action and dual-stack-action are mutually exclusive

disable-reqmod-icap

Description Disable REQMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-respmod-icap

Description Disable RESPMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dual-stack-action

Description Forwarding action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dual-stack-action and action are mutually exclusive

match-host

Description Match request host (HTTP stage) or SNI/SAN (SSL stage)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-encoding

Description Match the value of HTTP header “Content-Encoding”

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-length-range-begin

Description Match the value of HTTP header “Content-Length” with an inclusive range

Type: number

Range: 0-2147483647

match-http-content-length-range-end

Description End of the “Content-Length” range

Type: number

Range: 0-2147483647

match-http-content-type

Description Match the value of HTTP header "Content-Type"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-header

Description Matching the name of all request headers

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-method-connect

Description Match HTTP request method CONNECT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-delete

Description Match HTTP request method DELETE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-get

Description Match HTTP request method GET

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-head

Description Match HTTP request method HEAD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-options

Description Match HTTP request method OPTIONS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-patch

Description Match HTTP request method PATCH

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-post

Description Match HTTP request method POST

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-put

Description Match HTTP request method PUT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-trace

Description Match HTTP request method TRACE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-request-file-extension

Description Match file extension of URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url

Description Match URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url-regex

Description Match URI in HTTP request line by given regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-http-user-agent

Description Matching the value of HTTP header "User-Agent"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-server-address

Description Match target server IP address

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-server-port

Description Match target server port number

Type: number

Range: 1-65535

Mutual Exclusion: match-server-port and match-server-port-range-begin are mutually exclusive

match-server-port-range-begin

Description Math targer server port range inclusively

Type: number

Range: 1-65535

Mutual Exclusion: match-server-port-range-begin and match-server-port are mutually exclusive

match-server-port-range-end

Description End of port range

Type: number

Range: 1-65535

match-time-range

Description Enable rule in this time-range

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/forward-proxy/time-range*

match-web-category-list

Description Match web-category list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

match-web-reputation-scope

Description Match web-reputation scope

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/reputation-scope*

notify-page

Description Send notify-page to client

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/forward-proxy/notify-page*

priority

Description Rule priority (1000 is highest)

Type: number

Range: 1-1000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

adv-match-list_sampling-enable

Specification	Value
Type	*list*

        ...
    ]
```

adv-match attributes

action

Description Forwading action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: action and dual-stack-action are mutually exclusive

disable-reqmod-icap

Description Disable REQMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-respmod-icap

Description Disable RESPMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dual-stack-action

Description Forwarding action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dual-stack-action and action are mutually exclusive

match-host

Description Match request host (HTTP stage) or SNI/SAN (SSL stage)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-encoding

Description Match the value of HTTP header “Content-Encoding”

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-length-range-begin

Description Match the value of HTTP header "Content-Length" with an inclusive range

Type: number

Range: 0-2147483647

match-http-content-length-range-end

Description End of the "Content-Length" range

Type: number

Range: 0-2147483647

match-http-content-type

Description Match the value of HTTP header "Content-Type"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-header

Description Matching the name of all request headers

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-method-connect

Description Match HTTP request method CONNECT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-delete

Description Match HTTP request method DELETE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-get

Description Match HTTP request method GET

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-head

Description Match HTTP request method HEAD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-options

Description Match HTTP request method OPTIONS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-patch

Description Match HTTP request method PATCH

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-post

Description Match HTTP request method POST

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-put

Description Match HTTP request method PUT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-trace

Description Match HTTP request method TRACE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-request-file-extension

Description Match file extension of URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url

Description Match URL in HTTP request line

Type: string

port-list

port-list is **JSON List** of *port attributes*

port-list : [

{ *port attributes* },

{ *port attributes* },

...

]

port attributes

add

Description Slow start connection limit add by a number every interval (Add by this number every interval)

Type: number

Range: 1-4095

Mutual Exclusion: add and times are mutually exclusive

bw-rate-limit

Description Configure bandwidth rate limit on real server port (Bandwidth rate limit in Kbps)

Type: number

Range: 1-16777216

bw-rate-limit-duration

Description Duration in seconds the observed rate needs to honor

Type: number

Range: 1-250

bw-rate-limit-no-logging

Description Do not log bandwidth rate limit related state transitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Resume server selection after bandwidth drops below this threshold (in Kbps) (Bandwidth rate limit resume threshold (in Kbps))

Type: number

Range: 1-16777216

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-flaps

Description service dampening flaps count (max-flaps allowed in flap period)

Type: number

Range: 1-255

decrement

Description Decrease after every round of DNS query (default is 0)

Type: number

Range: 0-7

Default: 0

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-nat

Description Destination NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

down-grace-period

Description Port down grace period (Down grace period in seconds)

Type: number

Range: 1-86400

down-timer

Description The timer to bring the marked down server/port to up (default is 0, never bring up) (The timer to bring up server (in second, default is 0))

Type: number

Range: 0-255

Default: 0

dscp

Description Differentiated Services Code Point (DSCP to Real Server IP Mapping Value)

Type: number

Range: 1-63

dynamic-member-priority

Description Set dynamic member's priority (Initial priority (default is 16))

Type: number

Range: 1-16

Default: 16

every

Description Slow start connection limit increment interval (default 10)

Type: number

Range: 1-60

Default: 10

extended-stats

Description Enable extended statistics on real server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

flap-period

Description take service out of rotation if max-flaps exceeded within time in seconds

Type: number

Range: 1-255

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

inband-health-check

Description Use inband traffic to detect port's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

initial-slow-start

Description Initial slow start connection limit (default 128)

Type: number

Range: 1-4095

Default: 128

name

Description Port template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

no-ssl

Description No SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

reassign

Description Maximum reassign times before declear the server/port down (default is 25) (The maximum reassign number)

Type: number

Range: 0-255

Default: 25

request-rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

request-rate-limit

Description Request rate limit

Type: number

Range: 1-1048575

request-rate-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resel-on-reset

Description When receiving reset from server, do the server/port reselection (default is 0, don't do reselection)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restore-svc-time

Description put the service back to the rotation after time in seconds

Type: number

Range: 1-4095

resume

Description Resume accepting new connection after connection number drops below threshold (Connection resume threshold)

Type: number

Range: 1-1048575

retry

Description Maximum retry times before reassign this connection to another server/port (default is 2) (The maximum retry number)

Type: number

Range: 0-7

Default: 2

shared-partition-pool

Description Reference a NAT pool or pool-group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and source-nat are mutually exclusive

slow-start

Description Slowly ramp up the connection number after port is up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-nat

Description Source NAT (IP NAT Pool or pool group name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: source-nat and shared-partition-pool are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server port; 'stats-data-disable': Disable statistical data collection for real server port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

sub-group

Description Divide service group members into different sub groups (Sub group ID (default is 0))

Type: number

Range: 0-15

Default: 0

template-port-pool-shared

Description Source NAT (IP NAT Pool or pool group name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

till

Description Slow start ends when slow start connection limit reaches a number (default 4096) (Slow start ends when connection limit reaches this number)

Type: number

Range: 1-65535

Default: 4096

times

Description Slow start connection limit multiply by a number every interval (default 2) (Multiply by this number every interval)

Type: number

Range: 2-10

Default: 2

Mutual Exclusion: times and add are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight (port weight)

Type: number

Range: 1-1000

Default: 1

2.120.313 slb template quic

QUIC template

quic attributes

burst-len

Description Number of burst packet, default 16

Type: number

Range: 16-360

connection-id-length

Description Connection id length in byte, default 8 bytes

Type: number

Range: 1-20

idle-timeout

Description Idle Timeout (interval of 60 seconds), default 120 seconds (idle timeout in second, default 120)

Type: number

Range: 1-3600

initial-wnd

Description Initial window size in byte, default 10000 (Initial window size, default 10000)

Type: number

Range: 10000-100000

key-update-to-client

Description Initiate key update on the client-side

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-update-to-server

Description Initiate key update on the server-side

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description QUIC Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

receive-buffer

Description Receive buffer size in byte, default 200000 (Receive buffer size, default 200000)

Type: number

Range: 30000-400000

server-retry

Description Enable server retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

]

reqmod-icap attributes

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

allowed-http-methods

Description List of allowed HTTP methods. Default is "Allow All". (List of HTTP methods allowed (default "Allow All"))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

bypass-ip-cfg

Type: List

disable-http-server-reset

Description Don't reset http server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-close

Description When template sg is down mark vport down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

include-protocol-in-uri

Description Include protocol and port in HTTP URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-only-allowed-method

Description Only log allowed HTTP method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description logging template (Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

min-payload-size

Description min-payload-size value 0 - 65535, default is 0

Type: number

Range: 0-65535

Default: 0

name

Description Reqmod ICAP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

preview

Description Preview value 1 - 32768, default is 32768

Type: number

Range: 1-32768

Default: 32768

server-ssl

Description Server SSL template (Server SSL template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

service-url

Description URL to send to ICAP server (Service URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

x-auth-url

Description Use URL format for authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bypass-ip-cfg

Specification	Value
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass reqmod-icap service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-close

Description When template sg is down mark vport down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

include-protocol-in-uri

Description Include protocol and port in HTTP URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-only-allowed-method

Description Only log allowed HTTP method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description logging template (Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

min-payload-size

Description min-payload-size value 0 - 65535, default is 0

Type: number

Range: 0-65535

Default: 0

name

Description Reqmod ICAP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

preview

Description Preview value 1 - 32768, default is 32768

Type: number

Range: 1-32768

Default: 32768

server-ssl

Description Server SSL template (Server SSL template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

service-url

Description URL to send to ICAP server (Service URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

x-auth-url

Description Use URL format for authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bypass-ip-cfg

Specification	Value
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass respmod-icap service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

2.120.316 slb template server

Server template

server Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*server-list*
Collection URI	/axapi/v3/slb/template/server
Element Name	server
Element URI	/axapi/v3/slb/template/server/{name}
Element Attributes	server_attributes

server-list

server-list is **JSON List** of *server attributes*

server-list : [

{ *server attributes* },

{ *server attributes* },

...

]

server attributes

add

Description Slow start connection limit add by a number every interval (Add by this number every interval)

Type: number

Range: 1-4095

Mutual Exclusion: add and times are mutually exclusive

bw-rate-limit

Description Configure bandwidth rate limit on real server (Bandwidth rate limit in Kbps)

Type: number

Range: 1-16777216

bw-rate-limit-acct

Description 'to-server-only': Only account for traffic sent to server; 'from-server-only': Only account for traffic received from server; 'all': Account for all traffic sent to and received from server;

Type: string

Supported Values: to-server-only, from-server-only, all

Default: all

bw-rate-limit-duration

Description Duration in seconds the observed rate needs to honor

Type: number

Range: 1-250

bw-rate-limit-no-logging

Description Do not log bandwidth rate limit related state transitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Resume server selection after bandwidth drops below this threshold (in Kbps) (Bandwidth rate limit resume threshold (in Kbps))

Type: number

Range: 1-16777216

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-fail-interval

Description The interval to retry when DNS failed to query (DNS failure interval (in second, default is 30))

Type: number

Range: 0-1800

Default: 30

dns-query-interval

Description The interval to query DNS server for the hostname (DNS query interval (in minute, default is 10))

Type: number

Range: 1-1440

Default: 10

dynamic-server-prefix

Description Prefix of dynamic server (Prefix of dynamic server (default is "DRS"))

Type: string

Maximum Length: 3 characters

Maximum Length: 1 characters

Default: DRS

every

Description Slow start connection limit increment interval (default 10)

Type: number

Range: 1-60

Default: 10

extended-stats

Description Enable extended statistics on real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

initial-slow-start

Description Initial slow start connection limit (default 128)

Type: number

Range: 1-4095

Default: 128

log-selection-failure

Description Enable real-time logging for server selection failure event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-dynamic-server

Description Maximum dynamic server number (Maximum dynamic server number (default is 255))

Type: number

Range: 1-1023

Default: 255

min-ttl-ratio

Description Minimum TTL to DNS query interval ratio (Minimum TTL ratio (default is 2))

Type: number

Range: 1-15

Default: 2

name

Description Server template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

resume

Description Resume accepting new connection after connection number drops below threshold (Connection resume threshold)

Type: number

Range: 1-1048575

slow-start

Description Slowly ramp up the connection number after server is up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spoofing-cache

Description Servers under the template are spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server; 'stats-data-disable': Disable statistical data collection for real server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

till

Description Slow start ends when slow start connection limit reaches a number (default 4096) (Slow start ends when connection limit reaches this number)

Type: number

Range: 1-65535

Default: 4096

times

Description Slow start connection limit multiply by a number every interval (default 2) (Multiply by this number every interval)

Type: number

Range: 2-10

Default: 2

Mutual Exclusion: times and add are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight for the Real Servers (Connection Weight (default is 1))

Type: number

Range: 1-1000

Default: 1

2.120.317 slb template server-ssh

Server Side SSH Template

server-ssh Specification

Parameter	Value
Type	*Collection*

alert-type

Description 'fatal': Log fatal alerts;

Type: string

Supported Values: fatal

ca-certs

Type: List

certificate

Description: certificate is a **JSON Block**. Please see below for *certificate*

Type: Object

Reference Object: */axapi/v3/slb/template/server-ssl/{name}/certificate*

cipher-template

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: cipher-template, cipher-wo-prio, and shared-partition-cipher-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/cipher*

cipher-without-prio-list

Type: List

close-notify

Description Send close notification when terminate connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

crl-certs

Type: List

dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 30-34

Default: 31

dh-type

Description '1024': 1024; '1024-dsa': 1024-dsa; '2048': 2048;

Type: string

Supported Values: 1024, 1024-dsa, 2048

early-data

Description Enable TLS 1.3 early data (0-RTT)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Type: List

enable-ssli-ftp-alg

Description Enable SSLi FTP over TLS support at which port

Type: number

Range: 1-65535

enable-tls-alert-logging

Description Enable TLS alert logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-enable

Description Enable SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

handshake-logging-enable

Description Enable SSL handshake logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Server SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ocsp-stapling

Description Enable ocsp-stapling support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

renegotiation-disable

Description Disable SSL renegotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-certificate-error

Type: List

server-name

Description Specify Server Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

session-cache-size

Description Session Cache Size (Maximum cache size. Default value 0 (Session ID reuse disabled))

Type: number

Range: 0-128

Default: 0

session-cache-timeout

Description Session Cache Timeout (Timeout value, in seconds. Default no timeout.)

Type: number

Range: 1-7200

session-key-logging-enable

Description Enable SSL session key logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-ticket-enable

Description Enable server side session ticket support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-cipher-template

Description Reference a cipher template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cipher-template, cipher-wo-prio, and cipher-template are mutually exclusive

ssli-logging

Description SSLi logging level, default is error logging only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sslilogging

Description 'disable': Disable all logging; 'all': enable all logging(error, info);

Type: string

Supported Values: disable, all

template-cipher-shared

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/cipher*

use-client-sni

Description use client SNI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description TLS/SSL version, default is the highest number supported (TLS/SSL version: 30-SSLv3.0, 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 30-34

Default: 33

crl-certs

Specification	Value
Type	*list*
Block object keys	

crl

Description Certificate Revocation Lists (Certificate Revocation Lists file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

crl-partition-shared

Description Certificate Revocation Lists Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

certificate

Specification	Value
Type	*object*

cert

Description Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key

Description Client private-key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description Client Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ec-list

Specification	Value
Type	*list*
Block object keys	

ec

Description 'secp256r1': X9_62_prime256v1; 'secp384r1': secp384r1;

Type: string

Supported Values: secp256r1, secp384r1, secp521r1, x25519

server-certificate-error

Specification	Value
Type	*list*
Block object keys	

error-type

Description 'email': Notify the error via email; 'ignore': Ignore the error, which mean the connection can continue; 'logging': Log the error; 'trap': Notify the error by SNMP trap;

Type: string

Supported Values: email, ignore, logging, trap

ca-certs

Specification	Value
Type	*list*
Block object keys	

ca-cert

Description Specify CA certificate

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-cert-partition-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ocsp-sg

Description Specify service-group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/service-group*

server-ocsp-srvr

Description Specify authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/server/ocsp*

cipher-without-prio-list

Specification	Value
Type	*list*
Block object keys	

cipher-wo-prio

Description 'SSL3_RSA_DES_192_CBC3_SHA': TLS_RSA_WITH_3DES_EDE_CBC_SHA (0x000A); 'SSL3_RSA_RC4_128_MD5': TLS_RSA_WITH_RC4_128_MD5 (0x0004); 'SSL3_RSA_RC4_128_SHA': TLS_RSA_WITH_RC4_128_SHA (0x0005); 'TLS1_RSA_AES_128_SHA': TLS_RSA_WITH_AES_128_CBC_SHA (0x002F); 'TLS1_RSA_AES_256_SHA': TLS_RSA_WITH_AES_256_CBC_SHA (0x0035); 'TLS1_RSA_AES_128_SHA256': TLS_RSA_WITH_AES_128_CBC_SHA256 (0x003C); 'TLS1_RSA_AES_256_SHA256': TLS_RSA_WITH_AES_256_CBC_SHA256 (0x003D); 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS_DHE_RSA_WITH_AES_128_GCM_SHA256 (0x009E); 'TLS1_DHE_RSA_AES_128_SHA': TLS_DHE_RSA_WITH_AES_128_CBC_SHA (0x0033); 'TLS1_DHE_RSA_AES_128_SHA256': TLS_DHE_RSA_WITH_AES_128_CBC_SHA256 (0x0067); 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS_DHE_RSA_WITH_AES_256_GCM_SHA384 (0x009F); 'TLS1_DHE_RSA_AES_256_SHA': TLS_DHE_RSA_WITH_AES_256_CBC_SHA (0x0039); 'TLS1_DHE_RSA_AES_256_SHA256': TLS_DHE_RSA_WITH_AES_256_CBC_SHA256 (0x006B); 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256 (0xC02B); 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA (0xC009); 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256 (0xC023); 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384 (0xC02C); 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA (0xC00A); 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256 (0xC02F); 'TLS1_ECDHE_RSA_AES_128_SHA': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA (0xC013); 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256 (0xC027); 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 (0xC030); 'TLS1_ECDHE_RSA_AES_256_SHA': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA (0xC014); 'TLS1_RSA_AES_128_GCM_SHA256': TLS_RSA_WITH_AES_128_GCM_SHA256 (0x009C); 'TLS1_RSA_AES_256_GCM_SHA384': TLS_RSA_WITH_AES_256_GCM_SHA384 (0x009D); 'TLS1_ECDHE_RSA_AES_256_SHA384': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384 (0xC028); 'TLS1_ECDHE_ECDSA_AES_256_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384 (0xC024); 'TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA8); 'TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_ECDSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA9); 'TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256': TLS_DHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCAA);

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA,

TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256

Mutual Exclusion: cipher-wo-prio, cipher-template, and shared-partition-cipher-template are mutually exclusive

2.120.320 slb template server-ssl certificate

Client Certificate

certificate Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	certificate
Element URI	/axapi/v3/slb/template/server-ssl/{name}/certificate
Element Attributes	certificate_attributes
Partition Visibility	shared
Schema	`certificate schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/server-ssl/{name}/certificate

certificate attributes

```
POST /axapi/v3/slb/template/server-ssl/a/certificate
Payload:
{
    "certificate": {
        "cert": "a",
        "key": "a",
        "passphrase": "a"
    }
}
```

Get Object

certificate attributes

cert

Description Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key

Description Client private-key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description Client Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.321 slb template sip

SIP Template

sip Specification

Parameter	Value

```

sip-list

sip-list is **JSON List** of *sip attributes*

sip-list : [

{ *sip attributes* },

{ *sip attributes* },

...

]

sip attributes

acl-id

Description ACL id

Type: number

Range: 100-199

Mutual Exclusion: acl-id and acl-name-value are mutually exclusive

Reference Object: */axapi/v3/access-list/standard*

acl-name-value

Description IPv4 Access List Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-value and acl-id are mutually exclusive

Reference Object: */axapi/v3/ip/access-list*

alg-dest-nat

Description Translate VIP to real server IP in SIP message when destination NAT is used

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

alg-source-nat

Description Translate source IP to NAT IP in SIP message when source NAT is used

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

call-id-persist-disable

Description Disable call-ID persistence

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-keep-alive

Description Respond client keep-alive packet directly instead of forwarding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-request-header

Type: List

client-response-header

Type: List

dialog-aware

Description Permit system processes dialog session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-when-client-fail

Description Drop current SIP message when select client fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop-when-client-fail and failed-client-selection-message are mutually exclusive

drop-when-server-fail

Description Drop current SIP message when select server fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop-when-server-fail and failed-server-selection-message are mutually exclusive

exclude-translation

Type: List

failed-client-selection

Description Define action when select client fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failed-client-selection-message

Description Send SIP message (includs status code) to server when select client fail(Format: 3 digits(1XX~6XX) space reason)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: failed-client-selection-message and drop-when-client-fail are mutually exclusive

failed-server-selection

Description Define action when select server fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failed-server-selection-message

Description Send SIP message (includs status code) to client when select server fail(Format: 3 digits(1XX~6XX) space reason)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: failed-server-selection-message and drop-when-server-fail are mutually exclusive

insert-client-ip

Description Insert Client IP address into SIP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description The interval of keep-alive packet for each persist connection (second)

Type: number

Range: 5-300

Default: 30

keep-server-ip-if-match-acl

Description Use Real Server IP for addresses matching the ACL for a Call-Id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SIP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pstn-gw

Description configure pstn gw host name for tel: uri translate to sip: uri (Hostname String, default is "pstn")

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: pstn

server-keep-alive

Description Send server keep-alive packet for every persist connection when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-request-header

Type: List

server-response-header

Type: List

server-selection-per-request

Description Force server selection on every SIP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description service group name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

smp-call-id-rtp-session

Description Create the across cpu call-id rtp session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Time in minutes

Type: number

Range: 1-250

Default: 30

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-request-header

Specification	Value
Type	*list*
Block object keys	

insert-condition-server-request

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

server-request-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-request-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-request-header-insert

Description Insert a SIP header (Header Content (Format: “name:value”))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-response-header

Specification	Value
Type	*list*
Block object keys	

insert-condition-server-response

Description ‘insert-if-not-exist’: Only insert the header when it does not exist; ‘insert-always’: Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

server-response-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-response-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-response-header-insert

Description Insert a SIP header (Header Content (Format: “name:value”))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-request-header

Specification	Value
Type	*list*
Block object keys	

client-request-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-request-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-request-header-insert

Description Insert a SIP header (Header Content (Format: “name:value”))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

insert-condition-client-request

Description ‘insert-if-not-exist’: Only insert the header when it does not exist; ‘insert-always’: Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

client-response-header

Specification	Value
Type	*list*
Block object keys	

client-response-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-response-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-response-header-insert

Description Insert a SIP header (Header Content (Format: "name:value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

insert-condition-client-response

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

exclude-translation

Specification	Value
Type	*list*
Block object keys	

header-string

Description SIP header name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

translation-value

Description 'start-line': SIP request line or status line; 'header': SIP message headers; 'body': SIP message body;

