Type: string

Format: ipv6-address

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/virtual-server*

action-list_l1

Specification	Value
Type	*object*

auto

Description Auto calculate pkt len

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: auto and value are mutually exclusive

eth-list

Type: List

length

Description packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk_list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Total packet length starting at L2 header

Type: number

Range: 64-9000

Mutual Exclusion: value and auto are mutually exclusive

action-list_l1_eth-list

Specification	Value
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Interface number)

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

action-list_l1_trunk_list

Specification	Value
Type	*list*
Block object keys	

trunk-end

Description Trunk Group

Type: number

trunk-start

Description Trunk groups

Type: number

2.127.19 sys-ut state next-state case action

Specify event parameters

action Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*direction*
Collection Name	*action-list*
Collection URI	/axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action
Element Name	action
Element URI	/axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}
Element Attributes	action_attributes
Partition Visibility	shared
Schema	`action schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action

action attributes

action-list

Delete Object

DELETE

/axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}

action attributes

action-list

action-list is **JSON List** of *action attributes*

action-list : [

{ *action attributes* },

{ *action attributes* },

...

]

action attributes

delay

Description Delay in seconds

Type: number

Range: 1-3600

direction

Description 'send': Test event; 'expect': Expected result; 'wait': Introduce a delay;

Type: string

Supported Values: send, expect, wait

drop

Description Packet drop. Only allowed for output spec

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description: l1 is a **JSON Block**. Please see below for *l1*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l1*

l2

Description: l2 is a **JSON Block**. Please see below for *l2*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l2*

l3

Description: l3 is a **JSON Block**. Please see below for *l3*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l3*

tcp

Description: tcp is a **JSON Block**. Please see below for *tcp*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/tcp*

template

Description Packet template

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/sys-ut/template*

udp

Description: udp is a **JSON Block**. Please see below for *udp*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/udp*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udp

Specification	Value
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

length

Description Total packet length starting at UDP header

Type: number

Range: 64-9000

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-port

Description Source port value

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Specification	Value
Type	*object*

ack-seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

flags

Description: flags is a **JSON Block**. Please see below for *tcp_flags*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/tcp/flags*

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

options

Description: options is a **JSON Block**. Please see below for *tcp_options*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/tcp/options*

seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

src-port

Description Source port value

Type: number

Range: 1-65535

urgent

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

tcp_flags

Specification	Value
Type	*object*

ack

Description Ack

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cwr

Description Cwr

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ece

Description Ece

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin

Description Fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

psh

Description Psh

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rst

Description Rst

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn

Description Syn

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

urg

Description Urg

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_options

Specification	Value
Type	*object*

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description 'permitted': permitted; 'block': block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

l2

Specification	Value
Type	*object*

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

l2_mac-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Mac Address

Type: string

Format: mac-address

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/virtual-server*

l3

Specification	Value
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

ip-list

Type: List

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l3/ip/{src-dst}*

protocol

Description L4 Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description

Type: number

Range: 1-64

type

Description 'tcp': tcp; 'udp': udp; 'icmp': icmp;

Type: string

Supported Values: tcp, udp, icmp

Mutual Exclusion: type and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description protocol number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and type are mutually exclusive

l3_ip-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv6-address

Description Ipv6 address

Type: string

Format: ipv6-address

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/virtual-server*

l1

Specification	Value
Type	*object*

auto

Description Auto calculate pkt len

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: auto and value are mutually exclusive

eth-list

Type: List

length

Description packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk_list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Total packet length starting at L2 header

Type: number

Range: 64-9000

Mutual Exclusion: value and auto are mutually exclusive

l1_eth-list

Specification	Value

tcp attributes

tcp attributes

ack-seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

flags

Description: flags is a **JSON Block**. Please see below for *flags*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/tcp/flags*

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

options

Description: options is a **JSON Block**. Please see below for *options*

Type: Object

Reference Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/tcp/options*

seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

src-port

Description Source port value

Type: number

Range: 1-65535

urgent

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

flags

Specification	Value
Type	*object*

ack

Description Ack

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cwr

Description Cwr

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ece

Description Ece

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin

Description Fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

psh

Description Psh

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rst

Description Rst

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn

Description Syn

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

urg

Description Urg

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

options

Specification	Value
Type	*object*

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description ‘permitted’: permitted; ‘block’: block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

2.127.26 sys-ut state next-state case action tcp flags

TCP flags

flags Specification

Parameter	Value

udp attributes

udp attributes

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

length

Description Total packet length starting at UDP header

Type: number

Range: 64-9000

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-port

Description Source port value

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.127.29 sys-ut stop-test

Clear all dynamic test parameters and stop the test

stop-test Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	stop-test
Element URI	/axapi/v3/sys-ut/stop-test
Element Attributes	stop-test_attributes
Partition Visibility	None
Schema	`stop-test schema`

Operations Allowed:

        "status": "OK",
        "msg": "Success"
    }
}
```

template-list

template-list is **JSON List** of *template attributes*

template-list : [

{ *template attributes* },

{ *template attributes* },

...

]

template attributes

ignore-validation

Description: ignore-validation is a **JSON Block**. Please see below for *ignore-validation*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/ignore-validation*

l1

Description: l1 is a **JSON Block**. Please see below for *l1*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/l1*

l2

Description: l2 is a **JSON Block**. Please see below for *l2*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/l2*

l3

Description: l3 is a **JSON Block**. Please see below for *l3*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/l3*

name

Description template name

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Description: tcp is a **JSON Block**. Please see below for *tcp*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *udp*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/udp*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udp

Specification	Value
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

length

Description Total packet length starting at UDP header

Type: number

Range: 64-9000

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-port-range

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udp_src-port-range

Specification	Value
Type	*list*
Block object keys	

src-port-end

Description Src port end value

Type: number

src-port-start

Description Source port value

Type: number

l1

Specification	Value
Type	*object*

auto

Description Auto calculate pkt len

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: auto and value are mutually exclusive

drop

Description Packet drop. Only allowed for output spec

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eth-list

Type: List

length

Description packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk_list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Total packet length starting at L2 header

Type: number

Range: 64-9000

Mutual Exclusion: value and auto are mutually exclusive

l1_eth-list

Specification	Value
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Interface number)

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

l1_trunk_list

Specification	Value
Type	*list*
Block object keys	

trunk-end

Description Trunk Group

Type: number

trunk-start

Description Trunk groups

Type: number

l2

Specification	Value
Type	*object*

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Reference Object: */axapi/v3/sys-ut/template/{name}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

l2_mac-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Mac Address

Type: string

Format: mac-address

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/virtual-server*

l3

Specification	Value
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

ip-list

Type: List

Reference Object: */axapi/v3/sys-ut/template/{name}/l3/ip/{src-dst}*

protocol

Description L4 Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description

Type: number

Range: 1-64

type

Description 'tcp': tcp; 'udp': udp; 'icmp': icmp;

Type: string

Supported Values: tcp, udp, icmp

Mutual Exclusion: type and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description protocol number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and type are mutually exclusive

l3_ip-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

ipv4-end-address

Description IP end address

Type: string

Format: ipv4-address

ipv4-start-address

Description IP address

Type: string

Format: ipv4-address

ipv6-end-address

Description Ipv6 end address

Type: string

Format: ipv6-address

ipv6-start-address

Description Ipv6 address

Type: string

Format: ipv6-address

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual Ethernet interface

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/virtual-server*

ignore-validation

Specification	Value
Type	*object*

all

Description Skip validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description Dont validate TX descriptor. This includes Tx port, Len & vlan

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l2

Description Dont validate L2 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l3

Description Dont validate L3 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4

Description Dont validate L4 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Specification	Value
Type	*object*

ack-seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

flags

Description: flags is a **JSON Block**. Please see below for *tcp_flags*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/tcp/flags*

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

options

Description: options is a **JSON Block**. Please see below for *tcp_options*

Type: Object

Reference Object: */axapi/v3/sys-ut/template/{name}/tcp/options*

seq-number

Description 'valid': valid; 'invalid': invalid;

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_options

Specification	Value
Type	*object*

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description 'permitted': permitted; 'block': block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

2.127.31 sys-ut template ignore-validation

Ignore following layers for validation

ignore-validation Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ignore-validation
Element URI	/axapi/v3/sys-ut/template/{name}/ignore-validation
Element Attributes	ignore-validation_attributes
Partition Visibility	shared
Schema	`ignore-validation schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sys-ut/template/{name}/ignore-validation

ignore-validation attributes

```
POST /axapi/v3/sys-ut/template/a/ignore-validation
Payload:
{
    "ignore-validation": {
        "l1": 1
    }
}
```

Get Object

GET

/axapi/v3/sys-ut/template/{name}/ignore-validation

ignore-validation attributes

```
GET /axapi/v3/sys-ut/template/a/ignore-validation
Reponse:
{
    "ignore-validation": {
        "l1": 1,
        "l2": 0,
        "l3": 0,
        "l4": 0,
        "all": 0,
        "uuid": "2234c5ca-b702-11ef-b78f-ae71681635d0",

    }
}
```

Modify Object

POST

/axapi/v3/sys-ut/template/{name}/ignore-validation

ignore-validation attributes

Replace Object

PUT

/axapi/v3/sys-ut/template/{name}/ignore-validation

ignore-validation attributes

```
PUT /axapi/v3/sys-ut/template/a/ignore-validation
Payload:
{
    "ignore-validation": {
        "l1": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/sys-ut/template/{name}/ignore-validation

ignore-validation attributes

ignore-validation attributes

all

Description Skip validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description Dont validate TX descriptor. This includes Tx port, Len & vlan

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l2

Description Dont validate L2 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l3

Description Dont validate L3 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4

Description Dont validate L4 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.127.32 sys-ut template l1

