Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ip_ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ip_ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ip_ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ip_ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num-rx-pkts': received packets; 'num-total-rx-bytes': received bytes; 'num-tx-pkts': sent packets; 'num-total-tx-bytes': sent bytes; 'num-rx-err-pkts': received error packets; 'num-tx-err-pkts': sent error packets; 'rate_pkt_sent': Packet sent rate packets/sec; 'rate_byte_sent': Byte sent rate bits/sec; 'rate_pkt_rcvd': Packet received rate packets/sec; 'rate_byte_rcvd': Byte received rate bits/sec;

Type: string

Supported Values: all, num-rx-pkts, num-total-rx-bytes, num-tx-pkts, num-total-tx-bytes, num-rx-err-pkts, num-tx-err-pkts, rate_pkt_sent, rate_byte_sent, rate_pkt_rcvd, rate_byte_rcvd

lw-4o6

Specification	Value
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6

Specification	Value
Type	*object*

address-cfg

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description: router is a **JSON Block**. Please see below for *ipv6_router*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_address-cfg

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ipv6_router

Specification	Value
Type	*object*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ipv6_router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ripng*

ipv6_router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ipv6_ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ipv6_ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ipv6_ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ipv6_ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

2.63.113 interface tunnel ip

Global IP configuration subcommands

ip Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ip
Element URI	/axapi/v3/interface/tunnel/{ifnum}/ip
Element Attributes	ip_attributes
Partition Visibility	shared
Schema	`ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/tunnel/{ifnum}/ip

ip attributes

```
POST /axapi/v3/interface/tunnel/1/ip
Payload:

ip attributes

address

Description: address is a **JSON Block**. Please see below for *address*

Type: Object

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query-val

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Max Response Time (Default is 100)

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/rip*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *rip_authentication_str*

Type: Object

rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

address

Specification	Value
Type	*object*

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-cfg

Type: List

address_ip-cfg

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.63.114 interface tunnel ip ospf

Open Shortest Path First for IPv4 (OSPF)

ospf Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	ospf
Element URI	/axapi/v3/interface/tunnel/{ifnum}/ip/ospf
Element Attributes	ospf_attributes
Partition Visibility	shared
Schema	`ospf schema`

Operations Allowed:

Get Object

GET

/axapi/v3/interface/tunnel/{ifnum}/ip/ospf

ospf_attributes

ospf attributes

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf-global*

Type: Object

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.63.115 interface tunnel ip ospf ospf-global

Global setting for Open Shortest Path First for IPv4 (OSPF)

ospf-global Specification

Parameter	Value

rip attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *authentication_str*

Type: Object

authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

ipv6 attributes

address-cfg

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-cfg

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

router

Specification	Value
Type	*object*

ospf

Description: ospf is a **JSON Block**. Please see below for *router_ospf*

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ripng*

router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

2.63.122 interface tunnel ipv6 router ospf

Open Shortest Path First for IPv6 (OSPFv3)

ospf Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ospf
Element URI	/axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf
Element Attributes	ospf_attributes
Partition Visibility	shared
Schema	`ospf schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf

ospf attributes

```
POST /axapi/v3/interface/tunnel/1/ipv6/router/ospf
Payload:
{
    "ospf": {
        "area-list": [
            {
                "area-id-num": 0,
                "tag": "a"
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf

ospf attributes

```
GET /axapi/v3/interface/tunnel/1/ipv6/router/ospf
Reponse:
{
    "ospf": {
        "area-list": [
            {
                "area-id-num": 0,
                "tag": "a",
                "instance-id": 0
            }
        ],
        "uuid": "04b85f12-b5b2-11ef-bcb4-ae71681635d0",

        "status": "OK",
        "msg": "Success"
    }
}
```

ripng attributes

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.124 interface tunnel lw-4o6

Configure LW-4over6 interface

lw-4o6 Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	lw-4o6
Element URI	/axapi/v3/interface/tunnel/{ifnum}/lw-4o6
Element Attributes	lw-4o6_attributes
Partition Visibility	shared
Schema	`lw-4o6 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/tunnel/{ifnum}/lw-4o6

lw-4o6 attributes

```
POST /axapi/v3/interface/tunnel/1/lw-4o6
Payload:
{
    "lw-4o6": {
        "outside": 1
    }
}
```

Get Object

GET

/axapi/v3/interface/tunnel/{ifnum}/lw-4o6

lw-4o6 attributes

```
GET /axapi/v3/interface/tunnel/1/lw-4o6
Reponse:

    }
}
```

Delete Object

DELETE

/axapi/v3/interface/tunnel/{ifnum}/lw-4o6

lw-4o6 attributes

lw-4o6 attributes

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.125 interface tunnel map

Configure MAP on this interface

map Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	map
Element URI	/axapi/v3/interface/tunnel/{ifnum}/map
Element Attributes	map_attributes
Partition Visibility	shared
Schema	`map schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/tunnel/{ifnum}/map

map attributes

```
POST /axapi/v3/interface/tunnel/1/map
Payload:
{
    "map": {

    }
}
```

Get Object

GET

/axapi/v3/interface/tunnel/{ifnum}/map

map attributes

Modify Object

POST

/axapi/v3/interface/tunnel/{ifnum}/map

map attributes

Replace Object

PUT

/axapi/v3/interface/tunnel/{ifnum}/map

map attributes

Delete Object

DELETE

/axapi/v3/interface/tunnel/{ifnum}/map

map attributes

map attributes

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.126 interface tunnel oper

Operational Status for the object tunnel

tunnel Specification

Parameter	Value
Type	*Collection*
Collection Name	*tunnel-list*
Collection URI	/axapi/v3/interface/tunnel/{ifnum}
Element Name	tunnel
Element URI	/axapi/v3/interface/tunnel/{ifnum}/oper
Element Attributes	tunnel_attributes
Partition Visibility	None
Schema	`tunnel schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/tunnel/{ifnum}

tunnel attributes

Create List

POST

/axapi/v3/interface/tunnel/{ifnum}

tunnel attributes

Get Object

GET

/axapi/v3/interface/tunnel/{ifnum}/oper

tunnel attributes

Get List

GET

Type: string

ipv6-link-local-type

Description

Type: string

ipv6_addr_count

Description

Type: number

ipv6_list

Type: List

line-protocol

Description

Type: string

Supported Values: up, down

link-type

Description

Type: string

mac

Description

Type: string

Format: mac-address

Maximum Length: 17 characters

Maximum Length: 11 characters

state

Description

Type: string

Supported Values: up, disabled, down

oper_ipv6_list

Specification	Value
Type	*list*
Block object keys	

addr

Description IP address

Type: string

Format: ipv6-address

is_anycast

Description

Type: number

prefix

Description IP subnet mask

Type: string

oper_ipv4_list

Specification	Value
Type	*list*
Block object keys	

addr

Description IP address

Type: string

Format: ipv4-address

mask

Description IP subnet mask

Type: string

Format: ipv4-netmask

2.63.127 interface tunnel stats

Statistics for the object tunnel

tunnel Specification

Parameter	Value
Type	*Collection*
Collection Name	*tunnel-list*
Collection URI	/axapi/v3/interface/tunnel/{ifnum}
Element Name	tunnel
Element URI	/axapi/v3/interface/tunnel/{ifnum}/stats
Element Attributes	tunnel_attributes
Partition Visibility	None
Schema	`tunnel schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/tunnel/{ifnum}

tunnel attributes

Create List

POST

/axapi/v3/interface/tunnel/{ifnum}

tunnel attributes

Get Object

GET

/axapi/v3/interface/tunnel/{ifnum}/stats

tunnel attributes

tunnel attributes

tunnel-list

tunnel-list is **JSON List** of *tunnel attributes*

```
tunnel-list : [
        { tunnel attributes },
        { tunnel attributes },
        ...
    ]
```

tunnel attributes

ifnum

Description Tunnel interface number

Type: number

Range: 1-128

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

num-rx-err-pkts

Description received error packets

Type: number

Format: counter

num-rx-pkts

Description received packets

Type: number

Format: counter

num-total-rx-bytes

Description received bytes

Type: number

Format: counter

num-total-tx-bytes

Description sent bytes

Type: number

Format: counter

num-tx-err-pkts

Description sent error packets

Type: number

Format: counter

num-tx-pkts

Description sent packets

Type: number

Format: counter

rate_byte_rcvd

Description Byte received rate bits/sec

Type: number

Format: counter

rate_byte_sent

Description Byte sent rate bits/sec

Type: number

Format: counter

rate_pkt_rcvd

Description Packet received rate packets/sec

Type: number

Format: counter

rate_pkt_sent

Description Packet sent rate packets/sec

Type: number

Format: counter

2.63.128 interface ve

Virtual ethernet interface

ve Specification

Parameter	Value

        "msg": "Success"
    }
}
```

ve-list

ve-list is **JSON List** of *ve attributes*

ve-list : [

{ *ve attributes* },

{ *ve attributes* },

...

]

ve attributes

access-list

Description: access-list is a **JSON Block**. Please see below for *access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

bfd

Description: bfd is a **JSON Block**. Please see below for *bfd*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/bfd*

ddos

Description: ddos is a **JSON Block**. Please see below for *ddos*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ddos*

gaming-protocol-compliance

Description Enable Gaming Protocol Compliance Check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp-rate-limit

Description: icmp-rate-limit is a **JSON Block**. Please see below for *icmp-rate-limit*

Type: Object

icmpv6-rate-limit

Description: icmpv6-rate-limit is a **JSON Block**. Please see below for *icmpv6-rate-limit*

Type: Object

ifnum

Description Virtual ethernet interface number

Type: number

Range: 2-4094

Reference Object: */axapi/v3/network/vlan*

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *isis*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/isis*

l3-vlan-fwd-disable

Description Disable L3 forwarding between VLANs for incoming packets on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *lw-4o6*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/lw-4o6*

map

Description: map is a **JSON Block**. Please see below for *map*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/map*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nptv6

Description: nptv6 is a **JSON Block**. Please see below for *nptv6*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/nptv6*

ping-sweep-detection

Description 'enable': Enable ping sweep detection; 'disable': Disable ping sweep detection(default);

Type: string

Supported Values: enable, disable

Default: disable

port-scan-detection

Description 'enable': Enable port scan detection; 'disable': Disable port scan detection(default);

Type: string

Supported Values: enable, disable

Default: disable

sampling-enable

Type: List

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip

Specification	Value
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dmz

Description DMZ network facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ip_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *ip_rip*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ip_router*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ip_stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unnumbered

Description Set the interface as unnumbered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ip_helper-address-list

Specification	Value
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

ip_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ip_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/router/isis*

ip_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ip_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ip_rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ip_rip_authentication_str*

Type: Object

ip_rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ip_rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ip_rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ip_ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ip_ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ip_ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ip_ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ddos

Specification	Value
Type	*object*

inside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Reference Object: */axapi/v3/access-list/standard*

acl-name

Description Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

bfd

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_authentication

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

bfd_interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_pkts': Input packets; 'num_total_bytes': Input bytes; 'num_unicast_pkts': Received unicasts; 'num_broadcast_pkts': Received broadcasts; 'num_multicast_pkts': Received multicasts; 'num_tx_pkts': Transmitted packets; 'num_total_tx_bytes': Transmitted bytes; 'num_unicast_tx_pkts': Transmitted unicasts; 'num_broadcast_tx_pkts': Transmitted broadcasts; 'num_multicast_tx_pkts': Transmitted multicasts; 'rate_pkt_sent': Packet sent rate packets/sec; 'rate_byte_sent': Byte sent rate bits/sec; 'rate_pkt_rcvd': Packet received rate packets/sec; 'rate_byte_rcvd': Byte received rate bits/sec; 'load_interval': Load Interval;

Type: string

Supported Values: all, num_pkts, num_total_bytes, num_unicast_pkts, num_broadcast_pkts, num_multicast_pkts, num_tx_pkts, num_total_tx_bytes, num_unicast_tx_pkts, num_broadcast_tx_pkts, num_multicast_tx_pkts, rate_pkt_sent, rate_byte_sent, rate_pkt_rcvd, rate_byte_rcvd, load_interval

ipv6

Specification	Value
Type	*object*

address-list

Type: List

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inside

Description Configure interface as NAT inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/ospf*

outside

Description Configure interface as NAT outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *ipv6_rip*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *ipv6_router*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *ipv6_router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ipv6_stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

ipv6_address-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ipv6_rip

Specification	Value
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ipv6_stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ipv6_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ipv6_router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/ripng*

ipv6_router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ipv6_ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ipv6_ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ipv6_ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ipv6_ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_router-adver

Specification	Value
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

adver-vrid

Description Vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

hop-limit

Description Set Router Advertisement Hop Limit (default: 255)

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Max Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Min Router Advertisement Interval (seconds))

Type: number

Range: 3-1350

Default: 200

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_router-adver_prefix-list

Specification	Value
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

map

Specification	Value
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nptv6

Specification	Value
Type	*object*

domain-list

Type: List

Reference Object: */axapi/v3/interface/ve/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

nptv6_domain-list

Specification	Value
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

isis_priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

isis_hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

isis_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis_authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

isis_authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

isis_authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

isis_authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

isis_hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

isis_csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

icmpv6-rate-limit

Specification	Value
Type	*object*

lockup-period-v6

Description Lockup period (second)

Type: number

Range: 1-16383

lockup-v6

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

normal-v6

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

lw-4o6

Specification	Value
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp-rate-limit

Specification	Value
Type	*object*

lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

normal

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

2.63.129 interface ve bfd

Configure BFD (Bidirectional Forwarding Detection)

bfd Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	bfd
Element URI	/axapi/v3/interface/ve/{ifnum}/bfd
Element Attributes	bfd_attributes
Partition Visibility	shared
Schema	`bfd schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ve/{ifnum}/bfd

bfd attributes

```
POST /axapi/v3/interface/ve/2/bfd
Payload:
{
    "bfd": {
        "authentication": {
            "method": "md5",
            "key-id": 0,
            "password": "a"
        }
    }
}
```

Get Object

GET

/axapi/v3/interface/ve/{ifnum}/bfd

bfd attributes

```
GET /axapi/v3/interface/ve/2/bfd
Reponse:
{
    "bfd": {
        "authentication": {
            "key-id": 0,
            "method": "md5",
            "encrypted": "X7lswazs7vO3trvt9eupPErAz/qNkpzsGS/
↪aUyca97VpJgsdC8utH8XFYINI62WE"
        },
        "echo": 0,
        "uuid": "415aa6fe-b5b3-11ef-bcb4-ae71681635d0",
        "a10-url": "/axapi/v3/interface/ve/2/bfd"
    }
}
```

Modify Object

POST

/axapi/v3/interface/ve/{ifnum}/bfd

bfd attributes

Replace Object

PUT

/axapi/v3/interface/ve/{ifnum}/bfd

bfd attributes

```
PUT /axapi/v3/interface/ve/2/bfd
Payload:
{
```

(continues on next page)

(continued from previous page)

```
    "bfd": {
        "authentication": {
            "method": "meticulous-md5",
            "key-id": 1,
            "password": "abcd"
        }
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/ve/{ifnum}/bfd

bfd attributes

```
DELETE /axapi/v3/interface/ve/2/bfd
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

bfd attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

2.63.130 interface ve ddos

Configure DDoS interface direction

ddos Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ddos
Element URI	/axapi/v3/interface/ve/{ifnum}/ddos
Element Attributes	ddos_attributes
Partition Visibility	shared
Schema	`ddos schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ve/{ifnum}/ddos

ddos attributes

```
POST /axapi/v3/interface/ve/2/ddos
Payload:
{
    "ddos": {
        "outside": 1
    }
}
```

Get Object

GET

/axapi/v3/interface/ve/{ifnum}/ddos

ddos attributes

Modify Object

POST

ddos attributes

Delete Object

DELETE

/axapi/v3/interface/ve/{ifnum}/ddos

ddos attributes

ddos attributes

inside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.131 interface ve ip

Global IP configuration subcommands

ip Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ip
Element URI	/axapi/v3/interface/ve/{ifnum}/ip
Element Attributes	ip_attributes
Partition Visibility	shared
Schema	`ip schema`

Operations Allowed:

ip attributes

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dmz

Description DMZ network facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unnumbered

Description Set the interface as unnumbered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

helper-address-list

Specification	Value
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/router/isis*

router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *rip_authentication_str*

Type: Object

rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.63.132 interface ve ip ospf

Open Shortest Path First for IPv4 (OSPF)

ospf Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	ospf
Element URI	/axapi/v3/interface/ve/{ifnum}/ip/ospf
Element Attributes	ospf_attributes
Partition Visibility	shared
Schema	`ospf schema`

Operations Allowed:

ospf-ip attributes

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *authentication_str*

Type: Object

authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

2.63.136 interface ve ip router

Router

router Specification

Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

router-adver

Specification	Value
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

adver-vrid

Description Vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

hop-limit

Description Set Router Advertisement Hop Limit (default: 255)

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Max Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Min Router Advertisement Interval (seconds))

Type: number

Range: 3-1350

Default: 200

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router-adver_prefix-list

Specification	Value
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

2.63.140 interface ve ipv6 ospf

Open Shortest Path First for IPv6 (OSPFv3)

ospf Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ospf
Element URI	/axapi/v3/interface/ve/{ifnum}/ipv6/ospf
Element Attributes	ospf_attributes
Partition Visibility	shared
Schema	`ospf schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ve/{ifnum}/ipv6/ospf

        "status": "OK",
        "msg": "Success"
    }
}
```

ospf attributes

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

2.63.148 interface ve lw-4o6

Configure LW-4over6 interface

lw-4o6 Specification

Parameter	Value

Delete Object

DELETE

/axapi/v3/interface/ve/{ifnum}/stats

ve attributes

ve-list

ve-list is **JSON List** of *ve attributes*

ve-list : [

{ *ve attributes* },

{ *ve attributes* },

…

]

ve attributes

ifnum

Description Virtual ethernet interface number

Type: number

Range: 2-4094

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

load_interval

Description Load Interval

Type: number

Format: counter

num_broadcast_pkts

Description Received broadcasts

Type: number

Format: counter

num_broadcast_tx_pkts

Description Transmitted broadcasts

Type: number

Format: counter

num_multicast_pkts

Description Received multicasts

Type: number

Format: counter

num_multicast_tx_pkts

Description Transmitted multicasts

Type: number

Format: counter

num_pkts

Description Input packets

Type: number

Format: counter

num_total_bytes

Description Input bytes

Type: number

Format: counter

num_total_tx_bytes

Description Transmitted bytes

Type: number

Format: counter

num_tx_pkts

Description Transmitted packets

Type: number

Format: counter

num_unicast_pkts

Description Received unicasts

Type: number

Format: counter

num_unicast_tx_pkts

Description Transmitted unicasts

Type: number

Format: counter

rate_byte_rcvd

Description Byte received rate bits/sec

Type: number

Format: counter

rate_byte_sent

Description Byte sent rate bits/sec

Type: number

Format: counter

rate_pkt_rcvd

Description Packet received rate packets/sec

Type: number

Format: counter

rate_pkt_sent

Description Packet sent rate packets/sec

Type: number

Format: counter

2.64 ip

Objects:

2.64.1 ip

Global IP configuration subcommands

ip Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	ip
Element URI	/axapi/v3/ip
Element Attributes	ip_attributes
Partition Visibility	shared
Schema	`ip schema`

Operations Allowed:

Get Object

GET

/axapi/v3/ip

ip_attributes

ip attributes

access-list-list

Type: List

Reference Object: */axapi/v3/ip/access-list/{name}*

address

Description: address is a **JSON Block**. Please see below for *address*

Type: Object

Reference Object: */axapi/v3/ip/address*

anomaly-drop

Description: anomaly-drop is a **JSON Block**. Please see below for *anomaly-drop*

Type: Object

Reference Object: */axapi/v3/ip/anomaly-drop*

app-protocol-port

Description: app-protocol-port is a **JSON Block**. Please see below for *app-protocol-port*

Type: Object

Reference Object: */axapi/v3/ip/app-protocol-port*

as-path-list

Type: List

Reference Object: */axapi/v3/ip/as-path/{access-list}+{action}+{value}*

community-list

Description: community-list is a **JSON Block**. Please see below for *community-list*

Type: Object

Reference Object: */axapi/v3/ip/community-list*

default-gateway

Description: default-gateway is a **JSON Block**. Please see below for *default-gateway*

Type: Object

Reference Object: */axapi/v3/ip/default-gateway*

dns

Description: dns is a **JSON Block**. Please see below for *dns*

Type: Object

Reference Object: */axapi/v3/ip/dns*

extcommunity-list

Description: extcommunity-list is a **JSON Block**. Please see below for *extcommunity-list*

Type: Object

Reference Object: */axapi/v3/ip/extcommunity-list*

fib

Description: fib is a **JSON Block**. Please see below for *fib*

Type: Object

Reference Object: */axapi/v3/ip/fib*

fib-summary

Description: fib-summary is a **JSON Block**. Please see below for *fib-summary*

Type: Object

Reference Object: */axapi/v3/ip/fib-summary*

frag

Description: frag is a **JSON Block**. Please see below for *frag*

Type: Object

Reference Object: */axapi/v3/ip/frag*

icmp

Description: icmp is a **JSON Block**. Please see below for *icmp*

Type: Object

Reference Object: */axapi/v3/ip/icmp*

large-community-list

Description: large-community-list is a **JSON Block**. Please see below for *large-community-list*

Type: Object

Reference Object: */axapi/v3/ip/large-community-list*

map-list-list

Type: List

Reference Object: */axapi/v3/ip/map-list/{name}*

mgmt-traffic-list

Type: List

Reference Object: */axapi/v3/ip/mgmt-traffic/{traffic-type}*

nat

Description: nat is a **JSON Block**. Please see below for *nat*

Type: Object

Reference Object: */axapi/v3/ip/nat*

nat-global

Description: nat-global is a **JSON Block**. Please see below for *nat-global*

Type: Object

Reference Object: */axapi/v3/ip/nat-global*

prefix-list-list

Type: List

Reference Object: */axapi/v3/ip/prefix-list/{name}*

reroute

Description: reroute is a **JSON Block**. Please see below for *reroute*

Type: Object

Reference Object: */axapi/v3/ip/reroute*

rib

Description: rib is a **JSON Block**. Please see below for *rib*

Type: Object

Reference Object: */axapi/v3/ip/rib*

route

Description: route is a **JSON Block**. Please see below for *route*

Type: Object

Reference Object: */axapi/v3/ip/route*

tcp

Description: tcp is a **JSON Block**. Please see below for *tcp*

Type: Object

Reference Object: */axapi/v3/ip/tcp*

telemetry

Description: telemetry is a **JSON Block**. Please see below for *telemetry*

Type: Object

Reference Object: */axapi/v3/ip/telemetry*

unnumbered

Description: unnumbered is a **JSON Block**. Please see below for *unnumbered*

Type: Object

Reference Object: */axapi/v3/ip/unnumbered*

fib-summary

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Specification	Value
Type	*object*

syn-cookie

Description: syn-cookie is a **JSON Block**. Please see below for *tcp_syn-cookie*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_syn-cookie

Specification	Value
Type	*object*

sack-enable

Description Enable HW Syn-Cookie SACK support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold

Description SYN cookie expire threshold (seconds (default is 4))

Type: number

Range: 1-100

Default: 4

mgmt-traffic-list

Specification	Value
Type	*list*
Block object keys	

source-interface

Description: source-interface is a **JSON Block**. Please see below for *mgmt-traffic-list_source-interface*

Type: Object

traffic-type

Description 'all': All; 'ftp': FTP; 'ntp': NTP; 'snmp-trap': SNMP Trap; 'ssh': SSH and SCP; 'syslog': SYSLOG; 'telnet': Telnet; 'tftp': TFTP; 'web': Web - HTTP and HTTPS;

Type: string

Supported Values: all, ftp, ntp, snmp-trap, ssh, syslog, telnet, tftp, web

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mgmt-traffic-list_source-interface

Specification	Value
Type	*object*

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

lif

Description Logical interface (Lif interface number)

Type: number

Range: 1-128

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Range: 1-128

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

app-protocol-port

Specification	Value
Type	*object*

monitor

Description: monitor is a **JSON Block**. Please see below for *app-protocol-port_monitor*

Type: Object

Reference Object: */axapi/v3/ip/app-protocol-port/monitor*

tcp

Description: tcp is a **JSON Block**. Please see below for *app-protocol-port_tcp*

Type: Object

Reference Object: */axapi/v3/ip/app-protocol-port/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *app-protocol-port_udp*

Type: Object

Reference Object: */axapi/v3/ip/app-protocol-port/udp*

app-protocol-port_udp

Specification	Value
Type	*object*

passthrough

Description: passthrough is a **JSON Block**. Please see below for *app-protocol-port_udp_passthrough*

Type: Object

Reference Object: */axapi/v3/ip/app-protocol-port/udp/passthrough*

port

Description: port is a **JSON Block**. Please see below for *app-protocol-port_udp_port*

Type: Object

Reference Object: */axapi/v3/ip/app-protocol-port/udp/port*

app-protocol-port_udp_passthrough

Specification	Value
Type	*object*

disable

Description Disable global port processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enables global port processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

app-protocol-port_udp_port

Specification	Value
Type	*object*

add-list

Type: List

Reference Object: */axapi/v3/ip/app-protocol-port/udp/port/add/{port}*

disable-list

Type: List

Reference Object: */axapi/v3/ip/app-protocol-port/udp/port/disable/{port}*

app-protocol-port_udp_port_add-list

Specification	Value
Type	*list*
Block object keys	

app-name-list

Type: List

Reference Object: */axapi/v3/ip/app-protocol-port/udp/port/add/{port}/app-name/{name}*

port

Description Port Number

Type: number

Range: 0-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

app-protocol-port_udp_port_add-list_app-name-list

Specification	Value
Type	*list*
Block object keys	

interface

Description: interface is a **JSON Block**. Please see below for *app-protocol-port_udp_port_add-list_app-name-list_interface*

Type: Object

Reference Object: */axapi/v3/ip/app-protocol-port/udp/port/add/{port}/app-name/{name}/interface*

name

Description Application Protocol Port Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

app-protocol-port_udp_port_add-list_app-name-list_interface

Specification	Value
Type	*object*

eth-cfg

Type: List

management

Description Management Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

app-protocol-port_udp_port_add-list_app-name-list_interface_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve-end

Description VE port

Type: number

extcommunity-list_expanded-num-list

Specification	Value
Type	*list*
Block object keys	

ext-list-num

Description Extended Community list number (expanded)

Type: number

Range: 100-199

rules-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

extcommunity-list_expanded-num-list_rules-list

Specification	Value
Type	*list*
Block object keys	

ext-list-action

Description 'deny': Specify community to reject; 'permit': Specify community to accept;

Type: string

Supported Values: deny, permit

ext-list-value

Description An ordered list as a regular-expression

Type: string

Format: string-rlx

extcommunity-list_expanded-list

Specification	Value
Type	*list*
Block object keys	

expanded

Description Add an expanded extcommunity-list entry (Extended Community list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rules-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

extcommunity-list_expanded-list_rules-list

Specification	Value
Type	*list*
Block object keys	

expanded-action

Description 'deny': Specify community to reject; 'permit': Specify community to accept;

Supported Values: deny, permit

standard-value

Description rt Route Target extended community in aa:nn or IPaddr:nn format OR soo Site-of-Origin extended community in aa:nn or IPaddr:nn

Type: string

Format: string-rlx

icmp

Specification	Value
Type	*object*

redirect

Description Disable outbound ICMP redirect messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unreachable

Description Disable outbound ICMP unreachable messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

anomaly-drop

Specification	Value
Type	*object*

bad-content

Description bad content threshold (threshold value)

Type: number

Range: 1-127

drop-all

Description drop all IP anomaly packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

frag

Description drop all fragmented packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-option

Description drop packets with IP options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-ext-header

Description: ipv6-ext-header is a **JSON Block**. Please see below for *anomaly-drop_ipv6-ext-header*

Type: Object

land-attack

Description drop IP packets with the same source and destination addresses

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out-of-sequence

Description out of sequence packet threshold (threshold value)

Type: number

Range: 1-127

packet-deformity

Description: packet-deformity is a **JSON Block**. Please see below for *anomaly-drop_packet-deformity*

Type: Object

ping-of-death

Description drop oversize ICMP packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

security-attack

Description: security-attack is a **JSON Block**. Please see below for *anomaly-drop_security-attack*

Type: Object

tcp-no-flag

Description drop TCP packets with no flag

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-syn-fin

Description drop TCP packets with both syn and fin flags set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-syn-frag

Description drop fragmented TCP packets with syn flag set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zero-window

Description zero window size threshold (threshold value)

Type: number

Range: 1-127

anomaly-drop_security-attack

Specification	Value
Type	*object*

security-attack-layer-3

Description drop packets with layer 3 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

security-attack-layer-4

Description drop packets with layer 4 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

anomaly-drop_packet-deformity

Specification	Value
Type	*object*

packet-deformity-layer-3

Description drop packets with layer 3 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-deformity-layer-4

Description drop packets with layer 4 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

anomaly-drop_sampling-enable

Type: string

Supported Values: all, land, emp_frg, emp_mic_frg, opt, frg, bad_ip_hdrlen, bad_ip_flg, bad_ip_ttl, no_ip_payload, over_ip_payload, bad_ip_payload_len, bad_ip_frg_offset, csum, pod, bad_tcp_urg_offset, tcp_sht_hdr, tcp_bad_iplen, tcp_null_frg, tcp_null_scan, tcp_syn_fin, tcp_xmas, tcp_xmas_scan, tcp_syn_frg, tcp_frg_hdr, tcp_bad_csum, udp_srt_hdr, udp_bad_len, udp_kerb_frg, udp_port_lb, udp_bad_csum, runt_ip_hdr, runt_tcp_udp_hdr, ipip_tnl_msmtch, tcp_opt_err, ipip_tnl_err, vxlan_err, nvgre_err, gre_pptp_err, ipv6_eh_hbh, ipv6_eh_dest, ipv6_eh_routing, ipv6_eh_frag, ipv6_eh_ah, ipv6_eh_esp, ipv6_eh_mobility, ipv6_eh_none, ipv6_eh_other, ipv6_eh_malformed

anomaly-drop_ipv6-ext-header

Specification	Value
Type	*object*

dst-option-list

Type: List

hbh-option-list

Type: List

ipv6-eh-auth

Description Filter authentication extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-dest

Description Filter destination extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-esp

Description Filter ESP extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-frag

Description Filter fragmentation extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-hbh

Description Filter hop by hop extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-malformed

Description Filter malformed extension headers (check for order and occurrences)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-mobility

Description Filter mobility extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-nonext

Description Filter no-next-header extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-routing

Description Filter routing extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat_range-list-list

Specification	Value
Type	*list*
Block object keys	

global-netmaskv4

Description Mask for this Address range

Type: string

Format: ipv4-netmask

global-start-ipv4-addr

Description Global Start IPv4 Address of this list

Type: string

Format: ipv4-address

global-start-ipv6-addr

Description Global Start IPv6 Address of this list

Type: string

Format: ipv6-address-plen

local-netmaskv4

Description Mask for this Address range

Type: string

Format: ipv4-netmask

local-start-ipv4-addr

Description Local Start IPv4 Address of this list

Type: string

Format: ipv4-address

local-start-ipv6-addr

Description Local Start IPv6 Address of this list

Type: string

Format: ipv6-address-plen

name

Description Name for this Static List

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-acl-id

Description Access list ID

Type: number

Range: 1-199

v4-acl-name

Description Access list name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

v4-count

Description Number of addresses to be translated in this range

Type: number

Range: 1-200000

v4-vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Reference Object: */axapi/v3/vrrp-a/vrid*

v6-acl-name

Description Access list name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

v6-count

Description Number of addresses to be translated in this range

Type: number

Range: 1-200000

v6-vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Reference Object: */axapi/v3/vrrp-a/vrid*

nat_alg

Specification	Value
Type	*object*

dns

Description: dns is a **JSON Block**. Please see below for *nat_alg_dns*

Type: Object

Reference Object: */axapi/v3/ip/nat/alg/dns*

pptp

Description: pptp is a **JSON Block**. Please see below for *nat_alg_pptp*

Type: Object

Reference Object: */axapi/v3/ip/nat/alg/pptp*

nat_alg_pptp

Specification	Value
Type	*object*

pptp

Description 'disable': Disable PPTP NAT ALG; 'enable': Enable PPTP NAT ALG;

Type: string

Supported Values: disable, enable

Default: enable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_alg_pptp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'current-smp-sessions': some help string; 'current-gre-sessions': some help string; 'smp-session-creation-failure': some help string; 'truncated-pns-message': some help string; 'truncated-pac-message': some help string; 'mismatched-pns-call-id': some help string; 'mismatched-pac-call-id': some help string; 'retransmitted-pns-message': some help string; 'retransmitted-pac-message': some help string; 'truncated-gre-packet': some help string; 'unknown-gre-version': some help string; 'no-matching-gre-session': some help string;

Type: string

Supported Values: all, current-smp-sessions, current-gre-sessions, smp-session-creation-failure, truncated-pns-message, truncated-pac-message, mismatched-pns-call-id, mismatched-pac-call-id, retransmitted-pns-message, retransmitted-pac-message, truncated-gre-packet, unknown-gre-version, no-matching-gre-session

nat_alg_dns

Specification	Value
Type	*object*

dns-alg

Description 'disable': Disable DNS NAT ALG; 'enable': Enable DNS NAT ALG;

Type: string

Supported Values: disable, enable

Default: enable

query-id-switch

Description Use DNS query ID to create session (UDP session only)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_pool-group-list

Specification	Value
Type	*list*
Block object keys	

member-list

Type: List

Reference Object: */axapi/v3/ip/nat/pool-group/{pool-group-name}/member/{pool-name}*

pool-group-name

Description Specify pool group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Reference Object: */axapi/v3/vrrp-a/vrid*

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron':

9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

include-destination

Description Include the destination IP and port in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-rip-rport

Description Include the IP and port of real server in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *nat_template_logging-list_log*

Type: Object

name

Description NAT logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group

Description Set NAT logging service-group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

severity

Description: severity is a **JSON Block**. Please see below for *nat_template_logging-list_severity*

Type: Object

source-port

Description: source-port is a **JSON Block**. Please see below for *nat_template_logging-list_source-port*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_template_logging-list_severity

Specification	Value
Type	*object*

severity-string

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: debug

Mutual Exclusion: severity-string and severity-val are mutually exclusive

severity-val

Description Logging severity level

Type: number

Range: 0-7

Default: 7

Mutual Exclusion: severity-val and severity-string are mutually exclusive

nat_template_logging-list_log

Specification	Value
Type	*object*

port-mappings

Description 'creation': Log creation of NAT mappgins; 'disable': Disable Log creation and deletion of NAT mappings;

Type: string

Supported Values: creation, disable

nat_template_logging-list_source-port

Specification	Value
Type	*object*

any

Description Use any source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and source-port-num are mutually exclusive

source-port-num

Description Set source port for sending NAT syslogs (default: 514)

Type: number

Range: 1-65535

Default: 514

Mutual Exclusion: source-port-num and any are mutually exclusive

nat_translation

Specification	Value
Type	*object*

icmp-timeout

Description: icmp-timeout is a **JSON Block**. Please see below for *nat_translation_icmp-timeout*

Type: Object

ignore-tcp-msl

Description reclaim TCP resource immediately without MSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-timeout-list

Type: List

Reference Object: */axapi/v3/ip/nat/translation/service-timeout/{service-type}+{port}*

tcp-timeout

Description TCP protocol extended translations (Timeout in seconds (Interval of 60 seconds), default is 300 seconds (5 minutes))

Type: number

Range: 2-15000

Default: 300

udp-timeout

Description UDP protocol extended translations (Timeout in seconds (Interval of 60 seconds), default is 300 seconds (5 minutes))

Type: number

Range: 2-15000

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_translation_service-timeout-list

Specification	Value
Type	*list*
Block object keys	

port

Description Port Number

Type: number

Range: 1-65535

service-type

Description 'tcp': TCP Protocol; 'udp': UDP Protocol;

Type: string

Supported Values: tcp, udp

timeout-type

Description 'age': Expiration time; 'fast': Use Fast aging;

Type: string

Supported Values: age, fast

timeout-val

Description Timeout in seconds (Interval of 60 seconds)

Type: number

Range: 2-15000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_translation_icmp-timeout

Specification	Value
Type	*object*

icmp-timeout

Description 'age': Expiration time; 'fast': Use Fast aging;

Type: string

Supported Values: age, fast

Default: fast

icmp-timeout-val

Description Timeout in seconds (Interval of 60 seconds)

Type: number

Range: 2-15000

nat_icmp

Specification	Value
Type	*object*

always-source-nat-errors

Description Source NAT intermediate routers' IPs for ICMP errors (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

respond-to-ping

Description Respond to ICMP echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_inside

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_inside_source_class-list

Specification	Value
Type	*object*

name

Description Class List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_pool-list

Specification	Value
Type	*list*
Block object keys	

chunk-sharing

Description Share NAT pool chunk across CPUs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

ethernet

Description Ethernet interface

Type: number

Format: interface

gateway

Description Configure gateway IP

Type: string

Format: ipv4-address

ip-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-overload

Description Nat Pool Port overload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

scaleout-device-id

Description Configure Scaleout device id to which this NAT pool is to be bound (Specify Scaleout device id)

Type: number

Range: 1-16

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

Mutual Exclusion: start-address and use-if-ip are mutually exclusive

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip and start-address are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Reference Object: */axapi/v3/vrrp-a/vrid*

prefix-list-list

Specification	Value
Type	*list*
Block object keys	

name

Description Name of a prefix list

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rules

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

prefix-list-list_rules

Specification	Value
Type	*list*
Block object keys	

action

Description 'deny': Specify packets to reject; 'permit': Specify packets to forward;

Type: string

Supported Values: deny, permit

any

Description Any prefix match. Same as "0.0.0.0/0 le 32"

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Prefix-list specific description (Up to 80 characters describing this prefix-list)

Type: string

Maximum Length: 80 characters

Maximum Length: 1 characters

ge

Description Minimum prefix length to be matched

Type: number

Range: 0-32

ipaddr

Description IP prefix, e.g., 35.0.0.0/8

Type: string

Format: ipv4-cidr

le

Description Maximum prefix length to be matched

Type: number

Range: 0-32

seq

Description Sequence number of an entry

Type: number

Range: 1-4294967295

frag

Specification	Value
Type	*object*

buff

Description Max buff used for fragmentation (Buffer Value(10000-3000000))

Type: number

Range: 10000-3000000

cpu-threshold

Description: cpu-threshold is a **JSON Block**. Please see below for *frag_cpu-threshold*

Type: Object

max-packets-per-reassembly

Description Max number of fragmented packets allowed per reassembly(0 is unlimited) (default 0)

Type: number

Range: 2-16

max-reassembly-sessions

Description Max number of pending reassembly sessions allowed (default 100000)

Type: number

Range: 1-200000

sampling-enable

Type: List

timeout

Description Fragmentation timeout (in milliseconds 4 - 65535 (default is 60000))

Type: number

Range: 4-65535

Default: 60000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

frag_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-inserted': Session Inserted; 'session-expired': Session Expired; 'icmp-rcv': ICMP Received; 'icmpv6-rcv': ICMPv6 Received; 'udp-rcv': UDP Received; 'tcp-rcv': TCP Received; 'ipip-rcv': IP-in-IP Received; 'ipv6ip-rcv': IPv6-in-IP Received; 'other-rcv': Other Received; 'icmp-dropped': ICMP Dropped; 'icmpv6-dropped': ICMPv6 Dropped; 'udp-dropped': UDP Dropped; 'tcp-dropped': TCP Dropped; 'ipip-dropped': IP-in-IP Dropped; 'ipv6ip-dropped': IPv6-in-IP Dropped; 'other-dropped': Other Dropped; 'overlap-error': Overlapping Fragment Dropped; 'bad-ip-len': Bad IP Length; 'too-small': Fragment Too Small Drop; 'first-tcp-too-small': First TCP Fragment Too Small Drop; 'first-l4-too-small': First L4 Fragment Too Small Drop; 'total-sessions-exceeded': Total Sessions Exceeded Drop; 'no-session-memory': Out of Session Memory; 'fast-aging-set': Fragmentation Fast Aging Set; 'fast-aging-unset': Fragmentation Fast Aging Unset; 'fragment-queue-success': Fragment Queue Success; 'unaligned-len': Payload Length Unaligned; 'exceeded-len': Payload Length Out of Bounds; 'duplicate-first-frag': Duplicate First Fragment; 'duplicate-last-frag': Duplicate Last Fragment; 'total-fragments-exceeded': Total Queued Fragments Exceeded; 'fragment-queue-failure': Fragment Queue Failure; 'reassembly-success': Fragment Reassembly Success; 'max-len-exceeded': Fragment Max Data Length Exceeded; 'reassembly-failure': Fragment Reassembly Failure; 'policy-drop': MTU Exceeded Policy Drop; 'error-drop': Fragment Processing Drop; 'high-cpu-threshold': High CPU Threshold Reached; 'low-cpu-threshold': Low CPU Threshold Reached; 'cpu-threshold-drop': High CPU Drop; 'ipd-entry-drop': DDoS Protection Drop; 'max-packets-exceeded': Too Many Packets Per Reassembly Drop; 'session-packets-exceeded': Session Max Packets Exceeded; 'frag-session-count': Fragmentation Session Count; 'sctp-rcv': SCTP Received; 'sctp-dropped': SCTP Dropped; 'first-gtp-packet-too-small': First GTP Fragment Too Small Drop;

Type: string

Supported Values: all, session-inserted, session-expired, icmp-rcv, icmpv6-rcv, udp-rcv, tcp-rcv, ipip-rcv, ipv6ip-rcv, other-rcv, icmp-dropped, icmpv6-dropped, udp-dropped, tcp-dropped, ipip-dropped, ipv6ip-dropped, other-dropped, overlap-error, bad-ip-len, too-small, first-tcp-too-small, first-l4-too-small, total-sessions-exceeded, no-session-memory, fast-aging-set, fast-aging-unset, fragment-queue-success, unaligned-len, exceeded-len, duplicate-first-frag, duplicate-last-frag, total-fragments-exceeded, fragment-queue-failure, reassembly-success, max-len-exceeded, reassembly-failure, policy-drop, error-drop, high-cpu-threshold, low-cpu-threshold, cpu-threshold-drop, ipd-entry-drop, max-packets-exceeded, session-packets-exceeded, frag-session-count, sctp-rcv, sctp-dropped, first-gtp-packet-too-small

frag_cpu-threshold

Specification	Value
Type	*object*

high

Description When CPU usage reaches this value, it will stop processing fragments (default: 75%)

Type: number

Range: 0-100

Default: 75

low

Description When CPU usage remains under this value, it will resume processing fragments (default: 60%)

Type: number

Range: 0-100

Default: 60

dns

Specification	Value
Type	*object*

primary

Description: primary is a **JSON Block**. Please see below for *dns_primary*

Type: Object

Reference Object: */axapi/v3/ip/dns/primary*

secondary

Description: secondary is a **JSON Block**. Please see below for *dns_secondary*

Type: Object

Reference Object: */axapi/v3/ip/dns/secondary*

suffix

Description: suffix is a **JSON Block**. Please see below for *dns_suffix*

Type: Object

Reference Object: */axapi/v3/ip/dns/suffix*

dns_suffix

Specification	Value
Type	*object*

domain-name

Description DNS suffix

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_primary

Specification	Value
Type	*object*

ip-v4-addr

Description DNS server address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-v4-addr and ip-v6-addr are mutually exclusive

ip-v6-addr

Description DNS server address

Type: string

Format: ipv6-address

Mutual Exclusion: ip-v6-addr and ip-v4-addr are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_secondary

Specification	Value
Type	*object*

ip-v4-addr

Description DNS server address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-v4-addr and ip-v6-addr are mutually exclusive

ip-v6-addr

Description DNS server address

Type: string

Format: ipv6-address

Mutual Exclusion: ip-v6-addr and ip-v4-addr are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

large-community-list

Specification	Value
Type	*object*

expanded-list

Type: List

Reference Object: */axapi/v3/ip/large-community-list/expanded/{expanded}*

expanded-num-list

Type: List

Reference Object: */axapi/v3/ip/large-community-list/expanded-num/{ext-list-num}*

standard-list

Type: List

Reference Object: */axapi/v3/ip/large-community-list/standard/{standard}*

standard-num-list

Type: List

Reference Object: */axapi/v3/ip/large-community-list/standard-num/{std-list-num}*

large-community-list_expanded-num-list

Specification	Value
Type	*list*
Block object keys	

ext-list-num

Description Large community list number (expanded)

Type: number

Range: 100-199

rules-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

large-community-list_expanded-num-list_rules-list

Specification	Value
Type	*list*
Block object keys	

ext-list-lcom-action

Description 'deny': Specify large community to reject; 'permit': Specify large community to accept;

Type: string

Supported Values: deny, permit

ext-list-lcom-value

Description An ordered list as a regular-expression

Type: string

Format: string-rlx

large-community-list_expanded-list

Specification	Value
Type	*list*
Block object keys	

expanded

Description Add an expanded large community-list entry (Large community list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rules-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

large-community-list_expanded-list_rules-list

Specification	Value
Type	*list*
Block object keys	

expanded-lcom-action

Description 'deny': Specify large community to reject; 'permit': Specify large community to accept;

Type: string

Supported Values: deny, permit

expanded-lcom-value

Description An ordered list as a regular-expression

Type: string

Format: string-rlx

large-community-list_standard-num-list

Specification	Value
Type	*list*
Block object keys	

rules-list

Type: List

std-list-num

Description Large Community list number (standard)

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

large-community-list_standard-num-list_rules-list

Specification	Value
Type	*list*
Block object keys	

std-list-lcom-action

Description 'deny': Specify large community to reject; 'permit': Specify large community to accept;

Type: string

Supported Values: deny, permit

std-list-lcomm-value

Description Large community value in the format XX:YY:ZZ

Type: string

Format: string-rlx

large-community-list_standard-list

Specification	Value
Type	*list*
Block object keys	

rules-list

Type: List

standard

Description Add a standard large community-list entry (Large community list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

large-community-list_standard-list_rules-list

Specification	Value
Type	*list*
Block object keys	

standard-lcom-action

Description 'deny': Specify large community to reject; 'permit': Specify large community to accept;

Type: string

Supported Values: deny, permit

standard-lcomm-value

Description Large community value in the format XX:YY:ZZ

Type: string

Format: string-rlx

access-list-list

Specification	Value
Type	*list*
Block object keys	

name

Description IP Access List Name. Does not support name as digits or start with digit.