Type: string

Supported Values: start-line, header, body

2.120.322 slb template smpp

SMPP template

smpp Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*smpp-list*

```

smpp-list

smpp-list is **JSON List** of *smpp attributes*

smpp-list : [

{ *smpp attributes* },

{ *smpp attributes* },

...

]

smpp attributes

client-enquire-link

Description Respond client ENQUIRE_LINK packet directly instead of forwarding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SMPP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password

Description Configure the password used to bind

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-enquire-link

Description Send server ENQUIRE_LINK packet for every persist connection when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-enquire-link-val

Description Set interval of keep-alive packet for each persistent connection (second, default is 30)

Type: number

Range: 5-300

Default: 30

server-selection-per-request

Description Force server selection on every SMPP request when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user

Description Configure the user to bind (The name used to bind)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

smtp-list

smtp-list is **JSON List** of *smtp attributes*

smtp-list : [

{ *smtp attributes* },

{ *smtp attributes* },

...

]

smtp attributes

LF-to-CRLF

Description Change the LF to CRLF for smtp end of line

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-domain-switching

Type: List

client-starttls-type

Description 'optional': STARTTLS is optional requirement; 'enforced': Must issue START-TLS command before mail transaction;

Type: string

Supported Values: optional, enforced

command-disable

Type: List

error-code-to-client

Description Would transfer error code(554) to client, when getting it from connection establishing with real-server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SMTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-domain

Description Config the domain of the email servers (Server's domain, default is "mail-server-domain")

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

Default: mail-server-domain

server-starttls-type

Description 'optional': STARTTLS is optional requirement; 'enforced': Must issue START-TLS command before mail transaction;

Type: string

Supported Values: optional, enforced

service-ready-msg

Description Set SMTP service ready message (SMTP service ready message, default is "ESMTP mail service ready")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: ESMTP mail service ready

template

Description: template is a **JSON Block**. Please see below for *template*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

client-domain-switching

Specification	Value
Type	*list*
Block object keys	

match-string

Description Domain name string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

service-group

Description Select service group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

switching-type

Description 'contains': Specify domain name string if domain contains another string; 'ends-with': Specify domain name string if domain ends with another string; 'starts-with': Specify domain string if domain starts with another string;

Type: string

Supported Values: contains, ends-with, starts-with

template

Specification	Value
Type	*object*

logging

Description Logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

command-disable

Specification	Value
Type	*list*
Block object keys	

disable-type

Description 'expn': Disable SMTP EXPN commands; 'turn': Disable SMTP TURN commands; 'vrfy': Disable SMTP VRFY commands;

Type: string

Supported Values: expn, turn, vrfy

...

]

tcp attributes

alive-if-active

Description keep connection alive if active traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description send reset to client when server is disabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and down are mutually exclusive

down

Description send reset to client when server is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: down and disable are mutually exclusive

force-delete-timeout

Description The maximum time that a session can stay in the system before being delete (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being delete (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default off (half close idle timeout in second, default off)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default off (half open idle timeout in second, default off)

Type: number

Range: 1-60

idle-timeout

Description Idle Timeout value (Interval of 60 seconds), default 120 seconds (idle timeout in second, default 120)

Type: number

Range: 1-2097151

Default: 120

initial-window-size

Description Set the initial window size (number)

Type: number

Range: 1-65535

insert-client-ip

Description Insert client ip into TCP option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lan-fast-ack

Description Enable fast TCP ack on LAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description 'init': init only log; 'term': termination only log; 'both': both initial and termination log;

Type: string

Supported Values: init, term, both

name

Description Fast TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

proxy-header

Description: proxy-header is a **JSON Block**. Please see below for *proxy-header*

Type: Object

qos

Description QOS level (number)

Type: number

Range: 1-63

re-select-if-server-down

Description re-select another server if service port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-follow-fin

Description send reset to client or server upon receiving first fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-fwd

Description send reset to server if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-rev

Description send reset to client if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

proxy-header

Specification	Value
Type	*object*

proxy-header-action

Description 'insert': Insert proxy header;

Type: string

Supported Values: insert

proxy-header-version

Description 'v1': version 1; 'v2': version 2;

Type: string

Supported Values: v1, v2

tcp-proxy-list is **JSON List** of *tcp-proxy attributes*

tcp-proxy-list : [

{ *tcp-proxy attributes* },

{ *tcp-proxy attributes* },

...

]

tcp-proxy attributes

ack-aggressiveness

Description 'low': Delayed ACK; 'medium': Delayed ACK, with ACK on each packet with PUSH flag; 'high': ACK on each packet;

Type: string

Supported Values: low, medium, high

Default: low

alive-if-active

Description keep connection alive if active traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

backend-wscale

Description The TCP window scale used for the server side, default is off (number)

Type: number

Range: 1-14

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description send reset to client when server is disabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and down are mutually exclusive

disable-abc

Description Appropriate Byte Counting RFC 3465 Disabled, default is enabled (Appropriate Byte Counting (ABC) is enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sack

Description disable Selective Ack Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-tcp-timestamps

Description disable TCP Timestamps Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-window-scale

Description disable TCP Window-Scale Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

down

Description send reset to client when server is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: down and disable are mutually exclusive

dynamic-buffer-allocation

Description Optimally adjust the transmit and receive buffer sizes of TCP proxy while keeping their sum constant

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

early-retransmit

Description Configure the Early-Retransmit Algorithm (RFC 5827) (Early-Retransmit is disabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin-timeout

Description FIN timeout (sec), default is disabled (number)

Type: number

Range: 1-60

force-delete-timeout

Description The maximum time that a session can stay in the system before being deleted, default is off (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being deleted, default is off (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default is off (cmd is deprecated, use fin-timeout instead) (number)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default is off (number)

Type: number

Range: 1-60

idle-timeout

Description Idle Timeout (Interval of 60 seconds), default is 600 (idle timeout in second, default 600)

Type: number

Range: 1-2097151

Default: 600

init-cwnd

Description The initial congestion control window size (packets), default is 10 (init-cwnd in packets, default 10)

Type: number

Range: 1-15

Default: 10

initial-window-size

Description Set the initial window size, default is off (number)

Type: number

Range: 1-65535

insert-client-ip

Description Insert client ip into TCP option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

invalid-rate-limit

Description Invalid Packet Response Rate Limit (ms), default is 500 (number default 500 challenges)

Type: number

Range: 0-60000000

Default: 500

keepalive-interval

Description Interval between keepalive probes (sec), default is off (number (seconds))

Type: number

Range: 60-12000

keepalive-probes

Description Number of keepalive probes sent, default is off

Type: number

Range: 2-10

limited-slowstart

Description RFC 3742 Limited Slow-Start for TCP with Large Congestion Windows (number)

Type: number

Range: 0-2147483647

Default: 0

maxburst

Description The max packet count sent per transmission event (number)

Type: number

Range: 1-100

Default: 25

min-rto

Description The minmum retransmission timeout, default is 200ms (number)

Type: number

Range: 100-1000

Default: 200

mss

Description Responding MSS to use if client MSS is large, default is off (number)

Type: number

Range: 128-9000

Default: 1460

nagle

Description Enable Nagle Algorithm

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

naked-ack-on-handshake

Description Send naked ack before data during 3-way handshake

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

proxy-header

Description: proxy-header is a **JSON Block**. Please see below for *proxy-header*

Type: Object

psh-flag-optimization

Description Enable Optimized PSH Flag Use

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

qos

Description QOS level (number)

Type: number

Range: 1-63

reassembly-limit

Description The reassembly queuing limit, default is 25 segments (number)

Type: number

Range: 1-500

Default: 25

reassembly-timeout

Description The reassembly timeout, default is 30sec (number)

Type: number

Range: 1-300

Default: 30

receive-buffer

Description TCP Receive Buffer (default 200k) (number default 200000 bytes)

Type: number

Range: 1-2147483647

Default: 200000

reno

Description Enable Reno Congestion Control Algorithm

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-fwd

Description send reset to server if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-rev

Description send reset to client if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-retries

Description Number of Retries for Retransmit, default is 5

Type: number

Range: 1-20

Default: 5

server-down-action

Description 'FIN': FIN Connection; 'RST': Reset Connection;

Type: string

Supported Values: FIN, RST

syn-retries

Description SYN Retry Numbers, default is 5

Type: number

Range: 1-20

Default: 5

tcp-do-newsack

Description 'enable': Enable fast sack loss recovery; 'disable': Disable fast sack loss recovery; 'auto-select': Auto select fast sack loss recovery (disable);

Type: string

Supported Values: enable, disable, auto-select

Default: auto-select

timewait

Description Timewait Threshold (sec), default 5 (number)

Type: number

Range: 1-60

Default: 5

transmit-buffer

Description TCP Transmit Buffer (default 200k) (number default 200000 bytes)

Type: number

Range: 1-2147483647

Default: 200000

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

proxy-header

Specification	Value
Type	*object*

proxy-header-action

Description 'insert': Insert proxy header;

Type: string

Supported Values: insert

version

Description 'v1': version 1; 'v2': version 2;

Type: string

Supported Values: v1, v2

2.120.327 slb template udp

L4 UDP switch config

udp Specification

}
```

udp-list

udp-list is **JSON List** of *udp attributes*

udp-list : [

{ *udp attributes* },

{ *udp attributes* },

...

]

udp attributes

age

Description short age (in sec), default is 31

Type: number

Range: 1-31

avp

Description '4': NAS-IP-address; '8': Framed-IP-Address;

Type: string

Supported Values: 4, 8

disable-clear-session

Description Disable immediate clearing of session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

idle-timeout

Description Idle Timeout value (Interval of 60 seconds), default 120 seconds (idle timeout in second, default 120)

Type: number

Range: 1-2097151

Default: 120

immediate

Description Immediate Removal after Transaction

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: immediate and short are mutually exclusive

name

Description Fast UDP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

qos

Description QOS level (number)

Type: number

Range: 1-63

radius-lb-method-hash-type

Description 'ip': IP-Hash;

Type: string

Supported Values: ip, ipv6

re-select-if-server-down

Description re-select another server if service port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

short

Description Short lived session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: short and immediate are mutually exclusive

stateless-conn-timeout

Description Stateless Current Connection Timeout value (5 - 120 seconds) (idle timeout in second, default 120)

Type: number

Range: 5-120

Default: 120

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v6avp

Description '168': Framed-IPv6-Address; '97': Framed-IPv6-PrefixFramed-IPv6-Prefix;

Type: string

Supported Values: 168, 97

virtual-port-list

virtual-port-list is **JSON List** of *virtual-port attributes*

virtual-port-list : [

{ *virtual-port attributes* },

{ *virtual-port attributes* },

...

]

virtual-port attributes

aflow

Description Use aFlow to eliminate the traffic surge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-syn-otherflags

Description Allow initial SYN packet with other flags

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-vip-to-rport-mapping

Description Allow mapping of VIP to real port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit-reset

Description Send client reset when connection over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit-reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-unknown-conn

Description Drop conection if receives TCP packet without SYN or RST flag and it does not belong to any existing connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dscp

Description Differentiated Services Code Point (DSCP to Real Server IP Mapping Value)

Type: number

Range: 1-63

ignore-tcp-msl

Description reclaim TCP resource immediately without MSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-options

Description 'no-logging': Do not log over limit event; 'no-repeat-logging': log once for over limit event. Default is log once per minute;

Type: string

Supported Values: no-logging, no-repeat-logging

name

Description Virtual port template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

non-syn-initiation

Description Allow initial TCP packet to be non-SYN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pkt-rate-interval

Description '100ms': Source IP and port rate limit per 100ms; 'second': Source IP and port rate limit per second (default);

Type: string

Supported Values: 100ms, second

Default: second

pkt-rate-limit-reset

Description send client-side reset (reset after packet limit)

Type: number

Range: 0-1048575

Default: 0

pkt-rate-type

Description 'src-ip-port': Source IP and port rate limit; 'src-port': Source port rate limit;

Type: string

Supported Values: src-ip-port, src-port

rate

Description Source IP and port rate limit (Packet rate limit)

Type: number

Range: 1-1048575

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

reset-l7-on-failover

Description Send reset to L7 client and server connection upon a failover

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-unknown-conn

Description Send reset back if receives TCP packet without SYN or RST flag and it does not belong to any existing connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-msl

Description Source NAT MSL (Source NAT MSL value (seconds))

Type: number

Range: 1-1800

snat-port-preserve

Description Source NAT Port Preservation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

when-rr-enable

Description Only do rate limit if CPU RR triggered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

virtual-server attributes

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit-reset

Description Send client reset when connection over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit-reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-when-all-ports-down

Description Disable Virtual Server when all member ports are down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-when-all-ports-down and disable-when-any-port-down are mutually exclusive

disable-when-any-port-down

Description Disable Virtual Server when any member port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-when-any-port-down and disable-when-all-ports-down are mutually exclusive

icmp-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmp-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmp-rate-limit

Description ICMP rate limit (Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit)

Type: number

Range: 1-65535

icmpv6-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmpv6-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmpv6-rate-limit

Description ICMPv6 rate limit (Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit)

Type: number

Range: 1-65535

name

Description Virtual server template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

subnet-gratuitous-arp

Description Send gratuitous ARP for every IP in the subnet virtual server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-stack-tfo-active-conn-limit

Description The allowed active layer 7 tcp fast-open connection limit, default is zero (number)

Type: number

Range: 0-10000

Default: 0

tcp-stack-tfo-backoff-time

Description The time tcp stack will wait before allowing new fast-open requests after security condition, default 600 seconds (number)

Type: number

Range: 1-14400

Default: 600

tcp-stack-tfo-cookie-time-limit

Description The time limit (in seconds) that a layer 7 tcp fast-open cookie is valid, default is 60 seconds (number)

Type: number

Range: 1-14400

Default: 60

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.333 slb virtual-server

Create a Virtual Server

virtual-server Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*virtual-server-list*
Collection URI	/axapi/v3/slb/virtual-server
Element Name	virtual-server
Element URI	/axapi/v3/slb/virtual-server/{name}
Element Attributes	virtual-server_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/slb/virtual-server/{name}/oper
Schema	`virtual-server schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/virtual-server

virtual-server attributes

```
POST /axapi/v3/slb/virtual-server/
Payload:
{
    "virtual-server": {
        "name": "a",
        "ipv6-address": "2003::1",
        "ipv6-acl": "a"
    }
}
```

Create List

POST

/axapi/v3/slb/virtual-server

virtual-server attributes

Get Object

GET

/axapi/v3/slb/virtual-server/{name}

virtual-server attributes

```
GET /axapi/v3/slb/virtual-server/a
Reponse:
{
    "virtual-server": {
        "name": "a",
        "ipv6-address": "2003::1",
        "ipv6-acl": "a",
        "enable-disable-action": "enable",
        "redistribution-flagged": 0,
        "arp-disable": 0,
        "stats-data-action": "stats-data-enable",
        "extended-stats": 0,
        "disable-vip-adv": 0,
        "uuid": "8948f2c8-b666-11ef-816c-ae71681635d0",
        "a10-url": "/axapi/v3/slb/virtual-server/a"
    }
}
```

Get List

GET

/axapi/v3/slb/virtual-server

virtual-server-list

Modify Object

POST

/axapi/v3/slb/virtual-server/{name}

virtual-server attributes

Replace Object

PUT

/axapi/v3/slb/virtual-server/{name}

virtual-server attributes

```
PUT /axapi/v3/slb/virtual-server/a
Payload:
{
    "virtual-server": {
        "name": "a",
        "ipv6-address": "2003::2",
        "ipv6-acl": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/slb/virtual-server

virtual-server-list

Delete Object

DELETE

/axapi/v3/slb/virtual-server/{name}

virtual-server attributes

```
DELETE /axapi/v3/slb/virtual-server/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

virtual-server-list

virtual-server-list is **JSON List** of *virtual-server attributes*

virtual-server-list : [

{ *virtual-server attributes* },

{ *virtual-server attributes* },

...

]

virtual-server attributes

acl-id

Description acl id

Type: number

Range: 1-199

Mutual Exclusion: acl-id,acl-name, p-acl, and shared-partition-acl are mutually exclusive

Reference Object: */axapi/v3/access-list/standard*

acl-id-shared

Description acl id

Type: number

Range: 1-199

Mutual Exclusion: acl-id-shared and acl-name-shared are mutually exclusive

Reference Object: */axapi/v3/access-list/standard*

acl-name

Description Access List name (IPv4 Access List Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name,acl-id, p-acl, and shared-partition-acl are mutually exclusive

Reference Object: */axapi/v3/ip/access-list*

acl-name-shared

Description Access List name (IPv4 Access List Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-shared and acl-id-shared are mutually exclusive

Reference Object: */axapi/v3/ip/access-list*

arp-disable

Description Disable Respond to Virtual Server ARP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Create a description for VIP

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

disable-vip-adv

Description Disable virtual server GARP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-disable-action

Description 'enable': Enable Virtual Server (default); 'disable': Disable Virtual Server; 'disable-when-all-ports-down': Disable Virtual Server when all member ports are down; 'disable-when-any-port-down': Disable Virtual Server when any member port is down;

Type: string

Supported Values: enable, disable, disable-when-all-ports-down, disable-when-any-port-down

Default: enable

ethernet

Description Ethernet interface

Type: number

Format: interface

extended-stats

Description Enable extended statistics on virtual server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gaming-protocol-compliance

Description Enable Gaming Protocol Compliance Check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-dynamic

Description Dynamic failover based on vip status

Type: number

Range: 1-255

ip-address

Description IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address, ipv6-address, and use-if-ip are mutually exclusive

ipv6-acl

Description ipv6 acl name

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv6-acl, p-ipv6-acl, and shared-partition-ipv6-acl are mutually exclusive

Reference Object: */axapi/v3/ipv6/access-list*

ipv6-acl-shared

Description ipv6 acl name

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address, ip-address, and use-if-ip are mutually exclusive

migrate-vip

Description: migrate-vip is a **JSON Block**. Please see below for *migrate-vip*

Type: Object

Reference Object: */axapi/v3/slb/virtual-server/{name}/migrate-vip*

name

Description SLB Virtual Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask-brief

port-list

Type: List

Reference Object: */axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}*

redistribute-route-map

Description Route map reference (Name of route-map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribution-flagged

Description Flag VIP for special redistribution handling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-vs-template

Description Reference a virtual-server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-vs-template and template-virtual-server are mutually exclusive

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for virtual server; 'stats-data-disable': Disable statistical data collection for virtual server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

suppress-internal-loopback

Description Suppress VIP internal loopback programming

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-logging

Description NAT Logging template (NAT Logging template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/template/logging*

template-policy

Description Policy template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/policy*

template-scaleout

Description Scaleout template (Scaleout template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template-virtual-server

Description Virtual server template (Virtual server template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-virtual-server and shared-partition-vs-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/virtual-server*

template-virtual-server-shared

Description Virtual-Server Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/virtual-server*

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip, ipv6-address, and ip-address are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vport-disable-action

Description 'drop-packet': Drop packet for disabled virtual-port;

Type: string

Supported Values: drop-packet

vrid

Description Join a vrrp group (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

port-list

Specification	Value
Type	*list*
Block object keys	

acl-list

Type: List

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

aflex-scripts

Type: List

aflex-table-entry-syn-disable

Description Disable aFlex entry sync for this port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: aflex-table-entry-syn-disable and aflex-table-entry-syn-enable are mutually exclusive

aflex-table-entry-syn-enable

Description Enable aFlex entry sync for this port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: aflex-table-entry-syn-enable and aflex-table-entry-syn-disable are mutually exclusive

alt-protocol1

Description 'http': HTTP Port;

Type: string

Supported Values: http

alt-protocol2

Description 'tcp': TCP LB service;

Type: string

Supported Values: tcp

alternate-port

Description Alternate Virtual Port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: alternate-port and range are mutually exclusive

alternate-port-number

Description Virtual Port

Type: number

Range: 0-65534

attack-detection

Description Enable analytics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *port-list_auth-cfg*

Type: Object

auto

Description Configure auto NAT for the vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clientip-sticky-nat

Description Prefer to use same source NAT address for a client

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

cpu-compute

Description enable cpu compute on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

def-selection-if-pref-failed

Description 'def-selection-if-pref-failed': Use default server selection method if prefer method failed; 'def-selection-if-pref-failed-disable': Stop using default server selection method if prefer method failed;

Type: string

Supported Values: def-selection-if-pref-failed, def-selection-if-pref-failed-disable

Default: def-selection-if-pref-failed

enable-playerid-check

Description Enable playerid checks on UDP packets once the AX is in active mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-scaleout

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eth-fwd

Description Ethernet interface number

Type: number

Format: interface

Mutual Exclusion: eth-fwd and trunk-fwd are mutually exclusive

eth-rev

Description Ethernet interface number

Type: number

Format: interface

Mutual Exclusion: eth-rev and trunk-rev are mutually exclusive

expand

Description expand syn-cookie with timestamp and wscale

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

extended-stats

Description Enable extended statistics on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-dns-cache

Description 'force-enable': Always enable; 'force-disable': Always disable; 'depends-on-config': Depends on configurations;

Type: string

Supported Values: force-enable, force-disable, depends-on-config

fast-path

Description 'force': Force fast path in SLB processing; 'disable': Disable fast path in SLB processing;

Type: string

Supported Values: force, disable

force-routing-mode

Description Force routing mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-enable

Description Enable Global Server Load Balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-session-lb

Description Enable GTP Session Load Balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-conn-mirror

Description Enable for HA Conn sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-global

Description Ignore global substitute-source-mac

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-map-list

Description Enter name of IP Map List to be bound (IP Map List Name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip-only-lb

Description Enable IP-Only LB mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-smart-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipinip

Description Enable IP in IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l7-hardware-assist

Description FPGA assist L7 packet parsing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l7-service-chain

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

memory-compute

Description enable dynamic memory compute on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-switching

Description Message switching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SLB Virtual Service Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ng-waf

Description Next-gen WAF

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-auto-up-on-aflex

Description Don't automatically mark vport up when aFleX is bound

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-dest-nat

Description Disable destination NAT, this option only supports in wildcard VIP or when a connection is operated in SSLi + EP mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

on-syn

Description Enable for HA Conn sync for l4 tcp sessions on SYN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-server-conn

Description Support server that allow only one connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

optimization-level

Description '0': No optimization; '1': Optimization level 1 (Experimental);

Type: string

Supported Values: 0, 1

Default: 0

p-template-sip-shared

Description SIP Template Name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: p-template-sip-shared and template-sip are mutually exclusive

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/slb-vport-tmpl*

persist-type

Description 'src-dst-ip-swap-persist': Create persist session after source IP and destination IP swap; 'use-src-ip-for-dst-persist': Use the source IP to create a destination persist session; 'use-dst-ip-for-src-persist': Use the destination IP to create source IP persist session;

Type: string

Supported Values: src-dst-ip-swap-persist, use-src-ip-for-dst-persist, use-dst-ip-for-src-persist

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: pool and shared-partition-pool are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

pool-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

port-number

Description Port

Type: number

Range: 0-65534

port-translation

Description Enable port translation under no-dest-nat

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

precedence

Description Set auto NAT pool as higher precedence for source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': TCP LB service; 'udp': UDP Port; 'others': for no tcp/udp protocol, do IP load balancing; 'diameter': diameter port; 'dns-tcp': DNS service over TCP; 'dns-udp': DNS service over UDP; 'fast-http': Fast HTTP Port; 'fix': FIX Port; 'ftp': File Transfer Protocol Port; 'ftp-proxy': ftp proxy port; 'http': HTTP Port; 'https': HTTPS port; 'imap': imap proxy port; 'mlb': Message based load balancing; 'mms': Microsoft Multimedia Service Port; 'mysql': mssql port; 'mssql': mssql; 'pop3': pop3 proxy port; 'radius': RADIUS Port; 'rtsp': Real Time Streaming Protocol Port; 'sip': Session initiation protocol over UDP; 'sip-tcp': Session initiation protocol over TCP; 'sips': Session initiation protocol over TLS; 'smpp-tcp': SMPP service over TCP; 'spdy': spdy port; 'spdys': spdys port; 'smtp': SMTP Port; 'mqtt': MQTT Port; 'mqtts': MQTTS Port; 'ssl-proxy': Generic SSL proxy; 'ssli': SSL insight; 'ssh': SSH Port; 'tcp-proxy': Generic TCP proxy; 'tftp': TFTP Port; 'fast-fix': Fast FIX port; 'http-over-quic': HTTP3-over-quic port;