L1 packet paramters

l1 Specification

Parameter	Value
Type	*Configuration Resource*

}
```

l1 attributes

auto

Description Auto calculate pkt len

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: auto and value are mutually exclusive

drop

Description Packet drop. Only allowed for output spec

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eth-list

Type: List

length

Description packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk_list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Total packet length starting at L2 header

Type: number

Range: 64-9000

Mutual Exclusion: value and auto are mutually exclusive

eth-list

Specification	Value
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Interface number)

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

trunk_list

Specification	Value

l2 attributes

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Reference Object: */axapi/v3/sys-ut/template/{name}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

mac-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

Description: glid is a **JSON Block**. Please see below for *glid*

Type: Object

Reference Object: */axapi/v3/system/glid*

guest-file

Description: guest-file is a **JSON Block**. Please see below for *guest-file*

Type: Object

Reference Object: */axapi/v3/system/guest-file*

gui-image-list

Description: gui-image-list is a **JSON Block**. Please see below for *gui-image-list*

Type: Object

Reference Object: */axapi/v3/system/gui-image-list*

hardware

Description: hardware is a **JSON Block**. Please see below for *hardware*

Type: Object

Reference Object: */axapi/v3/system/hardware*

hardware-accelerate

Description: hardware-accelerate is a **JSON Block**. Please see below for *hardware-accelerate*

Type: Object

Reference Object: */axapi/v3/system/hardware-accelerate*

health-check-list

Type: List

Reference Object: */axapi/v3/system/health-check/{l2hm-hc-name}*

high-memory-l4-session

Description: high-memory-l4-session is a **JSON Block**. Please see below for *high-memory-l4-session*

Type: Object

Reference Object: */axapi/v3/system/high-memory-l4-session*

hrxq-status

Description: hrxq-status is a **JSON Block**. Please see below for *hrxq-status*

Type: Object

Reference Object: */axapi/v3/system/hrxq-status*

hw-blocking-enable

Description Enable system hardware blocking (default disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp

Description: icmp is a **JSON Block**. Please see below for *icmp*

Type: Object

Reference Object: */axapi/v3/system/icmp*

icmp-rate

Description: icmp-rate is a **JSON Block**. Please see below for *icmp-rate*

Type: Object

Reference Object: */axapi/v3/system/icmp-rate*

icmp6

Description: icmp6 is a **JSON Block**. Please see below for *icmp6*

Type: Object

Reference Object: */axapi/v3/system/icmp6*

inuse-cpu-list

Description: inuse-cpu-list is a **JSON Block**. Please see below for *inuse-cpu-list*

Type: Object

Reference Object: */axapi/v3/system/inuse-cpu-list*

inuse-port-list

Description: inuse-port-list is a **JSON Block**. Please see below for *inuse-port-list*

Type: Object

Reference Object: */axapi/v3/system/inuse-port-list*

io-cpu

Description: io-cpu is a **JSON Block**. Please see below for *io-cpu*

Type: Object

Reference Object: */axapi/v3/system/io-cpu*

ip-dns-cache

Description: ip-dns-cache is a **JSON Block**. Please see below for *ip-dns-cache*

Type: Object

Reference Object: */axapi/v3/system/ip-dns-cache*

ip-stats

Description: ip-stats is a **JSON Block**. Please see below for *ip-stats*

Type: Object

Reference Object: */axapi/v3/system/ip-stats*

ip-threat-list

Description: ip-threat-list is a **JSON Block**. Please see below for *ip-threat-list*

Type: Object

Reference Object: */axapi/v3/system/ip-threat-list*

ip6-stats

Description: ip6-stats is a **JSON Block**. Please see below for *ip6-stats*

Type: Object

Reference Object: */axapi/v3/system/ip6-stats*

ipmi

Description: ipmi is a **JSON Block**. Please see below for *ipmi*

Type: Object

Reference Object: */axapi/v3/system/ipmi*

ipmi-service

Description: ipmi-service is a **JSON Block**. Please see below for *ipmi-service*

Type: Object

Reference Object: */axapi/v3/system/ipmi-service*

ipsec

Description: ipsec is a **JSON Block**. Please see below for *ipsec*

Type: Object

Reference Object: */axapi/v3/system/ipsec*

ipv6-prefix-length

Description Length of IPv6 prefix used to determine the user-group and the PU, by default 128

Type: number

Range: 16-128

Default: 128

job-offload

Description: job-offload is a **JSON Block**. Please see below for *job-offload*

Type: Object

Reference Object: */axapi/v3/system/job-offload*

link-capability

Description: link-capability is a **JSON Block**. Please see below for *link-capability*

Type: Object

Reference Object: */axapi/v3/system/link-capability*

link-monitor

Description: link-monitor is a **JSON Block**. Please see below for *link-monitor*

Type: Object

Reference Object: */axapi/v3/system/link-monitor*

lro

Description: lro is a **JSON Block**. Please see below for *lro*

Type: Object

Reference Object: */axapi/v3/system/lro*

management-interface-mode

Description: management-interface-mode is a **JSON Block**. Please see below for *management-interface-mode*

Type: Object

Reference Object: */axapi/v3/system/management-interface-mode*

memory

Description: memory is a **JSON Block**. Please see below for *memory*

Type: Object

Reference Object: */axapi/v3/system/memory*

memory-block-debug

Description: memory-block-debug is a **JSON Block**. Please see below for *memory-block-debug*

Type: Object

Reference Object: */axapi/v3/system/memory-block-debug*

mfa-auth

Description: mfa-auth is a **JSON Block**. Please see below for *mfa-auth*

Type: Object

Reference Object: */axapi/v3/system/mfa-auth*

mfa-cert-store

Description: mfa-cert-store is a **JSON Block**. Please see below for *mfa-cert-store*

Type: Object

Reference Object: */axapi/v3/system/mfa-cert-store*

mfa-management

Description: mfa-management is a **JSON Block**. Please see below for *mfa-management*

Type: Object

Reference Object: */axapi/v3/system/mfa-management*

mfa-validation-type

Description: mfa-validation-type is a **JSON Block**. Please see below for *mfa-validation-type*

Type: Object

Reference Object: */axapi/v3/system/mfa-validation-type*

mgmt-port

Description: mgmt-port is a **JSON Block**. Please see below for *mgmt-port*

Type: Object

Reference Object: */axapi/v3/system/mgmt-port*

modify-port

Description: modify-port is a **JSON Block**. Please see below for *modify-port*

Type: Object

Reference Object: */axapi/v3/system/modify-port*

module-ctrl-cpu

Description 'high': high cpu usage; 'low': low cpu usage; 'medium': medium cpu usage;

Type: string

Supported Values: high, low, medium

mon-template

Description: mon-template is a **JSON Block**. Please see below for *mon-template*

Type: Object

Reference Object: */axapi/v3/system/mon-template*

multi-queue-support

Description: multi-queue-support is a **JSON Block**. Please see below for *multi-queue-support*

Type: Object

Reference Object: */axapi/v3/system/multi-queue-support*

ndisc-ra

Description: ndisc-ra is a **JSON Block**. Please see below for *ndisc-ra*

Type: Object

Reference Object: */axapi/v3/system/ndisc-ra*

netvsc-monitor

Description: netvsc-monitor is a **JSON Block**. Please see below for *netvsc-monitor*

Type: Object

Reference Object: */axapi/v3/system/netvsc-monitor*

nsm-a10lb

Description: nsm-a10lb is a **JSON Block**. Please see below for *nsm-a10lb*

Type: Object

Reference Object: */axapi/v3/system/nsm-a10lb*

password-policy

Description: password-policy is a **JSON Block**. Please see below for *password-policy*

Type: Object

Reference Object: */axapi/v3/system/password-policy*

path-list

Type: List

Reference Object: */axapi/v3/system/path/{l2hm-path-name}*

pbslb

Description: pbslb is a **JSON Block**. Please see below for *pbslb*

Type: Object

Reference Object: */axapi/v3/system/pbslb*

per-vlan-limit

Description: per-vlan-limit is a **JSON Block**. Please see below for *per-vlan-limit*

Type: Object

Reference Object: */axapi/v3/system/per-vlan-limit*

platformtype

Description: platformtype is a **JSON Block**. Please see below for *platformtype*

Type: Object

Reference Object: */axapi/v3/system/platformtype*

port-count

Description: port-count is a **JSON Block**. Please see below for *port-count*

Type: Object

Reference Object: */axapi/v3/system/port-count*

port-info

Description: port-info is a **JSON Block**. Please see below for *port-info*

Type: Object

Reference Object: */axapi/v3/system/port-info*

port-list

Description: port-list is a **JSON Block**. Please see below for *port-list*

Type: Object

Reference Object: */axapi/v3/system/port-list*

ports

Description: ports is a **JSON Block**. Please see below for *ports*

Type: Object

Reference Object: */axapi/v3/system/ports*

power-on-self-test

Description: power-on-self-test is a **JSON Block**. Please see below for *power-on-self-test*

Type: Object

Reference Object: */axapi/v3/system/power-on-self-test*

probe-network-devices

Type: Object

Reference Object: */axapi/v3/system/probe-network-devices*

promiscuous-mode

Description Run in promiscous mode settings

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

psu-info

Description: psu-info is a **JSON Block**. Please see below for *psu-info*

Type: Object

Reference Object: */axapi/v3/system/psu-info*

q-in-q

Description: q-in-q is a **JSON Block**. Please see below for *q-in-q*

Type: Object

Reference Object: */axapi/v3/system/q-in-q*

queuing-buffer

Description: queuing-buffer is a **JSON Block**. Please see below for *queuing-buffer*

Type: Object

Reference Object: */axapi/v3/system/queuing-buffer*

radius

Description: radius is a **JSON Block**. Please see below for *radius*

Type: Object

Reference Object: */axapi/v3/system/radius*

reboot

Description: reboot is a **JSON Block**. Please see below for *reboot*

Type: Object

Reference Object: */axapi/v3/system/reboot*

resource-accounting

Description: resource-accounting is a **JSON Block**. Please see below for *resource-accounting*

Type: Object

Reference Object: */axapi/v3/system/resource-accounting*

resource-usage

Description: resource-usage is a **JSON Block**. Please see below for *resource-usage*

Type: Object

Reference Object: */axapi/v3/system/resource-usage*

rfc-ipfix-ie-spec

Description 'enable': Use RFC-defined IPFIX information element lengths; 'disable': Use non-standard IPFIX information element lengths;

Type: string

Supported Values: enable, disable

Default: disable

session

Description: session is a **JSON Block**. Please see below for *session*

Type: Object

Reference Object: */axapi/v3/system/session*

session-reclaim-limit

Description: session-reclaim-limit is a **JSON Block**. Please see below for *session-reclaim-limit*

Type: Object

Reference Object: */axapi/v3/system/session-reclaim-limit*

set-rxtx-desc-size

Description: set-rxtx-desc-size is a **JSON Block**. Please see below for *set-rxtx-desc-size*

Type: Object

Reference Object: */axapi/v3/system/set-rxtx-desc-size*

set-rxtx-queue

Description: set-rxtx-queue is a **JSON Block**. Please see below for *set-rxtx-queue*

Type: Object

Reference Object: */axapi/v3/system/set-rxtx-queue*

set-tcp-syn-per-sec

Description: set-tcp-syn-per-sec is a **JSON Block**. Please see below for *set-tcp-syn-per-sec*

Type: Object

Reference Object: */axapi/v3/system/set-tcp-syn-per-sec*

shared-poll-mode

Description: shared-poll-mode is a **JSON Block**. Please see below for *shared-poll-mode*

Type: Object

Reference Object: */axapi/v3/system/shared-poll-mode*

shell-privileges

Description: shell-privileges is a **JSON Block**. Please see below for *shell-privileges*

Type: Object

Reference Object: */axapi/v3/system/shell-privileges*

shm-logging

Description: shm-logging is a **JSON Block**. Please see below for *shm-logging*

Type: Object

Reference Object: */axapi/v3/system/shm-logging*

shutdown

Description: shutdown is a **JSON Block**. Please see below for *shutdown*

Type: Object

Reference Object: */axapi/v3/system/shutdown*

software-tcam

Description: software-tcam is a **JSON Block**. Please see below for *software-tcam*

Type: Object

Reference Object: */axapi/v3/system/software-tcam*

spe-profile

Description: spe-profile is a **JSON Block**. Please see below for *spe-profile*

Type: Object

Reference Object: */axapi/v3/system/spe-profile*

spe-status

Description: spe-status is a **JSON Block**. Please see below for *spe-status*

Type: Object

Reference Object: */axapi/v3/system/spe-status*

src-ip-hash-enable

Description Enable source ip hash

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-req-q

Description: ssl-req-q is a **JSON Block**. Please see below for *ssl-req-q*

Type: Object

Reference Object: */axapi/v3/system/ssl-req-q*

ssl-scv

Description: ssl-scv is a **JSON Block**. Please see below for *ssl-scv*

Type: Object

Reference Object: */axapi/v3/system/ssl-scv*

ssl-scv-verify-crl-sign

Description: ssl-scv-verify-crl-sign is a **JSON Block**. Please see below for *ssl-scv-verify-crl-sign*

Type: Object

Reference Object: */axapi/v3/system/ssl-scv-verify-crl-sign*

ssl-scv-verify-host

Description: ssl-scv-verify-host is a **JSON Block**. Please see below for *ssl-scv-verify-host*

Type: Object

Reference Object: */axapi/v3/system/ssl-scv-verify-host*

ssl-set-compatible-cipher

Description: ssl-set-compatible-cipher is a **JSON Block**. Please see below for *ssl-set-compatible-cipher*

Type: Object

Reference Object: */axapi/v3/system/ssl-set-compatible-cipher*

ssl-status

Description: ssl-status is a **JSON Block**. Please see below for *ssl-status*

Type: Object

Reference Object: */axapi/v3/system/ssl-status*

syslog-time-msec

Description: syslog-time-msec is a **JSON Block**. Please see below for *syslog-time-msec*

Type: Object

Reference Object: */axapi/v3/system/syslog-time-msec*

system-chassis-port-split-enable

Description Enable port split for the chassis

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

table-integrity

Description: table-integrity is a **JSON Block**. Please see below for *table-integrity*

Type: Object

Reference Object: */axapi/v3/system/table-integrity*

tcp

Description: tcp is a **JSON Block**. Please see below for *tcp*

Type: Object

Reference Object: */axapi/v3/system/tcp*

tcp-stats

Description: tcp-stats is a **JSON Block**. Please see below for *tcp-stats*

Type: Object

Reference Object: */axapi/v3/system/tcp-stats*

tcp-syn-per-sec

Description: tcp-syn-per-sec is a **JSON Block**. Please see below for *tcp-syn-per-sec*

Type: Object

Reference Object: */axapi/v3/system/tcp-syn-per-sec*

telemetry-log

Description: telemetry-log is a **JSON Block**. Please see below for *telemetry-log*

Type: Object

Reference Object: */axapi/v3/system/telemetry-log*

template

Description: template is a **JSON Block**. Please see below for *template*

Type: Object

Reference Object: */axapi/v3/system/template*

template-bind

Description: template-bind is a **JSON Block**. Please see below for *template-bind*

Type: Object

Reference Object: */axapi/v3/system/template-bind*

throughput

Description: throughput is a **JSON Block**. Please see below for *throughput*

Type: Object

Reference Object: */axapi/v3/system/throughput*

timeout-value

Description: timeout-value is a **JSON Block**. Please see below for *timeout-value*

Type: Object

Reference Object: */axapi/v3/system/timeout-value*

tls-1-3-mgmt

Description: tls-1-3-mgmt is a **JSON Block**. Please see below for *tls-1-3-mgmt*

Type: Object

Reference Object: */axapi/v3/system/tls-1-3-mgmt*

trunk

Description: trunk is a **JSON Block**. Please see below for *trunk*

Type: Object

Reference Object: */axapi/v3/system/trunk*

trunk-hw-hash

Description: trunk-hw-hash is a **JSON Block**. Please see below for *trunk-hw-hash*

Type: Object

Reference Object: */axapi/v3/system/trunk-hw-hash*

trunk-xaui-hw-hash

Description: trunk-xaui-hw-hash is a **JSON Block**. Please see below for *trunk-xaui-hw-hash*

Type: Object

Reference Object: */axapi/v3/system/trunk-xaui-hw-hash*

tso

Description: tso is a **JSON Block**. Please see below for *tso*

Type: Object

Reference Object: */axapi/v3/system/tso*

udp

Description: udp is a **JSON Block**. Please see below for *udp*

Type: Object

Reference Object: */axapi/v3/system/udp*

upgrade-status

Description: upgrade-status is a **JSON Block**. Please see below for *upgrade-status*

Type: Object

Reference Object: */axapi/v3/system/upgrade-status*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-mac-scheme

Description: ve-mac-scheme is a **JSON Block**. Please see below for *ve-mac-scheme*

Type: Object

Reference Object: */axapi/v3/system/ve-mac-scheme*

xaui-dlb-mode

Description: xaui-dlb-mode is a **JSON Block**. Please see below for *xaui-dlb-mode*

Type: Object

Reference Object: */axapi/v3/system/xaui-dlb-mode*

geo-location

Specification	Value
Type	*object*

entry-list

Type: List

Reference Object: */axapi/v3/system/geo-location/entry/{geo-locn-obj-name}*

geo-location-geolite2-asn

Description Load built-in Maxmind GeoLite2-ASN database. Database available from http://www.maxmind.com

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location-geolite2-city

Description Load built-in Maxmind GeoLite2-City database. Database available from http://www.maxmind.com

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location-geolite2-country

Description Load built-in Maxmind GeoLite2-Country database. Database available from http://www.maxmind.com

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location-iana

Description Load built-in IANA Database

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

geo-location-iana-system

Description Load built-in IANA Database

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geolite2-asn-include-ipv6

Description Include IPv6 address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geolite2-city-include-ipv6

Description Include IPv6 address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geolite2-country-include-ipv6

Description Include IPv6 address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-load-file-list

Type: List

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location_entry-list_geo-locn-multiple-addresses

Specification	Value
Type	*list*
Block object keys	

first-ip-address

Description Specify IP information (Specify IP address)

Type: string

Format: ipv4-address

first-ipv6-address

Description Specify IPv6 address

Type: string

Format: ipv6-address

geol-ipv4-mask

Description Specify IPv4 mask

Type: string

Format: ipv4-netmask

Mutual Exclusion: geol-ipv4-mask and ip-addr2 are mutually exclusive

geol-ipv6-mask

Description Specify IPv6 mask

Type: number

Range: 0-128

Mutual Exclusion: geol-ipv6-mask and ipv6-addr2 are mutually exclusive

ip-addr2

Description Specify IP address range

Type: string

Format: ipv4-address

Mutual Exclusion: ip-addr2 and geol-ipv4-mask are mutually exclusive

ipv6-addr2

Description Specify IPv6 address range

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr2 and geol-ipv6-mask are mutually exclusive

geo-location_geoloc-load-file-list

Specification	Value
Type	*list*
Block object keys	

geo-location-load-file-include-ipv6

Description Include IPv6 address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location-load-filename

Description Specify file to be loaded

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

geo-location-load-temp-include-ipv6

Description Include IPv6 address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-name

Description CSV template to load this file

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/template/csv*

mgmt-port

Specification	Value
Type	*object*

mac-address

Description mac-address to be configured as mgmt port

Type: string

Format: mac-address

Maximum Length: 14 characters

Maximum Length: 14 characters

pci-address

Description pci-address to be configured as mgmt port

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

geolocation-file

Specification	Value
Type	*object*

error-info

Description: error-info is a **JSON Block**. Please see below for *geolocation-file_error-info*

Description 'all': all; 'activeopens': Active open conns; 'passiveopens': Passive open conns; 'attemptfails': Connect attemp failures; 'estabresets': Resets rcvd on EST conn; 'insegs': Total in TCP packets; 'outsegs': Total out TCP packets; 'retranssegs': Retransmited packets; 'inerrs': Input errors; 'outrsts': Reset Sent; 'sock_alloc': Sockets allocated; 'orphan_count': Orphan sockets; 'mem_alloc': Memory alloc; 'recv_mem': Total rx buffer; 'send_mem': Total tx buffer; 'currestab': Currently EST conns; 'currsyssnt': TCP in SYN-SNT state; 'currsynrcv': TCP in SYN-RCV state; 'currfinw1': TCP in FIN-W1 state; 'currfinw2': TCP FIN-W2 state; 'currtimew': TCP TimeW state; 'currclose': TCP in Close state; 'currclsw': TCP in CloseW state; 'currlack': TCP in LastACK state; 'currlstn': TCP in Listen state; 'currclsg': TCP in Closing state; 'pawsactiverejected': TCP paw active rej; 'syn_rcv_rstack': Rcv RST|ACK on SYN; 'syn_rcv_rst': Rcv RST on SYN; 'syn_rcv_ack': Rcv ACK on SYN; 'ax_rexmit_syn': TCP rexmit SYN; 'tcpabortontimeout': TCP abort on timeout; 'noroute': TCPIP out noroute; 'exceedmss': MSS exceeded pkt dropped; 'tfo_conns': TFO Total Connections; 'tfo_actives': TFO Current Actives; 'tfo_denied': TFO Denied;

Type: string

Supported Values: all, activeopens, passiveopens, attemptfails, estabresets, insegs, outsegs, retranssegs, inerrs, outrsts, sock_alloc, orphan_count, mem_alloc, recv_mem, send_mem, currestab, currsyssnt, currsynrcv, currfinw1, currfinw2, currtimew, currclose, currclsw, currlack, currlstn, currclsg, pawsactiverejected, syn_rcv_rstack, syn_rcv_rst, syn_rcv_ack,

ax_rexmit_syn, tcpabortontimeout, noroute, exceedmss, tfo_conns, tfo_actives, tfo_denied, syn_rcv_rexmit, sock_init, invalid_drop, delayed_free

tcp_rate-limit-reset-unknown-conn

Specification	Value
Type	*object*

log-for-reset-unknown-conn

Description Log when rate exceed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pkt-rate-for-reset-unknown-conn

Description

Type: number

Range: 1-1048575

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bandwidth

Specification	Value
Type	*object*

critical-threshold

Description Adjust bandwidth critical threshold

Type: number

Range: 81-99

Default: 95

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

warning-threshold

Description Adjust bandwidth warning threshold

Type: number

Range: 50-80

Default: 75

bandwidth_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'input-bytes-per-sec': In Bytes per second; 'output-bytes-per-sec': Out Bytes per second;

Type: string

Supported Values: all, input-bytes-per-sec, output-bytes-per-sec, ppsl_drop_egr, ppsl_drop_ing, ppsl_ignore_limit, licexpire_drop, bwl_drop

session

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

session_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_l4_conn': Total L4 Count; 'conn_counter': Conn Count; 'conn_freed_counter': Conn Freed; 'total_l4_packet_count': Total L4 Packet Count; 'total_l7_packet_count': Total L7 Packet Count; 'total_l4_conn_proxy': Total L4 Conn Proxy Count; 'total_l7_conn': Total L7 Conn; 'total_tcp_conn': Total TCP Conn; 'curr_free_conn': Curr Free Conn; 'tcp_est_counter': TCP Established; 'tcp_half_open_counter': TCP Half Open; 'tcp_half_close_counter': TCP Half Closed; 'udp_counter': UDP Count; 'ip_counter': IP Count; 'other_counter': Non TCP/UDP IP sessions; 'reverse_nat_tcp_counter': Reverse NAT TCP; 'reverse_nat_udp_counter': Reverse NAT UDP; 'tcp_syn_half_open_counter': TCP SYN Half Open; 'conn_smp_alloc_counter': Conn SMP Alloc; 'conn_smp_free_counter': Conn SMP Free; 'conn_smp_aged_counter': Conn SMP Aged; 'ssl_count_curr': Curr SSL Count; 'ssl_count_total': Total SSL Count; 'server_ssl_count_curr': Current SSL Server Count; 'server_ssl_count_total': Total SSL Server Count; 'client_ssl_reuse_total': Total SSL Client Reuse; 'server_ssl_reuse_total': Total SSL Server Reuse; 'ssl_failed_total': Total SSL Failures; 'ssl_failed_ca_verification': SSL Cert Auth Verification Errors; 'ssl_server_cert_error': SSL Server Cert Errors; 'ssl_client_cert_auth_fail': SSL Client Cert Auth Failures; 'total_ip_nat_conn': Total IP Nat Conn; 'total_l2l3_conn': Totl L2/L3 Connections; 'client_ssl_ctx_malloc_failure': Client SSL Ctx malloc Failures; 'conn_type_0_available': Conn Type 0 Available; 'conn_type_1_available': Conn Type 1 Available; 'conn_type_2_available': Conn Type 2 Available; 'conn_type_3_available': Conn Type 3 Available; 'conn_type_4_available': Conn Type 4 Available; 'conn_smp_type_0_available': Conn SMP Type 0 Available; 'conn_smp_type_1_available': Conn SMP Type 1 Available; 'conn_smp_type_2_available': Conn SMP Type 2 Available; 'conn_smp_type_3_available': Conn SMP Type 3 Available; 'conn_smp_type_4_available': Conn SMP Type 4 Available; 'sctp-half-open-counter': SCTP Half Open; 'sctp-est-counter': SCTP Established; 'nonssl_bypass': NON SSL Bypass Count; 'ssl_failsafe_total': Total SSL Failsafe Count; 'ssl_forward_proxy_failed_handshake_total': Total SSL Forward Proxy Failed Handshake Count; 'ssl_forward_proxy_failed_tcp_total': Total SSL Forward Proxy Failed TCP Count; 'ssl_forward_proxy_failed_crypto_total': Total SSL Forward Proxy Failed Crypto Count; 'ssl_forward_proxy_failed_cert_verify_total': Total SSL Forward Proxy Failed Certificate Verification Count; 'ssl_forward_proxy_invalid_ocsp_stapling_total': Total SSL Forward Proxy Invalid OCSP Stapling Count; 'ssl_forward_proxy_revoked_ocsp_total': Total SSL Forward Proxy Revoked OCSP Response Count; 'ssl_forward_proxy_failed_cert_signing_total': Total SSL Forward Proxy Failed Certificate Signing Count; 'ssl_forward_proxy_failed_ssl_version_total': Total SSL Forward Proxy Unsupported version Count; 'ssl_forward_proxy_sni_bypass_total': Total SSL Forward Proxy SNI Bypass Count; 'ssl_forward_proxy_client_auth_bypass_total': Total SSL Forward Proxy Client Auth Bypass Count; 'conn_app_smp_alloc_counter': Conn APP SMP Alloc; 'diameter_conn_counter': Diameter Conn Count; 'diameter_conn_freed_counter': Diameter Conn Freed; 'debug_tcp_counter': Hidden TCP sessions for CGNv6 Stateless Technologies; 'debug_udp_counter': Hidden UDP sessions for CGNv6 Stateless Technologies; 'total_fw_conn': Total Firewall Conn; 'total_local_conn': Total Local Conn; 'total_curr_conn': Total Curr Conn; 'client_ssl_fatal_alert': client ssl fatal alert; 'client_ssl_fin_rst': client ssl fin rst; 'fp_session_fin_rst': FP Session FIN/RST; 'server_ssl_fatal_alert': server ssl fatal alert; 'server_ssl_fin_rst': server ssl fin rst; 'client_template_int_err': client tem-

plate internal error; 'client_template_unknown_err': client template unknown error; 'server_template_int_err': server template int error; 'server_template_unknown_err': server template unknown error; 'total_debug_conn': Total Debug Conn; 'ssl_forward_proxy_failed_aflex_total': Total SSL Forward Proxy AFLEX Count; 'ssl_forward_proxy_cert_subject_bypass_total': Total SSL Forward Proxy Certificate Subject Bypass Count; 'ssl_forward_proxy_cert_issuer_bypass_total': Total SSL Forward Proxy Certificate Issuer Bypass Count; 'ssl_forward_proxy_cert_san_bypass_total': Total SSL Forward Proxy Certificate SAN Bypass Count; 'ssl_forward_proxy_no_sni_bypass_total': Total SSL Forward Proxy No SNI Bypass Count; 'ssl_forward_proxy_no_sni_reset_total': Total SSL Forward Proxy No SNI reset Count; 'ssl_forward_proxy_username_bypass_total': Total SSL Forward Proxy Username Bypass Count; 'ssl_forward_proxy_ad_grpup_bypass_total': Total SSL Forward Proxy AD-Group Bypass Count; 'diameter_concurrent_user_sessions_counter': Diameter Concurrent User-Sessions; 'client_ssl_session_ticket_reuse_total': Total SSL Client Session Ticket Reuse; 'server_ssl_session_ticket_reuse_total': Total SSL Server Session Ticket Reuse; 'total_clientside_early_data_connections': Total clientside early data connections; 'total_serverside_early_data_connections': Total serverside early data connections; 'total_clientside_failed_early_data-connections': Total clientside failed early data connections; 'total_serverside_failed_early_data-connections': Total serverside failed early data connections; 'ssl_forward_proxy_esni_bypass_total': Total SSL Forward Proxy ESNI Bypass Count; 'ssl_forward_proxy_esni_reset_total': Total SSL Forward Proxy ESNI Drop Count; 'total_logging_conn': Total Logging Conn; 'gtp_c_est_counter': GTP-C Established; 'gtp_c_half_open_counter': GTP-C Half Open; 'gtp_u_counter': GTP-U Count; 'gtp_c_echo_counter': GTP-C Echo Count; 'gtp_u_echo_counter': GTP-U Echo Count; 'gtp_curr_free_conn': GTP Current Available Conn; 'gtp_cum_conn_counter': GTP cumulative Conn Count; 'gtp_cum_conn_freed_counter': GTP cumulative Conn Freed; 'fw_blacklist_sess': Blacklist Sessions; 'fw_blacklist_sess_created': Blacklist Session Created; 'fw_blacklist_sess_freed': Blacklist Session Freed; 'server_tcp_est_counter': Server TCP Established; 'server_tcp_half_open_counter': Server TCP Half Open;

Type: string

Supported Values: all, entry-create, entry-create-failure, entry-create-fail-server-down, entry-create-fail-max-entry, entry-free, entry-free-opp-entry, entry-free-no-hw-prog, entry-free-no-conn, entry-free-no-sw-entry, entry-counter, entry-age-out, entry-age-out-idle, entry-age-out-tcp-fin, entry-age-out-tcp-rst, entry-age-out-invalid-dst, entry-force-hw-invalidate, entry-invalidate-server-down, tcam-create, tcam-free, tcam-counter

software-tcam

Specification	Value
Type	*object*

enable

Description Enable software TCAM

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

session-reclaim-limit

Specification	Value
Type	*object*

nscan-limit

Description smp session scan limit (number of smp sessions per scan)

Type: number

Range: 1-20480

Default: 4096

scan-freq

Description smp session scan frequency (scan per second)

Type: number

Range: 5-50

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inuse-cpu-list

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

add-port

Specification	Value
Type	*object*

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

tso

Specification	Value
Type	*object*

disable

Description Disable TCP Segmentation Offload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable TCP Segmentation Offload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'ip_checksum_error': IP packet checksum errors; 'udp_checksum_error': UDP packet checksum errors; 'session_not_found': Session not found; 'multihop_mismatch': Multihop session or packet mismatch; 'version_mismatch': BFD version mismatch; 'length_too_small': Packets too small; 'data_is_short': Packet data length too short; 'invalid_detect_mult': Invalid detect multiplier; 'invalid_multipoint': Invalid multipoint setting; 'invalid_my_disc': Invalid my descriptor; 'invalid_ttl': Invalid TTL; 'auth_length_invalid': Invalid authentication length; 'auth_mismatch': Authentication mismatch; 'auth_type_mismatch': Authentication type mismatch; 'auth_key_id_mismatch': Authentication key-id mismatch; 'auth_key_mismatch': Authentication key mismatch; 'auth_seqnum_invalid': Invalid authentication sequence number; 'auth_failed': Authentication failures; 'local_state_admin_down': Local admin down session state; 'dest_unreachable': Destination unreachable; 'no_ipv6_enable': No IPv6 enable; 'other_error': Other errors;

Type: string

Supported Values: all, ip_checksum_error, udp_checksum_error, session_not_found, multihop_mismatch, version_mismatch, length_too_small, data_is_short, invalid_detect_mult, invalid_multipoint, invalid_my_disc, invalid_ttl, auth_length_invalid, auth_mismatch, auth_type_mismatch, auth_key_id_mismatch, auth_key_mismatch, auth_seqnum_invalid, auth_failed, local_state_admin_down, dest_unreachable, no_ipv6_enable, other_error

tls-1-3-mgmt

Specification	Value
Type	*object*

enable

Description Enable TLS 1.3 support on ACOS management plane

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

environment

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-info

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-hw-hash

Specification	Value
Type	*object*

mode

Description Set HW hash mode, default is 6 (1:dst-mac 2:src-mac 3:src-dst-mac 4:src-ip 5:dst-ip 6:rtag6 7:rtag7)

Type: number

Range: 1-7

Default: 6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template

Specification	Value
Type	*object*

template-policy

Description Apply policy template to the whole system (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/policy*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-bind

Specification	Value
Type	*object*

monitor-list

Type: List

Reference Object: */axapi/v3/system/template-bind/monitor/{template-monitor}*

template-bind_monitor-list

Specification	Value
Type	*list*
Block object keys	

template-monitor

Description Monitor template ID Number

Type: number

Range: 1-16

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipmi

Specification	Value
Type	*object*

ip

Description: ip is a **JSON Block**. Please see below for *ipmi_ip*

Type: Object

Reference Object: */axapi/v3/system/ipmi/ip*

ipsrc

Description: ipsrc is a **JSON Block**. Please see below for *ipmi_ipsrc*

Type: Object

Reference Object: */axapi/v3/system/ipmi/ipsrc*

reset

Description Reset IPMI Controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tool

Description: tool is a **JSON Block**. Please see below for *ipmi_tool*

Type: Object

Reference Object: */axapi/v3/system/ipmi/tool*

user

Description: user is a **JSON Block**. Please see below for *ipmi_user*

Type: Object

Reference Object: */axapi/v3/system/ipmi/user*

ipmi_ip

Specification	Value
Type	*object*

default-gateway

Description Default gateway address

Type: string

Format: ipv4-address

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ipmi_ipsrc

Specification	Value
Type	*object*

dhcp

Description IP addr obtained by BMC running DHCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Manually configured static IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipmi_tool

Specification	Value
Type	*object*

cmd

Description Command to execute in double quotes

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

ipmi_user

Specification	Value
Type	*object*

add

Description Add a new IPMI user (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

administrator

Description Full control

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

callback

Description Lowest privilege level

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable an existing IPMI user (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

newname

Description New IPMI User Name

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

newpass

Description New Password

Type: string

Format: password

Maximum Length: 17 characters

Maximum Length: 1 characters

operator

Description Most BMC commands are allowed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description Password

Type: string

Format: password

Maximum Length: 17 characters

Maximum Length: 1 characters

privilege

Description Change an existing IPMI user privilege (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

setname

Description Change User Name (Current IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

setpass

Description Change Password (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

user

Description Only 'benign' commands are allowed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

set-rxtx-queue

Specification	Value
Type	*object*

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

rxq-size

Description Set number of new rx queues

Type: number

Range: 0-1024

txq-size

Description Set number of new tx queues

Type: number

Range: 0-1024

lro

Specification	Value
Type	*object*

disable

Description Disable Large Receive Offload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable Large Receive Offload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

q-in-q

Specification	Value
Type	*object*

enable-all-ports

Description Enable 802.1QinQ on all physical ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inner-tpid

Description TPID for inner VLAN (Inner TPID, 16 bit hex value, default is 8100)

Type: string

Format: time-hh:mm

Maximum Length: 4 characters

Maximum Length: 1 characters

outer-tpid

Description TPID for outer VLAN (Outer TPID, 16 bit hex value, default is 8100)

Type: string

Format: time-hh:mm

Maximum Length: 4 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-req-q

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-req-q_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num-ssl-queues': some help string; 'ssl-req-q-depth-tot': some help string; 'ssl-req-q-inuse-tot': some help string; 'ssl-hw-q-depth-tot': some help string; 'ssl-hw-q-inuse-tot': some help string;

Type: string

Supported Values: all, num-ssl-queues, ssl-req-q-depth-tot, ssl-req-q-inuse-tot, ssl-hw-q-depth-tot, ssl-hw-q-inuse-tot

telemetry-log

Specification	Value
Type	*object*

device-status

Description: device-status is a **JSON Block**. Please see below for *telemetry-log_device-status*

Type: Object

Reference Object: */axapi/v3/system/telemetry-log/device-status*

environment

Description: environment is a **JSON Block**. Please see below for *telemetry-log_environment*

Type: Object

Reference Object: */axapi/v3/system/telemetry-log/environment*

partition-metrics

Description: partition-metrics is a **JSON Block**. Please see below for *telemetry-log_partition-metrics*

Type: Object

Reference Object: */axapi/v3/system/telemetry-log/partition-metrics*

top-k-app-svc-list

Description: top-k-app-svc-list is a **JSON Block**. Please see below for *telemetry-log_top-k-app-svc-list*

Type: Object

Reference Object: */axapi/v3/system/telemetry-log/top-k-app-svc-list*

top-k-source-list

Description: top-k-source-list is a **JSON Block**. Please see below for *telemetry-log_top-k-source-list*

Type: Object

Reference Object: */axapi/v3/system/telemetry-log/top-k-source-list*

telemetry-log_device-status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

telemetry-log_environment

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

telemetry-log_partition-metrics

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

telemetry-log_top-k-app-svc-list

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

telemetry-log_top-k-source-list

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-count

Specification	Value
Type	*object*

port-count-alg

Description Total Ports to be allocated for alg types.

Type: number

Range: 1000-6000

Default: 6000

port-count-hm

Description Total Ports to be allocated for hm.

Type: number

Range: 1024-4096

Default: 1024

port-count-kernel

Description Total Ports to be allocated for kernel.

Type: number

Range: 1024-24000

Default: 18000

port-count-logging

Description Total Ports to be allocated for logging.

Type: number

Range: 1024-4096

Default: 4096

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipsec

Specification	Value
Type	*object*

QAT

Description HW assisted QAT SSL module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

crypto-core

Description Crypto cores assigned for IPsec processing

Type: number

Range: 0-64

Default: 0

crypto-mem

Description Crypto memory percentage assigned for IPsec processing (rounded to increments of 10)

Type: number

Range: 0-100

Default: 0

fpga-decrypt

Description: fpga-decrypt is a **JSON Block**. Please see below for *ipsec_fpga-decrypt*

Type: Object

Reference Object: */axapi/v3/system/ipsec/fpga-decrypt*

packet-round-robin

Description Enable packet round robin for IPsec packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipsec_fpga-decrypt

Specification	Value
Type	*object*

action

Description 'enable': Enable FPGA decryption offload; 'disable': Disable FPGA decryption offload;

Type: string

Supported Values: enable, disable

Default: disable

cli-monitor-interval

Specification	Value
Type	*object*

interval

Description one interval is 300ms (0 = disable)

Type: number

Range: 0-5000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

hrxq-status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cosq-stats

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

password-policy

Specification	Value
Type	*object*

aging

Description 'Strict': Strict: Max Age-60 Days; 'Medium': Medium: Max Age- 90 Days; 'Simple': Simple: Max Age-120 Days;

Type: string

Supported Values: Strict, Medium, Simple

complexity