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

rules

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list-list_rules

Specification	Value
Type	*list*
Block object keys	

acl-log

Description Log matches against this entry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action

Description 'deny': Deny; 'permit': Permit; 'l3-vlan-fwd-disable': Disable L3 forwarding between VLANs;

Type: string

Supported Values: deny, permit, l3-vlan-fwd-disable

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code, icmp-code, and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type, icmp-type, and special-type are mutually exclusive

dscp

Description DSCP

Type: number

Range: 1-63

dst-any

Description Any destination host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst-any,dst-host, dst-subnet, and dst-object-group are mutually exclusive

dst-eq

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-eq,dst-gt, dst-lt, and dst-range are mutually exclusive

dst-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: dst-gt,dst-eq, dst-lt, and dst-range are mutually exclusive

dst-host

Description A single destination host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: dst-host,dst-any, dst-subnet, and dst-object-group are mutually exclusive

dst-lt

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

Mutual Exclusion: dst-lt,dst-eq, dst-gt, and dst-range are mutually exclusive

dst-mask

Description Destination Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

dst-object-group

Description Destination network object group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-object-group,dst-any, dst-host, and dst-subnet are mutually exclusive

dst-port-end

Description Edning Destination Port Number

Type: number

Range: 1-65535

dst-range

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-range,dst-eq, dst-gt, and dst-lt are mutually exclusive

dst-subnet

Description Destination Address

Type: string

Format: ipv4-address

Mutual Exclusion: dst-subnet,dst-any, dst-host, and dst-object-group are mutually exclusive

established

Description TCP established

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

fragments

Description IP fragments

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location

Description Specify geo-location name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmp,tcp, udp, ip, and service-obj-group are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code, any-code, and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type, any-type, and special-type are mutually exclusive

ip

Description Any Internet Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip,icmp, tcp, udp, and service-obj-group are mutually exclusive

remark

Description Access list entry comment (Notes for this ACL)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-num

Description Sequence Number

Type: number

Range: 1-8192

service-obj-group

Description Service object group (Source object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-obj-group,icmp, tcp, udp, and ip are mutually exclusive

special-code

Description 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code, any-code, and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5, redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type, icmp-type, and any-type are mutually exclusive

src-any

Description Any source host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src-any,src-host, src-subnet, and src-object-group are mutually exclusive

src-eq

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: src-eq,src-gt, src-lt, and src-range are mutually exclusive

src-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: src-gt,src-eq, src-lt, and src-range are mutually exclusive

src-host

Description A single source host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: src-host,src-any, src-subnet, and src-object-group are mutually exclusive

src-lt

Description Match only packets with a lower port number

Type: number

Range: 2-65535

Mutual Exclusion: src-lt,src-eq, src-gt, and src-range are mutually exclusive

src-mask

Description Source Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

src-object-group

Description Network object group (Source network object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-object-group,src-any, src-host, and src-subnet are mutually exclusive

src-port-end

Description Ending Port Number

Type: number

Range: 1-65535

src-range

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: src-range,src-eq, src-gt, and src-lt are mutually exclusive

src-subnet

Description Source Address

Type: string

Format: ipv4-address

Mutual Exclusion: src-subnet,src-any, src-host, and src-object-group are mutually exclusive

tcp

Description protocol TCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tcp,icmp, udp, ip, and service-obj-group are mutually exclusive

transparent-session-only

Description Only log transparent sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk

Description Ethernet trunk (trunk number)

Type: number

Format: interface

udp

Description protocol UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: udp,icmp, tcp, ip, and service-obj-group are mutually exclusive

vlan

Description VLAN ID

Type: number

Range: 1-4094

map-list-list

Specification	Value
Type	*list*
Block object keys	

file

Description Create/Edit a IP Map List stored as a file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mapping-list

Type: List

name

Description Specify name of the IP Map List

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

map-list-list_mapping-list

Specification	Value
Type	*list*
Block object keys	

count

Description Number of addresses to be translated in this range

Type: number

Range: 1-16777216

global-start-ip

Description Global Start IPv4 Address of this list

Type: string

Format: ipv4-address

local-start-ip

Description Local Start IPv4 Address of this list

Type: string

Format: ipv4-address

address

Specification	Value
Type	*object*

ip-addr

Description IP address

Type: string

Format: ipv4-address

ip-mask

Description IP subnet mask

Type: string

Format: ipv4-netmask

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

unnumbered

Specification	Value
Type	*object*

use-source-ip

Description: use-source-ip is a **JSON Block**. Please see below for *unnumbered_use-source-ip*

Type: Object

Reference Object: */axapi/v3/ip/unnumbered/use-source-ip*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

unnumbered_use-source-ip

Specification	Value
Type	*object*

update-source-ip

Description IP address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

as-path-list

Specification	Value
Type	*list*
Block object keys	

access-list

Description Specify an access list name (Regular expression access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

action

Description 'deny': Specify packets to reject; 'permit': Specify packets to forward;

Type: string

Supported Values: deny, permit

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description A regular-expression to match the BGP AS paths

Type: string

Format: string-rlx

route

Specification	Value
Type	*object*

rib-list

Type: List

Reference Object: */axapi/v3/ip/route/rib/{ip-dest-addr}+{ip-mask}*

source

Description: source is a **JSON Block**. Please see below for *route_source*

Type: Object

Reference Object: */axapi/v3/ip/route/source*

static

Description: static is a **JSON Block**. Please see below for *route_static*

Type: Object

Reference Object: */axapi/v3/ip/route/static*

route_rib-list

Specification	Value
Type	*list*
Block object keys	

ip-dest-addr

Description Destination prefix

Type: string

Format: ipv4-address

ip-mask

Description Destination prefix mask

Type: string

Format: ipv4-netmask-brief

ip-nexthop-ipv4

Type: List

ip-nexthop-lif

Type: List

ip-nexthop-partition

Type: List

ip-nexthop-tunnel

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route_rib-list_ip-nexthop-lif

Specification	Value
Type	*list*
Block object keys	

description-nexthop-lif

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

lif

Description LIF Interface (Logical tunnel interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

route_rib-list_ip-nexthop-ipv4

Specification	Value
Type	*list*
Block object keys	

description-nexthop-ip

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

distance-nexthop-ip

Description Distance value for this route

Type: number

Range: 1-255

Default: 1

ip-next-hop

Description Forwarding router's address

Type: string

Format: ipv4-address

route_rib-list_ip-nexthop-tunnel

Specification	Value
Type	*list*
Block object keys	

description-nexthop-tunnel

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

distance-nexthop-tunnel

Description Distance value for this route

Type: number

Range: 1-255

Default: 1

ip-next-hop-tunnel

Description Forwarding router's address

Type: string

Format: ipv4-address

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Range: 1-128

route_rib-list_ip-nexthop-partition

Specification	Value
Type	*list*
Block object keys	

description-nexthop-partition

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

description-partition-vrid

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

partition-name

Description Name of network partition

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

vrid-num-in-partition

Description Specify ha VRRP-A vrid

Type: number

Range: 0-31

route_source

Specification	Value
Type	*object*

lif-list

Type: List

Reference Object: */axapi/v3/ip/route/source/lif/{ifname}+{nexthop-ip}*

ve-list

Type: List

Reference Object: */axapi/v3/ip/route/source/ve/{ve-num}+{nexthop-ip}*

route_source_lif-list

Specification	Value
Type	*list*
Block object keys	

ifname

Description Lif interface name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

nexthop-ip

Description Nexthop IP address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route_source_ve-list

Specification	Value
Type	*list*
Block object keys	

nexthop-ip

Description Nexthop IP address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-num

Description

Type: number

Range: 1-4094

route_static

Specification	Value
Type	*object*

bfd-list

Type: List

Reference Object: */axapi/v3/ip/route/static/bfd/{local-ip}+{nexthop-ip}*

route_static_bfd-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

local-ip

Description Local IP address

Type: string

Format: ipv4-address

nexthop-ip

Description Nexthop IP address

Type: string

Format: ipv4-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat-global

Specification	Value
Type	*object*

reset-idle-tcp-conn

Description Reset Idle TCP Connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reroute

Specification	Value
Type	*object*

suppress-protocols

Description: suppress-protocols is a **JSON Block**. Please see below for *reroute_suppress-protocols*

Type: Object

Reference Object: */axapi/v3/ip/reroute/suppress-protocols*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reroute_suppress-protocols

Specification	Value
Type	*object*

connected

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp

Description EBGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ibgp

Description IBGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis

Description ISIS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description OSPF

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description RIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.64.2 ip access-list

Configure Access List

access-list Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*access-list-list*
Collection URI	/axapi/v3/ip/access-list
Element Name	access-list
Element URI	/axapi/v3/ip/access-list/{name}
Element Attributes	access-list_attributes
Partition Visibility	shared
Schema	`access-list schema`

Operations Allowed:

access-list attributes

Replace List

PUT

/axapi/v3/ip/access-list

access-list-list

Delete Object

DELETE

/axapi/v3/ip/access-list/{name}

access-list attributes

access-list-list

access-list-list is **JSON List** of *access-list attributes*

```
access-list-list : [
        { access-list attributes },
        { access-list attributes },
        ...
    ]
```

access-list attributes

name

Description IP Access List Name. Does not support name as digits or start with digit.

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

rules

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rules

Specification	Value
Type	*list*
Block object keys	

acl-log

Description Log matches against this entry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action

Description 'deny': Deny; 'permit': Permit; 'l3-vlan-fwd-disable': Disable L3 forwarding between VLANs;

Type: string

Supported Values: deny, permit, l3-vlan-fwd-disable

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code, icmp-code, and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type, icmp-type, and special-type are mutually exclusive

dscp

Description DSCP

Type: number

Range: 1-63

dst-any

Description Any destination host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst-any,dst-host, dst-subnet, and dst-object-group are mutually exclusive

dst-eq

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-eq,dst-gt, dst-lt, and dst-range are mutually exclusive

dst-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: dst-gt,dst-eq, dst-lt, and dst-range are mutually exclusive

dst-host

Description A single destination host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: dst-host,dst-any, dst-subnet, and dst-object-group are mutually exclusive

dst-lt

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

Mutual Exclusion: dst-lt,dst-eq, dst-gt, and dst-range are mutually exclusive

dst-mask

Description Destination Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

dst-object-group

Description Destination network object group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-object-group,dst-any, dst-host, and dst-subnet are mutually exclusive

dst-port-end

Description Edning Destination Port Number

Type: number

Range: 1-65535

dst-range

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-range,dst-eq, dst-gt, and dst-lt are mutually exclusive

dst-subnet

Description Destination Address

Type: string

Format: ipv4-address

Mutual Exclusion: dst-subnet,dst-any, dst-host, and dst-object-group are mutually exclusive

established

Description TCP established

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

fragments

Description IP fragments

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location

Description Specify geo-location name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmp,tcp, udp, ip, and service-obj-group are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code, any-code, and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type, any-type, and special-type are mutually exclusive

ip

Description Any Internet Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip,icmp, tcp, udp, and service-obj-group are mutually exclusive

remark

Description Access list entry comment (Notes for this ACL)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-num

Description Sequence Number

Type: number

Range: 1-8192

service-obj-group

Description Service object group (Source object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-obj-group,icmp, tcp, udp, and ip are mutually exclusive

special-code

Description 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code, any-code, and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5, redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type, icmp-type, and any-type are mutually exclusive

src-any

Description Any source host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src-any,src-host, src-subnet, and src-object-group are mutually exclusive

src-eq

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: src-eq,src-gt, src-lt, and src-range are mutually exclusive

src-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: src-gt,src-eq, src-lt, and src-range are mutually exclusive

src-host

Description A single source host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: src-host,src-any, src-subnet, and src-object-group are mutually exclusive

src-lt

Description Match only packets with a lower port number

Type: number

Range: 2-65535

Mutual Exclusion: src-lt,src-eq, src-gt, and src-range are mutually exclusive

src-mask

Description Source Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

src-object-group

Description Network object group (Source network object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-object-group,src-any, src-host, and src-subnet are mutually exclusive

src-port-end

Description Ending Port Number

Type: number

Range: 1-65535

src-range

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: src-range,src-eq, src-gt, and src-lt are mutually exclusive

src-subnet

Description Source Address

Type: string

Format: ipv4-address

Mutual Exclusion: src-subnet,src-any, src-host, and src-object-group are mutually exclusive

tcp

Description protocol TCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tcp,icmp, udp, ip, and service-obj-group are mutually exclusive

transparent-session-only

Description Only log transparent sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk

Description Ethernet trunk (trunk number)

Type: number

Format: interface

udp

Description protocol UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: udp,icmp, tcp, ip, and service-obj-group are mutually exclusive

vlan

Description VLAN ID

Type: number

Range: 1-4094

2.64.3 ip address

}
```

anomaly-drop attributes

bad-content

Description bad content threshold (threshold value)

Type: number

Range: 1-127

drop-all

Description drop all IP anomaly packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

frag

Description drop all fragmented packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-option

Description drop packets with IP options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-ext-header

Description: ipv6-ext-header is a **JSON Block**. Please see below for *ipv6-ext-header*

Type: Object

land-attack

Description drop IP packets with the same source and destination addresses

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out-of-sequence

Description out of sequence packet threshold (threshold value)

Type: number

Range: 1-127

packet-deformity

Description: packet-deformity is a **JSON Block**. Please see below for *packet-deformity*

Type: Object

ping-of-death

Description drop oversize ICMP packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

security-attack

Description: security-attack is a **JSON Block**. Please see below for *security-attack*

Type: Object

tcp-no-flag

Description drop TCP packets with no flag

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-syn-fin

Description drop TCP packets with both syn and fin flags set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-syn-frag

Description drop fragmented TCP packets with syn flag set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zero-window

Description zero window size threshold (threshold value)

Type: number

Range: 1-127

security-attack

Specification	Value
Type	*object*

security-attack-layer-3

Description drop packets with layer 3 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

security-attack-layer-4

Description drop packets with layer 4 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-deformity

Specification	Value
Type	*object*

packet-deformity-layer-3

Description drop packets with layer 3 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-deformity-layer-4

Description drop packets with layer 4 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

ipv6-eh-dest

Description Filter destination extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-esp

Description Filter ESP extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-frag

Description Filter fragmentation extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-hbh

Description Filter hop by hop extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-malformed

Description Filter malformed extension headers (check for order and occurrences)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-mobility

Description Filter mobility extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-nonext

Description Filter no-next-header extension header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-eh-routing

Description Filter routing extension header

Type: boolean

Supported Values: true, false, 1, 0

Type: number

routing-otype-to

Description Option type range end

Type: number

ipv6-ext-header_dst-option-list

Specification	Value
Type	*list*
Block object keys	

dst-otype-from

Description Filter destination header option type (Option type value)

Type: number

dst-otype-to

Description Option type range end

Type: number

ipv6-ext-header_hbh-option-list

Specification	Value
Type	*list*
Block object keys	

hbh-otype-from

Description Filter hop by hop option type (Option type value)

Type: number

hbh-otype-to

Description Option type range end

Type: number

ipv6-ext-header_unknown-ext-header-list

Specification	Value
Type	*list*
Block object keys	

eh-type-from

Description Filter unknown extension header (eh) type (Extension header type value)

Type: number

eh-type-to

Description Extension header type range end

Type: number

2.64.5 ip anomaly-drop stats

Statistics for the object anomaly-drop

anomaly-drop Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	anomaly-drop
Element URI	/axapi/v3/ip/anomaly-drop/stats
Element Attributes	anomaly-drop_attributes
Partition Visibility	None
Schema	`anomaly-drop schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ip/anomaly-drop/stats

anomaly-drop attributes

Get Object

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

bad_ip_flg

Description Bad IP Flags Drop

Type: number

Format: counter

bad_ip_frg_offset

Description Bad IP Fragment Offset Drop

Type: number

Format: counter

bad_ip_hdrlen

Description Bad IP Header Len Drop

Type: number

Format: counter

bad_ip_payload_len

Description Bad IP Payload Len Drop

Type: number

Format: counter

bad_ip_ttl

Description Bad IP TTL Drop

Type: number

Format: counter

bad_tcp_urg_offset

Description TCP Bad Urgent Offset Drop

Type: number

Format: counter

csum

Description Bad IP Checksum Drop

Type: number

Format: counter

emp_frg

Description Empty Fragment Drop

Type: number

Format: counter

emp_mic_frg

Description Micro Fragment Drop

Type: number

Format: counter

frg

Description IPv4 Fragment Drop

Type: number

Format: counter

gre_pptp_err

Description GRE PPTP Error Drop

Type: number

Format: counter

ipip_tnl_err

Description IP-over-IP Tunnel Error Drop

Type: number

Format: counter

ipip_tnl_msmtch

Description IP-over-IP Tunnel Mismatch Drop

Type: number

Format: counter

ipv6_eh_ah

Description IPv6 Authentication Header Drop

Type: number

Format: counter

ipv6_eh_dest

Description IPv6 Destination Header Drop

Type: number

Format: counter

ipv6_eh_esp

Description IPv6 ESP Header Drop

Type: number

Format: counter

ipv6_eh_frag

Description IPv6 Fragmentation Header Drop

Type: number

Format: counter

ipv6_eh_hbh

Description IPv6 Hop by Hop Header Drop

Type: number

Format: counter

ipv6_eh_malformed

Description IPv6 Malformed Extension Header Drop

Type: number

Format: counter

ipv6_eh_mobility

Description IPv6 Mobility Header Drop

Type: number

Format: counter

ipv6_eh_none

Description IPv6 No Next Header Drop

Type: number

Format: counter

ipv6_eh_other

Description IPv6 Unknown Extension Header Drop

Type: number

Format: counter

ipv6_eh_routing

Description IPv6 Routing Header Drop

Type: number

Format: counter

land

Description Land Attack Drop

Type: number

Format: counter

no_ip_payload

Description No IP Payload drop

Type: number

Format: counter

nvgre_err

Description GRE Tunnel Error Drop

Type: number

Format: counter

opt

Description IPv4 Options Drop

Type: number

Format: counter

over_ip_payload

Description Oversize IP Payload Drop

Type: number

Format: counter

pod

Description ICMP Ping of Death Drop

Type: number

Format: counter

runt_ip_hdr

Description Runt IP Header Drop

Type: number

Format: counter

runt_tcp_udp_hdr

Description Runt TCP/UDP Header Drop

Type: number

Format: counter

tcp_bad_csum

Description TCP Bad Checksum Drop

Type: number

Format: counter

tcp_bad_iplen

Description TCP Bad IP Length Drop

Type: number

Format: counter

tcp_frg_hdr

Description TCP Fragmented Header Drop

Type: number

Format: counter

tcp_null_frg

Description TCP Null Flags Drop

Type: number

Format: counter

tcp_null_scan

Description TCP Null Scan Drop

Type: number

Format: counter

tcp_opt_err

Description TCP Option Error Drop

Type: number

Format: counter

tcp_sht_hdr

Description TCP Short Header Drop

Type: number

Format: counter

tcp_syn_fin

Description TCP Syn and Fin Drop

Type: number

Format: counter

tcp_syn_frg

Description TCP Syn Fragment Drop

Type: number

Format: counter

tcp_xmas

Description TCP XMAS Flags Drop

Type: number

Format: counter

tcp_xmas_scan

Description TCP XMAS Scan Drop

Type: number

Format: counter

udp_bad_csum

Description UDP Bad Checksum Drop

Type: number

Format: counter

udp_bad_len

Description UDP Bad Length Drop

Type: number

Format: counter

udp_kerb_frg

Description UDP Kerberos Fragment Drop

Type: number

Format: counter

udp_port_lb

Description UDP Port Loopback Drop

Type: number

Format: counter

udp_srt_hdr

Description UDP Short Header Drop

Type: number

Format: counter

vxlan_err

Description VXLAN Tunnel Error Drop

Type: number

Format: counter

2.64.6 ip app-protocol-port

Application protocol port filtering

app-protocol-port Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	app-protocol-port
Element URI	/axapi/v3/ip/app-protocol-port
Element Attributes	app-protocol-port_attributes
Partition Visibility	shared
Schema	`app-protocol-port schema`

Operations Allowed:

Get Object

GET

/axapi/v3/ip/app-protocol-port

Reference Object: */axapi/v3/ip/app-protocol-port/tcp/port/add/{port}/app-name/{name}*

port

Description Port Number

Type: number

Range: 0-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

add-list_app-name-list

Specification	Value
Type	*list*
Block object keys	

interface

Description: interface is a **JSON Block**. Please see below for *add-list_app-name-list_interface*

Type: Object

Reference Object: */axapi/v3/ip/app-protocol-port/tcp/port/add/{port}/app-name/{name}/interface*

name

Description Application Protocol Port Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

add-list_app-name-list_interface

Specification	Value
Type	*object*

eth-cfg

Type: List

management

Description Management Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

add-list_app-name-list_interface_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve-end

Description VE port

Type: number

ve-start

Description VE port (VE Interface number)

Type: number

add-list_app-name-list_interface_eth-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Ethernet Interface number)

Type: number

Format: interface

Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Ethernet Interface number)

Type: number

Format: interface

2.64.11 ip app-protocol-port tcp port add

Add application port

add Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*port*
Collection Name	*add-list*
Collection URI	/axapi/v3/ip/app-protocol-port/tcp/port/add
Element Name	add
Element URI	/axapi/v3/ip/app-protocol-port/tcp/port/add/{port}
Element Attributes	add_attributes
Partition Visibility	shared
Schema	`add schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ip/app-protocol-port/tcp/port/add

add attributes

```
POST /axapi/v3/ip/app-protocol-port/tcp/port/add/
Payload:
{
    "add": {
        "port": 0
```

(continues on next page)

(continued from previous page)

```
    }
}
```

Create List

POST

/axapi/v3/ip/app-protocol-port/tcp/port/add

add attributes

Get Object

GET

/axapi/v3/ip/app-protocol-port/tcp/port/add/{port}

add attributes

```
GET /axapi/v3/ip/app-protocol-port/tcp/port/add/0
Reponse:
{
    "add": {
        "port": 0,
        "uuid": "61f9da5c-b5c1-11ef-b932-ae71681635d0",

        "status": "OK",
        "msg": "Success"
    }
}
```

frag attributes

buff

Description Max buff used for fragmentation (Buffer Value(10000-3000000))

Type: number

Range: 10000-3000000

cpu-threshold

Description: cpu-threshold is a **JSON Block**. Please see below for *cpu-threshold*

Type: Object

max-packets-per-reassembly

Description Max number of fragmented packets allowed per reassembly(0 is unlimited) (default 0)

Type: number

Range: 2-16

max-reassembly-sessions

Description Max number of pending reassembly sessions allowed (default 100000)

Type: number

Range: 1-200000

sampling-enable

Type: List

timeout

Description Fragmentation timeout (in milliseconds 4 - 65535 (default is 60000))

Type: number

Range: 4-65535

Default: 60000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-inserted': Session Inserted; 'session-expired': Session Expired; 'icmp-rcv': ICMP Received; 'icmpv6-rcv': ICMPv6 Received; 'udp-rcv': UDP Received; 'tcp-rcv': TCP Received; 'ipip-rcv': IP-in-IP Received; 'ipv6ip-rcv': IPv6-in-IP Received; 'other-rcv': Other Received; 'icmp-dropped': ICMP Dropped; 'icmpv6-dropped': ICMPv6 Dropped; 'udp-dropped': UDP Dropped; 'tcp-dropped': TCP Dropped; 'ipip-dropped': IP-in-IP Dropped; 'ipv6ip-dropped': IPv6-in-IP Dropped; 'other-dropped': Other Dropped; 'overlap-error': Overlapping Fragment Dropped; 'bad-ip-len': Bad IP Length; 'too-small': Fragment Too Small Drop; 'first-tcp-too-small': First TCP Fragment Too Small Drop; 'first-l4-too-small': First L4 Fragment Too Small Drop; 'total-sessions-exceeded': Total Sessions Exceeded Drop; 'no-session-memory': Out of Session Memory; 'fast-aging-set': Fragmentation

Fast Aging Set; 'fast-aging-unset': Fragmentation Fast Aging Unset; 'fragment-queue-success': Fragment Queue Success; 'unaligned-len': Payload Length Unaligned; 'exceeded-len': Payload Length Out of Bounds; 'duplicate-first-frag': Duplicate First Fragment; 'duplicate-last-frag': Duplicate Last Fragment; 'total-fragments-exceeded': Total Queued Fragments Exceeded; 'fragment-queue-failure': Fragment Queue Failure; 'reassembly-success': Fragment Reassembly Success; 'max-len-exceeded': Fragment Max Data Length Exceeded; 'reassembly-failure': Fragment Reassembly Failure; 'policy-drop': MTU Exceeded Policy Drop; 'error-drop': Fragment Processing Drop; 'high-cpu-threshold': High CPU Threshold Reached; 'low-cpu-threshold': Low CPU Threshold Reached; 'cpu-threshold-drop': High CPU Drop; 'ipd-entry-drop': DDoS Protection Drop; 'max-packets-exceeded': Too Many Packets Per Reassembly Drop; 'session-packets-exceeded': Session Max Packets Exceeded; 'frag-session-count': Fragmentation Session Count; 'sctp-rcv': SCTP Received; 'sctp-dropped': SCTP Dropped; 'first-gtp-packet-too-small': First GTP Fragment Too Small Drop;

Type: string

Supported Values: all, session-inserted, session-expired, icmp-rcv, icmpv6-rcv, udp-rcv, tcp-rcv, ipip-rcv, ipv6ip-rcv, other-rcv, icmp-dropped, icmpv6-dropped, udp-dropped, tcp-dropped, ipip-dropped, ipv6ip-dropped, other-dropped, overlap-error, bad-ip-len, too-small, first-tcp-too-small, first-l4-too-small, total-sessions-exceeded, no-session-memory, fast-aging-set, fast-aging-unset, fragment-queue-success, unaligned-len, exceeded-len, duplicate-first-frag, duplicate-last-frag, total-fragments-exceeded, fragment-queue-failure, reassembly-success, max-len-exceeded, reassembly-failure, policy-drop, error-drop, high-cpu-threshold, low-cpu-threshold, cpu-threshold-drop, ipd-entry-drop, max-packets-exceeded, session-packets-exceeded, frag-session-count, sctp-rcv, sctp-dropped, first-gtp-packet-too-small

cpu-threshold

Specification	Value
Type	*object*

high

Description When CPU usage reaches this value, it will stop processing fragments (default: 75%)

Type: number

Range: 0-100

Default: 75

low

Description When CPU usage remains under this value, it will resume processing fragments (default: 60%)

Type: number

Range: 0-100

Default: 60

low-cpu-threshold

Description Low CPU Threshold Reached

Type: number

Format: counter

max-len-exceeded

Description Fragment Max Data Length Exceeded

Type: number

Format: counter

max-packets-exceeded

Description Too Many Packets Per Reassembly Drop

Type: number

Format: counter

no-session-memory

Description Out of Session Memory

Type: number

Format: counter

other-dropped

Description Other Dropped

Type: number

Format: counter

other-rcv

Description Other Received

Type: number

Format: counter

overlap-error

Description Overlapping Fragment Dropped

Type: number

Format: counter

policy-drop

Description MTU Exceeded Policy Drop

Type: number

Format: counter

reassembly-failure

Description Fragment Reassembly Failure

Type: number

Format: counter

reassembly-success

Description Fragment Reassembly Success

Type: number

Format: counter

sctp-dropped

Description SCTP Dropped

Type: number

Format: counter

sctp-rcv

Description SCTP Received

Type: number

Format: counter

session-expired

Description Session Expired

Type: number

Format: counter

session-inserted

Description Session Inserted

Type: number

Format: counter

session-packets-exceeded

Description Session Max Packets Exceeded

Type: number

Format: counter

tcp-dropped

Description TCP Dropped

Type: number

Format: counter

tcp-rcv

Description TCP Received

Type: number

Format: counter

too-small

Description Fragment Too Small Drop

Type: number

Format: counter

total-fragments-exceeded

Description Total Queued Fragments Exceeded

Type: number

Format: counter

total-sessions-exceeded

Description Total Sessions Exceeded Drop

Type: number

Format: counter

udp-dropped

Description UDP Dropped

Type: number

Format: counter

udp-rcv

Description UDP Received

Type: number

Format: counter

unaligned-len

Description Payload Length Unaligned

Type: number

Format: counter

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

include-destination

Description Include the destination IP and port in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-rip-rport

Description Include the IP and port of real server in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *template_logging-list_log*

Type: Object

name

Description NAT logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group

Description Set NAT logging service-group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

severity

Description: severity is a **JSON Block**. Please see below for *template_logging-list_severity*

Type: Object

source-port

Description: source-port is a **JSON Block**. Please see below for *template_logging-list_source-port*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_severity

Specification	Value
Type	*object*

severity-string

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: debug

Mutual Exclusion: severity-string and severity-val are mutually exclusive

severity-val

Description Logging severity level

Type: number

Range: 0-7

Default: 7

Mutual Exclusion: severity-val and severity-string are mutually exclusive

template_logging-list_log

Specification	Value
Type	*object*

port-mappings

Description 'creation': Log creation of NAT mappgins; 'disable': Disable Log creation and deletion of NAT mappings;

Type: string

Supported Values: creation, disable

template_logging-list_source-port

Specification	Value
Type	*object*

any

Description Use any source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and source-port-num are mutually exclusive

source-port-num

Description Set source port for sending NAT syslogs (default: 514)

Type: number

Range: 1-65535

Default: 514

Mutual Exclusion: source-port-num and any are mutually exclusive

translation

Specification	Value
Type	*object*

icmp-timeout

Description: icmp-timeout is a **JSON Block**. Please see below for *translation_icmp-timeout*

Type: Object

ignore-tcp-msl

Description reclaim TCP resource immediately without MSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-timeout-list

Type: List

Reference Object: */axapi/v3/ip/nat/translation/service-timeout/{service-type}+{port}*

tcp-timeout

Description TCP protocol extended translations (Timeout in seconds (Interval of 60 seconds), default is 300 seconds (5 minutes))

Type: number

Range: 2-15000

Default: 300

udp-timeout

Description UDP protocol extended translations (Timeout in seconds (Interval of 60 seconds), default is 300 seconds (5 minutes))

Type: number

Range: 2-15000

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation_service-timeout-list

Specification	Value
Type	*list*
Block object keys	

port

Description Port Number

Type: number

Range: 1-65535

service-type

Description 'tcp': TCP Protocol; 'udp': UDP Protocol;

Type: string

Supported Values: tcp, udp

timeout-type

Description 'age': Expiration time; 'fast': Use Fast aging;

Type: string

Supported Values: age, fast

timeout-val

Description Timeout in seconds (Interval of 60 seconds)

Type: number

Range: 2-15000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation_icmp-timeout

Specification	Value
Type	*object*

icmp-timeout

Description 'age': Expiration time; 'fast': Use Fast aging;

Type: string

Supported Values: age, fast

Default: fast

icmp-timeout-val

Description Timeout in seconds (Interval of 60 seconds)

Type: number

Range: 2-15000

icmp

Specification	Value
Type	*object*

always-source-nat-errors

Description Source NAT intermediate routers' IPs for ICMP errors (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

respond-to-ping

Description Respond to ICMP echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside

Specification	Value
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *inside_source*

Type: Object

Reference Object: */axapi/v3/ip/nat/inside/source*

inside_source

Specification	Value
Type	*object*

class-list

Description: class-list is a **JSON Block**. Please see below for *inside_source_class-list*

Type: Object

Reference Object: */axapi/v3/ip/nat/inside/source/class-list*

list

Description: list is a **JSON Block**. Please see below for *inside_source_list*

Type: Object

Reference Object: */axapi/v3/ip/nat/inside/source/list*

static-list

Type: List

Reference Object: */axapi/v3/ip/nat/inside/source/static/{src-address}+{nat-address}*

inside_source_static-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': Enable static mapping (default); 'disable': Disable static mapping;

Type: string

Supported Values: enable, disable

Default: enable

nat-address

Description NAT Address

Type: string

Format: ipv4-address

src-address

Description Original Source Address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Reference Object: */axapi/v3/vrrp-a/vrid*

inside_source_list

Specification	Value
Type	*object*

acl-id-list-list

Type: List

Reference Object: */axapi/v3/ip/nat/inside/source/list/acl-id-list/{acl-id}*

acl-name-list-list

Type: List

Reference Object: */axapi/v3/ip/nat/inside/source/list/acl-name-list/{name}*

inside_source_list_acl-id-list-list

Specification	Value
Type	*list*
Block object keys	

acl-id

Description Acl id

Type: number

Range: 1-199

Reference Object: */axapi/v3/access-list/standard*

msl

Description Maximum Session Life Value

Type: number

Range: 1-1800

pool

Description Pool or Pool Group (Pool or Pool Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside_source_list_acl-name-list-list

Specification	Value
Type	*list*
Block object keys	

msl

Description Maximum Session Life Value

Type: number

Range: 1-1800

name

Description Apply an access list

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

pool

Description Pool or Pool Group (Pool or Pool Group Nam)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside_source_class-list

Specification	Value
Type	*object*

name

Description Class List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pool-list

Specification	Value
Type	*list*
Block object keys	

chunk-sharing

Description Share NAT pool chunk across CPUs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

ethernet

Description Ethernet interface

Type: number

Format: interface

gateway

Description Configure gateway IP

Type: string

Format: ipv4-address

ip-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-overload

Description Nat Pool Port overload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

scaleout-device-id

Description Configure Scaleout device id to which this NAT pool is to be bound (Specify Scaleout device id)

Type: number

Range: 1-16

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

Mutual Exclusion: start-address and use-if-ip are mutually exclusive

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip and start-address are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Reference Object: */axapi/v3/vrrp-a/vrid*

pool-list

pool-list is **JSON List** of *pool attributes*

pool-list : [

{ *pool attributes* },

{ *pool attributes* },

...

]

pool attributes

chunk-sharing

Description Share NAT pool chunk across CPUs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

ethernet

Description Ethernet interface

Type: number

Format: interface

gateway

Description Configure gateway IP

Type: string

Format: ipv4-address

ip-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-overload

Description Nat Pool Port overload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

scaleout-device-id

Description Configure Scaleout device id to which this NAT pool is to be bound (Specify Scaleout device id)

Type: number

Range: 1-16

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

Mutual Exclusion: start-address and use-if-ip are mutually exclusive

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip and start-address are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Reference Object: */axapi/v3/vrrp-a/vrid*

logging-list

logging-list is **JSON List** of *logging attributes*

logging-list : [

{ *logging attributes* },

{ *logging attributes* },

...

]

logging attributes

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

include-destination

Description Include the destination IP and port in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-rip-rport

Description Include the IP and port of real server in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *log*

Type: Object

name

Description NAT logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group

Description Set NAT logging service-group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

severity

Description: severity is a **JSON Block**. Please see below for *severity*

Type: Object

source-port

Description: source-port is a **JSON Block**. Please see below for *source-port*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

severity

Specification	Value
Type	*object*

severity-string

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: debug

Mutual Exclusion: severity-string and severity-val are mutually exclusive

severity-val

Description Logging severity level

Type: number

Range: 0-7

Default: 7

Mutual Exclusion: severity-val and severity-string are mutually exclusive

log

Specification	Value
Type	*object*

port-mappings

Description 'creation': Log creation of NAT mappgins; 'disable': Disable Log creation and deletion of NAT mappings;

Type: string

Supported Values: creation, disable

source-port

Specification	Value
Type	*object*

any

Description Use any source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and source-port-num are mutually exclusive

source-port-num

Description Set source port for sending NAT syslogs (default: 514)

Type: number

Range: 1-65535

Default: 514

Mutual Exclusion: source-port-num and any are mutually exclusive

Type: number

Format: counter

icmpv6-dropped

Description ICMPv6 Dropped

Type: number

Format: counter

icmpv6-rcv

Description ICMPv6 Received

Type: number

Format: counter

ipd-entry-drop

Description DDoS Protection Drop

Type: number

Format: counter

ipip-dropped

Description IP-in-IP Dropped

Type: number

Format: counter

ipip-rcv

Description IP-in-IP Received

Type: number

Format: counter

ipv6ip-dropped

Description IPv6-in-IP Dropped

Type: number

Format: counter

ipv6ip-rcv

Description IPv6-in-IP Received

Type: number

Format: counter

low-cpu-threshold

Description Low CPU Threshold Reached

Type: number

Format: counter

max-len-exceeded

Description Fragment Max Data Length Exceeded

Type: number

Format: counter

max-packets-exceeded

Description Too Many Packets Per Reassembly Drop

Type: number

Format: counter

no-session-memory

Description Out of Session Memory

Type: number

Format: counter

other-dropped

Description Other Dropped

Type: number

Format: counter

other-rcv

Description Other Received

Type: number

Format: counter

overlap-error

Description Overlapping Fragment Dropped

Type: number

Format: counter

policy-drop

Description MTU Exceeded Policy Drop

Type: number

Format: counter

reassembly-failure

Description Fragment Reassembly Failure

Type: number

Format: counter

reassembly-success

Description Fragment Reassembly Success

Type: number

Format: counter

sctp-dropped

Description SCTP Dropped

Type: number

Format: counter

sctp-rcv

Description SCTP Received

Type: number

Format: counter

session-expired

Description Session Expired

Type: number

Format: counter

session-inserted

Description Session Inserted

Type: number

Format: counter

session-packets-exceeded

Description Session Max Packets Exceeded

Type: number

Format: counter

tcp-dropped

Description TCP Dropped

Type: number

Format: counter

tcp-rcv

Description TCP Received

Type: number

Format: counter

too-small

Description Fragment Too Small Drop

Type: number

Format: counter

total-fragments-exceeded

Description Total Queued Fragments Exceeded

Type: number

Format: counter

total-sessions-exceeded

Description Total Sessions Exceeded Drop

Type: number

Format: counter

udp-dropped

Description UDP Dropped

Type: number

Format: counter

udp-rcv

Description UDP Received

Type: number

Format: counter

unaligned-len

Description Payload Length Unaligned

Type: number

Format: counter

2.67 ipv6

Objects:

2.67.1 ipv6

Global IP configuration subcommands

ipv6 Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	ipv6
Element URI	/axapi/v3/ipv6
Element Attributes	ipv6_attributes
Partition Visibility	shared
Schema	`ipv6 schema`

Operations Allowed:

Get Object

GET

/axapi/v3/ipv6

ipv6_attributes

ipv6 attributes

access-list-list

Type: List

Reference Object: */axapi/v3/ipv6/access-list/{name}*

address

Description: address is a **JSON Block**. Please see below for *address*

Type: Object

Reference Object: */axapi/v3/ipv6/address*

default-gateway

Description: default-gateway is a **JSON Block**. Please see below for *default-gateway*

Type: Object

Reference Object: */axapi/v3/ipv6/default-gateway*

fib

Description: fib is a **JSON Block**. Please see below for *fib*

Type: Object

Reference Object: */axapi/v3/ipv6/fib*

fib-summary

Description: fib-summary is a **JSON Block**. Please see below for *fib-summary*

Type: Object

Reference Object: */axapi/v3/ipv6/fib-summary*

frag

Description: frag is a **JSON Block**. Please see below for *frag*

Type: Object

Reference Object: */axapi/v3/ipv6/frag*

icmpv6

Description: icmpv6 is a **JSON Block**. Please see below for *icmpv6*

Type: Object

Reference Object: */axapi/v3/ipv6/icmpv6*

nat

Description: nat is a **JSON Block**. Please see below for *nat*

Type: Object

Reference Object: */axapi/v3/ipv6/nat*

neighbor

Description: neighbor is a **JSON Block**. Please see below for *neighbor*

Type: Object

Reference Object: */axapi/v3/ipv6/neighbor*

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Reference Object: */axapi/v3/ipv6/ospf*

prefix-list-list

Type: List

Reference Object: */axapi/v3/ipv6/prefix-list/{name}*

reroute

Description: reroute is a **JSON Block**. Please see below for *reroute*

Type: Object

Reference Object: */axapi/v3/ipv6/reroute*

rib

Description: rib is a **JSON Block**. Please see below for *rib*

Type: Object

Reference Object: */axapi/v3/ipv6/rib*

route

Description: route is a **JSON Block**. Please see below for *route*

Type: Object

Reference Object: */axapi/v3/ipv6/route*

telemetry

Description: telemetry is a **JSON Block**. Please see below for *telemetry*

Type: Object

Reference Object: */axapi/v3/ipv6/telemetry*

unnumbered

Description: unnumbered is a **JSON Block**. Please see below for *unnumbered*

Type: Object

Reference Object: */axapi/v3/ipv6/unnumbered*

frag

Specification	Value
Type	*object*

frag-timeout

Description in milliseconds 4 - 65535 (default is 60000)

Type: number

Range: 4-65535

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

frag_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-inserted': Session Inserted; 'session-expired': Session Expired; 'icmp-rcv': ICMP Received; 'icmpv6-rcv': ICMPv6 Received; 'udp-rcv': UDP Received; 'tcp-rcv': TCP Received; 'ipip-rcv': IP-in-IP Received; 'ipv6ip-rcv': IPv6-in-IP Received; 'other-rcv': Other Received; 'icmp-dropped': ICMP Dropped; 'icmpv6-dropped': ICMPv6 Dropped; 'udp-dropped': UDP Dropped; 'tcp-dropped': TCP Dropped; 'ipip-dropped': IP-in-IP Dropped; 'ipv6ip-dropped': IPv6-in-IP Dropped; 'other-dropped': Other Dropped; 'overlap-error': Overlapping Fragment Dropped; 'bad-ip-len': Bad IP Length; 'too-small': Fragment Too Small Drop; 'first-tcp-too-small': First TCP Fragment Too Small Drop; 'first-l4-too-small': First L4 Fragment Too Small Drop; 'total-sessions-exceeded': Total Sessions Exceeded Drop; 'no-session-memory': Out of Session Memory; 'fast-aging-set': Fragmentation Fast Aging Set; 'fast-aging-unset': Fragmentation Fast Aging Unset; 'fragment-queue-success': Fragment Queue Success; 'unaligned-len': Payload Length Unaligned; 'exceeded-len': Payload Length Out of Bounds; 'duplicate-first-frag': Duplicate First Fragment; 'duplicate-last-frag': Duplicate Last Fragment; 'total-fragments-exceeded': Total Queued Fragments Exceeded; 'fragment-queue-failure': Fragment Queue Failure; 'reassembly-success': Fragment Reassembly Success; 'max-len-exceeded': Fragment Max Data Length Exceeded; 'reassembly-failure': Fragment Reassembly Failure; 'policy-drop': MTU Exceeded Policy Drop; 'error-drop': Fragment Processing Drop; 'high-cpu-threshold': High CPU Threshold Reached; 'low-cpu-threshold': Low CPU Threshold Reached; 'cpu-threshold-drop': High CPU Drop; 'ipd-entry-drop': DDoS Protection Drop; 'max-packets-exceeded': Too Many Packets Per Reassembly Drop; 'session-packets-exceeded': Session Max Packets Exceeded; 'frag-session-count': Fragmentation Session Count; 'sctp-rcv': SCTP Received; 'sctp-dropped': SCTP Dropped; 'first-gtp-packet-too-small': First GTP Fragment Too Small Drop;

Type: string

Supported Values: all, session-inserted, session-expired, icmp-rcv, icmpv6-rcv, udp-rcv, tcp-rcv, ipip-rcv, ipv6ip-rcv, other-rcv, icmp-dropped, icmpv6-dropped, udp-dropped, tcp-dropped, ipip-dropped, ipv6ip-dropped, other-dropped, overlap-error, bad-ip-len, too-small, first-tcp-too-small, first-l4-too-small, total-sessions-exceeded, no-session-memory, fast-aging-set, fast-aging-unset, fragment-queue-success, unaligned-len, exceeded-len, duplicate-first-frag, duplicate-last-frag, total-fragments-exceeded, fragment-queue-failure, reassembly-success, max-len-exceeded, reassembly-failure, policy-drop, error-drop, high-cpu-threshold, low-cpu-threshold, cpu-threshold-drop, ipd-entry-drop, max-packets-exceeded, session-packets-exceeded, frag-session-count, sctp-rcv, sctp-dropped, first-gtp-packet-too-small

nat

Specification	Value
Type	*object*

icmpv6

Description: icmpv6 is a **JSON Block**. Please see below for *nat_icmpv6*

Type: Object

Reference Object: */axapi/v3/ipv6/nat/icmpv6*

inside

Description: inside is a **JSON Block**. Please see below for *nat_inside*

Type: Object

Reference Object: */axapi/v3/ipv6/nat/inside*

pool-group-list

Type: List

Reference Object: */axapi/v3/ipv6/nat/pool-group/{pool-group-name}*

pool-list

Type: List

Reference Object: */axapi/v3/ipv6/nat/pool/{pool-name}*

nat_icmpv6

Specification	Value
Type	*object*

respond-to-ping

Description Respond to ICMPv6 echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_pool-group-list

Specification	Value
Type	*list*
Block object keys	

member-list

Type: List

Reference Object: */axapi/v3/ipv6/nat/pool-group/{pool-group-name}/member/{pool-name}*

pool-group-name

Description Specify pool group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat_pool-group-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'Failed': some-help-string;

Type: string

Supported Values: all, Failed

nat_pool-group-list_member-list

Specification	Value
Type	*list*
Block object keys	

pool-name

Description Specify NAT pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_inside

Specification	Value
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *nat_inside_source*

Type: Object

Reference Object: */axapi/v3/ipv6/nat/inside/source*

nat_inside_source

Specification	Value
Type	*object*

list-list

Type: List

Reference Object: */axapi/v3/ipv6/nat/inside/source/list/{list-name}*

nat_inside_source_list-list

Specification	Value
Type	*list*
Block object keys	

list-name

Description IPv6 access-list name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

pool

Description IPv6 NAT Pool (Pool Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_pool-list

Specification	Value
Type	*list*
Block object keys	

chunk-sharing

Description Share NAT pool chunk across CPUs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv6-address

gateway

Description Configure gateway IP

Type: string

Format: ipv6-address

ip-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netmask

Description Configure mask for pool

Type: number

Range: 64-128

pool-name

Description Specify pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-overload

Description Nat Pool Port overload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

scaleout-device-id

Description Configure Scaleout device id to which this NAT pool is to be bound (Specify Scaleout device id)

Type: number

Range: 1-16

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat_pool-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'Port-Usage': some help string; 'Total-Used': some help string; 'Total-Freed': some help string; 'Failed': some help string;

Type: string

Supported Values: all, Port-Usage, Total-Used, Total-Freed, Failed

fib-summary

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

telemetry

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route

Specification	Value
Type	*object*

rib-list

Type: List

Reference Object: */axapi/v3/ipv6/route/rib/{ipv6-address}*

source

Description: source is a **JSON Block**. Please see below for *route_source*

Type: Object

Reference Object: */axapi/v3/ipv6/route/source*

static

Description: static is a **JSON Block**. Please see below for *route_static*

Type: Object

Reference Object: */axapi/v3/ipv6/route/static*

route_rib-list

Specification	Value
Type	*list*
Block object keys	

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address-plen

ipv6-nexthop-ipv6

Type: List

ipv6-nexthop-tunnel

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route_rib-list_ipv6-nexthop-tunnel

Specification	Value
Type	*list*
Block object keys	

description

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

distance-nexthop-tunnel

Description Distance value for this route

Type: number

Range: 1-255

Default: 1

ipv6-nexthop-tunnel-addr

Description Forwarding router's address

Type: string

Format: ipv6-address

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Range: 1-128

route_rib-list_ipv6-nexthop-ipv6

Specification	Value
Type	*list*
Block object keys	

description

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

distance

Description Distance value for this route

Type: number

Range: 1-255

Default: 1

ethernet

Description Ethernet interface (Ethernet interface number)

Type: number

Format: interface

ipv6-nexthop

Description Forwarding router's address

Type: string

Format: ipv6-address

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

ve

Description Virtual Ethernet interface (Virtual Ethernet interface number)

Type: number

Format: interface

route_source

Specification	Value
Type	*object*

lif-list

Type: List

Reference Object: */axapi/v3/ipv6/route/source/lif/{ifname}+{nexthop-ip}*

ve-list

Type: List

Reference Object: */axapi/v3/ipv6/route/source/ve/{ve-num}+{nexthop-ip}*

route_source_lif-list

Specification	Value
Type	*list*
Block object keys	

ifname

Description Lif interface name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

nexthop-ip

Description Nexthop IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route_source_ve-list

Specification	Value
Type	*list*
Block object keys	

nexthop-ip

Description Nexthop IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-num

Description

Type: number

Range: 1-4094

route_static

Specification	Value
Type	*object*

bfd

Description: bfd is a **JSON Block**. Please see below for *route_static_bfd*

Type: Object

Reference Object: */axapi/v3/ipv6/route/static/bfd*

route_static_bfd

Specification	Value
Type	*object*

bfd-ipv6-list

Type: List

Reference Object: */axapi/v3/ipv6/route/static/bfd/bfd-ipv6/{local-ipv6}+{nexthop-ipv6}*

ethernet-list

Type: List

Reference Object: */axapi/v3/ipv6/route/static/bfd/ethernet/{eth-num}+{nexthop-ipv6-ll}*

trunk-list

Type: List

Reference Object: */axapi/v3/ipv6/route/static/bfd/trunk/{trunk-num}+{nexthop-ipv6-ll}*

ve-list

Type: List

Reference Object: */axapi/v3/ipv6/route/static/bfd/ve/{ve-num}+{nexthop-ipv6-ll}*

route_static_bfd_bfd-ipv6-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

local-ipv6

Description Local IPv6 address

Type: string

Format: ipv6-address

nexthop-ipv6

Description Nexthop IPv6 address

Type: string

Format: ipv6-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route_static_bfd_ethernet-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

eth-num

Description Ethernet (not a member of vlan or trunk)

Type: number

Range: 0-2147483647

nexthop-ipv6-ll

Description Nexthop IPv6 address (Link-local)

Type: string

Format: ipv6-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route_static_bfd_trunk-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

nexthop-ipv6-ll

Description Nexthop IPv6 address (Link-local)

Type: string

Format: ipv6-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

trunk-num

Description Trunk interface

Type: number

Range: 1-4096

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route_static_bfd_ve-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

nexthop-ipv6-ll

Description Nexthop IPv6 address (Link-local)

Type: string

Format: ipv6-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-num

Description Virtual ethernet interface

Type: number

Range: 2-4094

ospf

Specification	Value
Type	*object*

display-route-single-line

Description Print an entry in single line

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list-list

Specification	Value
Type	*list*
Block object keys	

name

Description Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

rules

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list-list_rules

Specification	Value
Type	*list*
Block object keys	

acl-log

Description Log matches against this entry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action

Description 'deny': Deny; 'permit': Permit; 'l3-vlan-fwd-disable': Disable L3 forwarding between VLANs;

Type: string

Supported Values: deny, permit, l3-vlan-fwd-disable

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code, icmp-code, and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type, icmp-type, and special-type are mutually exclusive

dscp

Description DSCP

Type: number

Range: 1-63

dst-any

Description Any destination host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst-any,dst-host, dst-subnet, and dst-object-group are mutually exclusive

dst-eq

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-eq,dst-gt, dst-lt, and dst-range are mutually exclusive

dst-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: dst-gt,dst-eq, dst-lt, and dst-range are mutually exclusive

dst-host

Description A single destination host (Host address)

Type: string

Format: ipv6-address

Mutual Exclusion: dst-host,dst-any, dst-subnet, and dst-object-group are mutually exclusive

dst-lt

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

Mutual Exclusion: dst-lt,dst-eq, dst-gt, and dst-range are mutually exclusive

dst-object-group

Description Destination network object group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-object-group,dst-any, dst-host, and dst-subnet are mutually exclusive

dst-port-end

Description Edning Destination Port Number

Type: number

Range: 1-65535

dst-range

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-range,dst-eq, dst-gt, and dst-lt are mutually exclusive

dst-subnet

Description Destination Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: dst-subnet,dst-any, dst-host, and dst-object-group are mutually exclusive

established

Description TCP established

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

fragments

Description IP fragments

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location

Description Specify geo-location name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: geo-location,icmp, tcp, udp, ipv6, and service-obj-group are mutually exclusive

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmp,tcp, udp, ipv6, service-obj-group, and geo-location are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code, any-code, and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type, any-type, and special-type are mutually exclusive

ipv6

Description Any Internet Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipv6,icmp, tcp, udp, service-obj-group, and geo-location are mutually exclusive

remark

Description Access list entry comment (Notes for this ACL)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-num

Description Sequence Number

Type: number

Range: 1-8192

service-obj-group

Description Service object group (Source object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-obj-group,icmp, tcp, udp, ipv6, and geo-location are mutually exclusive

special-code

Description 'addr-unreachable': Code 3, address unreachable; 'admin-prohibited': Code 1, admin prohibited; 'no-route': Code 0, no route to destination; 'not-neighbour': Code 2, not neighbor; 'port-unreachable': Code 4, destination port unreachable;

Type: string

Supported Values: addr-unreachable, admin-prohibited, no-route, not-neighbour, port-unreachable

Mutual Exclusion: special-code, any-code, and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 129, echo reply; 'echo-request': help Type 128, echo request; 'packet-too-big': Type 2, packet too big; 'param-prob': Type 4, parameter problem; 'time-exceeded': Type 3, time exceeded; 'dest-unreachable': Type 1, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, packet-too-big, param-prob, time-exceeded, dest-unreachable

Mutual Exclusion: special-type, icmp-type, and any-type are mutually exclusive

src-any

Description Any source host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src-any,src-host, src-subnet, and src-object-group are mutually exclusive

src-eq

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: src-eq,src-gt, src-lt, and src-range are mutually exclusive

src-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: src-gt,src-eq, src-lt, and src-range are mutually exclusive

src-host

Description A single source host (Host address)

Type: string

Format: ipv6-address

Mutual Exclusion: src-host,src-any, src-subnet, and src-object-group are mutually exclusive

src-lt

Description Match only packets with a lower port number

Type: number

Range: 2-65535

Mutual Exclusion: src-lt,src-eq, src-gt, and src-range are mutually exclusive

src-object-group

Description Network object group (Source network object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-object-group,src-any, src-host, and src-subnet are mutually exclusive

src-port-end

Description Ending Port Number

Type: number

Range: 1-65535

src-range

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: src-range,src-eq, src-gt, and src-lt are mutually exclusive

src-subnet

Description Source Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: src-subnet,src-any, src-host, and src-object-group are mutually exclusive

tcp

Description protocol TCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tcp,icmp, udp, ipv6, service-obj-group, and geo-location are mutually exclusive

trunk

Description Ethernet trunk (trunk number)

Type: number

Format: interface

udp

Description protocol UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: udp,icmp, tcp, ipv6, service-obj-group, and geo-location are mutually exclusive

vlan

Description VLAN ID

Type: number

Range: 1-4094

fib

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmpv6

Specification	Value
Type	*object*

redirect

Description Disable outbound ICMPv6 redirect messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unreachable

Description Disable outbound ICMPv6 unreachable messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

default-gateway

Specification	Value
Type	*object*

ipv6-default-gateway

Description Default gateway address

Type: string

Format: ipv6-address

Reference Object: */axapi/v3/ipv6/address*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

neighbor

Specification	Value
Type	*object*

dynamic

Description: dynamic is a **JSON Block**. Please see below for *neighbor_dynamic*

Type: Object

Reference Object: */axapi/v3/ipv6/neighbor/dynamic*

static-list

Type: List

Reference Object: */axapi/v3/ipv6/neighbor/static/{ipv6-addr}+{vlan}*

neighbor_dynamic

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

neighbor_static-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet port (Port Value)

Type: number

Format: interface

Mutual Exclusion: ethernet, trunk, and tunnel are mutually exclusive

ipv6-addr

Description IPV6 address

Type: string

Format: ipv6-address

mac

Description MAC Address

Type: string

Format: mac-address

trunk

Description Trunk group

Type: number

Range: 1-4096

Mutual Exclusion: trunk, ethernet, and tunnel are mutually exclusive

tunnel

Description Tunnel interface

Type: number

Range: 1-128

Mutual Exclusion: tunnel, ethernet, and trunk are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description VLAN ID

Type: number

Range: 2-4094

Reference Object: */axapi/v3/network/vlan*

address

Specification	Value
Type	*object*

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: anycast and link-local are mutually exclusive

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: link-local and anycast are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reroute

Specification	Value
Type	*object*

suppress-protocols

Description: suppress-protocols is a **JSON Block**. Please see below for *reroute_suppress-protocols*

Type: Object

Reference Object: */axapi/v3/ipv6/reroute/suppress-protocols*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reroute_suppress-protocols

Specification	Value
Type	*object*

connected

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp

Description EBGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ibgp

Description IBGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis

Description ISIS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description OSPF

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description RIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

prefix-list-list

Specification	Value
Type	*list*
Block object keys	

name

Description Name of a prefix list

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rules

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

prefix-list-list_rules

Specification	Value
Type	*list*
Block object keys	

action

Description 'deny': Specify packets to reject; 'permit': Specify packets to forward;

Type: string

Supported Values: deny, permit

any

Description Any prefix match. Same as "::0/0 le 128"

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Prefix-list specific description (Up to 80 characters describing this prefix-list)

Type: string

Maximum Length: 80 characters

Maximum Length: 1 characters

ge

Description Minimum prefix length to be matched

Type: number

Range: 0-128

ipaddr

Description IPv6 prefix, e.g., 3ffe::/16

Type: string

Format: ipv6-address-plen

le

Description Maximum prefix length to be matched

Type: number

Range: 0-128

seq

Description Sequence number of an entry

Type: number

Range: 1-4294967295

unnumbered

Specification	Value
Type	*object*

use-source-acl

Description Access List, Upon deny packet's source address will be NATed (ACL Name)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

use-source-ipv6

Description: use-source-ipv6 is a **JSON Block**. Please see below for *unnumbered_use-source-ipv6*

Type: Object

Reference Object: */axapi/v3/ipv6/unnumbered/use-source-ipv6*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

unnumbered_use-source-ipv6

Specification	Value
Type	*object*

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rib

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.67.2 ipv6 access-list

Configure a IPv6 Access List

access-list Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*access-list-list*
Collection URI	/axapi/v3/ipv6/access-list
Element Name	access-list
Element URI	/axapi/v3/ipv6/access-list/{name}
Element Attributes	access-list_attributes
Partition Visibility	shared
Schema	`access-list schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ipv6/access-list

access-list attributes

Create List

POST

/axapi/v3/ipv6/access-list

access-list attributes

Get Object

GET

/axapi/v3/ipv6/access-list/{name}

access-list attributes

Get List

GET

/axapi/v3/ipv6/access-list

access-list-list

Modify Object

POST

access-list-list

Delete Object

DELETE

/axapi/v3/ipv6/access-list/{name}

access-list attributes

access-list-list

access-list-list is **JSON List** of *access-list attributes*

access-list-list : [

{ *access-list attributes* },

{ *access-list attributes* },

…

]

access-list attributes

name

Description Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

rules

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rules

Specification	Value
Type	*list*
Block object keys	

acl-log

Description Log matches against this entry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action

Description 'deny': Deny; 'permit': Permit; 'l3-vlan-fwd-disable': Disable L3 forwarding between VLANs;

Type: string

Supported Values: deny, permit, l3-vlan-fwd-disable

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code, icmp-code, and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type, icmp-type, and special-type are mutually exclusive

dscp

Description DSCP

Type: number

Range: 1-63

dst-any

Description Any destination host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst-any,dst-host, dst-subnet, and dst-object-group are mutually exclusive

dst-eq

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-eq,dst-gt, dst-lt, and dst-range are mutually exclusive

dst-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: dst-gt,dst-eq, dst-lt, and dst-range are mutually exclusive

dst-host

Description A single destination host (Host address)

Type: string

Format: ipv6-address

Mutual Exclusion: dst-host,dst-any, dst-subnet, and dst-object-group are mutually exclusive

dst-lt

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

Mutual Exclusion: dst-lt,dst-eq, dst-gt, and dst-range are mutually exclusive

dst-object-group

Description Destination network object group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-object-group,dst-any, dst-host, and dst-subnet are mutually exclusive

dst-port-end

Description Edning Destination Port Number

Type: number

Range: 1-65535

dst-range

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-range,dst-eq, dst-gt, and dst-lt are mutually exclusive

dst-subnet

Description Destination Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: dst-subnet,dst-any, dst-host, and dst-object-group are mutually exclusive

established

Description TCP established

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

fragments

Description IP fragments

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location

Description Specify geo-location name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: geo-location,icmp, tcp, udp, ipv6, and service-obj-group are mutually exclusive

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmp,tcp, udp, ipv6, service-obj-group, and geo-location are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code, any-code, and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type, any-type, and special-type are mutually exclusive

ipv6

Description Any Internet Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipv6,icmp, tcp, udp, service-obj-group, and geo-location are mutually exclusive

remark

Description Access list entry comment (Notes for this ACL)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-num

Description Sequence Number

Type: number

Range: 1-8192

service-obj-group

Description Service object group (Source object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-obj-group,icmp, tcp, udp, ipv6, and geo-location are mutually exclusive

special-code

Description 'addr-unreachable': Code 3, address unreachable; 'admin-prohibited': Code 1, admin prohibited; 'no-route': Code 0, no route to destination; 'not-neighbour': Code 2, not neighbor; 'port-unreachable': Code 4, destination port unreachable;

Type: string

Supported Values: addr-unreachable, admin-prohibited, no-route, not-neighbour, port-unreachable

Mutual Exclusion: special-code, any-code, and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 129, echo reply; 'echo-request': help Type 128, echo request; 'packet-too-big': Type 2, packet too big; 'param-prob': Type 4, parameter problem; 'time-exceeded': Type 3, time exceeded; 'dest-unreachable': Type 1, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, packet-too-big, param-prob, time-exceeded, dest-unreachable

Mutual Exclusion: special-type, icmp-type, and any-type are mutually exclusive

src-any

Description Any source host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src-any,src-host, src-subnet, and src-object-group are mutually exclusive

src-eq

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: src-eq,src-gt, src-lt, and src-range are mutually exclusive

src-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: src-gt,src-eq, src-lt, and src-range are mutually exclusive

src-host

Description A single source host (Host address)

Type: string

Format: ipv6-address

Mutual Exclusion: src-host,src-any, src-subnet, and src-object-group are mutually exclusive

src-lt

Description Match only packets with a lower port number

Type: number

Range: 2-65535

Mutual Exclusion: src-lt,src-eq, src-gt, and src-range are mutually exclusive

src-object-group

Description Network object group (Source network object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-object-group,src-any, src-host, and src-subnet are mutually exclusive

src-port-end

Description Ending Port Number

Type: number

Range: 1-65535

src-range

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: src-range,src-eq, src-gt, and src-lt are mutually exclusive

src-subnet

Description Source Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: src-subnet,src-any, src-host, and src-object-group are mutually exclusive

tcp

Description protocol TCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tcp,icmp, udp, ipv6, service-obj-group, and geo-location are mutually exclusive

trunk

Description Ethernet trunk (trunk number)

Type: number

Format: interface

udp

Description protocol UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: udp,icmp, tcp, ipv6, service-obj-group, and geo-location are mutually exclusive

vlan

Description VLAN ID

Type: number

Range: 1-4094

2.67.3 ipv6 address

Transparent mode IPv6 Address

address Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	address
Element URI	/axapi/v3/ipv6/address

        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

address attributes

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: anycast and link-local are mutually exclusive

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: link-local and anycast are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.67.4 ipv6 default-gateway

Default gateway address

default-gateway Specification

Parameter	Value
Type	*Configuration Resource*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-inserted': Session Inserted; 'session-expired': Session Expired; 'icmp-rcv': ICMP Received; 'icmpv6-rcv': ICMPv6 Received; 'udp-rcv': UDP Received; 'tcp-rcv': TCP Received; 'ipip-rcv': IP-in-IP Received; 'ipv6ip-rcv': IPv6-in-IP Received; 'other-rcv': Other Received; 'icmp-dropped': ICMP Dropped; 'icmpv6-dropped': ICMPv6 Dropped; 'udp-dropped': UDP Dropped; 'tcp-dropped': TCP Dropped; 'ipip-dropped': IP-in-IP Dropped; 'ipv6ip-dropped': IPv6-in-IP Dropped; 'other-dropped': Other Dropped; 'overlap-error': Overlapping Fragment Dropped; 'bad-ip-len': Bad IP Length; 'too-small': Fragment Too Small Drop; 'first-tcp-too-small': First TCP Fragment Too Small Drop; 'first-l4-too-small': First L4 Fragment Too Small Drop; 'total-sessions-exceeded': Total Sessions Exceeded Drop; 'no-session-memory': Out of Session Memory; 'fast-aging-set': Fragmentation Fast Aging Set; 'fast-aging-unset': Fragmentation Fast Aging Unset; 'fragment-queue-success': Fragment Queue Success; 'unaligned-len': Payload Length Unaligned; 'exceeded-len': Payload Length Out of Bounds; 'duplicate-first-frag': Duplicate First Fragment; 'duplicate-last-frag': Duplicate Last Fragment; 'total-fragments-exceeded': Total Queued Fragments Exceeded; 'fragment-queue-failure': Fragment Queue Failure; 'reassembly-success': Fragment Reassembly Success; 'max-len-exceeded': Fragment Max Data Length Exceeded; 'reassembly-failure': Fragment Reassembly Failure; 'policy-drop': MTU Exceeded Policy Drop; 'error-drop': Fragment Processing Drop; 'high-cpu-threshold': High CPU Threshold Reached; 'low-cpu-threshold': Low CPU Threshold Reached; 'cpu-threshold-drop': High CPU Drop; 'ipd-entry-drop': DDoS Protection Drop; 'max-packets-exceeded': Too Many Packets Per Reassembly Drop; 'session-packets-exceeded': Session Max Packets Exceeded; 'frag-session-count': Fragmentation Session Count; 'sctp-rcv': SCTP Received; 'sctp-dropped': SCTP Dropped; 'first-gtp-packet-too-small': First GTP Fragment Too Small Drop;

Type: string

Supported Values: all, session-inserted, session-expired, icmp-rcv, icmpv6-rcv, udp-rcv, tcp-rcv, ipip-rcv, ipv6ip-rcv, other-rcv, icmp-dropped, icmpv6-dropped, udp-dropped, tcp-dropped, ipip-dropped, ipv6ip-dropped, other-dropped, overlap-error, bad-ip-len, too-small, first-tcp-too-small, first-l4-too-small, total-sessions-exceeded, no-session-memory, fast-aging-set, fast-aging-unset, fragment-queue-success, unaligned-len, exceeded-len, duplicate-first-frag, duplicate-last-frag, total-fragments-exceeded, fragment-queue-failure, reassembly-success, max-len-exceeded, reassembly-failure, policy-drop, error-drop, high-cpu-threshold, low-cpu-threshold, cpu-threshold-drop, ipd-entry-drop, max-packets-exceeded, session-packets-exceeded, frag-session-count, sctp-rcv, sctp-dropped, first-gtp-packet-too-small

2.67.8 ipv6 frag stats

Statistics for the object frag

frag Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	frag
Element URI	/axapi/v3/ipv6/frag/stats
Element Attributes	frag_attributes
Partition Visibility	None
Schema	`frag schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ipv6/frag/stats

frag attributes

Get Object

GET

/axapi/v3/ipv6/frag/stats

frag attributes

Modify Object

POST

/axapi/v3/ipv6/frag/stats

frag attributes

Replace Object

PUT

/axapi/v3/ipv6/frag/stats

frag attributes

Delete Object

DELETE

/axapi/v3/ipv6/frag/stats

frag attributes

frag attributes

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

bad-ip-len

Description Bad IP Length

Type: number

Format: counter

cpu-threshold-drop

Description High CPU Drop

Type: number

Format: counter

duplicate-first-frag

Description Duplicate First Fragment

Type: number

Format: counter

duplicate-last-frag

Description Duplicate Last Fragment

Type: number

Format: counter

error-drop

Description Fragment Processing Drop

Type: number

Format: counter

exceeded-len

Description Payload Length Out of Bounds

Type: number

Format: counter

fast-aging-set

Description Fragmentation Fast Aging Set

Type: number

Format: counter

fast-aging-unset

Description Fragmentation Fast Aging Unset

Type: number

Format: counter

first-gtp-packet-too-small

Description First GTP Fragment Too Small Drop

Type: number

Format: counter

first-l4-too-small

Description First L4 Fragment Too Small Drop

Type: number

Format: counter

first-tcp-too-small

Description First TCP Fragment Too Small Drop

Type: number

Format: counter

fragment-queue-failure

Description Fragment Queue Failure

Type: number

Format: counter

fragment-queue-success

Description Fragment Queue Success

Type: number

Format: counter

high-cpu-threshold

Description High CPU Threshold Reached

Type: number

Format: counter

icmp-dropped

Description ICMP Dropped

Type: number

Format: counter

icmp-rcv

Description ICMP Received

Type: number

Format: counter

icmpv6-dropped

Description ICMPv6 Dropped

Type: number

Format: counter

icmpv6-rcv

Description ICMPv6 Received

Type: number

Format: counter

ipd-entry-drop

Description DDoS Protection Drop

Type: number

Format: counter

ipip-dropped

Description IP-in-IP Dropped

Type: number

Format: counter

ipip-rcv

Description IP-in-IP Received

Type: number

Format: counter

ipv6ip-dropped

Description IPv6-in-IP Dropped

Type: number

Format: counter

ipv6ip-rcv

Description IPv6-in-IP Received

Type: number

Format: counter

low-cpu-threshold

Description Low CPU Threshold Reached

Type: number

Format: counter

max-len-exceeded

Description Fragment Max Data Length Exceeded

Type: number

Format: counter

max-packets-exceeded

Description Too Many Packets Per Reassembly Drop

Type: number

Format: counter

no-session-memory

Description Out of Session Memory

Type: number

Format: counter

other-dropped

Description Other Dropped

Type: number

Format: counter

other-rcv

Description Other Received

Type: number

Format: counter

overlap-error

Description Overlapping Fragment Dropped

Type: number

Format: counter

policy-drop

Description MTU Exceeded Policy Drop

Type: number

Format: counter

reassembly-failure

Description Fragment Reassembly Failure

Type: number

Format: counter

reassembly-success

Description Fragment Reassembly Success

Type: number

Format: counter

sctp-dropped

Description SCTP Dropped

Type: number

Format: counter

sctp-rcv

Description SCTP Received

Type: number

Format: counter

session-expired

Description Session Expired

Type: number

Format: counter

session-inserted

Description Session Inserted

Type: number

Format: counter

session-packets-exceeded

Description Session Max Packets Exceeded

Type: number

Format: counter

tcp-dropped

Description TCP Dropped

Type: number

Format: counter

tcp-rcv

Description TCP Received

Type: number

Format: counter

too-small

Description Fragment Too Small Drop

Type: number

Format: counter

total-fragments-exceeded

Description Total Queued Fragments Exceeded

Type: number

Format: counter

total-sessions-exceeded

Description Total Sessions Exceeded Drop

Type: number

Format: counter

udp-dropped

Description UDP Dropped

Type: number

Format: counter

udp-rcv

Description UDP Received

Type: number

Format: counter

unaligned-len

Description Payload Length Unaligned

Type: number

Format: counter

2.67.9 ipv6 icmpv6

Global ICMPv6 commands

icmpv6 Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	icmpv6
Element URI	/axapi/v3/ipv6/icmpv6
Element Attributes	icmpv6_attributes
Partition Visibility	shared
Schema	`icmpv6 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ipv6/icmpv6

icmpv6 attributes