Type: string

Supported Values: tcp, udp, others, diameter, dns-tcp, dns-udp, fast-http, fix, ftp, ftp-proxy, http, https, imap, mlb, mms, mysql, mssql, pop3, radius, rtsp, sip, sip-tcp, sips, smpp-tcp, spdy, spdys, smtp, mqtt, mqtts, ssl-proxy, ssli, ssh, tcp-proxy, tftp, fast-fix, http-over-quic

proxy-layer

Description 'v1': Force using old proxy; 'v2': Force using new proxy;

Type: string

Supported Values: v1, v2

range

Description Virtual Port range (Virtual Port range value)

Type: number

Range: 0-254

Default: 0

Mutual Exclusion: range and alternate-port are mutually exclusive

rate

Description Specify the log message rate

Type: number

Range: 0-2147483647

redirect-to-https

Description Redirect HTTP to HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reply-acme-challenge

Description Reply ACME http-01 challenge. This option only takes effect in HTTP port 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-fail

Description Use alternate virtual port when L7 request fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reselection

Description 'disable': disable;

Type: string

Supported Values: disable

reset

Description Send client reset when connection number over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-on-server-selection-fail

Description Send client reset when server selection fails

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: reset-on-server-selection-fail and when-server-selection-failed are mutually exclusive

resolve-web-cat-list

Description Web Category List name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

rtp-sip-call-id-match

Description rtp traffic try to match the real server of sip smp call-id session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

secs

Description Specify the interval in seconds

Type: number

Range: 1-100

serv-sel-fail

Description Use alternate virtual port when server selection failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-group

Description Bind a use-rcv-hop-for-resp Server Group to this Virtual Server (Server Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/server-group*

service-group

Description Bind a Service Group to this Virtual Server (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

shared-partition-cache-template

Description Reference a Cache template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cache-template and template-cache are mutually exclusive

shared-partition-client-ssl-template

Description Reference a Client SSL template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-client-ssl-template and template-client-ssl are mutually exclusive

shared-partition-connection-reuse-template

Description Reference a connection reuse template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-connection-reuse-template and template-connection-reuse are mutually exclusive

shared-partition-dblb-template

Description Reference a dblb template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dblb-template and template-dblb are mutually exclusive

shared-partition-diameter-template

Description Reference a Diameter template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-diameter-template and template-diameter are mutually exclusive

shared-partition-dns-template

Description Reference a dns template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dns-template and template-dns are mutually exclusive

shared-partition-doh-template

Description Reference a DNS over HTTP(s) template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-doh-template and template-doh are mutually exclusive

shared-partition-dynamic-service-template

Description Reference a dynamic service template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dynamic-service-template and template-dynamic-service are mutually exclusive

shared-partition-external-service-template

Description Reference a external service template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-external-service-template and template-external-service are mutually exclusive

shared-partition-fix-template

Description Reference a FIX template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-fix-template and template-fix are mutually exclusive

shared-partition-http-policy-template

Description Reference a http policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-http-policy-template and template-http-policy are mutually exclusive

shared-partition-http-template

Description Reference a HTTP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-http-template and template-http are mutually exclusive

shared-partition-imap-pop3-template

Description Reference a IMAP/POP3 template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-imap-pop3-template and template-imap-pop3 are mutually exclusive

shared-partition-persist-cookie-template

Description Reference a persist cookie template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-cookie-template and template-persist-cookie are mutually exclusive

shared-partition-persist-destination-ip-template

Description Reference a persist destination ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-destination-ip-template and template-persist-destination-ip are mutually exclusive

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and template-persist-source-ip are mutually exclusive

shared-partition-persist-ssl-sid-template

Description Reference a persist SSL SID template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-ssl-sid-template and template-persist-ssl-sid are mutually exclusive

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-pool

Description Specify NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and pool are mutually exclusive

shared-partition-quic-template

Description Reference a QUIC template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-quic-template and template-quic are mutually exclusive

shared-partition-server-ssl-template

Description Reference a SSL Server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-server-ssl-template and template-server-ssl are mutually exclusive

shared-partition-smpp-template

Description Reference a smpp template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-smpp-template and template-smpp are mutually exclusive

shared-partition-smtp-template

Description Reference a SMTP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-smtp-template and template-smtp are mutually exclusive

shared-partition-tcp

Description Reference a tcp template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp and template-tcp are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and template-tcp-proxy are mutually exclusive

shared-partition-udp

Description Reference a UDP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-udp and template-udp are mutually exclusive

shared-partition-virtual-port-template

Description Reference a Virtual Port template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-virtual-port-template and template-virtual-port are mutually exclusive

showtech-print-extended-stats

Description Enable print extended stats in showtech for dns vports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip-rev-hash

Description Skip rev tuple hash insertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-on-vip

Description Enable source NAT traffic against VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for virtual port; 'stats-data-disable': Disable statistical data collection for virtual port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

substitute-source-mac

Description Substitute Source MAC Address to that of the outgoing interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

support-http2

Description Support HTTP2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie

Description Enable syn-cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-cache

Description RAM caching template (Cache Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-cache and shared-partition-cache-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/cache*

template-cache-shared

Description Cache Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/cache*

template-client-ssh

Description Client SSH Template (Client SSH Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssh*

template-client-ssl

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-client-ssl and shared-partition-client-ssl-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/client-ssl*

template-client-ssl-shared

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

template-connection-reuse

Description Connection Reuse Template (Connection Reuse Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-connection-reuse and shared-partition-connection-reuse-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/connection-reuse*

template-connection-reuse-shared

Description Connection Reuse Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/connection-reuse*

template-dblb

Description DBLB Template (DBLB template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dblb and shared-partition-dblb-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/dblb*

template-dblb-shared

Description DBLB Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dblb*

template-diameter

Description Diameter Template (diameter template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-diameter and shared-partition-diameter-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/diameter*

template-diameter-shared

Description Diameter Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/diameter*

template-dns

Description DNS template (DNS template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dns and shared-partition-dns-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/dns*

template-dns-shared

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dns*

template-doh

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-doh and shared-partition-doh-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/doh*

template-doh-shared

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/doh*

template-dynamic-service

Description Dynamic Service Template (dynamic-service template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dynamic-service and shared-partition-dynamic-service-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/dynamic-service*

template-dynamic-service-shared

Description Dynamic Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dynamic-service*

template-external-service

Description External service template (external-service template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-external-service and shared-partition-external-service-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/external-service*

template-external-service-shared

Description External Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/external-service*

template-fix

Description FIX template (FIX Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-fix and shared-partition-fix-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/fix*

template-fix-shared

Description FIX Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/fix*

template-ftp

Description FTP port template (Ftp template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/ftp*

template-http

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-http and shared-partition-http-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/http*

template-http-policy

Description http-policy template (http-policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-http-policy and shared-partition-http-policy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/http-policy*

template-http-policy-shared

Description Http Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/http-policy*

template-http-shared

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/http*

template-imap-pop3

Description IMAP/POP3 Template (IMAP/POP3 Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-imap-pop3 and shared-partition-imap-pop3-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/imap-pop3*

template-imap-pop3-shared

Description IMAP/POP3 Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/imap-pop3*

template-mqtt

Description MQTT Template (MQTT Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/mqtt*

template-persist-cookie

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-cookie and shared-partition-persist-cookie-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/cookie*

template-persist-cookie-shared

Description Cookie Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/cookie*

template-persist-destination-ip

Description Destination IP persistence (Destination IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-destination-ip and shared-partition-persist-destination-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/destination-ip*

template-persist-destination-ip-shared

Description Destination IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/destination-ip*

template-persist-source-ip

Description Source IP persistence (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-persist-ssl-sid

Description SSL SID persistence (SSL SID persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-ssl-sid and shared-partition-persist-ssl-sid-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/ssl-sid*

template-persist-ssl-sid-shared

Description SSL SID Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/ssl-sid*

template-policy

Description Policy Template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/policy*

template-quic

Description QUIC Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-quic and shared-partition-quic-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/quic*

template-quic-client

Description QUIC Config Client (QUIC Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/quic*

template-quic-server

Description QUIC Config Server (QUIC Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/quic*

template-quic-shared

Description QUIC Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/quic*

template-ram-cache

Description RAM caching template (Cache Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/cache*

template-reqmod-icap

Description ICAP reqmod template (reqmod-icap template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/reqmod-icap*

template-respmod-icap

Description ICAP respmod service template (respmod-icap template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/respmod-icap*

template-scaleout

Description Scaleout template (Scaleout template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

template-server-ssh

Description Server SSH Template (Server SSH Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssh*

template-server-ssl

Description Server Side SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-server-ssl and shared-partition-server-ssl-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/server-ssl*

template-server-ssl-shared

Description Server SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

template-sip

Description SIP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-sip and p-template-sip-shared are mutually exclusive

Reference Object: */axapi/v3/slb/template/sip*

template-sip-shared

Description SIP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/sip*

template-smpp

Description SMPP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-smpp and shared-partition-smpp-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/smpp*

template-smpp-shared

Description SMPP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/smpp*

template-smtp

Description SMTP Template (SMTP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-smtp and shared-partition-smtp-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/smtp*

template-smtp-shared

Description SMTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/smtp*

template-ssli

Description SSLi template (SSLi Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/ssli*

template-tcp

Description TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-tcp and shared-partition-tcp are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp*

template-tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-client

Description TCP Proxy Config Client (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-server

Description TCP Proxy Config Server (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-shared

Description TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Reference Object: */axapi/v3/slb/template/tcp*

template-udp

Description L4 UDP Template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-udp and shared-partition-udp are mutually exclusive

Reference Object: */axapi/v3/slb/template/udp*

template-udp-shared

Description UDP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Reference Object: */axapi/v3/slb/template/udp*

template-virtual-port

Description Virtual port template (Virtual port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-virtual-port and shared-partition-virtual-port-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/virtual-port*

template-virtual-port-shared

Description Virtual Port Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/virtual-port*

trunk-fwd

Description Trunk interface number

Type: number

Format: interface

Mutual Exclusion: trunk-fwd and eth-fwd are mutually exclusive

trunk-rev

Description Trunk interface number

Type: number

Format: interface

Mutual Exclusion: trunk-rev and eth-rev are mutually exclusive

use-alternate-port

Description Use alternate virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-cgnv6

Description Follow CGNv6 source NAT configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-default-if-no-server

Description Use default forwarding if server selection failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-rcv-hop-for-resp

Description Use receive hop for response to client(For packets on default-vlan, also config "vlan-global enable-def-vlan-l2-forwarding".)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-rcv-hop-group

Description Set use-rcv-hop group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

view

Description Specify a GSLB View (ID)

Type: number

Range: 1-31

when-down

Description Use alternate virtual port when down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

when-down-protocol2

Description Use alternate virtual port when down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

when-server-selection-failed

Description 'send-504': Stay functional up and response with HTTP 504;

Type: string

Supported Values: send-504

Mutual Exclusion: when-server-selection-failed and reset-on-server-selection-fail are mutually exclusive

port-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current established connections; 'total_l4_conn': Total L4 connections established; 'total_l7_conn': Total L7 connections established; 'total_tcp_conn': Total TCP connections established; 'total_conn': Total connections established; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_dns_pkts': Total DNS packets processed; 'total_mf_dns_pkts': Total MF DNS packets; 'es_total_failure_actions': Total failure actions; 'compression_bytes_before': Data into gzip compression engine; 'compression_bytes_after': Data out of gzip compression engine; 'compression_hit': Number of requests compressed; 'compression_miss': Number of requests NOT compressed; 'compression_miss_no_client': Compression miss no client; 'compression_miss_template_exclusion': Compression miss template exclusion; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total successful requests; 'peak_conn': Peak connections; 'curr_conn_rate':

Current connection rate; 'last_rsp_time': Last response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'loc_permit': Geo-location Permit count; 'loc_deny': Geo-location Deny count; 'loc_conn': Geo-location Connection count; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'backend-time-to-first-byte': Backend Time from Request to Response First Byte; 'backend-time-to-last-byte': Backend Time from Request to Response Last Byte; 'in-latency': Request Latency at Thunder; 'out-latency': Response Latency at Thunder; 'total_fwd_bytes_out': Bytes processed in forward direction (outbound); 'total_fwd_pkts_out': Packets processed in forward direction (outbound); 'total_rev_bytes_out': Bytes processed in reverse direction (outbound); 'total_rev_pkts_out': Packets processed in reverse direction (outbound); 'curr_req_rate': Current request rate; 'curr_resp': Current response; 'total_resp': Total response; 'total_resp_succ': Total successful responses; 'curr_resp_rate': Current response rate; 'dnsrrl_total_allowed': DNS Response-Rate-Limiting Total Responses Allowed; 'dnsrrl_total_dropped': DNS Response-Rate-Limiting Total Responses Dropped; 'dnsrrl_total_slipped': DNS Response-Rate-Limiting Total Responses Slipped; 'dnsrrl_bad_fqdn': DNS Response-Rate-Limiting Bad FQDN; 'throughput-bits-per-sec': Throughput in bits/sec; 'dynamic-memory-alloc': dynamic memory (bytes) allocated by the vport; 'dynamic-memory-free': dynamic memory (bytes) allocated by the vport; 'dynamic-memory': dynamic memory (bytes) used by the vport(alloc-free); 'ip_only_lb_fwd_bytes': IP-Only-LB Bytes processed in forward direction; 'ip_only_lb_rev_bytes': IP-Only-LB Bytes processed in reverse direction; 'ip_only_lb_fwd_pkts': IP-Only-LB Packets processed in forward direction; 'ip_only_lb_rev_pkts': IP-Only-LB Packets processed in reverse direction; 'total_dns_filter_type_drop': Total DNS Filter Type Drop; 'total_dns_filter_class_drop': Total DNS Filter Class Drop; 'dns_filter_type_a_drop': DNS Filter Type A Drop; 'dns_filter_type_aaaa_drop': DNS Filter Type AAAA Drop; 'dns_filter_type_cname_drop': DNS Filter Type CNAME Drop; 'dns_filter_type_mx_drop': DNS Filter Type MX Drop; 'dns_filter_type_ns_drop': DNS Filter Type NS Drop; 'dns_filter_type_srv_drop': DNS Filter Type SRV Drop; 'dns_filter_type_ptr_drop': DNS Filter Type PTR Drop; 'dns_filter_type_soa_drop': DNS Filter Type SOA Drop; 'dns_filter_type_txt_drop': DNS Filter Type TXT Drop; 'dns_filter_type_any_drop': DNS Filter Type Any Drop; 'dns_filter_type_others_drop': DNS Filter Type OTHERS Drop; 'dns_filter_class_internet_drop': DNS Filter Class INTERNET Drop; 'dns_filter_class_chaos_drop': DNS Filter Class CHAOS Drop; 'dns_filter_class_hesiod_drop': DNS Filter Class HESIOD Drop; 'dns_filter_class_none_drop': DNS Filter Class NONE Drop; 'dns_filter_class_any_drop': DNS Filter Class ANY Drop; 'dns_filter_class_others_drop': DNS Filter Class OTHERS Drop; 'dns_rpz_action_drop': DNS RPZ Action Drop; 'dns_rpz_action_pass_thru': DNS RPZ Action Pass Through; 'dns_rpz_action_tcp_only': DNS RPZ Action TCP Only; 'dns_rpz_action_nxdomain': DNS RPZ Action NXDOMAIN; 'dns_rpz_action_nodata': DNS RPZ Action NODATA; 'dns_rpz_action_local_data': DNS RPZ Action Local Data; 'dns_rpz_trigger_client_ip': DNS RPZ Trigger Client IP; 'dns_rpz_trigger_resp_ip': DNS RPZ Trigger Response IP; 'dns_rpz_trigger_ns_ip': DNS RPZ Trigger NS IP; 'dns_rpz_trigger_qname': DNS RPZ Trigger Qname IP; 'dns_rpz_trigger_ns_name': DNS RPZ Trigger NS Name; 'compression_bytes_before_br': Data into brotli compression engine; 'compression_bytes_after_br': Data out of brotli compression engine; 'compression_bytes_before_total': Data into compression engine; 'compression_bytes_after_total': Data out of compression engine; 'compression_hit_br': Number of requests compressed with brotli; 'compression_miss_br': Number of requests NOT compressed with brotli; 'compression_hit_total': Number of requests compressed; 'compression_miss_total': Number of requests NOT compressed; 'dnsrrl_total_tc': DNS Response-Rate-Limiting Total Responses Replied With Truncated; 'http1_client_idle_timeout': HTTP1 Client Idle Timeout; 'http2_client_idle_timeout': HTTP2 Client Idle Timeout;

Type: string

port-list_acl-list

Specification	Value
Type	*list*
Block object keys	

acl-id

Description ACL id VPORT

Type: number

Range: 1-199

Mutual Exclusion: acl-id, p-acl, and shared-partition-acl are mutually exclusive

Reference Object: */axapi/v3/access-list/standard*

acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-shared

Description acl id

Type: number

Range: 1-199

Reference Object: */axapi/v3/access-list/standard*

acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-id-src-nat-pool and shared-partition-pool-id are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

acl-id-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

acl-name

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-shared

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-src-nat-pool, shared-partition-pool-name, and v-shared-partition-pool-name are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

acl-name-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

shared-partition-pool-id

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool-id and acl-id-src-nat-pool are mutually exclusive

shared-partition-pool-name

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool-name and acl-name-src-nat-pool are mutually exclusive

v-acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-id-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: v-acl-id-src-nat-pool and v-shared-partition-pool-id are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

v-acl-id-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

v-acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-name-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

v-acl-name-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

v-shared-partition-pool-id

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v-shared-partition-pool-id and v-acl-id-src-nat-pool are mutually exclusive

v-shared-partition-pool-name

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v-shared-partition-pool-name and acl-name-src-nat-pool are mutually exclusive

port-list_aflex-scripts

Specification	Value
Type	*list*
Block object keys	

aflex

Description aFleX Script Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

aflex-shared

Description aFleX Script Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list_auth-cfg

Specification	Value
Type	*object*

aaa-policy

Description Specify AAA policy name to bind to the virtual port

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/aaa-policy*

migrate-vip

Specification	Value
Type	*object*

cancel-migration

Description Cancel migration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cancel-migration and finish-migration are mutually exclusive

finish-migration

Description Complete the migration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: finish-migration and cancel-migration are mutually exclusive

target-data-cpu

Description Number of CPUs on the target platform

Type: number

Range: 1-75

target-floating-ipv4

Description Specify IP address

Type: string

Format: ipv4-address

Mutual Exclusion: target-floating-ipv4 and target-floating-ipv6 are mutually exclusive

target-floating-ipv6

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: target-floating-ipv6 and target-floating-ipv4 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.336 slb virtual-server port

Virtual Port

port Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*port-number, protocol*
Collection Name	*port-list*
Collection URI	/axapi/v3/slb/virtual-server/{name}/port
Element Name	port
Element URI	/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}
Element Attributes	port_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/stats
Operational Data URI	/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/oper
Schema	`port schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/virtual-server/{name}/port

port attributes

Create List

POST

/axapi/v3/slb/virtual-server/{name}/port

port attributes

Get Object

GET

/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}

port attributes

Get List

GET

/axapi/v3/slb/virtual-server/{name}/port

port-list

Modify Object

POST

/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}

port attributes

Replace Object

PUT

/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}

port attributes

Replace List

PUT

/axapi/v3/slb/virtual-server/{name}/port

port-list

Delete Object

DELETE

/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}

port attributes

port-list

port-list is **JSON List** of *port attributes*

port-list : [

{ *port attributes* },

{ *port attributes* },

…

]

port attributes

acl-list

Type: List

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

aflex-scripts

Type: List

aflex-table-entry-syn-disable

Description Disable aFlex entry sync for this port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: aflex-table-entry-syn-disable and aflex-table-entry-syn-enable are mutually exclusive

aflex-table-entry-syn-enable

Description Enable aFlex entry sync for this port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: aflex-table-entry-syn-enable and aflex-table-entry-syn-disable are mutually exclusive

alt-protocol1

Description 'http': HTTP Port;

Type: string

Supported Values: http

alt-protocol2

Description 'tcp': TCP LB service;

Type: string

Supported Values: tcp

alternate-port

Description Alternate Virtual Port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: alternate-port and range are mutually exclusive

alternate-port-number

Description Virtual Port

Type: number

Range: 0-65534

attack-detection

Description Enable analytics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *auth-cfg*

Type: Object

auto

Description Configure auto NAT for the vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clientip-sticky-nat

Description Prefer to use same source NAT address for a client

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

cpu-compute

Description enable cpu compute on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

def-selection-if-pref-failed

Description 'def-selection-if-pref-failed': Use default server selection method if prefer method failed; 'def-selection-if-pref-failed-disable': Stop using default server selection method if prefer method failed;

Type: string

Supported Values: def-selection-if-pref-failed, def-selection-if-pref-failed-disable

Default: def-selection-if-pref-failed

enable-playerid-check

Description Enable playerid checks on UDP packets once the AX is in active mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-scaleout

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eth-fwd

Description Ethernet interface number

Type: number

Format: interface

Mutual Exclusion: eth-fwd and trunk-fwd are mutually exclusive

eth-rev

Description Ethernet interface number

Type: number

Format: interface

Mutual Exclusion: eth-rev and trunk-rev are mutually exclusive

expand

Description expand syn-cookie with timestamp and wscale

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

extended-stats

Description Enable extended statistics on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-dns-cache

Description 'force-enable': Always enable; 'force-disable': Always disable; 'depends-on-config': Depends on configurations;

Type: string

Supported Values: force-enable, force-disable, depends-on-config

fast-path

Description 'force': Force fast path in SLB processing; 'disable': Disable fast path in SLB processing;

Type: string

Supported Values: force, disable

force-routing-mode

Description Force routing mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-enable

Description Enable Global Server Load Balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-session-lb

Description Enable GTP Session Load Balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-conn-mirror

Description Enable for HA Conn sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-global

Description Ignore global substitute-source-mac

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-map-list

Description Enter name of IP Map List to be bound (IP Map List Name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip-only-lb

Description Enable IP-Only LB mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-smart-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipinip

Description Enable IP in IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l7-hardware-assist

Description FPGA assist L7 packet parsing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l7-service-chain

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

memory-compute

Description enable dynamic memory compute on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-switching

Description Message switching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SLB Virtual Service Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ng-waf

Description Next-gen WAF

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-auto-up-on-aflex

Description Don't automatically mark vport up when aFleX is bound

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-dest-nat

Description Disable destination NAT, this option only supports in wildcard VIP or when a connection is operated in SSLi + EP mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

on-syn

Description Enable for HA Conn sync for l4 tcp sessions on SYN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-server-conn

Description Support server that allow only one connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

optimization-level

Description '0': No optimization; '1': Optimization level 1 (Experimental);

Type: string

Supported Values: 0, 1

Default: 0

p-template-sip-shared

Description SIP Template Name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: p-template-sip-shared and template-sip are mutually exclusive

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/slb-vport-tmpl*

persist-type

Description 'src-dst-ip-swap-persist': Create persist session after source IP and destination IP swap; 'use-src-ip-for-dst-persist': Use the source IP to create a destination persist session; 'use-dst-ip-for-src-persist': Use the destination IP to create source IP persist session;

Type: string

Supported Values: src-dst-ip-swap-persist, use-src-ip-for-dst-persist, use-dst-ip-for-src-persist