Description 'Strict': Strict: Min length:8, Min Lower Case:2, Min Upper Case:2, Min Numbers:2, Min Special Character:1, CHANGE Min 8 Characters; 'Medium': Medium: Min length:6, Min Lower Case:2, Min Upper Case:2, Min Numbers:1, Min Special Character:1, CHANGE Min 6 Characters; 'Default': Default: Min length:9, Min Lower Case:1, Min Upper Case:1, Min Numbers:1, Min Special Character:1, CHANGE Min 1 Characters; 'Simple': Simple: Min length:4, Min Lower Case:1, Min Upper Case:1, Min Numbers:1, Min Special Character:0, CHANGE Min 4 Characters;

Type: string

Supported Values: Strict, Medium, Default, Simple

forbid-consecutive-character

Description '0': Will disable the check; '3': Three consecutive characters on keyboard will not be allowed.; '4': Four consecutive characters on keyboard will not be allowed.; '5': Five consecutive characters on keyboard will not be allowed.;

Type: string

Supported Values: 0, 3, 4, 5

Default: 0

history

Description 'Strict': Strict: Does not allow upto 5 old passwords; 'Medium': Medium: Does not allow upto 4 old passwords; 'Simple': Simple: Does not allow upto 3 old passwords;

Type: string

Supported Values: Strict, Medium, Simple

min-pswd-len

Description Configure custom password length

Type: number

Range: 8-63

repeat-character-check

Description 'enable': Prohibition of consecutive repeated input of the same letter/number, case sensitive; 'disable': Will not check if the password contains repeat characters;

Type: string

Supported Values: enable, disable

Default: disable

username-check

Description 'enable': Prohibition to set password contains user account, case sensitive; 'disable': Will not check if the password contains user account;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

queuing-buffer

Specification	Value
Type	*object*

enable

Description Enable/Disable micro-burst traffic support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cpu-map

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ports

Specification	Value
Type	*object*

link-detection-interval

Description Link detection interval in msecs

Type: number

Range: 50-60000

Default: 1000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mfa-validation-type

Specification	Value
Type	*object*

ca-cert

Description Configure CA Certificate

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

core

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

app-performance

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

app-performance_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total-throughput-bits-per-sec': Total Throughput in bits/sec; 'l4-conns-per-sec': L4 Connections/sec; 'l7-conns-per-sec': L7 Connections/sec; 'l7-trans-per-sec': L7 Transactions/sec; 'ssl-conns-per-sec': SSL Connections/sec; 'ip-nat-conns-per-sec': IP NAT Connections/sec; 'total-new-conns-per-sec': Total New Connections Established/sec; 'total-curr-conns': Total Current Established Connections; 'l4-bandwidth': L4 Bandwidth in bits/sec; 'l7-bandwidth': L7 Bandwidth in bits/sec; 'serv-ssl-conns-per-sec': Server SSL Connections/sec; 'fw-conns-per-sec': FW Connections/sec; 'gifw-conns-per-sec': GiFW Connections/sec;

Type: string

Supported Values: all, total-throughput-bits-per-sec, l4-conns-per-sec, l7-conns-per-sec, l7-trans-per-sec, ssl-conns-per-sec, ip-nat-conns-per-sec, total-new-conns-per-sec, total-curr-conns, l4-bandwidth, l7-bandwidth, serv-ssl-conns-per-sec, fw-conns-per-sec, gifw-conns-per-sec

counter-lib-accounting

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inuse-port-list

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

control-cpu

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp-syn-per-sec

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

radius

Specification	Value
Type	*object*

server

Description: server is a **JSON Block**. Please see below for *radius_server*

Type: Object

Reference Object: */axapi/v3/system/radius/server*

radius_server

Specification	Value
Type	*object*

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default); 'delete-entry-and-sessions': Delete the entry and data sessions associated(CGN only);

Type: string

Supported Values: ignore, delete-entry, delete-entry-and-sessions

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI; 'custom1': Clear using CUSTOM1 attribute configured; 'custom2': Clear using CUSTOM2 attribute configured; 'custom3': Clear using CUSTOM3 attribute configured; 'custom4': Clear using CUSTOM4 attribute configured; 'custom5': Clear using CUSTOM5 attribute configured; 'custom6': Clear using CUSTOM6 attribute configured;

Type: string

Supported Values: msisdn, imei, imsi, custom1, custom2, custom3, custom4, custom5, custom6

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

derived-attribute

Description: derived-attribute is a **JSON Block**. Please see below for *radius_server_derived-attribute*

Type: Object

Reference Object: */axapi/v3/system/radius/server/derived-attribute*

disable-reply

Description Toggle option for RADIUS reply packet(Default: Accounting response will be sent)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (default 1813) (Port number)

Type: number

Range: 1024-65535

Default: 1813

remote

Description: remote is a **JSON Block**. Please see below for *radius_server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

radius_server_remote

Specification	Value
Type	*object*

ip-list

Type: List

radius_server_remote_ip-list

Specification	Value
Type	*list*
Block object keys	

ip-list-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

ip-list-name

Description IP-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ip-list-secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list-secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

radius_server_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'request-bad-secret-dropped': RADIUS Request Bad Secret Dropped; 'request-no-key-vap-dropped': RADIUS Request No Key Attribute Dropped; 'request-malformed-dropped': RADIUS Request Malformed Dropped; 'request-ignored': RADIUS Request Ignored; 'radius-table-full': RADIUS Request Dropped (Table Full); 'secret-not-configured-dropped': RADIUS Secret Not Configured Dropped; 'ha-standby-dropped': HA Standby Dropped; 'ipv6-prefix-length-mismatch': Framed IPV6 Prefix Length Mismatch; 'invalid-key': Radius Request has Invalid Key Field; 'smp-created': RADIUS SMP Created; 'smp-deleted': RADIUS SMP Deleted; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-in-rml': RADIUS SMP in RML; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received; 'acct-on-filters-full': RADIUS Acct On Request Ignored(Filters Full); 'acct-on-dup-request': Duplicate RADIUS Acct On Request; 'ip-mismatch-delete': Radius Entry IP Mismatch Delete; 'ip-add-race-drop': Radius Entry IP Add Race Drop; 'ha-sync-no-key-vap-dropped': HA Record Sync No key dropped; 'inter-card-msg-fail-drop': Inter-Card Message Fail Drop; 'radius-packets-redirected': RADIUS packets redirected (SO); 'radius-packets-redirect-fail-dropped': RADIUS packets dropped due to redirect failure (SO); 'radius-packets-process-local': RADIUS packets processed locally without redirection (SO); 'radius-packets-dropped-not-lo': RADIUS packets dropped dest not loopback (SO); 'radius-inter-card-dup-redir': RADIUS packet dropped as redirected by other blade (SO);

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-created, smp-deleted, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-in-rml, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

radius_server_attribute

Specification	Value
Type	*list*
Block object keys	

attribute-value

Description 'inside-ipv6-prefix': Framed IPv6 Prefix; 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

radius_server_derived-attribute

Specification	Value
Type	*object*

usergroup

Description: usergroup is a **JSON Block**. Please see below for *radius_server_derived-attribute_usergroup*

Type: Object

Reference Object: */axapi/v3/system/radius/server/derived-attribute/usergroup*

userid

Description: userid is a **JSON Block**. Please see below for *radius_server_derived-attribute_userid*

Type: Object

Reference Object: */axapi/v3/system/radius/server/derived-attribute/userid*

radius_server_derived-attribute_userid

Specification	Value
Type	*object*

attribute

Description 'imei': Specify the IMEI attribute.; 'imsi': Specify the IMSI attribute.; 'msisdn': Specify the MSISDN attribute.; 'custom1': Specify the custom1 attribute.; 'custom2': Specify the custom2 attribute.; 'custom3': Specify the custom3 attribute.; 'custom4': Specify the custom4 attribute.; 'custom5': Specify the custom5 attribute.; 'custom6': Specify the custom6 attribute.;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

regex

Description Specify the regular expression to parse the value from a RADIUS attribute.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

radius_server_derived-attribute_usergroup

Specification	Value
Type	*object*

attribute

Description 'imei': Specify the IMEI attribute.; 'imsi': Specify the IMSI attribute.; 'msisdn': Specify the MSISDN attribute.; 'custom1': Specify the custom1 attribute.; 'custom2': Specify the custom2 attribute.; 'custom3': Specify the custom3 attribute.; 'custom4': Specify the custom4 attribute.; 'custom5': Specify the custom5 attribute.; 'custom6': Specify the custom6 attribute.;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

regex

Description Specify the regular expression to parse the value from a RADIUS attribute.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

modify-port

Specification	Value
Type	*object*

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

port-number

Description port number to be configured (Specify port number)

Type: number

Range: 1-32

enable-password

Specification	Value
Type	*object*

follow-password-policy

Description enable-password will follow password policy complexity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

del-port

Specification	Value
Type	*object*

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

management-interface-mode

Specification	Value
Type	*object*

dedicated

Description Set management interface in dedicated mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

non-dedicated

Description Set management interface in non-dedicated mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-poll-mode

Specification	Value
Type	*object*

disable

Description Disable shared poll mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable shared poll mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

asic-mmu-fail-safe

Specification	Value
Type	*object*

inject-error

Description Inject MMU SER/Parity errors

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

monitor-disable

Description Enable Fail-safe software error monitoring and act on it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

monitor-interval

Description ASIC Fail-safe monitoring intervals in Seconds (Units of 1 Seconds (default 60))

Type: number

Range: 5-300

Default: 60

reboot-disable

Description Disable system reboot if system encounters mmu error

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recovery-threshold

Description ASIC Fail-safe recovery threshold in Errors (Units of 1 Errors (default 2))

Type: number

Range: 1-1000

Default: 2

test-pattern-type

Description 'all-zeros': Inject all bits 0s in a byte; 'all-ones': Inject all bits 1s in a byte; 'lcb': Logical checker board; 'inverse-lcb': Inverse Logical checker board;

Type: string

Supported Values: all-zeros, all-ones, lcb, inverse-lcb

Default: lcb

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

netvsc-monitor

Specification	Value
Type	*object*

enable

Description Enable/Disable auto-recovery from Rx/Tx hang

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reboot

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pbslb

Specification	Value
Type	*object*

sampling-enable

Type: List

sockstress-disable

Description Disable sockstress protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pbslb_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_entries': Current PBSLB Entry Count; 'total_v4_entries_created': Total V4 Entry Count Created; 'total_v4_entries_freed': Total V4 Entry Count Freed; 'total_v6_entries_created': Total V6 Entry Count Created; 'total_v6_entries_freed': Total V6 Entry Count Freed; 'total_domain_entries_created': Total Domain Entry Count Created; 'total_domain_entries_freed': Total Domain Entry Count

Freed; 'total_direct_action_entries_created': Total Direct Action Entry Count Created; 'total_direct_action_entries_freed': Total Direct Action Entry Count Freed; 'curr_entries_target_global': Current Entry Target Global; 'curr_entries_target_vserver': Current Entry Target Vserver; 'curr_entries_target_vport': Current Entry Target Vport; 'curr_entries_target_LOC': Current Entry Target LOC; 'curr_entries_target_rserver': Current Entry Target Rserver; 'curr_entries_target_rport': Current Entry Target Rport; 'curr_entries_target_service': Current Entry Target Service; 'curr_entries_stats': Current Entry Stats Count;

Type: string

Supported Values: all, curr_entries, total_v4_entries_created, total_v4_entries_freed, total_v6_entries_created, total_v6_entries_freed, total_domain_entries_created, total_domain_entries_freed, total_direct_action_entries_created, total_direct_action_entries_freed, curr_entries_target_global, curr_entries_target_vserver, curr_entries_target_vport, curr_entries_target_LOC, curr_entries_target_rserver, curr_entries_target_rport, curr_entries_target_service, curr_entries_stats, curr_entries_target_global_dns_cache

domain-list-info

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-mac-scheme

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-mac-scheme-val

Description 'hash-based': Hash-based using the VE number; 'round-robin': Round Robin scheme; 'system-mac': Use system MAC address;

Type: string

Supported Values: hash-based, round-robin, system-mac

Default: hash-based

cpu-packet-prio-support

Specification	Value
Type	*object*

disable

Description Disable CPU packet prioritization Support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and enable are mutually exclusive

enable

Description Enable CPU packet prioritization Support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: enable and disable are mutually exclusive

nsm-a10lb

Specification	Value
Type	*object*

kill

Description NSM will terminate a10lb if no response received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-monitor

Specification	Value
Type	*object*

disable

Description Disable Link Monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable Link Monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

apps-global

Specification	Value
Type	*object*

cps-threshold

Description Set threshold for the total Connections Per Second across the system (Enter threshold number)

Type: number

Range: 0-2147483647

Default: 0

log-session-on-established

Description Send TCP session creation log on completion of 3-way handshake

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msl-time

Description Configure maximum session life, default is 2 seconds (1-39 seconds, default is 2 seconds)

Type: number

Range: 1-39

Default: 2

sessions-threshold

Description Set threshold for total sessions across the system (Enter threshold number)

Type: number

Range: 0-2147483647

Default: 0

timer-wheel-walk-limit

Description Set timer wheel walk limit (0-1024, 0 is unlimited, default is 100)

Type: number

Range: 0-1024

Default: 100

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

multi-queue-support

Specification	Value
Type	*object*

enable

Description Enable Multi-Queue-Support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk

Specification	Value
Type	*object*

load-balance

Description: load-balance is a **JSON Block**. Please see below for *trunk_load-balance*

Type: Object

Reference Object: */axapi/v3/system/trunk/load-balance*

trunk_load-balance

Specification	Value
Type	*object*

use-l3

Description Layer-3 Header based load balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-l3 and use-l4 are mutually exclusive

use-l4

Description Layer-3/4 Header based load balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-l4 and use-l3 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-usage

Specification	Value
Type	*object*

aflex-table-entry-count

Description Total aFleX table entry in the system (Total aFlex entry in the system)

Type: number

auth-portal-html-file-size

Description Specify maximum html file size for each html page in auth portal (in KB)

Type: number

Range: 4-120

Default: 20

auth-portal-image-file-size

Description Specify maximum image file size for default portal (in KB)

Type: number

Range: 1-80

Default: 6

auth-session-count

Description Total auth sessions in the system

Type: number

authz-policy-number

Description Specify the maximum number of authorization policies

Type: number

class-list-ac-entry-count

Description Total entries for AC class-list

Type: number

class-list-entry-count

Description Total entries for class-list

Type: number

class-list-ipv6-addr-count

Description Total IPv6 addresses for class-list

Type: number

ipsec-sa-number

Description Specify the maximum number of IPsec SA

Type: number

l4-session-count

Description Total Sessions in the System

Type: number

max-aflex-authz-collection-number

Description Specify the maximum number of collections supported by aFleX authorization

Type: number

Range: 256-4096

Default: 512

max-aflex-file-size

Description Set maximum aFleX file size (Maximum file size in KBytes, default is 32K)

Type: number

Range: 16-1024

Default: 32

nat-pool-addr-count

Description Total configurable NAT Pool addresses in the System

Type: number

ngwaf-cache-entry

Description Specify the maximum cache entries for NGWAF

Type: number

radius-table-size

Description Total configurable CGNV6 RADIUS Table entries

Type: number

ram-cache-memory-limit

Description Specify the maximum memory used by ram cache

Type: number

ssl-context-memory

Description Total SSL context memory needed in units of MB. Will be rounded to closest multiple of 2MB

Type: number

Range: 256-16384

Default: 2048

ssl-dma-memory

Description Total SSL DMA memory needed in units of MB. Will be rounded to closest multiple of 2MB

Type: number

Range: 32-2048

Default: 256

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

visibility

Description: visibility is a **JSON Block**. Please see below for *resource-usage_visibility*

Type: Object

Reference Object: */axapi/v3/system/resource-usage/visibility*

resource-usage_visibility

Specification	Value
Type	*object*

monitored-entity-count

Description Total number of monitored entities for visibility

Type: number

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cl-threat-category

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

xaui-dlb-mode

Specification	Value
Type	*object*

enable

Description Enable/Disable Dynamic Load Balancing traffic distribution support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-scv-verify-crl-sign

Specification	Value
Type	*object*

enable

Description Enable verify CRL signature during SCV

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

power-on-self-test

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

throughput

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

throughput_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'global-system-throughput-bits-per-sec': Global System throughput in bits/sec; 'per-part-throughput-bits-per-sec': Partition throughput in bits/sec;

Type: string

Supported Values: all, global-system-throughput-bits-per-sec, per-part-throughput-bits-per-sec

cm-update-file-name-ref

Specification	Value
Type	*object*

dest_name

Description bind dest name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

id

Description Specify unique Partition id

Type: number

source_name

Description bind source name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

spe-status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mfa-auth

Specification	Value
Type	*object*

second-factor

Description Input second factor paramter

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

username

Description Username for MFA validation

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ssl-status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fpga-core-crc

Specification	Value
Type	*object*

monitor-disable

Description Disable FPGA Core CRC error monitoring and act on it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reboot-enable

Description Enable system reboot if system encounters FPGA Core CRC error

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-xaui-hw-hash

Specification	Value
Type	*object*

mode

Description Set HW hash mode, default is 6 (1:dst-mac 2:src-mac 3:src-dst-mac 4:src-ip 5:dst-ip 6:rtag6 7:rtag7)

Type: number

Range: 1-7

Default: 6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cpu-load-sharing

Specification	Value
Type	*object*

allow-l7-sessions

Description Allow L7 sessions forward to home cpu

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cpu-usage

Description: cpu-usage is a **JSON Block**. Please see below for *cpu-load-sharing_cpu-usage*

Type: Object

disable

Description Disable CPU load sharing in overload situations

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

others

Description Disallow redistribution of new non TCP/UDP IP sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packets-per-second

Description: packets-per-second is a **JSON Block**. Please see below for *cpu-load-sharing_packets-per-second*

Type: Object

tcp

Description Disallow redistribution of new TCP sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description Disallow redistribution of new UDP sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cpu-load-sharing_cpu-usage

Specification	Value
Type	*object*

high

Description CPU usage threshold (percentage) that will trigger the redistribution (default: 75)

Type: number

Range: 0-100

Default: 75

low

Description CPU usage threshold (percentage) that will restore the normal packet distribution (default: 60)

Type: number

Range: 0-100

Default: 60

cpu-load-sharing_packets-per-second

Specification	Value
Type	*object*

min

Description Minimum packets-per-second threshold (per CPU) before redistribution will take effect (Minimum packets-per-second threshold (per CPU) before redistribution will take effect (default: 100000))

Type: number

Range: 0-30000000

Default: 100000

geoloc-list-list

Specification	Value
Type	*list*
Block object keys	

exclude-geoloc-name-list

Type: List

include-geoloc-name-list

Type: List

name

Description Specify name of Geolocation list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

shared

Description Enable sharing with other partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geoloc-list-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hit-count': some help string; 'total-geoloc': some help string; 'total-active': some help string;

Type: string

Supported Values: all, hit-count, total-geoloc, total-active

geoloc-list-list_include-geoloc-name-list

Specification	Value
Type	*list*
Block object keys	

include-geoloc-name-val

Description Geolocation name to add

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

geoloc-list-list_exclude-geoloc-name-list

Specification	Value
Type	*list*
Block object keys	

exclude-geoloc-name-val

Description Geolocation name to exclude

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

shutdown

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-stats

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-stats_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'inreceives': Incoming packets received; 'inhdrerrors': Incoming packet header errors; 'intoobigerrors': Incoming packet too big errors; 'innoroutes': Incoming no route packet drops; 'inaddrerrors': Incoming packet address errors; 'inunknownprotos': Incoming unkown protocol packet drops; 'intruncatedpkts': Incoming truncated packets; 'indiscards': Incoming packets discarded; 'indelivers': Incoming packets delivered; 'outforwdatagrams': Outgoing forwarded datagrams; 'outrequests': Outgoing packets; 'outdiscards': Outgoing packets discarded; 'outnoroutes': Outgoing no route packet drops; 'reasmtimeout': Reassembly timed out packet drops; 'reasmreqds': Incoming reassembly requests; 'reasmoks': Incoming reassembled packets; 'reasmfails': Incoming reassembly requests failed; 'fragoks': Outgoing packets fragmented; 'fragfails': Outgoing packets fragmentation failed; 'fragcreates': Outgoing fragmented packets; 'inmcastpkts': Incoming multicast packets; 'outmcastpkts': Outgoing multicast packets;

Type: string

Supported Values: all, inreceives, inhdrerrors, intoobigerrors, innoroutes, inaddrerrors, inunknownprotos, intruncatedpkts, indiscards, indelivers, outforwdatagrams, outrequests, outdiscards, outnoroutes, reasmtimeout, reasmreqds, reasmoks, reasmfails, fragoks, fragfails, fragcreates, inmcastpkts, outmcastpkts

domain-list-settings

Specification	Value
Type	*object*

concurrent-task

Description Configure max concurrent AXFR task (Default 6)

Type: number

Range: 1-100

Default: 6

domain-list-per-group

Description '16': Allow 16 domain-list per group (Default); '32': Allow 32 domain-list per group;

Type: string

Supported Values: 16, 32

Default: 16

polling-interval

Description '1-second': Set interval to 1 second; '5-second': Set interval to 5 seconds; '10-second': Set interval to 10 seconds (Default);

Type: string

Supported Values: 1-second, 5-second, 10-second

Default: 10-second

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip6-stats

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip6-stats_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'inreceives': Incoming packets received; 'inhdrerrors': Incoming packet header errors; 'intoobigerrors': Incoming packet too big errors; 'innoroutes': Incoming no route packet drops; 'inaddrerrors': Incoming packet address errors; 'inunknownprotos': Incoming unkown protocol packet drops; 'intruncatedpkts': Incoming truncated packets; 'indiscards': Incoming packets discarded; 'indelivers': Incoming packets delivered; 'outforwdatagrams': Outgoing forwarded datagrams; 'outrequests': Outgoing packets; 'outdiscards': Outgoing packets discarded; 'outnoroutes': Outgoing no route packet drops; 'reasmtimeout': Reassembly timed out packet drops; 'reasmreqds': Incoming reassembly requests; 'reasmoks': Incoming reassembled packets; 'reasmfails': Incoming reassembly requests failed; 'fragoks': Outgoing packets fragmented; 'fragfails': Outgoing packets fragmentation failed; 'fragcreates': Outgoing fragmented packets; 'inmcastpkts': Incoming multicast packets; 'outmcastpkts': Outgoing multicast packets;

Type: string

Supported Values: all, inreceives, inhdrerrors, intoobigerrors, innoroutes, inaddrerrors, inunknownprotos, intruncatedpkts, indiscards, indelivers, outforwdatagrams, outrequests, outdiscards, outnoroutes, reasmtimeout, reasmreqds, reasmoks, reasmfails, fragoks, fragfails, fragcreates, inmcastpkts, outmcastpkts

config-mgmt

Specification	Value
Type	*object*

delete-referenced-tagged-objects

Description 'enable': Allow deletion of referenced tagged objects. Default option.; 'disable': Block deletion of referenced tagged objects;

Type: string

Supported Values: enable, disable

Default: enable

pu-sync-detection

Description: pu-sync-detection is a **JSON Block**. Please see below for *config-mgmt_pu-sync-detection*

Type: Object

Reference Object: */axapi/v3/system/config-mgmt/pu-sync-detection*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

config-mgmt_pu-sync-detection

Specification	Value
Type	*object*

action

Description 'enable': Enable pu-sync-detection feature; 'disable': Disable pu-sync-detection feature;

Type: string

Supported Values: enable, disable

Default: disable

interval

Description Time interval (seconds) for detection. Default is 30 seconds.

Type: number

Range: 30-86400

Default: 30

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-scv-verify-host

Specification	Value
Type	*object*

disable

Description Disable verify host during SCV

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

io-cpu

Specification	Value
Type	*object*

max-cores

Description max number of IO cores (Specify number of cores)

Type: number

Range: 0-128

dns

Specification	Value
Type	*object*

recursive-nameserver

Description: recursive-nameserver is a **JSON Block**. Please see below for *dns_recursive-nameserver*

Type: Object

Reference Object: */axapi/v3/system/dns/recursive-nameserver*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'slb_req': No. of requests; 'slb_resp': No. of responses; 'slb_no_resp': No. of requests with no response; 'slb_req_rexmit': No. of requests retransmit; 'slb_resp_no_match': No. of requests and responses with no match; 'slb_no_resource': No. of resource failures; 'nat_req': (NAT) No. of requests; 'nat_resp': (NAT) No. of responses; 'nat_no_resp': (NAT) No. of resource failures; 'nat_req_rexmit': (NAT) No. of request retransmits; 'nat_resp_no_match': (NAT) No. of requests with no response; 'nat_no_resource': (NAT) No. of resource failures; 'nat_xid_reused': (NAT) No. of requests reusing a transaction id; 'filter_type_drop': Total Query Type Drop; 'filter_class_drop': Total Query Class Drop; 'filter_type_any_drop': Total Query ANY Type Drop; 'slb_dns_client_ssl_succ': No. of client ssl success; 'slb_dns_server_ssl_succ': No. of server ssl success; 'slb_dns_udp_conn': No. of backend udp connections; 'slb_dns_udp_conn_succ': No. of backend udp conn established; 'slb_dns_padding_to_server_removed': some help string; 'slb_dns_padding_to_client_added': some help string; 'slb_dns_edns_subnet_to_server_removed': some help string; 'slb_dns_udp_retransmit': some help string; 'slb_dns_udp_retransmit_fail': some help string; 'rpz_action_drop': RPZ Action Drop; 'rpz_action_pass_thru': RPZ Action Pass Through; 'rpz_action_tcp_only': RPZ Action TCP Only; 'rpz_action_nxdomain': RPZ Action NXDOMAIN; 'rpz_action_nodata': RPZ Action NODATA; 'rpz_action_local_data': RPZ Action Local Data; 'slb_drop': DNS requests drop; 'nat_slb_drop': (NAT)DNS requests drop; 'invalid_q_len_to_udp': invalid query length to conver to UDP; 'slb_dns_edns_ecs_received': Number of ecs from client received; 'slb_dns_edns_ecs_inserted': Number of ecs inserted;

Type: string

Supported Values: all, slb_req, slb_resp, slb_no_resp, slb_req_rexmit, slb_resp_no_match, slb_no_resource, nat_req, nat_resp, nat_no_resp, nat_req_rexmit, nat_resp_no_match, nat_no_resource, nat_xid_reused, filter_type_drop, filter_class_drop, filter_type_any_drop, slb_dns_client_ssl_succ, slb_dns_server_ssl_succ, slb_dns_udp_conn, slb_dns_udp_conn_succ, slb_dns_padding_to_server_removed,

slb_dns_padding_to_client_added, slb_dns_edns_subnet_to_server_removed, slb_dns_udp_retransmit, slb_dns_udp_retransmit_fail, rpz_action_drop, rpz_action_pass_thru, rpz_action_tcp_only, rpz_action_nxdomain, rpz_action_nodata, rpz_action_local_data, slb_drop, nat_slb_drop, invalid_q_len_to_udp, slb_dns_edns_ecs_received, slb_dns_edns_ecs_inserted

dns_recursive-nameserver

Specification	Value
Type	*object*

follow-shared

Description Use the configured name servers of shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_recursive-nameserver_server-list

Specification	Value
Type	*list*
Block object keys	

ipv4-addr

Description Specify IPv4 server address

Type: string

Format: ipv4-address

ipv6-addr

Description Specify IPv6 server address

Type: string

Format: ipv6-address

v4-desc

Description Description for this ipv4 address

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

v6-desc

Description Description for this ipv6 address

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

memory

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

memory_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'usage-percentage': Memory Usage percentage;

Type: string

Supported Values: all, usage-percentage

cpu-hyper-thread

Specification	Value
Type	*object*

disable

Description Disable CPU Hyperthreading

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable CPU Hyperthreading

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-scv

Specification	Value
Type	*object*

enable

Description Enable server certificate validation for all SSL connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udp

Specification	Value
Type	*object*

skip-checksum-when-zero

Description When enabled, the system does not modify the L4 checksum if the original passthrough packet was received with UDP checksum valu

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-set-compatible-cipher

Specification	Value
Type	*object*

disable

Description Disable setting common cipher suite in management plane

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

glid

Specification	Value
Type	*object*

glid-id

Description Apply limits to the whole system

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/glid*

non-shared

Description Apply global limit ID to the whole system at per data cpu level (default disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

spe-profile

Specification	Value
Type	*object*

action

Description 'ipv4-only': Enable IPv4 HW forward entries only; 'ipv6-only': Enable IPv6 HW forward entries only; 'ipv4-ipv6': Enable Both IPv4/IPv6 HW forward entries (shared);

Type: string

Supported Values: ipv4-only, ipv6-only, ipv4-ipv6

Default: ipv4-ipv6

add-cpu-core

Specification	Value
Type	*object*

core-index

Description core index to be added (Specify core index)

Type: number

Range: 0-128

cpu-list

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num': Total number; 'inmsgs': In Messages; 'inerrors': In Errors; 'indestunreachs': In Destination Unreachable; 'intimeexcds': In TTL Exceeds; 'inparmprobs': In Parameter Problem; 'insrcquenchs': In Source Quench Error; 'inredirects': In Redirects; 'inechos': In Echo requests; 'inechoreps': In Echo replies; 'intimestamps': In Timestamp; 'intimestampreps': In Timestamp Rep; 'inaddrmasks': In Address Masks; 'inaddrmaskreps': In Address Mask Rep; 'outmsgs': Out Message; 'outerrors': Out Errors; 'outdestunreachs': Out Destination Unreachable; 'outtimeexcds': Out TTL Exceeds; 'outparmprobs': Out Parameter Problem; 'outsrcquenchs': Out Source Quench Error; 'outredirects': Out Redirects; 'outechos': Out Echo Requests; 'outechoreps': Out Echo Replies; 'outtimestamps': Out Time Stamp; 'outtimestampreps': Out Time Stamp Rep; 'outaddrmasks': Out Address Mask; 'outaddrmaskreps': Out Address Mask Rep;

Type: string

Supported Values: all, num, inmsgs, inerrors, indestunreachs, intimeexcds, inparmprobs, insrcquenchs, inredirects, inechos, inechoreps, intimestamps, intimestampreps, inaddrmasks, inaddrmaskreps, outmsgs, outerrors, outdestunreachs, outtimeexcds, outparmprobs, outsrcquenchs, outredirects, outechos, outechoreps, outtimestamps, outtimestampreps, outaddrmasks, outaddrmaskreps

gui-image-list

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp-stats

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp-stats_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'connattempt': Connect initiated; 'connects': Connect established; 'drops': Connect dropped; 'conndrops': Embryonic connect dropped; 'closed': Connect closed; 'segstimed': Segs to get RTT; 'rttupdated': Update RTT; 'delack': Delayed acks sent; 'timeoutdrop': Conn dropped in rxmt timeout; 'rexmttimeo': Retransmit timeout; 'persisttimeo': Persist timeout; 'keeptimeo': Keepalive timeout; 'keepprobe': Keepalive probe sent; 'keepdrops': Connect dropped in keepalive; 'sndtotal': Total packet sent; 'sndpack': Data packet sent; 'sndbyte': Data bytes sent; 'sndrexmitpack': Data packet retransmit; 'sndrexmitbyte': Data byte retransmit; 'sndrexmitbad': Unnecessary packet retransmit; 'sndacks': Ack packet sent; 'sndprobe': Window probe sent; 'sndurg': URG packet sent; 'sndwinup': Window update packet sent; 'sndctrl': SYN|FIN|RST packet sent; 'sndrst': RST packet sent; 'sndfin': FIN packet sent; 'sndsyn': SYN packet sent; 'rcvtotal': Total packet received; 'rcvpack': Packet received; 'rcvbyte': Bytes received; 'rcvbadoff': Packet received with bad offset; 'rcvmemdrop': Packet dropped for lack of memory; 'rcvduppack': Duplicate packet received; 'rcvdupbyte': Duplicate bytes received; 'rcvpartduppack': Packet with some duplicate data; 'rcvpartdupbyte': Dup. bytes in part-dup. packets; 'rcvoopack': Out-of-order packet received; 'rcvoobyte': Out-of-order bytes received; 'rcvpackafterwin': Packets with data after window; 'rcvbyteafterwin': Bytes rcvd after window; 'rcvwinprobe': Rcvd window probe packet; 'rcvdupack': Rcvd duplicate acks; 'rcvacktoomuch': Rcvd acks for unsent data; 'rcvackpack': Rcvd ack packets; 'rcvackbyte': Bytes acked by rcvd acks; 'rcvwinupd': Rcvd window update packets; 'pawsdrop': Segments dropped due to PAWS; 'predack': Hdr predict for acks; 'preddat': Hdr predict for data pkts; 'persistdrop': Timeout in persist state; 'badrst': Ignored RST; 'finwait2_drops': Drop FIN_WAIT_2 connection after time limit; 'sack_recovery_episode': SACK recovery episodes; 'sack_rexmits': SACK rexmit segments; 'sack_rexmit_bytes': SACK rexmit bytes; 'sack_rcv_blocks': SACK received; 'sack_send_blocks': SACK sent; 'sndcack': Challenge ACK sent; 'cacklim': Challenge ACK limited; 'reassmemdrop': Packet dropped during reassembly; 'reasstimeout': Reassembly Time Out; 'cc_idle': Congestion control window set do to idle; 'cc_reduce': Congestion control window reduced by event; 'rcvdsack': Rcvd DSACK packets; 'a2brcvwnd': ATCP to BTCP receive window; 'a2bsackpresent': ATCP to BTCP SACK options present; 'a2bdupack': ATCP to BTCP Dup/OO ACK; 'a2brxdata': ATCP to BTCP Rxmitted data; 'a2btcpoptions': ATCP to BTCP unsupported TCP options; 'a2boodata': ATCP to BTCP oo data received; 'a2bpartialack': ATCP to BTCP partial ack received; 'a2bfsmtransition': ATCP to BTCP state machine transition; 'a2btransitionnum': ATCP to BTCP total transitions; 'b2atransitionnum': ATCP to BTCP total transitions; 'bad_iochan': IO Channel Modified; 'atcpforward': Adaptive TCP forward; 'atcpsent': Adaptive TCP sent; 'atcprexmitsadrop': Adaptive TCP transmit SA drops; 'atcpsendbackack': Adaptive TCP sendback ACK; 'atcprexmit': Adaptive TCP retransmits; 'atcpbuffallocfail': Adaptive TCP buffer allocation fails; 'a2bappbuffering': Transition to full stack on when application buffers too much data; 'atcpsendfail': Adaptive TCP sent fails;

'earlyrexmit': Early Retransmission sent; 'mburstlim': Maxburst limited tx; 'a2bsndwnd': ATCP to BTCP send window; 'proxyheaderv1': Proxy header v1; 'proxyheaderv2': Proxy header v2;

Type: string

Supported Values: all, connattempt, connects, drops, conndrops, closed, segstimed, rttupdated, delack, timeoutdrop, rexmttimeo, persisttimeo, keeptimeo, keepprobe, keepdrops, sndtotal, sndpack, sndbyte, sndrexmitpack, sndrexmitbyte, sndrexmitbad, sndacks, sndprobe, sndurg, sndwinup, sndctrl, sndrst, sndfin, sndsyn, rcvtotal, rcvpack, rcvbyte, rcvbadoff, rcvmemdrop, rcvduppack, rcvdupbyte, rcvpartduppack, rcvpartdupbyte, rcvoopack, rcvoobyte, rcvpackafterwin, rcvbyteafterwin, rcvwinprobe, rcvdupack, rcvacktoomuch, rcvackpack, rcvackbyte, rcvwinupd, pawsdrop, predack, preddat, persistdrop, badrst, finwait2_drops, sack_recovery_episode, sack_rexmits, sack_rexmit_bytes, sack_rcv_blocks, sack_send_blocks, sndcack, cacklim, reassmemdrop, reasstimeout, cc_idle, cc_reduce, rcvdsack, a2brcvwnd, a2bsackpresent, a2bdupack, a2brxdata, a2btcpoptions, a2boodata, a2bpartialack, a2bfsmtransition, a2btransitionnum, b2atransitionnum, bad_iochan, atcpforward, atcpsent, atcprexmitsadrop, atcpsendbackack, atcprexmit, atcpbuffallocfail, a2bappbuffering, atcpsendfail, earlyrexmit, mburstlim, a2bsndwnd, proxyheaderv1, proxyheaderv2

delete-cpu-core

Specification	Value
Type	*object*

core-index

Description core index to be deleted (Specify core index)

Type: number

Range: 0-128

geoloc-name-helper

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geoloc-name-helper_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'place-holder': place-holder;

Type: string

Supported Values: all, place-holder

mfa-management

Specification	Value
Type	*object*

enable

Description Enable 2FA for management plane

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

shell-privileges

Specification	Value
Type	*object*

enable-shell-privileges

Description enable the shell privileges for a given customer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-capability

Specification	Value
Type	*object*

enable

Description Enable/Disable link capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

timeout-value