```
POST /axapi/v3/ipv6/icmpv6
Payload:
{
    "icmpv6": {
        "redirect": 1
    }
}
```

Get Object

GET

/axapi/v3/ipv6/icmpv6

icmpv6 attributes

```
GET /axapi/v3/ipv6/icmpv6
Reponse:
{
    "icmpv6": {
        "redirect": 1,
        "unreachable": 0,
        "uuid": "fa95a87e-b5c9-11ef-b932-ae71681635d0",
        "a10-url": "/axapi/v3/ipv6/icmpv6"
    }
}
```

Modify Object

POST

/axapi/v3/ipv6/icmpv6

icmpv6 attributes

Replace Object

PUT

/axapi/v3/ipv6/icmpv6

icmpv6 attributes

```
PUT /axapi/v3/ipv6/icmpv6
Payload:
{
    "icmpv6": {
        "redirect": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/ipv6/icmpv6

icmpv6 attributes

icmpv6 attributes

redirect

Description Disable outbound ICMPv6 redirect messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unreachable

Description Disable outbound ICMPv6 unreachable messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.67.10 ipv6 nat

Configure IPv6 NAT

nat Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	nat
Element URI	/axapi/v3/ipv6/nat
Element Attributes	nat_attributes
Partition Visibility	shared
Schema	`nat schema`

Operations Allowed:

Get Object

GET

/axapi/v3/ipv6/nat

nat_attributes

nat attributes

icmpv6

Description: icmpv6 is a **JSON Block**. Please see below for *icmpv6*

Type: Object

Reference Object: */axapi/v3/ipv6/nat/icmpv6*

inside

Description: inside is a **JSON Block**. Please see below for *inside*

Type: Object

Reference Object: */axapi/v3/ipv6/nat/inside*

pool-group-list

Type: List

Reference Object: */axapi/v3/ipv6/nat/pool-group/{pool-group-name}*

pool-list

Type: List

Reference Object: */axapi/v3/ipv6/nat/pool/{pool-name}*

icmpv6

Specification	Value
Type	*object*

respond-to-ping

Description Respond to ICMPv6 echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pool-group-list

Specification	Value
Type	*list*
Block object keys	

member-list

Type: List

Reference Object: */axapi/v3/ipv6/nat/pool-group/{pool-group-name}/member/{pool-name}*

pool-group-name

Description Specify pool group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

pool-group-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'Failed': some-help-string;

Type: string

Supported Values: all, Failed

pool-group-list_member-list

Specification	Value
Type	*list*
Block object keys	

pool-name

Description Specify NAT pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside

Specification	Value
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *inside_source*

Type: Object

Reference Object: */axapi/v3/ipv6/nat/inside/source*

inside_source

Specification	Value
Type	*object*

list-list

Type: List

Reference Object: */axapi/v3/ipv6/nat/inside/source/list/{list-name}*

inside_source_list-list

Specification	Value
Type	*list*
Block object keys	

list-name

Description IPv6 access-list name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

pool

Description IPv6 NAT Pool (Pool Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/nat/pool-group*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pool-list

Specification	Value
Type	*list*
Block object keys	

chunk-sharing

Description Share NAT pool chunk across CPUs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv6-address

gateway

Description Configure gateway IP

Type: string

Format: ipv6-address

ip-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netmask

Description Configure mask for pool

Type: number

Range: 64-128

pool-name

Description Specify pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-overload

Description Nat Pool Port overload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

scaleout-device-id

Description Configure Scaleout device id to which this NAT pool is to be bound (Specify Scaleout device id)

Type: number

Range: 1-16

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

pool-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'Port-Usage': some help string; 'Total-Used': some help string; 'Total-Freed': some help string; 'Failed': some help string;

Type: string

Supported Values: all, Port-Usage, Total-Used, Total-Freed, Failed

2.67.11 ipv6 nat icmpv6

ICMPv6 configuration for IPv6 NAT

icmpv6 Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	icmpv6
Element URI	/axapi/v3/ipv6/nat/icmpv6
Element Attributes	icmpv6_attributes
Partition Visibility	shared
Schema	`icmpv6 schema`

Operations Allowed:

pool attributes

chunk-sharing

Description Share NAT pool chunk across CPUs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv6-address

gateway

Description Configure gateway IP

Type: string

Format: ipv6-address

ip-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netmask

Description Configure mask for pool

Type: number

Range: 64-128

pool-name

Description Specify pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-overload

Description Nat Pool Port overload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

scaleout-device-id

Description Configure Scaleout device id to which this NAT pool is to be bound (Specify Scaleout device id)

Type: number

Range: 1-16

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'Port-Usage': some help string; 'Total-Used': some help string; 'Total-Freed': some help string; 'Failed': some help string;

Type: string

Supported Values: all, Port-Usage, Total-Used, Total-Freed, Failed

2.67.16 ipv6 nat pool-group

IPv6 pool group name

pool-group Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*pool-group-name*
Collection Name	*pool-group-list*
Collection URI	/axapi/v3/ipv6/nat/pool-group
Element Name	pool-group
Element URI	/axapi/v3/ipv6/nat/pool-group/{pool-group-name}
Element Attributes	pool-group_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/ipv6/nat/pool-group/{pool-group-name}/stats
Schema	`pool-group schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ipv6/nat/pool-group

pool-group attributes

```
POST /axapi/v3/ipv6/nat/pool-group/
Payload:
{
    "pool-group": {
        "pool-group-name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/ipv6/nat/pool-group

```

prefix-list-list

prefix-list-list is **JSON List** of *prefix-list attributes*

prefix-list-list : [

{ *prefix-list attributes* },

{ *prefix-list attributes* },

...

]

prefix-list attributes

name

Description Name of a prefix list

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rules

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rules

Specification	Value
Type	*list*
Block object keys	

action

Description 'deny': Specify packets to reject; 'permit': Specify packets to forward;

Type: string

Supported Values: deny, permit

any

Description Any prefix match. Same as "::0/0 le 128"

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Prefix-list specific description (Up to 80 characters describing this prefix-list)

Type: string

Maximum Length: 80 characters

Maximum Length: 1 characters

ge

Description Minimum prefix length to be matched

Type: number

Range: 0-128

ipaddr

Description IPv6 prefix, e.g., 3ffe::/16

Type: string

Format: ipv6-address-plen

le

Description Maximum prefix length to be matched

Type: number

Range: 0-128

seq

Description Sequence number of an entry

Type: number

Range: 1-4294967295

2.67.27 ipv6 reroute

bfd_bfd-ipv6-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

local-ipv6

Description Local IPv6 address

Type: string

Format: ipv6-address

nexthop-ipv6

Description Nexthop IPv6 address

Type: string

Format: ipv6-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_ethernet-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

eth-num

Description Ethernet (not a member of vlan or trunk)

Type: number

Range: 0-2147483647

nexthop-ipv6-ll

Description Nexthop IPv6 address (Link-local)

Type: string

Format: ipv6-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_trunk-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

nexthop-ipv6-ll

Description Nexthop IPv6 address (Link-local)

Type: string

Format: ipv6-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

trunk-num

Description Trunk interface

Type: number

Range: 1-4096

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_ve-list

Specification	Value
Type	*list*

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

nexthop-ipv6-ll

Description Nexthop IPv6 address (Link-local)

Type: string

Format: ipv6-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-num

Description Virtual ethernet interface

Type: number

Range: 2-4094

key-list

key-list is **JSON List** of *key attributes*

key-list : [

{ *key attributes* },

{ *key attributes* },

...

]

key attributes

key-chain-flag

Description Key-chain management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-chain-name

Description Key-chain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

key-list

Type: List

Reference Object: */axapi/v3/key/{key-chain-flag}+{key-chain-name}/key/{key-number}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

key-list

Specification	Value
Type	*list*
Block object keys	

key-number

Description Key identifier number

Type: number

Range: 1-255

key-string

Description Set key string (The key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.69.2 key key

Configure a key

key Specification

Parameter	Value

host_ldap-hostname-list

Specification	Value
Type	*list*
Block object keys	

base

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cn-value

Description LDAP common name identifier (i.e.: cn, uid)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

dn-value

Description LDAP distinguished name (dn)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

domain

Description Configure AD domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

domain-cfg

Description: domain-cfg is a **JSON Block**. Please see below for *host_ldap-hostname-list_domain-cfg*

Type: Object

group

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

hostname

Description Hostname of LDAP server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

hostname-cfg

Description: hostname-cfg is a **JSON Block**. Please see below for *host_ldap-hostname-list_hostname-cfg*

Type: Object

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *host_ldap-hostname-list_port-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_ldap-hostname-list_hostname-cfg

Specification	Value
Type	*object*

port

Description Specify the LDAP server's port (default 3268 without ssl or 3269 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

host_ldap-hostname-list_port-cfg

Specification	Value
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

host_ldap-hostname-list_domain-cfg

Specification	Value
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

host_ipv4-list

Specification	Value
Type	*list*
Block object keys	

base

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cn-value

Description LDAP common name identifier (i.e.: cn, uid)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

dn-value

Description LDAP distinguished name (dn)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

domain

Description Configure AD domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

domain-cfg

Description: domain-cfg is a **JSON Block**. Please see below for *host_ipv4-list_domain-cfg*

Type: Object

group

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ipv4-addr

Description IPV4 address of ldap server

Type: string

Format: ipv4-address

ipv4-addr-cfg

Description: ipv4-addr-cfg is a **JSON Block**. Please see below for *host_ipv4-list_ipv4-addr-cfg*

Type: Object

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *host_ipv4-list_port-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_ipv4-list_ipv4-addr-cfg

Specification	Value
Type	*object*

port

Description Specify the LDAP server's port (default 3268 without ssl or 3269 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

host_ipv4-list_port-cfg

Specification	Value
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

host_ipv4-list_domain-cfg

Specification	Value
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

host_ipv6-list

Specification	Value
Type	*list*
Block object keys	

base

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cn-value

Description LDAP common name identifier (i.e.: cn, uid)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

dn-value

Description LDAP distinguished name (dn)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

domain

Description Configure AD domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

domain-cfg

Description: domain-cfg is a **JSON Block**. Please see below for *host_ipv6-list_domain-cfg*

Type: Object

group

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ipv6-addr

Description IPV6 address of ldap server

Type: string

Format: ipv6-address

ipv6-addr-cfg

Description: ipv6-addr-cfg is a **JSON Block**. Please see below for *host_ipv6-list_ipv6-addr-cfg*

ipv4-list is **JSON List** of *ipv4 attributes*

ipv4-list : [

{ *ipv4 attributes* },

{ *ipv4 attributes* },

...

]

ipv4 attributes

base

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cn-value

Description LDAP common name identifier (i.e.: cn, uid)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

dn-value

Description LDAP distinguished name (dn)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

domain

Description Configure AD domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

domain-cfg

Description: domain-cfg is a **JSON Block**. Please see below for *domain-cfg*

Type: Object

group

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ipv4-addr

Description IPV4 address of ldap server

Type: string

Format: ipv4-address

ipv4-addr-cfg

Description: ipv4-addr-cfg is a **JSON Block**. Please see below for *ipv4-addr-cfg*

Type: Object

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *port-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv4-addr-cfg

Specification	Value
Type	*object*

port

Description Specify the LDAP server's port (default 3268 without ssl or 3269 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

port-cfg

Specification	Value
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

domain-cfg

Specification	Value
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

2.70.4 ldap-server host ipv6

Specify the hostname of ldap server

ipv6 Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*ipv6-addr*

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

host-ipv6

Description Configure license manager server ipv6-address

Type: string

Format: ipv6-address

Maximum Length: 63 characters

Maximum Length: 1 characters

port

Description Configure the license manager port, default is 443

Type: number

Range: 1-65535

Default: 443

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71.4 license-manager overage

Set overage parameters

overage Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	overage
Element URI	/axapi/v3/license-manager/overage
Element Attributes	overage_attributes
Partition Visibility	shared
Schema	`overage schema`

Operations Allowed:

Create Object

POST

/axapi/v3/license-manager/overage

overage attributes

```
POST /axapi/v3/license-manager/overage
Payload:
{
```

(continues on next page)

(continued from previous page)

    }
}
```

overage attributes

bytes

Description Number of bytes

Type: number

Range: 1-1023

days

Description Number of days

Type: number

Range: 0-365

gb

Description Number of GB

Type: number

Range: 1-65535

hours

Description Number of hours

Type: number

Range: 0-23

kb

Description Number of KB

Type: number

Range: 1-1023

mb

Description Number of MB

Type: number

Range: 1-1023

minutes

Description Number of minutes

Type: number

Range: 0-59

seconds

Description Number of seconds

Type: number

Range: 0-59

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71.5 license-manager reminder

Set the reminder for grace time

reminder Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*reminder-value*
Collection Name	*reminder-list*
Collection URI	/axapi/v3/license-manager/reminder
Element Name	reminder
Element URI	/axapi/v3/license-manager/reminder/{reminder-value}
Element Attributes	reminder_attributes
Partition Visibility	shared
Schema	`reminder schema`

Operations Allowed:

Create Object

POST

/axapi/v3/license-manager/reminder

reminder attributes

```
POST /axapi/v3/license-manager/reminder/
Payload:
{
    "reminder": {
        "reminder-value": 1
    }
}
```

Create List

POST

/axapi/v3/license-manager/reminder

reminder attributes

Get Object

GET

/axapi/v3/license-manager/reminder/{reminder-value}

reminder attributes

```
GET /axapi/v3/license-manager/reminder/1
Reponse:
{
    "reminder": {
        "reminder-value": 1,
        "uuid": "cac636a6-b6cb-11ef-8f5a-ae71681635d0",
        "a10-url": "/axapi/v3/license-manager/reminder/1"
    }
}
```

Get List

GET

/axapi/v3/license-manager/reminder

reminder-list

Modify Object

POST

/axapi/v3/license-manager/reminder/{reminder-value}

reminder attributes

Replace Object

PUT

/axapi/v3/license-manager/reminder/{reminder-value}

reminder attributes

```
PUT /axapi/v3/license-manager/reminder/1
Payload:
{
    "reminder": {
        "reminder-value": 1
    }
}
```

Replace List

PUT

/axapi/v3/license-manager/reminder

reminder-list

Delete Object

DELETE

/axapi/v3/license-manager/reminder/{reminder-value}

reminder attributes

```
DELETE /axapi/v3/license-manager/reminder/1
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

reminder-list

reminder-list is **JSON List** of *reminder attributes*

reminder-list : [

{ *reminder attributes* },

{ *reminder attributes* },

...

]

reminder attributes

reminder-value

Description Configure reminder for grace time (Hour)

Type: number

Range: 1-1000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.72 locale

Objects:

2.72.1 locale

Set locale for the CLI startup

locale Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	locale
Element URI	/axapi/v3/locale
Element Attributes	locale_attributes
Partition Visibility	shared
Schema	`locale schema`

Operations Allowed:

Create Object

POST

/axapi/v3/locale

locale attributes

```
POST /axapi/v3/locale
Payload:
{
    "locale": {
        "value": "en_US.UTF-8"
    }
}
```

Get Object

GET

/axapi/v3/locale

POST

/axapi/v3/locale

locale attributes

Replace Object

PUT

/axapi/v3/locale

locale attributes

```
PUT /axapi/v3/locale
Payload:
{
    "locale": {
        "value": "en_US.UTF-8"
    }
}
```

Delete Object

DELETE

/axapi/v3/locale

locale attributes

```
DELETE /axapi/v3/locale
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

locale attributes

test

Description: test is a **JSON Block**. Please see below for *test*

Type: Object

Reference Object: */axapi/v3/locale/test*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'en_US.UTF-8': English locale for the USA, encoding with UTF-8 (default); 'zh_CN.UTF-8': Chinese locale for PRC, encoding with UTF-8; 'zh_CN.GB18030': Chinese locale for PRC, encoding with GB18030; 'zh_CN.GBK': Chinese locale for PRC, encoding with GBK; 'zh_CN.GB2312': Chinese locale for PRC, encoding with GB2312; 'zh_TW.UTF-8': Chinese locale for Taiwan, encoding with UTF-8; 'zh_TW.BIG5': Chinese locale for Taiwan, encoding with BIG5; 'zh_TW.EUCTW': Chinese locale for Taiwan, encoding with EUC-TW; 'ja_JP.UTF-8': Japanese locale for Japan, encoding with UTF-8; 'ja_JP.EUC-JP': Japanese locale for Japan, encoding with EUC-JP;

Type: string

Supported Values: en_US.UTF-8, zh_CN.UTF-8, zh_CN.GB18030, zh_CN.GBK, zh_CN.GB2312, zh_TW.UTF-8, zh_TW.BIG5, zh_TW.EUCTW, ja_JP.UTF-8, ja_JP.EUC-JP

Default: en_US.UTF-8

test

Specification	Value
Type	*object*

locale

Description 'zh_CN': Chinese locale for PRC; 'zh_TW': Chinese locale for Taiwan; 'ja_JP': Japanese locale for Japan;

Type: string

Supported Values: zh_CN, zh_TW, ja_JP

2.73 logging

Objects:

2.73.1 logging

System logging configuration

logging Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	logging
Element URI	/axapi/v3/logging
Element Attributes	logging_attributes
Partition Visibility	shared
Schema	`logging schema`

Operations Allowed:

Get Object

GET

/axapi/v3/logging

logging_attributes

logging attributes

auditlog

Description: auditlog is a **JSON Block**. Please see below for *auditlog*

Type: Object

Reference Object: */axapi/v3/logging/auditlog*

buffered

Description: buffered is a **JSON Block**. Please see below for *buffered*

Type: Object

email-address

Description: email-address is a **JSON Block**. Please see below for *email-address*

Type: Object

Reference Object: */axapi/v3/logging/email-address*

export

Description: export is a **JSON Block**. Please see below for *export*

Type: Object

Reference Object: */axapi/v3/logging/export*

facility

Description: facility is a **JSON Block**. Please see below for *facility*

Type: Object

Reference Object: */axapi/v3/logging/facility*

host

Description: host is a **JSON Block**. Please see below for *host*

Type: Object

Reference Object: */axapi/v3/logging/host*

local-log

Description: local-log is a **JSON Block**. Please see below for *local-log*

Type: Object

Reference Object: */axapi/v3/logging/local-log*

lsn

Description: lsn is a **JSON Block**. Please see below for *lsn*

Type: Object

Reference Object: */axapi/v3/logging/lsn*

monitor

Description: monitor is a **JSON Block**. Please see below for *monitor*

Type: Object

Reference Object: */axapi/v3/logging/monitor*

single-priority-list

Type: List

Reference Object: */axapi/v3/logging/single-priority/{levelname}*

syslog

Description: syslog is a **JSON Block**. Please see below for *syslog*

Type: Object

Reference Object: */axapi/v3/logging/syslog*

trap

Description: trap is a **JSON Block**. Please see below for *trap*

Type: Object

Reference Object: */axapi/v3/logging/trap*

buffered

Specification	Value
Type	*object*

buffersize

Description Logging buffer size (in items), default 30000

Type: number

Range: 10000-50000

Default: 30000

levelname

Description 'disable': Do not send log to buffer; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: disable, emergency, alert, critical, error, warning, notification, information, debugging

Default: debugging

partition-buffersize

Description Logging buffer size (in items), default 3000

Type: number

Range: 1000-5000

Default: 3000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

email-address

Specification	Value
Type	*object*

email-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

email-address_email-list

Specification	Value
Type	*list*
Block object keys	

email-address

Description Email address information of recipients

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

console

Specification	Value
Type	*object*

console-levelname

Description 'disable': Do not send log to console; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: disable, emergency, alert, critical, error, warning, notification, information, debugging

Default: error

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor

Specification	Value
Type	*object*

monitor-levelname

Description 'disable': Do not send log to monitor; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: disable, emergency, alert, critical, error, warning, notification, information, debugging

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

facility

Specification	Value
Type	*object*

facilityname

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use; (Facility parameter for syslog messages)

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn

Specification	Value
Type	*object*

log-suppression

Description: log-suppression is a **JSON Block**. Please see below for *lsn_log-suppression*

Type: Object

Reference Object: */axapi/v3/logging/lsn/log-suppression*

port-unavailable

Description: port-unavailable is a **JSON Block**. Please see below for *lsn_port-unavailable*

Type: Object

Reference Object: */axapi/v3/logging/lsn/port-unavailable*

quota-exceeded

Description: quota-exceeded is a **JSON Block**. Please see below for *lsn_quota-exceeded*

Type: Object

Reference Object: */axapi/v3/logging/lsn/quota-exceeded*

lsn_quota-exceeded

Specification	Value
Type	*object*

custom1

Description Customized attribute No.1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom2

Description Customized attribute No.2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom3

Description Customized attribute No.3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom4

Description Customized attribute No.4

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom5

Description Customized attribute No.5

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom6

Description Customized attribute No.6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-pool-based

Description Disable log LSN user quota exceeded based on LSN pool(Default: enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imei

Description International Mobile Equipment Identity (IMEI)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imsi

Description International Mobile Subscriber Identity (IMSI)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-based

Description Log LSN user quota exceeded based on private IP(Default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msisdn

Description Mobile Subscriber Integrated Services Digital Netwrok-Number (MSISDN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

with-radius-attribute

Description Log with radius attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lsn_port-unavailable

Specification	Value
Type	*object*

ip-based

Description Log LSN port unavailable based on NAT IP (Default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_log-suppression

Specification	Value
Type	*object*

count

Description Configure log suppression count (default: 100)

Type: number

Range: 50-500

Default: 100

time

Description Log generation timeout(default: 30 seconds)

Type: number

Range: 1-300

Default: 30

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-partition-name

Specification	Value
Type	*object*

disable-partition-name

Description Disable partition name in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log

Specification	Value
Type	*object*

access

Description: access is a **JSON Block**. Please see below for *local-log_access*

Type: Object

Reference Object: */axapi/v3/logging/local-log/access*

app-fw

Description: app-fw is a **JSON Block**. Please see below for *local-log_app-fw*

Type: Object

Reference Object: */axapi/v3/logging/local-log/app-fw*

authentication

Description: authentication is a **JSON Block**. Please see below for *local-log_authentication*

Type: Object

Reference Object: */axapi/v3/logging/local-log/authentication*

global

Description: global is a **JSON Block**. Please see below for *local-log_global*

Type: Object

Reference Object: */axapi/v3/logging/local-log/global*

local-log_access

Specification	Value
Type	*object*

log

Description: log is a **JSON Block**. Please see below for *local-log_access_log*

Type: Object

Reference Object: */axapi/v3/logging/local-log/access/log*

top-n

Description: top-n is a **JSON Block**. Please see below for *local-log_access_top-n*

Type: Object

Reference Object: */axapi/v3/logging/local-log/access/top-n*

local-log_access_top-n

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log_access_log

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log_authentication

Specification	Value
Type	*object*

log

Description: log is a **JSON Block**. Please see below for *local-log_authentication_log*

Type: Object

Reference Object: */axapi/v3/logging/local-log/authentication/log*

top-n

Description: top-n is a **JSON Block**. Please see below for *local-log_authentication_top-n*

Type: Object

Reference Object: */axapi/v3/logging/local-log/authentication/top-n*

local-log_authentication_top-n

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log_authentication_log

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log_global

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log_global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'enqueue': Total local-log enqueue; 'enqueue-full': Total local-log queue full; 'enqueue-error': Total local-log enqueue error; 'dequeue': Total local-log dequeue; 'dequeue-error': Total local-log dequeue processing error; 'raw-log': Total local-log raw logs; 'raw-log-error': Total raw log logging error; 'log-summarized': Total raw log summarized; 'l1-log-summarized': Total layer 1 log summarized; 'l2-log-summarized': Total layer 2 log summarized; 'log-summarized-error': Total local-log summarization error; 'aam-db': Total local-log AAM raw database; 'ep-db': Total local-log EP raw database; 'fw-db': Total local-log Firewall raw database; 'aam-top-user-db': Total local-log AAM top user summary database; 'ep-top-user-db': Total local-log EP top user summary database; 'ep-top-src-db': Total local-log EP top client summary database; 'ep-top-dst-db': Total local-log EP top destination summary database; 'ep-top-domain-db': Total local-log EP top domain summary database; 'ep-top-web-category-db': Total local-log EP top web-category summary database; 'ep-top-host-db': Total local-log EP top host summary database; 'fw-top-app-db': Total local-log Firewall top application summary database; 'fw-top-src-db': Total local-log Firewall top source summary database; 'fw-top-app-src-db': Total local-log Firewall top application and source summary database; 'fw-top-category-db': Total local-log Firewall top category summary database; 'db-erro': Total local-log database create error; 'query': Total local-log axapi query; 'response': Total local-log axapi response; 'query-error': Total local-log axapi query error; 'fw-top-thr-db': Total local-log Firewall top threat summary database; 'fw-top-thr-src-db': Total local-log Firewall top threat and source summary database;

Type: string

Supported Values: all, enqueue, enqueue-full, enqueue-error, dequeue, dequeue-error, raw-log, raw-log-error, log-summarized, l1-log-summarized, l2-log-summarized, log-summarized-error, aam-db, ep-db, fw-db, aam-top-user-db, ep-top-user-db, ep-top-src-db, ep-top-dst-db, ep-top-domain-db, ep-top-web-category-db, ep-top-host-db, fw-top-app-db, fw-top-src-db, fw-top-app-src-db, fw-top-category-db, db-erro, query, response, query-error, fw-top-thr-db, fw-top-thr-src-db

local-log_app-fw

Specification	Value
Type	*object*

dot-plot

Description: dot-plot is a **JSON Block**. Please see below for *local-log_app-fw_dot-plot*

Type: Object

Reference Object: */axapi/v3/logging/local-log/app-fw/dot-plot*

top-n

Description: top-n is a **JSON Block**. Please see below for *local-log_app-fw_top-n*

Type: Object

Reference Object: */axapi/v3/logging/local-log/app-fw/top-n*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log_app-fw_top-n

Specification	Value
Type	*object*

uuid

Description uuid of the object

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log_app-fw_dot-plot

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

email

Specification	Value
Type	*object*

buffer

Description: buffer is a **JSON Block**. Please see below for *email_buffer*

Type: Object

Reference Object: */axapi/v3/logging/email/buffer*

filter-list

Type: List

Reference Object: */axapi/v3/logging/email/filter/{filter-id}*

level

Description: level is a **JSON Block**. Please see below for *email_level*

Type: Object

Reference Object: */axapi/v3/logging/email/level*

email_buffer

Specification	Value
Type	*object*

number

Description Number of log messages that can be buffered (Number of log messages that can be buffered, default 50)

Type: number

Range: 16-256

Default: 50

time

Description Number of minutes a log message can stay in buffer (Number of minutes a log message can stay in buffer, default 10)

Type: number

Range: 10-1440

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

email_filter-list

Specification	Value
Type	*list*
Block object keys	

expression

Description Reverse Polish Notation, consists of level 0-7, module AFLEX/HMON/..., pattern log-content-pattern, and or/and/not

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

filter-id

Description Logging via email filter settings

Type: number

Range: 1-8

trigger

Description Trigger email, override buffer settings

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

email_level

Specification	Value
Type	*object*

email-levelname

Description 'disable': Do not send log to email address; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'notification': Normal but significant conditions (severity=5);

Type: string

Supported Values: disable, emergency, alert, critical, notification

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

syslog

Specification	Value
Type	*object*

syslog-levelname

Description 'disable': Do not send log to syslog; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: disable, emergency, alert, critical, error, warning, notification, information, debugging

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host

Specification	Value
Type	*object*

ipv4addr-list

Type: List

Reference Object: */axapi/v3/logging/host/ipv4addr/{host-ipv4}*

ipv6addr-list

Type: List

Reference Object: */axapi/v3/logging/host/ipv6addr/{host-ipv6}*

partition

Description: partition is a **JSON Block**. Please see below for *host_partition*

Type: Object

Reference Object: */axapi/v3/logging/host/partition*

host_ipv6addr-list

Specification	Value
Type	*list*
Block object keys	

host-ipv6

Description Set syslog host ipv6 address

Type: string

Format: ipv6-address

over-tls

Description Enable remote logging over TLS session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Set remote syslog port number

Type: number

Range: 1-32767

Default: 514

tcp

Description Use TCP as transport protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_partition

Specification	Value
Type	*object*

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-name and shared are mutually exclusive

Reference Object: */axapi/v3/partition*

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared and partition-name are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_ipv4addr-list

Specification	Value
Type	*list*
Block object keys	

host-ipv4

Description Set syslog host ip address

Type: string

Format: host

over-tls

Description Enable remote logging over TLS session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Set remote syslog port number

Type: number

Range: 1-32767

Default: 514

tcp

Description Use TCP as transport protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

export

Specification	Value
Type	*object*

all

Description System support messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

remote-file

Description Remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trap

Specification	Value
Type	*object*

trap-levelname

Description 'disable': Do not send trap to snmp host; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2);

Type: string

Supported Values: disable, emergency, alert, critical

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auditlog

Specification	Value
Type	*object*

audit-facility

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use; (Configure the facility of auditlog)

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

host4

Description Configure the auditlog host

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: host4,shared, partition-name, and host6 are mutually exclusive

host6

Description Configure the auditlog host

Type: string

Format: ipv6-address

Mutual Exclusion: host6,shared, partition-name, and host4 are mutually exclusive

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-name,shared, host6, and host4 are mutually exclusive

Reference Object: */axapi/v3/partition*

port

Description Set remote audit log port number(Default 514)

Type: number

Range: 1-32767

Default: 514

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared,partition-name, host6, and host4 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

single-priority-list

Specification	Value
Type	*list*
Block object keys	

levelname

Description 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: emergency, alert, critical, error, warning, notification, information, debugging

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

configure

Specification	Value
Type	*object*

line-feed-in-udp-syslog

Description Add newline for syslog over UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.2 logging auditlog

Set send auditlog to syslog host

auditlog Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	auditlog
Element URI	/axapi/v3/logging/auditlog
Element Attributes	auditlog_attributes
Partition Visibility	shared
Schema	`auditlog schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/auditlog

auditlog attributes

```
POST /axapi/v3/logging/auditlog
Payload:
{
    "auditlog": {
        "audit-facility": "local0",
        "partition-name": "a",
        "port": 1
    }
}
```

Get Object

GET

/axapi/v3/logging/auditlog

auditlog attributes

```
GET /axapi/v3/logging/auditlog
Reponse:
{
    "auditlog": {
        "partition-name": "a",
        "audit-facility": "local0",
        "port": 1,
        "uuid": "4ccdaea2-b5e3-11ef-867e-ae71681635d0",
        "a10-url": "/axapi/v3/logging/auditlog"
    }
}
```

Modify Object

POST

/axapi/v3/logging/auditlog

auditlog attributes

Replace Object

PUT

/axapi/v3/logging/auditlog

auditlog attributes

```
PUT /axapi/v3/logging/auditlog
Payload:
{
    "auditlog": {
        "audit-facility": "local2",
        "partition-name": "abcd",
        "port": 2
    }
}
```

Delete Object

DELETE

/axapi/v3/logging/auditlog

auditlog attributes

```
DELETE /axapi/v3/logging/auditlog
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

auditlog attributes

audit-facility

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use; (Configure the facility of auditlog)

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

host4

Description Configure the auditlog host

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: host4,shared, partition-name, and host6 are mutually exclusive

host6

Description Configure the auditlog host

Type: string

Format: ipv6-address

Mutual Exclusion: host6,shared, partition-name, and host4 are mutually exclusive

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-name,shared, host6, and host4 are mutually exclusive

Reference Object: */axapi/v3/partition*

port

Description Set remote audit log port number(Default 514)

Type: number

Range: 1-32767

Default: 514

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared,partition-name, host6, and host4 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.3 logging buffered

Set buffered logging parameters

buffered Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	buffered
Element URI	/axapi/v3/logging/buffered
Element Attributes	buffered_attributes
Partition Visibility	shared
Schema	`buffered schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/buffered

buffered attributes

```
POST /axapi/v3/logging/buffered
Payload:
{
    "buffered": {
        "buffersize": 10000
    }
}
```

Get Object

GET

/axapi/v3/logging/buffered

buffered attributes

```
GET /axapi/v3/logging/buffered
Reponse:
{
    "buffered": {
        "buffersize": 10000,
        "levelname": "debugging",
        "uuid": "24d860b2-b5df-11ef-9360-ae71681635d0",
        "a10-url": "/axapi/v3/logging/buffered"
    }
}
```

Modify Object

POST

/axapi/v3/logging/buffered

buffered attributes

Replace Object

PUT

/axapi/v3/logging/buffered

buffered attributes

```
PUT /axapi/v3/logging/buffered
Payload:
{
    "buffered": {
        "buffersize": 10001
    }
}
```

Delete Object

DELETE

/axapi/v3/logging/buffered

buffered attributes

```
DELETE /axapi/v3/logging/buffered
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

buffered attributes

buffersize

Description Logging buffer size (in items), default 30000

Type: number

Range: 10000-50000

Default: 30000

levelname

Description 'disable': Do not send log to buffer; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: disable, emergency, alert, critical, error, warning, notification, information, debugging

Default: debugging

partition-buffersize

Description Logging buffer size (in items), default 3000

Type: number

Range: 1000-5000

Default: 3000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.4 logging configure

Set logging configuration

configure Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	configure
Element URI	/axapi/v3/logging/configure
Element Attributes	configure_attributes
Partition Visibility	shared
Schema	`configure schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/configure

configure attributes

```
POST /axapi/v3/logging/configure
Payload:
{
    "configure": {
        "line-feed-in-udp-syslog": 1
    }
}
```

Get Object

GET

/axapi/v3/logging/configure

configure attributes

```
GET /axapi/v3/logging/configure
Reponse:
{
    "configure": {
        "line-feed-in-udp-syslog": 1,
        "uuid": "24d85716-b5df-11ef-9360-ae71681635d0",
        "a10-url": "/axapi/v3/logging/configure"
    }
}
```

Modify Object

POST

/axapi/v3/logging/configure

configure attributes

Replace Object

PUT

/axapi/v3/logging/configure

configure attributes

```
PUT /axapi/v3/logging/configure
Payload:
{
    "configure": {
        "line-feed-in-udp-syslog": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/logging/configure

configure attributes

```
DELETE /axapi/v3/logging/configure
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
```

(continues on next page)

(continued from previous page)

```
    }
}
```

configure attributes

line-feed-in-udp-syslog

Description Add newline for syslog over UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.5 logging console

Set logging level which sent to console

console Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	console
Element URI	/axapi/v3/logging/console
Element Attributes	console_attributes
Partition Visibility	shared
Schema	`console schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/console

console attributes

```
POST /axapi/v3/logging/console
Payload:
{
    "console": {
        "console-levelname": "disable"
```

(continues on next page)

(continued from previous page)

```
    }
}
```

Get Object

GET

/axapi/v3/logging/console

console attributes

```
GET /axapi/v3/logging/console
Reponse:
{
    "console": {
        "console-levelname": "disable",
        "uuid": "24d85af4-b5df-11ef-9360-ae71681635d0",
        "a10-url": "/axapi/v3/logging/console"
    }
}
```

Modify Object

POST

/axapi/v3/logging/console

console attributes

Replace Object

PUT

/axapi/v3/logging/console

console attributes

```
PUT /axapi/v3/logging/console
Payload:
{
    "console": {
        "console-levelname": "disable"
    }
}
```

Delete Object

DELETE

/axapi/v3/logging/console

console attributes

```
DELETE /axapi/v3/logging/console
Reponse:
{
```

(continues on next page)

(continued from previous page)

```
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

console attributes

console-levelname

Description 'disable': Do not send log to console; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: disable, emergency, alert, critical, error, warning, notification, information, debugging

Default: error

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.6 logging disable-partition-name

disable-partition-name Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	disable-partition-name
Element URI	/axapi/v3/logging/disable-partition-name
Element Attributes	disable-partition-name_attributes
Partition Visibility	shared
Schema	`disable-partition-name schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/disable-partition-name

disable-partition-name attributes

```
POST /axapi/v3/logging/disable-partition-name
Payload:
{
    "disable-partition-name": {
        "disable-partition-name": 1
    }
}
```

Get Object

GET

/axapi/v3/logging/disable-partition-name

disable-partition-name attributes

```
GET /axapi/v3/logging/disable-partition-name
Reponse:
{
    "disable-partition-name": {
        "disable-partition-name": 1,
        "uuid": "f0fc75da-b5e3-11ef-867e-ae71681635d0",
        "a10-url": "/axapi/v3/logging/disable-partition-name"
    }
}
```

Modify Object

POST

/axapi/v3/logging/disable-partition-name

disable-partition-name attributes

Replace Object

PUT

/axapi/v3/logging/disable-partition-name

disable-partition-name attributes

```
PUT /axapi/v3/logging/disable-partition-name
Payload:
{
    "disable-partition-name": {
        "disable-partition-name": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/logging/disable-partition-name

disable-partition-name attributes

```
DELETE /axapi/v3/logging/disable-partition-name
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

disable-partition-name attributes

disable-partition-name

Description Disable partition name in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.7 logging email

Set logging level which sent to email address

email Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	email
Element URI	/axapi/v3/logging/email
Element Attributes	email_attributes
Partition Visibility	shared
Schema	`email schema`

Operations Allowed:

Get Object

GET

/axapi/v3/logging/email

email_attributes

email attributes

buffer

Description: buffer is a **JSON Block**. Please see below for *buffer*

Type: Object

Reference Object: */axapi/v3/logging/email/buffer*

filter-list

Type: List

Reference Object: */axapi/v3/logging/email/filter/{filter-id}*

level

Description: level is a **JSON Block**. Please see below for *level*

Type: Object

Reference Object: */axapi/v3/logging/email/level*

buffer

Specification	Value
Type	*object*

number

Description Number of log messages that can be buffered (Number of log messages that can be buffered, default 50)

Type: number

Range: 16-256

Default: 50

time

Description Number of minutes a log message can stay in buffer (Number of minutes a log message can stay in buffer, default 10)

Type: number

Range: 10-1440

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

filter-list

Specification	Value
Type	*list*
Block object keys	

expression

Description Reverse Polish Notation, consists of level 0-7, module AFLEX/HMON/..., pattern log-content-pattern, and or/and/not

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

filter-id

Description Logging via email filter settings

Type: number

Range: 1-8

trigger

Description Trigger email, override buffer settings

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

level

Specification	Value
Type	*object*

email-levelname

Description 'disable': Do not send log to email address; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'notification': Normal but significant conditions (severity=5);

Type: string

Supported Values: disable, emergency, alert, critical, notification

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.8 logging email-address

Set the recipients address

email-address Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	email-address
Element URI	/axapi/v3/logging/email-address
Element Attributes	email-address_attributes
Partition Visibility	shared
Schema	`email-address schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/email-address

email-address attributes

```
POST /axapi/v3/logging/email-address
Payload:
{
    "email-address": {
        "email-list": [
            {
                "email-address": "j@j.c"
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/logging/email-address

email-address attributes

```
GET /axapi/v3/logging/email-address
Reponse:
{
    "email-address": {
        "email-list": [
            {
                "email-address": "j@j.c"

    "email-address": {
        "email-list": [
            {
                "email-address": "o@pol.com"
            }
        ]
    }
}
```

Delete Object

DELETE

/axapi/v3/logging/email-address

email-address attributes

```
DELETE /axapi/v3/logging/email-address
Reponse:
{
    "response": {
        "http-status": 200,
```

(continues on next page)

(continued from previous page)

```
        "status": "OK",
        "msg": "Success"
    }
}
```

email-address attributes

email-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

email-list

Specification	Value
Type	*list*
Block object keys	

email-address

Description Email address information of recipients

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

2.73.9 logging email buffer

Logging via email buffering settings

buffer Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	buffer
Element URI	/axapi/v3/logging/email/buffer
Element Attributes	buffer_attributes
Partition Visibility	shared
Schema	`buffer schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/email/buffer

buffer attributes

```
POST /axapi/v3/logging/email/buffer
Payload:
{
    "buffer": {
        "number": 16
    }
}
```

Get Object

GET

        "msg": "Success"
    }
}
```

buffer attributes

number

Description Number of log messages that can be buffered (Number of log messages that can be buffered, default 50)

Type: number

Range: 16-256

Default: 50

time

Description Number of minutes a log message can stay in buffer (Number of minutes a log message can stay in buffer, default 10)

Type: number

Range: 10-1440

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.10 logging email filter

Logging via email filter settings

filter Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*filter-id*
Collection Name	*filter-list*
Collection URI	/axapi/v3/logging/email/filter
Element Name	filter
Element URI	/axapi/v3/logging/email/filter/{filter-id}
Element Attributes	filter_attributes
Partition Visibility	shared
Schema	`filter schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/email/filter

filter attributes

```
POST /axapi/v3/logging/email/filter/
Payload:
{
    "filter": {
        "filter-id": 1,
        "expression": "level emergency module AFLEX and pattern aaa or"
    }
}
```

Create List

        "status": "OK",
        "msg": "Success"
    }
}
```

filter-list

filter-list is **JSON List** of *filter attributes*

filter-list : [

{ *filter attributes* },

{ *filter attributes* },

...