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: pool and shared-partition-pool are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

pool-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

port-number

Description Port

Type: number

Range: 0-65534

port-translation

Description Enable port translation under no-dest-nat

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

precedence

Description Set auto NAT pool as higher precedence for source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': TCP LB service; 'udp': UDP Port; 'others': for no tcp/udp protocol, do IP load balancing; 'diameter': diameter port; 'dns-tcp': DNS service over TCP; 'dns-udp': DNS service over UDP; 'fast-http': Fast HTTP Port; 'fix': FIX Port; 'ftp': File Transfer Protocol Port; 'ftp-proxy': ftp proxy port; 'http': HTTP Port; 'https': HTTPS port; 'imap': imap proxy port; 'mlb': Message based load balancing; 'mms': Microsoft Multimedia Service Port; 'mysql': mssql port; 'mssql': mssql; 'pop3': pop3 proxy port; 'radius': RADIUS Port; 'rtsp': Real Time Streaming Protocol Port; 'sip': Session initiation protocol over UDP; 'sip-tcp': Session initiation protocol over TCP; 'sips': Session initiation protocol over TLS; 'smpp-tcp': SMPP service over TCP; 'spdy': spdy port; 'spdys': spdys port; 'smtp': SMTP Port; 'mqtt': MQTT Port; 'mqtts': MQTTS Port; 'ssl-proxy': Generic SSL proxy; 'ssli': SSL insight; 'ssh': SSH Port; 'tcp-proxy': Generic TCP proxy; 'tftp': TFTP Port; 'fast-fix': Fast FIX port; 'http-over-quic': HTTP3-over-quic port;

Type: string

Supported Values: tcp, udp, others, diameter, dns-tcp, dns-udp, fast-http, fix, ftp, ftp-proxy, http, https, imap, mlb, mms, mysql, mssql, pop3, radius, rtsp, sip, sip-tcp, sips, smpp-tcp, spdy, spdys, smtp, mqtt, mqtts, ssl-proxy, ssli, ssh, tcp-proxy, tftp, fast-fix, http-over-quic

proxy-layer

Description 'v1': Force using old proxy; 'v2': Force using new proxy;

Type: string

Supported Values: v1, v2

range

Description Virtual Port range (Virtual Port range value)

Type: number

Range: 0-254

Default: 0

Mutual Exclusion: range and alternate-port are mutually exclusive

rate

Description Specify the log message rate

Type: number

Range: 0-2147483647

redirect-to-https

Description Redirect HTTP to HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reply-acme-challenge

Description Reply ACME http-01 challenge. This option only takes effect in HTTP port 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-fail

Description Use alternate virtual port when L7 request fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reselection

Description 'disable': disable;

Type: string

Supported Values: disable

reset

Description Send client reset when connection number over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-on-server-selection-fail

Description Send client reset when server selection fails

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: reset-on-server-selection-fail and when-server-selection-failed are mutually exclusive

resolve-web-cat-list

Description Web Category List name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

rtp-sip-call-id-match

Description rtp traffic try to match the real server of sip smp call-id session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

secs

Description Specify the interval in seconds

Type: number

Range: 1-100

serv-sel-fail

Description Use alternate virtual port when server selection failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-group

Description Bind a use-rcv-hop-for-resp Server Group to this Virtual Server (Server Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/server-group*

service-group

Description Bind a Service Group to this Virtual Server (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

shared-partition-cache-template

Description Reference a Cache template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cache-template and template-cache are mutually exclusive

shared-partition-client-ssl-template

Description Reference a Client SSL template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-client-ssl-template and template-client-ssl are mutually exclusive

shared-partition-connection-reuse-template

Description Reference a connection reuse template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-connection-reuse-template and template-connection-reuse are mutually exclusive

shared-partition-dblb-template

Description Reference a dblb template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dblb-template and template-dblb are mutually exclusive

shared-partition-diameter-template

Description Reference a Diameter template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-diameter-template and template-diameter are mutually exclusive

shared-partition-dns-template

Description Reference a dns template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dns-template and template-dns are mutually exclusive

shared-partition-doh-template

Description Reference a DNS over HTTP(s) template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-doh-template and template-doh are mutually exclusive

shared-partition-dynamic-service-template

Description Reference a dynamic service template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dynamic-service-template and template-dynamic-service are mutually exclusive

shared-partition-external-service-template

Description Reference a external service template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-external-service-template and template-external-service are mutually exclusive

shared-partition-fix-template

Description Reference a FIX template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-fix-template and template-fix are mutually exclusive

shared-partition-http-policy-template

Description Reference a http policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-http-policy-template and template-http-policy are mutually exclusive

shared-partition-http-template

Description Reference a HTTP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-http-template and template-http are mutually exclusive

shared-partition-imap-pop3-template

Description Reference a IMAP/POP3 template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-imap-pop3-template and template-imap-pop3 are mutually exclusive

shared-partition-persist-cookie-template

Description Reference a persist cookie template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-cookie-template and template-persist-cookie are mutually exclusive

shared-partition-persist-destination-ip-template

Description Reference a persist destination ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-destination-ip-template and template-persist-destination-ip are mutually exclusive

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and template-persist-source-ip are mutually exclusive

shared-partition-persist-ssl-sid-template

Description Reference a persist SSL SID template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-ssl-sid-template and template-persist-ssl-sid are mutually exclusive

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-pool

Description Specify NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and pool are mutually exclusive

shared-partition-quic-template

Description Reference a QUIC template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-quic-template and template-quic are mutually exclusive

shared-partition-server-ssl-template

Description Reference a SSL Server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-server-ssl-template and template-server-ssl are mutually exclusive

shared-partition-smpp-template

Description Reference a smpp template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-smpp-template and template-smpp are mutually exclusive

shared-partition-smtp-template

Description Reference a SMTP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-smtp-template and template-smtp are mutually exclusive

shared-partition-tcp

Description Reference a tcp template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp and template-tcp are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and template-tcp-proxy are mutually exclusive

shared-partition-udp

Description Reference a UDP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-udp and template-udp are mutually exclusive

shared-partition-virtual-port-template

Description Reference a Virtual Port template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-virtual-port-template and template-virtual-port are mutually exclusive

showtech-print-extended-stats

Description Enable print extended stats in showtech for dns vports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip-rev-hash

Description Skip rev tuple hash insertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-on-vip

Description Enable source NAT traffic against VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for virtual port; 'stats-data-disable': Disable statistical data collection for virtual port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

substitute-source-mac

Description Substitute Source MAC Address to that of the outgoing interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

support-http2

Description Support HTTP2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie

Description Enable syn-cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-cache

Description RAM caching template (Cache Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-cache and shared-partition-cache-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/cache*

template-cache-shared

Description Cache Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/cache*

template-client-ssh

Description Client SSH Template (Client SSH Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssh*

template-client-ssl

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-client-ssl and shared-partition-client-ssl-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/client-ssl*

template-client-ssl-shared

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

template-connection-reuse

Description Connection Reuse Template (Connection Reuse Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-connection-reuse and shared-partition-connection-reuse-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/connection-reuse*

template-connection-reuse-shared

Description Connection Reuse Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/connection-reuse*

template-dblb

Description DBLB Template (DBLB template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dblb and shared-partition-dblb-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/dblb*

template-dblb-shared

Description DBLB Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dblb*

template-diameter

Description Diameter Template (diameter template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-diameter and shared-partition-diameter-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/diameter*

template-diameter-shared

Description Diameter Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/diameter*

template-dns

Description DNS template (DNS template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dns and shared-partition-dns-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/dns*

template-dns-shared

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dns*

template-doh

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-doh and shared-partition-doh-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/doh*

template-doh-shared

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/doh*

template-dynamic-service

Description Dynamic Service Template (dynamic-service template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dynamic-service and shared-partition-dynamic-service-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/dynamic-service*

template-dynamic-service-shared

Description Dynamic Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dynamic-service*

template-external-service

Description External service template (external-service template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-external-service and shared-partition-external-service-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/external-service*

template-external-service-shared

Description External Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/external-service*

template-fix

Description FIX template (FIX Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-fix and shared-partition-fix-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/fix*

template-fix-shared

Description FIX Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/fix*

template-ftp

Description FTP port template (Ftp template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/ftp*

template-http

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-http and shared-partition-http-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/http*

template-http-policy

Description http-policy template (http-policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-http-policy and shared-partition-http-policy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/http-policy*

template-http-policy-shared

Description Http Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/http-policy*

template-http-shared

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/http*

template-imap-pop3

Description IMAP/POP3 Template (IMAP/POP3 Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-imap-pop3 and shared-partition-imap-pop3-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/imap-pop3*

template-imap-pop3-shared

Description IMAP/POP3 Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/imap-pop3*

template-mqtt

Description MQTT Template (MQTT Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/mqtt*

template-persist-cookie

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-cookie and shared-partition-persist-cookie-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/cookie*

template-persist-cookie-shared

Description Cookie Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/cookie*

template-persist-destination-ip

Description Destination IP persistence (Destination IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-destination-ip and shared-partition-persist-destination-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/destination-ip*

template-persist-destination-ip-shared

Description Destination IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/destination-ip*

template-persist-source-ip

Description Source IP persistence (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-persist-ssl-sid

Description SSL SID persistence (SSL SID persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-ssl-sid and shared-partition-persist-ssl-sid-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/ssl-sid*

template-persist-ssl-sid-shared

Description SSL SID Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/ssl-sid*

template-policy

Description Policy Template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/policy*

template-quic

Description QUIC Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-quic and shared-partition-quic-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/quic*

template-quic-client

Description QUIC Config Client (QUIC Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/quic*

template-quic-server

Description QUIC Config Server (QUIC Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/quic*

template-quic-shared

Description QUIC Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/quic*

template-ram-cache

Description RAM caching template (Cache Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/cache*

template-reqmod-icap

Description ICAP reqmod template (reqmod-icap template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/reqmod-icap*

template-respmod-icap

Description ICAP respmod service template (respmod-icap template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/respmod-icap*

template-scaleout

Description Scaleout template (Scaleout template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

template-server-ssh

Description Server SSH Template (Server SSH Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssh*

template-server-ssl

Description Server Side SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-server-ssl and shared-partition-server-ssl-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/server-ssl*

template-server-ssl-shared

Description Server SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

template-sip

Description SIP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-sip and p-template-sip-shared are mutually exclusive

Reference Object: */axapi/v3/slb/template/sip*

template-sip-shared

Description SIP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/sip*

template-smpp

Description SMPP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-smpp and shared-partition-smpp-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/smpp*

template-smpp-shared

Description SMPP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/smpp*

template-smtp

Description SMTP Template (SMTP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-smtp and shared-partition-smtp-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/smtp*

template-smtp-shared

Description SMTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/smtp*

template-ssli

Description SSLi template (SSLi Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/ssli*

template-tcp

Description TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-tcp and shared-partition-tcp are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp*

template-tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-client

Description TCP Proxy Config Client (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-server

Description TCP Proxy Config Server (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-shared

Description TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Reference Object: */axapi/v3/slb/template/tcp*

template-udp

Description L4 UDP Template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-udp and shared-partition-udp are mutually exclusive

Reference Object: */axapi/v3/slb/template/udp*

template-udp-shared

Description UDP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Reference Object: */axapi/v3/slb/template/udp*

template-virtual-port

Description Virtual port template (Virtual port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-virtual-port and shared-partition-virtual-port-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/virtual-port*

template-virtual-port-shared

Description Virtual Port Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/virtual-port*

trunk-fwd

Description Trunk interface number

Type: number

Format: interface

Mutual Exclusion: trunk-fwd and eth-fwd are mutually exclusive

trunk-rev

Description Trunk interface number

Type: number

Format: interface

Mutual Exclusion: trunk-rev and eth-rev are mutually exclusive

use-alternate-port

Description Use alternate virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-cgnv6

Description Follow CGNv6 source NAT configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-default-if-no-server

Description Use default forwarding if server selection failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-rcv-hop-for-resp

Description Use receive hop for response to client(For packets on default-vlan, also config "vlan-global enable-def-vlan-l2-forwarding".)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-rcv-hop-group

Description Set use-rcv-hop group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

view

Description Specify a GSLB View (ID)

Type: number

Range: 1-31

when-down

Description Use alternate virtual port when down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

when-down-protocol2

Description Use alternate virtual port when down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

when-server-selection-failed

Description 'send-504': Stay functional up and response with HTTP 504;

Type: string

Supported Values: send-504

Mutual Exclusion: when-server-selection-failed and reset-on-server-selection-fail are mutually exclusive

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current established connections; 'total_l4_conn': Total L4 connections established; 'total_l7_conn': Total L7 connections established; 'total_tcp_conn': Total TCP connections established; 'total_conn': Total connections established; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_dns_pkts': Total DNS packets processed; 'total_mf_dns_pkts': Total MF DNS packets; 'es_total_failure_actions': Total

failure actions; 'compression_bytes_before': Data into gzip compression engine; 'compression_bytes_after': Data out of gzip compression engine; 'compression_hit': Number of requests compressed; 'compression_miss': Number of requests NOT compressed; 'compression_miss_no_client': Compression miss no client; 'compression_miss_template_exclusion': Compression miss template exclusion; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total successful requests; 'peak_conn': Peak connections; 'curr_conn_rate': Current connection rate; 'last_rsp_time': Last response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'loc_permit': Geo-location Permit count; 'loc_deny': Geo-location Deny count; 'loc_conn': Geo-location Connection count; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'backend-time-to-first-byte': Backend Time from Request to Response First Byte; 'backend-time-to-last-byte': Backend Time from Request to Response Last Byte; 'in-latency': Request Latency at Thunder; 'out-latency': Response Latency at Thunder; 'total_fwd_bytes_out': Bytes processed in forward direction (outbound); 'total_fwd_pkts_out': Packets processed in forward direction (outbound); 'total_rev_bytes_out': Bytes processed in reverse direction (outbound); 'total_rev_pkts_out': Packets processed in reverse direction (outbound); 'curr_req_rate': Current request rate; 'curr_resp': Current response; 'total_resp': Total response; 'total_resp_succ': Total successful responses; 'curr_resp_rate': Current response rate; 'dnsrrl_total_allowed': DNS Response-Rate-Limiting Total Responses Allowed; 'dnsrrl_total_dropped': DNS Response-Rate-Limiting Total Responses Dropped; 'dnsrrl_total_slipped': DNS Response-Rate-Limiting Total Responses Slipped; 'dnsrrl_bad_fqdn': DNS Response-Rate-Limiting Bad FQDN; 'throughput-bits-per-sec': Throughput in bits/sec; 'dynamic-memory-alloc': dynamic memory (bytes) allocated by the vport; 'dynamic-memory-free': dynamic memory (bytes) allocated by the vport; 'dynamic-memory': dynamic memory (bytes) used by the vport(alloc-free); 'ip_only_lb_fwd_bytes': IP-Only-LB Bytes processed in forward direction; 'ip_only_lb_rev_bytes': IP-Only-LB Bytes processed in reverse direction; 'ip_only_lb_fwd_pkts': IP-Only-LB Packets processed in forward direction; 'ip_only_lb_rev_pkts': IP-Only-LB Packets processed in reverse direction; 'total_dns_filter_type_drop': Total DNS Filter Type Drop; 'total_dns_filter_class_drop': Total DNS Filter Class Drop; 'dns_filter_type_a_drop': DNS Filter Type A Drop; 'dns_filter_type_aaaa_drop': DNS Filter Type AAAA Drop; 'dns_filter_type_cname_drop': DNS Filter Type CNAME Drop; 'dns_filter_type_mx_drop': DNS Filter Type MX Drop; 'dns_filter_type_ns_drop': DNS Filter Type NS Drop; 'dns_filter_type_srv_drop': DNS Filter Type SRV Drop; 'dns_filter_type_ptr_drop': DNS Filter Type PTR Drop; 'dns_filter_type_soa_drop': DNS Filter Type SOA Drop; 'dns_filter_type_txt_drop': DNS Filter Type TXT Drop; 'dns_filter_type_any_drop': DNS Filter Type Any Drop; 'dns_filter_type_others_drop': DNS Filter Type OTHERS Drop; 'dns_filter_class_internet_drop': DNS Filter Class INTERNET Drop; 'dns_filter_class_chaos_drop': DNS Filter Class CHAOS Drop; 'dns_filter_class_hesiod_drop': DNS Filter Class HESIOD Drop; 'dns_filter_class_none_drop': DNS Filter Class NONE Drop; 'dns_filter_class_any_drop': DNS Filter Class ANY Drop; 'dns_filter_class_others_drop': DNS Filter Class OTHERS Drop; 'dns_rpz_action_drop': DNS RPZ Action Drop; 'dns_rpz_action_pass_thru': DNS RPZ Action Pass Through; 'dns_rpz_action_tcp_only': DNS RPZ Action TCP Only; 'dns_rpz_action_nxdomain': DNS RPZ Action NXDOMAIN; 'dns_rpz_action_nodata': DNS RPZ Action NODATA; 'dns_rpz_action_local_data': DNS RPZ Action Local Data; 'dns_rpz_trigger_client_ip': DNS RPZ Trigger Client IP; 'dns_rpz_trigger_resp_ip': DNS RPZ Trigger Response IP; 'dns_rpz_trigger_ns_ip': DNS RPZ Trigger NS IP; 'dns_rpz_trigger_qname': DNS RPZ Trigger Qname IP; 'dns_rpz_trigger_ns_name': DNS RPZ Trigger NS Name; 'compression_bytes_before_br': Data into brotli compression engine; 'compression_bytes_after_br': Data out of brotli compression engine; 'compression_bytes_before_total': Data into compression engine; 'compression_bytes_after_total': Data out of compression engine; 'compression_hit_br': Number of requests compressed with brotli; 'compression_miss_br': Number of requests NOT compressed with brotli;

'compression_hit_total': Number of requests compressed; 'compression_miss_total': Number of requests NOT compressed; 'dnsrrl_total_tc': DNS Response-Rate-Limiting Total Responses Replied With Truncated; 'http1_client_idle_timeout': HTTP1 Client Idle Timeout; 'http2_client_idle_timeout': HTTP2 Client Idle Timeout;

Type: string

Supported Values: all, curr_conn, total_l4_conn, total_l7_conn, total_tcp_conn, total_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_dns_pkts, total_mf_dns_pkts, es_total_failure_actions, compression_bytes_before, compression_bytes_after, compression_hit, compression_miss, compression_miss_no_client, compression_miss_template_exclusion, curr_req, total_req, total_req_succ, peak_conn, curr_conn_rate, last_rsp_time, fastest_rsp_time, slowest_rsp_time, loc_permit, loc_deny, loc_conn, curr_ssl_conn, total_ssl_conn, backend-time-to-first-byte, backend-time-to-last-byte, in-latency, out-latency, total_fwd_bytes_out, total_fwd_pkts_out, total_rev_bytes_out, total_rev_pkts_out, curr_req_rate, curr_resp, total_resp, total_resp_succ, curr_resp_rate, dnsrrl_total_allowed, dnsrrl_total_dropped, dnsrrl_total_slipped, dnsrrl_bad_fqdn, throughput-bits-per-sec, dynamic-memory-alloc, dynamic-memory-free, dynamic-memory, ip_only_lb_fwd_bytes, ip_only_lb_rev_bytes, ip_only_lb_fwd_pkts, ip_only_lb_rev_pkts, total_dns_filter_type_drop, total_dns_filter_class_drop, dns_filter_type_a_drop, dns_filter_type_aaaa_drop, dns_filter_type_cname_drop, dns_filter_type_mx_drop, dns_filter_type_ns_drop, dns_filter_type_srv_drop, dns_filter_type_ptr_drop, dns_filter_type_soa_drop, dns_filter_type_txt_drop, dns_filter_type_any_drop, dns_filter_type_others_drop, dns_filter_class_internet_drop, dns_filter_class_chaos_drop, dns_filter_class_hesiod_drop, dns_filter_class_none_drop, dns_filter_class_any_drop, dns_filter_class_others_drop, dns_rpz_action_drop, dns_rpz_action_pass_thru, dns_rpz_action_tcp_only, dns_rpz_action_nxdomain, dns_rpz_action_nodata, dns_rpz_action_local_data, dns_rpz_trigger_client_ip, dns_rpz_trigger_resp_ip, dns_rpz_trigger_ns_ip, dns_rpz_trigger_qname, dns_rpz_trigger_ns_name, compression_bytes_before_br, compression_bytes_after_br, compression_bytes_before_total, compression_bytes_after_total, compression_hit_br, compression_miss_br, compression_hit_total, compression_miss_total, dnsrrl_total_tc, http1_client_idle_timeout, http2_client_idle_timeout, dnsrrl_nx_exceed

acl-list

Specification	Value
Type	*list*
Block object keys	

acl-id

Description ACL id VPORT

Type: number

Range: 1-199

Mutual Exclusion: acl-id, p-acl, and shared-partition-acl are mutually exclusive

Reference Object: */axapi/v3/access-list/standard*

acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-shared

Description acl id

Type: number

Range: 1-199

Reference Object: */axapi/v3/access-list/standard*

acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-id-src-nat-pool and shared-partition-pool-id are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

acl-id-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

acl-name

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-shared

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-src-nat-pool, shared-partition-pool-name, and v-shared-partition-pool-name are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

acl-name-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

shared-partition-pool-id

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool-id and acl-id-src-nat-pool are mutually exclusive

shared-partition-pool-name

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool-name and acl-name-src-nat-pool are mutually exclusive

v-acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-id-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: v-acl-id-src-nat-pool and v-shared-partition-pool-id are mutually exclusive

Reference Object: */axapi/v3/ip/nat/pool*

v-acl-id-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

v-acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-name-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

v-acl-name-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

v-shared-partition-pool-id

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v-shared-partition-pool-id and v-acl-id-src-nat-pool are mutually exclusive

v-shared-partition-pool-name

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v-shared-partition-pool-name and acl-name-src-nat-pool are mutually exclusive

aflex-scripts

dns_filter_type_soa_drop

Description DNS Filter Type SOA Drop

Type: number

Format: counter

dns_filter_type_srv_drop

Description DNS Filter Type SRV Drop

Type: number

Format: counter

dns_filter_type_txt_drop

Description DNS Filter Type TXT Drop

Type: number

Format: counter

dns_rpz_action_drop

Description DNS RPZ Action Drop

Type: number

Format: counter

dns_rpz_action_local_data

Description DNS RPZ Action Local Data

Type: number

Format: counter

dns_rpz_action_nodata

Description DNS RPZ Action NODATA

Type: number

Format: counter

dns_rpz_action_nxdomain

Description DNS RPZ Action NXDOMAIN

Type: number

Format: counter

dns_rpz_action_pass_thru

Description DNS RPZ Action Pass Through

Type: number

Format: counter

dns_rpz_action_tcp_only

Description DNS RPZ Action TCP Only

Type: number

Format: counter

dns_rpz_trigger_client_ip

Description DNS RPZ Trigger Client IP

Type: number

Format: counter

dns_rpz_trigger_ns_ip

Description DNS RPZ Trigger NS IP

Type: number

Format: counter

dns_rpz_trigger_ns_name

Description DNS RPZ Trigger NS Name

Type: number

Format: counter

dns_rpz_trigger_qname

Description DNS RPZ Trigger Qname IP

Type: number

Format: counter

dns_rpz_trigger_resp_ip

Description DNS RPZ Trigger Response IP

Type: number

Format: counter

dnsrrl_bad_fqdn

Description DNS Response-Rate-Limiting Bad FQDN

Type: number

Format: counter

dnsrrl_nx_exceed

Description DNS Response-Rate-Limiting NX Responses Exceed Limit

Type: number

Format: counter

dnsrrl_total_allowed

Description DNS Response-Rate-Limiting Total Responses Allowed

Type: number

Format: counter

dnsrrl_total_dropped

Description DNS Response-Rate-Limiting Total Responses Dropped

Type: number

Format: counter

dnsrrl_total_slipped

Description DNS Response-Rate-Limiting Total Responses Slipped

Type: number

Format: counter

dnsrrl_total_tc

Description DNS Response-Rate-Limiting Total Responses Replied With Truncated

Type: number

Format: counter

dynamic-memory

Description dynamic memory (bytes) used by the vport(alloc-free)