Specification	Value
Type	*object*

ftp

Description set timeout to stop ftp transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 120

http

Description set timeout to stop http transfer in seconds, 0 is no limit

Type: number

Range: 1-9999

Default: 120

https

Description set timeout to stop https transfer in seconds, 0 is no limit

Type: number

Range: 1-9999

Default: 120

scp

Description set timeout to stop scp transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 300

sftp

Description set timeout to stop sftp transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 0

tftp

Description set timeout to stop tftp transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

asic-debug-dump

Specification	Value
Type	*object*

enable

Description Enable/Disable L2L3 ASIC traffic discard/drop events and Dump debug information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

shm-logging

Specification	Value
Type	*object*

enable

Description Enable shared memory based logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-list

Specification	Value
Type	*object*

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_client-ssl-template-cfg

Specification	Value
Type	*object*

client-ssl-template-max

Description Enter the number of client-ssl-template allowed (client-ssl-template count (default is max-value))

Type: number

client-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_health-monitor-cfg

Specification	Value
Type	*object*

health-monitor-max

Description Enter the number of health monitors allowed (health-monitor count (default is max-value))

Type: number

Range: 0-1023

health-monitor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-1023

Default: 0

resource-accounting_template-list_app-resources_gslb-zone-cfg

Specification	Value
Type	*object*

gslb-zone-max

Description Enter the number of gslb-zone allowed (gslb-zone count (default is max-value))

Type: number

gslb-zone-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_conn-reuse-template-cfg

Specification	Value
Type	*object*

conn-reuse-template-max

Description Enter the number of conn-reuse-template allowed (conn-reuse-template count (default is max-value))

Type: number

conn-reuse-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-policy-cfg

Specification	Value
Type	*object*

gslb-policy-max

Description Enter the number of gslb-policy allowed (gslb-policy count (default is max-value))

Type: number

gslb-policy-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-service-cfg

Specification	Value
Type	*object*

gslb-service-max

Description Enter the number of gslb-service allowed (gslb-service count (default is max-value)

Type: number

gslb-service-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-geo-location-cfg

Specification	Value
Type	*object*

gslb-geo-location-max

Description Enter the number of gslb-geo-location allowed (gslb-geo-location count (default is max-value))

Type: number

gslb-geo-location-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_cache-template-cfg

Specification	Value
Type	*object*

cache-template-max

Description Enter the number of cache-template allowed (cache-template count (default is max-value))

Type: number

cache-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_persist-cookie-template-cfg

Specification	Value
Type	*object*

persist-cookie-template-max

Description Enter the number of persist-cookie-template allowed (persist-cookie-template count (default is max-value))

Type: number

persist-cookie-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_fix-template-cfg

Specification	Value
Type	*object*

fix-template-max

Description Enter the number of fix-template allowed (fix-template count (default is max-value))

Type: number

fix-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_fast-tcp-template-cfg

Specification	Value
Type	*object*

fast-tcp-template-max

Description Enter the number of fast-tcp-template allowed (fast-tcp-template count (default is max-value))

Type: number

fast-tcp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_fast-udp-template-cfg

Specification	Value
Type	*object*

fast-udp-template-max

Description Enter the number of fast-udp-template allowed (fast-udp-template count (default is max-value))

Type: number

fast-udp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-service-ip-cfg

Specification	Value
Type	*object*

gslb-service-ip-max

Description Enter the number of gslb-service-ip allowed (gslb-service-ip count (default is max-value))

Type: number

gslb-service-ip-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-svc-group-cfg

Specification	Value
Type	*object*

gslb-svc-group-max

Description Enter the number of gslb-svc-group allowed (gslb-svc-group count (default is max-value))

Type: number

gslb-svc-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_virtual-port-cfg

Specification	Value
Type	*object*

virtual-port-max

Description Enter the number of virtual-port allowed (virtual-port count (default is max-value))

Type: number

virtual-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_service-group-cfg

Specification	Value
Type	*object*

service-group-max

Description Enter the number of service groups allowed (service-group count (default is max-value))

Type: number

service-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_pbslb-entry-cfg

Specification	Value
Type	*object*

pbslb-entry-max

Description Enter the number of pbslb-entry allowed (pbslb-entry count)

Type: number

pbslb-entry-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-device-cfg

Specification	Value
Type	*object*

gslb-device-max

Description Enter the number of gslb-device allowed (gslb-device count (default is max-value))

Type: number

gslb-device-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_persist-srcip-template-cfg

Specification	Value
Type	*object*

persist-srcip-template-max

Description Enter the number of persist-srcip-template allowed (persist-source-ip-template count (default is max-value))

Type: number

persist-srcip-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_stream-template-cfg

Specification	Value
Type	*object*

stream-template-max

Description Enter the number of stream-template allowed (server-ssl-template count (default is max-value))

Type: number

stream-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_real-port-cfg

Specification	Value
Type	*object*

real-port-max

Description Enter the number of real-ports allowed (real-port count (default is max-value))

Type: number

real-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-ip-list-cfg

Specification	Value
Type	*object*

gslb-ip-list-max

Description Enter the number of gslb-ip-list allowed (gslb-ip-list count (default is max-value))

Type: number

gslb-ip-list-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_system-resources

Specification	Value
Type	*object*

bw-limit-cfg

Description: bw-limit-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_system-resources_bw-limit-cfg*

Type: Object

concurrent-session-limit-cfg

Description: concurrent-session-limit-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_system-resources_concurrent-session-limit-cfg*

Type: Object

fwcps-limit-cfg

Description: fwcps-limit-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_system-resources_fwcps-limit-cfg*

Type: Object

l4-session-limit-cfg

Description: l4-session-limit-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_system-resources_l4-session-limit-cfg*

Type: Object

l4cps-limit-cfg

Description: l4cps-limit-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_system-resources_l4cps-limit-cfg*

Type: Object

l7cps-limit-cfg

Description: l7cps-limit-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_system-resources_l7cps-limit-cfg*

Type: Object

natcps-limit-cfg

Description: natcps-limit-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_system-resources_natcps-limit-cfg*

Type: Object

ssl-throughput-limit-cfg

Description: ssl-throughput-limit-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_system-resources_ssl-throughput-limit-cfg*

Type: Object

sslcps-limit-cfg

Description: sslcps-limit-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_system-resources_sslcps-limit-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-accounting_template-list_system-resources_l4-session-limit-cfg

Specification	Value
Type	*object*

l4-session-limit-max

Description Enter the l4 session limit in % (0.01% to 99.99%) (Enter a number from 0.01 to 99.99 (up to 2 digits precision))

Type: string

Maximum Length: 5 characters

Maximum Length: 1 characters

l4-session-limit-min-guarantee

Description minimum guaranteed value in % (up to 2 digits precision) (Enter a number from 0 to 99.99)

Type: string

Maximum Length: 5 characters

Maximum Length: 1 characters

Default: 0

resource-accounting_template-list_system-resources_l7cps-limit-cfg

Specification	Value
Type	*object*

l7cps-limit-max

Description L7cps-limit (L7 cps limit (no limits applied by default))

Type: number

Range: 100-300000

resource-accounting_template-list_system-resources_l4cps-limit-cfg

Specification	Value
Type	*object*

l4cps-limit-max

Description Enter the L4 cps limit (L4 cps limit (no limits applied by default))

Type: number

Range: 100-1000000

resource-accounting_template-list_system-resources_natcps-limit-cfg

Specification	Value
Type	*object*

natcps-limit-max

Description Enter the Nat cps limit (NAT cps limit (no limits applied by default))

Type: number

Range: 100-1000000

resource-accounting_template-list_system-resources_sslcps-limit-cfg

Specification	Value
Type	*object*

sslcps-limit-max

Description Enter the SSL cps limit (SSL cps limit (no limits applied by default))

Type: number

Range: 100-300000

resource-accounting_template-list_system-resources_fwcps-limit-cfg

Specification	Value
Type	*object*

fwcps-limit-max

Description Enter the Firewall cps limit (Firewall cps limit (no limits applied by default))

Type: number

Range: 100-1000000

resource-accounting_template-list_system-resources_ssl-throughput-limit-cfg

Specification	Value
Type	*object*

ssl-throughput-limit-max

Description Enter the ssl throughput limit in mbps (SSL Througput limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

ssl-throughput-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resource-accounting_template-list_system-resources_bw-limit-cfg

Specification	Value
Type	*object*

bw-limit-max

Description Enter the bandwidth limit in mbps (Bandwidth limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

bw-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resource-accounting_template-list_system-resources_concurrent-session-limit-cfg

Specification	Value
Type	*object*

concurrent-session-limit-max

Description Enter the Concurrent Session limit (cps) (Concurrent-Session cps limit (no limits applied by default))

Type: number

resource-accounting_template-list_network-resources

Specification	Value
Type	*object*

ipv4-acl-line-cfg

Description: ipv4-acl-line-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_ipv4-acl-line-cfg*

Type: Object

ipv6-acl-line-cfg

Description: ipv6-acl-line-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_ipv6-acl-line-cfg*

Type: Object

object-group-cfg

Description: object-group-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_object-group-cfg*

Type: Object

object-group-clause-cfg

Description: object-group-clause-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_object-group-clause-cfg*

Type: Object

static-arp-cfg

Description: static-arp-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_static-arp-cfg*

Type: Object

static-ipv4-route-cfg

Description: static-ipv4-route-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_static-ipv4-route-cfg*

Type: Object

static-ipv6-route-cfg

Description: static-ipv6-route-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_static-ipv6-route-cfg*

Type: Object

static-mac-cfg

Description: static-mac-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_static-mac-cfg*

Type: Object

static-neighbor-cfg

Description: static-neighbor-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_static-neighbor-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-accounting_template-list_network-resources_static-ipv6-route-cfg

Specification	Value
Type	*object*

static-ipv6-route-max

Description Enter the number of static ipv6 routes allowed (Static ipv6 routes (default is max-value))

Type: number

static-ipv6-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_network-resources_object-group-clause-cfg

Specification	Value
Type	*object*

object-group-clause-max

Description Enter the number of object group clauses allowed (Object group clauses (default is max-value))

Type: number

Range: 0-8192000

object-group-clause-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8192000

Default: 0

resource-accounting_template-list_network-resources_static-ipv4-route-cfg

Specification	Value
Type	*object*

static-ipv4-route-max

Description Enter the number of static ipv4 routes allowed (Static ipv4 routes (default is max-value))

Type: number

static-ipv4-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_network-resources_static-arp-cfg

Specification	Value
Type	*object*

static-arp-max

Description Enter the number of static arp entries allowed (Static arp (default is max-value))

Type: number

Range: 0-128

static-arp-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

resource-accounting_template-list_network-resources_ipv4-acl-line-cfg

Specification	Value
Type	*object*

ipv4-acl-line-max

Description Enter the number of ACL lines allowed (IPV4 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv4-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

resource-accounting_template-list_network-resources_static-mac-cfg

Specification	Value
Type	*object*

static-mac-max

Description Enter the number of static MAC entries allowed (Static MACs (default is max-value))

Type: number

Range: 0-500

static-mac-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-500

Default: 0

resource-accounting_template-list_network-resources_ipv6-acl-line-cfg

Specification	Value
Type	*object*

ipv6-acl-line-max

Description Enter the number of ACL lines allowed (IPV6 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv6-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

resource-accounting_template-list_network-resources_static-neighbor-cfg

Specification	Value
Type	*object*

static-neighbor-max

Description Enter the number of static neighbor entries allowed (Static neighbors (default is max-value))

Type: number

Range: 0-128

static-neighbor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

resource-accounting_template-list_network-resources_object-group-cfg

Specification	Value
Type	*object*

object-group-max

Description Enter the number of object groups allowed (Object group (default is max-value))

Type: number

Range: 0-8000

object-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8000

Default: 0

hardware

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fpga-drop

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fpga-drop_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'mrx-drop': Total MRX Drop; 'hrx-drop': Total HRX Drop; 'siz-drop': Total Size Drop; 'fcs-drop': Total FCS Drop; 'land-drop': Total LAND Attack Drop; 'empty-frag-drop': Total Empty frag Drop; 'mic-frag-drop': Total Micro frag Drop; 'ipv4-opt-drop': Total IPv4 opt Drop; 'ipv4-frag': Total IP frag Drop; 'bad-ip-hdr-len': Total Bad IP hdr len Drop; 'bad-ip-flags-drop': Total Bad IP Flags Drop; 'bad-ip-ttl-drop': Total Bad IP TTL Drop; 'no-ip-payload-drop': Total No IP Payload Drop; 'oversize-ip-payload': Total Oversize IP PL Drop; 'bad-ip-payload-len': Total Bad IP PL len Drop; 'bad-ip-frag-offset': Total Bad IP frag off Drop; 'bad-ip-chksum-drop': Total Bad IP csum Drop; 'icmp-pod-drop': Total ICMP POD Drop; 'tcp-bad-urg-offet': Total TCP bad urg off Drop; 'tcp-short-hdr': Total TCP short hdr Drop; 'tcp-bad-ip-len': Total TCP Bad IP Len Drop; 'tcp-null-flags': Total TCP null flags Drop; 'tcp-null-scan': Total TCP null scan Drop; 'tcp-fin-sin': Total TCP SYN&FIN Drop; 'tcp-xmas-flags': Total TCP XMAS FLAGS Drop; 'tcp-xmas-scan': Total TCP XMAS scan Drop; 'tcp-syn-frag': Total TCP SYN frag Drop; 'tcp-frag-hdr': Total TCP frag header Drop; 'tcp-bad-chksum': Total TCP bad csum Drop; 'udp-short-hdr': Total UDP short hdr Drop; 'udp-bad-ip-len': Total UDP bad leng Drop; 'udp-kb-frags': Total UDP KB frag Drop; 'udp-port-lb': Total UDP port LB Drop; 'udp-bad-chksum': Total UDP bad csum Drop; 'runt-ip-hdr': Total Runt IP hdr Drop; 'runt-tcpudp-hdr': Total Runt TCPUDP hdr Drop; 'tun-mismatch': Total Tun mismatch Drop; 'qdr-drop': Total QDR Drop;

Type: string

Supported Values: all, mrx-drop, hrx-drop, siz-drop, fcs-drop, land-drop, empty-frag-drop, mic-frag-drop, ipv4-opt-drop, ipv4-frag, bad-ip-hdr-len, bad-ip-flags-drop, bad-ip-ttl-drop, no-ip-payload-drop, oversize-ip-payload, bad-ip-payload-len, bad-ip-frag-offset, bad-ip-chksum-drop, icmp-pod-drop, tcp-bad-urg-offet, tcp-short-hdr, tcp-bad-ip-len, tcp-null-flags, tcp-null-scan, tcp-fin-sin, tcp-xmas-flags, tcp-xmas-scan, tcp-syn-frag, tcp-frag-hdr, tcp-bad-chksum, udp-short-hdr, udp-bad-ip-len, udp-kb-frags, udp-port-lb, udp-bad-chksum, runt-ip-hdr, runt-tcpudp-hdr, tun-mismatch, qdr-drop

memory-block-debug

Specification	Value
Type	*object*

assert-block

Description Over size block allocation (Assert memory block over size (default: 16384))

Type: number

Range: 65536-1048576

Default: 65536

first-blk

Description First memory block ascending order (default: 2048) (Memory blocks 32,64,128,256,512,1K,2K,4K,8K,16K)

Type: number

Range: 32-1048576

Default: 8192

fourth-blk

Description Fourth memory block (default: 16384) (Memory blocks 32,64,128,256,512,1K,2K,4K,8K,16K)

Type: number

Range: 32-1048576

Default: 65536

pktdump-block

Description Enable pktdump Oversize block request packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

second-blk

Description Second memory block (default: 4096) (Memory blocks 32,64,128,256,512,1K,2K,4K,8K,16K)

Type: number

Range: 32-1048576

Default: 16384

third-blk

Description Third memory block (default: 8192) (Memory blocks 32,64,128,256,512,1K,2K,4K,8K,16K)

Type: number

Range: 32-1048576

Default: 32768

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

guest-file

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

high-memory-l4-session

Specification	Value
Type	*object*

enable

Description Enable/Disable high memory l4 session support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

per-vlan-limit

Specification	Value
Type	*object*

bcast

Description broadcast packets (per second limit)

Type: number

Range: 1-65535

Default: 1000

ipmcast

Description IP multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 1000

mcast

Description multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 1000

unknown-ucast

Description unknown unicast packets (per second limit)

Type: number

Range: 1-65535

Default: 1000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cosq-show

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

health-check-list

Specification	Value
Type	*list*
Block object keys	

l2bfd-multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval (default: 4))

Type: number

Range: 3-50

l2bfd-rx-interval

Description Minimum receive interval capability (Milliseconds (default: 800))

Type: number

Range: 48-1000

l2bfd-tx-interval

Description Transmit interval between BFD packets

Type: number

Range: 48-1000

l2hm-hc-name

Description Monitor Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

method-l2bfd

Description Method is l2bfd

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

syslog-time-msec

Specification	Value
Type	*object*

enable-flag

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipmi-service

Specification	Value
Type	*object*

disable

Description Disable IPMI on platform

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

data-cpu

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-cache

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-cache_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_q': Total query; 'total_r': Total server response; 'hit': Total cache hit; 'bad_q': Query not passed; 'encode_q': Query encoded; 'multiple_q': Query with multiple questions; 'oversize_q': Query exceed cache size; 'bad_r': Response not passed; 'oversize_r': Response exceed cache size; 'encode_r': Response encoded; 'multiple_r': Response with multiple questions; 'answer_r': Response with multiple answers; 'ttl_r': Response with

short TTL; 'ageout': Total aged out; 'bad_answer': Bad Answer; 'ageout_weight': Total aged for lower weight; 'total_log': Total stats log sent; 'total_alloc': Total allocated; 'total_freed': Total freed; 'current_allocate': Current allocate; 'current_data_allocate': Current data allocate; 'resolver_queue_full': Resolver task queue full; 'truncated_r': Response with Truncation bit set;

Type: string

Supported Values: all, total_q, total_r, hit, bad_q, encode_q, multiple_q, oversize_q, bad_r, oversize_r, encode_r, multiple_r, answer_r, ttl_r, ageout, bad_answer, ageout_weight, total_log, total_alloc, total_freed, current_allocate, current_data_allocate, resolver_queue_full, truncated_r, qps, hit_rate_per_sec

set-tcp-syn-per-sec

Specification	Value
Type	*object*

tcp-syn-value

Description Configure Tcp SYN's per sec, default 70

Type: number

Range: 25-6000

Default: 70

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fw

Specification	Value
Type	*object*

application-flow

Description Number of flows

Type: number

application-mempool

Description Enable application memory pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-dpi-enable

Description Enable basic dpi

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-dns-cache

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mon-template

Specification	Value
Type	*object*

link-block-as-down

Description: link-block-as-down is a **JSON Block**. Please see below for *mon-template_link-block-as-down*

Type: Object

Reference Object: */axapi/v3/system/mon-template/link-block-as-down*

link-down-on-restart

Description: link-down-on-restart is a **JSON Block**. Please see below for *mon-template_link-down-on-restart*

Type: Object

Reference Object: */axapi/v3/system/mon-template/link-down-on-restart*

monitor-list

Type: List

Reference Object: */axapi/v3/system/mon-template/monitor/{id}*

mon-template_link-down-on-restart

Specification	Value
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mon-template_monitor-list

Specification	Value
Type	*list*
Block object keys	

clear-cfg

Type: List

id

Description Monitor template ID Number

Type: number

Range: 1-16

link-disable-cfg

Type: List

link-down-cfg

Type: List

link-enable-cfg

Type: List

link-up-cfg

Type: List

monitor-relation

Description 'monitor-and': Configures the monitors in current template to work with AND logic; 'monitor-or': Configures the monitors in current template to work with OR logic;

Type: string

Supported Values: monitor-and, monitor-or

Default: monitor-and

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mon-template_monitor-list_clear-cfg

Specification	Value
Type	*list*
Block object keys	

clear-all-partition

Description Partition name to clear

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

clear-all-partition-all

Description Clear all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clear-all-sequence

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

clear-partition

Description Partition name to clear

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

clear-partition-all

Description Clear all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clear-sequence

Description Specify the port physical port number

Type: number

Range: 1-16

sessions

Description 'all': Clear all sessions; 'sequence': Sequence number;

Type: string

Supported Values: all, sequence

mon-template_monitor-list_link-enable-cfg

Specification	Value
Type	*list*
Block object keys	

ena-sequence

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

enaeth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

mon-template_monitor-list_link-up-cfg

Specification	Value
Type	*list*
Block object keys	

link-up-sequence1

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

link-up-sequence2

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

link-up-sequence3

Description Sequence number (Specify the sequece number)

Type: number

Range: 1-16

linkup-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

mon-template_monitor-list_link-down-cfg

Specification	Value
Type	*list*
Block object keys	

link-down-sequence1

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

link-down-sequence2

Description Sequence number (Specify the seqeuence number)

Type: number

Range: 1-16

link-down-sequence3

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

linkdown-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

mon-template_monitor-list_link-disable-cfg

Specification	Value
Type	*list*
Block object keys	

dis-sequence

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

diseth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

mon-template_link-block-as-down

Specification	Value
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

job-offload

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

job-offload_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'jobs': Current Jobs; 'submit': Jobs Submitted; 'receive': Jobs Received; 'execute': Jobs Executed; 'snt_home': Jobs Sent Back Home; 'rcv_home': Jobs Received Home; 'complete': Jobs Completed; 'fail_submit': Jobs Failed to Submit; 'q_no_space': No More Space in Q; 'fail_execute': Failed to Execute Job; 'fail_complete': Failed to Complete Job;

Type: string

Supported Values: all, jobs, submit, receive, execute, snt_home, rcv_home, complete, fail_submit, q_no_space, fail_execute, fail_complete

dpdk-stats

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dpdk-stats_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'pkt-drop': Total packet drop; 'pkt-lnk-down-drop': Total packets link down drop; 'err-pkt-drop': Total error packet drop; 'rx-err': Total RX packet error; 'tx-err': Total TX packet error; 'tx-drop': Total TX packet drop; 'rx-len-err': Total RX packet length error; 'rx-over-err': Total RX packet over error; 'rx-crc-err': Total RX packet CRC error; 'rx-frame-err': Total RX packet frame error; 'rx-no-buff-err': Total RX packet no buffer error; 'rx-miss-err': Total RX packet miss error; 'tx-abort-err': Total TX packet abort error; 'tx-carrier-err': Total TX packert carrier error; 'tx-fifo-err': Total TX packet fifo error; 'tx-hbeat-err': Total TX packet HBEAT error; 'tx-windows-err': Total TX windows error; 'rx-long-len-err': Total RX packet long length error; 'rx-short-len-err': Total RX packet short length error; 'rx-align-err': Total RX packet align error; 'rx-csum-offload-err': Total Rx packet check-sum offload error; 'io-rx-que-drop': Total IO core Rx queue drop; 'io-tx-que-drop': Total IO core TX queue drop; 'io-ring-drop': Total IO core ring drop; 'w-tx-que-drop': Total worker core queue drop; 'w-link-down-drop': Total worker core link down drop; 'w-ring-drop': Total worker core ring drop;

Type: string

Supported Values: all, pkt-drop, pkt-lnk-down-drop, err-pkt-drop, rx-err, tx-err, tx-drop, rx-len-err, rx-over-err, rx-crc-err, rx-frame-err, rx-no-buff-err, rx-miss-err, tx-abort-err, tx-carrier-err, tx-fifo-err, tx-hbeat-err, tx-windows-err, rx-long-len-err, rx-short-len-err, rx-align-err, rx-csum-offload-err, io-rx-que-drop, io-tx-que-drop, io-ring-drop, w-tx-que-drop, w-link-down-drop, w-ring-drop

geoloc

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geoloc_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'place-holder': place-holder;

Type: string

Supported Values: all, place-holder

mfa-cert-store

Specification	Value
Type	*object*

cert-host

Description Configure certificate store host

Type: string

Format: host

cert-store-path

Description Configure certificate store path

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

passwd-string

Description Certificate store host password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

protocol

Description 'tftp': Use tftp for connection; 'ftp': Use ftp for connection; 'scp': Use scp for connection; 'http': Use http for connection; 'https': Use https for connection; 'sftp': Use sftp for connection;

Type: string

Supported Values: tftp, ftp, scp, http, https, sftp

username

Description Certificate store host username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

upgrade-status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp-rate

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp-rate_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'over_limit_drop': Over limit drops; 'limit_intf_drop': Interfaces rate limit drops; 'limit_vserver_drop': Virtual Server rate limit drops; 'limit_total_drop': Total rate limit drops; 'lockup_time_left': Lockup time left; 'curr_rate': Current rate; 'v6_over_limit_drop': Over limit drops (v6); 'v6_limit_intf_drop': Interfaces rate limit drops (v6); 'v6_limit_vserver_drop': Virtual Server rate limit drops (v6); 'v6_limit_total_drop': Total rate limit drops (v6); 'v6_lockup_time_left': Lockup time left (v6); 'v6_curr_rate': Current rate (v6);

Type: string

Supported Values: all, over_limit_drop, limit_intf_drop, limit_vserver_drop, limit_total_drop, lockup_time_left, curr_rate, v6_over_limit_drop, v6_limit_intf_drop, v6_limit_vserver_drop, v6_limit_total_drop, v6_lockup_time_left, v6_curr_rate

set-rxtx-desc-size

Specification	Value
Type	*object*

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

rxd-size

Description Set new rx-descriptor size

Type: number

Range: 0-65536

txd-size

Description Set new tx-descriptor size

Type: number

Range: 0-65536

all-vlan-limit

Specification	Value
Type	*object*

bcast

Description broadcast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

ipmcast

Description IP multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

mcast

Description multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

unknown-ucast

Description unknown unicast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp6

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp6_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'in_msgs': In messages; 'in_errors': In Errors; 'in_dest_un_reach': In Destunation Unreachable; 'in_pkt_too_big': In Packet too big; 'in_time_exceeds': In TTL Exceeds; 'in_param_prob': In Parameter Problem; 'in_echoes': In Echo requests; 'in_exho_reply': In Echo replies; 'in_grp_mem_query': In Group member query; 'in_grp_mem_resp': In Group member reply; 'in_grp_mem_reduction': In Group member reduction; 'in_router_sol': In Router solicitation; 'in_ra': In Router advertisement; 'in_ns': In neighbor solicitation; 'in_na': In neighbor advertisement; 'in_redirect': In Redirects; 'out_msg': Out Messages; 'out_dst_un_reach': Out Destination Unreachable; 'out_pkt_too_big': Out Packet too big; 'out_time_exceeds': Out TTL Exceeds; 'out_param_prob': Out Parameter Problem; 'out_echo_req': Out Echo requests; 'out_echo_replies': Out Echo replies; 'out_rs': Out Router solicitation; 'out_ra': Out Router advertisement; 'out_ns': Out neighbor solicitation; 'out_na': Out neighbor advertisement; 'out_redirects': Out Redirects; 'out_mem_resp': Out Group member reply; 'out_mem_reductions': Out Group member reduction; 'err_rs': Error Router solicitation; 'err_ra': Error Router advertisement; 'err_ns': Error Neighbor solicitation; 'err_na': Error Neighbor advertisement; 'err_redirects': Error Redirects; 'err_echoes': Error Echo requests; 'err_echo_replies': Error Echo replies;

Type: string

Supported Values: all, in_msgs, in_errors, in_dest_un_reach, in_pkt_too_big, in_time_exceeds, in_param_prob, in_echoes, in_exho_reply, in_grp_mem_query, in_grp_mem_resp, in_grp_mem_reduction, in_router_sol, in_ra, in_ns, in_na, in_redirect, out_msg, out_dst_un_reach, out_pkt_too_big, out_time_exceeds, out_param_prob, out_echo_req, out_echo_replies, out_rs, out_ra, out_ns, out_na, out_redirects, out_mem_resp, out_mem_reductions, err_rs, err_ra, err_ns, err_na, err_redirects, err_echoes, err_echo_replies

psu-info

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

table-integrity

Specification	Value
Type	*object*

audit-action

Description 'enable': Enable table integrity audit; 'disable': Disable table integrity audit;

Type: string

Supported Values: enable, disable

Default: enable

auto-sync-action

Description 'enable': Enable auto-sync; 'disable': Disable auto-sync;

Type: string

Supported Values: enable, disable

Default: enable

sampling-enable

Type: List

table

Description 'all': All tables;

Type: string

Supported Values: all

Default: all

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

table-integrity_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'arp-tbl-sync-start-ts-m-1st': arp table sync start time stamp master; 'nd6-tbl-sync-start-ts-m-1st': nd6 table sync start time stamp master; 'ipv4-fib-tbl-sync-start-ts-m-1st': ipv4-fib table sync start time stamp master; 'ipv6-fib-tbl-sync-start-ts-m-1st': ipv6-fib table sync start time stamp master; 'mac-tbl-sync-start-ts-m-1st': mac table sync start time stamp master; 'arp-tbl-sync-start-ts-b-1st': arp table sync start time stamp blade; 'nd6-tbl-sync-start-ts-b-1st': nd6 table sync start time stamp blade; 'ipv4-fib-tbl-sync-start-ts-b-1st': ipv4-fib table sync start time stamp blade; 'ipv6-fib-tbl-sync-start-ts-b-1st': ipv6-fib table sync start time stamp blade; 'mac-tbl-sync-start-ts-b-1st': mac table sync start time stamp blade; 'arp-tbl-sync-entries-sent-m-1st': arp table entries sent from master for T0 synchronization; 'nd6-tbl-sync-entries-sent-m-1st': nd6 table entries sent from master for T0 synchronization; 'ipv4-fib-tbl-sync-entries-sent-m-1st': ipv4-fib table entries sent from master for T0 synchronization; 'ipv6-fib-tbl-sync-entries-sent-m-1st': ipv6-fib table entries sent from master for T0 synchronization; 'mac-tbl-sync-entries-sent-m-1st': mac table entries sent from master for T0 synchronization; 'arp-tbl-sync-entries-rcvd-b-1st': arp table entries received on blade for T0 synchronization; 'nd6-tbl-sync-entries-rcvd-b-1st': nd6 table entries received on blade for T0 synchronization; 'ipv4-fib-tbl-sync-entries-rcvd-b-1st': ipv4-fib table entries received on blade for T0 synchronization; 'ipv6-fib-tbl-sync-entries-rcvd-b-1st': ipv6-fib table entries received on blade for T0 synchronization; 'mac-tbl-sync-entries-rcvd-b-1st': mac table entries received on blade for T0 synchronization; 'arp-tbl-sync-entries-added-b-1st': arp table entries added on blade for T0 synchronization; 'nd6-tbl-sync-entries-added-b-1st': nd6 table entries added on blade for T0 synchronization; 'ipv4-fib-tbl-sync-entries-added-b-1st': ipv4-fib table entries added on blade for T0 synchronization; 'ipv6-fib-tbl-sync-entries-added-b-1st': ipv6-fib table entries added on blade for T0 synchronization; 'mac-tbl-sync-entries-added-b-1st': mac table entries added on blade for T0 synchronization; 'arp-tbl-sync-entries-removed-b-1st': arp table entries removed on blade for T0 synchronization; 'nd6-tbl-sync-entries-removed-b-1st': arp table entries removed on blade for T0 synchronization; 'ipv4-fib-tbl-sync-entries-removed-b-1st': arp table entries removed on blade for T0 synchronization; 'ipv6-fib-tbl-sync-entries-removed-b-1st': arp table entries removed on blade for T0 synchronization; 'mac-tbl-sync-entries-removed-b-1st': arp table entries removed on blade for T0 synchronization; 'arp-tbl-sync-end-ts-m-1st': arp table sync end time stamp master for T0 synchronization; 'nd6-tbl-sync-end-ts-m-1st': nd6 table sync end time stamp master for T0 synchronization; 'ipv4-fib-tbl-sync-end-ts-m-1st': ipv4-fib table sync end time stamp master for T0 synchronization; 'ipv6-fib-tbl-sync-end-ts-m-1st': ipv6-fib table sync end time stamp master for T0 synchronization; 'mac-tbl-sync-end-ts-m-1st': mac table sync end time stamp master for T0 synchronization; 'arp-tbl-sync-end-ts-b-1st': arp table sync end time stamp blade for T0 synchronization; 'nd6-tbl-sync-end-ts-b-1st': nd6 table sync end time stamp blade for T0 synchronization; 'ipv4-fib-tbl-sync-end-ts-b-1st': ipv4-fib table sync end time stamp blade for T0 synchronization; 'ipv6-fib-tbl-sync-end-ts-b-1st': ipv6-fib table sync end time stamp blade for T0 synchronization; 'mac-tbl-sync-end-ts-b-1st': mac table sync end time stamp blade for T0 synchronization; 'arp-tbl-sync-start-ts-m-2nd': arp table sync start time stamp master for T-1 synchronization; 'nd6-tbl-sync-start-ts-m-2nd': nd6 table sync start time stamp master for T-1 synchronization; 'ipv4-fib-tbl-sync-start-ts-m-2nd': ipv4-fib table sync start time stamp master for T-1 synchronization; 'ipv6-fib-tbl-sync-start-ts-m-2nd': ipv6-fib table sync start time stamp master for T-1 synchronization; 'mac-tbl-sync-start-ts-m-2nd': mac table sync start time stamp master for T-1 synchronization; 'arp-tbl-sync-start-ts-b-2nd': arp table sync start time stamp blade for T-1 synchronization;

‘nd6-tbl-sync-start-ts-b-2nd’: nd6 table sync start time stamp blade for T-1 synchronization; ‘ipv4-fib-tbl-sync-start-ts-b-2nd’: ipv4-fib table sync start time stamp blade for T-1 synchronization; ‘ipv6-fib-tbl-sync-start-ts-b-2nd’: ipv6-fib table sync start time stamp blade for T-1 synchronization; ‘mac-tbl-sync-start-ts-b-2nd’: mac table sync start time stamp blade for T-1 synchronization; ‘arp-tbl-sync-entries-sent-m-2nd’: arp table entries sent from master for T-1 synchronization; ‘nd6-tbl-sync-entries-sent-m-2nd’: nd6 table entries sent from master for T-1 synchronization; ‘ipv4-fib-tbl-sync-entries-sent-m-2nd’: ipv4-fib table entries sent from master for T-1 synchronization; ‘ipv6-fib-tbl-sync-entries-sent-m-2nd’: ipv6-fib table entries sent from master for T-1 synchronization; ‘mac-tbl-sync-entries-sent-m-2nd’: mac table entries sent from master for T-1 synchronization; ‘arp-tbl-sync-entries-rcvd-b-2nd’: arp table entries received in blade for T-1 synchronization; ‘nd6-tbl-sync-entries-rcvd-b-2nd’: nd6 table entries received in blade for T-1 synchronization; ‘ipv4-fib-tbl-sync-entries-rcvd-b-2nd’: ipv4-fib table entries received in blade for T-1 synchronization; ‘ipv6-fib-tbl-sync-entries-rcvd-b-2nd’: ipv6-fib table entries received in blade for T-1 synchronization; ‘mac-tbl-sync-entries-rcvd-b-2nd’: mac table entries received in blade for T-1 synchronization; ‘arp-tbl-sync-entries-added-b-2nd’: arp table entries added in blade for T-1 synchronization; ‘nd6-tbl-sync-entries-added-b-2nd’: nd6 table entries added in blade for T-1 synchronization; ‘ipv4-fib-tbl-sync-entries-added-b-2nd’: ipv4-fib table entries added in blade for T-1 synchronization; ‘ipv6-fib-tbl-sync-entries-added-b-2nd’: ipv6-fib table entries added in blade for T-1 synchronization; ‘mac-tbl-sync-entries-added-b-2nd’: mac table entries added in blade for T-1 synchronization; ‘arp-tbl-sync-entries-removed-b-2nd’: arp table entries removed in blade for T-1 synchronization; ‘nd6-tbl-sync-entries-removed-b-2nd’: nd6 table entries removed in blade for T-1 synchronization; ‘ipv4-fib-tbl-sync-entries-removed-b-2nd’: ipv4-fib table entries removed in blade for T-1 synchronization; ‘ipv6-fib-tbl-sync-entries-removed-b-2nd’: ipv6-fib table entries removed in blade for T-1 synchronization; ‘mac-tbl-sync-entries-removed-b-2nd’: mac table entries removed in blade for T-1 synchronization; ‘arp-tbl-sync-end-ts-m-2nd’: arp table sync end time stamp master for T-1 synchronization; ‘nd6-tbl-sync-end-ts-m-2nd’: nd6 table sync end time stamp master for T-1 synchronization; ‘ipv4-fib-tbl-sync-end-ts-m-2nd’: ipv4-fib table sync end time stamp master for T-1 synchronization; ‘ipv6-fib-tbl-sync-end-ts-m-2nd’: ipv6-fib table sync end time stamp master for T-1 synchronization; ‘mac-tbl-sync-end-ts-m-2nd’: mac table sync end time stamp master for T-1 synchronization; ‘arp-tbl-sync-end-ts-b-2nd’: arp table sync end time stamp blade for T-1 synchronization; ‘nd6-tbl-sync-end-ts-b-2nd’: nd6 table sync end time stamp blade for T-1 synchronization; ‘ipv4-fib-tbl-sync-end-ts-b-2nd’: ipv4-fib table sync end time stamp blade for T-1 synchronization; ‘ipv6-fib-tbl-sync-end-ts-b-2nd’: ipv6-fib table sync end time stamp blade for T-1 synchronization; ‘mac-tbl-sync-end-ts-b-2nd’: mac table sync end time stamp blade for T-1 synchronization; ‘arp-tbl-sync-start-ts-m-3rd’: arp table sync start time stamp master for T-2 synchronization; ‘nd6-tbl-sync-start-ts-m-3rd’: nd6 table sync start time stamp master for T-2 synchronization;