]

filter attributes

expression

Description Reverse Polish Notation, consists of level 0-7, module AFLEX/HMON/..., pattern log-content-pattern, and or/and/not

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

filter-id

Description Logging via email filter settings

Type: number

Range: 1-8

trigger

Description Trigger email, override buffer settings

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.11 logging email level

Set logging level which sent to email address

level Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	level
Element URI	/axapi/v3/logging/email/level
Element Attributes	level_attributes
Partition Visibility	shared
Schema	`level schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/email/level

level attributes

```
POST /axapi/v3/logging/email/level
Payload:
{
    "level": {
        "email-levelname": "disable"
    }
}
```

Get Object

GET

/axapi/v3/logging/email/level

level attributes

```
GET /axapi/v3/logging/email/level
Reponse:
{
    "level": {
        "email-levelname": "disable",
        "uuid": "24d85d38-b5df-11ef-9360-ae71681635d0",

        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

level attributes

email-levelname

Description 'disable': Do not send log to email address; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'notification': Normal but significant conditions (severity=5);

Type: string

Supported Values: disable, emergency, alert, critical, notification

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.12 logging facility

Facility parameter for syslog messages

facility Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	facility
Element URI	/axapi/v3/logging/facility
Element Attributes	facility_attributes
Partition Visibility	shared
Schema	`facility schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/facility

facility attributes

```
POST /axapi/v3/logging/facility
Payload:
{
    "facility": {
        "facilityname": "local0"
    }
}
```

Get Object

GET

/axapi/v3/logging/facility

facility attributes

```
GET /axapi/v3/logging/facility
Reponse:
{
    "facility": {
        "facilityname": "local0",
        "uuid": "da34a6fa-b5e4-11ef-867e-ae71681635d0",
```

(continues on next page)

(continued from previous page)

        "a10-url": "/axapi/v3/logging/facility"
    }
}
```

Modify Object

POST

/axapi/v3/logging/facility

facility attributes

Replace Object

PUT

/axapi/v3/logging/facility

facility attributes

Delete Object

DELETE

/axapi/v3/logging/facility

facility attributes

```
DELETE /axapi/v3/logging/facility
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

facility attributes

facilityname

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use; (Facility parameter for syslog messages)

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.13 logging host

Set remote syslog host DNS name or ip address

host Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	host
Element URI	/axapi/v3/logging/host
Element Attributes	host_attributes
Partition Visibility	shared
Schema	`host schema`

Operations Allowed:

Get Object

GET

/axapi/v3/logging/host

host_attributes

host attributes

ipv4addr-list

Type: List

Reference Object: */axapi/v3/logging/host/ipv4addr/{host-ipv4}*

ipv6addr-list

Type: List

Reference Object: */axapi/v3/logging/host/ipv6addr/{host-ipv6}*

partition

Description: partition is a **JSON Block**. Please see below for *partition*

Type: Object

Reference Object: */axapi/v3/logging/host/partition*

ipv6addr-list

Specification	Value
Type	*list*
Block object keys	

host-ipv6

Description Set syslog host ipv6 address

Type: string

Format: ipv6-address

over-tls

Description Enable remote logging over TLS session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Set remote syslog port number

Type: number

Range: 1-32767

Default: 514

tcp

Description Use TCP as transport protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

partition

Specification	Value
Type	*object*

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-name and shared are mutually exclusive

Reference Object: */axapi/v3/partition*

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared and partition-name are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv4addr-list

Specification	Value
Type	*list*
Block object keys	

host-ipv4

Description Set syslog host ip address

Type: string

Format: host

over-tls

Description Enable remote logging over TLS session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Set remote syslog port number

Type: number

Range: 1-32767

Default: 514

tcp

Description Use TCP as transport protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.14 logging host ipv4addr

host DNS name or ipv4 address of remote syslog server

ipv4addr Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*host-ipv4*
Collection Name	*ipv4addr-list*
Collection URI	/axapi/v3/logging/host/ipv4addr
Element Name	ipv4addr
Element URI	/axapi/v3/logging/host/ipv4addr/{host-ipv4}
Element Attributes	ipv4addr_attributes
Partition Visibility	shared
Schema	`ipv4addr schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/host/ipv4addr

ipv4addr attributes

```
POST /axapi/v3/logging/host/ipv4addr/
Payload:
{
    "ipv4addr": {
        "host-ipv4": "localhost",

quota-exceeded

Specification	Value
Type	*object*

custom1

Description Customized attribute No.1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom2

Description Customized attribute No.2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom3

Description Customized attribute No.3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom4

Description Customized attribute No.4

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom5

Description Customized attribute No.5

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom6

Description Customized attribute No.6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-pool-based

Description Disable log LSN user quota exceeded based on LSN pool(Default: enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imei

Description International Mobile Equipment Identity (IMEI)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imsi

Description International Mobile Subscriber Identity (IMSI)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-based

Description Log LSN user quota exceeded based on private IP(Default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msisdn

Description Mobile Subscriber Integrated Services Digital Netwrok-Number (MSISDN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

with-radius-attribute

Description Log with radius attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-unavailable

Specification	Value
Type	*object*

ip-based

Description Log LSN port unavailable based on NAT IP (Default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log-suppression

Specification	Value
Type	*object*

count

Description Configure log suppression count (default: 100)

Type: number

Range: 50-500

Default: 100

time

Description Log generation timeout(default: 30 seconds)

Type: number

Range: 1-300

Default: 30

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73.28 logging lsn log-suppression

Set LSN system log generation parameters

log-suppression Specification

```

quota-exceeded attributes

custom1

Description Customized attribute No.1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom2

Description Customized attribute No.2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom3

Description Customized attribute No.3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom4

Description Customized attribute No.4

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom5

Description Customized attribute No.5

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom6

Description Customized attribute No.6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-pool-based

Description Disable log LSN user quota exceeded based on LSN pool(Default: enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imei

Description International Mobile Equipment Identity (IMEI)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imsi

Description International Mobile Subscriber Identity (IMSI)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-based

Description Log LSN user quota exceeded based on private IP(Default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msisdn

Description Mobile Subscriber Integrated Services Digital Netwrok-Number (MSISDN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

with-radius-attribute

Description Log with radius attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.73.31 logging monitor

Set terminal monitor logging level

Default: 0

server-port

Description Control block-merge behavior for slb server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-server-port

Description Control block-merge behavior for slb virtual-server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.75.2 merge-mode-add slb

Control block-merge mode behavior for slb objects

slb Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	slb
Element URI	/axapi/v3/merge-mode-add/slb
Element Attributes	slb_attributes
Partition Visibility	shared
Schema	`slb schema`

Operations Allowed:

Create Object

POST

/axapi/v3/merge-mode-add/slb

slb attributes

```
POST /axapi/v3/merge-mode-add/slb
Payload:
{
    "slb": {
        "server-port": 1
    }
}
```

Get Object

GET

/axapi/v3/merge-mode-add/slb

slb attributes

```
GET /axapi/v3/merge-mode-add/slb
Reponse:
{
    "slb": {
        "server-port": 1,
        "member": 0,
        "virtual-server-port": 0,
        "uuid": "d8bb1d5c-09a1-11f0-837c-5323f81e20fe",
        "a10-url": "/axapi/v3/merge-mode-add/slb"
    }
}
```

Modify Object

POST

/axapi/v3/merge-mode-add/slb

slb attributes

Replace Object

PUT

/axapi/v3/merge-mode-add/slb

slb attributes

```
PUT /axapi/v3/merge-mode-add/slb
Payload:
{
    "slb": {
        "server-port": 0
```

(continues on next page)

(continued from previous page)

```
    }
}
```

Delete Object

DELETE

/axapi/v3/merge-mode-add/slb

slb attributes

```
DELETE /axapi/v3/merge-mode-add/slb
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

slb attributes

member

Description Control block-merge behavior for slb service-group member

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-port

Description Control block-merge behavior for slb server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-server-port

Description Control block-merge behavior for slb virtual-server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.76 mirror-port

Objects:

2.76.1 mirror-port

Enable a port to act as Mirror Port

mirror-port Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*mirror-index*
Collection Name	*mirror-port-list*
Collection URI	/axapi/v3/mirror-port
Element Name	mirror-port
Element URI	/axapi/v3/mirror-port/{mirror-index}
Element Attributes	mirror-port_attributes
Partition Visibility	shared
Schema	`mirror-port schema`

Operations Allowed:

Create Object

POST

/axapi/v3/mirror-port

mirror-port attributes

```
POST /axapi/v3/mirror-port/
Payload:
{
    "mirror-port": {
        "ethernet": 1,
        "mirror-index": 1
    }
}
```

Create List

POST

/axapi/v3/mirror-port

mirror-port attributes

Get Object

GET

/axapi/v3/mirror-port/{mirror-index}

mirror-port attributes

```
GET /axapi/v3/mirror-port/1
Reponse:
{
    "mirror-port": {
        "mirror-index": 1,
        "ethernet": 1,
        "mirror-dir": "both",
        "uuid": "a99e269a-b6cc-11ef-8f5a-ae71681635d0",
        "a10-url": "/axapi/v3/mirror-port/1"
    }
}
```

Get List

GET

/axapi/v3/mirror-port

mirror-port-list

Modify Object

POST

/axapi/v3/mirror-port/{mirror-index}

mirror-port attributes

Replace Object

PUT

/axapi/v3/mirror-port/{mirror-index}

mirror-port attributes

```
PUT /axapi/v3/mirror-port/1
Payload:
{
    "mirror-port": {
        "ethernet": 1,
        "mirror-index": 1
    }
}
```

Replace List

PUT

/axapi/v3/mirror-port

mirror-port-list

Delete Object

DELETE

/axapi/v3/mirror-port/{mirror-index}

mirror-port attributes

```
DELETE /axapi/v3/mirror-port/1
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

mirror-port-list

mirror-port-list is **JSON List** of *mirror-port attributes*

mirror-port-list : [

{ *mirror-port attributes* },

{ *mirror-port attributes* },

...

]

mirror-port attributes

ethernet

Description Ethernet port as mirror port (Port Value)

Type: number

Format: interface

mirror-dir

Description 'input': Mirror incoming packets to this port; 'output': Mirror outgoing packets to this port; 'both': Mirror both incoming and outgoing packets to this port;

Type: string

Supported Values: input, output, both

Default: both

mirror-index

Description Mirror index

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.77 misc

Objects:

2.77.1 misc

Delete Configuration file

misc Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	misc
Element URI	/axapi/v3/misc
Element Attributes	misc_attributes
Partition Visibility	None
Schema	`misc schema`

Operations Allowed:

Get Object

GET

/axapi/v3/misc

misc_attributes

misc attributes

2.77.2 misc top-level-lineage

Delete Configuration file

top-level-lineage Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	top-level-lineage
Element URI	/axapi/v3/misc/top-level-lineage
Element Attributes	top-level-lineage_attributes
Partition Visibility	None
Schema	`top-level-lineage schema`

Operations Allowed:

Get Object

GET

/axapi/v3/misc/top-level-lineage

top-level-lineage_attributes

top-level-lineage attributes

2.78 miscellenious-alb

Objects:

2.78.1 miscellenious-alb

Miscellenious Information Used for CLI rendering

miscellenious-alb Specification

Parameter	Value
Type	*operational*
Element Name	miscellenious-alb
Element URI	/axapi/v3/miscellenious-alb
Element Attributes	miscellenious-alb_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/miscellenious-alb/oper
Schema	`miscellenious-alb schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/miscellenious-alb

miscellenious-alb attributes

miscellenious-alb attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.78.2 miscellenious-alb oper

Operational Status for the object miscellenious-alb

miscellenious-alb Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	miscellenious-alb
Element URI	/axapi/v3/miscellenious-alb/oper
Element Attributes	miscellenious-alb_attributes
Partition Visibility	None
Schema	`miscellenious-alb schema`

Operations Allowed:

Create Object

POST

/axapi/v3/miscellenious-alb/oper

miscellenious-alb attributes

Get Object

GET

/axapi/v3/miscellenious-alb/oper

miscellenious-alb attributes

Modify Object

POST

/axapi/v3/miscellenious-alb/oper

miscellenious-alb attributes

Replace Object

PUT

        "status": "OK",
        "msg": "Success"
    }
}
```

monitor attributes

buffer-drop

Description Monitor buffer drop threshold (Threshold value)

Type: number

Range: 1-32767

Default: 4000

buffer-usage

Description Monitor IO buffer usage threshold (Threshold value)

Type: number

Range: 60000-4000000

conn-type0

Description Conn resource type 0 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

conn-type1

Description Conn resource type 1 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

conn-type2

Description Conn resource type 2 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

conn-type3

Description Conn resource type 3 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

conn-type4

Description Conn resource type 4 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

ctrl-cpu

Description Monitor control CPU threshold (Threshold value in percentage, default 90)

Type: number

Range: 1-100

Default: 90

data-cpu

Description Monitor data CPU threshold (Threshold value in percentage, default 90)

Type: number

Range: 1-100

Default: 90

disk

Description Monitor hard disk usage threshold (Threshold value in percentage, default 85)

Type: number

Range: 1-100

Default: 85

memory

Description Monitor memory usage threshold (Threshold value in percentage, default 95)

Type: number

Range: 1-100

Default: 95

smp-type0

Description SMP resource type 0 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

smp-type1

Description SMP resource type 1 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

smp-type2

Description SMP resource type 2 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

smp-type3

Description SMP resource type 3 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

smp-type4

Description SMP resource type 4 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

warn-temp

Description Monitor warning system temperature threshold (Threshold value in Celsius, default 1)

Type: number

2.80 multi-config

Objects:

2.80.1 multi-config

Set multi-config enable/disable

multi-config Specification

Parameter	Value

Description Configure timeout value to export flow records periodically for long-live session (Number of minutes: default is 10, 0 means only send flow record when session is deleted)

Type: number

Range: 0-1440

Default: 10

name

Description Name of netflow monitor

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/netflow-monitor-tmpl*

protocol

Description 'v9': Netflow version 9; 'v10': Netflow version 10 (IPFIX);

Type: string

Supported Values: v9, v10

Default: v9

record

Description: record is a **JSON Block**. Please see below for *monitor-list_record*

Type: Object

Reference Object: */axapi/v3/netflow/monitor/{name}/record*

resend-template

Description: resend-template is a **JSON Block**. Please see below for *monitor-list_resend-template*

Type: Object

Reference Object: */axapi/v3/netflow/monitor/{name}/resend-template*

sample

Description: sample is a **JSON Block**. Please see below for *monitor-list_sample*

Type: Object

Reference Object: */axapi/v3/netflow/monitor/{name}/sample*

sampling-enable

Type: List

scope

Description 'global': Netflow monitor is activated globally (Default); 'firewall-rule': Netflow monitor is only activated when referenced by a firewall rule;

Type: string

Supported Values: global, firewall-rule

Default: global

source-address

Description: source-address is a **JSON Block**. Please see below for *monitor-list_source-address*

Type: Object

Reference Object: */axapi/v3/netflow/monitor/{name}/source-address*

source-ip-use-mgmt

Description Use management interface's IP address for source ip of netflow packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_custom-record

Specification	Value
Type	*object*

custom-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_custom-record_custom-cfg

Specification	Value
Type	*list*
Block object keys	

event

Description 'sesn-event-nat44-creation': Export NAT44 session creation events; 'sesn-event-nat44-deletion': Export NAT44 session deletion events; 'sesn-event-nat64-creation': Export NAT64 session creation events; 'sesn-event-nat64-deletion': Export NAT64 session deletion events; 'sesn-event-dslite-creation': Export Dslite session creation events; 'sesn-event-dslite-deletion': Export Dslite session deletion events; 'sesn-event-fw4-creation': Export FW4 session creation events; 'sesn-event-fw4-deletion': Export FW4 session deletion events; 'sesn-event-fw6-creation': Export FW6 session creation events; 'sesn-event-fw6-deletion': Export FW6 session deletion events; 'deny-reset-event-fw4': Export FW4 Deny Reset events; 'deny-reset-event-fw6': Export FW6 Deny Reset events; 'port-mapping-nat44-creation': Export NAT44 Port Mapping Creation Event; 'port-mapping-nat44-deletion': Export NAT44 Port Mapping Deletion Event; 'port-mapping-nat64-creation': Export NAT64 Port Mapping Creation Event; 'port-mapping-nat64-deletion': Export NAT64 Port Mapping Deletion Event; 'port-mapping-dslite-creation': Export Dslite Port Mapping Creation Event; 'port-mapping-dslite-deletion': Export Dslite Port Mapping Deletion Event; 'port-batch-nat44-creation': Export NAT44 Port Batch Creation Event; 'port-batch-nat44-deletion': Export NAT44 Port Batch Deletion Event; 'port-batch-nat64-creation': Export NAT64 Port Batch Creation Event; 'port-batch-nat64-deletion': Export NAT64 Port Batch Deletion Event; 'port-batch-dslite-creation': Export Dslite Port Batch Creation Event; 'port-batch-dslite-deletion': Export Dslite Port Batch Deletion Event; 'port-batch-v2-nat44-creation': Export NAT44 Port Batch v2 Creation Event; 'port-batch-v2-nat44-deletion': Export NAT44 Port Batch v2 Deletion Event; 'port-batch-v2-nat64-creation': Export NAT64 Port Batch v2 Creation Event; 'port-batch-v2-nat64-deletion': Export NAT64 Port Batch v2 Deletion Event; 'port-batch-v2-dslite-creation': Export Dslite Port Batch v2 Creation Event; 'port-batch-v2-dslite-deletion': Export Dslite Port Batch v2 Deletion Event; 'gtp-c-tunnel-event': Export GTP Control Tunnel Creation or Deletion Events; 'gtp-u-tunnel-event': Export GTP User Tunnel Creation or Deletion Events; 'gtp-deny-event': Export GTP Deny events on GTP C/U Tunnels; 'gtp-info-event': Export GTP Info events on GTP C/U Tunnels; 'fw-ddos-entry-creation': Export FW iDDoS Entry Created Record; 'fw-ddos-entry-deletion': Export FW iDDoS Entry Deleted Record; 'fw-session-limit-exceeded': Export FW Session Limit Exceeded Record; 'cgn-ddos-l3-entry-creation': Export CGN iDDoS L3 Entry Creation; 'cgn-ddos-l3-entry-deletion': Export CGN iDDoS L3 Entry Deletion; 'cgn-ddos-l4-entry-creation': Export CGN iDDoS L4 Entry Creation; 'cgn-ddos-l4-entry-deletion': Export CGN iDDoS L4 Entry Deletion; 'gtp-rate-limit-periodic': Export GTP Rate Limit Periodic;

Type: string

Supported Values: sesn-event-nat44-creation, sesn-event-nat44-deletion, sesn-event-nat64-creation, sesn-event-nat64-deletion, sesn-event-dslite-creation, sesn-event-dslite-deletion, sesn-event-fw4-creation, sesn-event-fw4-deletion, sesn-event-fw6-creation, sesn-event-fw6-deletion, deny-reset-event-fw4, deny-reset-event-fw6, port-mapping-nat44-creation, port-mapping-nat44-deletion, port-mapping-nat64-creation, port-mapping-nat64-deletion, port-mapping-dslite-creation, port-mapping-dslite-deletion, port-batch-nat44-creation, port-batch-nat44-deletion, port-batch-nat64-creation, port-batch-nat64-deletion, port-batch-

dslite-creation, port-batch-dslite-deletion, port-batch-v2-nat44-creation, port-batch-v2-nat44-deletion, port-batch-v2-nat64-creation, port-batch-v2-nat64-deletion, port-batch-v2-dslite-creation, port-batch-v2-dslite-deletion, gtp-c-tunnel-event, gtp-u-tunnel-event, gtp-deny-event, gtp-info-event, fw-ddos-entry-creation, fw-ddos-entry-deletion, fw-session-limit-exceeded, cgn-ddos-l3-entry-creation, cgn-ddos-l3-entry-deletion, cgn-ddos-l4-entry-creation, cgn-ddos-l4-entry-deletion, gtp-rate-limit-periodic

ipfix-template

Description Custom IPFIX Template

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/netflow/template*

monitor-list_sample

Specification	Value
Type	*object*

ethernet-list

Type: List

Reference Object: */axapi/v3/netflow/monitor/{name}/sample/ethernet/{ifindex}*

nat-pool-list

Type: List

Reference Object: */axapi/v3/netflow/monitor/{name}/sample/nat-pool/{pool-name}*

ve-list

Type: List

Reference Object: */axapi/v3/netflow/monitor/{name}/sample/ve/{ve-num}*

monitor-list_sample_ve-list

Specification	Value
Type	*list*
Block object keys	

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-num

Description VE interface number

Type: number

Range: 2-4094

Reference Object: */axapi/v3/interface/ve*

monitor-list_sample_nat-pool-list

Specification	Value
Type	*list*
Block object keys	

pool-name

Description Name of nat pool

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_sample_ethernet-list

Specification	Value
Type	*list*
Block object keys	

ifindex

Description Ethernet interface number

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_source-address

Specification	Value
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_destination

Specification	Value
Type	*object*

ip-cfg

Description: ip-cfg is a **JSON Block**. Please see below for *monitor-list_destination_ip-cfg*

Type: Object

ipv6-cfg

Description: ipv6-cfg is a **JSON Block**. Please see below for *monitor-list_destination_ipv6-cfg*

Type: Object

service-group

Description Service-group for load balancing between multiple collector servers

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group, ip, and ipv6 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_destination_ip-cfg

Specification	Value
Type	*object*

ip

Description IP address of netflow collector

Type: string

Format: ipv4-address

Mutual Exclusion: ip, service-group, and ipv6 are mutually exclusive

port4

Description Port number, default is 9996

Type: number

Range: 1-65535

Default: 9996

monitor-list_destination_ipv6-cfg

Specification	Value
Type	*object*

ipv6

Description IPv6 address of netflow collector

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6, service-group, and ip are mutually exclusive

port6

Description Port number, default is 9996

Type: number

Range: 1-65535

Default: 9996

monitor-list_disable-log-by-destination

Specification	Value
Type	*object*

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Reference Object: */axapi/v3/netflow/monitor/{name}/disable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Reference Object: */axapi/v3/netflow/monitor/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_disable-log-by-destination_ip-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_disable-log-by-destination_ip-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

monitor-list_disable-log-by-destination_ip-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

monitor-list_disable-log-by-destination_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

monitor-list_disable-log-by-destination_ip6-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_disable-log-by-destination_ip6-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

monitor-list_disable-log-by-destination_ip6-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

monitor-list_disable-log-by-destination_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

monitor-list_record

Specification	Value
Type	*object*

ddos-general-stat

Description General DDOS statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ddos-http-stat

Description HTTP DDOS statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dslite

Description DS-Lite Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat44

Description NAT44 Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat64

Description NAT64 Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netflow-v5

Description NetFlow V5 Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netflow-v5-ext

Description Extended NetFlow V5 Flow Record Template, supports ipv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-batch-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-fw4

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-fw6

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets-sent': Sent Packets Count; 'bytes-sent': Sent Bytes Count; 'nat44-records-sent': NAT44 Flow Records Sent; 'nat44-records-sent-failure': NAT44 Flow Records Failed; 'nat64-records-sent': NAT64 Flow Records Sent; 'nat64-records-sent-failure': NAT64 Flow Records Failed; 'dslite-records-sent': Dslite Flow Records Sent; 'dslite-records-sent-failure': Dslite Flow Records Failed; 'session-event-nat44-records-sent': Nat44 Session Event Records Sent; 'session-event-nat44-records-sent-failure': Nat44 Session Event Records Failed; 'session-event-nat64-records-sent': Nat64 Session Event Records Sent; 'session-event-nat64-records-sent-failure': Nat64 Session Event Records Falied; 'session-event-dslite-records-sent': Dslite Session Event Records Sent; 'session-event-dslite-records-sent-failure': Dslite Session Event Records Failed; 'session-event-fw4-records-sent': FW4 Session Event Records Sent; 'session-event-fw4-records-sent-failure': FW4 Session Event Records Failed; 'session-event-fw6-records-sent': FW6 Session Event Records Sent; 'session-event-fw6-records-sent-failure': FW6 Session Event Records Failed; 'port-mapping-nat44-records-sent': Port Mapping Nat44 Event Records Sent; 'port-mapping-nat44-records-sent-failure': Port Mapping Nat44 Event Records Failed; 'port-mapping-nat64-records-sent': Port Mapping Nat64 Event Records Sent; 'port-mapping-nat64-records-sent-failure': Port Mapping Nat64 Event Records Failed; 'port-mapping-dslite-records-sent': Port Mapping Dslite Event Records Sent; 'port-mapping-dslite-records-sent-failure': Port Mapping Dslite Event Records failed; 'netflow-v5-records-sent': Netflow v5 Records Sent; 'netflow-v5-records-sent-failure': Netflow v5 Records Failed; 'netflow-v5-ext-records-sent': Netflow v5 Ext Records Sent; 'netflow-v5-ext-records-sent-failure': Netflow v5 Ext Records Failed; 'port-batching-nat44-records-sent': Port Batching Nat44 Records Sent; 'port-batching-nat44-records-sent-failure': Port Batching Nat44 Records Failed; 'port-batching-nat64-records-sent': Port Batching Nat64 Records Sent; 'port-batching-nat64-records-sent-failure': Port Batching Nat64 Records Failed; 'port-batching-dslite-records-sent': Port Batching Dslite Records Sent; 'port-batching-dslite-records-sent-failure': Port Batching Dslite Records Failed; 'port-batching-v2-nat44-records-sent': Port Batching V2 Nat44 Records Sent; 'port-batching-v2-nat44-records-sent-failure': Port Batching V2 Nat44 Records Failed; 'port-batching-v2-nat64-records-sent': Port Batching V2 Nat64 Records Sent; 'port-batching-v2-nat64-records-sent-failure': Port Batching V2 Nat64 Records Failed; 'port-batching-v2-dslite-records-sent': Port Batching V2 Dslite Records Sent; 'port-batching-v2-dslite-records-sent-failure': Port Batching V2 Dslite Records Falied; 'custom-session-event-nat44-creation-records-sent': Custom Nat44 Session Creation Records Sent; 'custom-session-event-nat44-creation-records-sent-failure': Custom Nat44 Session Creation Records Failed; 'custom-session-event-nat64-creation-records-sent': Custom Nat64 Session Creation Records Sent; 'custom-session-event-nat64-creation-records-sent-failure': Custom Nat64 Session Creation Records Failed; 'custom-session-event-dslite-creation-records-sent': Custom Dslite Session Creation Records Sent; 'custom-session-event-dslite-creation-records-sent-failure': Custom Dslite Session Creation Records Failed;

monitor-list_resend-template

Specification	Value
Type	*object*

records

Description To resend template once for each number of records (Number of records: default is 1000, 0 means disable template resend based on record-count)

Type: number

Range: 0-1000000

Default: 1000

timeout

Description To set time interval to resend template (number of seconds: default is 1800, 0 means disable template resend based on timeout)

Type: number

Range: 0-86400

Default: 1800

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common

Specification	Value
Type	*object*

max-packet-queue-time

Description Configure netflow packet queue time (Max packet queue time(*20ms). Default:50(*20ms = 1s)))

Type: number

Range: 0-50

Default: 50

nat44_tpl_1001

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-time-on-flow-record

Description Reset session start time to current time on each flow timeout export for long-lasting session (default: disabled).

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

selector-algorithm-list

Type: List

Reference Object: */axapi/v3/netflow/common/selector-algorithm/{algorithm-name}*

}
```

monitor-list

monitor-list is **JSON List** of *monitor attributes*

monitor-list : [

{ *monitor attributes* },

{ *monitor attributes* },

...

]

monitor attributes

counter-polling-interval

Description Configure the interval to export global counters (Number of seconds: default is 60)

Type: number

Range: 1-3600

Default: 60

custom-record

Description: custom-record is a **JSON Block**. Please see below for *custom-record*

Type: Object

Reference Object: */axapi/v3/netflow/monitor/{name}/custom-record*

destination

Description: destination is a **JSON Block**. Please see below for *destination*

Type: Object

Reference Object: */axapi/v3/netflow/monitor/{name}/destination*

disable

Description Disable this netflow monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-log-by-destination

Description: disable-log-by-destination is a **JSON Block**. Please see below for *disable-log-by-destination*

Type: Object

Reference Object: */axapi/v3/netflow/monitor/{name}/disable-log-by-destination*

flow-timeout

Description Configure timeout value to export flow records periodically for long-live session (Number of minutes: default is 10, 0 means only send flow record when session is deleted)

Type: number

Range: 0-1440

Default: 10

name

Description Name of netflow monitor

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/netflow-monitor-tmpl*

protocol

Description 'v9': Netflow version 9; 'v10': Netflow version 10 (IPFIX);

Type: string

Supported Values: v9, v10

Default: v9

record

Description: record is a **JSON Block**. Please see below for *record*

Type: Object

Reference Object: */axapi/v3/netflow/monitor/{name}/record*

resend-template

Description: resend-template is a **JSON Block**. Please see below for *resend-template*

Type: Object

Reference Object: */axapi/v3/netflow/monitor/{name}/resend-template*

sample

Description: sample is a **JSON Block**. Please see below for *sample*

Type: Object

Reference Object: */axapi/v3/netflow/monitor/{name}/sample*

sampling-enable

Type: List

scope

Description 'global': Netflow monitor is activated globally (Default); 'firewall-rule': Netflow monitor is only activated when referenced by a firewall rule;

Type: string

Supported Values: global, firewall-rule

Default: global

source-address

Description: source-address is a **JSON Block**. Please see below for *source-address*

Type: Object

Reference Object: */axapi/v3/netflow/monitor/{name}/source-address*

source-ip-use-mgmt

Description Use management interface's IP address for source ip of netflow packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

custom-record

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-log-by-destination_ip-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_ip-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_ip6-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-log-by-destination_ip6-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_ip6-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

record

Specification	Value
Type	*object*

ddos-general-stat

Description General DDOS statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ddos-http-stat

Description HTTP DDOS statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dslite

Description DS-Lite Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat44

Description NAT44 Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat64

Description NAT64 Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netflow-v5

Description NetFlow V5 Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netflow-v5-ext

Description Extended NetFlow V5 Flow Record Template, supports ipv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-batch-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-fw4

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-fw6

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

resend-template

Specification	Value
Type	*object*

records

Description To resend template once for each number of records (Number of records: default is 1000, 0 means disable template resend based on record-count)

Type: number

Range: 0-1000000

Default: 1000

timeout

Description To set time interval to resend template (number of seconds: default is 1800, 0 means disable template resend based on timeout)

Type: number

Range: 0-86400

Default: 1800

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.11 netflow monitor custom-record

Configure custom record types to be exported

custom-record Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	custom-record
Element URI	/axapi/v3/netflow/monitor/{name}/custom-record
Element Attributes	custom-record_attributes
Partition Visibility	shared
Schema	`custom-record schema`

Operations Allowed:

Create Object

POST

/axapi/v3/netflow/monitor/{name}/custom-record

custom-record attributes

```
POST /axapi/v3/netflow/monitor/a/custom-record
Payload:
{
    "custom-record": {
        "custom-cfg": [
            {
                "event": "sesn-event-nat44-creation",
                "ipfix-template": "a"
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/netflow/monitor/{name}/custom-record

custom-record attributes

```
GET /axapi/v3/netflow/monitor/a/custom-record
Reponse:
{
    "custom-record": {
        "custom-cfg": [
```

(continues on next page)

(continued from previous page)

```
            {
                "event": "sesn-event-nat44-creation",
                "ipfix-template": "a"
            }
        ],
        "uuid": "48a58954-08fd-11f0-8ff3-bb094934892a",
        "a10-url": "/axapi/v3/netflow/monitor/a/custom-record"
    }
}
```

Modify Object

POST

ipfix-template

Description Custom IPFIX Template

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/netflow/template*

2.82.12 netflow monitor destination

Configure destination where netflow records will be sent

destination Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	destination
Element URI	/axapi/v3/netflow/monitor/{name}/destination
Element Attributes	destination_attributes
Partition Visibility	shared
Schema	`destination schema`

Operations Allowed:

Create Object

POST

/axapi/v3/netflow/monitor/{name}/destination

destination attributes

```
POST /axapi/v3/netflow/monitor/a/destination
Payload:
{
    "destination": {
        "service-group": "a"
    }
}
```

Get Object

GET

/axapi/v3/netflow/monitor/{name}/destination

destination attributes

```
GET /axapi/v3/netflow/monitor/a/destination
Reponse:
{
    "destination": {
        "service-group": "a",
        "uuid": "662ddf3a-08fd-11f0-8ff3-bb094934892a",
        "a10-url": "/axapi/v3/netflow/monitor/a/destination"
    }
}
```

Modify Object

POST

/axapi/v3/netflow/monitor/{name}/destination

destination attributes

Replace Object

PUT

/axapi/v3/netflow/monitor/{name}/destination

destination attributes

```
PUT /axapi/v3/netflow/monitor/a/destination
Payload:
{
    "destination": {
        "service-group": "abcd"
    }
}
```

Delete Object

DELETE

/axapi/v3/netflow/monitor/{name}/destination

destination attributes

```
DELETE /axapi/v3/netflow/monitor/a/destination
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

destination attributes

ip-cfg

Description: ip-cfg is a **JSON Block**. Please see below for *ip-cfg*

Type: Object

ipv6-cfg

Description: ipv6-cfg is a **JSON Block**. Please see below for *ipv6-cfg*

Type: Object

service-group

Description Service-group for load balancing between multiple collector servers

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group, ip, and ipv6 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-cfg

Specification	Value
Type	*object*

ip

Description IP address of netflow collector

Type: string

Format: ipv4-address

Mutual Exclusion: ip, service-group, and ipv6 are mutually exclusive

port4

Description Port number, default is 9996

Type: number

Range: 1-65535

Default: 9996

ipv6-cfg

Specification	Value
Type	*object*

ipv6

Description IPv6 address of netflow collector

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6, service-group, and ip are mutually exclusive

port6

Description Port number, default is 9996

Type: number

Range: 1-65535

Default: 9996

2.82.13 netflow monitor disable-log-by-destination

Disable logging by destination ip address protocol and port

disable-log-by-destination Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	disable-log-by-destination
Element URI	/axapi/v3/netflow/monitor/{name}/disable-log-by-destination
Element Attributes	disable-log-by-destination_attributes
Partition Visibility	shared
Schema	`disable-log-by-destination schema`

Operations Allowed:

Create Object

POST

/axapi/v3/netflow/monitor/{name}/disable-log-by-destination

disable-log-by-destination attributes

```
POST /axapi/v3/netflow/monitor/a/disable-log-by-destination
Payload:
{
    "disable-log-by-destination": {
        "ip-list": [
            {
```

(continues on next page)

(continued from previous page)

```

Reference Object: */axapi/v3/netflow/monitor/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

ip-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

tcp-list

Specification	Value

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-fw4

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-fw6

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.18 netflow monitor resend-template

Configure when to resend netflow template

resend-template Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	resend-template
Element URI	/axapi/v3/netflow/monitor/{name}/resend-template
Element Attributes	resend-template_attributes
Partition Visibility	shared
Schema	`resend-template schema`

Operations Allowed:

Create Object

POST

/axapi/v3/netflow/monitor/{name}/resend-template

resend-template attributes

```
POST /axapi/v3/netflow/monitor/a/resend-template
Payload:
{
    "resend-template": {
        "timeout": 0
    }
}
```

Get Object

GET

/axapi/v3/netflow/monitor/{name}/resend-template

resend-template attributes

```
GET /axapi/v3/netflow/monitor/a/resend-template
Reponse:
{
    "resend-template": {
        "timeout": 0,
        "records": 1000,
        "uuid": "e601bb90-08fe-11f0-8ff3-bb094934892a",
        "a10-url": "/axapi/v3/netflow/monitor/a/resend-template"
    }
}
```

Modify Object

POST

/axapi/v3/netflow/monitor/{name}/resend-template

resend-template attributes

Replace Object

PUT

/axapi/v3/netflow/monitor/{name}/resend-template

resend-template attributes

```
PUT /axapi/v3/netflow/monitor/a/resend-template
Payload:
{
    "resend-template": {
        "timeout": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/netflow/monitor/{name}/resend-template

resend-template attributes

```
DELETE /axapi/v3/netflow/monitor/a/resend-template
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

resend-template attributes

records

Description To resend template once for each number of records (Number of records: default is 1000, 0 means disable template resend based on record-count)

Type: number

Range: 0-1000000

Default: 1000

timeout

Description To set time interval to resend template (number of seconds: default is 1800, 0 means disable template resend based on timeout)

Type: number

Range: 0-86400

Default: 1800

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.19 netflow monitor sample

Configure filters for monitoring traffic (All traffic is monitored if no filters configured)

sample Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	sample
Element URI	/axapi/v3/netflow/monitor/{name}/sample
Element Attributes	sample_attributes
Partition Visibility	shared
Schema	`sample schema`

Operations Allowed:

Get Object

GET

/axapi/v3/netflow/monitor/{name}/sample

sample_attributes

sample attributes

ethernet-list

Type: List

Reference Object: */axapi/v3/netflow/monitor/{name}/sample/ethernet/{ifindex}*

nat-pool-list

Type: List

Reference Object: */axapi/v3/netflow/monitor/{name}/sample/nat-pool/{pool-name}*

ve-list

Type: List

Reference Object: */axapi/v3/netflow/monitor/{name}/sample/ve/{ve-num}*

ve-list

Specification	Value
Type	*list*
Block object keys	

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-num

Description VE interface number

Type: number

Range: 2-4094

Reference Object: */axapi/v3/interface/ve*

nat-pool-list

Specification	Value
Type	*list*
Block object keys	

pool-name

Description Name of nat pool

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list

Specification	Value
Type	*list*
Block object keys	

ifindex

Description Ethernet interface number

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.20 netflow monitor sample ethernet

select ethernet interface to monitor

ethernet Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*ifindex*
Collection Name	*ethernet-list*
Collection URI	/axapi/v3/netflow/monitor/{name}/sample/ethernet
Element Name	ethernet
Element URI	/axapi/v3/netflow/monitor/{name}/sample/ethernet/{ifindex}
Element Attributes	ethernet_attributes
Partition Visibility	shared
Schema	`ethernet schema`

Operations Allowed:

Create Object

POST

/axapi/v3/netflow/monitor/{name}/sample/ethernet

ethernet attributes

Create List

POST

/axapi/v3/netflow/monitor/{name}/sample/ethernet

ethernet attributes

Get Object

GET

/axapi/v3/netflow/monitor/{name}/sample/ethernet/{ifindex}

ethernet attributes

Get List

GET

/axapi/v3/netflow/monitor/{name}/sample/ethernet

ethernet-list

Modify Object

POST

/axapi/v3/netflow/monitor/{name}/sample/ethernet/{ifindex}

ethernet attributes

Replace Object

PUT

/axapi/v3/netflow/monitor/{name}/sample/ethernet/{ifindex}

ethernet attributes

Replace List

PUT

/axapi/v3/netflow/monitor/{name}/sample/ethernet

ethernet-list

Delete Object

DELETE

/axapi/v3/netflow/monitor/{name}/sample/ethernet/{ifindex}

ethernet attributes

ethernet-list

ethernet-list is **JSON List** of *ethernet attributes*

```
ethernet-list : [
        { ethernet attributes },
        { ethernet attributes },
        ...
    ]
```

ethernet attributes

ifindex

Description Ethernet interface number

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.21 netflow monitor sample nat-pool

Select nat pool to monitor

nat-pool Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*pool-name*
Collection Name	*nat-pool-list*
Collection URI	/axapi/v3/netflow/monitor/{name}/sample/nat-pool
Element Name	nat-pool
Element URI	/axapi/v3/netflow/monitor/{name}/sample/nat-pool/{pool-name}
Element Attributes	nat-pool_attributes
Partition Visibility	shared
Schema	`nat-pool schema`

Operations Allowed:

Create Object

POST

/axapi/v3/netflow/monitor/{name}/sample/nat-pool

nat-pool attributes

Create List

POST

/axapi/v3/netflow/monitor/{name}/sample/nat-pool

nat-pool attributes

Get Object

GET

/axapi/v3/netflow/monitor/{name}/sample/nat-pool/{pool-name}

nat-pool attributes

Get List

GET

/axapi/v3/netflow/monitor/{name}/sample/nat-pool

nat-pool-list

Modify Object

POST

/axapi/v3/netflow/monitor/{name}/sample/nat-pool/{pool-name}

nat-pool attributes

Replace Object

PUT

/axapi/v3/netflow/monitor/{name}/sample/nat-pool/{pool-name}

nat-pool attributes

Replace List

PUT

/axapi/v3/netflow/monitor/{name}/sample/nat-pool

nat-pool-list

Delete Object

DELETE

/axapi/v3/netflow/monitor/{name}/sample/nat-pool/{pool-name}

nat-pool attributes

nat-pool-list

nat-pool-list is **JSON List** of *nat-pool attributes*

```
nat-pool-list : [
        { nat-pool attributes },
        { nat-pool attributes },
        ...
    ]
```

nat-pool attributes

pool-name

Description Name of nat pool

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.22 netflow monitor sample ve

select VE interface to monitor

ve Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*ve-num*
Collection Name	*ve-list*
Collection URI	/axapi/v3/netflow/monitor/{name}/sample/ve
Element Name	ve
Element URI	/axapi/v3/netflow/monitor/{name}/sample/ve/{ve-num}
Element Attributes	ve_attributes
Partition Visibility	shared
Schema	`ve schema`

Operations Allowed:

Create Object

POST

/axapi/v3/netflow/monitor/{name}/sample/ve

ve attributes

Create List

POST

/axapi/v3/netflow/monitor/{name}/sample/ve

ve attributes

Get Object

/axapi/v3/netflow/monitor/{name}/sample/ve

ve-list

Delete Object

DELETE

/axapi/v3/netflow/monitor/{name}/sample/ve/{ve-num}

ve attributes

ve-list

ve-list is **JSON List** of *ve attributes*

ve-list : [

{ *ve attributes* },

{ *ve attributes* },

...