Type: number

Format: counter

es_total_failure_actions

Description Total failure actions

Type: number

Format: counter

fastest_rsp_time

Description Fastest response time

Type: number

Format: counter

http1_client_idle_timeout

Description HTTP1 Client Idle Timeout

Type: number

Format: counter

http2_client_idle_timeout

Description HTTP2 Client Idle Timeout

Type: number

Format: counter

in-latency

Description Request Latency at Thunder

Type: number

Format: counter

ip_only_lb_fwd_bytes

Description IP-Only-LB Bytes processed in forward direction

Type: number

Format: counter

ip_only_lb_fwd_pkts

Description IP-Only-LB Packets processed in forward direction

Type: number

Format: counter

ip_only_lb_rev_bytes

Description IP-Only-LB Bytes processed in reverse direction

Type: number

Format: counter

ip_only_lb_rev_pkts

Description IP-Only-LB Packets processed in reverse direction

Type: number

Format: counter

last_rsp_time

Description Last response time

Type: number

Format: counter

loc_conn

Description Geo-location Connection count

Type: number

Format: counter

loc_deny

Description Geo-location Deny count

Type: number

Format: counter

loc_permit

Description Geo-location Permit count

Type: number

Format: counter

out-latency

Description Response Latency at Thunder

Type: number

Format: counter

peak_conn

Description Peak connections

Type: number

Format: counter

slowest_rsp_time

Description Slowest response time

Type: number

Format: counter

throughput-bits-per-sec

Description Throughput in bits/sec

Type: number

Format: counter

total_conn

Description Total connections established

Type: number

Format: counter

total_dns_filter_class_drop

Description Total DNS Filter Class Drop

Type: number

Format: counter

total_dns_filter_type_drop

Description Total DNS Filter Type Drop

Type: number

Format: counter

total_dns_pkts

Description Total DNS packets processed

Type: number

Format: counter

total_fwd_bytes

Description Bytes processed in forward direction

Type: number

Format: counter

total_fwd_bytes_out

Description Bytes processed in forward direction (outbound)

Type: number

Format: counter

total_fwd_pkts

Description Packets processed in forward direction

Type: number

Format: counter

total_fwd_pkts_out

Description Packets processed in forward direction (outbound)

Type: number

Format: counter

total_l4_conn

Description Total L4 connections established

Type: number

Format: counter

total_l7_conn

Description Total L7 connections established

Type: number

Format: counter

total_mf_dns_pkts

Description Total MF DNS packets

Type: number

Format: counter

total_req

Description Total requests

Type: number

Format: counter

total_req_succ

Description Total successful requests

Type: number

Format: counter

total_resp

Description Total response

Type: number

Format: counter

total_resp_succ

Description Total successful responses

Type: number

Format: counter

total_rev_bytes

Description Bytes processed in reverse direction

Type: number

Format: counter

total_rev_bytes_out

Description Bytes processed in reverse direction (outbound)

Type: number

Format: counter

total_rev_pkts

Description Packets processed in reverse direction

Type: number

Format: counter

total_rev_pkts_out

Description Packets processed in reverse direction (outbound)

Type: number

Format: counter

total_ssl_conn

Description Total SSL connections

Type: number

Format: counter

total_tcp_conn

Description Total TCP connections established

Type: number

Format: counter

2.121 smtp

Objects:

2.121.1 smtp

Configure SMTP Server

smtp Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	smtp
Element URI	/axapi/v3/smtp
Element Attributes	smtp_attributes
Partition Visibility	shared
Schema	`smtp schema`

Operations Allowed:

Create Object

POST

/axapi/v3/smtp

smtp attributes

```
POST /axapi/v3/smtp
Payload:
{
    "smtp": {
        "smtp-server": "a"
    }
}
```

Get Object

GET

/axapi/v3/smtp

smtp attributes

```
GET /axapi/v3/smtp
Reponse:
{
    "smtp": {
        "smtp-server": "a",
        "needauthentication": 0,
        "uuid": "3f33dc24-b6df-11ef-8f5a-ae71681635d0",
        "a10-url": "/axapi/v3/smtp"
```

(continues on next page)

(continued from previous page)

```
    }
}
```

Modify Object

POST

/axapi/v3/smtp

smtp attributes

Replace Object

PUT

/axapi/v3/smtp

smtp attributes

```
PUT /axapi/v3/smtp
Payload:
{
    "smtp": {
        "smtp-server": "abcd"
    }
}
```

Delete Object

DELETE

/axapi/v3/smtp

smtp attributes

```
DELETE /axapi/v3/smtp
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

smtp attributes

mailfrom

Description Configure email source address

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

needauthentication

Description Configure SMTP server need authtication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Configure SMTP Port (Configure SMTP port, default is 25)

Type: number

Range: 1-65535

smtp-server

Description Configure SMTP Server (length:1-254)

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

Mutual Exclusion: smtp-server and smtp-server-v6 are mutually exclusive

smtp-server-v6

Description Configure SMTP Server IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: smtp-server-v6 and smtp-server are mutually exclusive

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *username-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

username-cfg

Specification	Value
Type	*object*

password

Description: password is a **JSON Block**. Please see below for *username-cfg_password*

Type: Object

username

Description Configure SMTP login username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

username-cfg_password

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

smtp-password

Description Configure SMTP login password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

2.122 snmp-server

Objects:

2.122.1 snmp-server

Configure SNMP engine parameters

snmp-server Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	snmp-server
Element URI	/axapi/v3/snmp-server
Element Attributes	snmp-server_attributes
Partition Visibility	shared
Schema	`snmp-server schema`

Operations Allowed:

Get Object

GET

/axapi/v3/snmp-server

snmp-server_attributes

snmp-server attributes

SNMPv1-v2c

Description: SNMPv1-v2c is a **JSON Block**. Please see below for *SNMPv1-v2c*

Type: Object

Reference Object: */axapi/v3/snmp-server/SNMPv1-v2c*

SNMPv3

Description: SNMPv3 is a **JSON Block**. Please see below for *SNMPv3*

Type: Object

Reference Object: */axapi/v3/snmp-server/SNMPv3*

community

Description: community is a **JSON Block**. Please see below for *community*

Type: Object

Reference Object: */axapi/v3/snmp-server/community*

contact

Description: contact is a **JSON Block**. Please see below for *contact*

Type: Object

Reference Object: */axapi/v3/snmp-server/contact*

disable

Description: disable is a **JSON Block**. Please see below for *disable*

Type: Object

Reference Object: */axapi/v3/snmp-server/disable*

enable

Description: enable is a **JSON Block**. Please see below for *enable*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable*

engineID

Description: engineID is a **JSON Block**. Please see below for *engineID*

Type: Object

Reference Object: */axapi/v3/snmp-server/engineID*

group-list

Type: List

Reference Object: */axapi/v3/snmp-server/group/{groupname}*

host

Description: host is a **JSON Block**. Please see below for *host*

Type: Object

Reference Object: */axapi/v3/snmp-server/host*

location

Description: location is a **JSON Block**. Please see below for *location*

Type: Object

Reference Object: */axapi/v3/snmp-server/location*

management-index

Description: management-index is a **JSON Block**. Please see below for *management-index*

Type: Object

Reference Object: */axapi/v3/snmp-server/management-index*

slb-data-cache-timeout

Description: slb-data-cache-timeout is a **JSON Block**. Please see below for *slb-data-cache-timeout*

Type: Object

Reference Object: */axapi/v3/snmp-server/slb-data-cache-timeout*

table-timeout-list

Type: List

Reference Object: */axapi/v3/snmp-server/table-timeout/{table}*

user-list

Type: List

Reference Object: */axapi/v3/snmp-server/user/{username}*

view-list

Type: List

Reference Object: */axapi/v3/snmp-server/view/{viewname}+{oid}*

table-timeout-list

Specification	Value
Type	*list*
Block object keys	

table

Description SNMP table name or table oid

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

timeout

Description timeout value

Type: number

Range: 1-60

Default: 60

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable

Specification	Value
Type	*object*

schema-agent

Description Enable schema-agent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service

Description Enable SNMP service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traps

Description: traps is a **JSON Block**. Please see below for *enable_traps*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps

Specification	Value
Type	*object*

all

Description Enable all SNMP traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb

Description: gslb is a **JSON Block**. Please see below for *enable_traps_gslb*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/gslb*

lldp

Description Enable lldp traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lsn

Description: lsn is a **JSON Block**. Please see below for *enable_traps_lsn*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/lsn*

network

Description: network is a **JSON Block**. Please see below for *enable_traps_network*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/network*

routing

Description: routing is a **JSON Block**. Please see below for *enable_traps_routing*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing*

scaleout

Description: scaleout is a **JSON Block**. Please see below for *enable_traps_scaleout*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout*

slb

Description: slb is a **JSON Block**. Please see below for *enable_traps_slb*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/slb*

slb-change

Description: slb-change is a **JSON Block**. Please see below for *enable_traps_slb-change*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/slb-change*

snmp

Description: snmp is a **JSON Block**. Please see below for *enable_traps_snmp*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/snmp*

ssl

Description: ssl is a **JSON Block**. Please see below for *enable_traps_ssl*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/ssl*

system

Description: system is a **JSON Block**. Please see below for *enable_traps_system*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/system*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vcs

Description: vcs is a **JSON Block**. Please see below for *enable_traps_vcs*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/vcs*

vrrp-a

Description: vrrp-a is a **JSON Block**. Please see below for *enable_traps_vrrp-a*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/vrrp-a*

enable_traps_slb-change

Specification	Value
Type	*object*

all

Description Enable all system group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-resource-event

Description Enable system connection resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resource-usage-warning

Description Enable partition resource usage warning trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Enable slb server create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-port

Description Enable slb server port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-change

Description Enable SSL certificate change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-expire

Description Enable SSL certificate expiring trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-threshold

Description Enable slb system threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description Enable slb vip create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port

Description Enable slb vip-port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable_traps_lsn

Specification	Value
Type	*object*

all

Description Enable all LSN group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mapping-file-change

Description Enable LSN trap when fixed nat port mapping file change

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-ipport-threshold

Description Maximum threshold

Type: number

Range: 10000-64512

Default: 64512

max-port-threshold

Description Maximum threshold

Type: number

Range: 10000-655355000

Default: 655350000

per-ip-port-usage-threshold

Description Enable LSN trap when IP total port usage reaches the threshold (default 64512)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

total-port-usage-threshold

Description Enable LSN trap when NAT total port usage reaches the threshold (default 655350000)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-exceeded

Description Enable LSN trap when NAT pool reaches the threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_vrrp-a

Specification	Value
Type	*object*

active

Description Enable VRRP-A active trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all

Description Enable all VRRP-A group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

standby

Description Enable VRRP-A standby trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_snmp

Specification	Value
Type	*object*

all

Description Enable all SNMP group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

linkdown

Description Enable SNMP link-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

linkup

Description Enable SNMP link-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_system

Specification	Value
Type	*object*

all

Description Enable all system group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

apps-global

Description: apps-global is a **JSON Block**. Please see below for *enable_traps_system_apps-global*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/system/apps-global*

control-cpu-high

Description Enable control CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

data-cpu-high

Description Enable data CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fan

Description Enable system fan trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-sys-read-only

Description Enable file system read-only trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-disk-use

Description Enable system high disk usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-memory-use

Description Enable system high memory usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-temp

Description Enable system high temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

license-management

Description Enable system license management traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

low-temp

Description Enable system low temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-drop

Description Enable system packet dropped trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

power

Description Enable system power supply trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pri-disk

Description Enable system primary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart

Description Enable system restart trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sec-disk

Description Enable system secondary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shutdown

Description Enable system shutdown trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smp-resource-event

Description Enable system smp resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start

Description Enable system start trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syslog-severity-one

Description Enable system syslog severity one messages trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacacs-server-up-down

Description Enable system TACACS monitor server up/down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_system_apps-global

Specification	Value
Type	*object*

cps-threshold

Description Enable CPS trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sessions-threshold

Description Enable sessions threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_ssl

Specification	Value
Type	*object*

server-certificate-error

Description Enable SSL server certificate error trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_vcs

Specification	Value
Type	*object*

state-change

Description Enable VCS state change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_routing

Specification	Value
Type	*object*

bgp

Description: bgp is a **JSON Block**. Please see below for *enable_traps_routing_bgp*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing/bgp*

isis

Description: isis is a **JSON Block**. Please see below for *enable_traps_routing_isis*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *enable_traps_routing_ospf*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing/ospf*

enable_traps_routing_bgp

Specification	Value
Type	*object*

ax

Description: ax is a **JSON Block**. Please see below for *enable_traps_routing_bgp_ax*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing/bgp/ax*

bgpBackwardTransNotification

Description Enable bgpBackwardTransNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpEstablishedNotification

Description Enable bgpEstablishedNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_routing_bgp_ax

Specification	Value
Type	*object*

bgpBackwardTransNotification

Description Enable bgpBackwardTransNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpEstablishedNotification

Description Enable bgpEstablishedNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpPrefixThresholdClearNotification

Description Enable bgpPrefixThresholdClearNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpPrefixThresholdExceededNotification

Description Enable bgpPrefixThresholdExceededNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_routing_ospf

Specification	Value
Type	*object*

ospfIfAuthFailure

Description Enable ospfIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfConfigError

Description Enable ospfIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfRxBadPacket

Description Enable ospfIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfStateChange

Description Enable ospfIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbApproachingOverflow

Description Enable ospfLsdbApproachingOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbOverflow

Description Enable ospfLsdbOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfMaxAgeLsa

Description Enable ospfMaxAgeLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfNbrStateChange

Description Enable ospfNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfOriginateLsa

Description Enable ospfOriginateLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfTxRetransmit

Description Enable ospfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfAuthFailure

Description Enable ospfVirtIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfConfigError

Description Enable ospfVirtIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfRxBadPacket

Description Enable ospfVirtIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfStateChange

Description Enable ospfVirtIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfTxRetransmit

Description Enable ospfVirtIfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtNbrStateChange

Description Enable ospfVirtNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_routing_isis

Specification	Value
Type	*object*

isisAdjacencyChange

Description Enable isisAdjacencyChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAreaMismatch

Description Enable isisAreaMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAttemptToExceedMaxSequence

Description Enable isisAttemptToExceedMaxSequence traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationFailure

Description Enable isisAuthenticationFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationTypeFailure

Description Enable isisAuthenticationTypeFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisCorruptedLSPDetected

Description Enable isisCorruptedLSPDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisDatabaseOverload

Description Enable isisDatabaseOverload traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisIDLenMismatch

Description Enable isisIDLenMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPErrorDetected

Description Enable isisLSPErrorDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPTooLargeToPropagate

Description Enable isisLSPTooLargeToPropagate traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisManualAddressDrops

Description Enable isisManualAddressDrops traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisMaxAreaAddressesMismatch

Description Enable isisMaxAreaAddressesMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOriginatingLSPBufferSizeMismatch

Description Enable isisOriginatingLSPBufferSizeMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOwnLSPPurge

Description Enable isisOwnLSPPurge traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisProtocolsSupportedMismatch

Description Enable isisProtocolsSupportedMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisRejectedAdjacency

Description Enable isisRejectedAdjacency traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisSequenceNumberSkip

Description Enable isisSequenceNumberSkip traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisVersionSkew

Description Enable isisVersionSkew traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_scaleout

Specification	Value
Type	*object*

infrastructure

Description: infrastructure is a **JSON Block**. Please see below for *enable_traps_scaleout_infrastructure*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout/infrastructure*

enable_traps_scaleout_infrastructure

Specification	Value
Type	*object*

all

Description Enable all infra traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cluster

Description: cluster is a **JSON Block**. Please see below for *enable_traps_scaleout_infrastructure_cluster*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout/infrastructure/cluster*

master-node

Description: master-node is a **JSON Block**. Please see below for *enable_traps_scaleout_infrastructure_master-node*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout/infrastructure/master-node*

service-node

Description: service-node is a **JSON Block**. Please see below for *enable_traps_scaleout_infrastructure_service-node*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout/infrastructure/service-node*

test-send-all-traps

Description Send all infra traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_scaleout_infrastructure_service-node

Specification	Value
Type	*object*

local-device-disabled

Description Enable local device disabled trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-master

Description Enable service-master trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-map-update

Description Enable traffic map update trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_scaleout_infrastructure_cluster

Specification	Value
Type	*object*

election

Description Enable election status trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

master-calling-re-election

Description Enable re-election trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

node-status

Description Enable active node status trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_scaleout_infrastructure_master-node

Specification	Value
Type	*object*

traffic-map-distribution

Description Enable Traffic-map distribution trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vserver-traffic-map-update

Description Enable VServer Traffic-map trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable_traps_gslb

Specification	Value
Type	*object*

all

Description Enable all GSLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

group

Description Enable GSLB group related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-ip

Description Enable GSLB service-ip related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

site

Description Enable GSLB site related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone

Description Enable GSLB zone related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable_traps_slb

Specification	Value
Type	*object*

all

Description Enable all SLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

application-buffer-limit

Description Enable application buffer reach limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-exceed

Description Enable SLB server/port bandwidth rate limit exceed trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Enable SLB server/port bandwidth rate limit resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-down

Description Enable SLB server gateway down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-up

Description Enable SLB server gateway up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-limit

Description Enable SLB server connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-resume

Description Enable SLB server connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-disabled

Description Enable SLB server-disabled trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-down

Description Enable SLB server-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-selection-failure

Description Enable SLB server selection failure trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-up

Description Enable slb server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-limit

Description Enable SLB service connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-resume

Description Enable SLB service connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-down

Description Enable SLB service-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-down

Description Enable SLB service-group-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-down

Description Enable SLB service-group-member-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-up

Description Enable SLB service-group-member-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-up

Description Enable SLB service-group-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-up

Description Enable SLB service-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-connlimit

Description Enable the virtual server reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-connratelimit

Description Enable the virtual server reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-down

Description Enable SLB virtual server down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connlimit

Description Enable the virtual port reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connratelimit

Description Enable the virtual port reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-down

Description Enable SLB virtual port down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-qps

Description Enable the virtual port query-per-second threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-up

Description Enable SLB virtual port up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-up

Description Enable SLB virtual server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable_traps_network

Specification	Value
Type	*object*

trunk-port-threshold

Description Enable network trunk-port-threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

slb-data-cache-timeout

Specification	Value
Type	*object*

slblimit

Description Cache time-out in seconds, default as 60 seconds

Type: number

Range: 5-120

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

view-list

Specification	Value
Type	*list*
Block object keys	

mask

Description Hex octets, separated by '.', mask of oid

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: mask and type are mutually exclusive

oid

Description MIB view family name or oid

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

type

Description 'included': MIB family is included in the view; 'excluded': MIB family is excluded from the view;

Type: string

Supported Values: included, excluded

Mutual Exclusion: type and mask are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

viewname

Description Name of the view

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

community

Specification	Value
Type	*object*

read-list

Type: List

Reference Object: */axapi/v3/snmp-server/community/read/{user}*

community_read-list

Specification	Value
Type	*list*
Block object keys	

oid-list

Type: List

Reference Object: */axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}*

remote

Description: remote is a **JSON Block**. Please see below for *community_read-list_remote*

Type: Object

user

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

community_read-list_oid-list

Specification	Value
Type	*list*
Block object keys	

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *community_read-list_oid-list_remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

community_read-list_oid-list_remote

Specification	Value
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

community_read-list_oid-list_remote_host-list

Specification	Value
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

community_read-list_oid-list_remote_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

community_read-list_oid-list_remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

community_read-list_remote

Specification	Value
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

community_read-list_remote_host-list

Specification	Value
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

community_read-list_remote_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

community_read-list_remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

contact

Specification	Value
Type	*object*

contact-name

Description Identification of the contact person for this managed node

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host

Specification	Value
Type	*object*

host-name-list

Type: List

Reference Object: */axapi/v3/snmp-server/host/host-name/{hostname}+{version}*

ipv4-host-list

Type: List

Reference Object: */axapi/v3/snmp-server/host/ipv4-host/{ipv4-addr}+{version}*

ipv6-host-list

Type: List

Reference Object: */axapi/v3/snmp-server/host/ipv6-host/{ipv6-addr}+{version}*

host_ipv6-host-list

Specification	Value
Type	*list*
Block object keys	

ipv6-addr

Description IPV6 address of SNMP trap host

Type: string

Format: ipv6-address

udp-port

Description The trap host's UDP port number(default: 162)

Type: number

Range: 1-65535

Default: 162

user

Description SNMPv3 user to send traps (User Name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v1-v2c-comm

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

version

Description 'v1': Use SNMPv1; 'v2c': Use SNMPv2c; 'v3': User SNMPv3;

Type: string

Supported Values: v1, v2c, v3

Default: v2c

host_host-name-list

Specification	Value
Type	*list*
Block object keys	

hostname

Description Hostname of SNMP trap host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

udp-port

Description The trap host's UDP port number(default: 162)

Type: number

Range: 1-65535

Default: 162

user

Description SNMPv3 user to send traps (User Name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v1-v2c-comm

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

version

Description 'v1': Use SNMPv1; 'v2c': Use SNMPv2c; 'v3': User SNMPv3;

Type: string

Supported Values: v1, v2c, v3

Default: v2c

host_ipv4-host-list

Specification	Value
Type	*list*
Block object keys	

ipv4-addr

Description IPV4 address of SNMP trap host

Type: string

Format: ipv4-address

udp-port

Description The trap host's UDP port number(default: 162)

Type: number

Range: 1-65535

Default: 162

user

Description SNMPv3 user to send traps (User Name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v1-v2c-comm

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

version

Description 'v1': Use SNMPv1; 'v2c': Use SNMPv2c; 'v3': User SNMPv3;

Type: string

Supported Values: v1, v2c, v3

Default: v2c

management-index

Specification	Value
Type	*object*

mgmt-index

Description index number

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable

Specification	Value
Type	*object*

a10cmsubagent

Description Disable a10cmsubagent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traps

Description: traps is a **JSON Block**. Please see below for *disable_traps*

Type: Object

Reference Object: */axapi/v3/snmp-server/disable/traps*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable_traps

Specification	Value
Type	*object*

all

Description Disable all traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb

Description Disable all gslb traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb

Description Disable all slb traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-change

Description Disable all slb-change traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp

Description Disable all snmp traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrrp-a

Description Disable all vrrp-a on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

location

Specification	Value
Type	*object*

loc

Description The physical location of this node

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

group-list

Specification	Value
Type	*list*
Block object keys	

groupname

Description Name of the group

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

read

Description specify a read view for the group (read view name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': group using the authNoPriv Security Level; 'noauth': group using the noAuthNoPriv Security Level; 'priv': group using SNMPv3 authPriv security level;

Type: string

Supported Values: auth, noauth, priv

SNMPv3

Specification	Value
Type	*object*

user-list

Type: List

Reference Object: */axapi/v3/snmp-server/SNMPv3/user/{username}*

SNMPv3_user-list

Specification	Value
Type	*list*
Block object keys	

auth-val

Description 'md5': Use HMAC MD5 algorithm for authentication; 'sha': Use HMAC SHA algorithm for authentication; 'sha-512': Use HMAC SHA-512 algorithm for authentication; 'sha-384': Use HMAC SHA-384 algorithm for authentication; 'sha-256': Use HMAC SHA-256 algorithm for authentication; 'sha-224': Use HMAC SHA-224 algorithm for authentication;

Type: string

Supported Values: md5, sha, sha-512, sha-384, sha-256, sha-224

encpasswd

Description Passphrase for encryption

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

group

Description Group to which the user belongs

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

passwd

Description Password of this user

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

priv

Description 'des': DES encryption alogrithm; 'aes': AES encryption alogrithm; 'aes-192': AES-192 encryption alogrithm; 'aes-256': AES-256 encryption alogrithm; (Encryption type)

Type: string

Supported Values: des, aes, aes-192, aes-256

priv-pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

username

Description Name of the user

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': Using the authNoPriv Security Level; 'noauth': Using the noAuthNoPriv Security Level;

Type: string

Supported Values: auth, noauth

user-list

Specification	Value
Type	*list*
Block object keys	

auth-val

Description 'md5': Use HMAC MD5 algorithm for authentication; 'sha': Use HMAC SHA algorithm for authentication;

Type: string

Supported Values: md5, sha

encpasswd

Description Passphrase for encryption

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

group

Description Group to which the user belongs

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

passwd

Description Password of this user

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

priv

Description 'des': DES encryption alogrithm; 'aes': AES encryption alogrithm; (Encryption type)

Type: string

Supported Values: des, aes

priv-pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

username

Description Name of the user

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': Using the authNoPriv Security Level; 'noauth': Using the noAuthNoPriv Security Level;

Type: string

Supported Values: auth, noauth

engineID

Specification	Value
Type	*object*

engId

Description Define local engineID HEX WORD

Type: string

Maximum Length: 24 characters

Maximum Length: 10 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

SNMPv1-v2c

Specification	Value
Type	*object*

user-list

Type: List

Reference Object: */axapi/v3/snmp-server/SNMPv1-v2c/user/{user}*

SNMPv1-v2c_user-list

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED community string)

oid-list

Type: List

Reference Object: */axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}*

passwd

Description define value of community string

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *SNMPv1-v2c_user-list_remote*

Type: Object

user

Description SNMPv1/v2c community configuration key

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

SNMPv1-v2c_user-list_remote

Specification	Value
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

SNMPv1-v2c_user-list_remote_host-list

Specification	Value
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

SNMPv1-v2c_user-list_remote_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

SNMPv1-v2c_user-list_remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

SNMPv1-v2c_user-list_oid-list

Specification	Value
Type	*list*
Block object keys	

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *SNMPv1-v2c_user-list_oid-list_remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

SNMPv1-v2c_user-list_oid-list_remote

Specification	Value
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

SNMPv1-v2c_user-list_oid-list_remote_host-list

Specification	Value
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

SNMPv1-v2c_user-list_oid-list_remote_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

SNMPv1-v2c_user-list_oid-list_remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

2.122.2 snmp-server SNMPv1-v2c

Specify the SNMPv1/v2c configuration

SNMPv1-v2c Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	SNMPv1-v2c
Element URI	/axapi/v3/snmp-server/SNMPv1-v2c
Element Attributes	SNMPv1-v2c_attributes
Partition Visibility	shared
Schema	`SNMPv1-v2c schema`

Operations Allowed:

Get Object

GET

/axapi/v3/snmp-server/SNMPv1-v2c

SNMPv1-v2c_attributes

SNMPv1-v2c attributes

user-list

Type: List

Reference Object: */axapi/v3/snmp-server/SNMPv1-v2c/user/{user}*

user-list

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED community string)

oid-list

Type: List

Reference Object: */axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}*

passwd

Description define value of community string

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *user-list_remote*

Type: Object

user

Description SNMPv1/v2c community configuration key

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

user-list_remote

Specification	Value
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

user-list_remote_host-list

Specification	Value
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

user-list_remote_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

user-list_remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

user-list_oid-list

Specification	Value
Type	*list*
Block object keys	

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *user-list_oid-list_remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

user-list_oid-list_remote

Specification	Value
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

user-list_oid-list_remote_host-list

Specification	Value
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

user-list_oid-list_remote_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

user-list_oid-list_remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

2.122.3 snmp-server SNMPv1-v2c user

Define configuration for SNMPv1/v2c user

user Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*user*
Collection Name	*user-list*
Collection URI	/axapi/v3/snmp-server/SNMPv1-v2c/user
Element Name	user
Element URI	/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}
Element Attributes	user_attributes
Partition Visibility	shared
Schema	`user schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/SNMPv1-v2c/user

user attributes