```

all-vlan-limit attributes

bcast

Description broadcast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

ipmcast

Description IP multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

mcast

Description multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

unknown-ucast

Description unknown unicast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

}
```

apps-global attributes

cps-threshold

Description Set threshold for the total Connections Per Second across the system (Enter threshold number)

Type: number

Range: 0-2147483647

Default: 0

log-session-on-established

Description Send TCP session creation log on completion of 3-way handshake

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msl-time

Description Configure maximum session life, default is 2 seconds (1-39 seconds, default is 2 seconds)

Type: number

Range: 1-39

Default: 2

sessions-threshold

Description Set threshold for total sessions across the system (Enter threshold number)

Type: number

Range: 0-2147483647

Default: 0

timer-wheel-walk-limit

Description Set timer wheel walk limit (0-1024, 0 is unlimited, default is 100)

Type: number

Range: 0-1024

Default: 100

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.6 system asic-debug-dump

Enable/Disable L2L3 ASIC traffic discard/drop events and Dump debug information

asic-debug-dump Specification

Parameter	Value
Type	*Configuration Resource*

asic-mmu-fail-safe attributes

inject-error

Description Inject MMU SER/Parity errors

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

monitor-disable

Description Enable Fail-safe software error monitoring and act on it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

monitor-interval

Description ASIC Fail-safe monitoring intervals in Seconds (Units of 1 Seconds (default 60))

Type: number

Range: 5-300

Default: 60

reboot-disable

Description Disable system reboot if system encounters mmu error

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recovery-threshold

Description ASIC Fail-safe recovery threshold in Errors (Units of 1 Errors (default 2))

Type: number

Range: 1-1000

Default: 2

test-pattern-type

Description 'all-zeros': Inject all bits 0s in a byte; 'all-ones': Inject all bits 1s in a byte; 'lcb': Logical checker board; 'inverse-lcb': Inverse Logical checker board;

Type: string

Supported Values: all-zeros, all-ones, lcb, inverse-lcb

Default: lcb

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cpu-load-sharing attributes

allow-l7-sessions

Description Allow L7 sessions forward to home cpu

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cpu-usage

Description: cpu-usage is a **JSON Block**. Please see below for *cpu-usage*

Type: Object

disable

Description Disable CPU load sharing in overload situations

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

others

Description Disallow redistribution of new non TCP/UDP IP sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packets-per-second

Description: packets-per-second is a **JSON Block**. Please see below for *packets-per-second*

Type: Object

tcp

Description Disallow redistribution of new TCP sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description Disallow redistribution of new UDP sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cpu-usage

Specification	Value
Type	*object*

high

Description CPU usage threshold (percentage) that will trigger the redistribution (default: 75)

Type: number

Range: 0-100

Default: 75

low

Description CPU usage threshold (percentage) that will restore the normal packet distribution (default: 60)

Type: number

Range: 0-100

Default: 60

packets-per-second

Specification	Value
Type	*object*

min

Description Minimum packets-per-second threshold (per CPU) before redistribution will take effect (Minimum packets-per-second threshold (per CPU) before redistribution will take effect (default: 100000))

Type: number

Range: 0-30000000

Default: 100000

geo-location-load-temp-include-ipv6

Description Include IPv6 address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-name

Description CSV template to load this file

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/template/csv*

2.129.51 system geo-location entry

Manually configure geo-location entry

entry Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*geo-locn-obj-name*
Collection Name	*entry-list*
Collection URI	/axapi/v3/system/geo-location/entry
Element Name	entry
Element URI	/axapi/v3/system/geo-location/entry/{geo-locn-obj-name}
Element Attributes	entry_attributes
Partition Visibility	shared
Schema	`entry schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/geo-location/entry

entry attributes

```
POST /axapi/v3/system/geo-location/entry/
Payload:
{
    "entry": {
        "geo-locn-obj-name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/system/geo-location/entry

entry attributes

Get Object

GET

/axapi/v3/system/geo-location/entry/{geo-locn-obj-name}

entry attributes

```
GET /axapi/v3/system/geo-location/entry/a
Reponse:
{
    "entry": {
        "geo-locn-obj-name": "a",
        "uuid": "742d60f0-b70a-11ef-b78f-ae71681635d0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/system/geo-location/entry/a"
    }
}
```

Get List

GET

/axapi/v3/system/geo-location/entry

entry-list

Modify Object

POST

/axapi/v3/system/geo-location/entry/{geo-locn-obj-name}

entry attributes

Replace Object

PUT

/axapi/v3/system/geo-location/entry/{geo-locn-obj-name}

entry attributes

Replace List

PUT

/axapi/v3/system/geo-location/entry

entry-list

Delete Object

DELETE

/axapi/v3/system/geo-location/entry/{geo-locn-obj-name}

entry attributes

entry-list

entry-list is **JSON List** of *entry attributes*

```
entry-list : [
        { entry attributes },
        { entry attributes },
        ...
    ]
```

entry attributes

geo-locn-multiple-addresses

Type: List

geo-locn-obj-name

Description Specify geo-location name, section range is (1-15)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-locn-multiple-addresses

Specification	Value
Type	*list*
Block object keys	

first-ip-address

Description Specify IP information (Specify IP address)

Type: string

Format: ipv4-address

first-ipv6-address

Description Specify IPv6 address

Type: string

Format: ipv6-address

geol-ipv4-mask

Description Specify IPv4 mask

Type: string

Format: ipv4-netmask

Mutual Exclusion: geol-ipv4-mask and ip-addr2 are mutually exclusive

geol-ipv6-mask

Description Specify IPv6 mask

Type: number

Range: 0-128

Mutual Exclusion: geol-ipv6-mask and ipv6-addr2 are mutually exclusive

ip-addr2

Description Specify IP address range

Type: string

Format: ipv4-address

Mutual Exclusion: ip-addr2 and geol-ipv4-mask are mutually exclusive

ipv6-addr2

Description Specify IPv6 address range

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr2 and geol-ipv6-mask are mutually exclusive

2.129.52 system geoloc-list

Configure geolocation list

geoloc-list Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*geoloc-list-list*
Collection URI	/axapi/v3/system/geoloc-list
Element Name	geoloc-list
Element URI	/axapi/v3/system/geoloc-list/{name}
Element Attributes	geoloc-list_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/system/geoloc-list/{name}/stats
Operational Data URI	/axapi/v3/system/geoloc-list/{name}/oper
Schema	`geoloc-list schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/geoloc-list

geoloc-list attributes

```
POST /axapi/v3/system/geoloc-list/
Payload:
{
    "geoloc-list": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/system/geoloc-list

geoloc-list attributes

Get Object

GET

/axapi/v3/system/geoloc-list/{name}

geoloc-list attributes

```
GET /axapi/v3/system/geoloc-list/a
Reponse:
{
    "geoloc-list": {
        "name": "a",
        "shared": 0,
        "uuid": "e5dbfedc-b70a-11ef-b78f-ae71681635d0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/system/geoloc-list/a"

...

]

geoloc-list attributes

exclude-geoloc-name-list

Type: List

include-geoloc-name-list

Type: List

name

Description Specify name of Geolocation list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

shared

Description Enable sharing with other partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hit-count': some help string; 'total-geoloc': some help string; 'total-active': some help string;

Type: string

Supported Values: all, hit-count, total-geoloc, total-active

include-geoloc-name-list

Specification	Value
Type	*list*
Block object keys	

include-geoloc-name-val

Description Geolocation name to add

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

exclude-geoloc-name-list

Specification	Value
Type	*list*
Block object keys	

exclude-geoloc-name-val

Description Geolocation name to exclude

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

2.129.53 system geoloc-list oper

Operational Status for the object geoloc-list

geoloc-list Specification

Parameter	Value

Reference Object: */axapi/v3/system/mon-template/link-down-on-restart*

monitor-list

Type: List

Reference Object: */axapi/v3/system/mon-template/monitor/{id}*

link-down-on-restart

Specification	Value
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list

Specification	Value
Type	*list*
Block object keys	

clear-cfg

Type: List

id

Description Monitor template ID Number

Type: number

Range: 1-16

link-disable-cfg

Type: List

link-down-cfg

Type: List

link-enable-cfg

Type: List

link-up-cfg

Type: List

monitor-relation

Description 'monitor-and': Configures the monitors in current template to work with AND logic; 'monitor-or': Configures the monitors in current template to work with OR logic;

Type: string

Supported Values: monitor-and, monitor-or

Default: monitor-and

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_clear-cfg

Specification	Value
Type	*list*
Block object keys	

clear-all-partition

Description Partition name to clear

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

clear-all-partition-all

Description Clear all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clear-all-sequence

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

clear-partition

Description Partition name to clear

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

clear-partition-all

Description Clear all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clear-sequence

Description Specify the port physical port number

Type: number

Range: 1-16

sessions

Description 'all': Clear all sessions; 'sequence': Sequence number;

Type: string

Supported Values: all, sequence

monitor-list_link-enable-cfg

Specification	Value
Type	*list*
Block object keys	

ena-sequence

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

enaeth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

monitor-list_link-up-cfg

Specification	Value
Type	*list*
Block object keys	

link-up-sequence1

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

link-up-sequence2

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

link-up-sequence3

Description Sequence number (Specify the sequece number)

Type: number

Range: 1-16

linkup-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

monitor-list_link-down-cfg

Specification	Value
Type	*list*
Block object keys	

link-down-sequence1

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

link-down-sequence2

Description Sequence number (Specify the seqeuence number)

Type: number

Range: 1-16

link-down-sequence3

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

linkdown-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

monitor-list_link-disable-cfg

Specification	Value
Type	*list*
Block object keys	

dis-sequence

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

diseth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

link-block-as-down

Specification	Value
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.111 system mon-template link-block-as-down

LACP Link-block will be treated as Link-down template

Supported Values: Strict, Medium, Simple

complexity

Description 'Strict': Strict: Min length:8, Min Lower Case:2, Min Upper Case:2, Min Numbers:2, Min Special Character:1, CHANGE Min 8 Characters; 'Medium': Medium: Min length:6, Min Lower Case:2, Min Upper Case:2, Min Numbers:1, Min Special Character:1, CHANGE Min 6 Characters; 'Default': Default: Min length:9, Min Lower Case:1, Min Upper Case:1, Min Numbers:1, Min Special Character:1, CHANGE Min 1 Characters; 'Simple': Simple: Min length:4, Min Lower Case:1, Min Upper Case:1, Min Numbers:1, Min Special Character:0, CHANGE Min 4 Characters;

Type: string

Supported Values: Strict, Medium, Default, Simple

forbid-consecutive-character

Description '0': Will disable the check; '3': Three consecutive characters on keyboard will not be allowed.; '4': Four consecutive characters on keyboard will not be allowed.; '5': Five consecutive characters on keyboard will not be allowed.;

Type: string

Supported Values: 0, 3, 4, 5

Default: 0

history

Description 'Strict': Strict: Does not allow upto 5 old passwords; 'Medium': Medium: Does not allow upto 4 old passwords; 'Simple': Simple: Does not allow upto 3 old passwords;

Type: string

Supported Values: Strict, Medium, Simple

min-pswd-len

Description Configure custom password length

Type: number

Range: 8-63

repeat-character-check

Description 'enable': Prohibition of consecutive repeated input of the same letter/number, case sensitive; 'disable': Will not check if the password contains repeat characters;

Type: string

Supported Values: enable, disable

Default: disable

username-check

Description 'enable': Prohibition to set password contains user account, case sensitive; 'disable': Will not check if the password contains user account;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.119 system path

Layer-2 path

path Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*l2hm-path-name*
Collection Name	*path-list*

enable-all-ports

Description Enable 802.1QinQ on all physical ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inner-tpid

Description TPID for inner VLAN (Inner TPID, 16 bit hex value, default is 8100)

Type: string

Format: time-hh:mm

Maximum Length: 4 characters

Maximum Length: 1 characters

outer-tpid

Description TPID for outer VLAN (Outer TPID, 16 bit hex value, default is 8100)

Type: string

Format: time-hh:mm

Maximum Length: 4 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.133 system queuing-buffer

Specification	Value
Type	*object*

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default); 'delete-entry-and-sessions': Delete the entry and data sessions associated(CGN only);

Type: string

Supported Values: ignore, delete-entry, delete-entry-and-sessions

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI; 'custom1': Clear using CUSTOM1 attribute configured; 'custom2': Clear using CUSTOM2 attribute configured; 'custom3': Clear using CUSTOM3 attribute configured; 'custom4': Clear using CUSTOM4 attribute configured; 'custom5': Clear using CUSTOM5 attribute configured; 'custom6': Clear using CUSTOM6 attribute configured;

Type: string

Supported Values: msisdn, imei, imsi, custom1, custom2, custom3, custom4, custom5, custom6

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

derived-attribute

Description: derived-attribute is a **JSON Block**. Please see below for *server_derived-attribute*

Type: Object

Reference Object: */axapi/v3/system/radius/server/derived-attribute*

disable-reply

Description Toggle option for RADIUS reply packet(Default: Accounting response will be sent)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (default 1813) (Port number)

Type: number

Range: 1024-65535

Default: 1813

remote

Description: remote is a **JSON Block**. Please see below for *server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

counters1

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'request-bad-secret-dropped': RADIUS Request Bad Secret Dropped; 'request-no-key-vap-dropped': RADIUS Request No Key Attribute Dropped; 'request-malformed-dropped': RADIUS Request Malformed Dropped; 'request-ignored': RADIUS Request Ignored; 'radius-table-full': RADIUS Request Dropped (Table Full); 'secret-not-configured-dropped': RADIUS Secret Not Configured Dropped; 'ha-standby-dropped': HA Standby Dropped; 'ipv6-prefix-length-mismatch': Framed IPV6 Prefix Length Mismatch; 'invalid-key': Radius Request has Invalid Key Field; 'smp-created': RADIUS SMP Created; 'smp-deleted': RADIUS SMP Deleted; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-in-rml': RADIUS SMP in RML; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received; 'acct-on-filters-full': RADIUS Acct On Request Ignored(Filters Full); 'acct-on-dup-request': Duplicate RADIUS Acct On Request; 'ip-mismatch-delete': Radius Entry IP Mismatch Delete; 'ip-add-race-drop': Radius Entry IP Add Race Drop; 'ha-sync-no-key-vap-dropped': HA Record Sync No key dropped; 'inter-card-msg-fail-drop': Inter-Card Message Fail Drop; 'radius-packets-redirected': RADIUS packets redirected (SO); 'radius-packets-redirect-fail-dropped': RADIUS packets dropped due to redirect failure (SO); 'radius-packets-process-local': RADIUS packets processed locally without redirection (SO); 'radius-packets-dropped-not-lo': RADIUS packets dropped dest not loopback (SO); 'radius-inter-card-dup-redir': RADIUS packet dropped as redirected by other blade (SO);

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-created, smp-deleted, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-in-rml, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

server_attribute

Specification	Value
Type	*list*
Block object keys	

attribute-value

Description 'inside-ipv6-prefix': Framed IPv6 Prefix; 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

server_derived-attribute

Specification	Value
Type	*object*

usergroup

Description: usergroup is a **JSON Block**. Please see below for *server_derived-attribute_usergroup*

Type: Object

userid

Description: userid is a **JSON Block**. Please see below for *server_derived-attribute_userid*

Type: Object

Reference Object: */axapi/v3/system/radius/server/derived-attribute/userid*

server_derived-attribute_userid

Specification	Value
Type	*object*

attribute

Description 'imei': Specify the IMEI attribute.; 'imsi': Specify the IMSI attribute.; 'msisdn': Specify the MSISDN attribute.; 'custom1': Specify the custom1 attribute.; 'custom2': Specify the custom2 attribute.; 'custom3': Specify the custom3 attribute.; 'custom4': Specify the custom4 attribute.; 'custom5': Specify the custom5 attribute.; 'custom6': Specify the custom6 attribute.;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

regex

Description Specify the regular expression to parse the value from a RADIUS attribute.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_derived-attribute_usergroup

Specification	Value
Type	*object*

attribute

Description 'imei': Specify the IMEI attribute.; 'imsi': Specify the IMSI attribute.; 'msisdn': Specify the MSISDN attribute.; 'custom1': Specify the custom1 attribute.; 'custom2': Specify the custom2 attribute.; 'custom3': Specify the custom3 attribute.; 'custom4': Specify the custom4 attribute.; 'custom5': Specify the custom5 attribute.; 'custom6': Specify the custom6 attribute.;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

regex

Description Specify the regular expression to parse the value from a RADIUS attribute.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Description 'inside-ipv6-prefix': Framed IPv6 Prefix; 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

derived-attribute

Specification	Value
Type	*object*

usergroup

Description: usergroup is a **JSON Block**. Please see below for *derived-attribute_usergroup*

Type: Object

Reference Object: */axapi/v3/system/radius/server/derived-attribute/usergroup*

userid

Description: userid is a **JSON Block**. Please see below for *derived-attribute_userid*

Type: Object

Reference Object: */axapi/v3/system/radius/server/derived-attribute/userid*

derived-attribute_userid

Specification	Value
Type	*object*

attribute

Description 'imei': Specify the IMEI attribute.; 'imsi': Specify the IMSI attribute.; 'msisdn': Specify the MSISDN attribute.; 'custom1': Specify the custom1 attribute.; 'custom2': Specify the custom2 attribute.; 'custom3': Specify the custom3 attribute.; 'custom4': Specify the custom4 attribute.; 'custom5': Specify the custom5 attribute.; 'custom6': Specify the custom6 attribute.;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

regex

Description Specify the regular expression to parse the value from a RADIUS attribute.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

derived-attribute_usergroup

Specification	Value
Type	*object*

attribute

Description 'imei': Specify the IMEI attribute.; 'imsi': Specify the IMSI attribute.; 'msisdn': Specify the MSISDN attribute.; 'custom1': Specify the custom1 attribute.; 'custom2': Specify the custom2 attribute.; 'custom3': Specify the custom3 attribute.; 'custom4': Specify the custom4 attribute.; 'custom5': Specify the custom5 attribute.; 'custom6': Specify the custom6 attribute.;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

regex

Description Specify the regular expression to parse the value from a RADIUS attribute.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.136 system radius server derived-attribute

Configure the derived attributes extended by the RADIUS attributes.

derived-attribute Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	derived-attribute
Element URI	/axapi/v3/system/radius/server/derived-attribute
Element Attributes	derived-attribute_attributes
Partition Visibility	shared
Schema	`derived-attribute schema`

Operations Allowed:

Get Object

GET

/axapi/v3/system/radius/server/derived-attribute

derived-attribute_attributes

derived-attribute attributes

usergroup

Description: usergroup is a **JSON Block**. Please see below for *usergroup*

Type: Object

Reference Object: */axapi/v3/system/radius/server/derived-attribute/usergroup*

userid

Description: userid is a **JSON Block**. Please see below for *userid*

Type: Object

Reference Object: */axapi/v3/system/radius/server/derived-attribute/userid*

userid

Specification	Value
Type	*object*

attribute

Description 'imei': Specify the IMEI attribute.; 'imsi': Specify the IMSI attribute.; 'msisdn': Specify the MSISDN attribute.; 'custom1': Specify the custom1 attribute.; 'custom2': Specify the custom2 attribute.; 'custom3': Specify the custom3 attribute.; 'custom4': Specify the custom4 attribute.; 'custom5': Specify the custom5 attribute.; 'custom6': Specify the custom6 attribute.;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

regex

Description Specify the regular expression to parse the value from a RADIUS attribute.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

usergroup

Specification	Value
Type	*object*

attribute

Description 'imei': Specify the IMEI attribute.; 'imsi': Specify the IMSI attribute.; 'msisdn': Specify the MSISDN attribute.; 'custom1': Specify the custom1 attribute.; 'custom2': Specify the custom2 attribute.; 'custom3': Specify the custom3 attribute.; 'custom4': Specify the custom4 attribute.; 'custom5': Specify the custom5 attribute.; 'custom6': Specify the custom6 attribute.;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

regex

Description Specify the regular expression to parse the value from a RADIUS attribute.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.137 system radius server derived-attribute usergroup

Configure the derived attribute of user group.

usergroup Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	usergroup
Element URI	/axapi/v3/system/radius/server/derived-attribute/usergroup
Element Attributes	usergroup_attributes
Partition Visibility	shared
Schema	`usergroup schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/radius/server/derived-attribute/usergroup

usergroup attributes

```
POST /axapi/v3/system/radius/server/derived-attribute/usergroup
Payload:
{
    "usergroup": {
        "regex": "a",
        "attribute": "imei"
    }
}
```

Get Object

GET

/axapi/v3/system/radius/server/derived-attribute/usergroup

usergroup attributes

```
GET /axapi/v3/system/radius/server/derived-attribute/usergroup
Reponse:
{
    "usergroup": {
        "attribute": "imei",
        "regex": "a",
        "uuid": "29deb00a-b717-11ef-b78f-ae71681635d0",
        "a10-url": "/axapi/v3/system/radius/server/derived-attribute/usergroup"
    }
}
```

Modify Object

POST

/axapi/v3/system/radius/server/derived-attribute/usergroup

usergroup attributes

Replace Object

PUT

/axapi/v3/system/radius/server/derived-attribute/usergroup

usergroup attributes

```
PUT /axapi/v3/system/radius/server/derived-attribute/usergroup
Payload:
{
    "usergroup": {
        "regex": "a",
        "attribute": "imei"
    }
}
```

Delete Object

DELETE

/axapi/v3/system/radius/server/derived-attribute/usergroup

usergroup attributes

```
DELETE /axapi/v3/system/radius/server/derived-attribute/usergroup
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

usergroup attributes

attribute

Description 'imei': Specify the IMEI attribute.; 'imsi': Specify the IMSI attribute.; 'msisdn': Specify the MSISDN attribute.; 'custom1': Specify the custom1 attribute.; 'custom2': Specify the custom2 attribute.; 'custom3': Specify the custom3 attribute.; 'custom4': Specify the custom4 attribute.; 'custom5': Specify the custom5 attribute.; 'custom6': Specify the custom6 attribute.;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

regex

Description Specify the regular expression to parse the value from a RADIUS attribute.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.138 system radius server derived-attribute userid

Configure the derived attribute of user ID.

userid Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	userid
Element URI	/axapi/v3/system/radius/server/derived-attribute/userid
Element Attributes	userid_attributes
Partition Visibility	shared
Schema	`userid schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/radius/server/derived-attribute/userid

userid attributes

```
POST /axapi/v3/system/radius/server/derived-attribute/userid
Payload:
{
    "userid": {
        "regex": "a",
        "attribute": "imei"
    }
}
```

Get Object

GET

/axapi/v3/system/radius/server/derived-attribute/userid

userid attributes

```
GET /axapi/v3/system/radius/server/derived-attribute/userid
Reponse:
{
    "userid": {
        "attribute": "imei",
        "regex": "a",
        "uuid": "4d51926e-b717-11ef-b78f-ae71681635d0",
        "a10-url": "/axapi/v3/system/radius/server/derived-attribute/userid"
    }
}
```

Modify Object

POST

/axapi/v3/system/radius/server/derived-attribute/userid

userid attributes

Replace Object

PUT

/axapi/v3/system/radius/server/derived-attribute/userid

userid attributes

```
PUT /axapi/v3/system/radius/server/derived-attribute/userid
Payload:
{
    "userid": {
        "regex": "a",
        "attribute": "imei"
    }
}
```

Delete Object

DELETE

/axapi/v3/system/radius/server/derived-attribute/userid

userid attributes

```
DELETE /axapi/v3/system/radius/server/derived-attribute/userid
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

userid attributes

attribute

Description 'imei': Specify the IMEI attribute.; 'imsi': Specify the IMSI attribute.; 'msisdn': Specify the MSISDN attribute.; 'custom1': Specify the custom1 attribute.; 'custom2': Specify the custom2 attribute.; 'custom3': Specify the custom3 attribute.; 'custom4': Specify the custom4 attribute.; 'custom5': Specify the custom5 attribute.; 'custom6': Specify the custom6 attribute.;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

regex

Description Specify the regular expression to parse the value from a RADIUS attribute.