]

ve attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-num

Description VE interface number

Type: number

Range: 2-4094

Reference Object: */axapi/v3/interface/ve*

2.82.23 netflow monitor source-address

Specify source address of Netflow packet

source-address Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	source-address
Element URI	/axapi/v3/netflow/monitor/{name}/source-address
Element Attributes	source-address_attributes
Partition Visibility	shared
Schema	`source-address schema`

Operations Allowed:

Create Object

POST

/axapi/v3/netflow/monitor/{name}/source-address

source-address attributes

```
POST /axapi/v3/netflow/monitor/a/source-address
Payload:
{
    "source-address": {
        "ip": "3.3.3.3"
    }
}
```

Get Object

GET

/axapi/v3/netflow/monitor/{name}/source-address

source-address attributes

```
GET /axapi/v3/netflow/monitor/a/source-address
Reponse:
{
    "source-address": {
        "ip": "3.3.3.3",
        "uuid": "6189f660-08ff-11f0-8ff3-bb094934892a",
        "a10-url": "/axapi/v3/netflow/monitor/a/source-address"
    }
}
```

Modify Object

POST

/axapi/v3/netflow/monitor/{name}/source-address

source-address attributes

Replace Object

PUT

/axapi/v3/netflow/monitor/{name}/source-address

source-address attributes

```
PUT /axapi/v3/netflow/monitor/a/source-address
Payload:
{
    "source-address": {
        "ip": "3.3.3.4"
    }
}
```

Delete Object

DELETE

/axapi/v3/netflow/monitor/{name}/source-address

source-address attributes

```
DELETE /axapi/v3/netflow/monitor/a/source-address
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

source-address attributes

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.24 netflow monitor stats

Statistics for the object monitor

monitor Specification

Parameter	Value
Type	*Collection*
Collection Name	*monitor-list*
Collection URI	/axapi/v3/netflow/monitor/{name}
Element Name	monitor
Element URI	/axapi/v3/netflow/monitor/{name}/stats
Element Attributes	monitor_attributes
Partition Visibility	None
Schema	`monitor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/netflow/monitor/{name}

monitor attributes

Create List

POST

/axapi/v3/netflow/monitor/{name}

monitor attributes

Get Object

GET

/axapi/v3/netflow/monitor/{name}/stats

monitor attributes

Get List

GET

/axapi/v3/netflow/monitor/{name}

monitor-list

Modify Object

POST

/axapi/v3/netflow/monitor/{name}/stats

monitor attributes

Replace Object

PUT

/axapi/v3/netflow/monitor/{name}/stats

monitor attributes

Replace List

PUT

/axapi/v3/netflow/monitor/{name}

monitor-list

Delete Object

DELETE

/axapi/v3/netflow/monitor/{name}/stats

monitor attributes

monitor-list

monitor-list is **JSON List** of *monitor attributes*

```
monitor-list : [
        { monitor attributes },
        { monitor attributes },

information-element

Description 'fwd-tuple-vnp-id': Session forward tuple partition id (ID: 33028); 'rev-tuple-vnp-id': Session reverse tuple partition id (ID: 33029); 'source-ipv4-address': IPv4 source address in the IP packet header (ID: 8); 'source-ipv4-prefix-len': Prefix length for IPv4 source address(ID: 9); 'dest-ipv4-address': IPv4 destination address in the IP packet header (ID: 12); 'dest-ipv4-prefix-len': Prefix length for IPv4 dest address(ID: 13); 'source-ipv6-address': IPv6 source address in the IP packet header (ID: 27); 'source-ipv6-prefix-len': Prefix length for IPv6 source address(ID:29); 'dest-ipv6-address': IPv6 destination address in the IP packet header

(ID:28); 'dest-ipv6-prefix-len': Prefix length for IPv6 dest address (ID:30); 'post-nat-source-ipv4-address': IPv4 natted source address (ID: 225); 'post-nat-dest-ipv4-address': IPv4 natted destination address(ID: 226); 'post-nat-source-ipv6-address': IPv6 natted source address (ID: 281); 'post-nat-dest-ipv6-address': IPv6 natted destination address (ID: 282); 'source-port': Source port identifier in the transport header (ID: 7); 'dest-port': Destination port identifier in the transport header (ID: 11); 'post-nat-source-port': L4 natted source port(ID: 227); 'post-nat-dest-port': L4 natted destination port (ID: 228); 'fwd-tuple-type': Session forward tuple type (ID: 33024); 'rev-tuple-type': Session reverse tuple type (ID: 33025); 'ip-proto': Value of the protocol number in the IP packet header (ID: 4); 'flow-direction': Flow direction: 0:inbound(To an outside interface)/1:outbound(To an inside interface) (ID: 61); 'tcp-control-bits': Cumulative of all the TCP flags seen for this flow (ID: 6); 'fwd-bytes': Incoming bytes associated with an IP Flow (ID: 1); 'fwd-packets': Incoming packets associated with an IP Flow (ID: 2); 'rev-bytes': Delta bytes in reverse direction of bidirectional flow record (ID: 32769); 'rev-packets': Delta packets in reverse direction of bidirectional flow record (ID: 32770); 'in-port': Incoming interface port (ID: 10); 'out-port': Outcoming interface port (ID: 14); 'in-interface': Incoming interface name e.g. ethernet 0 (ID: 82); 'out-interface': Outcoming interface name e.g. ethernet 0 (ID: 32850); 'port-range-start': Port number identifying the start of a range of ports (ID: 361); 'port-range-end': Port number identifying the end of a range of ports (ID: 362); 'port-range-step-size': Step size in a port range (ID: 363); 'port-range-num-ports': Number of ports in a port range (ID: 364); 'rule-name': Rule Name (ID: 33034); 'rule-set-name': Rule-Set Name (ID: 33035); 'fw-source-zone': Firewall Source Zone Name (ID: 33036); 'fw-dest-zone': Firewall Dest Zone Name (ID: 33037); 'application-id': Application ID (ID: 95); 'application-name': Application Name (ID: 96); 'imsi': Subscriber Attribute IMSI (ID: 455); 'msisdn': Subscriber Attribute MSISDN (ID: 456); 'imei': Subscriber Attribute IMEI (ID: 33030); 'radius-custom1': Radius Attribute Custom 1 (ID: 33031); 'radius-custom2': Radius Attribute Custom 2(ID: 33032); 'radius-custom3': Radius Attribute Custom 3 (ID:33033); 'radius-custom4': Radius Attribute Custom 4 (ID: 33067); 'radius-custom5': Radius Attribute Custom 5(ID: 33068); 'radius-custom6': Radius Attribute Custom 6 (ID:33069); 'flow-start-msec': The absolute timestamp of the first packet of the flow (ID: 152); 'flow-duration-msec': Difference in time between the first observed packet of this flow and the last observed packet of this flow (4 bytes) (ID: 161); 'flow-duration-msec-64': Difference in time between the first observed packet of this flow and the last observed packet of this flow (8 bytes) (ID: 33039); 'flow-end-msec': The absolute timestamp of the last packet of the flow (ID: 153); 'nat-event': Indicates a NAT event (ID: 230); 'fw-event': Indicates a FW session event(ID: 233); 'fw-deny-reset-event': Indicates a FW deny/reset event (ID: 33038); 'cgn-flow-direction': Flow direction: 0:inbound(To an outside interface)/1:outbound(To an inside interface)/2:hairpin(From an inside interface to an inside interface) (ID: 33040); 'fw-dest-fqdn': Firewall matched fqdn(ID: 33041); 'flow-end-reason': A10 flow end reason(ID: 33042); 'gtp-deny-reason': Indicates a GTP deny event (ID: 33043); 'gtp-apn': Indicates GTP APN (ID: 33044); 'gtp-steid': Indicates GTP Source TEID (ID: 33045); 'gtp-dteid': Indicates GTP Destination TEID (ID: 33046); 'gtp-selection-mode': Indicates GTP Selection Mode (ID: 33047); 'gtp-mcc': Indicates the MCC of the Serving Network (ID: 33048); 'gtp-mnc': Indicates the MNC of the serving network (ID: 33049); 'gtp-rat-type': Indicates the RAT Type received in the GTP Control packet (ID: 33050); 'gtp-pdn-pdp-type': Indicates the PDN/PDP Type in the GTP Control Packet (ID: 33051); 'gtp-uli': Indicates the User Location Information (ID: 33052); 'gtp-enduser-v4-addr': Indicates the Subscriber IPv4 Address (ID: 33053); 'gtp-enduser-v6-addr': Indicates the Subscriber IPv6 Address (ID: 33054); 'gtp-bearer-id-or-nsapi': Indicates the EPS Bearer ID or NSAPI of the Subscriber (ID: 33055); 'gtp-qci': Indicates the QoS Profile or Traffic Class of the subscriber (ID: 33056); 'gtp-info-event-ind': Indicates a GTP Info event(ID: 33057); 'gtp-restarted-node-ipv4': Restarted S5 Node IPV4 Address(ID: 33058); 'gtp-restarted-node-ipv6': Restarted S5 Node IPV6 Address(ID: 33059); 'gtp-c-tunnels-removed-with-node-restart': Indicates GTP-C tunnels removed by Node restart (ID: 33060); 'radius-imsi': Subscriber Attribute IMSI (Deprecated Field) (ID: 455); 'radius-msisdn': Subscriber Attribute MSISDN (Deprecated Field) (ID: 456); 'radius-imei': Subscriber Attribute IMEI (Deprecated Field) (ID: 33030); 'event-time-

msec': The absolute time in milliseconds of an event observation(ID: 323); 'security-event-type': Type of security event(ID: 33063); 'limit-exceeded-count': Limit exceeded count for FW concurrent session(ID: 33062); 'rate-limit-key': Rate Limit Key(ID: 33064); 'rate-limit-type': Rate Limit Type(ID: 33065); 'rate-limit-drop-count': Rate Limit Drop Count(ID: 33066);

Type: string

Supported Values: fwd-tuple-vnp-id, rev-tuple-vnp-id, source-ipv4-address, source-ipv4-prefix-len, dest-ipv4-address, dest-ipv4-prefix-len, source-ipv6-address, source-ipv6-prefix-len, dest-ipv6-address, dest-ipv6-prefix-len, post-nat-source-ipv4-address, post-nat-dest-ipv4-address, post-nat-source-ipv6-address, post-nat-dest-ipv6-address, source-port, dest-port, post-nat-source-port, post-nat-dest-port, fwd-tuple-type, rev-tuple-type, ip-proto, flow-direction, tcp-control-bits, fwd-bytes, fwd-packets, rev-bytes, rev-packets, in-port, out-port, in-interface, out-interface, port-range-start, port-range-end, port-range-step-size, port-range-num-ports, rule-name, rule-set-name, fw-source-zone, fw-dest-zone, application-id, application-name, application-category-name, application-subcategory-name, imsi, msisdn, imei, radius-custom1, radius-custom2, radius-custom3, radius-custom4, radius-custom5, radius-custom6, flow-start-msec, flow-duration-msec, flow-duration-msec-64, flow-end-msec, nat-event, fw-event, fw-deny-reset-event, cgn-flow-direction, fw-dest-fqdn, flow-end-reason, gtp-deny-reason, gtp-apn, gtp-steid, gtp-dteid, gtp-selection-mode, gtp-mcc, gtp-mnc, gtp-rat-type, gtp-pdn-pdp-type, gtp-uli, gtp-enduser-v4-addr, gtp-enduser-v6-addr, gtp-bearer-id-or-nsapi, gtp-qci, gtp-info-event-ind, gtp-restarted-node-ipv4, gtp-restarted-node-ipv6, gtp-c-tunnels-removed-with-node-restart, radius-imsi, radius-msisdn, radius-imei, event-time-msec, security-event-type, limit-exceeded-count, rate-limit-key, rate-limit-type, rate-limit-drop-count, rfc-flow-end-reason

2.82.26 netflow use-partition

Use NetFlow configuration on a dedicated partition

use-partition Specification

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'xparent_vlan_list_err': Transparent Mode VLAN List Errors;

Type: string

Supported Values: all, xparent_vlan_list_err, asymmetric_route_drop_err

lacp

Specification	Value
Type	*object*

system-priority

Description LACP system priority (LACP system priority, 1-65535, default 32768)

Type: number

Range: 1-65535

Default: 32768

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

twamp

Specification	Value
Type	*object*

responder

Description: responder is a **JSON Block**. Please see below for *twamp_responder*

Type: Object

Reference Object: */axapi/v3/network/twamp/responder*

twamp_responder

Specification	Value
Type	*object*

enable-both-ip-ipv6

Description Enable both IP and IPv6 TWAMP packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: enable-both-ip-ipv6, enable-ip, and enable-ipv6 are mutually exclusive

enable-ip

Description Enable IP TWAMP packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: enable-ip, enable-ipv6, and enable-both-ip-ipv6 are mutually exclusive

enable-ipv6

Description Enable IPv6 TWAMP packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: enable-ipv6, enable-ip, and enable-both-ip-ipv6 are mutually exclusive

ip

Description: ip is a **JSON Block**. Please see below for *twamp_responder_ip*

Type: Object

Reference Object: */axapi/v3/network/twamp/responder/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *twamp_responder_ipv6*

Type: Object

Reference Object: */axapi/v3/network/twamp/responder/ipv6*

port

Description Port number

Type: number

Range: 1024-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

twamp_responder_ip

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Mutual Exclusion: acl-id and acl-name are mutually exclusive

acl-name

Description Apply a named access list (Access List name)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name and acl-id are mutually exclusive

Reference Object: */axapi/v3/ip/access-list*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

twamp_responder_ipv6

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v6-acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

lif-stats

Specification	Value
Type	*object*

enable

Description Enable LIF interface stats generation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire-vlan-pair-list

Specification	Value
Type	*list*
Block object keys	

pair-id

Description virtual wire vlan pair id

Type: number

Range: 1-16

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan1

Description first vlan in the pair

Type: number

Range: 2-4094

vlan2

Description second vlan in the pair

Type: number

Range: 2-4094

virtual-wire-health-check-list

Specification	Value
Type	*list*
Block object keys	

active-threshold

Description Threshold(Packet Per Second) for entering active mode

Type: number

Range: 1-1048575

enable

Description Enable the health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface

Type: number

Format: interface

garp-interval

Description Interval (Seconds), default is 3, 0 for interface event only

Type: number

Range: 0-180

inner-vlan

Description inner VLAN for 802.1QinQ

Type: number

Range: 2-4094

inner-vlan-packet-count

Description Only count packets with configured inner VLAN ID

Type: number

Range: 2-4094

interval

Description Interval (Seconds), default is 3

Type: number

Range: 1-180

l3-packet

Description Only count L3 packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description 'ping': Ping; 'garp': GARP; 'packet-count': Packet Count;

Type: string

Supported Values: ping, garp, packet-count

nexthop-ip

Description Nexthop address

Type: string

Format: ipv4-address

nexthop-mac

Description Nexthop mac address

Type: string

Format: mac-address

partition-health-check

Description Health check state stands for the partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

sby-ethernet

Description Ethernet interface

Type: number

Format: interface

sby-trunk

Description Trunk interface

Type: number

Range: 1-4096

source-ip

Description source ip for ping method

Type: string

Format: ipv4-address

source-mac

Description source mac for ping method

Type: string

Format: mac-address

trunk

Description Trunk interface

Type: number

Range: 1-4096

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description VLAN ID, specify 1 for untagged traffic

Type: number

Range: 1-4094

virtual-wire-health-check-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'act-event': Active Event Count; 'sby-event': Standby Event Count; 'packet-count': Packet Count;

Type: string

Supported Values: all, act-event, sby-event, packet-count

bfd

Specification	Value
Type	*object*

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds (default: 800))

Type: number

Range: 48-1000

Default: 800

min-rx

Description Minimum receive interval capability (Milliseconds (default: 800))

Type: number

Range: 48-1000

Default: 800

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval (default: 4))

Type: number

Range: 3-50

Default: 4

mac-age-time

Specification	Value
Type	*object*

aging-time

Description Set aging period in seconds for all MAC interfaces (default 300 seconds)

Type: number

Range: 10-600

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-stats

Specification	Value
Type	*object*

enable

Description Enable trunk interface stats generation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire-vlan-pair-set-list

Specification	Value
Type	*list*
Block object keys	

set-cfg

Type: List

set-id

Description virtual wire vlan set id

Type: number

Range: 1-8

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire-vlan-pair-set-list_set-cfg

Specification	Value
Type	*list*
Block object keys	

virtual-wire-vlan-pair

Description virtual wire vlan pair id

Type: number

Range: 1-16

Reference Object: */axapi/v3/network/virtual-wire-vlan-pair*

virtual-wire-list

Specification	Value
Type	*list*
Block object keys	

eth1

Description

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

eth2

Description

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

group1

Description

Type: number

Range: 1-16

Reference Object: */axapi/v3/network/virtual-wire-ethernet-group*

group2

Description

Type: number

Range: 1-16

Reference Object: */axapi/v3/network/virtual-wire-ethernet-group*

trunk1

Description

Type: number

Range: 1-4096

Reference Object: */axapi/v3/interface/trunk*

trunk2

Description

Type: number

Range: 1-4096

Reference Object: */axapi/v3/interface/trunk*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire-id

Description virtual wire id

Type: number

Range: 1-32

bridge-vlan-group-list

Specification	Value
Type	*list*
Block object keys	

bridge-vlan-group-number

Description Bridge VLAN Group Number

Type: number

Range: 1-255

forward-traffic

Description 'forward-all-traffic': Forward all traffic between bridge members; 'forward-ip-traffic': Forward only IP traffic between bridge members (default);

Type: string

Supported Values: forward-all-traffic, forward-ip-traffic

Default: forward-ip-traffic

name

Description Bridge Group Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual Ethernet Port (Virtual Ethernet Port number)

Type: number

Range: 2-4094

Reference Object: */axapi/v3/network/vlan*

vlan-list

Type: List

bridge-vlan-group-list_vlan-list

Specification	Value
Type	*list*
Block object keys	

vlan-end

Description VLAN id

Type: number

Reference Object: */axapi/v3/network/vlan*

vlan-start

Description VLAN id

Type: number

Reference Object: */axapi/v3/network/vlan*

mac-address

Specification	Value
Type	*object*

dynamic

Description: dynamic is a **JSON Block**. Please see below for *mac-address_dynamic*

Type: Object

Reference Object: */axapi/v3/network/mac-address/dynamic*

static-list

Type: List

Reference Object: */axapi/v3/network/mac-address/static/{mac}+{vlan}*

mac-address_dynamic

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mac-address_static-list

Specification	Value
Type	*list*
Block object keys	

dest

Description Trap MAC with this DA to CPU

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac

Description Configure a Static MAC address

Type: string

Format: mac-address

port

Description Ethernet Port on which the Address is applicable (Port Value)

Type: number

Format: interface

redirect-dummy-mac

Description Dummy for redirect use

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description VLAN Id

Type: number

Range: 2-4094

Reference Object: */axapi/v3/network/vlan*

spanning-tree

Specification	Value
Type	*object*

mode

Description: mode is a **JSON Block**. Please see below for *spanning-tree_mode*

Type: Object

Reference Object: */axapi/v3/network/spanning-tree/mode*

spanning-tree_mode

Specification	Value
Type	*object*

info

Description: info is a **JSON Block**. Please see below for *spanning-tree_mode_info*

Type: Object

Reference Object: */axapi/v3/network/spanning-tree/mode/info*

interface

Description: interface is a **JSON Block**. Please see below for *spanning-tree_mode_interface*

Type: Object

Reference Object: */axapi/v3/network/spanning-tree/mode/interface*

mstp

Description: mstp is a **JSON Block**. Please see below for *spanning-tree_mode_mstp*

Type: Object

Reference Object: */axapi/v3/network/spanning-tree/mode/mstp*

rstp

Description: rstp is a **JSON Block**. Please see below for *spanning-tree_mode_rstp*

Type: Object

Reference Object: */axapi/v3/network/spanning-tree/mode/rstp*

stp

Description: stp is a **JSON Block**. Please see below for *spanning-tree_mode_stp*

Type: Object

Reference Object: */axapi/v3/network/spanning-tree/mode/stp*

spanning-tree_mode_info

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

spanning-tree_mode_interface

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

spanning-tree_mode_stp

Specification	Value
Type	*object*

action

Description enable spanning tree RSTP mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description set bridge priority

Type: number

Range: 0-61440

Default: 32768

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-start

Description VLAN ID

Type: number

Range: 2-4094

spanning-tree_mode_rstp

Specification	Value
Type	*object*

action

Description enable spanning tree RSTP mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description set bridge priority

Type: number

Range: 0-61440

Default: 32768

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-start

Description VLAN ID

Type: number

Range: 2-4094

spanning-tree_mode_mstp

Specification	Value
Type	*object*

action

Description Enable spanning tree MSTP mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

instance-list

Type: List

Reference Object: */axapi/v3/network/spanning-tree/mode/mstp/instance/{instance-start}*

priority

Description Set bridge priority

Type: number

Range: 0-61440

Default: 32768

revision-cfg

Description: revision-cfg is a **JSON Block**. Please see below for *spanning-tree_mode_mstp_revision-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

spanning-tree_mode_mstp_revision-cfg

Specification	Value
Type	*object*

name

Description Set MSTP revision name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

revision

Description Set MSTP revision level and name

Type: number

Range: 0-65535

spanning-tree_mode_mstp_instance-list

Specification	Value
Type	*list*
Block object keys	

instance-start

Description Instance ID

Type: number

Range: 1-4094

priority

Description Set instance priority

Type: number

Range: 0-2147483647

Default: 32768

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-list

Type: List

spanning-tree_mode_mstp_instance-list_vlan-list

Specification	Value
Type	*list*
Block object keys	

vlan-end

Description

Type: number

Reference Object: */axapi/v3/network/vlan*

vlan-start

Description VLAN ID

Type: number

Reference Object: */axapi/v3/network/vlan*

lldp

Specification	Value
Type	*object*

enable-cfg

Description: enable-cfg is a **JSON Block**. Please see below for *lldp_enable-cfg*

Type: Object

management-address

Description: management-address is a **JSON Block**. Please see below for *lldp_management-address*

Type: Object

Reference Object: */axapi/v3/network/lldp/management-address*

notification-cfg

Description: notification-cfg is a **JSON Block**. Please see below for *lldp_notification-cfg*

Type: Object

system-description

Description Configure lldp system description

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

system-name

Description Configure lldp system name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

tx-set

Description: tx-set is a **JSON Block**. Please see below for *lldp_tx-set*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp_management-address

Specification	Value
Type	*object*

dns-list

Type: List

Reference Object: */axapi/v3/network/lldp/management-address/dns/{dns}*

ipv4-addr-list

Type: List

Reference Object: */axapi/v3/network/lldp/management-address/ipv4-addr/{ipv4}*

ipv6-addr-list

Type: List

Reference Object: */axapi/v3/network/lldp/management-address/ipv6-addr/{ipv6}*

lldp_management-address_ipv6-addr-list

Specification	Value
Type	*list*
Block object keys	

interface-ipv6

Description: interface-ipv6 is a **JSON Block**. Please see below for *lldp_management-address_ipv6-addr-list_interface-ipv6*

Type: Object

ipv6

Description Configure lldp management-address, subtype is ipv6 (lldp management-address ipv6 address)

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp_management-address_ipv6-addr-list_interface-ipv6

Specification	Value
Type	*object*

ipv6-eth

Description configure lldp management-address interface ethernet (lldp management-address interface port number)

Type: number

Format: interface

ipv6-mgmt

Description configure lldp management-address interface management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-ve

Description configure lldp management-address interface ve (lldp management-address interface port number)

Type: number

Range: 2-4094

lldp_management-address_ipv4-addr-list

Specification	Value
Type	*list*
Block object keys	

interface-ipv4

Description: interface-ipv4 is a **JSON Block**. Please see below for *lldp_management-address_ipv4-addr-list_interface-ipv4*

Type: Object

ipv4

Description Configure lldp management-address, subtype is ipv4 (lldp management-address ipv4 address)

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp_management-address_ipv4-addr-list_interface-ipv4

Specification	Value
Type	*object*

ipv4-eth

Description configure lldp management-address interface ethernet (lldp management-address interface port number)

Type: number

Format: interface

ipv4-mgmt

Description configure lldp management-address interface management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-ve

Description configure lldp management-address interface ve (lldp management-address interface port number)

Type: number

Range: 2-4094

lldp_management-address_dns-list

Specification	Value
Type	*list*
Block object keys	

dns

Description Configure lldp management-address, subtype is dns (lldp management-address dns address)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

interface

Description: interface is a **JSON Block**. Please see below for *lldp_management-address_dns-list_interface*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp_management-address_dns-list_interface

Specification	Value
Type	*object*

ethernet

Description configure lldp management-address interface ethernet (lldp management-address interface port number)

Type: number

Format: interface

Mutual Exclusion: ethernet, ve, and management are mutually exclusive

management

Description configure lldp management-address interface management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: management, ethernet, and ve are mutually exclusive

ve

Description configure lldp management-address interface management (lldp management-address interface port number)

Type: number

Range: 2-4094

Mutual Exclusion: ve, ethernet, and management are mutually exclusive

lldp_notification-cfg

Specification	Value
Type	*object*

interval

Description Configure lldp notification interval, default is 30 (The lldp notification interval value, default is 30)

Type: number

Range: 5-3600

Default: 30

notification

Description Enable lldp notification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_tx-set

Specification	Value
Type	*object*

fast-count

Description Configure lldp tx fast count value (The lldp tx fast count value, default is 4)

Type: number

Range: 1-8

Default: 4

fast-interval

Description Configure lldp tx fast interval value (The lldp tx fast interval value, default is 1)

Type: number

Range: 1-3600

Default: 1

hold

Description Configure lldp tx hold multiplier (The lldp tx hold value, default is 4)

Type: number

Range: 1-10

Default: 4

reinit-delay

Description Configure lldp tx reinit delay (The lldp tx reinit_delay value, default is 2)

Type: number

Range: 1-10

Default: 2

tx-interval

Description Configure lldp tx interval (The lldp tx interval value, default is 30)

Type: number

Range: 1-3600

Default: 30

lldp_enable-cfg

Specification	Value
Type	*object*

enable

Description Enable lldp

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l2-bfd

Specification	Value
Type	*object*

ether-type

Description Ethernet paylaod type for L2BFD packets, help-val 16 bit hex value, default is hex 88B6

Type: string

Format: time-hh:mm

Maximum Length: 4 characters

Maximum Length: 1 characters

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval (default: 4))

Type: number

Range: 3-50

Default: 4

rx-interval

Description Minimum receive interval capability (Milliseconds (default: 800))

Type: number

Range: 48-1000

Default: 800

tx-interval

Description Transmit interval between BFD packets (Milliseconds (default: 800))

Type: number

Range: 48-1000

Default: 800

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-stats

Specification	Value
Type	*object*

enable

Description Enable vlan ve interface stats generation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire-global

Specification	Value
Type	*object*

sampling-enable

Type: List

src-mac-learning

Description Update source mac information for all interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

update-active-vlan

Description 'all': all; 'l3-packet': l3-packet(default);

Type: string

Supported Values: all, l3-packet

Default: l3-packet

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-update-period

Description Update period in second (default is 30)

Type: number

Range: 1-255

Default: 30

virtual-wire-global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'vlan-update': VLAN update; 'mac-update': MAC update;

Type: string

Supported Values: all, vlan-update, mac-update, vlan-pair-update, hc-pkt-drop

virtual-wire-ethernet-group-list

Specification	Value
Type	*list*
Block object keys	

eth-list

Type: List

group-id

Description

Type: number

Range: 1-16

trunk-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire-ethernet-group-list_eth-list

Specification	Value
Type	*list*
Block object keys	

eth-end

Description

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

eth-start

Description

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

virtual-wire-ethernet-group-list_trunk-list

Specification	Value
Type	*list*
Block object keys	

trunk-end

Description

Type: number

Reference Object: */axapi/v3/interface/trunk*

trunk-start

Description

Type: number

Reference Object: */axapi/v3/interface/trunk*

trunk

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-list

Specification	Value
Type	*list*
Block object keys	

name

Description VLAN name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

shared-vlan

Description Configure VLAN as a shared VLAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tagged-eth-list

Type: List

tagged-trunk-list

Type: List

traffic-distribution-mode

Description 'sip': sip; 'dip': dip; 'primary': primary; 'blade': blade; 'l4-src-port': l4-src-port; 'l4-dst-port': l4-dst-port;

Type: string

Supported Values: sip, dip, l3-lookup, primary, blade, l4-src-port, l4-dst-port

untagged-eth-list

Type: List

untagged-lif

Description Logical tunnel interface (Logical tunnel interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

untagged-trunk-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description ve number

Type: number

Range: 2-4094

vlan-num

Description VLAN number

Type: number

Range: 2-4094

vlan-list_untagged-trunk-list

Specification	Value
Type	*list*
Block object keys	

untagged-trunk-end

Description Trunk Group

Type: number

untagged-trunk-start

Description Trunk groups

Type: number

vlan-list_untagged-eth-list

Specification	Value
Type	*list*
Block object keys	

untagged-ethernet-end

Description Ethernet port

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

untagged-ethernet-start

Description Ethernet port (Interface number)

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

vlan-list_tagged-eth-list

Specification	Value
Type	*list*
Block object keys	

tagged-ethernet-end

Description Ethernet port

Type: number

Format: interface

tagged-ethernet-start

Description Ethernet port (Interface number)

Type: number

Format: interface

vlan-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'broadcast_count': Broadcast counter; 'multicast_count': Multicast counter; 'ip_multicast_count': IP Multicast counter; 'unknown_unicast_count': Unknown Unicast counter; 'mac_movement_count': Mac Movement counter; 'shared_vlan_partition_switched_counter': SVLAN Partition switched counter;

Type: string

Supported Values: all, broadcast_count, multicast_count, ip_multicast_count, unknown_unicast_count, mac_movement_count, shared_vlan_partition_switched_counter

vlan-list_tagged-trunk-list

Specification	Value
Type	*list*
Block object keys	

tagged-trunk-end

Description Trunk Group

Type: number

tagged-trunk-start

Description Trunk groups

Type: number

icmp-rate-limit

Specification	Value
Type	*object*

icmp-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmp-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmp-normal-rate-limit

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

arp-timeout

Specification	Value
Type	*object*

timeout

Description ARP entry timeout

Type: number

Range: 60-86400

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

available-trunk-list

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmpv6-rate-limit

Specification	Value
Type	*object*

icmpv6-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmpv6-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmpv6-normal-rate-limit

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lacp-passthrough-list

Specification	Value
Type	*list*
Block object keys	

peer-from

Description Peer member to forward received LACP packets

Type: number

Format: interface

peer-to

Description Peer member to forward received LACP packets

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-group-list

Specification	Value
Type	*list*
Block object keys	

eth-list

Type: List

trunk-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-num-end

Description End of VLAN range

Type: number

Range: 2-4094

vlan-num-start

Description Start of VLAN range

Type: number

Range: 2-4094

vlan-group-list_eth-list

Specification	Value
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port (Interface number)

Type: number

Format: interface

ethernet-start

Description Ethernet port (Interface number)

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

vlan-group-list_trunk-list

Specification	Value
Type	*list*
Block object keys	

trunk-end

Description

Type: number

Reference Object: */axapi/v3/interface/trunk*

trunk-start

Description

Type: number

Reference Object: */axapi/v3/interface/trunk*

2.83.2 network arp

Configure ARP

arp Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	arp
Element URI	/axapi/v3/network/arp
Element Attributes	arp_attributes
Partition Visibility	shared
Schema	`arp schema`

Operations Allowed:

Get Object

GET

/axapi/v3/network/arp

arp_attributes

arp attributes

dynamic

Description: dynamic is a **JSON Block**. Please see below for *dynamic*

Type: Object

Reference Object: */axapi/v3/network/arp/dynamic*

static-list

Type: List

Reference Object: */axapi/v3/network/arp/static/{ip-addr}+{vlan}*

dynamic

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

static-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet port (Port Value)

Type: number

Format: interface

Mutual Exclusion: ethernet and trunk are mutually exclusive

ip-addr

Description IP address

Type: string

Format: ipv4-address

mac-addr

Description MAC address

Type: string

Format: mac-address

trunk

Description Trunk group

Type: number

Range: 1-4096

Mutual Exclusion: trunk and ethernet are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description VLAN ID

Type: number

Range: 2-4094

Reference Object: */axapi/v3/network/vlan*

2.83.3 network arp dynamic oper

Operational Status for the object dynamic

dynamic Specification

Parameter	Value
Type	*Configuration Resource*

        "msg": "Success"
```

(continues on next page)

(continued from previous page)

```
    }
}
```

bfd attributes

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds (default: 800))

Type: number

Range: 48-1000

Default: 800

min-rx

Description Minimum receive interval capability (Milliseconds (default: 800))

Type: number

Range: 48-1000

Default: 800

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval (default: 4))

Type: number

Range: 3-50

Default: 4

2.83.9 network bpdu-fwd-group

bridge-vlan-group attributes

bridge-vlan-group-number

Description Bridge VLAN Group Number

Type: number

Range: 1-255

forward-traffic

Description 'forward-all-traffic': Forward all traffic between bridge members; 'forward-ip-traffic': Forward only IP traffic between bridge members (default);

Type: string

Supported Values: forward-all-traffic, forward-ip-traffic

Default: forward-ip-traffic

name

Description Bridge Group Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual Ethernet Port (Virtual Ethernet Port number)

Type: number

Range: 2-4094

Reference Object: */axapi/v3/network/vlan*

vlan-list

}
```

icmp-rate-limit attributes

icmp-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmp-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmp-normal-rate-limit

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

        "msg": "Success"
    }
}
```

l2-bfd attributes

ether-type

Description Ethernet paylaod type for L2BFD packets, help-val 16 bit hex value, default is hex 88B6

Type: string

Format: time-hh:mm

Maximum Length: 4 characters

Maximum Length: 1 characters

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval (default: 4))

Type: number

Range: 3-50

Default: 4

rx-interval

Description Minimum receive interval capability (Milliseconds (default: 800))

Type: number

Range: 48-1000

Default: 800

tx-interval

Description Transmit interval between BFD packets (Milliseconds (default: 800))

Type: number

Range: 48-1000

Default: 800

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.83.14 network lacp

LACP commands

lacp Specification

Parameter	Value

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

management-address_ipv4-addr-list_interface-ipv4

Specification	Value
Type	*object*

ipv4-eth

Description configure lldp management-address interface ethernet (lldp management-address interface port number)

Type: number

Format: interface

ipv4-mgmt

Description configure lldp management-address interface management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-ve

Description configure lldp management-address interface ve (lldp management-address interface port number)

Type: number

Range: 2-4094

management-address_dns-list

Specification	Value
Type	*list*
Block object keys	

dns

Description Configure lldp management-address, subtype is dns (lldp management-address dns address)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

interface

Description: interface is a **JSON Block**. Please see below for *management-address_dns-list_interface*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

management-address_dns-list_interface

Specification	Value
Type	*object*

ethernet

Description configure lldp management-address interface ethernet (lldp management-address interface port number)

Type: number

Format: interface

Mutual Exclusion: ethernet, ve, and management are mutually exclusive

management

Description configure lldp management-address interface management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: management, ethernet, and ve are mutually exclusive

ve

Description configure lldp management-address interface management (lldp management-address interface port number)

Type: number

Range: 2-4094

Mutual Exclusion: ve, ethernet, and management are mutually exclusive

notification-cfg

Specification	Value
Type	*object*

interval

Description Configure lldp notification interval, default is 30 (The lldp notification interval value, default is 30)

Type: number

Range: 5-3600

Default: 30

notification

Description Enable lldp notification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-set

Specification	Value
Type	*object*

fast-count

Description Configure lldp tx fast count value (The lldp tx fast count value, default is 4)

Type: number

Range: 1-8

Default: 4

fast-interval

Description Configure lldp tx fast interval value (The lldp tx fast interval value, default is 1)

Type: number

Range: 1-3600

Default: 1

hold

Description Configure lldp tx hold multiplier (The lldp tx hold value, default is 4)

Type: number

Range: 1-10

Default: 4

reinit-delay

Description Configure lldp tx reinit delay (The lldp tx reinit_delay value, default is 2)

Type: number

Range: 1-10

Default: 2

tx-interval

Description Configure lldp tx interval (The lldp tx interval value, default is 30)

Type: number

Range: 1-3600

Default: 30

enable-cfg

Specification	Value
Type	*object*

enable

Description Enable lldp

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.83.18 network lldp management-address

Configure lldp management address

management-address Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	management-address
Element URI	/axapi/v3/network/lldp/management-address
Element Attributes	management-address_attributes
Partition Visibility	shared
Schema	`management-address schema`

Operations Allowed:

Get Object

GET

/axapi/v3/network/lldp/management-address

management-address_attributes

```
GET /axapi/v3/network/lldp/management-address
Reponse:
{
    "management-address": {
        "dns-list": [
            {
                "dns": "a",

static attributes

dest

Description Trap MAC with this DA to CPU

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac

Description Configure a Static MAC address

Type: string

Format: mac-address

port

Description Ethernet Port on which the Address is applicable (Port Value)

Type: number

Format: interface

redirect-dummy-mac

Description Dummy for redirect use

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description VLAN Id

Type: number

Range: 2-4094

Reference Object: */axapi/v3/network/vlan*

auth-key-list

Specification	Value
Type	*list*
Block object keys	

alg-type

Description 'M': encryption using MD5; 'SHA': encryption using SHA; 'SHA1': encryption using SHA1;

Type: string

Supported Values: M, SHA, SHA1

asc-key

Description

Type: string

Format: password

Maximum Length: 20 characters

Maximum Length: 1 characters

Mutual Exclusion: asc-key and hex-key are mutually exclusive

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: encrypted and hex-encrypted are mutually exclusive

hex-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: hex-encrypted and encrypted are mutually exclusive

hex-key

Description

Type: string

Format: password

Maximum Length: 40 characters

Maximum Length: 21 characters

Mutual Exclusion: hex-key and asc-key are mutually exclusive

key

Description authentication key

Type: number

Range: 1-65535

key-type

Description 'ascii': key string in ASCII form; 'hex': key string in hex form;

Type: string

Supported Values: ascii, hex

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trusted-key-list

Specification	Value
Type	*list*
Block object keys	

key

Description trusted key

Type: number

Range: 1-65535

Reference Object: */axapi/v3/ntp/auth-key*

uuid

Description uuid of the object

Specification	Value
Type	*object*

allow-data-ports

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server

Specification	Value
Type	*object*

hostname-list

Type: List

Reference Object: */axapi/v3/ntp/server/hostname/{host-servername}*

server_hostname-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': Enable this NTP server; 'disable': Disable this NTP server;

Type: string

Supported Values: enable, disable

Default: enable

host-servername

Description IPV4 address, IPV6 address or host name of NTP server(string1~63)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

key

Description Use trusted key to authenticate this NTP server (The trusted key number to use)

Type: number

Range: 1-65535

Reference Object: */axapi/v3/ntp/trusted-key*

prefer

Description Set this NTP server as preferred

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.85.2 ntp auth-key

authentication key

auth-key Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*key*

Description IPv4 Host Address start

Type: string

Format: ipv4-address

Mutual Exclusion: ip-range-start,ipv6-range-start, subnet, and ipv6-subnet are mutually exclusive

ipv6-range-end

Description IPV6 Host address end

Type: string

Format: ipv6-address

ipv6-range-start

Description IPv6 Host Address start

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-range-start,ip-range-start, subnet, and ipv6-subnet are mutually exclusive

ipv6-subnet

Description IPv6 Network Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: ipv6-subnet,ip-range-start, ipv6-range-start, and subnet are mutually exclusive

net-name

Description Network Object Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

subnet

Description IPv4 Network Address

Type: string

Format: ipv4-cidr

Mutual Exclusion: subnet,ip-range-start, ipv6-range-start, and ipv6-subnet are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.87.2 object network

Configure Network Object

network Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*net-name*
Collection Name	*network-list*
Collection URI	/axapi/v3/object/network

alg

Description 'FTP': Specify FTP ALG port range; 'TFTP': Specify TFTP ALG port range; 'SIP': Specify SIP ALG port range; 'DNS': Specify DNS ALG port range; 'PPTP': Specify PPTP ALG port range; 'RTSP': Specify RTSP ALG port range;

Type: string

Supported Values: FTP, TFTP, SIP, DNS, PPTP, RTSP

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code, icmp-code, and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type, icmp-type, and special-type are mutually exclusive

eq-dst

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

eq-src

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

gt-dst

Description Match only packets with a greater destination port number

Type: number

Range: 1-65534

gt-src

Description Match only packets with a greater source port number

Type: number

Range: 1-65534

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code, any-code, and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type, any-type, and special-type are mutually exclusive

icmpv6

Description Internet Control Message Protocol version 6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmpv6-code

Description ICMPv6 code number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-code, v6-any-code, and special-v6-code are mutually exclusive

icmpv6-type

Description ICMPv6 type number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-type, v6-any-type, and special-v6-type are mutually exclusive

lt-dst

Description Match only packets with a lesser destination port number

Type: number

Range: 2-65535

lt-src

Description Match only packets with a lower source port number

Type: number

Range: 2-65535

port-num-end-dst

Description Ending Destination Port Number

Type: number

Range: 1-65535

port-num-end-src

Description Ending Source Port Number

Type: number

Range: 1-65535

protocol-id

Description Protocol ID

Type: number

Range: 0-255

range-dst

Description Match only packets in the range of destination port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

range-src

Description match only packets in the range of source port numbers (Starting Port Number)

Type: number

Range: 1-65535

seq-num

Description Sequence number

Type: number

Range: 1-8192

source

Description Source Port Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

special-code

Description 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code, any-code, and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5, redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type, icmp-type, and any-type are mutually exclusive

special-v6-code

Description 'addr-unreachable': Code 3, address unreachable; 'admin-prohibited': Code 1, admin prohibited; 'no-route': Code 0, no route to destination; 'not-neighbour': Code 2, not neighbor; 'port-unreachable': Code 4, destination port unreachable;

Type: string

Supported Values: addr-unreachable, admin-prohibited, no-route, not-neighbour, port-unreachable

Mutual Exclusion: special-v6-code, v6-any-code, and icmpv6-code are mutually exclusive

special-v6-type

Description 'dest-unreachable': Type 1, destination unreachable; 'echo-reply': Type 129, echo reply; 'echo-request': Type 128, echo request; 'packet-too-big': Type 2, packet too big; 'param-prob': Type 4, parameter problem; 'time-exceeded': Type 3, time exceeded;

Type: string

Supported Values: dest-unreachable, echo-reply, echo-request, packet-too-big, param-prob, time-exceeded

Mutual Exclusion: special-v6-type, icmpv6-type, and v6-any-type are mutually exclusive

tcp-udp

Description 'tcp': Protocol TCP; 'udp': Protocol UDP;

Type: string

Supported Values: tcp, udp

v6-any-code

Description Any ICMPv6 code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v6-any-code, icmpv6-code, and special-v6-code are mutually exclusive

v6-any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v6-any-type, icmpv6-type, and special-v6-type are mutually exclusive

Specification	Value
Type	*list*
Block object keys	

alg

Description 'FTP': Specify FTP ALG port range; 'TFTP': Specify TFTP ALG port range; 'SIP': Specify SIP ALG port range; 'DNS': Specify DNS ALG port range; 'PPTP': Specify PPTP ALG port range; 'RTSP': Specify RTSP ALG port range;

Type: string

Supported Values: FTP, TFTP, SIP, DNS, PPTP, RTSP

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code, icmp-code, and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type, icmp-type, and special-type are mutually exclusive

eq-dst

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

eq-src

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

gt-dst

Description Match only packets with a greater destination port number

Type: number

Range: 1-65534

gt-src

Description Match only packets with a greater source port number

Type: number

Range: 1-65534

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code, any-code, and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type, any-type, and special-type are mutually exclusive

icmpv6

Description Internet Control Message Protocol version 6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmpv6-code

Description ICMPv6 code number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-code, v6-any-code, and special-v6-code are mutually exclusive

icmpv6-type

Description ICMPv6 type number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-type, v6-any-type, and special-v6-type are mutually exclusive

lt-dst

Description Match only packets with a lesser destination port number

Type: number

Range: 2-65535

lt-src

Description Match only packets with a lower source port number

Type: number

Range: 2-65535

port-num-end-dst

Description Ending Destination Port Number

Type: number

Range: 1-65535

port-num-end-src

Description Ending Source Port Number

Type: number

Range: 1-65535

protocol-id

Description Protocol ID

Type: number

Range: 0-255

range-dst

Description Match only packets in the range of destination port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

range-src

Description match only packets in the range of source port numbers (Starting Port Number)

Type: number

Range: 1-65535

seq-num

Description Sequence number

Type: number

Range: 1-8192

source

Description Source Port Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

special-code

Description 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code, any-code, and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5, redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type, icmp-type, and any-type are mutually exclusive

special-v6-code

Description 'addr-unreachable': Code 3, address unreachable; 'admin-prohibited': Code 1, admin prohibited; 'no-route': Code 0, no route to destination; 'not-neighbour': Code 2, not neighbor; 'port-unreachable': Code 4, destination port unreachable;

Type: string

Supported Values: addr-unreachable, admin-prohibited, no-route, not-neighbour, port-unreachable

Mutual Exclusion: special-v6-code, v6-any-code, and icmpv6-code are mutually exclusive

special-v6-type

Description 'dest-unreachable': Type 1, destination unreachable; 'echo-reply': Type 129, echo reply; 'echo-request': Type 128, echo request; 'packet-too-big': Type 2, packet too big; 'param-prob': Type 4, parameter problem; 'time-exceeded': Type 3, time exceeded;

Type: string

Supported Values: dest-unreachable, echo-reply, echo-request, packet-too-big, param-prob, time-exceeded

Mutual Exclusion: special-v6-type, icmpv6-type, and v6-any-type are mutually exclusive

tcp-udp

Description 'tcp': Protocol TCP; 'udp': Protocol UDP;

Type: string

Supported Values: tcp, udp

v6-any-code

Description Any ICMPv6 code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v6-any-code, icmpv6-code, and special-v6-code are mutually exclusive

v6-any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v6-any-type, icmpv6-type, and special-v6-type are mutually exclusive

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vxlan-dest-port

Description VXLAN UDP Destination Port (UDP Port Number (default 4789))

Type: number

Range: 1-65535

options_src-port-range

Specification	Value
Type	*object*

max-port

Description Maximum Port Number

Type: number

Range: 1-65535

Default: 65535

min-port

Description Minimum Port Number

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-list

Specification	Value
Type	*list*
Block object keys	

dest-port

Description Layer-4 Destination Port (Port Number)

Type: number

Range: 1-65535

encap

Description 'ip-encap': Tunnel encapsulation type is IP; 'gre': Tunnel encapsulation type is GRE; 'nvgre': Tunnel Encapsulation Type is NVGRE; 'vxlan': Tunnel Encapsulation Type is VXLAN;

Type: string

Supported Values: ip-encap, gre, nvgre, vxlan

host-list

Type: List

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/host/{ip-addr}+{overlay-mac-addr}+{vni}+{remote-vtep}+{remote-ipv6-vtep}*

id

Description VTEP Identifier

Type: number

Range: 1-190

local-ip-address

Description: local-ip-address is a **JSON Block**. Please see below for *vtep-list_local-ip-address*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/local-ip-address*

local-ipv6-address

Description: local-ipv6-address is a **JSON Block**. Please see below for *vtep-list_local-ipv6-address*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/local-ipv6-address*

remote-ip-address-list

Type: List

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}*

remote-ipv6-address-list

Type: List

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}*

sampling-enable

Type: List

src-port-range

Description: src-port-range is a **JSON Block**. Please see below for *vtep-list_src-port-range*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/src-port-range*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-list_src-port-range

Specification	Value
Type	*object*

max-port

Description Maximum Port Number

Type: number

Range: 1-65535

Default: 65535

min-port

Description Minimum Port Number

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-list_local-ip-address

Specification	Value
Type	*object*

ip-address

Description Source Tunnel End Point IPv4 address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni-list

Type: List

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/local-ip-address/vni/{segment}*

vtep-list_local-ip-address_vni-list

Specification	Value
Type	*list*
Block object keys	

gateway

Description This is a Gateway segment id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

segment

Description Id of the segment that is being extended

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-list_local-ipv6-address

Specification	Value
Type	*object*

ipv6-address

Description Source Tunnel End Point IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni-list

Type: List

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/local-ipv6-address/vni/{segment}*

vtep-list_local-ipv6-address_vni-list

Specification	Value
Type	*list*
Block object keys	

gateway

Description This is a Gateway segment id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

segment

Description Id of the segment that is being extended

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'cfg_err_count': Config errors; 'flooded_pkt_count': Flooded packet count; 'encap_unresolved_count': Encap unresolved failures; 'unknown_encap_rx_pkt': Encap miss rx pkts; 'unknown_encap_tx_pkt': Encap miss tx pkts; 'arp_req_sent': Arp request sent; 'vtep_host_learned': Hosts learned; 'vtep_host_learn_error': Host learn error; 'invalid_lif_rx': Invalid Lif pkts in; 'invalid_lif_tx': Invalid Lif pkts out; 'unknown_vtep_tx': Vtep unknown tx; 'unknown_vtep_rx': Vtep Unkown rx; 'unhandled_pkt_rx': Unhandled packets in; 'unhandled_pkt_tx': Unhandled packets out; 'total_pkts_rx': Total packets out; 'total_bytes_rx': Total packet bytes in; 'unicast_pkt_rx': Total unicast packets in; 'bcast_pkt_rx': Total broadcast packets in; 'mcast_pkt_rx': Total multicast packets in; 'dropped_pkt_rx': Dropped received packets; 'encap_miss_pkts_rx': Encap missed in received packets; 'bad_chksum_pks_rx': Bad checksum in received packets; 'requeue_pkts_in': Requeued packets in; 'pkts_out': Packets out; 'total_bytes_tx': Packet bytes out; 'unicast_pkt_tx': Unicast packets out; 'bcast_pkt_tx': Broadcast packets out; 'mcast_pkt_tx': Multicast packets out; 'dropped_pkts_tx': Dropped packets out; 'large_pkts_rx': Too large packets in; 'dot1q_pkts_rx': Dot1q packets in; 'frag_pkts_tx': Frag packets out; 'reassembled_pkts_rx': Reassembled packets in; 'bad_inner_ipv4_len_rx': bad inner ipv4 packet len; 'bad_inner_ipv6_len_rx': Bad inner ipv6 packet len; 'frag_drop_pkts_tx': Frag dropped packets out; 'lif_un_init_rx': Lif uninitialized packets in;

Type: string

Supported Values: all, cfg_err_count, flooded_pkt_count, encap_unresolved_count, unknown_encap_rx_pkt, unknown_encap_tx_pkt, arp_req_sent, vtep_host_learned, vtep_host_learn_error, invalid_lif_rx, invalid_lif_tx, unknown_vtep_tx, unknown_vtep_rx, unhandled_pkt_rx, unhandled_pkt_tx, total_pkts_rx, total_bytes_rx, unicast_pkt_rx, bcast_pkt_rx, mcast_pkt_rx, dropped_pkt_rx, encap_miss_pkts_rx, bad_chksum_pks_rx, requeue_pkts_in, pkts_out, total_bytes_tx, unicast_pkt_tx, bcast_pkt_tx, mcast_pkt_tx, dropped_pkts_tx, large_pkts_rx, dot1q_pkts_rx, frag_pkts_tx, reassembled_pkts_rx, bad_inner_ipv4_len_rx, bad_inner_ipv6_len_rx, frag_drop_pkts_tx, lif_un_init_rx

vtep-list_remote-ip-address-list

Specification	Value
Type	*list*
Block object keys	

class-list

Description Name of the class-list

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

encap

Description 'nvgre': Tunnel Encapsulation Type is NVGRE; 'vxlan': Tunnel Encapsulation Type is VXLAN;

Type: string

Supported Values: nvgre, vxlan

gre-keepalive

Description: gre-keepalive is a **JSON Block**. Please see below for *vtep-list_remote-ip-address-list_gre-keepalive*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/gre-keepalive*

ip-address

Description IP Address of the remote VTEP

Type: string

Format: ipv4-address

use-gre-key

Description: use-gre-key is a **JSON Block**. Please see below for *vtep-list_remote-ip-address-list_use-gre-key*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-gre-key*

use-lif

Description: use-lif is a **JSON Block**. Please see below for *vtep-list_remote-ip-address-list_use-lif*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-lif*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni-list

Type: List

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni/{segment}*

vtep-list_remote-ip-address-list_gre-keepalive

Specification	Value
Type	*object*

retry-count

Description Keepalive multiplier

Type: number

Range: 2-100

retry-time

Description Keepalive retry interval in seconds

Type: number

Range: 1-60

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-list_remote-ip-address-list_use-lif

Specification	Value
Type	*object*

lif

Description Logical interface (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

uuid

Description uuid of the object

Maximum Length: 1 characters

vtep-list_host-list

Specification	Value
Type	*list*
Block object keys	

ip-addr

Description IPv4 address of the overlay host

Type: string

Format: ipv4-address

ipv6-addr

Description IPv6 address of the overlay host

Type: string

Format: ipv6-address

overlay-mac-addr

Description MAC Address of the overlay host

Type: string

Format: mac-address

remote-ipv6-vtep

Description Configure the VTEP IPv6 address (IPv6 address of the VTEP for the remote host)

Type: string

Format: ipv6-address

remote-vtep

Description Configure the VTEP IP address (IPv4 address of the VTEP for the remote host)

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni

Description Configure the segment id (VNI of the remote host)

Type: number

Range: 1-16777215

2.90.2 overlay-tunnel debug

Configure scaleout

debug Specification

Parameter	Value
Type	*Intermediate Resource*

}
```

options attributes

fragmentation-mode-inner

Description Enable the inner-fragmentation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-mac

Description MAC to be used with Gateway segment Id (MAC Address for the Gateway segment)

Type: string

Format: mac-address

ip-dscp-preserve

Description Copy DSCP bits from inner IP to outer IP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nvgre-disable-flow-id

Description Disable Flow-ID computation for NVGRE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nvgre-key-mode-lower24

Description Use the lower 24-bits of the GRE key as the VSID

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-port-range

Description: src-port-range is a **JSON Block**. Please see below for *src-port-range*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/options/src-port-range*

tcp-mss-adjust-disable

Description Disable TCP MSS adjustment in SYN packet for tunnels

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vxlan-dest-port

Description VXLAN UDP Destination Port (UDP Port Number (default 4789))

Type: number

Range: 1-65535

src-port-range

Specification	Value
Type	*object*

max-port

Description Maximum Port Number

Type: number

Range: 1-65535

Default: 65535

min-port

Description Minimum Port Number

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

}
```

vtep-list

vtep-list is **JSON List** of *vtep attributes*

vtep-list : [

{ *vtep attributes* },

{ *vtep attributes* },

...