```
POST /axapi/v3/snmp-server/SNMPv1-v2c/user/a/oid/
Payload:
{
    "oid": {
        "oid-val": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/snmp-server/SNMPv1-v2c/user

user attributes

Get Object

GET

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}

user attributes

```
GET /axapi/v3/snmp-server/SNMPv1-v2c/user/a/oid/a
Reponse:
{
    "oid": {
        "oid-val": "a",
        "uuid": "3f5ebb1c-b67e-11ef-8129-ae71681635d0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/snmp-server/SNMPv1-v2c/user/a/oid/a"
    }
}
```

Get List

GET

/axapi/v3/snmp-server/SNMPv1-v2c/user

user-list

Modify Object

POST

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}

user attributes

Replace Object

PUT

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}

user attributes

```
PUT /axapi/v3/snmp-server/SNMPv1-v2c/user/a/oid/a
Payload:
{
    "oid": {
        "oid-val": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/snmp-server/SNMPv1-v2c/user

user-list

Delete Object

DELETE

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}

user attributes

```
DELETE /axapi/v3/snmp-server/SNMPv1-v2c/user/a/oid/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

user-list

user-list is **JSON List** of *user attributes*

user-list : [

{ *user attributes* },

{ *user attributes* },

...

]

user attributes

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED community string)

oid-list

Type: List

Reference Object: */axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}*

passwd

Description define value of community string

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *remote*

Type: Object

user

Description SNMPv1/v2c community configuration key

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote

Specification	Value
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

remote_host-list

Specification	Value
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

remote_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

oid-list

Specification	Value
Type	*list*
Block object keys	

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *oid-list_remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oid-list_remote

Specification	Value
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

oid-list_remote_host-list

Specification	Value
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

oid-list_remote_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

oid-list_remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

2.122.4 snmp-server SNMPv1-v2c user oid

Define a remote entity to which user belongs

oid Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*oid-val*
Collection Name	*oid-list*
Collection URI	/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid
Element Name	oid
Element URI	/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}
Element Attributes	oid_attributes
Partition Visibility	shared
Schema	`oid schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid

oid attributes

Create List

POST

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid

oid attributes

Get Object

GET

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}

oid attributes

Get List

GET

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid

oid-list

Modify Object

POST

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}

oid attributes

Replace Object

PUT

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}

oid attributes

Replace List

PUT

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid

oid-list

Delete Object

DELETE

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}

oid attributes

oid-list

oid-list is **JSON List** of *oid attributes*

oid-list : [

{ *oid attributes* },

{ *oid attributes* },

…

]

oid attributes

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote

Specification	Value
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

remote_host-list

Specification	Value
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

remote_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

2.122.5 snmp-server SNMPv3

Define a SNMPv3 user

SNMPv3 Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	SNMPv3
Element URI	/axapi/v3/snmp-server/SNMPv3
Element Attributes	SNMPv3_attributes
Partition Visibility	shared
Schema	`SNMPv3 schema`

Operations Allowed:

Get Object

GET

/axapi/v3/snmp-server/SNMPv3

SNMPv3_attributes

SNMPv3 attributes

user-list

Type: List

Reference Object: */axapi/v3/snmp-server/SNMPv3/user/{username}*

user-list

Specification	Value
Type	*list*
Block object keys	

auth-val

Description 'md5': Use HMAC MD5 algorithm for authentication; 'sha': Use HMAC SHA algorithm for authentication; 'sha-512': Use HMAC SHA-512 algorithm for authentication; 'sha-384': Use HMAC SHA-384 algorithm for authentication; 'sha-256': Use HMAC SHA-256 algorithm for authentication; 'sha-224': Use HMAC SHA-224 algorithm for authentication;

Type: string

Supported Values: md5, sha, sha-512, sha-384, sha-256, sha-224

encpasswd

Description Passphrase for encryption

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

group

Description Group to which the user belongs

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

passwd

Description Password of this user

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

priv

Description 'des': DES encryption alogrithm; 'aes': AES encryption alogrithm; 'aes-192': AES-192 encryption alogrithm; 'aes-256': AES-256 encryption alogrithm; (Encryption type)

Type: string

Supported Values: des, aes, aes-192, aes-256

priv-pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

username

Description Name of the user

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': Using the authNoPriv Security Level; 'noauth': Using the noAuthNoPriv Security Level;

Type: string

Supported Values: auth, noauth

2.122.6 snmp-server SNMPv3 user

Define a user who can access the SNMP engine

user Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*username*
Collection Name	*user-list*
Collection URI	/axapi/v3/snmp-server/SNMPv3/user
Element Name	user
Element URI	/axapi/v3/snmp-server/SNMPv3/user/{username}
Element Attributes	user_attributes
Partition Visibility	shared
Schema	`user schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/SNMPv3/user

user attributes

```
POST /axapi/v3/snmp-server/SNMPv3/user/
Payload:
{
    "user": {
        "username": "a",
        "auth-val": "md5",
        "v3": "auth",
        "group": "a",
        "passwd": "abcdefgh",
        "priv": "des",
        "encpasswd": "abcdefgh"
    }
}
```

Create List

POST

/axapi/v3/snmp-server/SNMPv3/user

user attributes

Get Object

GET

/axapi/v3/snmp-server/SNMPv3/user/{username}

user attributes

```
GET /axapi/v3/snmp-server/SNMPv3/user/a
Reponse:
{
```

(continues on next page)

(continued from previous page)

```
    "user": {
        "username": "a",
        "group": "a",
        "v3": "auth",
        "auth-val": "md5",

↪",
        "priv": "des",
        "priv-pw-encrypted": "sNydJS31jb/
↪U+MvapbeCa2gLWRT88aQV7Xja7kjT0V6Zpk57UFIaLkWkKbbbZxOp",
        "uuid": "a295d36e-b67e-11ef-8129-ae71681635d0",
        "a10-url": "/axapi/v3/snmp-server/SNMPv3/user/a"
    }
}
```

Get List

GET

/axapi/v3/snmp-server/SNMPv3/user

user-list

Modify Object

POST

/axapi/v3/snmp-server/SNMPv3/user/{username}

user attributes

Replace Object

PUT

/axapi/v3/snmp-server/SNMPv3/user/{username}

user attributes

```
PUT /axapi/v3/snmp-server/SNMPv3/user/a
Payload:
{
    "user": {
        "username": "a",
        "v3": "noauth",
        "group": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/snmp-server/SNMPv3/user

user-list

Delete Object

DELETE

/axapi/v3/snmp-server/SNMPv3/user/{username}

user attributes

```
DELETE /axapi/v3/snmp-server/SNMPv3/user/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

user-list

user-list is **JSON List** of *user attributes*

user-list : [

{ *user attributes* },

{ *user attributes* },

...

]

user attributes

auth-val

Description 'md5': Use HMAC MD5 algorithm for authentication; 'sha': Use HMAC SHA algorithm for authentication; 'sha-512': Use HMAC SHA-512 algorithm for authentication; 'sha-384': Use HMAC SHA-384 algorithm for authentication; 'sha-256': Use HMAC SHA-256 algorithm for authentication; 'sha-224': Use HMAC SHA-224 algorithm for authentication;

Type: string

Supported Values: md5, sha, sha-512, sha-384, sha-256, sha-224

encpasswd

Description Passphrase for encryption

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

group

Description Group to which the user belongs

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

passwd

Description Password of this user

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

priv

Description 'des': DES encryption alogrithm; 'aes': AES encryption alogrithm; 'aes-192': AES-192 encryption alogrithm; 'aes-256': AES-256 encryption alogrithm; (Encryption type)

Type: string

Supported Values: des, aes, aes-192, aes-256

priv-pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

username

Description Name of the user

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': Using the authNoPriv Security Level; 'noauth': Using the noAuthNoPriv Security Level;

Type: string

Supported Values: auth, noauth

2.122.7 snmp-server community

Deprecated SNMP community command

community Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	community
Element URI	/axapi/v3/snmp-server/community
Element Attributes	community_attributes
Partition Visibility	shared
Schema	`community schema`

Operations Allowed:

Get Object

GET

/axapi/v3/snmp-server/community

community_attributes

community attributes

read-list

Type: List

Type: List

Reference Object: */axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}*

remote

Description: remote is a **JSON Block**. Please see below for *read-list_remote*

Type: Object

user

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

read-list_oid-list

Specification	Value
Type	*list*
Block object keys	

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *read-list_oid-list_remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

read-list_oid-list_remote

Specification	Value
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

read-list_oid-list_remote_host-list

Specification	Value
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

read-list_oid-list_remote_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

read-list_oid-list_remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

read-list_remote

Specification	Value
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

read-list_remote_host-list

Specification	Value
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

read-list_remote_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

read-list_remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

2.122.8 snmp-server community read

Define a read only community string

read Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*user*
Collection Name	*read-list*
Collection URI	/axapi/v3/snmp-server/community/read
Element Name	read
Element URI	/axapi/v3/snmp-server/community/read/{user}
Element Attributes	read_attributes
Partition Visibility	shared
Schema	`read schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/community/read

read attributes

```
POST /axapi/v3/snmp-server/community/read/
Payload:
{
    "read": {
        "user": "a",
```

(continues on next page)

(continued from previous page)

```
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/snmp-server/community/read

read attributes

Get Object

GET

/axapi/v3/snmp-server/community/read/{user}

read attributes

```
GET /axapi/v3/snmp-server/community/read/a
Reponse:
{
    "read": {
        "user": "a",
        "uuid": "f7725f24-b67e-11ef-8129-ae71681635d0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/snmp-server/community/read/a"
    }
}
```

Get List

GET

/axapi/v3/snmp-server/community/read

read-list

Modify Object

POST

/axapi/v3/snmp-server/community/read/{user}

read attributes

Replace Object

PUT

/axapi/v3/snmp-server/community/read/{user}

read attributes

```
PUT /axapi/v3/snmp-server/community/read/a
Payload:
{
    "read": {
```

(continues on next page)

(continued from previous page)

```
        "user": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/snmp-server/community/read

read-list

Delete Object

DELETE

/axapi/v3/snmp-server/community/read/{user}

read attributes

```
DELETE /axapi/v3/snmp-server/community/read/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

read-list

read-list is **JSON List** of *read attributes*

read-list : [

{ *read attributes* },

{ *read attributes* },

...

]

read attributes

oid-list

Type: List

Reference Object: */axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}*

remote

Description: remote is a **JSON Block**. Please see below for *remote*

Type: Object

user

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oid-list

Specification	Value
Type	*list*
Block object keys	

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *oid-list_remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

2.122.9 snmp-server community read oid

Define a remote entity to which user belongs

oid Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*oid-val*
Collection Name	*oid-list*
Collection URI	/axapi/v3/snmp-server/community/read/{user}/oid
Element Name	oid
Element URI	/axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}
Element Attributes	oid_attributes
Partition Visibility	shared
Schema	`oid schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/community/read/{user}/oid

oid attributes

Create List

POST

/axapi/v3/snmp-server/community/read/{user}/oid

oid attributes

Get Object

GET

/axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}

oid attributes

Get List

GET

/axapi/v3/snmp-server/community/read/{user}/oid

oid-list

Modify Object

POST

/axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}

oid attributes

Replace Object

PUT

/axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}

oid attributes

Replace List

PUT

/axapi/v3/snmp-server/community/read/{user}/oid

oid-list

Delete Object

DELETE

/axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}

oid attributes

oid-list

oid-list is **JSON List** of *oid attributes*

oid-list : [

{ *oid attributes* },

{ *oid attributes* },

...

]

oid attributes

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote

Specification	Value
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

remote_host-list

Specification	Value
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

remote_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

remote_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

2.122.10 snmp-server contact

Text for mib object sysContact

contact Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	contact
Element URI	/axapi/v3/snmp-server/contact
Element Attributes	contact_attributes
Partition Visibility	shared
Schema	`contact schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/contact

contact attributes

```
POST /axapi/v3/snmp-server/contact
Payload:
{
    "contact": {
        "contact-name": "a"
    }
}
```

Get Object

GET

/axapi/v3/snmp-server/contact

contact attributes

```
GET /axapi/v3/snmp-server/contact
Reponse:
{
    "contact": {
        "contact-name": "a",
        "uuid": "834b2602-b67f-11ef-8129-ae71681635d0",
        "a10-url": "/axapi/v3/snmp-server/contact"
    }
}
```

Modify Object

POST

/axapi/v3/snmp-server/contact

contact attributes

Replace Object

PUT

/axapi/v3/snmp-server/contact

contact attributes

```
PUT /axapi/v3/snmp-server/contact
Payload:
{
    "contact": {
        "contact-name": "a"
    }
}
```

Delete Object

DELETE

/axapi/v3/snmp-server/contact

contact attributes

```
DELETE /axapi/v3/snmp-server/contact
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

contact attributes

contact-name

Description Identification of the contact person for this managed node

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.122.11 snmp-server disable

Disable SNMP service

disable Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	disable
Element URI	/axapi/v3/snmp-server/disable
Element Attributes	disable_attributes
Partition Visibility	shared
Schema	`disable schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/disable

disable attributes

```
POST /axapi/v3/snmp-server/disable
Payload:
{
    "disable": {
        "a10cmsubagent": 1
    }
}
```

Get Object

GET

/axapi/v3/snmp-server/disable

disable attributes

```
GET /axapi/v3/snmp-server/disable
Reponse:
{

```

(continues on next page)

(continued from previous page)

```
    }
}
```

disable attributes

a10cmsubagent

Description Disable a10cmsubagent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traps

Description: traps is a **JSON Block**. Please see below for *traps*

Type: Object

Reference Object: */axapi/v3/snmp-server/disable/traps*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps

Specification	Value
Type	*object*

all

Description Disable all traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb

Description Disable all gslb traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb

Description Disable all slb traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-change

Description Disable all slb-change traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp

Description Disable all snmp traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrrp-a

Description Disable all vrrp-a on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.122.12 snmp-server disable traps

Disable l3v partition SNMP traps

traps Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	traps
Element URI	/axapi/v3/snmp-server/disable/traps

all

Description Disable all traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb

Description Disable all gslb traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb

Description Disable all slb traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-change

Description Disable all slb-change traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp

Description Disable all snmp traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrrp-a

Description Disable all vrrp-a on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.122.13 snmp-server enable

Enable SNMP service

enable Specification

Parameter	Value

Description: routing is a **JSON Block**. Please see below for *traps_routing*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing*

scaleout

Description: scaleout is a **JSON Block**. Please see below for *traps_scaleout*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout*

slb

Description: slb is a **JSON Block**. Please see below for *traps_slb*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/slb*

slb-change

Description: slb-change is a **JSON Block**. Please see below for *traps_slb-change*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/slb-change*

snmp

Description: snmp is a **JSON Block**. Please see below for *traps_snmp*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/snmp*

ssl

Description: ssl is a **JSON Block**. Please see below for *traps_ssl*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/ssl*

system

Description: system is a **JSON Block**. Please see below for *traps_system*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/system*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vcs

Description: vcs is a **JSON Block**. Please see below for *traps_vcs*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/vcs*

vrrp-a

Description: vrrp-a is a **JSON Block**. Please see below for *traps_vrrp-a*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/vrrp-a*

traps_slb-change

Specification	Value
Type	*object*

all

Description Enable all system group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-resource-event

Description Enable system connection resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resource-usage-warning

Description Enable partition resource usage warning trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Enable slb server create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-port

Description Enable slb server port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-change

Description Enable SSL certificate change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-expire

Description Enable SSL certificate expiring trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-threshold

Description Enable slb system threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description Enable slb vip create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port

Description Enable slb vip-port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traps_lsn

Specification	Value
Type	*object*

all

Description Enable all LSN group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mapping-file-change

Description Enable LSN trap when fixed nat port mapping file change

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-ipport-threshold

Description Maximum threshold

Type: number

Range: 10000-64512

Default: 64512

max-port-threshold

Description Maximum threshold

Type: number

Range: 10000-655355000

Default: 655350000

per-ip-port-usage-threshold

Description Enable LSN trap when IP total port usage reaches the threshold (default 64512)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

total-port-usage-threshold

Description Enable LSN trap when NAT total port usage reaches the threshold (default 655350000)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-exceeded

Description Enable LSN trap when NAT pool reaches the threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_vrrp-a

Specification	Value
Type	*object*

active

Description Enable VRRP-A active trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all

Description Enable all VRRP-A group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

standby

Description Enable VRRP-A standby trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_snmp

Specification	Value
Type	*object*

all

Description Enable all SNMP group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

linkdown

Description Enable SNMP link-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

linkup

Description Enable SNMP link-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_system

Specification	Value
Type	*object*

all

Description Enable all system group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

apps-global

Description: apps-global is a **JSON Block**. Please see below for *traps_system_apps-global*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/system/apps-global*

control-cpu-high

Description Enable control CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

data-cpu-high

Description Enable data CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fan

Description Enable system fan trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-sys-read-only

Description Enable file system read-only trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-disk-use

Description Enable system high disk usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-memory-use

Description Enable system high memory usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-temp

Description Enable system high temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

license-management

Description Enable system license management traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

low-temp

Description Enable system low temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-drop

Description Enable system packet dropped trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

power

Description Enable system power supply trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pri-disk

Description Enable system primary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart

Description Enable system restart trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sec-disk

Description Enable system secondary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shutdown

Description Enable system shutdown trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smp-resource-event

Description Enable system smp resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start

Description Enable system start trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syslog-severity-one

Description Enable system syslog severity one messages trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacacs-server-up-down

Description Enable system TACACS monitor server up/down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_system_apps-global

Specification	Value
Type	*object*

cps-threshold

Description Enable CPS trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sessions-threshold

Description Enable sessions threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_ssl

Specification	Value
Type	*object*

server-certificate-error

Description Enable SSL server certificate error trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_vcs

Specification	Value
Type	*object*

state-change

Description Enable VCS state change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_routing

Specification	Value
Type	*object*

bgp

Description: bgp is a **JSON Block**. Please see below for *traps_routing_bgp*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing/bgp*

isis

Description: isis is a **JSON Block**. Please see below for *traps_routing_isis*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *traps_routing_ospf*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing/ospf*

traps_routing_bgp

Specification	Value
Type	*object*

ax

Description: ax is a **JSON Block**. Please see below for *traps_routing_bgp_ax*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing/bgp/ax*

bgpBackwardTransNotification

Description Enable bgpBackwardTransNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpEstablishedNotification

Description Enable bgpEstablishedNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_routing_bgp_ax

Specification	Value
Type	*object*

bgpBackwardTransNotification

Description Enable bgpBackwardTransNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpEstablishedNotification

Description Enable bgpEstablishedNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpPrefixThresholdClearNotification

Description Enable bgpPrefixThresholdClearNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpPrefixThresholdExceededNotification

Description Enable bgpPrefixThresholdExceededNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_routing_ospf

Specification	Value
Type	*object*

ospfIfAuthFailure

Description Enable ospfIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfConfigError

Description Enable ospfIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfRxBadPacket

Description Enable ospfIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfStateChange

Description Enable ospfIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbApproachingOverflow

Description Enable ospfLsdbApproachingOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbOverflow

Description Enable ospfLsdbOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfMaxAgeLsa

Description Enable ospfMaxAgeLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfNbrStateChange

Description Enable ospfNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfOriginateLsa

Description Enable ospfOriginateLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfTxRetransmit

Description Enable ospfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfAuthFailure

Description Enable ospfVirtIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfConfigError

Description Enable ospfVirtIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfRxBadPacket

Description Enable ospfVirtIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfStateChange

Description Enable ospfVirtIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfTxRetransmit

Description Enable ospfVirtIfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtNbrStateChange

Description Enable ospfVirtNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_routing_isis

Specification	Value
Type	*object*

isisAdjacencyChange

Description Enable isisAdjacencyChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAreaMismatch

Description Enable isisAreaMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAttemptToExceedMaxSequence

Description Enable isisAttemptToExceedMaxSequence traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationFailure

Description Enable isisAuthenticationFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationTypeFailure

Description Enable isisAuthenticationTypeFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisCorruptedLSPDetected

Description Enable isisCorruptedLSPDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisDatabaseOverload

Description Enable isisDatabaseOverload traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisIDLenMismatch

Description Enable isisIDLenMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPErrorDetected

Description Enable isisLSPErrorDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPTooLargeToPropagate

Description Enable isisLSPTooLargeToPropagate traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisManualAddressDrops

Description Enable isisManualAddressDrops traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisMaxAreaAddressesMismatch

Description Enable isisMaxAreaAddressesMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOriginatingLSPBufferSizeMismatch

Description Enable isisOriginatingLSPBufferSizeMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOwnLSPPurge

Description Enable isisOwnLSPPurge traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisProtocolsSupportedMismatch

Description Enable isisProtocolsSupportedMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisRejectedAdjacency

Description Enable isisRejectedAdjacency traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisSequenceNumberSkip

Description Enable isisSequenceNumberSkip traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisVersionSkew

Description Enable isisVersionSkew traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_scaleout

Specification	Value
Type	*object*

infrastructure

Description: infrastructure is a **JSON Block**. Please see below for *traps_scaleout_infrastructure*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout/infrastructure*

traps_scaleout_infrastructure

Specification	Value
Type	*object*

all

Description Enable all infra traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cluster

Description: cluster is a **JSON Block**. Please see below for *traps_scaleout_infrastructure_cluster*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout/infrastructure/cluster*

master-node

Description: master-node is a **JSON Block**. Please see below for *traps_scaleout_infrastructure_master-node*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout/infrastructure/master-node*

service-node

Description: service-node is a **JSON Block**. Please see below for *traps_scaleout_infrastructure_service-node*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout/infrastructure/service-node*

test-send-all-traps

Description Send all infra traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_scaleout_infrastructure_service-node

Specification	Value
Type	*object*

local-device-disabled

Description Enable local device disabled trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-master

Description Enable service-master trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-map-update

Description Enable traffic map update trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_scaleout_infrastructure_cluster

Specification	Value
Type	*object*

election

Description Enable election status trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

master-calling-re-election

Description Enable re-election trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

node-status

Description Enable active node status trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_scaleout_infrastructure_master-node

Specification	Value
Type	*object*

traffic-map-distribution

Description Enable Traffic-map distribution trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vserver-traffic-map-update

Description Enable VServer Traffic-map trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traps_gslb

Specification	Value
Type	*object*

all

Description Enable all GSLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

group

Description Enable GSLB group related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-ip

Description Enable GSLB service-ip related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

site

Description Enable GSLB site related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone

Description Enable GSLB zone related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traps_slb

Specification	Value
Type	*object*

all

Description Enable all SLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

application-buffer-limit

Description Enable application buffer reach limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-exceed

Description Enable SLB server/port bandwidth rate limit exceed trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Enable SLB server/port bandwidth rate limit resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-down

Description Enable SLB server gateway down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-up

Description Enable SLB server gateway up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-limit

Description Enable SLB server connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-resume

Description Enable SLB server connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-disabled

Description Enable SLB server-disabled trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-down

Description Enable SLB server-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-selection-failure

Description Enable SLB server selection failure trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-up

Description Enable slb server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-limit

Description Enable SLB service connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-resume

Description Enable SLB service connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-down

Description Enable SLB service-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-down

Description Enable SLB service-group-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-down

Description Enable SLB service-group-member-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-up

Description Enable SLB service-group-member-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-up

Description Enable SLB service-group-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-up

Description Enable SLB service-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-connlimit

Description Enable the virtual server reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-connratelimit

Description Enable the virtual server reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-down

Description Enable SLB virtual server down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connlimit

Description Enable the virtual port reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connratelimit

Description Enable the virtual port reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-down

Description Enable SLB virtual port down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-qps

Description Enable the virtual port query-per-second threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-up

Description Enable SLB virtual port up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-up

Description Enable SLB virtual server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traps_network

Specification	Value
Type	*object*

trunk-port-threshold

Description Enable network trunk-port-threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.122.14 snmp-server enable traps

Enable SNMP traps

traps Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	traps
Element URI	/axapi/v3/snmp-server/enable/traps
Element Attributes	traps_attributes
Partition Visibility	shared
Schema	`traps schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/enable/traps

traps attributes

```
POST /axapi/v3/snmp-server/enable/traps
Payload:
{
    "traps": {
        "all": 1
    }
}
```

Get Object

slb-change

Specification	Value
Type	*object*

all

Description Enable all system group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-resource-event

Description Enable system connection resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resource-usage-warning

Description Enable partition resource usage warning trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Enable slb server create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-port

Description Enable slb server port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-change

Description Enable SSL certificate change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-expire

Description Enable SSL certificate expiring trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-threshold

Description Enable slb system threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description Enable slb vip create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port

Description Enable slb vip-port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lsn

Specification	Value
Type	*object*

all

Description Enable all LSN group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mapping-file-change

Description Enable LSN trap when fixed nat port mapping file change

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-ipport-threshold

Description Maximum threshold

Type: number

Range: 10000-64512

Default: 64512

max-port-threshold

Description Maximum threshold

Type: number

Range: 10000-655355000

Default: 655350000

per-ip-port-usage-threshold

Description Enable LSN trap when IP total port usage reaches the threshold (default 64512)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

total-port-usage-threshold

Description Enable LSN trap when NAT total port usage reaches the threshold (default 655350000)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-exceeded

Description Enable LSN trap when NAT pool reaches the threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrrp-a

Specification	Value
Type	*object*

active

Description Enable VRRP-A active trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all

Description Enable all VRRP-A group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

standby

Description Enable VRRP-A standby trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

snmp

Specification	Value
Type	*object*

all

Description Enable all SNMP group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

linkdown

Description Enable SNMP link-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

linkup

Description Enable SNMP link-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

system

Specification	Value
Type	*object*

all

Description Enable all system group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

apps-global

Description: apps-global is a **JSON Block**. Please see below for *system_apps-global*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/system/apps-global*

control-cpu-high

Description Enable control CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

data-cpu-high

Description Enable data CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fan

Description Enable system fan trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-sys-read-only

Description Enable file system read-only trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-disk-use

Description Enable system high disk usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-memory-use

Description Enable system high memory usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-temp

Description Enable system high temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

license-management

Description Enable system license management traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

low-temp

Description Enable system low temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-drop

Description Enable system packet dropped trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

power

Description Enable system power supply trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pri-disk

Description Enable system primary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart

Description Enable system restart trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sec-disk

Description Enable system secondary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shutdown

Description Enable system shutdown trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smp-resource-event

Description Enable system smp resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start

Description Enable system start trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syslog-severity-one

Description Enable system syslog severity one messages trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacacs-server-up-down

Description Enable system TACACS monitor server up/down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

system_apps-global

Specification	Value
Type	*object*

cps-threshold

Description Enable CPS trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sessions-threshold

Description Enable sessions threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl

Specification	Value
Type	*object*

server-certificate-error

Description Enable SSL server certificate error trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vcs

Specification	Value
Type	*object*

state-change

Description Enable VCS state change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

routing

Specification	Value
Type	*object*

bgp

Description: bgp is a **JSON Block**. Please see below for *routing_bgp*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing/bgp*

isis

Description: isis is a **JSON Block**. Please see below for *routing_isis*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *routing_ospf*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing/ospf*

routing_bgp

Specification	Value
Type	*object*

ax

Description: ax is a **JSON Block**. Please see below for *routing_bgp_ax*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/routing/bgp/ax*

bgpBackwardTransNotification

Description Enable bgpBackwardTransNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpEstablishedNotification

Description Enable bgpEstablishedNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

routing_bgp_ax

Specification	Value
Type	*object*

bgpBackwardTransNotification

Description Enable bgpBackwardTransNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpEstablishedNotification

Description Enable bgpEstablishedNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpPrefixThresholdClearNotification

Description Enable bgpPrefixThresholdClearNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpPrefixThresholdExceededNotification

Description Enable bgpPrefixThresholdExceededNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

routing_ospf

Specification	Value
Type	*object*

ospfIfAuthFailure

Description Enable ospfIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfConfigError

Description Enable ospfIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfRxBadPacket

Description Enable ospfIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfStateChange

Description Enable ospfIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbApproachingOverflow

Description Enable ospfLsdbApproachingOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbOverflow

Description Enable ospfLsdbOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfMaxAgeLsa

Description Enable ospfMaxAgeLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfNbrStateChange

Description Enable ospfNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfOriginateLsa

Description Enable ospfOriginateLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfTxRetransmit

Description Enable ospfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfAuthFailure

Description Enable ospfVirtIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfConfigError

Description Enable ospfVirtIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfRxBadPacket

Description Enable ospfVirtIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfStateChange

Description Enable ospfVirtIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfTxRetransmit

Description Enable ospfVirtIfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtNbrStateChange

Description Enable ospfVirtNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

routing_isis

Specification	Value
Type	*object*

isisAdjacencyChange

Description Enable isisAdjacencyChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAreaMismatch

Description Enable isisAreaMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAttemptToExceedMaxSequence

Description Enable isisAttemptToExceedMaxSequence traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationFailure

Description Enable isisAuthenticationFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationTypeFailure

Description Enable isisAuthenticationTypeFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisCorruptedLSPDetected

Description Enable isisCorruptedLSPDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisDatabaseOverload

Description Enable isisDatabaseOverload traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisIDLenMismatch

Description Enable isisIDLenMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPErrorDetected

Description Enable isisLSPErrorDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPTooLargeToPropagate

Description Enable isisLSPTooLargeToPropagate traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisManualAddressDrops

Description Enable isisManualAddressDrops traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisMaxAreaAddressesMismatch

Description Enable isisMaxAreaAddressesMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOriginatingLSPBufferSizeMismatch

Description Enable isisOriginatingLSPBufferSizeMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOwnLSPPurge

Description Enable isisOwnLSPPurge traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisProtocolsSupportedMismatch

Description Enable isisProtocolsSupportedMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisRejectedAdjacency

Description Enable isisRejectedAdjacency traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisSequenceNumberSkip

Description Enable isisSequenceNumberSkip traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisVersionSkew

Description Enable isisVersionSkew traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

scaleout

Specification	Value
Type	*object*

infrastructure

Description: infrastructure is a **JSON Block**. Please see below for *scaleout_infrastructure*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout/infrastructure*

scaleout_infrastructure

Specification	Value
Type	*object*

all

Description Enable all infra traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cluster

Description: cluster is a **JSON Block**. Please see below for *scaleout_infrastructure_cluster*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout/infrastructure/cluster*

master-node

Description: master-node is a **JSON Block**. Please see below for *scaleout_infrastructure_master-node*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout/infrastructure/master-node*

service-node

Description: service-node is a **JSON Block**. Please see below for *scaleout_infrastructure_service-node*

Type: Object

Reference Object: */axapi/v3/snmp-server/enable/traps/scaleout/infrastructure/service-node*

test-send-all-traps

Description Send all infra traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

scaleout_infrastructure_service-node

Specification	Value
Type	*object*

local-device-disabled

Description Enable local device disabled trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-master

Description Enable service-master trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-map-update

Description Enable traffic map update trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

scaleout_infrastructure_cluster

Specification	Value
Type	*object*

election

Description Enable election status trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

master-calling-re-election

Description Enable re-election trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

node-status

Description Enable active node status trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

scaleout_infrastructure_master-node

Specification	Value
Type	*object*

traffic-map-distribution

Description Enable Traffic-map distribution trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vserver-traffic-map-update

Description Enable VServer Traffic-map trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb

Specification	Value
Type	*object*

all

Description Enable all GSLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

group

Description Enable GSLB group related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-ip

Description Enable GSLB service-ip related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

site

Description Enable GSLB site related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone

Description Enable GSLB zone related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb

Specification	Value
Type	*object*

all

Description Enable all SLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

application-buffer-limit

Description Enable application buffer reach limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-exceed

Description Enable SLB server/port bandwidth rate limit exceed trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Enable SLB server/port bandwidth rate limit resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-down

Description Enable SLB server gateway down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-up

Description Enable SLB server gateway up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-limit

Description Enable SLB server connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-resume

Description Enable SLB server connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-disabled

Description Enable SLB server-disabled trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-down

Description Enable SLB server-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-selection-failure

Description Enable SLB server selection failure trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-up

Description Enable slb server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-limit

Description Enable SLB service connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-resume

Description Enable SLB service connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-down

Description Enable SLB service-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-down

Description Enable SLB service-group-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-down

Description Enable SLB service-group-member-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-up

Description Enable SLB service-group-member-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-up

Description Enable SLB service-group-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-up

Description Enable SLB service-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-connlimit

Description Enable the virtual server reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-connratelimit

Description Enable the virtual server reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-down

Description Enable SLB virtual server down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connlimit

Description Enable the virtual port reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connratelimit

Description Enable the virtual port reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-down

Description Enable SLB virtual port down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-qps

Description Enable the virtual port query-per-second threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-up

Description Enable SLB virtual port up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-up

Description Enable SLB virtual server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Specification	Value
Type	*object*

trunk-port-threshold

Description Enable network trunk-port-threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.122.15 snmp-server enable traps gslb

Enable GSLB group traps

gslb Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	gslb
Element URI	/axapi/v3/snmp-server/enable/traps/gslb
Element Attributes	gslb_attributes
Partition Visibility	shared
Schema	`gslb schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/enable/traps/gslb

gslb attributes

```
POST /axapi/v3/snmp-server/enable/traps/gslb
Payload:
{
    "gslb": {
        "all": 1
    }
}
```

Get Object

GET

/axapi/v3/snmp-server/enable/traps/gslb

gslb attributes

```
GET /axapi/v3/snmp-server/enable/traps/gslb
Reponse:
{
    "gslb": {
        "all": 1,
        "zone": 0,
```

(continues on next page)

(continued from previous page)

        "all": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/snmp-server/enable/traps/gslb

gslb attributes

gslb attributes

all

Description Enable all GSLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

group

Description Enable GSLB group related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-ip

Description Enable GSLB service-ip related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

site

Description Enable GSLB site related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone

Description Enable GSLB zone related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.122.16 snmp-server enable traps lsn

Enable LSN group traps

lsn Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	lsn
Element URI	/axapi/v3/snmp-server/enable/traps/lsn
Element Attributes	lsn_attributes
Partition Visibility	shared
Schema	`lsn schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/enable/traps/lsn

lsn attributes

```
POST /axapi/v3/snmp-server/enable/traps/lsn
Payload:
{
    "lsn": {
        "all": 1
    }
}
```

Get Object

GET

/axapi/v3/snmp-server/enable/traps/lsn

lsn attributes

```
GET /axapi/v3/snmp-server/enable/traps/lsn
Reponse:
{
    "lsn": {
        "all": 1,
        "total-port-usage-threshold": 0,
        "per-ip-port-usage-threshold": 0,
        "fixed-nat-port-mapping-file-change": 0,
        "traffic-exceeded": 0,
        "uuid": "69625cbe-b680-11ef-8129-ae71681635d0",
        "a10-url": "/axapi/v3/snmp-server/enable/traps/lsn"
    }
}
```

    }
}
```

Delete Object

DELETE

/axapi/v3/snmp-server/enable/traps/lsn

lsn attributes

lsn attributes

all

Description Enable all LSN group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mapping-file-change

Description Enable LSN trap when fixed nat port mapping file change

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-ipport-threshold

Description Maximum threshold

Type: number

Range: 10000-64512

Default: 64512

max-port-threshold

Description Maximum threshold

Type: number

Range: 10000-655355000

Default: 655350000

per-ip-port-usage-threshold

Description Enable LSN trap when IP total port usage reaches the threshold (default 64512)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

total-port-usage-threshold

Description Enable LSN trap when NAT total port usage reaches the threshold (default 655350000)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-exceeded

Description Enable LSN trap when NAT pool reaches the threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.122.17 snmp-server enable traps network

Enable network group traps

network Specification

Parameter	Value

Specification	Value
Type	*object*

ospfIfAuthFailure

Description Enable ospfIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfConfigError

Description Enable ospfIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfRxBadPacket

Description Enable ospfIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfStateChange

Description Enable ospfIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbApproachingOverflow

Description Enable ospfLsdbApproachingOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbOverflow

Description Enable ospfLsdbOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfMaxAgeLsa

Description Enable ospfMaxAgeLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfNbrStateChange

Description Enable ospfNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfOriginateLsa

Description Enable ospfOriginateLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfTxRetransmit

Description Enable ospfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfAuthFailure

Description Enable ospfVirtIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfConfigError

Description Enable ospfVirtIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfRxBadPacket

Description Enable ospfVirtIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfStateChange

Description Enable ospfVirtIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfTxRetransmit

Description Enable ospfVirtIfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtNbrStateChange

Description Enable ospfVirtNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis

Specification	Value
Type	*object*

isisAdjacencyChange

Description Enable isisAdjacencyChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAreaMismatch

Description Enable isisAreaMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAttemptToExceedMaxSequence

Description Enable isisAttemptToExceedMaxSequence traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationFailure

Description Enable isisAuthenticationFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationTypeFailure

Description Enable isisAuthenticationTypeFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisCorruptedLSPDetected

Description Enable isisCorruptedLSPDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisDatabaseOverload

Description Enable isisDatabaseOverload traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisIDLenMismatch

Description Enable isisIDLenMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPErrorDetected

Description Enable isisLSPErrorDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPTooLargeToPropagate

Description Enable isisLSPTooLargeToPropagate traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisManualAddressDrops

Description Enable isisManualAddressDrops traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisMaxAreaAddressesMismatch

Description Enable isisMaxAreaAddressesMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOriginatingLSPBufferSizeMismatch

Description Enable isisOriginatingLSPBufferSizeMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOwnLSPPurge

Description Enable isisOwnLSPPurge traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisProtocolsSupportedMismatch

Description Enable isisProtocolsSupportedMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisRejectedAdjacency

Description Enable isisRejectedAdjacency traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisSequenceNumberSkip

Description Enable isisSequenceNumberSkip traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisVersionSkew

Description Enable isisVersionSkew traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAreaMismatch

Description Enable isisAreaMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAttemptToExceedMaxSequence

Description Enable isisAttemptToExceedMaxSequence traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationFailure

Description Enable isisAuthenticationFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationTypeFailure

Description Enable isisAuthenticationTypeFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisCorruptedLSPDetected

Description Enable isisCorruptedLSPDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisDatabaseOverload

Description Enable isisDatabaseOverload traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisIDLenMismatch

Description Enable isisIDLenMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPErrorDetected

Description Enable isisLSPErrorDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPTooLargeToPropagate

Description Enable isisLSPTooLargeToPropagate traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisManualAddressDrops

Description Enable isisManualAddressDrops traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisMaxAreaAddressesMismatch

Description Enable isisMaxAreaAddressesMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOriginatingLSPBufferSizeMismatch

Description Enable isisOriginatingLSPBufferSizeMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOwnLSPPurge

Description Enable isisOwnLSPPurge traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisProtocolsSupportedMismatch

Description Enable isisProtocolsSupportedMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisRejectedAdjacency

Description Enable isisRejectedAdjacency traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisSequenceNumberSkip

Description Enable isisSequenceNumberSkip traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisVersionSkew

Description Enable isisVersionSkew traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.122.22 snmp-server enable traps routing ospf

Enable OSPFv2 traps

ospf Specification

application-buffer-limit

Description Enable application buffer reach limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-exceed

Description Enable SLB server/port bandwidth rate limit exceed trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Enable SLB server/port bandwidth rate limit resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-down

Description Enable SLB server gateway down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-up

Description Enable SLB server gateway up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-limit

Description Enable SLB server connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-resume

Description Enable SLB server connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-disabled

Description Enable SLB server-disabled trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-down

Description Enable SLB server-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-selection-failure

Description Enable SLB server selection failure trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-up

Description Enable slb server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-limit

Description Enable SLB service connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-resume

Description Enable SLB service connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-down

Description Enable SLB service-down trap

Type: boolean

Supported Values: true, false, 1, 0

service-group-down

Description Enable SLB service-group-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-down

Description Enable SLB service-group-member-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-up

Description Enable SLB service-group-member-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-up

Description Enable SLB service-group-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-up

Description Enable SLB service-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-connlimit

Description Enable the virtual server reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-connratelimit

Description Enable the virtual server reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-down

Description Enable SLB virtual server down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connlimit

Description Enable the virtual port reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connratelimit

Description Enable the virtual port reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-down

Description Enable SLB virtual port down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-qps

Description Enable the virtual port query-per-second threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-up

Description Enable SLB virtual port up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-up

Description Enable SLB virtual server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.122.29 snmp-server enable traps slb-change

Enable SLB change traps

slb-change Specification

    }
}
```

engineID attributes

engId

Description Define local engineID HEX WORD

Type: string

Maximum Length: 24 characters

Maximum Length: 10 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.122.37 snmp-server group

Define a User Security Model group

group Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*groupname*
Collection Name	*group-list*
Collection URI	/axapi/v3/snmp-server/group
Element Name	group
Element URI	/axapi/v3/snmp-server/group/{groupname}
Element Attributes	group_attributes
Partition Visibility	shared
Schema	`group schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/group

group attributes

```
POST /axapi/v3/snmp-server/group/
Payload:
{
    "group": {
        "read": "a",
        "groupname": "a",
        "v3": "auth"
```

(continues on next page)

(continued from previous page)

```
    }
}
```

Create List

POST

/axapi/v3/snmp-server/group

group attributes

Get Object

GET

/axapi/v3/snmp-server/group/{groupname}

group attributes

```
GET /axapi/v3/snmp-server/group/a
Reponse:
{
    "group": {
        "groupname": "a",
        "v3": "auth",
        "read": "a",
        "uuid": "1af2c4da-b683-11ef-8129-ae71681635d0",
        "a10-url": "/axapi/v3/snmp-server/group/a"
    }

    }
}
```

group-list

group-list is **JSON List** of *group attributes*

group-list : [

{ *group attributes* },

{ *group attributes* },

...