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-ssl-template-cfg

Description: server-ssl-template-cfg is a **JSON Block**. Please see below for *template-list_app-resources_server-ssl-template-cfg*

Type: Object

service-group-cfg

Description: service-group-cfg is a **JSON Block**. Please see below for *template-list_app-resources_service-group-cfg*

Type: Object

stream-template-cfg

Description: stream-template-cfg is a **JSON Block**. Please see below for *template-list_app-resources_stream-template-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-port-cfg

Description: virtual-port-cfg is a **JSON Block**. Please see below for *template-list_app-resources_virtual-port-cfg*

Type: Object

virtual-server-cfg

Description: virtual-server-cfg is a **JSON Block**. Please see below for *template-list_app-resources_virtual-server-cfg*

Type: Object

template-list_app-resources_http-template-cfg

Specification	Value
Type	*object*

http-template-max

Description Enter the number of http-template allowed (http-template count (default is max-value))

Type: number

http-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_server-ssl-template-cfg

Specification	Value
Type	*object*

server-ssl-template-max

Description Enter the number of server-ssl-template allowed (server-ssl-template count (default is max-value))

Type: number

server-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_gslb-template-cfg

Specification	Value
Type	*object*

gslb-template-max

Description Enter the number of gslb-template allowed (gslb-template count (default is max-value))

Type: number

gslb-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_virtual-server-cfg

Specification	Value
Type	*object*

virtual-server-max

Description Enter the number of virtual-servers allowed (virtual-server count (default is max-value))

Type: number

virtual-server-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_gslb-service-port-cfg

Specification	Value
Type	*object*

gslb-service-port-max

Description Enter the number of gslb-service-port allowed (gslb-service-port count (default is max-value))

Type: number

gslb-service-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_gslb-site-cfg

Specification	Value
Type	*object*

gslb-site-max

Description Enter the number of gslb-site allowed (gslb-site count (default is max-value))

Type: number

gslb-site-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_proxy-template-cfg

Specification	Value
Type	*object*

proxy-template-max

Description Enter the number of proxy-template allowed (server-ssl-template count (default is max-value))

Type: number

proxy-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_real-server-cfg

Specification	Value
Type	*object*

real-server-max

Description Enter the number of real-servers allowed (real-server count (default is max-value))

Type: number

real-server-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_link-cost-template-cfg

Specification	Value
Type	*object*

link-cost-template-max

Description Enter the number of link-cost-template allowed (link-cost-template count (default is max-value))

Type: number

link-cost-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_client-ssl-template-cfg

Specification	Value
Type	*object*

client-ssl-template-max

Description Enter the number of client-ssl-template allowed (client-ssl-template count (default is max-value))

Type: number

client-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_health-monitor-cfg

Specification	Value
Type	*object*

health-monitor-max

Description Enter the number of health monitors allowed (health-monitor count (default is max-value))

Type: number

Range: 0-1023

health-monitor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-1023

Default: 0

template-list_app-resources_gslb-zone-cfg

Specification	Value
Type	*object*

gslb-zone-max

Description Enter the number of gslb-zone allowed (gslb-zone count (default is max-value))

Type: number

gslb-zone-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_conn-reuse-template-cfg

Specification	Value
Type	*object*

conn-reuse-template-max

Description Enter the number of conn-reuse-template allowed (conn-reuse-template count (default is max-value))

Type: number

conn-reuse-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_gslb-policy-cfg

Specification	Value
Type	*object*

gslb-policy-max

Description Enter the number of gslb-policy allowed (gslb-policy count (default is max-value))

Type: number

gslb-policy-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_gslb-service-cfg

Specification	Value
Type	*object*

gslb-service-max

Description Enter the number of gslb-service allowed (gslb-service count (default is max-value)

Type: number

gslb-service-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_gslb-geo-location-cfg

Specification	Value
Type	*object*

gslb-geo-location-max

Description Enter the number of gslb-geo-location allowed (gslb-geo-location count (default is max-value))

Type: number

gslb-geo-location-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_cache-template-cfg

Specification	Value
Type	*object*

cache-template-max

Description Enter the number of cache-template allowed (cache-template count (default is max-value))

Type: number

cache-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_persist-cookie-template-cfg

Specification	Value
Type	*object*

persist-cookie-template-max

Description Enter the number of persist-cookie-template allowed (persist-cookie-template count (default is max-value))

Type: number

persist-cookie-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_fix-template-cfg

Specification	Value
Type	*object*

fix-template-max

Description Enter the number of fix-template allowed (fix-template count (default is max-value))

Type: number

fix-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_fast-tcp-template-cfg

Specification	Value
Type	*object*

fast-tcp-template-max

Description Enter the number of fast-tcp-template allowed (fast-tcp-template count (default is max-value))

Type: number

fast-tcp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_fast-udp-template-cfg

Specification	Value
Type	*object*

fast-udp-template-max

Description Enter the number of fast-udp-template allowed (fast-udp-template count (default is max-value))

Type: number

fast-udp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_gslb-service-ip-cfg

Specification	Value
Type	*object*

gslb-service-ip-max

Description Enter the number of gslb-service-ip allowed (gslb-service-ip count (default is max-value))

Type: number

gslb-service-ip-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_gslb-svc-group-cfg

Specification	Value
Type	*object*

gslb-svc-group-max

Description Enter the number of gslb-svc-group allowed (gslb-svc-group count (default is max-value))

Type: number

gslb-svc-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_virtual-port-cfg

Specification	Value
Type	*object*

virtual-port-max

Description Enter the number of virtual-port allowed (virtual-port count (default is max-value))

Type: number

virtual-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_service-group-cfg

Specification	Value
Type	*object*

service-group-max

Description Enter the number of service groups allowed (service-group count (default is max-value))

Type: number

service-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_pbslb-entry-cfg

Specification	Value
Type	*object*

pbslb-entry-max

Description Enter the number of pbslb-entry allowed (pbslb-entry count)

Type: number

pbslb-entry-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_gslb-device-cfg

Specification	Value
Type	*object*

gslb-device-max

Description Enter the number of gslb-device allowed (gslb-device count (default is max-value))

Type: number

gslb-device-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_persist-srcip-template-cfg

Specification	Value
Type	*object*

persist-srcip-template-max

Description Enter the number of persist-srcip-template allowed (persist-source-ip-template count (default is max-value))

Type: number

persist-srcip-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_stream-template-cfg

Specification	Value
Type	*object*

stream-template-max

Description Enter the number of stream-template allowed (server-ssl-template count (default is max-value))

Type: number

stream-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_real-port-cfg

Specification	Value
Type	*object*

real-port-max

Description Enter the number of real-ports allowed (real-port count (default is max-value))

Type: number

real-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_app-resources_gslb-ip-list-cfg

Specification	Value
Type	*object*

gslb-ip-list-max

Description Enter the number of gslb-ip-list allowed (gslb-ip-list count (default is max-value))

Type: number

gslb-ip-list-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_system-resources

Specification	Value
Type	*object*

bw-limit-cfg

Description: bw-limit-cfg is a **JSON Block**. Please see below for *template-list_system-resources_bw-limit-cfg*

Type: Object

concurrent-session-limit-cfg

Description: concurrent-session-limit-cfg is a **JSON Block**. Please see below for *template-list_system-resources_concurrent-session-limit-cfg*

Type: Object

fwcps-limit-cfg

Description: fwcps-limit-cfg is a **JSON Block**. Please see below for *template-list_system-resources_fwcps-limit-cfg*

Type: Object

l4-session-limit-cfg

Description: l4-session-limit-cfg is a **JSON Block**. Please see below for *template-list_system-resources_l4-session-limit-cfg*

Type: Object

l4cps-limit-cfg

Description: l4cps-limit-cfg is a **JSON Block**. Please see below for *template-list_system-resources_l4cps-limit-cfg*

Type: Object

l7cps-limit-cfg

Description: l7cps-limit-cfg is a **JSON Block**. Please see below for *template-list_system-resources_l7cps-limit-cfg*

Type: Object

natcps-limit-cfg

Description: natcps-limit-cfg is a **JSON Block**. Please see below for *template-list_system-resources_natcps-limit-cfg*

Type: Object

ssl-throughput-limit-cfg

Description: ssl-throughput-limit-cfg is a **JSON Block**. Please see below for *template-list_system-resources_ssl-throughput-limit-cfg*

Type: Object

sslcps-limit-cfg

Description: sslcps-limit-cfg is a **JSON Block**. Please see below for *template-list_system-resources_sslcps-limit-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_system-resources_l4-session-limit-cfg

Specification	Value
Type	*object*

l4-session-limit-max

Description Enter the l4 session limit in % (0.01% to 99.99%) (Enter a number from 0.01 to 99.99 (up to 2 digits precision))

Type: string

Maximum Length: 5 characters

Maximum Length: 1 characters

l4-session-limit-min-guarantee

Description minimum guaranteed value in % (up to 2 digits precision) (Enter a number from 0 to 99.99)

Type: string

Maximum Length: 5 characters

Maximum Length: 1 characters

Default: 0

template-list_system-resources_l7cps-limit-cfg

Specification	Value
Type	*object*

l7cps-limit-max

Description L7cps-limit (L7 cps limit (no limits applied by default))

Type: number

Range: 100-300000

template-list_system-resources_l4cps-limit-cfg

Specification	Value
Type	*object*

l4cps-limit-max

Description Enter the L4 cps limit (L4 cps limit (no limits applied by default))

Type: number

Range: 100-1000000

template-list_system-resources_natcps-limit-cfg

Specification	Value
Type	*object*

natcps-limit-max

Description Enter the Nat cps limit (NAT cps limit (no limits applied by default))

Type: number

Range: 100-1000000

template-list_system-resources_sslcps-limit-cfg

Specification	Value
Type	*object*

sslcps-limit-max

Description Enter the SSL cps limit (SSL cps limit (no limits applied by default))

Type: number

Range: 100-300000

template-list_system-resources_fwcps-limit-cfg

Specification	Value
Type	*object*

fwcps-limit-max

Description Enter the Firewall cps limit (Firewall cps limit (no limits applied by default))

Type: number

Range: 100-1000000

template-list_system-resources_ssl-throughput-limit-cfg

Specification	Value
Type	*object*

ssl-throughput-limit-max

Description Enter the ssl throughput limit in mbps (SSL Througput limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

ssl-throughput-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-list_system-resources_bw-limit-cfg

Specification	Value
Type	*object*

bw-limit-max

Description Enter the bandwidth limit in mbps (Bandwidth limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

bw-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-list_system-resources_concurrent-session-limit-cfg

Specification	Value
Type	*object*

concurrent-session-limit-max

Description Enter the Concurrent Session limit (cps) (Concurrent-Session cps limit (no limits applied by default))

Type: number

template-list_network-resources

Specification	Value
Type	*object*

ipv4-acl-line-cfg

Description: ipv4-acl-line-cfg is a **JSON Block**. Please see below for *template-list_network-resources_ipv4-acl-line-cfg*

Type: Object

ipv6-acl-line-cfg

Description: ipv6-acl-line-cfg is a **JSON Block**. Please see below for *template-list_network-resources_ipv6-acl-line-cfg*

Type: Object

object-group-cfg

Description: object-group-cfg is a **JSON Block**. Please see below for *template-list_network-resources_object-group-cfg*

Type: Object

object-group-clause-cfg

Description: object-group-clause-cfg is a **JSON Block**. Please see below for *template-list_network-resources_object-group-clause-cfg*

Type: Object

static-arp-cfg

Description: static-arp-cfg is a **JSON Block**. Please see below for *template-list_network-resources_static-arp-cfg*

Type: Object

static-ipv4-route-cfg

Description: static-ipv4-route-cfg is a **JSON Block**. Please see below for *template-list_network-resources_static-ipv4-route-cfg*

Type: Object

static-ipv6-route-cfg

Description: static-ipv6-route-cfg is a **JSON Block**. Please see below for *template-list_network-resources_static-ipv6-route-cfg*

Type: Object

static-mac-cfg

Description: static-mac-cfg is a **JSON Block**. Please see below for *template-list_network-resources_static-mac-cfg*

Type: Object

static-neighbor-cfg

Description: static-neighbor-cfg is a **JSON Block**. Please see below for *template-list_network-resources_static-neighbor-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_network-resources_static-ipv6-route-cfg

Specification	Value
Type	*object*

static-ipv6-route-max

Description Enter the number of static ipv6 routes allowed (Static ipv6 routes (default is max-value))

Type: number

static-ipv6-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_network-resources_object-group-clause-cfg

Specification	Value
Type	*object*

object-group-clause-max

Description Enter the number of object group clauses allowed (Object group clauses (default is max-value))

Type: number

Range: 0-8192000

object-group-clause-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8192000

Default: 0

template-list_network-resources_static-ipv4-route-cfg

Specification	Value
Type	*object*

static-ipv4-route-max

Description Enter the number of static ipv4 routes allowed (Static ipv4 routes (default is max-value))

Type: number

static-ipv4-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_network-resources_static-arp-cfg

Specification	Value
Type	*object*

static-arp-max

Description Enter the number of static arp entries allowed (Static arp (default is max-value))

Type: number

Range: 0-128

static-arp-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

template-list_network-resources_ipv4-acl-line-cfg

Specification	Value
Type	*object*

ipv4-acl-line-max

Description Enter the number of ACL lines allowed (IPV4 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv4-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

template-list_network-resources_static-mac-cfg

Specification	Value
Type	*object*

static-mac-max

Description Enter the number of static MAC entries allowed (Static MACs (default is max-value))

Type: number

Range: 0-500

static-mac-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-500

Default: 0

template-list_network-resources_ipv6-acl-line-cfg

Specification	Value
Type	*object*

ipv6-acl-line-max

Description Enter the number of ACL lines allowed (IPV6 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv6-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

template-list_network-resources_static-neighbor-cfg

Specification	Value
Type	*object*

static-neighbor-max

Description Enter the number of static neighbor entries allowed (Static neighbors (default is max-value))

Type: number

Range: 0-128

static-neighbor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

template-list_network-resources_object-group-cfg

Specification	Value
Type	*object*

object-group-max

Description Enter the number of object groups allowed (Object group (default is max-value))

Type: number

Range: 0-8000

object-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8000

Default: 0

2.129.143 system resource-accounting oper

Operational Status for the object resource-accounting

resource-accounting Specification

Parameter	Value
Type	*Configuration Resource*

Description: fast-udp-template-cfg is a **JSON Block**. Please see below for *app-resources_fast-udp-template-cfg*

Type: Object

fix-template-cfg

Description: fix-template-cfg is a **JSON Block**. Please see below for *app-resources_fix-template-cfg*

Type: Object

gslb-device-cfg

Description: gslb-device-cfg is a **JSON Block**. Please see below for *app-resources_gslb-device-cfg*

Type: Object

gslb-geo-location-cfg

Description: gslb-geo-location-cfg is a **JSON Block**. Please see below for *app-resources_gslb-geo-location-cfg*

Type: Object

gslb-ip-list-cfg

Description: gslb-ip-list-cfg is a **JSON Block**. Please see below for *app-resources_gslb-ip-list-cfg*

Type: Object

gslb-policy-cfg

Description: gslb-policy-cfg is a **JSON Block**. Please see below for *app-resources_gslb-policy-cfg*

Type: Object

gslb-service-cfg

Description: gslb-service-cfg is a **JSON Block**. Please see below for *app-resources_gslb-service-cfg*

Type: Object

gslb-service-ip-cfg

Description: gslb-service-ip-cfg is a **JSON Block**. Please see below for *app-resources_gslb-service-ip-cfg*

Type: Object

gslb-service-port-cfg

Description: gslb-service-port-cfg is a **JSON Block**. Please see below for *app-resources_gslb-service-port-cfg*

Type: Object

gslb-site-cfg

Description: gslb-site-cfg is a **JSON Block**. Please see below for *app-resources_gslb-site-cfg*

Type: Object

gslb-svc-group-cfg

Description: gslb-svc-group-cfg is a **JSON Block**. Please see below for *app-resources_gslb-svc-group-cfg*

Type: Object

gslb-template-cfg

Description: gslb-template-cfg is a **JSON Block**. Please see below for *app-resources_gslb-template-cfg*

Type: Object

gslb-zone-cfg

Description: gslb-zone-cfg is a **JSON Block**. Please see below for *app-resources_gslb-zone-cfg*

Type: Object

health-monitor-cfg

Description: health-monitor-cfg is a **JSON Block**. Please see below for *app-resources_health-monitor-cfg*

Type: Object

http-template-cfg

Description: http-template-cfg is a **JSON Block**. Please see below for *app-resources_http-template-cfg*

Type: Object

link-cost-template-cfg

Description: link-cost-template-cfg is a **JSON Block**. Please see below for *app-resources_link-cost-template-cfg*

Type: Object

pbslb-entry-cfg

Description: pbslb-entry-cfg is a **JSON Block**. Please see below for *app-resources_pbslb-entry-cfg*

Type: Object

persist-cookie-template-cfg

Description: persist-cookie-template-cfg is a **JSON Block**. Please see below for *app-resources_persist-cookie-template-cfg*

Type: Object

persist-srcip-template-cfg

Description: persist-srcip-template-cfg is a **JSON Block**. Please see below for *app-resources_persist-srcip-template-cfg*

Type: Object

proxy-template-cfg

Description: proxy-template-cfg is a **JSON Block**. Please see below for *app-resources_proxy-template-cfg*

Type: Object

real-port-cfg

Description: real-port-cfg is a **JSON Block**. Please see below for *app-resources_real-port-cfg*

Type: Object

real-server-cfg

Description: real-server-cfg is a **JSON Block**. Please see below for *app-resources_real-server-cfg*

Type: Object

server-ssl-template-cfg

Description: server-ssl-template-cfg is a **JSON Block**. Please see below for *app-resources_server-ssl-template-cfg*

Type: Object

service-group-cfg

Description: service-group-cfg is a **JSON Block**. Please see below for *app-resources_service-group-cfg*

Type: Object

stream-template-cfg

Description: stream-template-cfg is a **JSON Block**. Please see below for *app-resources_stream-template-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-port-cfg

Description: virtual-port-cfg is a **JSON Block**. Please see below for *app-resources_virtual-port-cfg*

Type: Object

virtual-server-cfg

Description: virtual-server-cfg is a **JSON Block**. Please see below for *app-resources_virtual-server-cfg*

Type: Object

app-resources_http-template-cfg

Specification	Value
Type	*object*

http-template-max

Description Enter the number of http-template allowed (http-template count (default is max-value))

Type: number

http-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_server-ssl-template-cfg

Specification	Value
Type	*object*

server-ssl-template-max

Description Enter the number of server-ssl-template allowed (server-ssl-template count (default is max-value))

Type: number

server-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-template-cfg

Specification	Value
Type	*object*

gslb-template-max

Description Enter the number of gslb-template allowed (gslb-template count (default is max-value))

Type: number

gslb-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_virtual-server-cfg

Specification	Value
Type	*object*

virtual-server-max

Description Enter the number of virtual-servers allowed (virtual-server count (default is max-value))

Type: number

virtual-server-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-service-port-cfg

Specification	Value
Type	*object*

gslb-service-port-max

Description Enter the number of gslb-service-port allowed (gslb-service-port count (default is max-value))

Type: number

gslb-service-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-site-cfg

Specification	Value
Type	*object*

gslb-site-max

Description Enter the number of gslb-site allowed (gslb-site count (default is max-value))

Type: number

gslb-site-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_proxy-template-cfg

Specification	Value
Type	*object*

proxy-template-max

Description Enter the number of proxy-template allowed (server-ssl-template count (default is max-value))

Type: number

proxy-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_real-server-cfg

Specification	Value
Type	*object*

real-server-max

Description Enter the number of real-servers allowed (real-server count (default is max-value))

Type: number

real-server-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_link-cost-template-cfg

Specification	Value
Type	*object*

link-cost-template-max

Description Enter the number of link-cost-template allowed (link-cost-template count (default is max-value))

Type: number

link-cost-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_client-ssl-template-cfg

Specification	Value
Type	*object*

client-ssl-template-max

Description Enter the number of client-ssl-template allowed (client-ssl-template count (default is max-value))

Type: number

client-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_health-monitor-cfg

Specification	Value
Type	*object*

health-monitor-max

Description Enter the number of health monitors allowed (health-monitor count (default is max-value))

Type: number

Range: 0-1023

health-monitor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-1023

Default: 0

app-resources_gslb-zone-cfg

Specification	Value
Type	*object*

gslb-zone-max

Description Enter the number of gslb-zone allowed (gslb-zone count (default is max-value))

Type: number

gslb-zone-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_conn-reuse-template-cfg

Specification	Value
Type	*object*

conn-reuse-template-max

Description Enter the number of conn-reuse-template allowed (conn-reuse-template count (default is max-value))

Type: number

conn-reuse-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-policy-cfg

Specification	Value
Type	*object*

gslb-policy-max

Description Enter the number of gslb-policy allowed (gslb-policy count (default is max-value))

Type: number

gslb-policy-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-service-cfg

Specification	Value
Type	*object*

gslb-service-max

Description Enter the number of gslb-service allowed (gslb-service count (default is max-value)

Type: number

gslb-service-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-geo-location-cfg

Specification	Value
Type	*object*

gslb-geo-location-max

Description Enter the number of gslb-geo-location allowed (gslb-geo-location count (default is max-value))

Type: number

gslb-geo-location-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_cache-template-cfg

Specification	Value
Type	*object*

cache-template-max

Description Enter the number of cache-template allowed (cache-template count (default is max-value))

Type: number

cache-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_persist-cookie-template-cfg

Specification	Value
Type	*object*

persist-cookie-template-max

Description Enter the number of persist-cookie-template allowed (persist-cookie-template count (default is max-value))

Type: number

persist-cookie-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_fix-template-cfg

Specification	Value
Type	*object*

fix-template-max

Description Enter the number of fix-template allowed (fix-template count (default is max-value))

Type: number

fix-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_fast-tcp-template-cfg

Specification	Value
Type	*object*

fast-tcp-template-max

Description Enter the number of fast-tcp-template allowed (fast-tcp-template count (default is max-value))

Type: number

fast-tcp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_fast-udp-template-cfg

Specification	Value
Type	*object*

fast-udp-template-max

Description Enter the number of fast-udp-template allowed (fast-udp-template count (default is max-value))

Type: number

fast-udp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-service-ip-cfg

Specification	Value
Type	*object*

gslb-service-ip-max

Description Enter the number of gslb-service-ip allowed (gslb-service-ip count (default is max-value))

Type: number

gslb-service-ip-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-svc-group-cfg

Specification	Value
Type	*object*

gslb-svc-group-max

Description Enter the number of gslb-svc-group allowed (gslb-svc-group count (default is max-value))

Type: number

gslb-svc-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_virtual-port-cfg

Specification	Value
Type	*object*

virtual-port-max

Description Enter the number of virtual-port allowed (virtual-port count (default is max-value))

Type: number

virtual-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_service-group-cfg

Specification	Value
Type	*object*

service-group-max

Description Enter the number of service groups allowed (service-group count (default is max-value))

Type: number

service-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_pbslb-entry-cfg

Specification	Value
Type	*object*

pbslb-entry-max

Description Enter the number of pbslb-entry allowed (pbslb-entry count)

Type: number

pbslb-entry-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-device-cfg

Specification	Value
Type	*object*

gslb-device-max

Description Enter the number of gslb-device allowed (gslb-device count (default is max-value))

Type: number

gslb-device-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_persist-srcip-template-cfg

Specification	Value
Type	*object*

persist-srcip-template-max

Description Enter the number of persist-srcip-template allowed (persist-source-ip-template count (default is max-value))

Type: number

persist-srcip-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_stream-template-cfg

Specification	Value
Type	*object*

stream-template-max

Description Enter the number of stream-template allowed (server-ssl-template count (default is max-value))

Type: number

stream-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_real-port-cfg

Specification	Value
Type	*object*

real-port-max

Description Enter the number of real-ports allowed (real-port count (default is max-value))

Type: number

real-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-ip-list-cfg

Specification	Value
Type	*object*

gslb-ip-list-max

Description Enter the number of gslb-ip-list allowed (gslb-ip-list count (default is max-value))

Type: number

gslb-ip-list-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

system-resources

Specification	Value
Type	*object*

bw-limit-cfg

Description: bw-limit-cfg is a **JSON Block**. Please see below for *system-resources_bw-limit-cfg*

Type: Object

concurrent-session-limit-cfg

Description: concurrent-session-limit-cfg is a **JSON Block**. Please see below for *system-resources_concurrent-session-limit-cfg*

Type: Object

fwcps-limit-cfg

Description: fwcps-limit-cfg is a **JSON Block**. Please see below for *system-resources_fwcps-limit-cfg*

Type: Object

l4-session-limit-cfg

Description: l4-session-limit-cfg is a **JSON Block**. Please see below for *system-resources_l4-session-limit-cfg*

Type: Object

l4cps-limit-cfg

Description: l4cps-limit-cfg is a **JSON Block**. Please see below for *system-resources_l4cps-limit-cfg*

Type: Object

l7cps-limit-cfg

Description: l7cps-limit-cfg is a **JSON Block**. Please see below for *system-resources_l7cps-limit-cfg*

Type: Object

natcps-limit-cfg

Description: natcps-limit-cfg is a **JSON Block**. Please see below for *system-resources_natcps-limit-cfg*

Type: Object

ssl-throughput-limit-cfg

Description: ssl-throughput-limit-cfg is a **JSON Block**. Please see below for *system-resources_ssl-throughput-limit-cfg*

Type: Object

sslcps-limit-cfg

Description: sslcps-limit-cfg is a **JSON Block**. Please see below for *system-resources_sslcps-limit-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

system-resources_l4-session-limit-cfg

Specification	Value
Type	*object*

l4-session-limit-max

Description Enter the l4 session limit in % (0.01% to 99.99%) (Enter a number from 0.01 to 99.99 (up to 2 digits precision))

Type: string

Maximum Length: 5 characters

Maximum Length: 1 characters

l4-session-limit-min-guarantee

Description minimum guaranteed value in % (up to 2 digits precision) (Enter a number from 0 to 99.99)

Type: string

Maximum Length: 5 characters

Maximum Length: 1 characters

Default: 0

system-resources_l7cps-limit-cfg

Specification	Value
Type	*object*

l7cps-limit-max

Description L7cps-limit (L7 cps limit (no limits applied by default))

Type: number

Range: 100-300000

system-resources_l4cps-limit-cfg

Specification	Value
Type	*object*

l4cps-limit-max

Description Enter the L4 cps limit (L4 cps limit (no limits applied by default))

Type: number

Range: 100-1000000

system-resources_natcps-limit-cfg

Specification	Value
Type	*object*

natcps-limit-max

Description Enter the Nat cps limit (NAT cps limit (no limits applied by default))

Type: number

Range: 100-1000000

system-resources_sslcps-limit-cfg

Specification	Value
Type	*object*

sslcps-limit-max

Description Enter the SSL cps limit (SSL cps limit (no limits applied by default))

Type: number

Range: 100-300000

system-resources_fwcps-limit-cfg

Specification	Value
Type	*object*

fwcps-limit-max

Description Enter the Firewall cps limit (Firewall cps limit (no limits applied by default))

Type: number

Range: 100-1000000

system-resources_ssl-throughput-limit-cfg

Specification	Value
Type	*object*

ssl-throughput-limit-max

Description Enter the ssl throughput limit in mbps (SSL Througput limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

ssl-throughput-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-resources_bw-limit-cfg

Specification	Value
Type	*object*

bw-limit-max

Description Enter the bandwidth limit in mbps (Bandwidth limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

bw-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-resources_concurrent-session-limit-cfg

Specification	Value
Type	*object*

concurrent-session-limit-max

Description Enter the Concurrent Session limit (cps) (Concurrent-Session cps limit (no limits applied by default))

Type: number

network-resources

Specification	Value
Type	*object*

ipv4-acl-line-cfg

Description: ipv4-acl-line-cfg is a **JSON Block**. Please see below for *network-resources_ipv4-acl-line-cfg*

Type: Object

ipv6-acl-line-cfg

Description: ipv6-acl-line-cfg is a **JSON Block**. Please see below for *network-resources_ipv6-acl-line-cfg*

Type: Object

object-group-cfg

Description: object-group-cfg is a **JSON Block**. Please see below for *network-resources_object-group-cfg*

Type: Object

object-group-clause-cfg

Description: object-group-clause-cfg is a **JSON Block**. Please see below for *network-resources_object-group-clause-cfg*

Type: Object

static-arp-cfg

Description: static-arp-cfg is a **JSON Block**. Please see below for *network-resources_static-arp-cfg*

Type: Object

static-ipv4-route-cfg

Description: static-ipv4-route-cfg is a **JSON Block**. Please see below for *network-resources_static-ipv4-route-cfg*

Type: Object

static-ipv6-route-cfg

Description: static-ipv6-route-cfg is a **JSON Block**. Please see below for *network-resources_static-ipv6-route-cfg*

Type: Object

static-mac-cfg

Description: static-mac-cfg is a **JSON Block**. Please see below for *network-resources_static-mac-cfg*