]

vtep attributes

dest-port

Description Layer-4 Destination Port (Port Number)

Type: number

Range: 1-65535

encap

Description 'ip-encap': Tunnel encapsulation type is IP; 'gre': Tunnel encapsulation type is GRE; 'nvgre': Tunnel Encapsulation Type is NVGRE; 'vxlan': Tunnel Encapsulation Type is VXLAN;

Type: string

Supported Values: ip-encap, gre, nvgre, vxlan

host-list

Type: List

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/host/{ip-addr}+{overlay-mac-addr}+{vni}+{remote-vtep}+{remote-ipv6-vtep}*

id

Description VTEP Identifier

Type: number

Range: 1-190

local-ip-address

Description: local-ip-address is a **JSON Block**. Please see below for *local-ip-address*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/local-ip-address*

local-ipv6-address

Description: local-ipv6-address is a **JSON Block**. Please see below for *local-ipv6-address*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/local-ipv6-address*

remote-ip-address-list

Type: List

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}*

remote-ipv6-address-list

Type: List

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}*

sampling-enable

Type: List

src-port-range

Description: src-port-range is a **JSON Block**. Please see below for *src-port-range*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/src-port-range*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

src-port-range

Specification	Value
Type	*object*

max-port

Description Maximum Port Number

Type: number

Range: 1-65535

Default: 65535

min-port

Description Minimum Port Number

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-ip-address

Specification	Value
Type	*object*

ip-address

Description Source Tunnel End Point IPv4 address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni-list

Type: List

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/local-ip-address/vni/{segment}*

local-ip-address_vni-list

Specification	Value
Type	*list*
Block object keys	

gateway

Description This is a Gateway segment id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

segment

Description Id of the segment that is being extended

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-ipv6-address

Specification	Value
Type	*object*

ipv6-address

Description Source Tunnel End Point IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni-list

Type: List

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/local-ipv6-address/vni/{segment}*

local-ipv6-address_vni-list

Specification	Value
Type	*list*
Block object keys	

gateway

Description This is a Gateway segment id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

segment

Description Id of the segment that is being extended

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'cfg_err_count': Config errors; 'flooded_pkt_count': Flooded packet count; 'encap_unresolved_count': Encap unresolved failures; 'unknown_encap_rx_pkt': Encap miss rx pkts; 'unknown_encap_tx_pkt': Encap miss tx pkts; 'arp_req_sent': Arp request sent; 'vtep_host_learned': Hosts learned; 'vtep_host_learn_error': Host learn error; 'invalid_lif_rx': Invalid Lif pkts in; 'invalid_lif_tx': Invalid Lif pkts out; 'unknown_vtep_tx': Vtep unknown tx; 'unknown_vtep_rx': Vtep Unkown rx; 'unhandled_pkt_rx': Unhandled packets in; 'unhandled_pkt_tx': Unhandled packets out; 'total_pkts_rx': Total packets out; 'total_bytes_rx': Total packet bytes in; 'unicast_pkt_rx': Total unicast packets in; 'bcast_pkt_rx': Total broadcast packets in; 'mcast_pkt_rx': Total multicast packets in; 'dropped_pkt_rx': Dropped received packets; 'encap_miss_pkts_rx': Encap missed in received packets; 'bad_chksum_pks_rx': Bad checksum in received packets; 'requeue_pkts_in': Requeued packets in; 'pkts_out': Packets out; 'total_bytes_tx': Packet bytes out; 'unicast_pkt_tx': Unicast packets out; 'bcast_pkt_tx': Broadcast packets out; 'mcast_pkt_tx': Multicast packets out; 'dropped_pkts_tx': Dropped packets out; 'large_pkts_rx': Too large packets in; 'dot1q_pkts_rx': Dot1q packets in; 'frag_pkts_tx': Frag packets out; 'reassembled_pkts_rx': Reassembled packets in; 'bad_inner_ipv4_len_rx': bad inner ipv4 packet len; 'bad_inner_ipv6_len_rx': Bad inner ipv6 packet len; 'frag_drop_pkts_tx': Frag dropped packets out; 'lif_un_init_rx': Lif uninitialized packets in;

Type: string

Supported Values: all, cfg_err_count, flooded_pkt_count, encap_unresolved_count, unknown_encap_rx_pkt, unknown_encap_tx_pkt, arp_req_sent, vtep_host_learned, vtep_host_learn_error, invalid_lif_rx, invalid_lif_tx, unknown_vtep_tx, unknown_vtep_rx, unhandled_pkt_rx, unhandled_pkt_tx, total_pkts_rx, total_bytes_rx, unicast_pkt_rx, bcast_pkt_rx, mcast_pkt_rx, dropped_pkt_rx, encap_miss_pkts_rx, bad_chksum_pks_rx, requeue_pkts_in, pkts_out, total_bytes_tx, unicast_pkt_tx, bcast_pkt_tx, mcast_pkt_tx, dropped_pkts_tx, large_pkts_rx, dot1q_pkts_rx, frag_pkts_tx, reassembled_pkts_rx, bad_inner_ipv4_len_rx, bad_inner_ipv6_len_rx, frag_drop_pkts_tx, lif_un_init_rx

remote-ip-address-list

Specification	Value
Type	*list*
Block object keys	

class-list

Description Name of the class-list

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

encap

Description 'nvgre': Tunnel Encapsulation Type is NVGRE; 'vxlan': Tunnel Encapsulation Type is VXLAN;

Type: string

Supported Values: nvgre, vxlan

gre-keepalive

Description: gre-keepalive is a **JSON Block**. Please see below for *remote-ip-address-list_gre-keepalive*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/gre-keepalive*

ip-address

Description IP Address of the remote VTEP

Type: string

Format: ipv4-address

use-gre-key

Description: use-gre-key is a **JSON Block**. Please see below for *remote-ip-address-list_use-gre-key*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-gre-key*

use-lif

Description: use-lif is a **JSON Block**. Please see below for *remote-ip-address-list_use-lif*

Type: Object

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-lif*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni-list

Type: List

Reference Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni/{segment}*

remote-ip-address-list_gre-keepalive

Specification	Value
Type	*object*

retry-count

Description Keepalive multiplier

Type: number

Range: 2-100

retry-time

Description Keepalive retry interval in seconds

Type: number

Range: 1-60

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote-ip-address-list_use-lif

Specification	Value
Type	*object*

lif

Description Logical interface (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote-ip-address-list_vni-list

Specification	Value
Type	*list*
Block object keys	

segment

Description VNI configured for the remote VTEP

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote-ip-address-list_use-gre-key

Specification	Value
Type	*object*

gre-key

Description key

Type: number

Range: 0-4294967295

Type: Object

Reference Object: */axapi/v3/partition/{partition-name}/template*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

shared-vlan

Specification	Value
Type	*object*

allowable-ip-range

Type: List

allowable-ipv6-range

Type: List

mgmt-floating-ip-address

Description IPv4 Address for Shared VLAN Mgmt IP Address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description

Type: number

Range: 2-4094

vrid

Description Specify VRRP-A vrid

Type: number

Range: 0-31

template

Specification	Value
Type	*object*

resource-accounting

Description Attach a resource accounting template (Name of the template)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.91.2 partition shared-vlan

Enable shared-vlan feature in Network partition

shared-vlan Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	shared-vlan
Element URI	/axapi/v3/partition/{partition-name}/shared-vlan
Element Attributes	shared-vlan_attributes

access-type

Description

Type: string

Format: enum-list

Default: axapi,cli,web

action

Description 'enable': Enable user; 'disable': Disable user;

Type: string

Supported Values: enable, disable

Default: enable

encrypted

Description Specify an ENCRYPTED password string (User password)

passwd-string

Description Config user password

Type: string

Format: password

privilege-partition

Description 'partition-enable-disable': Set per-partition enable/disable privilege; 'partition-read': Set per-partition read privilege; 'partition-write': Set per-partition write privilege;

Type: string

Supported Values: partition-enable-disable, partition-read, partition-write

Default: partition-read

trusted-host

Description Set trusted network administrator can login in

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trusted-host-cidr

Description Trusted IP Address with network mask

Type: string

Format: ipv4-cidr

user

Description Partition admin user name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.93 partition-all

Description: cert-stats is a **JSON Block**. Please see below for *cert-stats*

Type: Object

Reference Object: */axapi/v3/pki/cert-stats*

cmp-cert-list

Type: List

Reference Object: */axapi/v3/pki/cmp-cert/{name}*

copy-cert

Description: copy-cert is a **JSON Block**. Please see below for *copy-cert*

Type: Object

Reference Object: */axapi/v3/pki/copy-cert*

copy-key

Description: copy-key is a **JSON Block**. Please see below for *copy-key*

Type: Object

Reference Object: */axapi/v3/pki/copy-key*

create-oper

Description: create-oper is a **JSON Block**. Please see below for *create-oper*

Type: Object

Reference Object: */axapi/v3/pki/create-oper*

delete

Description: delete is a **JSON Block**. Please see below for *delete*

Type: Object

Reference Object: */axapi/v3/pki/delete*

delete-oper

Description: delete-oper is a **JSON Block**. Please see below for *delete-oper*

Type: Object

Reference Object: */axapi/v3/pki/delete-oper*

placeholder

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

scep-cert-list

Type: List

Reference Object: */axapi/v3/pki/scep-cert/{name}*

ssli

Description: ssli is a **JSON Block**. Please see below for *ssli*

Type: Object

Reference Object: */axapi/v3/pki/ssli*

ssli

Specification	Value
Type	*object*

generate

Description: generate is a **JSON Block**. Please see below for *ssli_generate*

Type: Object

Reference Object: */axapi/v3/pki/ssli/generate*

revoke

Description: revoke is a **JSON Block**. Please see below for *ssli_revoke*

Type: Object

Reference Object: */axapi/v3/pki/ssli/revoke*

ssli_revoke

Specification	Value
Type	*object*

port

Description port number

Type: number

Range: 0-65534

serial

Description Serial number in hex

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

vip-name

Description VIP name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ssli_generate

Specification	Value
Type	*object*

crl

Description: crl is a **JSON Block**. Please see below for *ssli_generate_crl*

Type: Object

Reference Object: */axapi/v3/pki/ssli/generate/crl*

ssli_generate_crl

Specification	Value
Type	*object*

port

Description port number

Type: number

Range: 0-65534

vip-name

Description VIP name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

cert-stats

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cmp-cert-list

Specification	Value
Type	*list*
Block object keys	

allow-unprotected-errors

Description Accept missing or invalid protection of negative responses(CA likes EJCBA tends to not protect negative responses)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cert-type

Description Specify the type of certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cmp-trusted-ca

Description The specific CA to trust while verifying signature of CMP response message

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

cmp-trusted-cert

Description The specific CMP server certificate to use and directly trust when verifying signature of CMP response message

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

ec-key-length

Description '256': Key size 256 bits; '384': Key size 384 bits(default);

Type: string

Supported Values: 256, 384

Default: 384

ecdsa-type

Description ECDSA certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ecdsa-type and rsa-type are mutually exclusive

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

enroll

Description Initiates enrollment of device with the CA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-level

Description Level for logging output of CMP commands(default 1 and detailed 2)

Type: number

Range: 1-2

Default: 1

max-polltime

Description Maximum time in seconds a(n) enrollment/key update may take (default 120)

Type: number

Range: 5-1024

Default: 120

minute

Description Periodic interval in minutes

Type: number

Range: 2-255

Mutual Exclusion: minute and renew-every-type are mutually exclusive

name

Description Specify Certificate name to be enrolled

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

recipient-dn

Description Distinguished Name of the CMP message recipient, i.e., the CMP server (usually a CA or RA entity)) (DN OIDis case sensitive)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 2 characters

renew-before

Description Specify interval before certificate expiry to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-before and renew-every are mutually exclusive

renew-before-type

Description 'hour': Number of hours before cert expiry; 'day': Number of days before cert expiry; 'week': Number of weeks before cert expiry; 'month': Number of months before cert expiry(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

renew-before-value

Description Value of renewal period

Type: number

Range: 1-255

renew-every

Description Specify periodic interval in which to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-every and renew-before are mutually exclusive

renew-every-type

Description 'hour': Periodic interval in hours; 'day': Periodic interval in days; 'week': Periodic interval in weeks; 'month': Periodic interval in months(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

Mutual Exclusion: renew-every-type and minute are mutually exclusive

renew-every-value

Description Value of renewal period

Type: number

Range: 1-255

rsa-key-length

Description '1024': Key size 1024 bits; '2048': Key size 2048 bits(default); '4096': Key size 4096 bits; '8192': Key size 8192 bits;

Type: string

Supported Values: 1024, 2048, 4096, 8192

Default: 2048

rsa-type

Description RSA certificate (default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rsa-type and ecdsa-type are mutually exclusive

secret

Description Specify the pre-shared secret used to enroll the device's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description pre-shared secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

subject-alternate-name

Description: subject-alternate-name is a **JSON Block**. Please see below for *cmp-cert-list_subject-alternate-name*

Type: Object

subject-dn

Description Distinguished Name to use while enrolling the certificate(For EJBCA CA, this is the subject DN of an End Entity) (DN OID is case sensitive)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 2 characters

url

Description CMP server's absolute URL(http(s)://host:[port]/path), path is the location to use for the CMP server(aka CMP alias)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cmp-cert-list_subject-alternate-name

Specification	Value
Type	*object*

san-type

Description 'email': Enter e-mail address of the subject; 'dns': Enter hostname of the subject; 'ip': Enter IP address of the subject;

Type: string

Supported Values: email, dn, ip

san-value

Description Value of subject-alternate-name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

copy-key

Specification	Value
Type	*object*

dest-key

Description Destination key file

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

overwrite

Description Overwrite the destination file if already present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rotation

Description Specify rotation number of SCEP/CMP generated key file

Type: number

Range: 1-4

src-key

Description Source key file

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

copy-cert

Specification	Value
Type	*object*

dest-cert

Description Destination certificate file

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

overwrite

Description Overwrite the destination file if already present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rotation

Description Specify rotation number of SCEP/CMP generated certificate file

Type: number

Range: 1-4

src-cert

Description Source certificate file

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-cert

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cert

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

acme-concurrent-process-count

Specification	Value
Type	*object*

process-num

Description Set the concurrent processes number, the default and the maximum number are dependent on the number of control CPU

Type: number

Range: 1-51

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

delete-oper

Specification	Value
Type	*object*

filename

Description

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

acme-cert-list

Specification	Value
Type	*list*
Block object keys	

acme-client

Description 'agent-v1': Set agent-v1 as the ACME client (default); 'agent-v2': Set agent-v2 as the ACME client;

Type: string

Supported Values: agent-v1, agent-v2

Default: agent-v1

cert-type

Description Specify the type of certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

domain

Description Main domain you want to issue the cert for. CA will verify whether you control this domain

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

eab-hmac-key

Description The HMAC key for ACME External Account Binding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eab-key-id

Description The key identifier for ACME External Account Binding

Type: string

Format: string-rlx

Maximum Length: 256 characters

Maximum Length: 1 characters

ec-key-length

Description '256': Key size 256 bits; '384': Key size 384 bits(default);

Type: string

Supported Values: 256, 384

Default: 384

ecdsa-type

Description ECDSA certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ecdsa-type and rsa-type are mutually exclusive

email

Description A valid email address for your ACME account. CA uses this email to send you expiration or other notices

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

enroll

Description Initiates enrollment with CA. Due to CA rate limit, A10 strongly recommend you set "run-with-staging-server" during test

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force

Description Ignore the next renewal time and force to renew cert

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-level

Description Level for logging output of ACME commands(default 1 and detailed 2, including debug messages)

Type: number

Range: 1-2

Default: 1

minute

Description Periodic interval in minutes

Type: number

Range: 2-255

Mutual Exclusion: minute and renew-every-type are mutually exclusive

name

Description Specify Certificate name to be enrolled

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

renew-before

Description Specify interval before certificate expiry to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-before and renew-every are mutually exclusive

renew-before-type

Description 'hour': Number of hours before cert expiry; 'day': Number of days before cert expiry; 'week': Number of weeks before cert expiry; 'month': Number of months before cert expiry(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

renew-before-value

Description Value of renewal period

Type: number

Range: 1-255

renew-every

Description Specify periodic interval in which to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-every and renew-before are mutually exclusive

renew-every-type

Description 'hour': Periodic interval in hours; 'day': Periodic interval in days; 'week': Periodic interval in weeks; 'month': Periodic interval in months(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

Mutual Exclusion: renew-every-type and minute are mutually exclusive

renew-every-value

Description Value of renewal period

Type: number

Range: 1-255

rsa-key-length

Description '2048': Key size 2048 bits(default); '3072': Key size 3072 bits; '4096': Key size 4096 bits; '8192': Key size 8192 bits;

Type: string

Supported Values: 2048, 3072, 4096, 8192

Default: 2048

rsa-type

Description RSA certificate (default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rsa-type and ecdsa-type are mutually exclusive

san-domain

Description Subject-alternate-name dns(s) for your cert, sperated by /

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

secret-string

Description The HMAC key for ACME External Account Binding

Type: string

Format: password

Maximum Length: 256 characters

Maximum Length: 1 characters

staging

Description Run ACME operation with staging server. Due to CA rate limit, A10 strongly recommends you set this during test

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

staging-url

Description ACME staging directory URL. By default, use Let's encrypt as CA server

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

url

Description ACME directory URL. By default, use Let's encrypt as CA server

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify ha VRRP-A vrid. It is used to sync http-01 challenge token

Type: number

Range: 0-31

create-oper

Specification	Value
Type	*object*

bits

Description '256': 256; '384': 384; '1024': 1024; '2048': 2048; '4096': 4096;

Type: string

Supported Values: 256, 384, 1024, 2048, 4096

Default: 1024

cert-type

Description 'rsa': rsa; 'ecdsa': ecdsa;

Type: string

Supported Values: rsa, ecdsa

Default: rsa

common-name

Description

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

country

Description

Type: string

Maximum Length: 3 characters

Maximum Length: 2 characters

csr-generate

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

digest

Description 'sha1': sha1; 'sha256': sha256; 'sha384': sha384; 'sha512': sha512;

Type: string

Supported Values: sha1, sha256, sha384, sha512

Default: sha1

division

Description

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

email

Description

Type: string

Format: email-addr

Maximum Length: 64 characters

Maximum Length: 1 characters

filename

Description

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

locality

Description

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

organization

Description

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rootca

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secured

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

state-province

Description

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

v3-request

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

valid-days

Description

Type: number

Range: 30-3650

Default: 730

scep-cert-list

Specification	Value
Type	*list*
Block object keys	

days

Description Validity of self-signed certificate (default 1825)

Type: number

Range: 1-3650

Default: 1825

dn

Description Specify the Distinguished-Name to use while enrolling the certificate (Format: "cn=user, dc=example, dc=com")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

end-date

Description End date of self-signed certificate in YYMMDDHHMMSS format specified in UTC time

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

enroll

Description Initiates enrollment of device with the CA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Interval time in seconds to poll when SCEP response is PENDING (default 5)

Type: number

Range: 1-3600

Default: 5

key-length

Description '1024': Key size 1024 bits; '2048': Key size 2048 bits(default); '4096': Key size 4096 bits; '8192': Key size 8192 bits;

Type: string

Supported Values: 1024, 2048, 4096, 8192

Default: 2048

log-level

Description level for logging output of scepclient commands(default 1 and detailed 4)

Type: number

Range: 1-4

Default: 1

max-polltime

Description Maximum time in seconds to poll when SCEP response is PENDING (default 180)

Type: number

Range: 15-432000

Default: 180

method

Description 'GET': GET request; 'POST': POST request;

Type: string

Supported Values: GET, POST

Default: GET

minute

Description Periodic interval in minutes

Type: number

Range: 2-255

Mutual Exclusion: minute and renew-every-type are mutually exclusive

name

Description Specify Certificate name to be enrolled

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify the password used to enroll the device's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

renew-before

Description Specify interval before certificate expiry to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-before and renew-every are mutually exclusive

renew-before-type

Description 'hour': Number of hours before cert expiry; 'day': Number of days before cert expiry; 'week': Number of weeks before cert expiry; 'month': Number of months before cert expiry(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

renew-before-value

Description Value of renewal period

Type: number

Range: 1-255

renew-every

Description Specify periodic interval in which to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-every and renew-before are mutually exclusive

renew-every-type

Description 'hour': Periodic interval in hours; 'day': Periodic interval in days; 'week': Periodic interval in weeks; 'month': Periodic interval in months(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

Mutual Exclusion: renew-every-type and minute are mutually exclusive

renew-every-value

Description Value of renewal period

Type: number

Range: 1-255

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

start-date

Description Start date of self-signed certificate in YYMMDDHHMMSS format specified in UTC time

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

subject-alternate-name

Description: subject-alternate-name is a **JSON Block**. Please see below for *scep-cert-list_subject-alternate-name*

Type: Object

url

Description Specify the Enrollment Agent's absolute URL (Format: http://host/path)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

scep-cert-list_subject-alternate-name

Specification	Value
Type	*object*

san-type

Description 'email': Enter e-mail address of the subject; 'dns': Enter hostname of the subject; 'ip': Enter IP address of the subject;

Type: string

Supported Values: email, dns, ip

san-value

Description Value of subject-alternate-name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

delete

Specification	Value
Type	*object*

ca

Description CA certificate file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

cert-name

Description Certificate file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

crl

Description CRL file name

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

csr

Description CSR file name

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

private-key

Description Private key file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

2.96.2 pki acme-cert

ACME Certificate enrollment object

acme-cert Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*acme-cert-list*
Collection URI	/axapi/v3/pki/acme-cert
Element Name	acme-cert
Element URI	/axapi/v3/pki/acme-cert/{name}

/axapi/v3/pki/acme-cert/{name}

acme-cert attributes

acme-cert-list

acme-cert-list is **JSON List** of *acme-cert attributes*

```
acme-cert-list : [
        { acme-cert attributes },
        { acme-cert attributes },
        ...
    ]
```

acme-cert attributes

acme-client

Description 'agent-v1': Set agent-v1 as the ACME client (default); 'agent-v2': Set agent-v2 as the ACME client;

Type: string

Supported Values: agent-v1, agent-v2

Default: agent-v1

cert-type

Description Specify the type of certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

domain

Description Main domain you want to issue the cert for. CA will verify whether you control this domain

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

eab-hmac-key

Description The HMAC key for ACME External Account Binding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eab-key-id

Description The key identifier for ACME External Account Binding

Type: string

Format: string-rlx

Maximum Length: 256 characters

Maximum Length: 1 characters

ec-key-length

Description '256': Key size 256 bits; '384': Key size 384 bits(default);

Type: string

Supported Values: 256, 384

Default: 384

ecdsa-type

Description ECDSA certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ecdsa-type and rsa-type are mutually exclusive

email

Description A valid email address for your ACME account. CA uses this email to send you expiration or other notices

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

enroll

Description Initiates enrollment with CA. Due to CA rate limit, A10 strongly recommend you set "run-with-staging-server" during test

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force

Description Ignore the next renewal time and force to renew cert

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-level

Description Level for logging output of ACME commands(default 1 and detailed 2, including debug messages)

Type: number

Range: 1-2

Default: 1

minute

Description Periodic interval in minutes

Type: number

Range: 2-255

Mutual Exclusion: minute and renew-every-type are mutually exclusive

name

Description Specify Certificate name to be enrolled

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

renew-before

Description Specify interval before certificate expiry to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-before and renew-every are mutually exclusive

renew-before-type

Description 'hour': Number of hours before cert expiry; 'day': Number of days before cert expiry; 'week': Number of weeks before cert expiry; 'month': Number of months before cert expiry(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

renew-before-value

Description Value of renewal period

Type: number

Range: 1-255

renew-every

Description Specify periodic interval in which to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-every and renew-before are mutually exclusive

renew-every-type

Description 'hour': Periodic interval in hours; 'day': Periodic interval in days; 'week': Periodic interval in weeks; 'month': Periodic interval in months(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

Mutual Exclusion: renew-every-type and minute are mutually exclusive

renew-every-value

Description Value of renewal period

Type: number

Range: 1-255

rsa-key-length

Description '2048': Key size 2048 bits(default); '3072': Key size 3072 bits; '4096': Key size 4096 bits; '8192': Key size 8192 bits;

Type: string

Supported Values: 2048, 3072, 4096, 8192

Default: 2048

rsa-type

Description RSA certificate (default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rsa-type and ecdsa-type are mutually exclusive

san-domain

Description Subject-alternate-name dns(s) for your cert, sperated by /

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

secret-string

Description The HMAC key for ACME External Account Binding

Type: string

Format: password

Maximum Length: 256 characters

Maximum Length: 1 characters

staging

Description Run ACME operation with staging server. Due to CA rate limit, A10 strongly recommends you set this during test

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

staging-url

Description ACME staging directory URL. By default, use Let's encrypt as CA server

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

url

Description ACME directory URL. By default, use Let's encrypt as CA server

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify ha VRRP-A vrid. It is used to sync http-01 challenge token

Type: number

Range: 0-31

2.96.3 pki acme-concurrent-process-count

Configure the number of cuncurrent ACME processes

acme-concurrent-process-count Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	acme-concurrent-process-count
Element URI	/axapi/v3/pki/acme-concurrent-process-count
Element Attributes	acme-concurrent-process-count_attributes
Partition Visibility	shared
Schema	`acme-concurrent-process-count schema`

Operations Allowed:

Create Object

POST

/axapi/v3/pki/acme-concurrent-process-count

acme-concurrent-process-count attributes

Get Object

GET

/axapi/v3/pki/acme-concurrent-process-count

DELETE

/axapi/v3/pki/cmp-cert/{name}

cmp-cert attributes

cmp-cert-list

cmp-cert-list is **JSON List** of *cmp-cert attributes*

cmp-cert-list : [

{ *cmp-cert attributes* },

{ *cmp-cert attributes* },

...

]

cmp-cert attributes

allow-unprotected-errors

Description Accept missing or invalid protection of negative responses(CA likes EJCBA tends to not protect negative responses)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cert-type

Description Specify the type of certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cmp-trusted-ca

Description The specific CA to trust while verifying signature of CMP response message

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

cmp-trusted-cert

Description The specific CMP server certificate to use and directly trust when verifying signature of CMP response message

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

ec-key-length

Description '256': Key size 256 bits; '384': Key size 384 bits(default);

Type: string

Supported Values: 256, 384

Default: 384

ecdsa-type

Description ECDSA certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ecdsa-type and rsa-type are mutually exclusive

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

enroll

Description Initiates enrollment of device with the CA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-level

Description Level for logging output of CMP commands(default 1 and detailed 2)

Type: number

Range: 1-2

Default: 1

max-polltime

Description Maximum time in seconds a(n) enrollment/key update may take (default 120)

Type: number

Range: 5-1024

Default: 120

minute

Description Periodic interval in minutes

Type: number

Range: 2-255

Mutual Exclusion: minute and renew-every-type are mutually exclusive

name

Description Specify Certificate name to be enrolled

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

recipient-dn

Description Distinguished Name of the CMP message recipient, i.e., the CMP server (usually a CA or RA entity)) (DN OIDis case sensitive)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 2 characters

renew-before

Description Specify interval before certificate expiry to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-before and renew-every are mutually exclusive

renew-before-type

Description 'hour': Number of hours before cert expiry; 'day': Number of days before cert expiry; 'week': Number of weeks before cert expiry; 'month': Number of months before cert expiry(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

renew-before-value

Description Value of renewal period

Type: number

Range: 1-255

renew-every

Description Specify periodic interval in which to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-every and renew-before are mutually exclusive

renew-every-type

Description 'hour': Periodic interval in hours; 'day': Periodic interval in days; 'week': Periodic interval in weeks; 'month': Periodic interval in months(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

Mutual Exclusion: renew-every-type and minute are mutually exclusive

renew-every-value

Description Value of renewal period

Type: number

Range: 1-255

rsa-key-length

Description '1024': Key size 1024 bits; '2048': Key size 2048 bits(default); '4096': Key size 4096 bits; '8192': Key size 8192 bits;

Type: string

Supported Values: 1024, 2048, 4096, 8192

Default: 2048

rsa-type

Description RSA certificate (default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rsa-type and ecdsa-type are mutually exclusive

secret

Description Specify the pre-shared secret used to enroll the device's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description pre-shared secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

subject-alternate-name

Description: subject-alternate-name is a **JSON Block**. Please see below for *subject-alternate-name*

Type: Object

subject-dn

Description Distinguished Name to use while enrolling the certificate(For EJBCA CA, this is the subject DN of an End Entity) (DN OID is case sensitive)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 2 characters

url

Description CMP server's absolute URL(http(s)://host:[port]/path), path is the location to use for the CMP server(aka CMP alias)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

subject-alternate-name

Specification	Value
Type	*object*

san-type

Description 'email': Enter e-mail address of the subject; 'dns': Enter hostname of the subject; 'ip': Enter IP address of the subject;

Type: string

Supported Values: email, dn, ip

san-value

Description Value of subject-alternate-name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

2.96.8 pki scep-cert

SCEP Certificate enrollment object

scep-cert Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*scep-cert-list*
Collection URI	/axapi/v3/pki/scep-cert
Element Name	scep-cert
Element URI	/axapi/v3/pki/scep-cert/{name}
Element Attributes	scep-cert_attributes

scep-cert-list is **JSON List** of *scep-cert attributes*

scep-cert-list : [

{ *scep-cert attributes* },

{ *scep-cert attributes* },

...

]

scep-cert attributes

days

Description Validity of self-signed certificate (default 1825)

Type: number

Range: 1-3650

Default: 1825

dn

Description Specify the Distinguished-Name to use while enrolling the certificate (Format: "cn=user, dc=example, dc=com")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

end-date

Description End date of self-signed certificate in YYMMDDHHMMSS format specified in UTC time

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

enroll

Description Initiates enrollment of device with the CA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Interval time in seconds to poll when SCEP response is PENDING (default 5)

Type: number

Range: 1-3600

Default: 5

key-length

Description '1024': Key size 1024 bits; '2048': Key size 2048 bits(default); '4096': Key size 4096 bits; '8192': Key size 8192 bits;

Type: string

Supported Values: 1024, 2048, 4096, 8192

Default: 2048

log-level

Description level for logging output of scepclient commands(default 1 and detailed 4)

Type: number

Range: 1-4

Default: 1

max-polltime

Description Maximum time in seconds to poll when SCEP response is PENDING (default 180)

Type: number

Range: 15-432000

Default: 180

method

Description 'GET': GET request; 'POST': POST request;

Type: string

Supported Values: GET, POST

Default: GET

minute

Description Periodic interval in minutes

Type: number

Range: 2-255

Mutual Exclusion: minute and renew-every-type are mutually exclusive

name

Description Specify Certificate name to be enrolled

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify the password used to enroll the device's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

renew-before

Description Specify interval before certificate expiry to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-before and renew-every are mutually exclusive

renew-before-type

Description 'hour': Number of hours before cert expiry; 'day': Number of days before cert expiry; 'week': Number of weeks before cert expiry; 'month': Number of months before cert expiry(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

renew-before-value

Description Value of renewal period

Type: number

Range: 1-255

renew-every

Description Specify periodic interval in which to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-every and renew-before are mutually exclusive

renew-every-type

Description 'hour': Periodic interval in hours; 'day': Periodic interval in days; 'week': Periodic interval in weeks; 'month': Periodic interval in months(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

Mutual Exclusion: renew-every-type and minute are mutually exclusive

renew-every-value

Description Value of renewal period

Type: number

Range: 1-255

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

start-date

Description Start date of self-signed certificate in YYMMDDHHMMSS format specified in UTC time

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

subject-alternate-name

Description: subject-alternate-name is a **JSON Block**. Please see below for *subject-alternate-name*

Type: Object

url

Description Specify the Enrollment Agent's absolute URL (Format: http://host/path)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

subject-alternate-name

Specification	Value
Type	*object*

san-type

Description 'email': Enter e-mail address of the subject; 'dns': Enter hostname of the subject; 'ip': Enter IP address of the subject;

Type: string

Supported Values: email, dns, ip

san-value

Description Value of subject-alternate-name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

```

radius-server attributes

default-privilege-read-write

Description Specify the RADIUS default privilege

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

host

Description: host is a **JSON Block**. Please see below for *host*

Type: Object

Reference Object: */axapi/v3/radius-server/host*

message-authenticator-verify-enable

Description Enable the verification of Message-Authenticator attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host

Specification	Value
Type	*object*

ipv4-list

Type: List

Reference Object: */axapi/v3/radius-server/host/ipv4/{ipv4-addr}*

name-list

Type: List

Reference Object: */axapi/v3/radius-server/host/name/{hostname}*

host_ipv4-list

Specification	Value
Type	*list*
Block object keys	

ipv4-addr

Description IPV4 address of RADIUS server

Type: string

Format: ipv4-address

secret

Description: secret is a **JSON Block**. Please see below for *host_ipv4-list_secret*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_ipv4-list_secret

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *host_ipv4-list_secret_port-cfg*

Type: Object

secret-value

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

host_ipv4-list_secret_port-cfg

Specification	Value
Type	*object*

acct-port

Description Specify the RADIUS server's accounting port (default 1813)

Type: number

Range: 1-65535

auth-port

Description Specify the RADIUS server's authentication port (default 1812)

Type: number

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-30

Default: 3

host_name-list

Specification	Value
Type	*list*
Block object keys	

hostname

Description Hostname of RADIUS server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

secret

Description: secret is a **JSON Block**. Please see below for *host_name-list_secret*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_name-list_secret

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *host_name-list_secret_port-cfg*

Type: Object

secret-value

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

host_name-list_secret_port-cfg

Specification	Value
Type	*object*

acct-port

Description Specify the RADIUS server's accounting port (default 1813)

Type: number

Range: 1-65535

auth-port

Description Specify the RADIUS server's authentication port (default 1812)

Type: number

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-30

Default: 3

host_ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-addr

Description IPV6 address of RADIUS server

Type: string

Format: ipv6-address

secret

Description: secret is a **JSON Block**. Please see below for *host_ipv6-list_secret*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_ipv6-list_secret

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *host_ipv6-list_secret_port-cfg*

Type: Object

secret-value

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

host_ipv6-list_secret_port-cfg

Specification	Value
Type	*object*

acct-port

Description Specify the RADIUS server's accounting port (default 1813)

Type: number

Range: 1-65535

auth-port

Description Specify the RADIUS server's authentication port (default 1812)

Type: number

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-30

Default: 3

2.100.2 radius-server host

Specify the RADIUS server's hostname or IP address

host Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	host
Element URI	/axapi/v3/radius-server/host
Element Attributes	host_attributes
Partition Visibility	shared

secret_port-cfg

Specification	Value
Type	*object*

acct-port

Description Specify the RADIUS server's accounting port (default 1813)

Type: number

Range: 1-65535

auth-port

Description Specify the RADIUS server's authentication port (default 1812)

Type: number

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-30

Default: 3

2.100.4 radius-server host ipv6

Specify the hostname of RADIUS server

ipv6 Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*ipv6-addr*
Collection Name	*ipv6-list*
Collection URI	/axapi/v3/radius-server/host/ipv6
Element Name	ipv6
Element URI	/axapi/v3/radius-server/host/ipv6/{ipv6-addr}
Element Attributes	ipv6_attributes
Partition Visibility	shared
Schema	`ipv6 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/radius-server/host/ipv6

ipv6 attributes

```
POST /axapi/v3/radius-server/host/ipv6/
Payload:
{
    "ipv6": {
        "ipv6-addr": "2003::1",
        "secret": {
            "secret-value": "a",
            "port-cfg": {
                "auth-port": 1
            }
        }
    }
}
```

Create List

POST

/axapi/v3/radius-server/host/ipv6

}
```

ipv6-list

ipv6-list is **JSON List** of *ipv6 attributes*

ipv6-list : [

{ *ipv6 attributes* },

{ *ipv6 attributes* },

...

]

ipv6 attributes

ipv6-addr

Description IPV6 address of RADIUS server

Type: string

Format: ipv6-address

secret

Description: secret is a **JSON Block**. Please see below for *secret*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

secret

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *secret_port-cfg*

Type: Object

secret-value

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

secret_port-cfg

Specification	Value
Type	*object*

acct-port

Description Specify the RADIUS server's accounting port (default 1813)

Type: number

Range: 1-65535

auth-port

Description Specify the RADIUS server's authentication port (default 1812)

Type: number

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-30

Default: 3

2.100.5 radius-server host name

Specify the hostname of RADIUS server

name Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*hostname*
Collection Name	*name-list*
Collection URI	/axapi/v3/radius-server/host/name

name attributes

hostname

Description Hostname of RADIUS server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

secret

Description: secret is a **JSON Block**. Please see below for *secret*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

secret

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *secret_port-cfg*

Type: Object

secret-value

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

secret_port-cfg

Specification	Value
Type	*object*

acct-port

Description Specify the RADIUS server's accounting port (default 1813)

Type: number

Range: 1-65535

auth-port

Description Specify the RADIUS server's authentication port (default 1812)

Type: number

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-30

Default: 3

2.101 rate-limit

Objects:

2.101.1 rate-limit

Rate limit configuration

rate-limit Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	rate-limit

rate-limit attributes

maxPktNum

Description Max number of packets

Type: number

Range: 1000-100000

Default: 10000

rl-type

Description 'ctrl': The max number of packets that can be sent to kernel in 100ms;

Type: string

Supported Values: ctrl

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.102 rba

Objects:

2.102.1 rba

Role Based Access configuration

rba Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	rba
Element URI	/axapi/v3/rba
Element Attributes	rba_attributes
Partition Visibility	shared
Schema	`rba schema`

Operations Allowed:

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

group-list

Specification	Value
Type	*list*
Block object keys	

name

Description Name of a RBA group

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

partition-list

Type: List

Reference Object: */axapi/v3/rba/group/{name}/partition/{partition-name}*

user-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

group-list_partition-list

Specification	Value
Type	*list*
Block object keys	

partition-name

Description partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

role-list

Type: List

rule-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

group-list_partition-list_role-list

Specification	Value
Type	*list*
Block object keys	

role

Description Role in a given partition

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/rba/role*

group-list_partition-list_rule-list

Specification	Value
Type	*list*
Block object keys	

object

Description Lineage of object class for permitted operation

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

operation

Description 'no-access': no-access; 'read': read; 'oper': oper; 'write': write;

Type: string

Supported Values: no-access, read, oper, write

group-list_user-list

Specification	Value
Type	*list*
Block object keys	

user

Description Users in the group

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

user-list

Specification	Value
Type	*list*
Block object keys	

name

Description Name of a user account

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

partition-list

Type: List

Reference Object: */axapi/v3/rba/user/{name}/partition/{partition-name}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

user-list_partition-list

Specification	Value
Type	*list*
Block object keys	

partition-name

Description partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

role-list

Type: List

rule-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

user-list_partition-list_role-list

Specification	Value
Type	*list*
Block object keys	

role

Description Role in a given partition

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/rba/role*

user-list_partition-list_rule-list

Specification	Value
Type	*list*
Block object keys	

object

Description Lineage of object class for permitted operation

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

operation

Description ‘no-access’: no-access; ‘read’: read; ‘oper’: oper; ‘write’: write;

Type: string

Supported Values: no-access, read, oper, write

role-list

Specification	Value
Type	*list*
Block object keys	

default-privilege

Description ‘no-access’: no-access; ‘read’: read; ‘write’: write;

Type: string

Supported Values: no-access, read, write

Default: no-access

name

Description Name for the RBA role

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

partition-only

Description Partition RBA Role

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rule-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

role attributes

default-privilege

Description 'no-access': no-access; 'read': read; 'write': write;

Type: string

Supported Values: no-access, read, write

Default: no-access

name

Description Name for the RBA role

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

partition-only

Description Partition RBA Role

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rule-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rule-list

Specification	Value
Type	*list*
Block object keys	

object

Description Lineage of object class for permitted operation

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

operation

Description 'no-access': no-access; 'read': read; 'oper': oper; 'write': write;

Type: string

Supported Values: no-access, read, oper, write

2.102.5 rba user

RBA configuration for a user

user Specification

Parameter	Value

Type: List

vlan-cfg

Specification	Value
Type	*list*
Block object keys	

timeout

Description

Type: number

Range: 2-600

vlan

Description VLAN tracking (VLAN id)

Type: number

Range: 2-4094

weight

Description The failover event weight

Type: number

Range: 1-255

route

Specification	Value
Type	*object*

ip-destination-cfg

Type: List

ipv6-destination-cfg

Type: List

route_ipv6-destination-cfg

Specification	Value
Type	*list*
Block object keys	

distance

Description Route's administrative distance (default: match any)

Type: number

Range: 1-255

gatewayv6

Description Match the route's gateway (next-hop) (default: match any)

Type: string

Format: ipv6-address

ipv6-destination

Description IPv6 Destination Prefix

Type: string

Format: ipv6-address-plen

protocol

Description 'any': Match any routing protocol (default); 'static': Match only static routes (added by user); 'dynamic': Match routes added by dynamic routing protocols (e.g. OSPF);

Type: string

Supported Values: any, static, dynamic

Default: any

weight

Description The amount the priority will decrease if the route is missing (The amount the priority will decrease if the route is not present)

Type: number

Range: 1-255

route_ip-destination-cfg

Specification	Value
Type	*list*
Block object keys	

distance

Description Route's administrative distance(default: match any)

Type: number

Range: 1-255

Description: origin is a **JSON Block**. Please see below for *set_origin*

Type: Object

originator-id

Description: originator-id is a **JSON Block**. Please see below for *set_originator-id*

Type: Object

tag

Description: tag is a **JSON Block**. Please see below for *set_tag*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description: weight is a **JSON Block**. Please see below for *set_weight*

Type: Object

set_extcommunity

Specification	Value
Type	*object*

rt

Description: rt is a **JSON Block**. Please see below for *set_extcommunity_rt*

Type: Object

soo

Description: soo is a **JSON Block**. Please see below for *set_extcommunity_soo*

Type: Object

set_extcommunity_rt

Specification	Value
Type	*object*

value

Description VPN extended community

Type: string

Format: string-rlx

set_extcommunity_soo

Specification	Value
Type	*object*

value

Description VPN extended community

Type: string

Format: string-rlx

set_origin

Specification	Value
Type	*object*

egp

Description remote EGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: egp, igp, and incomplete are mutually exclusive

igp

Description local IGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: igp, egp, and incomplete are mutually exclusive

incomplete

Description unknown heritage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: incomplete, egp, and igp are mutually exclusive

set_aggregator

Specification	Value
Type	*object*

aggregator-as

Description: aggregator-as is a **JSON Block**. Please see below for *set_aggregator_aggregator-as*

Type: Object

set_aggregator_aggregator-as

Specification	Value
Type	*object*

asn

Description AS number

Type: number

Range: 1-4294967295

ip

Description IP address of aggregator

Type: string

Format: ipv4-address

set_weight

Specification	Value
Type	*object*

weight-val

Description Weight value

Type: number

Range: 0-4294967295

set_level

Specification	Value
Type	*object*

value

Description 'level-1': Export into a level-1 area; 'level-1-2': Export into level-1 and level-2; 'level-2': Export into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

set_ip

Specification	Value
Type	*object*

next-hop

Description: next-hop is a **JSON Block**. Please see below for *set_ip_next-hop*

Type: Object

set_ip_next-hop

Specification	Value
Type	*object*

address

Description IP address of next hop

Type: string

Format: ipv4-address

set_metric

Specification	Value
Type	*object*

value

Description Metric Value (from -4294967295 to 4294967295)

Type: string

Format: string-rlx

Maximum Length: 11 characters

Maximum Length: 1 characters

set_as-path

Specification	Value
Type	*object*

num

Description AS number

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

num2

Description AS number

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

prepend

Description Prepend to the as-path (AS number)

Type: string

Format: string-rlx

set_comm-list

Specification	Value
Type	*object*

delete

Description Delete matching communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Community-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name, v-std, and v-exp are mutually exclusive

name-delete

Description Delete matching communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v-exp

Description Community-list number (expanded)

Type: number

Range: 100-199

Mutual Exclusion: v-exp,v-std, name, and l-name are mutually exclusive

v-exp-delete

Description Delete matching communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v-std

Description Community-list number (standard)

Type: number

Range: 1-99

Mutual Exclusion: v-std,v-exp, name, l-v-exp, and l-name are mutually exclusive

set_local-preference

Specification	Value
Type	*object*

val

Description Preference value

Type: number

Range: 0-4294967295

set_ddos

Specification	Value
Type	*object*

class-list-cid

Description Class-List Cid

Type: number

Range: 1-32

class-list-name

Description Class-List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

zone

Description Zone Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

set_tag

Specification	Value
Type	*object*

value

Description Tag value

Type: number

Range: 0-4294967295

set_ipv6

Specification	Value
Type	*object*

next-hop-1

Description: next-hop-1 is a **JSON Block**. Please see below for *set_ipv6_next-hop-1*

Type: Object

set_ipv6_next-hop-1

Specification	Value
Type	*object*

address

Description global address of next hop

Type: string

Format: ipv6-address

local

Description: local is a **JSON Block**. Please see below for *set_ipv6_next-hop-1_local*

Type: Object

set_ipv6_next-hop-1_local

Specification	Value
Type	*object*

address

Description IPv6 address of next hop

Type: string

Format: ipv6-address

set_large-comm-list

Specification	Value
Type	*object*

l-name

Description Large Community-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: l-name, v-std, and v-exp are mutually exclusive

l-v-exp

Description Large Community-list number (expanded)

Type: number

Range: 100-199

Mutual Exclusion: l-v-exp and v-std are mutually exclusive

l-v-exp-delete

Description Delete matching large communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l-v-std

Description Large Community-list number (standard)

Type: number

Range: 1-99

l-v-std-delete

Description Delete matching large communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

large-name-delete

Description Delete matching large communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

set_dampening-cfg

Specification	Value
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half-time

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-penalty

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

set_originator-id

Specification	Value
Type	*object*

originator-ip

Description IP address of originator

Type: string

Format: ipv4-address

set_metric-type

Specification	Value
Type	*object*

value

Description 'external': IS-IS external metric type; 'internal': IS-IS internal metric type; 'type-1': OSPF external type 1 metric; 'type-2': OSPF external type 2 metric;

Type: string

Supported Values: external, internal, type-1, type-2

match

Specification	Value
Type	*object*

as-path

Description: as-path is a **JSON Block**. Please see below for *match_as-path*

Type: Object

community

Description: community is a **JSON Block**. Please see below for *match_community*

Type: Object

extcommunity

Description: extcommunity is a **JSON Block**. Please see below for *match_extcommunity*

Type: Object

group

Description: group is a **JSON Block**. Please see below for *match_group*

Type: Object

interface

Description: interface is a **JSON Block**. Please see below for *match_interface*

Type: Object

ip

Description: ip is a **JSON Block**. Please see below for *match_ip*

Type: Object

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *match_ipv6*

Type: Object

large-community

Description: large-community is a **JSON Block**. Please see below for *match_large-community*

Type: Object

local-preference

Description: local-preference is a **JSON Block**. Please see below for *match_local-preference*

Type: Object

metric

Description: metric is a **JSON Block**. Please see below for *match_metric*

Type: Object

origin

Description: origin is a **JSON Block**. Please see below for *match_origin*

Type: Object

route-type

Description: route-type is a **JSON Block**. Please see below for *match_route-type*

Type: Object

scaleout

Description: scaleout is a **JSON Block**. Please see below for *match_scaleout*

Type: Object

tag

Description: tag is a **JSON Block**. Please see below for *match_tag*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

match_extcommunity

Specification	Value
Type	*object*

extcommunity-l-name

Description: extcommunity-l-name is a **JSON Block**. Please see below for *match_extcommunity_extcommunity-l-name*

Type: Object

match_extcommunity_extcommunity-l-name

Specification	Value
Type	*object*

exact-match

Description Do exact matching of ecommunities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description One or more Extended Community Lists (numbered or named)

Type: string

Format: string-rlx

match_origin

Specification	Value
Type	*object*

egp

Description remote EGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: egp, igp, and incomplete are mutually exclusive

igp

Description local IGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: igp, egp, and incomplete are mutually exclusive

incomplete

Description unknown heritage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: incomplete, egp, and igp are mutually exclusive

match_group

Specification	Value
Type	*object*

group-id

Description HA or VRRP-A group id

Type: number

Range: 0-31

ha-state

Description 'active': HA or VRRP-A in Active State; 'standby': HA or VRRP-A in Standby State;

Type: string

Supported Values: active, standby

match_ip

Specification	Value
Type	*object*

address

Description: address is a **JSON Block**. Please see below for *match_ip_address*

Type: Object

next-hop

Description: next-hop is a **JSON Block**. Please see below for *match_ip_next-hop*

Type: Object

peer

Description: peer is a **JSON Block**. Please see below for *match_ip_peer*

Type: Object

rib

Description: rib is a **JSON Block**. Please see below for *match_ip_rib*

Type: Object

match_ip_peer

Specification	Value
Type	*object*

acl1

Description IP access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1, acl2, and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2, acl1, and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name, acl1, and acl2 are mutually exclusive

match_ip_next-hop

Specification	Value
Type	*object*

acl1

Description IP access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1, acl2, and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2, acl1, and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name, acl1, and acl2 are mutually exclusive

prefix-list-1

Description: prefix-list-1 is a **JSON Block**. Please see below for *match_ip_next-hop_prefix-list-1*