]

group attributes

groupname

Description Name of the group

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

read

Description specify a read view for the group (read view name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': group using the authNoPriv Security Level; 'noauth': group using the noAuthNoPriv Security Level; 'priv': group using SNMPv3 authPriv security level;

Type: string

Supported Values: auth, noauth, priv

2.122.38 snmp-server host

Specify hosts to receive SNMP traps

host Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	host
Element URI	/axapi/v3/snmp-server/host
Element Attributes	host_attributes
Partition Visibility	shared
Schema	`host schema`

Operations Allowed:

Get Object

GET

/axapi/v3/snmp-server/host

host_attributes

host attributes

host-name-list

Type: List

Reference Object: */axapi/v3/snmp-server/host/host-name/{hostname}+{version}*

ipv4-host-list

Type: List

Reference Object: */axapi/v3/snmp-server/host/ipv4-host/{ipv4-addr}+{version}*

ipv6-host-list

Type: List

Reference Object: */axapi/v3/snmp-server/host/ipv6-host/{ipv6-addr}+{version}*

ipv6-host-list

Specification	Value
Type	*list*
Block object keys	

ipv6-addr

Description IPV6 address of SNMP trap host

Type: string

Format: ipv6-address

udp-port

Description The trap host's UDP port number(default: 162)

Type: number

Range: 1-65535

Default: 162

user

Description SNMPv3 user to send traps (User Name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v1-v2c-comm

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

version

Description 'v1': Use SNMPv1; 'v2c': Use SNMPv2c; 'v3': User SNMPv3;

Type: string

Supported Values: v1, v2c, v3

Default: v2c

host-name-list

Specification	Value
Type	*list*
Block object keys	

hostname

Description Hostname of SNMP trap host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

udp-port

Description The trap host's UDP port number(default: 162)

Type: number

Range: 1-65535

Default: 162

user

Description SNMPv3 user to send traps (User Name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v1-v2c-comm

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

version

Description 'v1': Use SNMPv1; 'v2c': Use SNMPv2c; 'v3': User SNMPv3;

Type: string

Supported Values: v1, v2c, v3

Default: v2c

ipv4-host-list

Specification	Value
Type	*list*
Block object keys	

ipv4-addr

Description IPV4 address of SNMP trap host

Type: string

Format: ipv4-address

udp-port

Description The trap host's UDP port number(default: 162)

Type: number

Range: 1-65535

Default: 162

user

Description SNMPv3 user to send traps (User Name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v1-v2c-comm

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

version

Description 'v1': Use SNMPv1; 'v2c': Use SNMPv2c; 'v3': User SNMPv3;

Type: string

Supported Values: v1, v2c, v3

Default: v2c

2.122.39 snmp-server host host-name

Specify IPV6 hosts to receive SNMP traps

host-name Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*hostname, version*
Collection Name	*host-name-list*
Collection URI	/axapi/v3/snmp-server/host/host-name
Element Name	host-name
Element URI	/axapi/v3/snmp-server/host/host-name/{hostname}+{version}
Element Attributes	host-name_attributes
Partition Visibility	shared
Schema	`host-name schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/host/host-name

host-name attributes

```
POST /axapi/v3/snmp-server/host/host-name/
Payload:
{
    "host-name": {
        "hostname": "des.ss.aa",
        "version": "v1",
        "v1-v2c-comm": "public"
    }
}
```

Create List

POST

/axapi/v3/snmp-server/host/host-name

host-name attributes

Get Object

GET

/axapi/v3/snmp-server/host/host-name/{hostname}+{version}

host-name attributes

```
GET /axapi/v3/snmp-server/host/host-name/des.ss.aa+v1
Reponse:
{
    "host-name": {
        "hostname": "des.ss.aa",
        "version": "v1",
        "v1-v2c-comm": "public",
        "udp-port": 162,

```

user-list

user-list is **JSON List** of *user attributes*

user-list : [

{ *user attributes* },

{ *user attributes* },

...

]

user attributes

auth-val

Description 'md5': Use HMAC MD5 algorithm for authentication; 'sha': Use HMAC SHA algorithm for authentication;

Type: string

Supported Values: md5, sha

encpasswd

Description Passphrase for encryption

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

group

Description Group to which the user belongs

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

passwd

Description Password of this user

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

priv

Description 'des': DES encryption alogrithm; 'aes': AES encryption alogrithm; (Encryption type)

Type: string

Supported Values: des, aes

priv-pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

username

Description Name of the user

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': Using the authNoPriv Security Level; 'noauth': Using the noAuthNoPriv Security Level;

Type: string

Supported Values: auth, noauth

2.122.47 snmp-server view

Defines named "view" - a subset of the overall OID tree

view Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*viewname, oid*

}
```

view-list

view-list is **JSON List** of *view attributes*

view-list : [

{ *view attributes* },

{ *view attributes* },

...

]

view attributes

mask

Description Hex octets, separated by '.', mask of oid

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: mask and type are mutually exclusive

oid

Description MIB view family name or oid

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

type

Description 'included': MIB family is included in the view; 'excluded': MIB family is excluded from the view;

Type: string

Supported Values: included, excluded

Mutual Exclusion: type and mask are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

viewname

Description Name of the view

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Description L2 redirect pkt vlan not retrieved

Type: number

Format: counter

so_pkts_l3_redirect_chassis_dest_mac_error

Description L3 Redirect RX multi-slot Destination MAC Error

Type: number

Format: counter

so_pkts_l3_redirect_decap_non_ipv4_vxlan_drop

Description L3 Redirect received non ipv4 VXLAN packet

Type: number

Format: counter

so_pkts_l3_redirect_decap_rx_encap_params_drop

Description L3 Redirect decap Rx encap params error Drop

Type: number

Format: counter

so_pkts_l3_redirect_decap_vlan_sanity_drop

Description L3 Redirect Decap VLAN Sanity Drop during receipt

Type: number

Format: counter

so_pkts_l3_redirect_encap_error_drop

Description L3 Redirect encap error drop during transmission

Type: number

Format: counter

so_pkts_l3_redirect_encap_ipv4_jumbo_frag_drop

Description L3 Redirect ipv4 packet after encap more than max jumbo size

Type: number

Format: counter

so_pkts_l3_redirect_encap_ipv6_jumbo_frag_drop

Description L3 Redirect tx ipv6 packet after encap more than max jumbo size

Type: number

Format: counter

so_pkts_l3_redirect_encap_mtu_error_drop

Description Received L3 Redirected MTU not enough to add encap

Type: number

Format: counter

so_pkts_l3_redirect_fragmentation_error

Description L3 redirect encap Fragmentation error

Type: number

Format: counter

so_pkts_l3_redirect_inner_mac_zero_drop

Description L3 Redirect inner mac zero drop during transmission

Type: number

Format: counter

so_pkts_l3_redirect_invalid_dev_dir

Description L3 Redirect Invalid Device direction during transmission

Type: number

Format: counter

so_pkts_l3_redirect_rcvd_in_l2_mode_drop

Description Recevied l3 redirect packets in L2 mode Drop

Type: number

Format: counter

so_pkts_l3_redirect_table_error

Description L3 Redirect Table error Drop

Type: number

Format: counter

so_pkts_l3_redirect_table_no_entry_found

Description L3 redirect Table no redirect entry found error

Type: number

Format: counter

so_pkts_l3_redirect_too_large_pkts_in_drop

Description Received L3 Redirected fragmented packets too large

Type: number

Format: counter

so_pkts_rcvd

Description Total data packets received

Type: number

Format: counter

so_pkts_redirection_loop_drop

Description Packets redirection loop drop

Type: number

Format: counter

so_pkts_scaleout_not_active_drop

Description Scaleout Not Active Drop

Type: number

Format: counter

so_pkts_slb_nat_release_fail

Description Total SLB NAT release failures

Type: number

Format: counter

so_pkts_slb_nat_reserve_fail

Description Total SLB NAT reserve failures

Type: number

Format: counter

so_pkts_traffic_map_not_found_drop

Description Traffic MAP Not Found Drop

Type: number

Format: counter

so_redirect_pkts_sent

Description Total packets redirected out of node

Type: number

Format: counter

so_redirected_pkts_rcvd

Description Total redirected packets received on node

Type: number

Format: counter

so_slb_pkts_redirect_conn_aged_out

Description Total SLB redirect conns aged out

Type: number

Format: counter

so_slb_shadow_session_created

Description SLB Shadow Session created

Type: number

Format: counter

2.124 ssh-login-grace-time

Objects:

2.124.1 ssh-login-grace-time

The grace time during which a connection can exist without successful authentication

ssh-login-grace-time Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ssh-login-grace-time
Element URI	/axapi/v3/ssh-login-grace-time
Element Attributes	ssh-login-grace-time_attributes
Partition Visibility	shared
Schema	`ssh-login-grace-time schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ssh-login-grace-time

ssh-login-grace-time attributes

```
POST /axapi/v3/ssh-login-grace-time
Payload:
{
    "ssh-login-grace-time": {
        "grace-time": 5
    }
}
```

Get Object

GET

/axapi/v3/ssh-login-grace-time

ssh-login-grace-time attributes

```
GET /axapi/v3/ssh-login-grace-time
Reponse:

Replace Object

PUT

/axapi/v3/syn-cookie

syn-cookie attributes

Delete Object

DELETE

/axapi/v3/syn-cookie

syn-cookie attributes

syn-cookie attributes

enable

Description Global Syn-Cookie Protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

off-threshold

Description off-threshold for Syn-cookie. (default 0) (Decimal number)

Type: number

Range: 0-2147483647

Default: 0

on-threshold

Description on-threshold for Syn-cookie. (default 0) (Decimal number, 0 for turning on Syn-cookie without threshold)

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

```

sys-ut attributes

action

Description 'enable': Set device to SUT mode; 'disable': Set device to normal mode;

Type: string

Supported Values: enable, disable

Default: disable

common

Description: common is a **JSON Block**. Please see below for *common*

Type: Object

Reference Object: */axapi/v3/sys-ut/common*

event-list

Type: List

Reference Object: */axapi/v3/sys-ut/event/{event-number}*

run-test

Description: run-test is a **JSON Block**. Please see below for *run-test*

Type: Object

Reference Object: */axapi/v3/sys-ut/run-test*

secondary-name

Description Minor test case name. This is autogenerated

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

state-list

Type: List

Reference Object: */axapi/v3/sys-ut/state/{name}*

template-list

Type: List

Reference Object: */axapi/v3/sys-ut/template/{name}*

test-name

Description Name for this test case

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

event-list

Specification	Value
Type	*list*
Block object keys	

action-list

Type: List

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}*

event-number

Description Event number

Type: number

Range: 1-32

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

event-list_action-list

Specification	Value
Type	*list*
Block object keys	

delay

Description Delay in seconds

Type: number

Range: 1-3600

direction

Description 'send': Test event; 'expect': Expected result; 'wait': Introduce a delay;

Type: string

Supported Values: send, expect, wait

drop

Description Packet drop. Only allowed for output spec

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-validation

Description: ignore-validation is a **JSON Block**. Please see below for *event-list_action-list_ignore-validation*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/ignore-validation*

l1

Description: l1 is a **JSON Block**. Please see below for *event-list_action-list_l1*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l1*

l2

Description: l2 is a **JSON Block**. Please see below for *event-list_action-list_l2*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l2*

l3

Description: l3 is a **JSON Block**. Please see below for *event-list_action-list_l3*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l3*

tcp

Description: tcp is a **JSON Block**. Please see below for *event-list_action-list_tcp*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp*

template

Description Packet template

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/sys-ut/template*

udp

Description: udp is a **JSON Block**. Please see below for *event-list_action-list_udp*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/udp*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

event-list_action-list_ignore-validation

Specification	Value
Type	*object*

all

Description Skip validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description Dont validate TX descriptor. This includes Tx port, Len & vlan

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l2

Description Dont validate L2 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l3

Description Dont validate L3 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4

Description Dont validate L4 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

event-list_action-list_udp

Specification	Value
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

length

Description Total packet length starting at UDP header

Type: number

Range: 64-9000

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-port

Description Source port value

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

event-list_action-list_tcp

Specification	Value
Type	*object*

ack-seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

flags

Description: flags is a **JSON Block**. Please see below for *event-list_action-list_tcp_flags*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp/flags*

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

options

Description: options is a **JSON Block**. Please see below for *event-list_action-list_tcp_options*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp/options*

seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

src-port

Description Source port value

Type: number

Range: 1-65535

urgent

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

event-list_action-list_tcp_flags

Specification	Value
Type	*object*

ack

Description Ack

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cwr

Description Cwr

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ece

Description Ece

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin

Description Fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

psh

Description Psh

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rst

Description Rst

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn

Description Syn

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

urg

Description Urg

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

event-list_action-list_tcp_options

Specification	Value
Type	*object*

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description 'permitted': permitted; 'block': block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

event-list_action-list_l2

Specification	Value
Type	*object*

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

event-list_action-list_l2_mac-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Mac Address

Type: string

Format: mac-address

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Description: l2 is a **JSON Block**. Please see below for *template-list_l2*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/l2*

l3

Description: l3 is a **JSON Block**. Please see below for *template-list_l3*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/l3*

name

Description template name

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Description: tcp is a **JSON Block**. Please see below for *template-list_tcp*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *template-list_udp*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/udp*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_udp

Specification	Value
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

length

Description Total packet length starting at UDP header

Type: number

Range: 64-9000

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-port-range

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_udp_src-port-range

Specification	Value
Type	*list*
Block object keys	

src-port-end

Description Src port end value

Type: number

src-port-start

Description Source port value

Type: number

template-list_l1

Specification	Value
Type	*object*

auto

Description Auto calculate pkt len

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: auto and value are mutually exclusive

drop

Description Packet drop. Only allowed for output spec

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eth-list

Type: List

length

Description packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk_list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Total packet length starting at L2 header

Type: number

Range: 64-9000

Mutual Exclusion: value and auto are mutually exclusive

template-list_l1_eth-list

Specification	Value
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Interface number)

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

template-list_l1_trunk_list

Specification	Value
Type	*list*
Block object keys	

trunk-end

Description Trunk Group

Type: number

trunk-start

Description Trunk groups

Type: number

template-list_l2

Specification	Value
Type	*object*

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Reference Object: */axapi/v3/sys-ut/template/{name}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

template-list_l2_mac-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Mac Address

Type: string

Format: mac-address

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/virtual-server*

template-list_l3

Specification	Value
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

ip-list

Type: List

Reference Object: */axapi/v3/sys-ut/template/{name}/l3/ip/{src-dst}*

protocol

Description L4 Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description

Type: number

Range: 1-64

type

Description 'tcp': tcp; 'udp': udp; 'icmp': icmp;

Type: string

Supported Values: tcp, udp, icmp

Mutual Exclusion: type and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description protocol number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and type are mutually exclusive

template-list_l3_ip-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

ipv4-end-address

Description IP end address

Type: string

Format: ipv4-address

ipv4-start-address

Description IP address

Type: string

Format: ipv4-address

ipv6-end-address

Description Ipv6 end address

Type: string

Format: ipv6-address

ipv6-start-address

Description Ipv6 address

Type: string

Format: ipv6-address

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/virtual-server*

template-list_ignore-validation

Specification	Value
Type	*object*

all

Description Skip validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description Dont validate TX descriptor. This includes Tx port, Len & vlan

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l2

Description Dont validate L2 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l3

Description Dont validate L3 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4

Description Dont validate L4 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_tcp

Specification	Value
Type	*object*

ack-seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

flags

Description: flags is a **JSON Block**. Please see below for *template-list_tcp_flags*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/tcp/flags*

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

options

Description: options is a **JSON Block**. Please see below for *template-list_tcp_options*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/tcp/options*

seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

src-port-range

Type: List

urgent

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

template-list_tcp_src-port-range

Specification	Value
Type	*list*

Default: 0

fin

Description Fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

psh

Description Psh

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rst

Description Rst

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn

Description Syn

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

urg

Description Urg

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_tcp_options

Specification	Value
Type	*object*

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description 'permitted': permitted; 'block': block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

state-list

Specification	Value
Type	*list*
Block object keys	

name

Description Node name

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list

Type: List

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}*

Type	*list*
Block object keys	

action-list

Type: List

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}*

case-number

Description

Type: number

Range: 1-32

repeat

Description number of times case should be repeated before state transition

Type: number

Range: 1-32

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

state-list_next-state-list_case-list_action-list

Specification	Value
Type	*list*
Block object keys	

delay

Description Delay in seconds

Type: number

Range: 1-3600

direction

Description 'send': Test event; 'expect': Expected result; 'wait': Introduce a delay;

Type: string

Supported Values: send, expect, wait

drop

Description Packet drop. Only allowed for output spec

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description: l1 is a **JSON Block**. Please see below for *state-list_next-state-list_case-list_action-list_l1*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l1*

    }
}
```

common attributes

delay

Description wait time in seconds after each run

Type: number

Range: 1-3600

proceed-on-error

Description Run test even in case of event failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.127.3 sys-ut event

Specify event parameters

event Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*event-number*
Collection Name	*event-list*
Collection URI	/axapi/v3/sys-ut/event
Element Name	event
Element URI	/axapi/v3/sys-ut/event/{event-number}
Element Attributes	event_attributes
Partition Visibility	shared
Schema	`event schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sys-ut/event

event attributes

```
POST /axapi/v3/sys-ut/event/
Payload:
{
    "event": {
        "event-number": 1
    }
}
```

Create List

POST

/axapi/v3/sys-ut/event

event attributes

Get Object

GET

/axapi/v3/sys-ut/event/{event-number}

    }
}
```

event-list

event-list is **JSON List** of *event attributes*

event-list : [

{ *event attributes* },

{ *event attributes* },

...

]

event attributes

action-list

Type: List

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}*

event-number

Description Event number

Type: number

Range: 1-32

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list

Specification	Value
Type	*list*
Block object keys	

delay

Description Delay in seconds

Type: number

Range: 1-3600

direction

Description 'send': Test event; 'expect': Expected result; 'wait': Introduce a delay;

Type: string

Supported Values: send, expect, wait

drop

Description Packet drop. Only allowed for output spec

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-validation

Description: ignore-validation is a **JSON Block**. Please see below for *action-list_ignore-validation*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/ignore-validation*

l1

Description: l1 is a **JSON Block**. Please see below for *action-list_l1*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l1*

l2

Description: l2 is a **JSON Block**. Please see below for *action-list_l2*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l2*

l3

Description: l3 is a **JSON Block**. Please see below for *action-list_l3*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l3*

tcp

Description: tcp is a **JSON Block**. Please see below for *action-list_tcp*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp*

template

Description Packet template

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/sys-ut/template*

udp

Description: udp is a **JSON Block**. Please see below for *action-list_udp*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/udp*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list_ignore-validation

Specification	Value
Type	*object*

all

Description Skip validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description Dont validate TX descriptor. This includes Tx port, Len & vlan

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l2

Description Dont validate L2 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l3

Description Dont validate L3 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4

Description Dont validate L4 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list_udp

Specification	Value
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

length

Description Total packet length starting at UDP header

Type: number

Range: 64-9000

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-port

Description Source port value

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list_tcp

Specification	Value
Type	*object*

ack-seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

flags

Description: flags is a **JSON Block**. Please see below for *action-list_tcp_flags*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp/flags*

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

options

Description: options is a **JSON Block**. Please see below for *action-list_tcp_options*

Type: Object

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp/options*

seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

src-port

Description Source port value

Type: number

Range: 1-65535

urgent

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

action-list_tcp_flags

Specification	Value
Type	*object*

ack

Description Ack

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cwr

Description Cwr

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ece

Description Ece

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin

Description Fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

psh

Description Psh

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rst

Description Rst

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn

Description Syn

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

urg

Description Urg

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list_tcp_options

Specification	Value
Type	*object*

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description 'permitted': permitted; 'block': block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

action-list_l2

Specification	Value
Type	*object*

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

action-list_l2_mac-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Mac Address

Type: string

Format: mac-address

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/virtual-server*

action-list_l3

Specification	Value
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

ip-list

Type: List

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv6-address

Description Ipv6 address

Type: string

Format: ipv6-address

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/virtual-server*

l1

Specification	Value
Type	*object*

auto

Description Auto calculate pkt len

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: auto and value are mutually exclusive

eth-list

Type: List

length

Description packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk_list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Total packet length starting at L2 header

Type: number

Range: 64-9000

Mutual Exclusion: value and auto are mutually exclusive

l1_eth-list

Specification	Value
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Interface number)

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

l1_trunk_list

Specification	Value
Type	*list*
Block object keys	

trunk-end

Description Trunk Group

Type: number

trunk-start

Description Trunk groups

Type: number

2.127.5 sys-ut event action ignore-validation

Ignore following layers for validation

ignore-validation Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ignore-validation
Element URI	/axapi/v3/sys-ut/event/{event-number}/action/{direction}/ignore-validation
Element Attributes	ignore-validation_attributes
Partition Visibility	shared
Schema	`ignore-validation schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/ignore-validation

ignore-validation attributes

Get Object

GET

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/ignore-validation

ignore-validation attributes

Modify Object

POST

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/ignore-validation

ignore-validation attributes

Replace Object

PUT

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/ignore-validation

ignore-validation attributes

Delete Object

DELETE

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/ignore-validation

ignore-validation attributes

ignore-validation attributes

all

Description Skip validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description Dont validate TX descriptor. This includes Tx port, Len & vlan

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l2

Description Dont validate L2 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l3

Description Dont validate L3 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4

Description Dont validate L4 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.127.6 sys-ut event action l1

L1 packet paramters

l1 Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	l1

l2 attributes

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Reference Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

mac-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Element Attributes	state_attributes
Partition Visibility	shared
Schema	`state schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sys-ut/state

state attributes

```
POST /axapi/v3/sys-ut/state/
Payload:
{
    "state": {
        "name": "a"
    }
}
```

Create List

POST

/axapi/v3/sys-ut/state

state attributes

Get Object

GET

/axapi/v3/sys-ut/state/{name}

state attributes

```
GET /axapi/v3/sys-ut/state/a
Reponse:
{
    "state": {
        "name": "a",
        "uuid": "4717dd9a-b6fe-11ef-b78f-ae71681635d0",
        "a10-url": "/axapi/v3/sys-ut/state/a"
    }
}
```

Get List

GET

/axapi/v3/sys-ut/state

state-list

Modify Object

POST

/axapi/v3/sys-ut/state/{name}

state attributes

Replace Object

PUT

/axapi/v3/sys-ut/state/{name}

state attributes

```
PUT /axapi/v3/sys-ut/state/a
Payload:
{
    "state": {
        "name": "a"
    }
}
```

Replace List

PUT

/axapi/v3/sys-ut/state

state-list

Delete Object

DELETE

/axapi/v3/sys-ut/state/{name}

state attributes

```
DELETE /axapi/v3/sys-ut/state/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

state-list

state-list is **JSON List** of *state attributes*

state-list : [

{ *state attributes* },

{ *state attributes* },

...

]

state attributes

name

Description Node name

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list

Type: List

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list

Specification	Value
Type	*list*
Block object keys	

case-list

Type: List

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}*

name

Description Node name

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list_case-list

Specification	Value
Type	*list*
Block object keys	

action-list

Type: List

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}*

case-number

Description

Type: number

Range: 1-32

repeat

Description number of times case should be repeated before state transition

Type: number

Range: 1-32

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list_case-list_action-list

Specification	Value
Type	*list*
Block object keys	

delay

Description Delay in seconds

Type: number

Range: 1-3600

direction

Description 'send': Test event; 'expect': Expected result; 'wait': Introduce a delay;

Type: string

Supported Values: send, expect, wait

drop

Description Packet drop. Only allowed for output spec

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description: l1 is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_l1*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l1*

l2

Description: l2 is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_l2*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l2*

l3

Description: l3 is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_l3*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l3*

tcp

Description: tcp is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_tcp*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/tcp*

template

Description Packet template

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/sys-ut/template*

udp

Description: udp is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_udp*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/udp*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list_case-list_action-list_udp

Specification	Value
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

length

Description Total packet length starting at UDP header

Type: number

Range: 64-9000

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-port

Description Source port value

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list_case-list_action-list_tcp

Specification	Value
Type	*object*

ack-seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

flags

Description: flags is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_tcp_flags*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/tcp/flags*

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

options

Description: options is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_tcp_options*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/tcp/options*

seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

src-port

Description Source port value

Type: number

Range: 1-65535

urgent

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

next-state-list_case-list_action-list_tcp_flags

Specification	Value
Type	*object*

ack

Description Ack

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cwr

Description Cwr

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ece

Description Ece

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin

Description Fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

psh

Description Psh

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rst

Description Rst

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn

Description Syn

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

urg

Description Urg

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list_case-list_action-list_tcp_options

Specification	Value
Type	*object*

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description 'permitted': permitted; 'block': block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

next-state-list_case-list_action-list_l2

Specification	Value
Type	*object*

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

next-state-list_case-list_action-list_l2_mac-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Mac Address

Type: string

Format: mac-address

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/virtual-server*

next-state-list_case-list_action-list_l3

Specification	Value
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

ip-list

Type: List

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l3/ip/{src-dst}*

protocol

Description L4 Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description

Type: number

Range: 1-64

type

Description 'tcp': tcp; 'udp': udp; 'icmp': icmp;

Type: string

Supported Values: tcp, udp, icmp

Mutual Exclusion: type and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description protocol number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and type are mutually exclusive

next-state-list_case-list_action-list_l3_ip-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv6-address

Description Ipv6 address

Type: string

Format: ipv6-address

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string