Type: Object

static-neighbor-cfg

Description: static-neighbor-cfg is a **JSON Block**. Please see below for *network-resources_static-neighbor-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network-resources_static-ipv6-route-cfg

Specification	Value
Type	*object*

static-ipv6-route-max

Description Enter the number of static ipv6 routes allowed (Static ipv6 routes (default is max-value))

Type: number

static-ipv6-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

network-resources_object-group-clause-cfg

Specification	Value
Type	*object*

object-group-clause-max

Description Enter the number of object group clauses allowed (Object group clauses (default is max-value))

Type: number

Range: 0-8192000

object-group-clause-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8192000

Default: 0

network-resources_static-ipv4-route-cfg

Specification	Value
Type	*object*

static-ipv4-route-max

Description Enter the number of static ipv4 routes allowed (Static ipv4 routes (default is max-value))

Type: number

static-ipv4-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

network-resources_static-arp-cfg

Specification	Value
Type	*object*

static-arp-max

Description Enter the number of static arp entries allowed (Static arp (default is max-value))

Type: number

Range: 0-128

static-arp-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

network-resources_ipv4-acl-line-cfg

Specification	Value
Type	*object*

ipv4-acl-line-max

Description Enter the number of ACL lines allowed (IPV4 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv4-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

network-resources_static-mac-cfg

Specification	Value
Type	*object*

static-mac-max

Description Enter the number of static MAC entries allowed (Static MACs (default is max-value))

Type: number

Range: 0-500

static-mac-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-500

Default: 0

network-resources_ipv6-acl-line-cfg

Specification	Value
Type	*object*

ipv6-acl-line-max

Description Enter the number of ACL lines allowed (IPV6 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv6-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

network-resources_static-neighbor-cfg

Specification	Value
Type	*object*

static-neighbor-max

Description Enter the number of static neighbor entries allowed (Static neighbors (default is max-value))

Type: number

Range: 0-128

static-neighbor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

network-resources_object-group-cfg

Specification	Value
Type	*object*

object-group-max

Description Enter the number of object groups allowed (Object group (default is max-value))

Type: number

Range: 0-8000

object-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8000

Default: 0

2.129.145 system resource-accounting template app-resources

Enter the application resource limits

app-resources Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	app-resources
Element URI	/axapi/v3/system/resource-accounting/template/{name}/app-resources
Element Attributes	app-resources_attributes
Partition Visibility	shared
Schema	`app-resources schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/resource-accounting/template/{name}/app-resources

app-resources attributes

```
POST /axapi/v3/system/resource-accounting/template/aa/app-resources
Payload:
{
    "app-resources": {
        "gslb-device-cfg": {
            "gslb-device-max": 1,
            "gslb-device-min-guarantee": 1
        }
    }
}
```

Get Object

GET

/axapi/v3/system/resource-accounting/template/{name}/app-resources

app-resources attributes

```
GET /axapi/v3/system/resource-accounting/template/aa/app-resources
Reponse:
{
    "app-resources": {
        "gslb-device-cfg": {
            "gslb-device-max": 1,
            "gslb-device-min-guarantee": 1
        },
        "uuid": "d0e90a80-b717-11ef-b78f-ae71681635d0",
        "a10-url": "/axapi/v3/system/resource-accounting/template/aa/app-resources"
    }
}
```

Modify Object

POST

/axapi/v3/system/resource-accounting/template/{name}/app-resources

app-resources attributes

Replace Object

PUT

/axapi/v3/system/resource-accounting/template/{name}/app-resources

app-resources attributes

```
PUT /axapi/v3/system/resource-accounting/template/aa/app-resources
Payload:
{
    "app-resources": {
        "gslb-device-cfg": {
            "gslb-device-max": 2,
            "gslb-device-min-guarantee": 2
        }
    }
}
```

app-resources attributes

cache-template-cfg

Description: cache-template-cfg is a **JSON Block**. Please see below for *cache-template-cfg*

Type: Object

client-ssl-template-cfg

Description: client-ssl-template-cfg is a **JSON Block**. Please see below for *client-ssl-template-cfg*

Type: Object

link-cost-template-cfg

Description: link-cost-template-cfg is a **JSON Block**. Please see below for *link-cost-template-cfg*

Type: Object

pbslb-entry-cfg

Description: pbslb-entry-cfg is a **JSON Block**. Please see below for *pbslb-entry-cfg*

Type: Object

persist-cookie-template-cfg

Description: persist-cookie-template-cfg is a **JSON Block**. Please see below for *persist-cookie-template-cfg*

Type: Object

persist-srcip-template-cfg

Description: persist-srcip-template-cfg is a **JSON Block**. Please see below for *persist-srcip-template-cfg*

Type: Object

proxy-template-cfg

Description: proxy-template-cfg is a **JSON Block**. Please see below for *proxy-template-cfg*

Type: Object

real-port-cfg

Description: real-port-cfg is a **JSON Block**. Please see below for *real-port-cfg*

Type: Object

real-server-cfg

Description: real-server-cfg is a **JSON Block**. Please see below for *real-server-cfg*

Type: Object

server-ssl-template-cfg

Description: server-ssl-template-cfg is a **JSON Block**. Please see below for *server-ssl-template-cfg*

Type: Object

service-group-cfg

Description: service-group-cfg is a **JSON Block**. Please see below for *service-group-cfg*

Type: Object

stream-template-cfg

Description: stream-template-cfg is a **JSON Block**. Please see below for *stream-template-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-port-cfg

Description: virtual-port-cfg is a **JSON Block**. Please see below for *virtual-port-cfg*

Type: Object

virtual-server-cfg

Description: virtual-server-cfg is a **JSON Block**. Please see below for *virtual-server-cfg*

Type: Object

http-template-cfg

Specification	Value
Type	*object*

http-template-max

Description Enter the number of http-template allowed (http-template count (default is max-value))

Type: number

http-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

server-ssl-template-cfg

Specification	Value
Type	*object*

server-ssl-template-max

Description Enter the number of server-ssl-template allowed (server-ssl-template count (default is max-value))

Type: number

server-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-template-cfg

Specification	Value
Type	*object*

gslb-template-max

Description Enter the number of gslb-template allowed (gslb-template count (default is max-value))

Type: number

gslb-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

virtual-server-cfg

Specification	Value
Type	*object*

virtual-server-max

Description Enter the number of virtual-servers allowed (virtual-server count (default is max-value))

Type: number

virtual-server-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-service-port-cfg

Specification	Value
Type	*object*

gslb-service-port-max

Description Enter the number of gslb-service-port allowed (gslb-service-port count (default is max-value))

Type: number

gslb-service-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-site-cfg

Specification	Value
Type	*object*

gslb-site-max

Description Enter the number of gslb-site allowed (gslb-site count (default is max-value))

Type: number

gslb-site-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

proxy-template-cfg

Specification	Value
Type	*object*

proxy-template-max

Description Enter the number of proxy-template allowed (server-ssl-template count (default is max-value))

Type: number

proxy-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

real-server-cfg

Specification	Value
Type	*object*

real-server-max

Description Enter the number of real-servers allowed (real-server count (default is max-value))

Type: number

real-server-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

link-cost-template-cfg

Specification	Value
Type	*object*

link-cost-template-max

Description Enter the number of link-cost-template allowed (link-cost-template count (default is max-value))

Type: number

link-cost-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

client-ssl-template-cfg

Specification	Value
Type	*object*

client-ssl-template-max

Description Enter the number of client-ssl-template allowed (client-ssl-template count (default is max-value))

Type: number

client-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

health-monitor-cfg

Specification	Value
Type	*object*

health-monitor-max

Description Enter the number of health monitors allowed (health-monitor count (default is max-value))

Type: number

Range: 0-1023

health-monitor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-1023

Default: 0

gslb-zone-cfg

Specification	Value
Type	*object*

gslb-zone-max

Description Enter the number of gslb-zone allowed (gslb-zone count (default is max-value))

Type: number

gslb-zone-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

conn-reuse-template-cfg

Specification	Value
Type	*object*

conn-reuse-template-max

Description Enter the number of conn-reuse-template allowed (conn-reuse-template count (default is max-value))

Type: number

conn-reuse-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-policy-cfg

Specification	Value
Type	*object*

gslb-policy-max

Description Enter the number of gslb-policy allowed (gslb-policy count (default is max-value))

Type: number

gslb-policy-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-service-cfg

Specification	Value
Type	*object*

gslb-service-max

Description Enter the number of gslb-service allowed (gslb-service count (default is max-value)

Type: number

gslb-service-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-geo-location-cfg

Specification	Value
Type	*object*

gslb-geo-location-max

Description Enter the number of gslb-geo-location allowed (gslb-geo-location count (default is max-value))

Type: number

gslb-geo-location-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

cache-template-cfg

Specification	Value
Type	*object*

cache-template-max

Description Enter the number of cache-template allowed (cache-template count (default is max-value))

Type: number

cache-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

persist-cookie-template-cfg

Specification	Value
Type	*object*

persist-cookie-template-max

Description Enter the number of persist-cookie-template allowed (persist-cookie-template count (default is max-value))

Type: number

persist-cookie-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

fix-template-cfg

Specification	Value
Type	*object*

fix-template-max

Description Enter the number of fix-template allowed (fix-template count (default is max-value))

Type: number

fix-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

fast-tcp-template-cfg

Specification	Value
Type	*object*

fast-tcp-template-max

Description Enter the number of fast-tcp-template allowed (fast-tcp-template count (default is max-value))

Type: number

fast-tcp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

fast-udp-template-cfg

Specification	Value
Type	*object*

fast-udp-template-max

Description Enter the number of fast-udp-template allowed (fast-udp-template count (default is max-value))

Type: number

fast-udp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-service-ip-cfg

Specification	Value
Type	*object*

gslb-service-ip-max

Description Enter the number of gslb-service-ip allowed (gslb-service-ip count (default is max-value))

Type: number

gslb-service-ip-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-svc-group-cfg

Specification	Value
Type	*object*

gslb-svc-group-max

Description Enter the number of gslb-svc-group allowed (gslb-svc-group count (default is max-value))

Type: number

gslb-svc-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

virtual-port-cfg

Specification	Value
Type	*object*

virtual-port-max

Description Enter the number of virtual-port allowed (virtual-port count (default is max-value))

Type: number

virtual-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

service-group-cfg

Specification	Value
Type	*object*

service-group-max

Description Enter the number of service groups allowed (service-group count (default is max-value))

Type: number

service-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

pbslb-entry-cfg

Specification	Value
Type	*object*

pbslb-entry-max

Description Enter the number of pbslb-entry allowed (pbslb-entry count)

Type: number

pbslb-entry-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-device-cfg

Specification	Value
Type	*object*

gslb-device-max

Description Enter the number of gslb-device allowed (gslb-device count (default is max-value))

Type: number

gslb-device-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

persist-srcip-template-cfg

Specification	Value
Type	*object*

persist-srcip-template-max

Description Enter the number of persist-srcip-template allowed (persist-source-ip-template count (default is max-value))

Type: number

persist-srcip-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

stream-template-cfg

Specification	Value
Type	*object*

stream-template-max

Description Enter the number of stream-template allowed (server-ssl-template count (default is max-value))

Type: number

stream-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

real-port-cfg

Specification	Value
Type	*object*

real-port-max

Description Enter the number of real-ports allowed (real-port count (default is max-value))

Type: number

real-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-ip-list-cfg

Specification	Value
Type	*object*

gslb-ip-list-max

Description Enter the number of gslb-ip-list allowed (gslb-ip-list count (default is max-value))

Type: number

gslb-ip-list-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Maximum Length: 1 characters

static-ipv6-route-cfg

Specification	Value
Type	*object*

static-ipv6-route-max

Description Enter the number of static ipv6 routes allowed (Static ipv6 routes (default is max-value))

Type: number

static-ipv6-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

object-group-clause-cfg

Specification	Value
Type	*object*

object-group-clause-max

Description Enter the number of object group clauses allowed (Object group clauses (default is max-value))

Type: number

Range: 0-8192000

object-group-clause-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8192000

Default: 0

static-ipv4-route-cfg

Specification	Value
Type	*object*

static-ipv4-route-max

Description Enter the number of static ipv4 routes allowed (Static ipv4 routes (default is max-value))

Type: number

static-ipv4-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

static-arp-cfg

Specification	Value
Type	*object*

static-arp-max

Description Enter the number of static arp entries allowed (Static arp (default is max-value))

Type: number

Range: 0-128

static-arp-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

ipv4-acl-line-cfg

Specification	Value
Type	*object*

ipv4-acl-line-max

Description Enter the number of ACL lines allowed (IPV4 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv4-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

static-mac-cfg

Specification	Value
Type	*object*

static-mac-max

Description Enter the number of static MAC entries allowed (Static MACs (default is max-value))

Type: number

Range: 0-500

static-mac-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-500

Default: 0

ipv6-acl-line-cfg

Specification	Value
Type	*object*

ipv6-acl-line-max

Description Enter the number of ACL lines allowed (IPV6 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv6-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

static-neighbor-cfg

Specification	Value
Type	*object*

static-neighbor-max

Description Enter the number of static neighbor entries allowed (Static neighbors (default is max-value))

Type: number

Range: 0-128

static-neighbor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

object-group-cfg

Specification	Value
Type	*object*

object-group-max

Description Enter the number of object groups allowed (Object group (default is max-value))

Type: number

Range: 0-8000

object-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8000

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

l4-session-limit-cfg

Specification	Value
Type	*object*

l4-session-limit-max

Description Enter the l4 session limit in % (0.01% to 99.99%) (Enter a number from 0.01 to 99.99 (up to 2 digits precision))

Type: string

Maximum Length: 5 characters

Maximum Length: 1 characters

l4-session-limit-min-guarantee

Description minimum guaranteed value in % (up to 2 digits precision) (Enter a number from 0 to 99.99)

Type: string

Maximum Length: 5 characters

Maximum Length: 1 characters

Default: 0

l7cps-limit-cfg

Specification	Value
Type	*object*

l7cps-limit-max

Description L7cps-limit (L7 cps limit (no limits applied by default))

Type: number

Range: 100-300000

l4cps-limit-cfg

Specification	Value
Type	*object*

l4cps-limit-max

Description Enter the L4 cps limit (L4 cps limit (no limits applied by default))

Type: number

Range: 100-1000000

natcps-limit-cfg

Specification	Value
Type	*object*

natcps-limit-max

Description Enter the Nat cps limit (NAT cps limit (no limits applied by default))

Type: number

Range: 100-1000000

sslcps-limit-cfg

Specification	Value
Type	*object*

sslcps-limit-max

Description Enter the SSL cps limit (SSL cps limit (no limits applied by default))

Type: number

Range: 100-300000

fwcps-limit-cfg

Specification	Value
Type	*object*

fwcps-limit-max

Description Enter the Firewall cps limit (Firewall cps limit (no limits applied by default))

Type: number

Range: 100-1000000

ssl-throughput-limit-cfg

Specification	Value
Type	*object*

ssl-throughput-limit-max

Description Enter the ssl throughput limit in mbps (SSL Througput limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

ssl-throughput-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-limit-cfg

Specification	Value
Type	*object*

bw-limit-max

Description Enter the bandwidth limit in mbps (Bandwidth limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

bw-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

concurrent-session-limit-cfg

Specification	Value
Type	*object*

concurrent-session-limit-max

Description Enter the Concurrent Session limit (cps) (Concurrent-Session cps limit (no limits applied by default))

Type: number

resource-usage attributes

aflex-table-entry-count

Description Total aFleX table entry in the system (Total aFlex entry in the system)

Type: number

auth-portal-html-file-size

Description Specify maximum html file size for each html page in auth portal (in KB)

Type: number

Range: 4-120

Default: 20

auth-portal-image-file-size

Description Specify maximum image file size for default portal (in KB)

Type: number

Range: 1-80

Default: 6

auth-session-count

Description Total auth sessions in the system

Type: number

authz-policy-number

Description Specify the maximum number of authorization policies

Type: number

class-list-ac-entry-count

Description Total entries for AC class-list

Type: number

class-list-entry-count

Description Total entries for class-list

Type: number

class-list-ipv6-addr-count

Description Total IPv6 addresses for class-list

Type: number

ipsec-sa-number

Description Specify the maximum number of IPsec SA

Type: number

l4-session-count

Description Total Sessions in the System

Type: number

max-aflex-authz-collection-number

Description Specify the maximum number of collections supported by aFleX authorization

Type: number

Range: 256-4096

Default: 512

max-aflex-file-size

Description Set maximum aFleX file size (Maximum file size in KBytes, default is 32K)

Type: number

Range: 16-1024

Default: 32

nat-pool-addr-count

Description Total configurable NAT Pool addresses in the System

Type: number

ngwaf-cache-entry

Description Specify the maximum cache entries for NGWAF

Type: number

radius-table-size

Description Total configurable CGNV6 RADIUS Table entries

Type: number

ram-cache-memory-limit

Description Specify the maximum memory used by ram cache

Type: number

ssl-context-memory

Description Total SSL context memory needed in units of MB. Will be rounded to closest multiple of 2MB

Type: number

Range: 256-16384

Default: 2048

ssl-dma-memory

Description Total SSL DMA memory needed in units of MB. Will be rounded to closest multiple of 2MB

Type: number

Range: 32-2048

Default: 256

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.153 system session-reclaim-limit

Set limits for smp session reclaim

session-reclaim-limit Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	session-reclaim-limit
Element URI	/axapi/v3/system/session-reclaim-limit
Element Attributes	session-reclaim-limit_attributes
Partition Visibility	shared
Schema	`session-reclaim-limit schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/session-reclaim-limit

session-reclaim-limit attributes

```
POST /axapi/v3/system/session-reclaim-limit
Payload:
{
    "session-reclaim-limit": {
        "nscan-limit": 1
    }
}
```

Get Object

GET

/axapi/v3/system/session-reclaim-limit

session-reclaim-limit attributes

```
GET /axapi/v3/system/session-reclaim-limit
Reponse:
{
    "session-reclaim-limit": {
        "nscan-limit": 1,
        "scan-freq": 5,
        "uuid": "5739a526-b6f6-11ef-b25f-ae71681635d0",
        "a10-url": "/axapi/v3/system/session-reclaim-limit"
    }
}
```

Modify Object

POST

/axapi/v3/system/session-reclaim-limit

session-reclaim-limit attributes

Replace Object

PUT

/axapi/v3/system/session-reclaim-limit

session-reclaim-limit attributes

```
PUT /axapi/v3/system/session-reclaim-limit
Payload:
{
    "session-reclaim-limit": {
        "nscan-limit": 2
    }
}
```

Delete Object

DELETE

/axapi/v3/system/session-reclaim-limit

session-reclaim-limit attributes

```
DELETE /axapi/v3/system/session-reclaim-limit
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
```

(continues on next page)

(continued from previous page)

```
        "msg": "Success"
    }
}
```

session-reclaim-limit attributes

nscan-limit

Description smp session scan limit (number of smp sessions per scan)

Type: number

Range: 1-20480

Default: 4096

scan-freq

Description smp session scan frequency (scan per second)

Type: number

Range: 5-50

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.155 system set-tcp-syn-per-sec

Configure tcp syn per sec

set-tcp-syn-per-sec Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	set-tcp-syn-per-sec
Element URI	/axapi/v3/system/set-tcp-syn-per-sec
Element Attributes	set-tcp-syn-per-sec_attributes
Partition Visibility	shared
Schema	`set-tcp-syn-per-sec schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/set-tcp-syn-per-sec

set-tcp-syn-per-sec attributes

```
POST /axapi/v3/system/set-tcp-syn-per-sec
Payload:
{
    "set-tcp-syn-per-sec": {
        "tcp-syn-value": 25
    }
}
```

Get Object

GET

/axapi/v3/system/set-tcp-syn-per-sec

set-tcp-syn-per-sec attributes

```
GET /axapi/v3/system/set-tcp-syn-per-sec
Reponse:
{
    "set-tcp-syn-per-sec": {
        "tcp-syn-value": 25,

    }
}
```

Modify Object

POST

/axapi/v3/system/set-tcp-syn-per-sec

set-tcp-syn-per-sec attributes

Replace Object

PUT

/axapi/v3/system/set-tcp-syn-per-sec

set-tcp-syn-per-sec attributes

```
PUT /axapi/v3/system/set-tcp-syn-per-sec
Payload:
{
    "set-tcp-syn-per-sec": {
        "tcp-syn-value": 25
    }
}
```

Delete Object

DELETE

/axapi/v3/system/set-tcp-syn-per-sec

set-tcp-syn-per-sec attributes

```
DELETE /axapi/v3/system/set-tcp-syn-per-sec
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

set-tcp-syn-per-sec attributes

tcp-syn-value

Description Configure Tcp SYN's per sec, default 70

Type: number

Range: 25-6000

Default: 70

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.156 system shell-privileges

Configuration for special shell privileges

shell-privileges Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	shell-privileges
Element URI	/axapi/v3/system/shell-privileges
Element Attributes	shell-privileges_attributes
Partition Visibility	shared
Schema	`shell-privileges schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/shell-privileges

shell-privileges attributes

Get Object

GET

/axapi/v3/system/shell-privileges

shell-privileges attributes

Modify Object

shell-privileges attributes

Delete Object

DELETE

/axapi/v3/system/shell-privileges

shell-privileges attributes

shell-privileges attributes

enable-shell-privileges

Description enable the shell privileges for a given customer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.157 system shm-logging

Configure shared memory logging

shm-logging Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	shm-logging
Element URI	/axapi/v3/system/shm-logging
Element Attributes	shm-logging_attributes
Partition Visibility	shared
Schema	`shm-logging schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/shm-logging

shm-logging attributes

Get Object

GET

/axapi/v3/system/shm-logging

shm-logging attributes

Modify Object

POST

/axapi/v3/system/shm-logging

shm-logging attributes

Replace Object

PUT

/axapi/v3/system/shm-logging

shm-logging attributes

Delete Object

DELETE

/axapi/v3/system/shm-logging

shm-logging attributes

shm-logging attributes

enable

Description Enable shared memory based logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.158 system shutdown oper

Operational Status for the object shutdown

shutdown Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	shutdown
Element URI	/axapi/v3/system/shutdown/oper
Element Attributes	shutdown_attributes
Partition Visibility	None
Schema	`shutdown schema`

Operations Allowed:

Create Object

ssl-scv-verify-crl-sign attributes

ssl-scv-verify-crl-sign attributes

enable

Description Enable verify CRL signature during SCV

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.165 system ssl-scv-verify-host

To Enable/disable checking claimed identity in server certificate during server certificate validation

ssl-scv-verify-host Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ssl-scv-verify-host
Element URI	/axapi/v3/system/ssl-scv-verify-host
Element Attributes	ssl-scv-verify-host_attributes
Partition Visibility	shared
Schema	`ssl-scv-verify-host schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/ssl-scv-verify-host

ssl-scv-verify-host attributes

```
POST /axapi/v3/system/ssl-scv-verify-host
Payload:
{
    "ssl-scv-verify-host": {
        "disable": 1
    }
}
```

arp-tbl-cksum-b

Description arp table checksum count in blade

Type: number

Format: counter

arp-tbl-cksum-cancel-m

Description arp table checksum cancelled count in master

Type: number

Format: counter

arp-tbl-cksum-m

Description arp table checksum count in master

Type: number

Format: counter

arp-tbl-cksum-mismatch-b

Description arp table checksum mismatch count in blade

Type: number

Format: counter

arp-tbl-sync-b

Description arp table sync count in blade

Type: number

Format: counter

arp-tbl-sync-end-ts-b-1st

Description arp table sync end time stamp blade for T0 synchronization

Type: number

Format: counter

arp-tbl-sync-end-ts-b-2nd

Description arp table sync end time stamp blade for T-1 synchronization

Type: number

Format: counter

arp-tbl-sync-end-ts-b-3rd

Description arp table sync end time stamp blade for T-2 synchronization

Type: number

Format: counter

arp-tbl-sync-end-ts-b-4th

Description arp table sync end time stamp blade for T-3 synchronization

Type: number

Format: counter

arp-tbl-sync-end-ts-b-5th

Description arp table sync end time stamp blade for T-4 synchronization

Type: number

Format: counter

arp-tbl-sync-end-ts-m-1st

Description arp table sync end time stamp master for T0 synchronization

Type: number

Format: counter

arp-tbl-sync-end-ts-m-2nd

Description arp table sync end time stamp master for T-1 synchronization

Type: number

Format: counter

arp-tbl-sync-end-ts-m-3rd

Description arp table sync end time stamp master for T-2 synchronization

Type: number

Format: counter

arp-tbl-sync-end-ts-m-4th

Description arp table sync end time stamp master for T-3 synchronization

Type: number

Format: counter

arp-tbl-sync-end-ts-m-5th

Description arp table sync end time stamp master for T-4 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-added-b-1st

Description arp table entries added on blade for T0 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-added-b-2nd

Description arp table entries added in blade for T-1 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-added-b-3rd

Description arp table entries added in blade for T-2 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-added-b-4th

Description arp table entries added in blade for T-3 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-added-b-5th

Description arp table entries added in blade for T-4 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-rcvd-b-1st

Description arp table entries received on blade for T0 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-rcvd-b-2nd

Description arp table entries received in blade for T-1 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-rcvd-b-3rd

Description arp table entries received in blade for T-2 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-rcvd-b-4th

Description arp table entries received in blade for T-3 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-rcvd-b-5th

Description arp table entries received in blade for T-4 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-removed-b-1st

Description arp table entries removed on blade for T0 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-removed-b-2nd

Description arp table entries removed in blade for T-1 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-removed-b-3rd

Description arp table entries removed in blade for T-2 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-removed-b-4th

Description arp table entries removed in blade for T-3 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-removed-b-5th

Description arp table entries removed in blade for T-4 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-sent-m-1st

Description arp table entries sent from master for T0 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-sent-m-2nd

Description arp table entries sent from master for T-1 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-sent-m-3rd

Description arp table entries sent from master for T-2 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-sent-m-4th

Description arp table entries sent from master for T-3 synchronization

Type: number

Format: counter

arp-tbl-sync-entries-sent-m-5th

Description arp table sync start time stamp blade for T-4 synchronization

Type: number

Format: counter

arp-tbl-sync-m

Description arp table sync count in master

Type: number

Format: counter

arp-tbl-sync-start-ts-b-1st

Description arp table sync start time stamp blade

a2brcvwnd

Description ATCP to BTCP receive window

Type: number

Format: counter

a2brxdata

Description ATCP to BTCP Rxmitted data

Type: number

Format: counter

a2bsackpresent

Description ATCP to BTCP SACK options present

Type: number

Format: counter

a2bsndwnd

Description ATCP to BTCP send window

Type: number

Format: counter

a2btcpoptions

Description ATCP to BTCP unsupported TCP options

Type: number

Format: counter

a2btransitionnum

Description ATCP to BTCP total transitions

Type: number

Format: counter

atcpbuffallocfail

Description Adaptive TCP buffer allocation fails

Type: number

Format: counter

atcpforward

Description Adaptive TCP forward

Type: number

Format: counter

atcprexmit

Description Adaptive TCP retransmits

Type: number

Format: counter

atcprexmitsadrop

Description Adaptive TCP transmit SA drops

Type: number

Format: counter

atcpsendbackack

Description Adaptive TCP sendback ACK

Type: number

Format: counter

atcpsendfail

Description Adaptive TCP sent fails

Type: number

Format: counter

atcpsent

Description Adaptive TCP sent

Type: number

Format: counter

b2atransitionnum

Description ATCP to BTCP total transitions

Type: number

Format: counter

bad_iochan

Description IO Channel Modified

Type: number

Format: counter

badrst

Description Ignored RST

Type: number

Format: counter

cacklim

Description Challenge ACK limited

Type: number

Format: counter

cc_idle

Description Congestion control window set do to idle

Type: number

Format: counter

cc_reduce

Description Congestion control window reduced by event

Type: number

Format: counter

closed

Description Connect closed

Type: number

Format: counter

connattempt

Description Connect initiated

Type: number

Format: counter

conndrops

Description Embryonic connect dropped

Type: number

Format: counter

connects

Description Connect established

Type: number

Format: counter

delack

Description Delayed acks sent

Type: number

Format: counter

drops

Description Connect dropped

Type: number

Format: counter

earlyrexmit

Description Early Retransmission sent

Type: number

Format: counter

finwait2_drops

Description Drop FIN_WAIT_2 connection after time limit

Type: number

Format: counter

keepdrops

Description Connect dropped in keepalive

Type: number

Format: counter

keepprobe

Description Keepalive probe sent

Type: number

Format: counter

keeptimeo

Description Keepalive timeout

Type: number

Format: counter

mburstlim

Description Maxburst limited tx

Type: number

Format: counter

pawsdrop

Description Segments dropped due to PAWS

Type: number

Format: counter

persistdrop

Description Timeout in persist state

Type: number

Format: counter

persisttimeo

Description Persist timeout

Type: number

Format: counter

predack

Description Hdr predict for acks

Type: number

Format: counter

preddat

Description Hdr predict for data pkts

Type: number

Format: counter

proxyheaderv1

Description Proxy header v1

Type: number

Format: counter

proxyheaderv2

Description Proxy header v2

Type: number

Format: counter

rcvackbyte

Description Bytes acked by rcvd acks

Type: number

Format: counter

rcvackpack

Description Rcvd ack packets

Type: number

Format: counter

rcvacktoomuch

Description Rcvd acks for unsent data

Type: number

Format: counter

rcvbadoff

Description Packet received with bad offset

Type: number

Format: counter

rcvbyte

Description Bytes received

Type: number

Format: counter

rcvbyteafterwin

Description Bytes rcvd after window

Type: number

Format: counter

rcvdsack

Description Rcvd DSACK packets

Type: number

Format: counter

rcvdupack

Description Rcvd duplicate acks

Type: number

Format: counter

rcvdupbyte

Description Duplicate bytes received

Type: number

Format: counter

rcvduppack

Description Duplicate packet received

Type: number

Format: counter

rcvmemdrop

Description Packet dropped for lack of memory

Type: number

Format: counter

rcvoobyte

Description Out-of-order bytes received

Type: number

Format: counter

rcvoopack

Description Out-of-order packet received

Type: number

Format: counter

rcvpack

Description Packet received

Type: number

Format: counter

rcvpackafterwin

Description Packets with data after window

Type: number

Format: counter

rcvpartdupbyte

Description Dup. bytes in part-dup. packets

Type: number

Format: counter

rcvpartduppack

Description Packet with some duplicate data

Type: number

Format: counter

rcvtotal

Description Total packet received

Type: number

Format: counter

rcvwinprobe

Description Rcvd window probe packet

Type: number

Format: counter

rcvwinupd

Description Rcvd window update packets

Type: number

Format: counter

reassmemdrop

Description Packet dropped during reassembly

Type: number

Format: counter

reasstimeout

Description Reassembly Time Out

Type: number

Format: counter

rexmttimeo

Description Retransmit timeout

Type: number

Format: counter

rttupdated

Description Update RTT

Type: number

Format: counter

sack_rcv_blocks

Description SACK received

Type: number

Format: counter

sack_recovery_episode

Description SACK recovery episodes

Type: number

Format: counter

sack_rexmit_bytes

Description SACK rexmit bytes

Type: number

Format: counter

sack_rexmits

Description SACK rexmit segments

Type: number

Format: counter

sack_send_blocks

Description SACK sent

Type: number

Format: counter

segstimed

Description Segs to get RTT

Type: number

Format: counter

sndacks

Description Ack packet sent

Type: number

Format: counter

sndbyte

Description Data bytes sent

Type: number

Format: counter

sndcack

Description Challenge ACK sent

Type: number

Format: counter

sndctrl

Description SYN|FIN|RST packet sent

Type: number

Format: counter

sndfin

Description FIN packet sent

Type: number

Format: counter

sndpack

Description Data packet sent

Type: number

Format: counter

sndprobe

Description Window probe sent

Type: number

Format: counter

sndrexmitbad

Description Unnecessary packet retransmit

Type: number

Format: counter

sndrexmitbyte

Description Data byte retransmit

Type: number

Format: counter

sndrexmitpack

Description Data packet retransmit

Type: number

Format: counter

sndrst

Description RST packet sent

Type: number

Format: counter

sndsyn

Description SYN packet sent

Type: number

Format: counter

sndtotal

Description Total packet sent

Type: number

Format: counter

sndurg

Description URG packet sent

Type: number

Format: counter

sndwinup

Description Window update packet sent

Type: number

Format: counter

timeoutdrop

Description Conn dropped in rxmt timeout

Type: number

Format: counter

2.129.177 system tcp-syn-per-sec

Tcp SYN's per sec

tcp-syn-per-sec Specification

Parameter	Value
Type	*Configuration Resource*

monitor-list

Type: List

Reference Object: */axapi/v3/system/template-bind/monitor/{template-monitor}*

monitor-list

Specification	Value
Type	*list*
Block object keys	

template-monitor

Description Monitor template ID Number

Type: number

Range: 1-16

Reference Object: */axapi/v3/slb/template/monitor*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.192 system template-bind monitor

Apply monitor template to the whole system

monitor Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*template-monitor*
Collection Name	*monitor-list*
Collection URI	/axapi/v3/system/template-bind/monitor
Element Name	monitor
Element URI	/axapi/v3/system/template-bind/monitor/{template-monitor}
Element Attributes	monitor_attributes
Partition Visibility	shared
Schema	`monitor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/template-bind/monitor

monitor attributes