Type: Object

match_ip_next-hop_prefix-list-1

Specification	Value
Type	*object*

name

Description IP prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

match_ip_rib

Specification	Value
Type	*object*

exact

Description Exact match a prefix (Prefix IPv4 address)

Type: string

Format: ipv4-cidr

Mutual Exclusion: exact, reachable, and unreachable are mutually exclusive

reachable

Description IP address is reachable

Type: string

Format: ipv4-address

Mutual Exclusion: reachable, exact, and unreachable are mutually exclusive

unreachable

Description IP address is unreachable

Type: string

Format: ipv4-address

Mutual Exclusion: unreachable, exact, and reachable are mutually exclusive

match_ip_address

Specification	Value
Type	*object*

acl1

Description IP access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1, acl2, and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2, acl1, and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name, acl1, and acl2 are mutually exclusive

prefix-list

Description: prefix-list is a **JSON Block**. Please see below for *match_ip_address_prefix-list*

Type: Object

match_ip_address_prefix-list

Specification	Value
Type	*object*

name

Description IP prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

match_metric

Specification	Value
Type	*object*

value

Description Metric value

Type: number

Range: 0-4294967295

match_ipv6

Specification	Value
Type	*object*

address-1

Description: address-1 is a **JSON Block**. Please see below for *match_ipv6_address-1*

Type: Object

next-hop-1

Description: next-hop-1 is a **JSON Block**. Please see below for *match_ipv6_next-hop-1*

Type: Object

peer-1

Description: peer-1 is a **JSON Block**. Please see below for *match_ipv6_peer-1*

Type: Object

rib

Description: rib is a **JSON Block**. Please see below for *match_ipv6_rib*

Type: Object

match_ipv6_next-hop-1

Specification	Value
Type	*object*

next-hop-acl-name

Description IPv6 access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: next-hop-acl-name and v6-addr are mutually exclusive

prefix-list-name

Description IPv6 prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

v6-addr

Description IPv6 address of next hop

Type: string

Format: ipv6-address

Mutual Exclusion: v6-addr and next-hop-acl-name are mutually exclusive

match_ipv6_rib

Specification	Value
Type	*object*

exact

Description Exact match a prefix (Prefix IPv6 address)

Type: string

Format: ipv6-address-plen

Mutual Exclusion: exact, reachable, and unreachable are mutually exclusive

reachable

Description IPv6 address is reachable

Type: string

Format: ipv6-address

Mutual Exclusion: reachable, exact, and unreachable are mutually exclusive

unreachable

Description IPv6 address is unreachable

Type: string

Format: ipv6-address

Mutual Exclusion: unreachable, exact, and reachable are mutually exclusive

match_ipv6_peer-1

Specification	Value
Type	*object*

acl1

Description IPv6 access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1, acl2, and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2, acl1, and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name, acl1, and acl2 are mutually exclusive

match_ipv6_address-1

Specification	Value
Type	*object*

name

Description IPv6 access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-2

Description: prefix-list-2 is a **JSON Block**. Please see below for *match_ipv6_address-1_prefix-list-2*

Type: Object

match_ipv6_address-1_prefix-list-2

Specification	Value
Type	*object*

name

Description IPv6 prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

match_large-community

Specification	Value
Type	*object*

l-name-cfg

Description: l-name-cfg is a **JSON Block**. Please see below for *match_large-community_l-name-cfg*

Type: Object

match_large-community_l-name-cfg

Specification	Value
Type	*object*

exact-match

Description Do exact matching of large-communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description One or more Large Community Lists (numbered or named)

Type: string

Format: string-rlx

match_local-preference

Specification	Value
Type	*object*

val

Description Preference value

Type: number

Range: 0-4294967295

match_route-type

Specification	Value
Type	*object*

external

Description: external is a **JSON Block**. Please see below for *match_route-type_external*

Type: Object

match_route-type_external

Specification	Value
Type	*object*

value

Description 'type-1': Match OSPF External Type 1 metrics; 'type-2': Match OSPF External Type 2 metrics;

Type: string

Supported Values: type-1, type-2

match_tag

Specification	Value
Type	*object*

value

Description Tag value

Type: number

Range: 0-4294967295

match_community

Specification	Value
Type	*object*

name-cfg

Description: name-cfg is a **JSON Block**. Please see below for *match_community_name-cfg*

Type: Object

match_community_name-cfg

Specification	Value
Type	*object*

exact-match

Description Do exact matching of communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description One or more Community Lists (numbered or named)

Type: string

Format: string-rlx

match_as-path

Specification	Value
Type	*object*

name

Description AS path access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

match_interface

Specification	Value
Type	*object*

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,loopback, trunk, ve, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Range: 0-10

Mutual Exclusion: loopback,ethernet, trunk, ve, and tunnel are mutually exclusive

trunk

Description Trunk Interface (Trunk interface number)

Type: number

Range: 1-4096

Mutual Exclusion: trunk,ethernet, loopback, ve, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,ethernet, loopback, trunk, and ve are mutually exclusive

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Range: 2-4094

Mutual Exclusion: ve,ethernet, loopback, trunk, and tunnel are mutually exclusive

match_scaleout

Specification	Value
Type	*object*

cluster-id

Description Scaleout Cluster-id

Type: number

Range: 1-64

ipv4

Description 'up': Scaleout is up and running; 'down': Scaleout is down or disabled;

Type: string

Supported Values: up, down

Mutual Exclusion: ipv4, operational-state, and ipv6 are mutually exclusive

ipv6

Description 'up': Scaleout is up and running; 'down': Scaleout is down or disabled;

Type: string

Supported Values: up, down

Mutual Exclusion: ipv6, operational-state, and ipv4 are mutually exclusive

operational-state

Description 'up': Scaleout is up and running; 'down': Scaleout is down or disabled;

Type: string

Supported Values: up, down

Mutual Exclusion: operational-state, ipv4, and ipv6 are mutually exclusive

2.106.2 route-map match

Match values from routing table

match Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	match
Element URI	/axapi/v3/route-map/{tag}+{action}+{sequence}/match
Element Attributes	match_attributes
Partition Visibility	shared
Schema	`match schema`

Operations Allowed:

Create Object

POST

/axapi/v3/route-map/{tag}+{action}+{sequence}/match

match attributes

```
POST /axapi/v3/route-map/a+deny+1/match
Payload:
{
    "match": {
        "as-path": {
            "name": "a"
        }
    }
}
```

Get Object

GET

/axapi/v3/route-map/{tag}+{action}+{sequence}/match

match attributes

```
GET /axapi/v3/route-map/a+deny+1/match
Reponse:
{
    "match": {
        "as-path": {
            "name": "a"
        },
        "origin": {
            "egp": 0
        },
        "uuid": "23d617aa-09ad-11f0-837c-5323f81e20fe",
```

(continues on next page)

(continued from previous page)

```
        "a10-url": "/axapi/v3/route-map/a+deny+1/match"
    }
}
```

Modify Object

POST

/axapi/v3/route-map/{tag}+{action}+{sequence}/match

match attributes

Replace Object

PUT

/axapi/v3/route-map/{tag}+{action}+{sequence}/match

match attributes

```
PUT /axapi/v3/route-map/a+deny+1/match
Payload:
{
    "match": {
        "as-path": {
            "name": "abcd"
        }
    }
}
```

Delete Object

DELETE

/axapi/v3/route-map/{tag}+{action}+{sequence}/match

match attributes

```
DELETE /axapi/v3/route-map/a+deny+1/match
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

match attributes

as-path

Description: as-path is a **JSON Block**. Please see below for *as-path*

Type: Object

community

Description: community is a **JSON Block**. Please see below for *community*

Type: Object

extcommunity

Description: extcommunity is a **JSON Block**. Please see below for *extcommunity*

Type: Object

group

Description: group is a **JSON Block**. Please see below for *group*

Type: Object

interface

Description: interface is a **JSON Block**. Please see below for *interface*

Type: Object

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

large-community

Description: large-community is a **JSON Block**. Please see below for *large-community*

Type: Object

local-preference

Description: local-preference is a **JSON Block**. Please see below for *local-preference*

Type: Object

metric

Description: metric is a **JSON Block**. Please see below for *metric*

Type: Object

origin

Description: origin is a **JSON Block**. Please see below for *origin*

Type: Object

route-type

Description: route-type is a **JSON Block**. Please see below for *route-type*

Type: Object

scaleout

Description: scaleout is a **JSON Block**. Please see below for *scaleout*

Type: Object

tag

Description: tag is a **JSON Block**. Please see below for *tag*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

extcommunity

Specification	Value
Type	*object*

extcommunity-l-name

Description: extcommunity-l-name is a **JSON Block**. Please see below for *extcommunity_extcommunity-l-name*

Type: Object

extcommunity_extcommunity-l-name

Specification	Value
Type	*object*

exact-match

Description Do exact matching of ecommunities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description One or more Extended Community Lists (numbered or named)

Type: string

Format: string-rlx

origin

Specification	Value
Type	*object*

egp

Description remote EGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: egp, igp, and incomplete are mutually exclusive

igp

Description local IGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: igp, egp, and incomplete are mutually exclusive

incomplete

Description unknown heritage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: incomplete, egp, and igp are mutually exclusive

group

Specification	Value
Type	*object*

group-id

Description HA or VRRP-A group id

Type: number

Range: 0-31

ha-state

Description 'active': HA or VRRP-A in Active State; 'standby': HA or VRRP-A in Standby State;

Type: string

Supported Values: active, standby

ip

Specification	Value
Type	*object*

address

Description: address is a **JSON Block**. Please see below for *ip_address*

Type: Object

next-hop

Description: next-hop is a **JSON Block**. Please see below for *ip_next-hop*

Type: Object

peer

Description: peer is a **JSON Block**. Please see below for *ip_peer*

Type: Object

rib

Description: rib is a **JSON Block**. Please see below for *ip_rib*

Type: Object

ip_peer

Specification	Value
Type	*object*

acl1

Description IP access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1, acl2, and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2, acl1, and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name, acl1, and acl2 are mutually exclusive

ip_next-hop

Specification	Value
Type	*object*

acl1

Description IP access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1, acl2, and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2, acl1, and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name, acl1, and acl2 are mutually exclusive

prefix-list-1

Description: prefix-list-1 is a **JSON Block**. Please see below for *ip_next-hop_prefix-list-1*

Type: Object

ip_next-hop_prefix-list-1

Specification	Value
Type	*object*

name

Description IP prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip_rib

Specification	Value
Type	*object*

exact

Description Exact match a prefix (Prefix IPv4 address)

Type: string

Format: ipv4-cidr

Mutual Exclusion: exact, reachable, and unreachable are mutually exclusive

reachable

Description IP address is reachable

Type: string

Format: ipv4-address

Mutual Exclusion: reachable, exact, and unreachable are mutually exclusive

unreachable

Description IP address is unreachable

Type: string

Format: ipv4-address

Mutual Exclusion: unreachable, exact, and reachable are mutually exclusive

ip_address

Specification	Value
Type	*object*

acl1

Description IP access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1, acl2, and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2, acl1, and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name, acl1, and acl2 are mutually exclusive

prefix-list

Description: prefix-list is a **JSON Block**. Please see below for *ip_address_prefix-list*

Type: Object

ip_address_prefix-list

Specification	Value
Type	*object*

name

Description IP prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

metric

Specification	Value
Type	*object*

value

Description Metric value

Type: number

Range: 0-4294967295

ipv6

Specification	Value
Type	*object*

address-1

Description: address-1 is a **JSON Block**. Please see below for *ipv6_address-1*

Type: Object

next-hop-1

Description: next-hop-1 is a **JSON Block**. Please see below for *ipv6_next-hop-1*

Type: Object

peer-1

Description: peer-1 is a **JSON Block**. Please see below for *ipv6_peer-1*

Type: Object

rib

Description: rib is a **JSON Block**. Please see below for *ipv6_rib*

Type: Object

ipv6_next-hop-1

Specification	Value
Type	*object*

next-hop-acl-name

Description IPv6 access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: next-hop-acl-name and v6-addr are mutually exclusive

prefix-list-name

Description IPv6 prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

v6-addr

Description IPv6 address of next hop

Type: string

Format: ipv6-address

Mutual Exclusion: v6-addr and next-hop-acl-name are mutually exclusive

ipv6_rib

Specification	Value
Type	*object*

exact

Description Exact match a prefix (Prefix IPv6 address)

Type: string

Format: ipv6-address-plen

Mutual Exclusion: exact, reachable, and unreachable are mutually exclusive

reachable

Description IPv6 address is reachable

Type: string

Format: ipv6-address

Mutual Exclusion: reachable, exact, and unreachable are mutually exclusive

unreachable

Description IPv6 address is unreachable

Type: string

Format: ipv6-address

Mutual Exclusion: unreachable, exact, and reachable are mutually exclusive

ipv6_peer-1

Specification	Value
Type	*object*

acl1

Description IPv6 access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1, acl2, and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2, acl1, and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name, acl1, and acl2 are mutually exclusive

ipv6_address-1

Specification	Value
Type	*object*

name

Description IPv6 access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-2

Description: prefix-list-2 is a **JSON Block**. Please see below for *ipv6_address-1_prefix-list-2*

Type: Object

ipv6_address-1_prefix-list-2

Specification	Value
Type	*object*

name

Description IPv6 prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

large-community

Specification	Value
Type	*object*

l-name-cfg

Description: l-name-cfg is a **JSON Block**. Please see below for *large-community_l-name-cfg*

Type: Object

large-community_l-name-cfg

Specification	Value
Type	*object*

exact-match

Description Do exact matching of large-communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description One or more Large Community Lists (numbered or named)

Type: string

Format: string-rlx

local-preference

Specification	Value
Type	*object*

val

Description Preference value

Type: number

Range: 0-4294967295

route-type

Specification	Value
Type	*object*

external

Description: external is a **JSON Block**. Please see below for *route-type_external*

Type: Object

route-type_external

Specification	Value
Type	*object*

value

Description 'type-1': Match OSPF External Type 1 metrics; 'type-2': Match OSPF External Type 2 metrics;

Type: string

Supported Values: type-1, type-2

tag

Specification	Value
Type	*object*

value

Description Tag value

Type: number

Range: 0-4294967295

community

Specification	Value
Type	*object*

name-cfg

Description: name-cfg is a **JSON Block**. Please see below for *community_name-cfg*

Type: Object

community_name-cfg

Specification	Value
Type	*object*

exact-match

Description Do exact matching of communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description One or more Community Lists (numbered or named)

Type: string

Format: string-rlx

as-path

Specification	Value
Type	*object*

name

Description AS path access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

interface

Specification	Value
Type	*object*

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,loopback, trunk, ve, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Range: 0-10

Mutual Exclusion: loopback,ethernet, trunk, ve, and tunnel are mutually exclusive

trunk

Description Trunk Interface (Trunk interface number)

Type: number

Range: 1-4096

Mutual Exclusion: trunk,ethernet, loopback, ve, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,ethernet, loopback, trunk, and ve are mutually exclusive

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Range: 2-4094

Mutual Exclusion: ve,ethernet, loopback, trunk, and tunnel are mutually exclusive

scaleout

Specification	Value
Type	*object*

cluster-id

Description Scaleout Cluster-id

Type: number

Range: 1-64

ipv4

Description 'up': Scaleout is up and running; 'down': Scaleout is down or disabled;

Type: string

Supported Values: up, down

Mutual Exclusion: ipv4, operational-state, and ipv6 are mutually exclusive

ipv6

Description 'up': Scaleout is up and running; 'down': Scaleout is down or disabled;

Type: string

Supported Values: up, down

Mutual Exclusion: ipv6, operational-state, and ipv4 are mutually exclusive

operational-state

Description 'up': Scaleout is up and running; 'down': Scaleout is down or disabled;

Type: string

Supported Values: up, down

Mutual Exclusion: operational-state, ipv4, and ipv6 are mutually exclusive

2.106.3 route-map set

Set values in destination routing protocol

set Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	set
Element URI	/axapi/v3/route-map/{tag}+{action}+{sequence}/set
Element Attributes	set_attributes
Partition Visibility	shared
Schema	`set schema`

Operations Allowed:

Create Object

POST

/axapi/v3/route-map/{tag}+{action}+{sequence}/set

set attributes

```
POST /axapi/v3/route-map/a+permit+1/set
Payload:
{
    "set": {
        "ip": {
            "next-hop": {
                "address": "3.3.3.3"
            }
        }
    }
}
```

Get Object

GET

/axapi/v3/route-map/{tag}+{action}+{sequence}/set

set attributes

```
GET /axapi/v3/route-map/a+permit+1/set
Reponse:
{
    "set": {
        "ip": {
            "next-hop": {
                "address": "3.3.3.3"
            }
        },
```

(continues on next page)

(continued from previous page)

```
        "atomic-aggregate": 0,
        "dampening-cfg": {
            "dampening": 0
        },
        "origin": {
            "egp": 0
        },
        "uuid": "6c3ff500-09ae-11f0-837c-5323f81e20fe",
        "a10-url": "/axapi/v3/route-map/a+permit+1/set"
    }
}
```

Modify Object

POST

/axapi/v3/route-map/{tag}+{action}+{sequence}/set

set attributes

Replace Object

PUT

/axapi/v3/route-map/{tag}+{action}+{sequence}/set

set attributes

```
PUT /axapi/v3/route-map/a+permit+1/set
Payload:
{
    "set": {
        "ip": {
            "next-hop": {
                "address": "3.3.3.4"
            }
        }
    }
}
```

Delete Object

DELETE

/axapi/v3/route-map/{tag}+{action}+{sequence}/set

set attributes

```
DELETE /axapi/v3/route-map/a+permit+1/set
Reponse:
{
    "response": {

```
    }
}
```

set attributes

aggregator

Description: aggregator is a **JSON Block**. Please see below for *aggregator*

Type: Object

as-path

Description: as-path is a **JSON Block**. Please see below for *as-path*

Type: Object

atomic-aggregate

Description BGP atomic aggregate attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-list

Description: comm-list is a **JSON Block**. Please see below for *comm-list*

Type: Object

community

Description BGP community attribute

Type: string

Format: string-rlx

dampening-cfg

Description: dampening-cfg is a **JSON Block**. Please see below for *dampening-cfg*

Type: Object

ddos

Description: ddos is a **JSON Block**. Please see below for *ddos*

Type: Object

extcommunity

Description: extcommunity is a **JSON Block**. Please see below for *extcommunity*

Type: Object

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

large-comm-list

Description: large-comm-list is a **JSON Block**. Please see below for *large-comm-list*

Type: Object

large-community

Description BGP large community attribute

Type: string

Format: string-rlx

level

Description: level is a **JSON Block**. Please see below for *level*

Type: Object

local-preference

Description: local-preference is a **JSON Block**. Please see below for *local-preference*

Type: Object

metric

Description: metric is a **JSON Block**. Please see below for *metric*

Type: Object

metric-type

Description: metric-type is a **JSON Block**. Please see below for *metric-type*

Type: Object

origin

Description: origin is a **JSON Block**. Please see below for *origin*

Type: Object

originator-id

Description: originator-id is a **JSON Block**. Please see below for *originator-id*

Type: Object

tag

Description: tag is a **JSON Block**. Please see below for *tag*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description: weight is a **JSON Block**. Please see below for *weight*

Type: Object

extcommunity

Specification	Value
Type	*object*

rt

Description: rt is a **JSON Block**. Please see below for *extcommunity_rt*

Type: Object

soo

Description: soo is a **JSON Block**. Please see below for *extcommunity_soo*

Type: Object

extcommunity_rt

Specification	Value
Type	*object*

value

Description VPN extended community

Type: string

Format: string-rlx

extcommunity_soo

Specification	Value
Type	*object*

value

Description VPN extended community

Type: string

Format: string-rlx

origin

Specification	Value
Type	*object*

egp

Description remote EGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: egp, igp, and incomplete are mutually exclusive

igp

Description local IGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: igp, egp, and incomplete are mutually exclusive

incomplete

Description unknown heritage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: incomplete, egp, and igp are mutually exclusive

aggregator

Specification	Value
Type	*object*

aggregator-as

Description: aggregator-as is a **JSON Block**. Please see below for *aggregator_aggregator-as*

Type: Object

aggregator_aggregator-as

Specification	Value
Type	*object*

asn

Description AS number

Type: number

Range: 1-4294967295

ip

Description IP address of aggregator

Type: string

Format: ipv4-address

weight

Specification	Value
Type	*object*

weight-val

Description Weight value

Type: number

Range: 0-4294967295

level

Specification	Value
Type	*object*

value

Description 'level-1': Export into a level-1 area; 'level-1-2': Export into level-1 and level-2; 'level-2': Export into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

ip

Specification	Value
Type	*object*

next-hop

Description: next-hop is a **JSON Block**. Please see below for *ip_next-hop*

Type: Object

ip_next-hop

Specification	Value
Type	*object*

address

Description IP address of next hop

Type: string

Format: ipv4-address

metric

Specification	Value
Type	*object*

value

Description Metric Value (from -4294967295 to 4294967295)

Type: string

Format: string-rlx

Maximum Length: 11 characters

Maximum Length: 1 characters

as-path

Specification	Value
Type	*object*

num

Description AS number

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

num2

Description AS number

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

prepend

Description Prepend to the as-path (AS number)

Type: string

Format: string-rlx

comm-list

Specification	Value
Type	*object*

delete

Description Delete matching communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Community-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name, v-std, and v-exp are mutually exclusive

name-delete

Description Delete matching communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v-exp

Description Community-list number (expanded)

Type: number

Range: 100-199

Mutual Exclusion: v-exp,v-std, name, and l-name are mutually exclusive

v-exp-delete

Description Delete matching communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v-std

Description Community-list number (standard)

Type: number

Range: 1-99

Mutual Exclusion: v-std,v-exp, name, l-v-exp, and l-name are mutually exclusive

local-preference

Specification	Value
Type	*object*

val

Description Preference value

Type: number

Range: 0-4294967295

ddos

Specification	Value
Type	*object*

class-list-cid

Description Class-List Cid

Type: number

Range: 1-32

class-list-name

Description Class-List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

zone

Description Zone Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

tag

Specification	Value
Type	*object*

value

Description Tag value

Type: number

Range: 0-4294967295

ipv6

Specification	Value
Type	*object*

next-hop-1

Description: next-hop-1 is a **JSON Block**. Please see below for *ipv6_next-hop-1*

Type: Object

ipv6_next-hop-1

Specification	Value
Type	*object*

address

Description global address of next hop

Type: string

Format: ipv6-address

local

Description: local is a **JSON Block**. Please see below for *ipv6_next-hop-1_local*

Type: Object

ipv6_next-hop-1_local

Specification	Value
Type	*object*

address

Description IPv6 address of next hop

Type: string

Format: ipv6-address

large-comm-list

Specification	Value
Type	*object*

l-name

Description Large Community-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: l-name, v-std, and v-exp are mutually exclusive

l-v-exp

Description Large Community-list number (expanded)

Type: number

Range: 100-199

Mutual Exclusion: l-v-exp and v-std are mutually exclusive

l-v-exp-delete

Description Delete matching large communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l-v-std

Description Large Community-list number (standard)

Type: number

Range: 1-99

l-v-std-delete

Description Delete matching large communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

large-name-delete

Description Delete matching large communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-cfg

Specification	Value
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half-time

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-penalty

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

originator-id

Specification	Value
Type	*object*

originator-ip

Description IP address of originator

Type: string

Format: ipv4-address

metric-type

Specification	Value
Type	*object*

value

Description 'external': IS-IS external metric type; 'internal': IS-IS internal metric type; 'type-1': OSPF external type 1 metric; 'type-2': OSPF external type 2 metric;

Type: string

Supported Values: external, internal, type-1, type-2

2.107 router

Objects:

2.107.1 router

Configure routing process

router Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	router
Element URI	/axapi/v3/router
Element Attributes	router_attributes
Partition Visibility	shared
Schema	`router schema`

Operations Allowed:

Get Object

GET

/axapi/v3/router

router_attributes

router attributes

bgp-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Reference Object: */axapi/v3/router/ipv6*

isis-list

Type: List

Reference Object: */axapi/v3/router/isis/{tag}*

log

Description: log is a **JSON Block**. Please see below for *log*

Specification	Value
Type	*list*
Block object keys	

area-list

Type: List

Reference Object: */axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}*

auto-cost-reference-bandwidth

Description Use reference bandwidth method to assign OSPF cost (The reference bandwidth in terms of Mbits per second)

Type: number

Range: 1-4294967

Default: 10000

bfd-all-interfaces

Description Enable BFD on all interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-information

Description: default-information is a **JSON Block**. Please see below for *ospf-list_default-information*

Type: Object

Reference Object: */axapi/v3/router/ospf/{process-id}/default-information*

default-metric

Description Set metric of redistributed routes (Default metric)

Type: number

Range: 1-16777214

Default: 20

distance

Description: distance is a **JSON Block**. Please see below for *ospf-list_distance*

Type: Object

distribute-internal-list

Type: List

distribute-lists

Type: List

extern-lsa-equivalence-check

Description external LSA equivalance check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-standby-extra-cost

Type: List

host-list

Type: List

log-adjacency-changes-cfg

Description: log-adjacency-changes-cfg is a **JSON Block**. Please see below for *ospf-list_log-adjacency-changes-cfg*

Type: Object

max-concurrent-dd

Description Maximum number allowed to process DD concurrently (Number of DD process)

Type: number

Range: 1-65535

Default: 5

maximum-area

Description Maximum number of non-backbone areas (OSPF area limit)

Type: number

Range: 1-4294967294

neighbor-list

Type: List

network-list

Type: List

ospf-1

Description: ospf-1 is a **JSON Block**. Please see below for *ospf-list_ospf-1*

overflow

Description: overflow is a **JSON Block**. Please see below for *ospf-list_overflow*

Type: Object

passive-interface

Description: passive-interface is a **JSON Block**. Please see below for *ospf-list_passive-interface*

Type: Object

process-id

Description OSPF process ID

Type: number

Range: 0-65535

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *ospf-list_redistribute*

Type: Object

Reference Object: */axapi/v3/router/ospf/{process-id}/redistribute*

rfc1583-compatible

Description Compatible with RFC 1583

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router-id

Description: router-id is a **JSON Block**. Please see below for *ospf-list_router-id*

Type: Object

summary-address-list

Type: List

timers

Description: timers is a **JSON Block**. Please see below for *ospf-list_timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-list_distribute-internal-list

Specification	Value
Type	*list*
Block object keys	

di-area-ipv4

Description OSPF area ID as a IP address format

Type: string

Format: ipv4-address

di-area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

di-cost

Description Cost of route

Type: number

Range: 1-65535

Default: 1

di-type

Description 'lw4o6': LW4O6 Prefix; 'floating-ip': Floating IP; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'static-nat': Static NAT; 'vip': Only not flagged Virtual IP (VIP); 'vip-only-flagged': Selected Virtual IP (VIP);

Type: string

Supported Values: lw4o6, floating-ip, ip-nat, ip-nat-list, static-nat, public-ip, vip, vip-only-flagged

ospf-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

option

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

ospf-id

Description OSPF process ID

Type: number

Range: 1-65535

protocol

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'lw4o6': LW4O6 Prefix; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'static-nat': Static NAT; 'isis': ISO IS-IS; 'ospf': Open Shortest Path First (OSPF); 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, lw4o6, ip-nat, ip-nat-list, static-nat, public-ip, isis, ospf, rip, static

value

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf-list_router-id

Specification	Value

value

Description OSPF router-id in IPv4 address format

Type: string

Format: ipv4-address

ospf-list_neighbor-list

Specification	Value
Type	*list*
Block object keys	

address

Description Neighbor address

Type: string

Format: ipv4-address

cost

Description OSPF cost for point-to-multipoint neighbor (Metric)

Type: number

Range: 1-65535

poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 1-65535

priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf-list_ospf-1

Specification	Value
Type	*object*

abr-type

Description: abr-type is a **JSON Block**. Please see below for *ospf-list_ospf-1_abr-type*

Type: Object

ospf-list_ospf-1_abr-type

Specification	Value
Type	*object*

option

Description 'cisco': Alternative ABR, Cisco implementation (RFC3509); 'ibm': Alternative ABR, IBM implementation (RFC3509); 'shortcut': Shortcut ABR; 'standard': Standard behavior (RFC2328);

Type: string

Supported Values: cisco, ibm, shortcut, standard

Default: cisco

ospf-list_host-list

Specification	Value
Type	*list*
Block object keys	

area-cfg

Description: area-cfg is a **JSON Block**. Please see below for *ospf-list_host-list_area-cfg*

Type: Object

host-address

Description Host address

Type: string

Format: ipv4-address

ospf-list_host-list_area-cfg

Specification	Value
Type	*object*

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

Mutual Exclusion: area-ipv4 and area-num are mutually exclusive

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

Mutual Exclusion: area-num and area-ipv4 are mutually exclusive

cost

Description Cost of host

Type: number

Range: 0-65535

Default: 0

ospf-list_log-adjacency-changes-cfg

Specification	Value
Type	*object*

state

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

ospf-list_area-list

Specification	Value
Type	*list*
Block object keys	

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *ospf-list_area-list_auth-cfg*

Type: Object

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

filter-lists

Type: List

nssa-cfg

Description: nssa-cfg is a **JSON Block**. Please see below for *ospf-list_area-list_nssa-cfg*

Type: Object

range-list

Type: List

shortcut

Description 'default': Set default shortcutting behavior; 'disable': Disable shortcutting through the area; 'enable': Enable shortcutting through the area;

Type: string

Supported Values: default, disable, enable

Default: default

stub-cfg

Description: stub-cfg is a **JSON Block**. Please see below for *ospf-list_area-list_stub-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

ospf-list_area-list_nssa-cfg

Specification	Value
Type	*object*

default-information-originate

Description Originate Type 7 default into NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

Default: 1

metric-type

Description OSPF metric type (OSPF metric type for default routes)

Type: number

Range: 1-2

Default: 2

no-redistribution

Description No redistribution into this NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-summary

Description Do not send summary LSA into NSSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nssa

Description Specify a NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

translator-role

Description 'always': Translate always; 'candidate': Candidate for translator (default); 'never': Do not translate;

Type: string

Supported Values: always, candidate, never

Default: candidate

ospf-list_area-list_filter-lists

Specification	Value
Type	*list*
Block object keys	

acl-direction

Description 'in': Filter networks sent to this area; 'out': Filter networks sent from this area;

Type: string

Supported Values: in, out

acl-name

Description Filter networks by access-list (Name of an access-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list

Description Filter networks between OSPF areas

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

plist-direction

Description 'in': Filter networks sent to this area; 'out': Filter networks sent from this area;

Type: string

Supported Values: in, out

plist-name

Description Filter networks by prefix-list (Name of an IP prefix-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf-list_area-list_virtual-link-list

Specification	Value
Type	*list*
Block object keys	

authentication-key

Description Set authentication key (Authentication key (8 chars))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

md5

Description Use MD5 algorithm (Authentication key (16 chars))

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Set message digest key (Key ID)

Type: number

Range: 1-255

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

virtual-link-auth-type

Description 'message-digest': Use message-digest authentication; 'null': Use null authentication;

Type: string

Supported Values: message-digest, null

virtual-link-authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

virtual-link-ip-addr

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

ospf-list_area-list_stub-cfg

Specification	Value
Type	*object*

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stub

Description Configure OSPF area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-list_area-list_auth-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest

Description Use message-digest authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-list_area-list_range-list

Specification	Value
Type	*list*
Block object keys	

area-range-prefix

Description Area range for IPv4 prefix

Type: string

Format: ipv4-cidr

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

Default: advertise

ospf-list_summary-address-list

Specification	Value
Type	*list*
Block object keys	

not-advertise

Description Suppress routes that match the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-address

Description Configure IP address summaries (Summary prefix)

Type: string

Format: ipv4-cidr

tag

Description Set tag (32-bit tag value)

Type: number

Range: 0-4294967295

ospf-list_passive-interface

Specification	Value
Type	*object*

eth-cfg

Type: List

lif-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

tunnel-cfg

Type: List

ve-cfg

Type: List

ospf-list_passive-interface_tunnel-cfg

Specification	Value
Type	*list*
Block object keys	

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

tunnel-address

Description Address of Interface

Type: string

Format: ipv4-address

ospf-list_passive-interface_loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

loopback-address

Description Address of Interface

Type: string

Format: ipv4-address

ospf-list_passive-interface_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ve-address

Description Address of Interface

Type: string

Format: ipv4-address

ospf-list_passive-interface_lif-cfg

Specification	Value
Type	*list*
Block object keys	

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

lif-address

Description Address of Interface

Type: string

Format: ipv4-address

ospf-list_passive-interface_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

trunk-address

Description Address of Interface

Type: string

Format: ipv4-address

ospf-list_passive-interface_eth-cfg

Specification	Value
Type	*list*
Block object keys	

eth-address

Description Address of Interface

Type: string

Format: ipv4-address

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

ospf-list_default-information

Specification	Value
Type	*object*

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-list_overflow

Specification	Value
Type	*object*

database

Description: database is a **JSON Block**. Please see below for *ospf-list_overflow_database*

Type: Object

ospf-list_overflow_database

Specification	Value
Type	*object*

count

Description Maximum number of LSAs

Type: number

Range: 0-4294967294

Default: 4294967294

db-external

Description Maximum number of LSAs

Type: number

Range: 0-2147483647

Default: 2147483647

limit

Description 'hard': Hard limit: Instance will be shutdown if exceeded; 'soft': Soft limit: Warning will be given if exceeded;

Type: string

Supported Values: hard, soft

Default: hard

recovery-time

Description Time to recover (0 not recover)

Type: number

Range: 0-65535

Default: 0

ospf-list_distance

Specification	Value
Type	*object*

distance-ospf

Description: distance-ospf is a **JSON Block**. Please see below for *ospf-list_distance_distance-ospf*

Type: Object

distance-value

Description OSPF Administrative distance

Type: number

Range: 1-255

Default: 110

ospf-list_distance_distance-ospf

Specification	Value
Type	*object*

distance-external

Description External routes (Distance for external routes)

Type: number

Range: 1-255

distance-inter-area

Description Inter-area routes (Distance for inter-area routes)

Type: number

Range: 1-255

distance-intra-area

Description Intra-area routes (Distance for intra-area routes)

Type: number

Range: 1-255

ospf-list_redistribute

Specification	Value
Type	*object*

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-ip-nat

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

ospf-list_redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-4294967295

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'lw4o6': LW4O6 Prefix; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, lw4o6, nat-map, static-nat, public-ip, isis, rip, static

ospf-list_redistribute_ospf-list

Specification	Value
Type	*list*
Block object keys	

metric-ospf

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPF process ID

Type: number

Range: 1-65535

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-ospf

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-4294967295

ospf-list_redistribute_ip-nat-floating-list

Specification	Value
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv4-address

ip-nat-prefix

Description Address

Type: string

Format: ipv4-cidr

ospf-list_redistribute_vip-list

Specification	Value
Type	*list*
Block object keys	

metric-type-vip

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-vip

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-2147483647

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

ospf-list_redistribute_vip-floating-list

Specification	Value
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv4-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv4-address

ospf-list_network-list

Specification	Value
Type	*list*
Block object keys	

network-area

Description: network-area is a **JSON Block**. Please see below for *ospf-list_network-list_network-area*

Type: Object

network-ipv4

Description Network number

Type: string

Format: ipv4-address

network-ipv4-cidr

Description OSPF network prefix

Type: string

Format: ipv4-cidr

network-ipv4-mask

Description OSPF wild card bits

Type: string

Format: ipv4-rev-netmask

ospf-list_network-list_network-area

Specification	Value
Type	*object*

instance-value

Description Instance ID

Type: number

Range: 0-255

Default: 0

network-area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

network-area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

ospf-list_timers

Specification	Value
Type	*object*

spf

Description: spf is a **JSON Block**. Please see below for *ospf-list_timers_spf*

Type: Object

ospf-list_timers_spf

Specification	Value
Type	*object*

exp

Description: exp is a **JSON Block**. Please see below for *ospf-list_timers_spf_exp*

Type: Object

ospf-list_timers_spf_exp

Specification	Value
Type	*object*

max-delay

Description Maximum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min-delay

Description Minimum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

ospf-list_ha-standby-extra-cost

Specification	Value
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

log

Specification	Value
Type	*object*

file

Description: file is a **JSON Block**. Please see below for *log_file*

Type: Object

Reference Object: */axapi/v3/router/log/file*

log-buffer

Description Logging goes to log-buffer

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log_file

Specification	Value
Type	*object*

name

Description Logging filename (File name)

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

per-protocol

Description Per protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rotate

Description Log file rotation (Number of backup files)

Type: number

Range: 0-100

size

Description Log file maximum size (File size in MBytes)

Type: number

Range: 0-1000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	Value
Type	*object*

cisco-metric-behavior

Description 'enable': Enables updating metric consistent with Cisco; 'disable': Disables updating metric consistent with Cisco; (Enable/Disable updating metric consistent with Cisco)

Type: string

Supported Values: enable, disable

Default: disable

default-information

Description 'originate': originate; (Distribute default route)

Type: string

Supported Values: originate

default-metric

Description Set a metric of redistribute routes (Default metric)

Type: number

Range: 1-16

Default: 1

distance-list-cfg

Type: List

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *rip_distribute-list*

Type: Object

Reference Object: */axapi/v3/router/rip/distribute-list*

neighbor

Type: List

network-addresses

Type: List

network-interface-list-cfg

Type: List

offset-list

Description: offset-list is a **JSON Block**. Please see below for *rip_offset-list*

Type: Object

Reference Object: */axapi/v3/router/rip/offset-list*

passive-interface-list

Type: List

recv-buffer-size

Description Set the RIP UDP receive buffer size (the RIP UDP receive buffer size value)

Type: number

Range: 8192-2147483647

redistribute

Description: redistribute is a **JSON Block**. Please see below for *rip_redistribute*

Type: Object

Reference Object: */axapi/v3/router/rip/redistribute*

rip-maximum-prefix-cfg

Description: rip-maximum-prefix-cfg is a **JSON Block**. Please see below for *rip_rip-maximum-prefix-cfg*

Type: Object

route-cfg

Type: List

timers

Description: timers is a **JSON Block**. Please see below for *rip_timers*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description Set routing protocol version (RIP version)

Type: number

Range: 1-2

Default: 2

rip_rip-maximum-prefix-cfg

Specification	Value
Type	*object*

maximum-prefix

Description Set the maximum number of RIP routes

Type: number

Range: 1-2048

maximum-prefix-thres

Description Percentage of maximum routes to generate a warning (Default 75%)

Type: number

Range: 1-100

Default: 75

rip_route-cfg

Specification	Value
Type	*list*
Block object keys	

route

Description Static route advertisement (debugging purpose) (IP prefix network/length)

Type: string

Format: ipv4-cidr

rip_passive-interface-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_redistribute

Specification	Value
Type	*object*

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

rip_redistribute_vip-list

Specification	Value
Type	*list*
Block object keys	

vip-metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

rip_redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'isis': ISO IS-IS; 'lw4o6': LW4O6 Prefix; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'ospf': Open Shortest Path First (OSPF); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, isis, lw4o6, nat-map, static-nat, public-ip, ospf, static

rip_network-interface-list-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_timers

Specification	Value
Type	*object*

timers-cfg

Description: timers-cfg is a **JSON Block**. Please see below for *rip_timers_timers-cfg*

Type: Object

rip_timers_timers-cfg

Specification	Value
Type	*object*

basic

Description Basic routing protocol update timers (Routing table update timer value in second. Default is 30)

Type: number

Range: 5-2147483647

val-2

Description Routing information timeout timer. Default is 180

Type: number

Range: 5-2147483647

val-3

Description Garbage collection timer. Default is 120

Type: number

Range: 5-2147483647

rip_neighbor

Specification	Value
Type	*list*
Block object keys	

value

Description Neighbor address

Type: string

Format: ipv4-address

rip_offset-list

Specification	Value
Type	*object*

acl-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_offset-list_acl-cfg

Specification	Value
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

metric

Description Metric value

Type: number

Range: 0-16

offset-list-direction

Description 'in': Filter incoming updates; 'out': Filter outgoing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_distribute-list

Specification	Value
Type	*object*

acl-cfg

Type: List

prefix

Description: prefix is a **JSON Block**. Please see below for *rip_distribute-list_prefix*

Type: Object

Reference Object: */axapi/v3/router/rip/distribute-list/prefix*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_distribute-list_acl-cfg

Specification	Value
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

acl-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_distribute-list_prefix

Specification	Value
Type	*object*

prefix-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_distribute-list_prefix_prefix-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

prefix-list

Description Filter prefixes in routing updates (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_distance-list-cfg

Specification	Value
Type	*list*
Block object keys	

distance

Description Administrative distance (Distance value)

Type: number

Range: 1-255

Default: 120

distance-acl

Description Access list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distance-ipv4-mask

Description IP source prefix

Type: string

Format: ipv4-cidr

rip_network-addresses

Specification	Value
Type	*list*
Block object keys	

network-ipv4-mask

Description IP prefix network/length, e.g., 35.0.0.0/8

Type: string

Format: ipv4-cidr

bgp-list

Specification	Value
Type	*list*
Block object keys	

address-family

Description: address-family is a **JSON Block**. Please see below for *bgp-list_address-family*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family*

aggregate-address-list

Type: List

as-number

Description AS number

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

auto-summary

Description Enable automatic network number summarization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Description: bgp is a **JSON Block**. Please see below for *bgp-list_bgp*

Type: Object

distance-list

Type: List

maximum-paths-value

Description Supported BGP multipath numbers

Type: number

Range: 1-64

Default: 1

neighbor

Description: neighbor is a **JSON Block**. Please see below for *bgp-list_neighbor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor*

network

Description: network is a **JSON Block**. Please see below for *bgp-list_network*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/network*

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *bgp-list_redistribute*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/redistribute*

synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description: timers is a **JSON Block**. Please see below for *bgp-list_timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_redistribute

Specification	Value
Type	*object*

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_nat-map-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_ospf-cfg*

Type: Object

public-ip-cfg

Description: public-ip-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_public-ip-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *bgp-list_redistribute_vip*

Type: Object

bgp-list_redistribute_ip-nat-list-cfg

Specification	Value
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_lw4o6-cfg

Specification	Value
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_connected-cfg

Specification	Value
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_vip

Specification	Value
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_vip_only-not-flagged-cfg*

Type: Object

bgp-list_redistribute_vip_only-not-flagged-cfg

Specification	Value
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_vip_only-flagged-cfg

Specification	Value
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_ip-nat-cfg

Specification	Value
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_floating-ip-cfg

Specification	Value
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_isis-cfg

Specification	Value
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_nat-map-cfg

Specification	Value
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_rip-cfg

Specification	Value
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_ospf-cfg

Specification	Value
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_static-nat-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_redistribute_static-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_redistribute_public-ip-cfg

Specification	Value
Type	*object*

public-ip

Description Public IPv6/IPv4 Prefixes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_aggregate-address-list

Specification	Value
Type	*list*
Block object keys	

aggregate-address

Description Configure BGP aggregate entries (Aggregate prefix)

Type: string

Format: ipv4-cidr

as-set

Description Generate AS set path information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-only

Description Filter more specific routes from updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_bgp

Specification	Value
Type	*object*

always-compare-med

Description Allow comparing MED from different neighbors

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bestpath-cfg

Description: bestpath-cfg is a **JSON Block**. Please see below for *bgp-list_bgp_bestpath-cfg*

Type: Object

bgp-restart-time

Description BGP Peer Graceful Restart time in seconds (default 90)

Type: number

Range: 1-3600

Default: 90

bgp-stalepath-time

Description BGP Graceful Restart Stalepath retention time in seconds (default 360)

Type: number

Range: 1-3600

Default: 360

dampening-cfg

Description: dampening-cfg is a **JSON Block**. Please see below for *bgp-list_bgp_dampening-cfg*

Type: Object

deterministic-med

Description Pick the best-MED path among paths advertised from the neighboring AS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforce-first-as

Description Enforce the first AS for EBGP routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-external-failover

Description Immediately reset session if a link to a directly connected external peer goes down

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

graceful-restart

Description Configure BGP BGP Graceful Restart

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-preference-value

Description Configure default local preference value

Type: number

Range: 0-4294967295

Default: 100

log-neighbor-changes

Description Log neighbor up/down and reset reason

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nexthop-trigger-count

Description BGP nexthop-tracking status (count)

Type: number

Range: 0-127

Default: 0

router-id

Description Override current router identifier (peers will reset) (Manually configured router identifier)

Type: string

Format: ipv4-address

scan-time

Description Configure background scan interval (Scan interval (sec) [Default:60 Disable:0])

Type: number

Range: 0-60

Default: 60

bgp-list_bgp_dampening-cfg

Specification	Value
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half-time

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-penalty

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

route-map

Description Route-map to specify criteria for dampening (Route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_bgp_bestpath-cfg

Specification	Value
Type	*object*

compare-routerid

Description Compare router-id for identical EBGP paths

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore

Description Ignore as-path length in selecting a route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

missing-as-worst

Description Treat missing MED as the least preferred one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-recv-med

Description To remove rcvd MED attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-send-med

Description To remove send MED attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_network

Specification	Value
Type	*object*

ip-cidr-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}*

monitor

Description: monitor is a **JSON Block**. Please see below for *bgp-list_network_monitor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/network/monitor*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *bgp-list_network_synchronization*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/network/synchronization*

bgp-list_network_synchronization

Specification	Value
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_network_monitor

Specification	Value
Type	*object*

default

Description: default is a **JSON Block**. Please see below for *bgp-list_network_monitor_default*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/network/monitor/default*

bgp-list_network_monitor_default

Specification	Value
Type	*object*

network-monitor-default

Description default route monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_network_ip-cidr-list

Specification	Value
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

lcomm-value

Description Large community value in the format XX:YY:ZZ

Type: string

Format: string-rlx

network-ipv4-cidr

Description Specify network mask

Type: string

Format: ipv4-cidr

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_timers

Specification	Value
Type	*object*

bgp-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

bgp-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

bgp-list_neighbor

Specification	Value
Type	*object*

ethernet-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor/{ethernet}*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor/{trunk}*

ve-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}*

bgp-list_neighbor_ve-neighbor-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

bgp-list_neighbor_ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,update-source-ip, update-source-ipv6, loopback, ve, trunk, lif, and tunnel are mutually exclusive

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lif,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopback,update-source-ip, update-source-ipv6, ethernet, ve, trunk, lif, and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-name,advertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers, and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

telemetry

Description Send BGP update to telemetry db

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunk,update-source-ip, update-source-ipv6, ethernet, loopback, ve, lif, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ip,update-source-ipv6, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6,update-source-ip, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: ve,update-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif, and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

bgp-list_neighbor_ipv4-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_neighbor_ipv4-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_ipv4-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_peer-group-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,update-source-ip, update-source-ipv6, loopback, ve, trunk, lif, and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lif,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopback,update-source-ip, update-source-ipv6, ethernet, ve, trunk, lif, and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-route-map-lists

Type: List

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

peer-group-key

Description Configure peer-group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-remote-as

Description Specify AS number of BGP neighbor

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunk,update-source-ip, update-source-ipv6, ethernet, loopback, ve, lif, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and lif are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ip,update-source-ipv6, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6,update-source-ip, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: ve,update-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif, and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

bgp-list_neighbor_peer-group-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_neighbor_ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,update-source-ip, update-source-ipv6, loopback, ve, trunk, lif, and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lif,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopback,update-source-ip, update-source-ipv6, ethernet, ve, trunk, lif, and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-name,advertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers, and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

telemetry

Description Send BGP update to telemetry db

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunk,update-source-ip, update-source-ipv6, ethernet, loopback, ve, lif, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ip,update-source-ipv6, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6,update-source-ip, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: ve,update-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif, and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

bgp-list_neighbor_ipv6-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_neighbor_ipv6-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_ipv6-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_ethernet-neighbor-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_neighbor_trunk-neighbor-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_distance-list

Specification	Value
Type	*list*
Block object keys	

acl-str

Description Access list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

admin-distance

Description Define an administrative distance

Type: number

Range: 1-255

ext-routes-dist

Description Distance for routes external to the AS

Type: number

Range: 1-255

int-routes-dist

Description Distance for routes internal to the AS

Type: number

Range: 1-255

local-routes-dist

Description Distance for local routes

Type: number

Range: 1-255

src-prefix

Description IP source prefix

Type: string

Format: ipv4-cidr

bgp-list_address-family

Specification	Value
Type	*object*

ipv4-flowspec

Description: ipv4-flowspec is a **JSON Block**. Please see below for *bgp-list_address-family_ipv4-flowspec*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv4-flowspec*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6*

ipv6-flowspec

Description: ipv6-flowspec is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6-flowspec*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6-flowspec*

bgp-list_address-family_ipv6-flowspec

Specification	Value
Type	*object*

neighbor

Description: neighbor is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6-flowspec_neighbor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6-flowspec/neighbor*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6-flowspec_neighbor

Specification	Value
Type	*object*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6-flowspec/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6-flowspec/neighbor/ipv6-neighbor/{neighbor-ipv6}*

bgp-list_address-family_ipv6-flowspec_neighbor_ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-route-map-lists

Type: List

send-community-val

Description 'all': Send Standard, Extended, and Large Community attributes; 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes; 'large': Send Large Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6-flowspec_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6-flowspec_neighbor_ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-route-map-lists

Type: List

send-community-val

Description 'all': Send Standard, Extended, and Large Community attributes; 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes; 'large': Send Large Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6-flowspec_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv4-flowspec

Specification	Value
Type	*object*

neighbor

Description: neighbor is a **JSON Block**. Please see below for *bgp-list_address-family_ipv4-flowspec_neighbor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv4-flowspec/neighbor*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv4-flowspec_neighbor

Specification	Value
Type	*object*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv4-flowspec/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv4-flowspec/neighbor/ipv6-neighbor/{neighbor-ipv6}*

bgp-list_address-family_ipv4-flowspec_neighbor_ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-route-map-lists

Type: List

send-community-val

Description 'all': Send Standard, Extended, and Large Community attributes; 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes; 'large': Send Large Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv4-flowspec_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv4-flowspec_neighbor_ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-route-map-lists

Type: List

send-community-val

Description 'all': Send Standard, Extended, and Large Community attributes; 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes; 'large': Send Large Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv4-flowspec_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6

Specification	Value
Type	*object*

aggregate-address-list

Type: List

auto-summary

Description Enable automatic network number summarization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Description: bgp is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_bgp*

Type: Object

distance

Description: distance is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_distance*

Type: Object

maximum-paths-value

Description Supported BGP multipath numbers

Type: number

Range: 1-64

Default: 1

neighbor

Description: neighbor is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_neighbor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor*

network

Description: network is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_network*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network*

originate

Description Distribute an IPv6 default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/redistribute*

synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_distance

Specification	Value
Type	*object*

distance-ext

Description Distance for routes external to the AS

Type: number

Range: 1-255

distance-int

Description Distance for routes internal to the AS

Type: number

Range: 1-255

distance-local

Description Distance for local routes

Type: number

Range: 1-255

bgp-list_address-family_ipv6_redistribute

Specification	Value
Type	*object*

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_nat-map-cfg*

Type: Object

nat64-cfg

Description: nat64-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_nat64-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_ospf-cfg*

Type: Object

public-ip-cfg

Description: public-ip-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_public-ip-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_vip*

Type: Object

bgp-list_address-family_ipv6_redistribute_ip-nat-list-cfg

Specification	Value
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_lw4o6-cfg

Specification	Value
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_nat64-cfg

Specification	Value
Type	*object*

nat64

Description NAT64 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_connected-cfg

Specification	Value
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_vip

Specification	Value
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_vip_only-not-flagged-cfg*

Type: Object

bgp-list_address-family_ipv6_redistribute_vip_only-not-flagged-cfg

Specification	Value
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_vip_only-flagged-cfg

Specification	Value
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_ip-nat-cfg

Specification	Value
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_floating-ip-cfg

Specification	Value
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_isis-cfg

Specification	Value
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_nat-map-cfg

Specification	Value
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_rip-cfg

Specification	Value
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_ospf-cfg

Specification	Value
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_static-nat-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_address-family_ipv6_redistribute_static-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_address-family_ipv6_redistribute_public-ip-cfg

Specification	Value
Type	*object*

public-ip

Description Public IPv6/IPv4 Prefixes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_aggregate-address-list

Specification	Value
Type	*list*
Block object keys	

aggregate-address

Description Configure BGP aggregate entries (Aggregate IPv6 prefix)

Type: string

Format: ipv6-address-plen

as-set

Description Generate AS set path information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-only

Description Filter more specific routes from updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_address-family_ipv6_bgp

Specification	Value
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-start-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-start-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

dampening-unreachability

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

route-map

Description Route-map to specify criteria for dampening (Route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_network

Specification	Value
Type	*object*

ipv6-network-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}*

monitor

Description: monitor is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_network_monitor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_network_synchronization*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/synchronization*

bgp-list_address-family_ipv6_network_ipv6-network-list

Specification	Value
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

lcomm-value

Description Large community value in the format XX:YY:ZZ

Type: string

Format: string-rlx

network-ipv6

Description Specify a network to announce via BGP

Type: string

Format: ipv6-address-plen

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_network_synchronization

Specification	Value
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_network_monitor

Specification	Value
Type	*object*

default

Description: default is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_network_monitor_default*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor/default*

bgp-list_address-family_ipv6_network_monitor_default

Specification	Value
Type	*object*

network-monitor-default

Description default route monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_neighbor

Specification	Value
Type	*object*

ethernet-neighbor-ipv6-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ethernet-neighbor-ipv6/{ethernet}*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-ipv6-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6/{trunk}*

ve-neighbor-ipv6-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6/{ve}*

bgp-list_address-family_ipv6_neighbor_ethernet-neighbor-ipv6-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_neighbor_ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

bgp-list_address-family_ipv6_neighbor_ipv4-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_neighbor_ipv4-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_ipv4-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_peer-group-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

bgp-list_address-family_ipv6_neighbor_peer-group-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_neighbor_ve-neighbor-ipv6-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

bgp-list_address-family_ipv6_neighbor_trunk-neighbor-ipv6-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_neighbor_ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

bgp-list_address-family_ipv6_neighbor_ipv6-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_neighbor_ipv6-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_ipv6-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6

Specification	Value
Type	*object*

ospf-list

Type: List

Reference Object: */axapi/v3/router/ipv6/ospf/{process-id}*

rip

Description: rip is a **JSON Block**. Please see below for *ipv6_rip*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip*

ipv6_ospf-list

Specification	Value
Type	*list*
Block object keys	

abr-type-option

Description 'cisco': Alternative ABR, Cisco implementation (RFC3509); 'ibm': Alternative ABR, IBM implementation (RFC3509); 'standard': Standard behavior (RFC2328);

Type: string

Supported Values: cisco, ibm, standard

Default: cisco

area-list

Type: List

Reference Object: */axapi/v3/router/ipv6/ospf/{process-id}/area/{area-ipv4}+{area-num}*

auto-cost-reference-bandwidth

Description Use reference bandwidth method to assign OSPF cost (The reference bandwidth in terms of Mbits per second)

Type: number

Range: 1-4294967

Default: 10000

bfd-all-interfaces

Description Enable BFD on all interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-information

Description: default-information is a **JSON Block**. Please see below for *ipv6_ospf-list_default-information*

Type: Object

Reference Object: */axapi/v3/router/ipv6/ospf/{process-id}/default-information*

default-metric

Description Set metric of redistributed routes (Default metric)

Type: number

Range: 1-16777214

Default: 20

distribute-internal-list

Type: List

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *ipv6_ospf-list_distribute-list*

Type: Object

ha-standby-extra-cost

Type: List

log-adjacency-changes

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

max-concurrent-dd

Description Maximum number allowed to process DD concurrently (Number of DD process)

Type: number

Range: 1-65535

Default: 5

passive-interface

Description: passive-interface is a **JSON Block**. Please see below for *ipv6_ospf-list_passive-interface*

Type: Object

process-id

Description OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *ipv6_ospf-list_redistribute*

Type: Object

Reference Object: */axapi/v3/router/ipv6/ospf/{process-id}/redistribute*

router-id

Description router-id for the OSPF process (OSPFv3 router-id in IPv4 address format)

Type: string

Format: ipv4-address

timers

Description: timers is a **JSON Block**. Please see below for *ipv6_ospf-list_timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf-list_distribute-internal-list

Specification	Value
Type	*list*
Block object keys	

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

Default: 255.255.255.255

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

cost

Description Cost

Type: number

Range: 1-65535

Default: 1

type

Description 'lw4o6': LW4O6 Prefix; 'nat64': NAT64 Prefix; 'static-nat': Static NAT; 'floating-ip': Floating IP; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'vip': Only not flagged Virtual IP (VIP); 'vip-only-flagged': Selected Virtual IP (VIP);

Type: string

Supported Values: lw4o6, nat64, static-nat, public-ip, floating-ip, ip-nat, ip-nat-list, vip, vip-only-flagged

ipv6_ospf-list_redistribute

Specification	Value
Type	*object*

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

ipv6_ospf-list_redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'nat64': NAT64 Prefix; 'lw4o6': LW4O6 Prefix; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, nat-map, static-nat, public-ip, nat64, lw4o6, isis, rip, static

ipv6_ospf-list_redistribute_ospf-list

Specification	Value
Type	*list*
Block object keys	

metric-ospf

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPFV3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_ospf-list_redistribute_ip-nat-floating-list

Specification	Value
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

ip-nat-prefix

Description Address

Type: string

Format: ipv6-address-plen

ipv6_ospf-list_redistribute_vip-list

Specification	Value
Type	*list*
Block object keys	

metric-type-vip

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

ipv6_ospf-list_redistribute_vip-floating-list

Specification	Value
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv6-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

ipv6_ospf-list_distribute-list

Specification	Value
Type	*object*

prefix-list

Description: prefix-list is a **JSON Block**. Please see below for *ipv6_ospf-list_distribute-list_prefix-list*

Type: Object

ipv6_ospf-list_distribute-list_prefix-list

Specification	Value
Type	*object*

direction

Description 'in': Filter incoming routing updates;

Type: string

Supported Values: in

value

Description Prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_ospf-list_area-list

Specification	Value
Type	*list*
Block object keys	

area-ipv4

Description OSPFv3 area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPFv3 area ID as a decimal value

Type: number

Range: 0-4294967295

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-list

Type: List

stub

Description Configure OSPFv3 area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

ipv6_ospf-list_area-list_virtual-link-list

Specification	Value
Type	*list*
Block object keys	

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

instance-id

Description OSPFv3 instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

value

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

ipv6_ospf-list_area-list_range-list

Specification	Value
Type	*list*
Block object keys	

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

value

Description Area range for IPv6 prefix

Type: string

Format: ipv6-address-plen

ipv6_ospf-list_default-information

Specification	Value
Type	*object*

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf-list_passive-interface

Specification	Value
Type	*object*

eth-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

tunnel-cfg

Type: List

ve-cfg

Type: List

ipv6_ospf-list_passive-interface_tunnel-cfg

Specification	Value
Type	*list*
Block object keys	

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ipv6_ospf-list_passive-interface_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6_ospf-list_passive-interface_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

ipv6_ospf-list_passive-interface_loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

ipv6_ospf-list_passive-interface_eth-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

ipv6_ospf-list_timers

Specification	Value
Type	*object*

spf

Description: spf is a **JSON Block**. Please see below for *ipv6_ospf-list_timers_spf*

Type: Object

ipv6_ospf-list_timers_spf

Specification	Value
Type	*object*

exp

Description: exp is a **JSON Block**. Please see below for *ipv6_ospf-list_timers_spf_exp*

Type: Object

ipv6_ospf-list_timers_spf_exp

Specification	Value
Type	*object*

max-delay

Description Maximum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min-delay

Description Minimum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

ipv6_ospf-list_ha-standby-extra-cost

Specification	Value
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

ipv6_rip

Specification	Value
Type	*object*

aggregate-address-cfg

Type: List

cisco-metric-behavior

Description 'enable': Enables updating metric consistent with Cisco; 'disable': Disables updating metric consistent with Cisco; (Enable/Disable updating metric consistent with Cisco)

Type: string

Supported Values: enable, disable

Default: disable

default-information

Description 'originate': originate; (Distribute default route)

Type: string

Supported Values: originate

default-metric

Description Set a metric of redistribute routes (Default metric)

Type: number

Range: 1-16

Default: 1

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *ipv6_rip_distribute-list*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip/distribute-list*

offset-list

Description: offset-list is a **JSON Block**. Please see below for *ipv6_rip_offset-list*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip/offset-list*

passive-interface-list

Type: List

recv-buffer-size

Description Set the RIPNG UDP receive buffer size (the RIPNG UDP receive buffer size value)

Type: number

Range: 8192-2147483647

redistribute

Description: redistribute is a **JSON Block**. Please see below for *ipv6_rip_redistribute*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip/redistribute*

ripng-neighbor

Description: ripng-neighbor is a **JSON Block**. Please see below for *ipv6_rip_ripng-neighbor*

Type: Object

route-cfg

Type: List

route-map

Description: route-map is a **JSON Block**. Please see below for *ipv6_rip_route-map*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip/route-map*

timers

Description: timers is a **JSON Block**. Please see below for *ipv6_rip_timers*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_offset-list

Specification	Value
Type	*object*

acl-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_offset-list_acl-cfg

Specification	Value
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

metric

Description Metric value

Type: number

Range: 0-16

offset-list-direction

Description 'in': Filter incoming updates; 'out': Filter outgoing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6_rip_route-map

Specification	Value
Type	*object*

map-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_route-map_map-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

map

Description Route map name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-map-direction

Description 'in': Route map set for input filtering; 'out': Route map set for output filtering;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6_rip_passive-interface-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6_rip_redistribute

Specification	Value
Type	*object*

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

ipv6_rip_redistribute_vip-list

Specification	Value
Type	*list*
Block object keys	

vip-metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

ipv6_rip_redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'isis': ISO IS-IS; 'lw4o6': LW4O6

Prefix; 'nat-map': NAT MAP Prefix; 'nat64': NAT64 Prefix; 'static-nat': Static NAT; 'ospf': Open Shortest Path First (OSPF); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, isis, lw4o6, nat-map, nat64, static-nat, public-ip, ospf, static

ipv6_rip_route-cfg

Specification	Value
Type	*list*
Block object keys	

route

Description Static route advertisement (debugging purpose) (IP prefix)

Type: string

Format: ipv6-address-plen

ipv6_rip_timers

Specification	Value
Type	*object*

timers-cfg

Description: timers-cfg is a **JSON Block**. Please see below for *ipv6_rip_timers_timers-cfg*

Type: Object

ipv6_rip_timers_timers-cfg

Specification	Value
Type	*object*

basic

Description Basic routing protocol update timers (Routing table update timer value in second. Default is 30)

Type: number

Range: 5-2147483647

val-2

Description Routing information timeout timer. Default is 180

Type: number

Range: 5-2147483647

val-3

Description Garbage collection timer. Default is 120

Type: number

Range: 5-2147483647

ipv6_rip_aggregate-address-cfg

Specification	Value
Type	*list*
Block object keys	

aggregate-address

Description Set aggregate RIP route announcement (Aggregate network)

Type: string

Format: ipv6-address-plen

ipv6_rip_ripng-neighbor

Specification	Value
Type	*object*

ripng-neighbor-cfg

Type: List

ipv6_rip_ripng-neighbor_ripng-neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

neighbor-link-local-addr

Description IPv6 link-local address

Type: string

Format: ipv6-address

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6_rip_distribute-list

Specification	Value
Type	*object*

acl-cfg

Type: List

prefix

Description: prefix is a **JSON Block**. Please see below for *ipv6_rip_distribute-list_prefix*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip/distribute-list/prefix*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_distribute-list_acl-cfg

Specification	Value
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

acl-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6_rip_distribute-list_prefix

Specification	Value
Type	*object*

prefix-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_distribute-list_prefix_prefix-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

prefix-list

Description Filter prefixes in routing updates (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

isis-list

Specification	Value
Type	*list*
Block object keys	

address-family

Description: address-family is a **JSON Block**. Please see below for *isis-list_address-family*

Type: Object

Reference Object: */axapi/v3/router/isis/{tag}/address-family*

adjacency-check

Description Check ISIS neighbor protocol support

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

area-password-cfg

Description: area-password-cfg is a **JSON Block**. Please see below for *isis-list_area-password-cfg*

Type: Object

authentication

Description: authentication is a **JSON Block**. Please see below for *isis-list_authentication*

Type: Object

bfd

Description 'all-interfaces': Enable BFD on all interfaces;

Type: string

Supported Values: all-interfaces

default-information

Description 'originate': Distribute a default route;

Type: string

Supported Values: originate

distance-list

Type: List

domain-password-cfg

Description: domain-password-cfg is a **JSON Block**. Please see below for *isis-list_domain-password-cfg*

Type: Object

ha-standby-extra-cost

Type: List

ignore-lsp-errors

Description Ignore LSPs with bad checksums

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

is-type

Description 'level-1': Act as a station router only; 'level-1-2': Act as both a station router and an area router; 'level-2-only': Act as an area router only;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1

log-adjacency-changes-cfg

Description: log-adjacency-changes-cfg is a **JSON Block**. Please see below for *isis-list_log-adjacency-changes-cfg*

Type: Object

lsp-gen-interval-list

Type: List

lsp-refresh-interval

Description Set LSP refresh interval (LSP refresh time in seconds)

Type: number

Range: 1-65535

Default: 900

max-lsp-lifetime

Description Set maximum LSP lifetime (Maximum LSP lifetime in seconds)

Type: number

Range: 350-65535

Default: 1200

metric-style-list

Type: List

net-list

Type: List

passive-interface-list

Type: List

protocol-list

Type: List

redistribute

Description: redistribute is a **JSON Block**. Please see below for *isis-list_redistribute*

Type: Object

Reference Object: */axapi/v3/router/isis/{tag}/redistribute*

set-overload-bit-cfg

Description: set-overload-bit-cfg is a **JSON Block**. Please see below for *isis-list_set-overload-bit-cfg*

Type: Object

spf-interval-exp-list

Type: List

summary-address-list

Type: List

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Default:

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis-list_domain-password-cfg

Specification	Value
Type	*object*

authenticate

Description: authenticate is a **JSON Block**. Please see below for *isis-list_domain-password-cfg_authenticate*

Type: Object

password

Description Set the authentication password for a routing domain (Routing domain password)

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis-list_domain-password-cfg_authenticate

Specification	Value
Type	*object*

snp

Description 'send-only': Send but do not check PDUs on receiving; 'validate': Send and check PDUs on receiving;

Type: string

Supported Values: send-only, validate

isis-list_set-overload-bit-cfg

Specification	Value
Type	*object*

on-startup

Description: on-startup is a **JSON Block**. Please see below for *isis-list_set-overload-bit-cfg_on-startup*

Type: Object

set-overload-bit

Description Signal other touers not to use us in SPF

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

suppress-cfg

Description: suppress-cfg is a **JSON Block**. Please see below for *isis-list_set-overload-bit-cfg_suppress-cfg*

Type: Object

isis-list_set-overload-bit-cfg_suppress-cfg

Specification	Value
Type	*object*

external

Description If overload-bit set, don't advertise IP prefixes learned from other protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interlevel

Description If overload-bit set, don't advertise IP prefixes learned from another ISIS level

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_set-overload-bit-cfg_on-startup

Specification	Value
Type	*object*

delay

Description Time in seconds to advertise ourself as overloaded after reboot

Type: number

Range: 5-86400

Mutual Exclusion: delay and wait-for-bgp are mutually exclusive

wait-for-bgp

Description Let BGP decide when to unset the overload bit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: wait-for-bgp and delay are mutually exclusive

isis-list_net-list

Specification	Value
Type	*list*
Block object keys	

net

Description A Network Entity Title for this process (XX.XXXX. ... .XXXX.XX Network entity title (NET))

Type: string

Format: nasp-string

Maximum Length: 128 characters

Maximum Length: 1 characters

isis-list_metric-style-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Level-1 only; 'level-1-2': Level-1-2; 'level-2': Level-2 only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-1-2

type

Description 'narrow': Use old style of TLVs with narrow metric; 'wide': Use new style of TLVs to carry wider metric; 'transition': Send and accept both styles of TLVs during transition; 'narrow-transition': Send old style of TLVs with narrow metric with accepting both styles of TLVs; 'wide-transition': Send new style of TLVs to carry wider metric with accepting both styles of TLVs;

Type: string

Supported Values: narrow, wide, transition, narrow-transition, wide-transition

Default: narrow

isis-list_authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

isis-list_authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

isis-list_authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Authentication mode;

Type: string

Supported Values: md5

isis-list_authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_protocol-list

Specification	Value
Type	*list*
Block object keys	

protocol-topology

Description Protocol Topology

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_log-adjacency-changes-cfg

Specification	Value
Type	*object*

state

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

isis-list_spf-interval-exp-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Set interval for level 1 only; 'level-2': Set interval for level 2 only;

Type: string

Supported Values: level-1, level-2

max

Description Maximum Delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min

Description Minimum Delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

isis-list_passive-interface-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

isis-list_summary-address-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Summarize into level-1 area; 'level-1-2': Summarize into both area and sub-domain; 'level-2': Summarize into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

prefix

Description IP network prefix

Type: string

Format: ipv4-cidr

isis-list_address-family

Specification	Value
Type	*object*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *isis-list_address-family_ipv6*

Type: Object

Reference Object: */axapi/v3/router/isis/{tag}/address-family/ipv6*

isis-list_address-family_ipv6

Specification	Value
Type	*object*

adjacency-check

Description Check ISIS neighbor protocol support

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

default-information

Description 'originate': Distribute a default route;

Type: string

Supported Values: originate

distance

Description ISIS Administrative Distance (Distance value)

Type: number

Range: 1-255

Default: 115

multi-topology-cfg

Description: multi-topology-cfg is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_multi-topology-cfg*

Type: Object

redistribute

Description: redistribute is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_redistribute*

Type: Object

Reference Object: */axapi/v3/router/isis/{tag}/address-family/ipv6/redistribute*

summary-prefix-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis-list_address-family_ipv6_redistribute

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_redistribute_isis*

Type: Object

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

isis-list_address-family_ipv6_redistribute_vip-list

Specification	Value
Type	*list*
Block object keys	

vip-level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

vip-metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

vip-metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

isis-list_address-family_ipv6_redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'lw4o6': LW4O6 Prefix; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'nat64': NAT64 Prefix; 'ospf': Open Shortest Path First (OSPF); 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, lw4o6, nat-map, static-nat, public-ip, nat64, ospf, rip, static

isis-list_address-family_ipv6_redistribute_isis

Specification	Value
Type	*object*

level-1-from

Description: level-1-from is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_redistribute_isis_level-1-from*

Type: Object

level-2-from

Description: level-2-from is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_redistribute_isis_level-2-from*

Type: Object

isis-list_address-family_ipv6_redistribute_isis_level-2-from

Specification	Value
Type	*object*

into-2

Description: into-2 is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_redistribute_isis_level-2-from_into-2*

Type: Object

isis-list_address-family_ipv6_redistribute_isis_level-2-from_into-2

Specification	Value
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-1

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_address-family_ipv6_redistribute_isis_level-1-from

Specification	Value
Type	*object*

into-1

Description: into-1 is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_redistribute_isis_level-1-from_into-1*

Type: Object

isis-list_address-family_ipv6_redistribute_isis_level-1-from_into-1

Specification	Value
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-2

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_address-family_ipv6_multi-topology-cfg

Specification	Value
Type	*object*

level

Description 'level-1': Level-1 only; 'level-1-2': Level-1-2; 'level-2': Level-2 only;

Type: string

Supported Values: level-1, level-1-2, level-2

Mutual Exclusion: level and transition are mutually exclusive

level-transition

Description Accept and generate both IS-IS IPv6 and Multi-topology IPV6 TLVs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-topology

Description Enable multi-topology mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transition

Description Accept and generate both IS-IS IPv6 and Multi-topology IPV6 TLVs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: transition and level are mutually exclusive

isis-list_address-family_ipv6_summary-prefix-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Summarize into level-1 area; 'level-1-2': Summarize into both area and sub-domain; 'level-2': Summarize into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

isis-list_redistribute

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *isis-list_redistribute_isis*

Type: Object

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

isis-list_redistribute_vip-list

Specification	Value
Type	*list*
Block object keys	

vip-level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

vip-metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

vip-metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

isis-list_redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'lw4o6': LW4O6 Prefix; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'ospf': Open Shortest Path First (OSPF); 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, lw4o6, nat-map, static-nat, public-ip, ospf, rip, static

isis-list_redistribute_isis

Specification	Value
Type	*object*

level-1-from

Description: level-1-from is a **JSON Block**. Please see below for *isis-list_redistribute_isis_level-1-from*

Type: Object

level-2-from

Description: level-2-from is a **JSON Block**. Please see below for *isis-list_redistribute_isis_level-2-from*

Type: Object

isis-list_redistribute_isis_level-2-from

Specification	Value
Type	*object*

into-2

Description: into-2 is a **JSON Block**. Please see below for *isis-list_redistribute_isis_level-2-from_into-2*

Type: Object

isis-list_redistribute_isis_level-2-from_into-2

Specification	Value
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-1

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_redistribute_isis_level-1-from

Specification	Value
Type	*object*

into-1

Description: into-1 is a **JSON Block**. Please see below for *isis-list_redistribute_isis_level-1-from_into-1*

Type: Object

isis-list_redistribute_isis_level-1-from_into-1

Specification	Value
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-2

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_area-password-cfg

Specification	Value
Type	*object*

authenticate

Description: authenticate is a **JSON Block**. Please see below for *isis-list_area-password-cfg_authenticate*

Type: Object

password

Description Configure the authentication password for an area (Area password)

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis-list_area-password-cfg_authenticate

Specification	Value
Type	*object*

snp

Description 'send-only': Send but do not check PDUs on receiving; 'validate': Send and check PDUs on receiving;

Type: string

Supported Values: send-only, validate

isis-list_lsp-gen-interval-list

Specification	Value
Type	*list*
Block object keys	

interval

Description Minimum interval in seconds

Type: number

Range: 1-120

Default: 30

level

Description 'level-1': Set interval for level 1 only; 'level-2': Set interval for level 2 only;

Type: string

Supported Values: level-1, level-2

isis-list_distance-list

Specification	Value
Type	*list*
Block object keys	

System-ID

Description System-ID in XXXX.XXXX.XXXX

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

acl

Description Access list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distance

Description ISIS Administrative Distance (Distance value)

Type: number

Range: 1-255

Default: 115

isis-list_ha-standby-extra-cost

Specification	Value
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

2.107.2 router bgp

Border Gateway Protocol (BGP)

bgp Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*as-number*
Collection Name	*bgp-list*
Collection URI	/axapi/v3/router/bgp
Element Name	bgp
Element URI	/axapi/v3/router/bgp/{as-number}
Element Attributes	bgp_attributes
Partition Visibility	shared
Schema	`bgp schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp

bgp attributes

```
POST /axapi/v3/router/bgp/
Payload:
{
    "bgp": {
        "as-number": "1",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/router/bgp

bgp attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}

bgp attributes

```
GET /axapi/v3/router/bgp/1
Reponse:
{
    "bgp": {

```

bgp-list

bgp-list is **JSON List** of *bgp attributes*

bgp-list : [

{ *bgp attributes* },

{ *bgp attributes* },

...

]

bgp attributes

address-family

Description: address-family is a **JSON Block**. Please see below for *address-family*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family*

aggregate-address-list

Type: List

as-number

Description AS number

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

auto-summary

Description Enable automatic network number summarization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Description: bgp is a **JSON Block**. Please see below for *bgp*

Type: Object

distance-list

Type: List

maximum-paths-value

Description Supported BGP multipath numbers

Type: number

Range: 1-64

Default: 1

neighbor

Description: neighbor is a **JSON Block**. Please see below for *neighbor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor*

network

Description: network is a **JSON Block**. Please see below for *network*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/network*

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *redistribute*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/redistribute*

synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description: timers is a **JSON Block**. Please see below for *timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

redistribute

Specification	Value
Type	*object*

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *redistribute_connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *redistribute_floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *redistribute_ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *redistribute_ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *redistribute_isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *redistribute_lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *redistribute_nat-map-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *redistribute_ospf-cfg*

Type: Object

public-ip-cfg

Description: public-ip-cfg is a **JSON Block**. Please see below for *redistribute_public-ip-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *redistribute_rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *redistribute_static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *redistribute_static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *redistribute_vip*

Type: Object

redistribute_ip-nat-list-cfg

Specification	Value
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_lw4o6-cfg

Specification	Value
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_connected-cfg

Specification	Value
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_vip

Specification	Value
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *redistribute_vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *redistribute_vip_only-not-flagged-cfg*

Type: Object

redistribute_vip_only-not-flagged-cfg

Specification	Value
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_vip_only-flagged-cfg

Specification	Value
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_ip-nat-cfg

Specification	Value
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_floating-ip-cfg

Specification	Value
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_isis-cfg

Specification	Value
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_nat-map-cfg

Specification	Value
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_rip-cfg

Specification	Value
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_ospf-cfg

Specification	Value
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_static-nat-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute_static-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute_public-ip-cfg

Specification	Value
Type	*object*

public-ip

Description Public IPv6/IPv4 Prefixes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

aggregate-address-list

Specification	Value
Type	*list*
Block object keys	

aggregate-address

Description Configure BGP aggregate entries (Aggregate prefix)

Type: string

Format: ipv4-cidr

as-set

Description Generate AS set path information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-only

Description Filter more specific routes from updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Specification	Value
Type	*object*

always-compare-med

Description Allow comparing MED from different neighbors

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bestpath-cfg

Description: bestpath-cfg is a **JSON Block**. Please see below for *bgp_bestpath-cfg*

Type: Object

bgp-restart-time

Description BGP Peer Graceful Restart time in seconds (default 90)

Type: number

Range: 1-3600

Default: 90

bgp-stalepath-time

Description BGP Graceful Restart Stalepath retention time in seconds (default 360)

Type: number

Range: 1-3600

Default: 360

dampening-cfg

Description: dampening-cfg is a **JSON Block**. Please see below for *bgp_dampening-cfg*

Type: Object

deterministic-med

Description Pick the best-MED path among paths advertised from the neighboring AS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforce-first-as

Description Enforce the first AS for EBGP routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-external-failover

Description Immediately reset session if a link to a directly connected external peer goes down

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

graceful-restart

Description Configure BGP BGP Graceful Restart

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-preference-value

Description Configure default local preference value

Type: number

Range: 0-4294967295

Default: 100

log-neighbor-changes

Description Log neighbor up/down and reset reason

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nexthop-trigger-count

Description BGP nexthop-tracking status (count)

Type: number

Range: 0-127

Default: 0

router-id

Description Override current router identifier (peers will reset) (Manually configured router identifier)

Type: string

Format: ipv4-address

scan-time

Description Configure background scan interval (Scan interval (sec) [Default:60 Disable:0])

Type: number

Range: 0-60

Default: 60

bgp_dampening-cfg

Specification	Value
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half-time

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-penalty

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

route-map

Description Route-map to specify criteria for dampening (Route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp_bestpath-cfg

Specification	Value
Type	*object*

compare-routerid

Description Compare router-id for identical EBGP paths

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore

Description Ignore as-path length in selecting a route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

missing-as-worst

Description Treat missing MED as the least preferred one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-recv-med

Description To remove rcvd MED attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-send-med

Description To remove send MED attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Specification	Value
Type	*object*

ip-cidr-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}*

monitor

Description: monitor is a **JSON Block**. Please see below for *network_monitor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/network/monitor*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *network_synchronization*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/network/synchronization*

network_synchronization

Specification	Value
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network_monitor

Specification	Value
Type	*object*

default

Description: default is a **JSON Block**. Please see below for *network_monitor_default*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/network/monitor/default*

network_monitor_default

Specification	Value
Type	*object*

network-monitor-default

Description default route monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network_ip-cidr-list

Specification	Value
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

lcomm-value

Description Large community value in the format XX:YY:ZZ

Type: string

Format: string-rlx

network-ipv4-cidr

Description Specify network mask

Type: string

Format: ipv4-cidr

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

timers

Specification	Value
Type	*object*

bgp-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

bgp-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

neighbor

Specification	Value
Type	*object*

ethernet-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor/{ethernet}*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor/{trunk}*

ve-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}*

neighbor_ve-neighbor-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

neighbor_ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,update-source-ip, update-source-ipv6, loopback, ve, trunk, lif, and tunnel are mutually exclusive

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lif,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopback,update-source-ip, update-source-ipv6, ethernet, ve, trunk, lif, and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-name,advertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers, and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

telemetry

Description Send BGP update to telemetry db

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunk,update-source-ip, update-source-ipv6, ethernet, loopback, ve, lif, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ip,update-source-ipv6, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6,update-source-ip, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: ve,update-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif, and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor_ipv4-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor_ipv4-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv4-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_peer-group-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,update-source-ip, update-source-ipv6, loopback, ve, trunk, lif, and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lif,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopback,update-source-ip, update-source-ipv6, ethernet, ve, trunk, lif, and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-route-map-lists

Type: List

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

peer-group-key

Description Configure peer-group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-remote-as

Description Specify AS number of BGP neighbor

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunk,update-source-ip, update-source-ipv6, ethernet, loopback, ve, lif, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and lif are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ip,update-source-ipv6, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6,update-source-ip, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: ve,update-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif, and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor_peer-group-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor_ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,update-source-ip, update-source-ipv6, loopback, ve, trunk, lif, and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lif,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopback,update-source-ip, update-source-ipv6, ethernet, ve, trunk, lif, and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-name,advertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers, and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

telemetry

Description Send BGP update to telemetry db

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunk,update-source-ip, update-source-ipv6, ethernet, loopback, ve, lif, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ip,update-source-ipv6, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6,update-source-ip, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: ve,update-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif, and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor_ipv6-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor_ipv6-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv6-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ethernet-neighbor-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

neighbor_trunk-neighbor-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distance-list

Specification	Value
Type	*list*
Block object keys	

acl-str

Description Access list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

admin-distance

Description Define an administrative distance

Type: number

Range: 1-255

ext-routes-dist

Description Distance for routes external to the AS

Type: number

Range: 1-255

int-routes-dist

Description Distance for routes internal to the AS

Type: number

Range: 1-255

local-routes-dist

Description Distance for local routes

Type: number

Range: 1-255

src-prefix

Description IP source prefix

Type: string

Format: ipv4-cidr

address-family

Specification	Value
Type	*object*

ipv4-flowspec

Description: ipv4-flowspec is a **JSON Block**. Please see below for *address-family_ipv4-flowspec*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv4-flowspec*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *address-family_ipv6*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6*

ipv6-flowspec

Description: ipv6-flowspec is a **JSON Block**. Please see below for *address-family_ipv6-flowspec*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6-flowspec*

address-family_ipv6-flowspec

Specification	Value
Type	*object*

neighbor

Description: neighbor is a **JSON Block**. Please see below for *address-family_ipv6-flowspec_neighbor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6-flowspec/neighbor*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6-flowspec_neighbor

Specification	Value
Type	*object*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6-flowspec/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6-flowspec/neighbor/ipv6-neighbor/{neighbor-ipv6}*

address-family_ipv6-flowspec_neighbor_ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-route-map-lists

Type: List

send-community-val

Description 'all': Send Standard, Extended, and Large Community attributes; 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes; 'large': Send Large Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6-flowspec_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6-flowspec_neighbor_ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-route-map-lists

Type: List

send-community-val

Description 'all': Send Standard, Extended, and Large Community attributes; 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes; 'large': Send Large Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6-flowspec_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv4-flowspec

Specification	Value
Type	*object*

neighbor

Description: neighbor is a **JSON Block**. Please see below for *address-family_ipv4-flowspec_neighbor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv4-flowspec/neighbor*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv4-flowspec_neighbor

Specification	Value
Type	*object*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv4-flowspec/neighbor/ipv4-neighbor/{neighbor-ipv4}*

address-family_ipv4-flowspec_neighbor_ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-route-map-lists

Type: List

send-community-val

Description 'all': Send Standard, Extended, and Large Community attributes; 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes; 'large': Send Large Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv4-flowspec_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv4-flowspec_neighbor_ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-route-map-lists

Type: List

send-community-val

Description 'all': Send Standard, Extended, and Large Community attributes; 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes; 'large': Send Large Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv4-flowspec_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6

Specification	Value
Type	*object*

aggregate-address-list

Type: List

auto-summary

Description Enable automatic network number summarization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Description: bgp is a **JSON Block**. Please see below for *address-family_ipv6_bgp*

Type: Object

distance

Description: distance is a **JSON Block**. Please see below for *address-family_ipv6_distance*

Type: Object

maximum-paths-value

Description Supported BGP multipath numbers

Type: number

Range: 1-64

Default: 1

neighbor

Description: neighbor is a **JSON Block**. Please see below for *address-family_ipv6_neighbor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor*

network

Description: network is a **JSON Block**. Please see below for *address-family_ipv6_network*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network*

originate

Description Distribute an IPv6 default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *address-family_ipv6_redistribute*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/redistribute*

synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6_distance

Specification	Value
Type	*object*

distance-ext

Description Distance for routes external to the AS

Type: number

Range: 1-255

distance-int

Description Distance for routes internal to the AS

Type: number

Range: 1-255

distance-local

Description Distance for local routes

Type: number

Range: 1-255

address-family_ipv6_redistribute

Specification	Value
Type	*object*

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_nat-map-cfg*

Type: Object

nat64-cfg

Description: nat64-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_nat64-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_ospf-cfg*

Type: Object

public-ip-cfg

Description: public-ip-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_public-ip-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_vip*

Type: Object

address-family_ipv6_redistribute_ip-nat-list-cfg

Specification	Value
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_lw4o6-cfg

Specification	Value
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_nat64-cfg

Specification	Value
Type	*object*

nat64

Description NAT64 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_connected-cfg

Specification	Value
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_vip

Specification	Value
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_vip_only-not-flagged-cfg*

Type: Object

address-family_ipv6_redistribute_vip_only-not-flagged-cfg

Specification	Value
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_vip_only-flagged-cfg

Specification	Value
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_ip-nat-cfg

Specification	Value
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_floating-ip-cfg

Specification	Value
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_isis-cfg

Specification	Value
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_nat-map-cfg

Specification	Value
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_rip-cfg

Specification	Value
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_ospf-cfg

Specification	Value
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_static-nat-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

address-family_ipv6_redistribute_static-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

address-family_ipv6_redistribute_public-ip-cfg

Specification	Value
Type	*object*

public-ip

Description Public IPv6/IPv4 Prefixes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_aggregate-address-list

Specification	Value
Type	*list*
Block object keys	

aggregate-address

Description Configure BGP aggregate entries (Aggregate IPv6 prefix)

Type: string

Format: ipv6-address-plen

as-set

Description Generate AS set path information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-only

Description Filter more specific routes from updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

address-family_ipv6_bgp

Specification	Value
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-start-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-start-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

dampening-unreachability

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

route-map

Description Route-map to specify criteria for dampening (Route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_network

Specification	Value
Type	*object*

ipv6-network-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}*

monitor

Description: monitor is a **JSON Block**. Please see below for *address-family_ipv6_network_monitor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *address-family_ipv6_network_synchronization*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/synchronization*

address-family_ipv6_network_ipv6-network-list

Specification	Value
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

lcomm-value

Description Large community value in the format XX:YY:ZZ

Type: string

Format: string-rlx

network-ipv6

Description Specify a network to announce via BGP

Type: string

Format: ipv6-address-plen

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6_network_synchronization

Specification	Value
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6_network_monitor

Specification	Value
Type	*object*

default

Description: default is a **JSON Block**. Please see below for *address-family_ipv6_network_monitor_default*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor/default*

address-family_ipv6_network_monitor_default

Specification	Value
Type	*object*

network-monitor-default

Description default route monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6_neighbor

Specification	Value
Type	*object*

ethernet-neighbor-ipv6-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ethernet-neighbor-ipv6/{ethernet}*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-ipv6-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6/{trunk}*

ve-neighbor-ipv6-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6/{ve}*

address-family_ipv6_neighbor_ethernet-neighbor-ipv6-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6_neighbor_ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

address-family_ipv6_neighbor_ipv4-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

address-family_ipv6_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_neighbor_ipv4-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

address-family_ipv6_neighbor_ipv4-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

address-family_ipv6_neighbor_peer-group-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

address-family_ipv6_neighbor_peer-group-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_neighbor_ve-neighbor-ipv6-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

address-family_ipv6_neighbor_trunk-neighbor-ipv6-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6_neighbor_ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

address-family_ipv6_neighbor_ipv6-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

address-family_ipv6_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_neighbor_ipv6-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

address-family_ipv6_neighbor_ipv6-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.107.3 router bgp address-family

Enter Address Family command mode

address-family Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	address-family
Element URI	/axapi/v3/router/bgp/{as-number}/address-family
Element Attributes	address-family_attributes
Partition Visibility	shared
Schema	`address-family schema`

Operations Allowed:

Get Object

GET

/axapi/v3/router/bgp/{as-number}/address-family

address-family_attributes

address-family attributes

ipv4-flowspec

Description: ipv4-flowspec is a **JSON Block**. Please see below for *ipv4-flowspec*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv4-flowspec*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6*

ipv6-flowspec

Description: ipv6-flowspec is a **JSON Block**. Please see below for *ipv6-flowspec*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6-flowspec*

ipv6-flowspec

Specification	Value
Type	*object*

neighbor

Description: neighbor is a **JSON Block**. Please see below for *ipv6-flowspec_neighbor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6-flowspec/neighbor*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6-flowspec_neighbor

Specification	Value
Type	*object*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6-flowspec/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6-flowspec/neighbor/ipv6-neighbor/{neighbor-ipv6}*

ipv6-flowspec_neighbor_ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-route-map-lists

Type: List

send-community-val

Description 'all': Send Standard, Extended, and Large Community attributes; 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes; 'large': Send Large Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6-flowspec_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6-flowspec_neighbor_ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-route-map-lists

Type: List

send-community-val

Description 'all': Send Standard, Extended, and Large Community attributes; 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes; 'large': Send Large Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6-flowspec_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv4-flowspec

Specification	Value
Type	*object*

neighbor

Description: neighbor is a **JSON Block**. Please see below for *ipv4-flowspec_neighbor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv4-flowspec/neighbor*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv4-flowspec_neighbor

Specification	Value
Type	*object*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv4-flowspec/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv4-flowspec/neighbor/ipv6-neighbor/{neighbor-ipv6}*

ipv4-flowspec_neighbor_ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-route-map-lists

Type: List

send-community-val

Description 'all': Send Standard, Extended, and Large Community attributes; 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes; 'large': Send Large Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv4-flowspec_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv4-flowspec_neighbor_ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-route-map-lists

Type: List

send-community-val

Description 'all': Send Standard, Extended, and Large Community attributes; 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes; 'large': Send Large Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv4-flowspec_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6

Specification	Value
Type	*object*

aggregate-address-list

Type: List

auto-summary

Description Enable automatic network number summarization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Description: bgp is a **JSON Block**. Please see below for *ipv6_bgp*

Type: Object

distance

Description: distance is a **JSON Block**. Please see below for *ipv6_distance*

Type: Object

maximum-paths-value

Description Supported BGP multipath numbers

Type: number

Range: 1-64

Default: 1

neighbor

Description: neighbor is a **JSON Block**. Please see below for *ipv6_neighbor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor*

network

Description: network is a **JSON Block**. Please see below for *ipv6_network*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network*

originate

Description Distribute an IPv6 default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *ipv6_redistribute*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/redistribute*

synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_distance

Specification	Value
Type	*object*

distance-ext

Description Distance for routes external to the AS

Type: number

Range: 1-255

distance-int

Description Distance for routes internal to the AS

Type: number

Range: 1-255

distance-local

Description Distance for local routes

Type: number

Range: 1-255

ipv6_redistribute

Specification	Value
Type	*object*

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_nat-map-cfg*

Type: Object

nat64-cfg

Description: nat64-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_nat64-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_ospf-cfg*

Type: Object

public-ip-cfg

Description: public-ip-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_public-ip-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *ipv6_redistribute_vip*

Type: Object

ipv6_redistribute_ip-nat-list-cfg

Specification	Value
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_lw4o6-cfg

Specification	Value
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_nat64-cfg

Specification	Value
Type	*object*

nat64

Description NAT64 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_connected-cfg

Specification	Value
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_vip

Specification	Value
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_vip_only-not-flagged-cfg*

Type: Object

ipv6_redistribute_vip_only-not-flagged-cfg

Specification	Value
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_vip_only-flagged-cfg

Specification	Value
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_ip-nat-cfg

Specification	Value
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_floating-ip-cfg

Specification	Value
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_isis-cfg

Specification	Value
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_nat-map-cfg

Specification	Value
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_rip-cfg

Specification	Value
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_ospf-cfg

Specification	Value
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_static-nat-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_redistribute_static-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_redistribute_public-ip-cfg

Specification	Value
Type	*object*

public-ip

Description Public IPv6/IPv4 Prefixes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_aggregate-address-list

Specification	Value
Type	*list*
Block object keys	

aggregate-address

Description Configure BGP aggregate entries (Aggregate IPv6 prefix)

Type: string

Format: ipv6-address-plen

as-set

Description Generate AS set path information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-only

Description Filter more specific routes from updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_bgp

Specification	Value
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-start-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-start-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

dampening-unreachability

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

route-map

Description Route-map to specify criteria for dampening (Route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_network

Specification	Value
Type	*object*

ipv6-network-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}*

monitor

Description: monitor is a **JSON Block**. Please see below for *ipv6_network_monitor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *ipv6_network_synchronization*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/synchronization*

ipv6_network_ipv6-network-list

Specification	Value
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

lcomm-value

Description Large community value in the format XX:YY:ZZ

Type: string

Format: string-rlx

network-ipv6

Description Specify a network to announce via BGP

Type: string

Format: ipv6-address-plen

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_network_synchronization

Specification	Value
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_network_monitor

Specification	Value
Type	*object*

default

Description: default is a **JSON Block**. Please see below for *ipv6_network_monitor_default*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor/default*

ipv6_network_monitor_default

Specification	Value
Type	*object*

network-monitor-default

Description default route monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_neighbor

Specification	Value
Type	*object*

ethernet-neighbor-ipv6-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ethernet-neighbor-ipv6/{ethernet}*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-ipv6-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6/{trunk}*

ve-neighbor-ipv6-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6/{ve}*

ipv6_neighbor_ethernet-neighbor-ipv6-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_neighbor_ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv6_neighbor_ipv4-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_neighbor_ipv4-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_ipv4-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_peer-group-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv6_neighbor_peer-group-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_neighbor_ve-neighbor-ipv6-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

ipv6_neighbor_trunk-neighbor-ipv6-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_neighbor_ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv6_neighbor_ipv6-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_neighbor_ipv6-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_ipv6-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.107.4 router bgp address-family ipv4-flowspec

ipv4-flowspec

ipv4-flowspec Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ipv4-flowspec
Element URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv4-flowspec

ipv6 attributes

aggregate-address-list

Type: List

auto-summary

Description Enable automatic network number summarization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Description: bgp is a **JSON Block**. Please see below for *bgp*

Type: Object

distance

Description: distance is a **JSON Block**. Please see below for *distance*

Type: Object

maximum-paths-value

Description Supported BGP multipath numbers

Type: number

Range: 1-64

Default: 1

neighbor

Description: neighbor is a **JSON Block**. Please see below for *neighbor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor*

network

Description: network is a **JSON Block**. Please see below for *network*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network*

originate

Description Distribute an IPv6 default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *redistribute*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/redistribute*

synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distance

Specification	Value
Type	*object*

distance-ext

Description Distance for routes external to the AS

Type: number

Range: 1-255

distance-int

Description Distance for routes internal to the AS

Type: number

Range: 1-255

distance-local

Description Distance for local routes

Type: number

Range: 1-255

redistribute

Specification	Value
Type	*object*

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *redistribute_connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *redistribute_floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *redistribute_ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *redistribute_ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *redistribute_isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *redistribute_lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *redistribute_nat-map-cfg*

Type: Object

nat64-cfg

Description: nat64-cfg is a **JSON Block**. Please see below for *redistribute_nat64-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *redistribute_ospf-cfg*

Type: Object

public-ip-cfg

Description: public-ip-cfg is a **JSON Block**. Please see below for *redistribute_public-ip-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *redistribute_rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *redistribute_static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *redistribute_static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *redistribute_vip*

Type: Object

redistribute_ip-nat-list-cfg

Specification	Value
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_lw4o6-cfg

Specification	Value
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_nat64-cfg

Specification	Value
Type	*object*

nat64

Description NAT64 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_connected-cfg

Specification	Value
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_vip

Specification	Value
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *redistribute_vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *redistribute_vip_only-not-flagged-cfg*

Type: Object

redistribute_vip_only-not-flagged-cfg

Specification	Value
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_vip_only-flagged-cfg

Specification	Value
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_ip-nat-cfg

Specification	Value
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_floating-ip-cfg

Specification	Value
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_isis-cfg

Specification	Value
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_nat-map-cfg

Specification	Value
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_rip-cfg

Specification	Value
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_ospf-cfg

Specification	Value
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_static-nat-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute_static-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute_public-ip-cfg

Specification	Value
Type	*object*

public-ip

Description Public IPv6/IPv4 Prefixes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

aggregate-address-list

Specification	Value
Type	*list*
Block object keys	

aggregate-address

Description Configure BGP aggregate entries (Aggregate IPv6 prefix)

Type: string

Format: ipv6-address-plen

as-set

Description Generate AS set path information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-only

Description Filter more specific routes from updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Specification	Value
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-start-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-start-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

dampening-unreachability

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

route-map

Description Route-map to specify criteria for dampening (Route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

network

Specification	Value
Type	*object*

ipv6-network-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}*

monitor

Description: monitor is a **JSON Block**. Please see below for *network_monitor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *network_synchronization*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/synchronization*

network_ipv6-network-list

Specification	Value
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

lcomm-value

Description Large community value in the format XX:YY:ZZ

Type: string

Format: string-rlx

network-ipv6

Description Specify a network to announce via BGP

Type: string

Format: ipv6-address-plen

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network_synchronization

Specification	Value
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network_monitor

Specification	Value
Type	*object*

default

Description: default is a **JSON Block**. Please see below for *network_monitor_default*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor/default*

network_monitor_default

Specification	Value
Type	*object*

network-monitor-default

Description default route monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

neighbor

Specification	Value
Type	*object*

ethernet-neighbor-ipv6-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ethernet-neighbor-ipv6/{ethernet}*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-ipv6-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6/{trunk}*

ve-neighbor-ipv6-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6/{ve}*

neighbor_ethernet-neighbor-ipv6-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

neighbor_ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor_ipv4-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor_ipv4-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv4-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_peer-group-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor_peer-group-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor_ve-neighbor-ipv6-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

neighbor_trunk-neighbor-ipv6-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

neighbor_ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor_ipv6-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv4-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv6-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.107.14 router bgp address-family ipv6 neighbor ethernet-neighbor-ipv6

Specify an ethernet unnumbered neighbor

ethernet-neighbor-ipv6 Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*ethernet*
Collection Name	*ethernet-neighbor-ipv6-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ethernet-neighbor-ipv6
Element Name	ethernet-neighbor-ipv6
Element URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ethernet-neighbor-ipv6/{ethernet}
Element Attributes	ethernet-neighbor-ipv6_attributes
Partition Visibility	shared
Schema	`ethernet-neighbor-ipv6 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ethernet-neighbor-ipv6

ethernet-neighbor-ipv6 attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ethernet-neighbor-ipv6

ethernet-neighbor-ipv6 attributes

ipv4-neighbor attributes

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.107.16 router bgp address-family ipv6 neighbor ipv6-neighbor

Specify a peer-group neighbor router

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Description: monitor is a **JSON Block**. Please see below for *monitor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *synchronization*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/synchronization*

ipv6-network-list

Specification	Value
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

lcomm-value

Description Large community value in the format XX:YY:ZZ

Type: string

Format: string-rlx

network-ipv6

Description Specify a network to announce via BGP

Type: string

Format: ipv6-address-plen

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

synchronization

Specification	Value
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor

Specification	Value
Type	*object*

default

Description: default is a **JSON Block**. Please see below for *monitor_default*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor/default*

monitor_default

Specification	Value
Type	*object*

network-monitor-default

Description default route monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.107.21 router bgp address-family ipv6 network ipv6-network

Specify a ip address mask network to announce via BGP

ipv6-network Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*network-ipv6*
Collection Name	*ipv6-network-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network
Element Name	ipv6-network
Element URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}
Element Attributes	ipv6-network_attributes
Partition Visibility	shared
Schema	`ipv6-network schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network

ipv6-network attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network

ipv6-network attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}

ipv6-network attributes

Get List

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network

ipv6-network-list

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}

ipv6-network attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}

ipv6-network attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network

ipv6-network-list

Delete Object

DELETE

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}

ipv6-network attributes

ipv6-network-list

ipv6-network-list is **JSON List** of *ipv6-network attributes*

```
ipv6-network-list : [
        { ipv6-network attributes },
        { ipv6-network attributes },
        ...
    ]
```

ipv6-network attributes

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value