```
POST /axapi/v3/system/template-bind/monitor/
Payload:
{
    "monitor": {
        "template-monitor": 1
    }
}
```

Create List

POST

/axapi/v3/system/template-bind/monitor

monitor attributes

Get Object

GET

/axapi/v3/system/template-bind/monitor/{template-monitor}

monitor attributes

```
GET /axapi/v3/system/template-bind/monitor/1
Reponse:
{
    "monitor": {
        "template-monitor": 1,
        "uuid": "c4d11712-b71f-11ef-b78f-ae71681635d0",
        "a10-url": "/axapi/v3/system/template-bind/monitor/1"
    }
}
```

Get List

GET

/axapi/v3/system/template-bind/monitor

monitor-list

Modify Object

POST

/axapi/v3/system/template-bind/monitor/{template-monitor}

monitor attributes

Replace Object

PUT

/axapi/v3/system/template-bind/monitor/{template-monitor}

monitor attributes

```
PUT /axapi/v3/system/template-bind/monitor/1
Payload:
{
    "monitor": {
        "template-monitor": 1
    }
}
```

Replace List

PUT

/axapi/v3/system/template-bind/monitor

monitor-list

Delete Object

DELETE

/axapi/v3/system/template-bind/monitor/{template-monitor}

monitor attributes

```
DELETE /axapi/v3/system/template-bind/monitor/1
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

monitor-list

monitor-list is **JSON List** of *monitor attributes*

monitor-list : [

{ *monitor attributes* },

{ *monitor attributes* },

...

]

monitor attributes

template-monitor

Description Monitor template ID Number

Type: number

Range: 1-16

Reference Object: */axapi/v3/slb/template/monitor*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.193 system throughput

System throughput

throughput Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	throughput
Element URI	/axapi/v3/system/throughput
Element Attributes	throughput_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/system/throughput/stats
Schema	`throughput schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/throughput

throughput attributes

```
POST /axapi/v3/system/throughput
Payload:
{
    "throughput": {
        "sampling-enable": [
            {
                "counters1": "all"
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/system/throughput

throughput attributes

```
GET /axapi/v3/system/throughput
Reponse:
{

        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

throughput attributes

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'global-system-throughput-bits-per-sec': Global System throughput in bits/sec; 'per-part-throughput-bits-per-sec': Partition throughput in bits/sec;

Type: string

Supported Values: all, global-system-throughput-bits-per-sec, per-part-throughput-bits-per-sec

2.129.194 system throughput stats

Statistics for the object throughput

throughput Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	throughput
Element URI	/axapi/v3/system/throughput/stats
Element Attributes	throughput_attributes
Partition Visibility	None
Schema	`throughput schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/throughput/stats

throughput attributes

Get Object

GET

/axapi/v3/system/throughput/stats

throughput attributes

Modify Object

POST

/axapi/v3/system/throughput/stats

throughput attributes

Replace Object

throughput attributes

throughput attributes

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

global-system-throughput-bits-per-sec

Description Global System throughput in bits/sec

Type: number

Format: counter

per-part-throughput-bits-per-sec

Description Partition throughput in bits/sec

Type: number

Format: counter

2.129.195 system timeout-value

set the timeout to stop transferring a file

timeout-value Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	timeout-value
Element URI	/axapi/v3/system/timeout-value
Element Attributes	timeout-value_attributes
Partition Visibility	shared
Schema	`timeout-value schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/timeout-value

timeout-value attributes

```
POST /axapi/v3/system/timeout-value
Payload:
{
    "timeout-value": {
        "ftp": 0
    }
}
```

Get Object

GET

/axapi/v3/system/timeout-value

timeout-value attributes

```
GET /axapi/v3/system/timeout-value
Reponse:
{
    "timeout-value": {
        "ftp": 0,
        "scp": 300,
        "sftp": 0,
        "tftp": 300,
        "http": 120,
        "https": 120,
        "uuid": "573926be-b6f6-11ef-b25f-ae71681635d0",
        "a10-url": "/axapi/v3/system/timeout-value"
    }
}
```

Modify Object

POST

/axapi/v3/system/timeout-value

timeout-value attributes

Replace Object

PUT

/axapi/v3/system/timeout-value

timeout-value attributes

```
PUT /axapi/v3/system/timeout-value
Payload:

        "status": "OK",
        "msg": "Success"
    }
}
```

timeout-value attributes

ftp

Description set timeout to stop ftp transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 120

http

Description set timeout to stop http transfer in seconds, 0 is no limit

Type: number

Range: 1-9999

Default: 120

https

Description set timeout to stop https transfer in seconds, 0 is no limit

Type: number

Range: 1-9999

Default: 120

scp

Description set timeout to stop scp transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 300

sftp

Description set timeout to stop sftp transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 0

tftp

Description set timeout to stop tftp transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.196 system tls-1-3-mgmt

To Enable/disable TLS 1.3 support on ACOS management plane

tls-1-3-mgmt Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	tls-1-3-mgmt
Element URI	/axapi/v3/system/tls-1-3-mgmt
Element Attributes	tls-1-3-mgmt_attributes
Partition Visibility	shared
Schema	`tls-1-3-mgmt schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/tls-1-3-mgmt

tls-1-3-mgmt attributes

```
POST /axapi/v3/system/tls-1-3-mgmt
Payload:
{
    "tls-1-3-mgmt": {
        "enable": 1
    }
}
```

Get Object

GET

/axapi/v3/system/tls-1-3-mgmt

        "status": "OK",
        "msg": "Success"
    }
}
```

tls-1-3-mgmt attributes

enable

Description Enable TLS 1.3 support on ACOS management plane

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.197 system trunk

System level Trunk configurations

trunk Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	trunk
Element URI	/axapi/v3/system/trunk
Element Attributes	trunk_attributes
Partition Visibility	shared
Schema	`trunk schema`

Operations Allowed:

Get Object

GET

/axapi/v3/system/trunk

trunk_attributes

trunk attributes

load-balance

Description: load-balance is a **JSON Block**. Please see below for *load-balance*

Type: Object

Reference Object: */axapi/v3/system/trunk/load-balance*

load-balance

Specification	Value
Type	*object*

use-l3

Description Layer-3 Header based load balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-l3 and use-l4 are mutually exclusive

use-l4

Description Layer-3/4 Header based load balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-l4 and use-l3 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.129.198 system trunk-hw-hash

Set Trunk HW Hash Mode

trunk-hw-hash Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	trunk-hw-hash
Element URI	/axapi/v3/system/trunk-hw-hash
Element Attributes	trunk-hw-hash_attributes
Partition Visibility	shared
Schema	`trunk-hw-hash schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/trunk-hw-hash

trunk-hw-hash attributes

```
POST /axapi/v3/system/trunk-hw-hash
Payload:
{
    "trunk-hw-hash": {
        "mode": 1
    }
}
```

Get Object

GET

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *ipv4-list_secret_port-cfg*

Type: Object

secret-value

Description The TACACS+ server's secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

source-eth

Description Ethernet interface (Port number)

Type: number

Format: interface

source-ip

Description IP address

Type: string

Format: ipv4-address

source-lif

Description Logical interface (Lif interface number)

Type: number

Range: 1-128

source-loopback

Description Loopback interface (Port number)

Type: number

Format: interface

source-trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

source-ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv4-list_secret_port-cfg

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

monitor

Description Specify monitor TACACS+ server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-value

Description The user password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

port

Description Specify the port number used by TACACS+ server.(default port is 49) (Port number (default 49))

Type: number

Range: 1-65535

Default: 49

timeout

Description Specify the maximum time allowed for setting up a connection with the TACACS+ server. (default timeout is 12 seconds) (Maximum time allowed for setting up a connection with the TACACS+ server, in seconds (default 12))

Type: number

Range: 1-12

Default: 12

username

Description Specify the username

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6-list

Specification	Value
Type	*list*
Block object keys	

ipv6-addr

Description IPV6 address of TACACS+ server

Type: string

Format: ipv6-address

secret

Description: secret is a **JSON Block**. Please see below for *ipv6-list_secret*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6-list_secret

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) help-val The ENCRYPTED secret string

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *ipv6-list_secret_port-cfg*

Type: Object

secret-value

Description The TACACS+ server's secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

source-eth

Description Ethernet interface (Port number)

Type: number

Format: interface

source-ipv6

Description IPV6 address

Type: string

Format: ipv6-address

source-lif

Description Logical interface (Lif interface number)

Type: number

Range: 1-128

source-loopback

Description Loopback interface (Port number)

Type: number

Format: interface

source-trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

source-ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6-list_secret_port-cfg

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

monitor

Description Specify monitor TACACS+ server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-value

Description The user password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

port

Description Specify the port number used by TACACS+ server.(default port is 49) (Port number (default 49))

Type: number

Range: 1-65535

Default: 49

timeout

Description Specify the maximum time allowed for setting up a connection with the TACACS+ server. (default timeout is 12 seconds) (Maximum time allowed for setting up a connection with the TACACS+ server, in seconds (default 12))

Type: number

Range: 1-12

Default: 12

username

Description Specify the username

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

2.136.3 tacacs-server host ipv4

Specify the hostname of TACACS+ server

ipv4 Specification

Parameter	Value

    }
}
```

techreport attributes

disable

Description Disable the polling techreport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-full-history

Description Enable 31 day poll techreports (default seven) on platforms with less than 32GB disk (no op otherwise)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description: interval is a **JSON Block**. Please see below for *interval*

Type: Object

Reference Object: */axapi/v3/techreport/interval*

max-logfile-size

Description: max-logfile-size is a **JSON Block**. Please see below for *max-logfile-size*

Type: Object

Reference Object: */axapi/v3/techreport/max-logfile-size*

max-partitions

Description: max-partitions is a **JSON Block**. Please see below for *max-partitions*

Type: Object

Reference Object: */axapi/v3/techreport/max-partitions*

priority-partition-list

Type: List

Reference Object: */axapi/v3/techreport/priority-partition/{part-name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

max-logfile-size

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Log file size for periodic techsupport (default is 1)

Type: number

Range: 1-10

Default: 1

max-partitions

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Maximum partions to show in per periodic techsupport (default is 30)

Type: number

Range: 1-120

Default: 30

interval

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Showtech interval in minutes (default is 15)

Type: number

Range: 15-120

Default: 15

priority-partition-list

Specification	Value
Type	*list*
Block object keys	

part-name

Description Name of partition always want to show in showtech (shared is always shown by default)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.137.2 techreport interval

Configure polling techreport interval

interval Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	interval
Element URI	/axapi/v3/techreport/interval
Element Attributes	interval_attributes
Partition Visibility	shared
Schema	`interval schema`

Operations Allowed:

Create Object

POST

/axapi/v3/techreport/interval

interval attributes

```
POST /axapi/v3/techreport/interval
Payload:
{
    "interval": {
        "value": 15
    }
}
```

Get Object

GET

/axapi/v3/techreport/interval

interval attributes

```
GET /axapi/v3/techreport/interval
Reponse:
{
    "interval": {
        "value": 15,
        "uuid": "898e7240-b6a6-11ef-b71b-ae71681635d0",
        "a10-url": "/axapi/v3/techreport/interval"
    }
}
```

Modify Object

POST

/axapi/v3/techreport/interval

interval attributes

Replace Object

PUT

/axapi/v3/techreport/interval

interval attributes

```
PUT /axapi/v3/techreport/interval
Payload:
{
    "interval": {
        "value": 15
    }
}
```

Delete Object

DELETE

/axapi/v3/techreport/interval

interval attributes

```
DELETE /axapi/v3/techreport/interval
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Polling techreport interval is 15\n"
    }
}
```

interval attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Showtech interval in minutes (default is 15)

Type: number

Range: 15-120

Default: 15

2.137.3 techreport max-logfile-size

Maximum logfile size for periodic techsupport

max-logfile-size Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	max-logfile-size
Element URI	/axapi/v3/techreport/max-logfile-size
Element Attributes	max-logfile-size_attributes
Partition Visibility	shared
Schema	`max-logfile-size schema`

Operations Allowed:

Create Object

POST

/axapi/v3/techreport/max-logfile-size

max-logfile-size attributes

```
POST /axapi/v3/techreport/max-logfile-size
Payload:
{
    "max-logfile-size": {
        "value": 1
    }
}
```

Get Object

GET

/axapi/v3/techreport/max-logfile-size

max-logfile-size attributes

```
GET /axapi/v3/techreport/max-logfile-size
Reponse:

    }
}
```

Modify Object

POST

/axapi/v3/techreport/max-logfile-size

max-logfile-size attributes

Replace Object

PUT

/axapi/v3/techreport/max-logfile-size

max-logfile-size attributes

```
PUT /axapi/v3/techreport/max-logfile-size
Payload:
{
    "max-logfile-size": {
        "value": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/techreport/max-logfile-size

max-logfile-size attributes

```
DELETE /axapi/v3/techreport/max-logfile-size
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Polling periodic techreport logfile size is 1\n"
    }
}
```

max-logfile-size attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Log file size for periodic techsupport (default is 1)

Type: number

Range: 1-10

Default: 1

2.137.4 techreport max-partitions

Maximum partitions to show in per periodic techsupport

max-partitions Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	max-partitions
Element URI	/axapi/v3/techreport/max-partitions
Element Attributes	max-partitions_attributes
Partition Visibility	shared
Schema	`max-partitions schema`

Operations Allowed:

Create Object

POST

/axapi/v3/techreport/max-partitions

max-partitions attributes

```
POST /axapi/v3/techreport/max-partitions
Payload:
{
    "max-partitions": {
        "value": 1
    }
}
```

Get Object

GET

/axapi/v3/techreport/max-partitions

max-partitions attributes

```
GET /axapi/v3/techreport/max-partitions
Reponse:
{
    "max-partitions": {
        "value": 1,
        "uuid": "898e745c-b6a6-11ef-b71b-ae71681635d0",
        "a10-url": "/axapi/v3/techreport/max-partitions"
    }
}
```

Modify Object

POST

/axapi/v3/techreport/max-partitions

max-partitions attributes

Replace Object

PUT

/axapi/v3/techreport/max-partitions

max-partitions attributes

```
PUT /axapi/v3/techreport/max-partitions
Payload:
{
    "max-partitions": {
        "value": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/techreport/max-partitions

max-partitions attributes

```
DELETE /axapi/v3/techreport/max-partitions
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Polling periodic techreport max-partitions is 31\n"
    }
}
```

max-partitions attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Maximum partions to show in per periodic techsupport (default is 30)

Type: number

Range: 1-120

Default: 30

2.137.5 techreport priority-partition

Configure partition to always poll for techreport

priority-partition Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*part-name*
Collection Name	*priority-partition-list*
Collection URI	/axapi/v3/techreport/priority-partition
Element Name	priority-partition
Element URI	/axapi/v3/techreport/priority-partition/{part-name}
Element Attributes	priority-partition_attributes
Partition Visibility	shared
Schema	`priority-partition schema`

Operations Allowed:

Create Object

POST

/axapi/v3/techreport/priority-partition

priority-partition attributes

```
POST /axapi/v3/techreport/priority-partition/
Payload:
{
    "priority-partition": {
        "part-name": "a"
    }
}
```

Create List

POST

/axapi/v3/techreport/priority-partition

priority-partition attributes

Get Object

GET

/axapi/v3/techreport/priority-partition/{part-name}

priority-partition attributes

```
GET /axapi/v3/techreport/priority-partition/a
Reponse:
{
    "priority-partition": {
```

(continues on next page)

(continued from previous page)

```
        "part-name": "a",
        "uuid": "d1823ed0-b6e0-11ef-8f5a-ae71681635d0",
        "a10-url": "/axapi/v3/techreport/priority-partition/a"
    }
}
```

Get List

GET

/axapi/v3/techreport/priority-partition

priority-partition-list

Modify Object

POST

/axapi/v3/techreport/priority-partition/{part-name}

priority-partition attributes

Replace Object

PUT

/axapi/v3/techreport/priority-partition/{part-name}

priority-partition attributes

```
PUT /axapi/v3/techreport/priority-partition/a
Payload:
{
    "priority-partition": {
        "part-name": "a"
    }
}
```

Replace List

PUT

/axapi/v3/techreport/priority-partition

priority-partition-list

Delete Object

DELETE

/axapi/v3/techreport/priority-partition/{part-name}

priority-partition attributes

```
DELETE /axapi/v3/techreport/priority-partition/a
Reponse:
{
    "response": {
        "http-status": 200,
```

(continues on next page)

(continued from previous page)

```
        "status": "OK",
        "msg": "Success"
    }
}
```

priority-partition-list

priority-partition-list is **JSON List** of *priority-partition attributes*

priority-partition-list : [

{ *priority-partition attributes* },

{ *priority-partition attributes* },

...

]

priority-partition attributes

part-name

Description Name of partition always want to show in showtech (shared is always shown by default)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.138 techsupport

Objects:

2.138.1 techsupport showtech

Generates Show Tech file Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	Generates Show Tech file
Element URI	/axapi/v3/techsupport/showtech
Element Attributes	Generates Show Tech file_attributes
Partition Visibility	None
Schema	`Generates Show Tech file schema`

Operations Allowed:

Create Object

POST

/axapi/v3/techsupport/showtech

Generates Show Tech file attributes

Get Object

GET

/axapi/v3/techsupport/showtech

Generates Show Tech file attributes

Type	*list*
Block object keys	

ddos-protection-factor

Description Enable DDoS Protection (Multiplier of the downlink PPS)

Type: number

Range: 1-50

downlink-pps

Description Downlink PPS limit (Number of Packets per second)

Type: number

Range: 1-2147483647

downlink-throughput

Description Downlink Throughput limit (Mega Bits per second)

Type: number

Range: 1-100000

lid-number

Description Lid Number

Type: number

Range: 1-1023

limit-cps

Description Enable Connections Per Second Rate Limit (Number of Connections per second)

Type: number

Range: 1-2147483647

limit-rate

Description 'limit-pps': Enable Packets Per Second Rate Limit; 'limit-throughput': Enable Throughput Rate Limit;

Type: string

Supported Values: limit-pps, limit-throughput

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-ip

Description: src-ip is a **JSON Block**. Please see below for *lid-list_src-ip*

Type: Object

total-pps

Description Total PPS limit (Number of Packets per second)

Type: number

Range: 1-2147483647

total-throughput

Description Total Throughput limit (Mega Bits per second)

Type: number

Range: 1-100000

uplink-pps

Description Uplink PPS limit (Number of Packets per second)

Type: number

Range: 1-2147483647

uplink-throughput

Description Uplink Throughput limit (Mega Bits per second)

Type: number

Range: 1-100000

user-tag

Description Customized tag

Type: string

burstsize-cps

Description CPS Token Bucket Size (Must Exceed Configured Rate) (In Connections per second)

Type: number

Range: 1-2147483647

burstsize-downlink-pps

Description Downlink PPS Token Bucket Size (Must Exceed Configured Rate) (In Packets)

Type: number

Range: 1-2147483647

burstsize-downlink-throughput

Description Downlink Throughput Token Bucket Size (Must Exceed Configured Rate) (In Mega Bits per second)

Type: number

Range: 1-100000

burstsize-total-pps

Description Total PPS Token Bucket Size (Must Exceed Configured Rate) (In Packets)

Type: number

Range: 1-2147483647

burstsize-total-throughput

Description Total Throughput Token Bucket Size (Must Exceed Configured Rate) (In Mega Bits per second)

Type: number

Range: 1-100000

burstsize-uplink-pps

Description Uplink PPS Token Bucket Size (Must Exceed Configured Rate) (In Packets)

Type: number

Range: 1-2147483647

burstsize-uplink-throughput

Description Uplink Throughput Token Bucket Size (Must Exceed Configured Rate) (In Mega Bits per second)

Type: number

Range: 1-100000

concurrent-sessions

Description Concurrent Session Limit per Source IP Address (Number of Concurrent Sessions)

Type: number

Range: 1-2147483647

log

Description Log when Session Limit is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix-length

Description Source prefix length

Type: number

Range: 1-128

csv-list

Specification	Value
Type	*list*

csv-name

Description Specify name of csv template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

delim-char

Description enter a delimiter character, default ","

Type: string

Format: string-rlx

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: ,

Mutual Exclusion: delim-char and delim-num are mutually exclusive

delim-num

Description enter a delimiter number, default 44 (",")

Type: number

Range: 0-255

Default: 44

Mutual Exclusion: delim-num and delim-char are mutually exclusive

ipv6-enable

Description Support IPv6 IP ranges

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multiple-fields

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Block object keys	

handover-timeout

Description Tunnel Inactivity Timeout during Handover in minutes (default: 2 mins)

Type: number

Range: 1-63

Default: 2

max-mesg-length-action

Description 'monitor': Forward failed packet; 'drop': drop packet failing check(Default);

Type: string

Supported Values: monitor, drop

Default: drop

maximum-message-length

Description Maximum message length for a GTP message in bytes

Type: number

Range: 64-1500

Default: 1500

name

Description Specify name of the GTP General Policy

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tunnel-timeout

Description Tunnel Inactivity Timeout in minutes (default: 1440 minutes)

Type: number

Range: 5-60000

Default: 1440

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v0-action

Description 'permit': Permit GTP-C version 0; 'drop': Drop GTP-C version 0(Default);

Type: string

Supported Values: permit, drop

Default: drop

Block object keys	

rat-type-filt-action

Description 'monitor': Forward packet; 'drop': drop packet (default);

Type: string

Supported Values: monitor, drop

Default: drop

rat-type-value

Description 'utran': RAT Type for 3G Networks; 'geran': RAT Type for 2G Networks; 'wlan': RAT Type for WLAN Networks; 'gan': RAT Type for GAN Networks; 'hspa-evolution': RAT Type for HSPA Networks; 'eutran': RAT Type for 4G Networks;

Type: string

Supported Values: utran, geran, wlan, gan, hspa-evolution, eutran

gtp_rate-limit-policy-list

Specification	Value
Type	*list*
Block object keys	

gtp-u-downlink-byte-rate

Description Maximum allowed of rate of GTP-U bytes in downlink direction

Type: number

Range: 1-2147483647

gtp-u-downlink-packet-rate

Description Maximum allowed of rate of GTP-U packets in downlink direction

Type: number

Range: 1-2147483647

gtp-u-max-concurrent-tunnels

Description Maximum allowed GTP-U tunnels per Peer/APN Filter

Type: number

Range: 1-2147483647

gtp-u-total-byte-rate

Description Maximum allowed of rate of GTP-U bytes total in both directions

Type: number

Range: 1-2147483647

gtp-u-total-packet-rate

Description Maximum allowed of rate of GTP-U packets total in both directions

Type: number

Range: 1-2147483647

gtp-u-tunnel-create-rate

Description Maximum allowed of rate of GTP-U tunnels

Type: number

Range: 1-2147483647

gtp-u-uplink-byte-rate

Description Maximum allowed of rate of GTP-U bytes in uplink direction

Type: number

Range: 1-2147483647

gtp-u-uplink-packet-rate

Description Maximum allowed of rate of GTP-U packets in uplink direction

Type: number

Range: 1-2147483647

lockout

Description Lockout traffic from the source for a certain time period after rate exceeded (Lockout duration in minutes)

Type: number

Range: 1-1023

name

Description Specify name of the GTP Rate Limit Policy

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rate-limit-action

Description 'monitor': Forward packet exceeding limit; 'drop': drop packet exceeding limit(default);

Type: string

Supported Values: monitor, drop

Default: drop

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v0-agg-message-type-rate

Description Maximum allowed GTPv0-C message rate of all types

Type: number

Range: 1-2147483647

v1-agg-message-type-rate

Description Maximum allowed GTPv1-C message rate of all types

Type: number

Range: 1-2147483647

v1-create-pdp-request-rate

Description Maximum allowed rate of GTPv1-C Create PDP Request message type

Type: number

Range: 1-2147483647

v1-update-pdp-request-rate

Description Maximum allowed rate of GTPv1-C Update PDP Request message type

Type: number

Range: 1-2147483647

v2-agg-message-type-rate

Description Maximum allowed GTPv2-C message rate of all types

Type: number

Range: 1-2147483647

v2-create-session-request-rate

Description Maximum allowed rate of GTPv2-C Create Session Request message type

Type: number

Range: 1-2147483647

v2-modify-bearer-request-rate

Description Maximum allowed rate of GTPv2-C Modify Bearer Request message type

Type: number

Range: 1-2147483647

apn

Description Specify the APN filter

Type: string

Format: string-rlx

Maximum Length: 100 characters

Maximum Length: 1 characters

imsi

Description Specify the IMSI filter

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: imsi and selection-mode are mutually exclusive

imsi-selection

Description Specify the IMSI filter

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

selection-mode

Description 'mobilestation': MS provided APN, subscription not verified; 'network': Network provided APN, subscription not verified; 'verified': MS or Network provided APN, subscription verified;

Type: string

Supported Values: mobilestation, network, verified

Mutual Exclusion: selection-mode and imsi are mutually exclusive

gtp_logging-policy-list

Specification	Value
Type	*list*
Block object keys	

log

Description: log is a **JSON Block**. Please see below for *gtp_logging-policy-list_log*

Type: Object

name

Description Specify name of the GTP Logging Policy

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

gtp_logging-policy-list_log

Specification	Value
Type	*object*

anti-spoofing-check

Description Logging Packet Drop due to End User IP Address Spoofing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

apn-imsi-filtering

Description Logging Packet Drop due to APN IMSI filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

crosslayer-correlation

Description Logging Packet Drop due to mismatch in IP address and GTP FTEID/GSN address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-in-gtp-filtering

Description Logging Packet Drop due to GTP in GTP filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

invalid-header-check

Description Logging Packet Drop due to Invalid Header checks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

invalid-teid-check

Description Logging Packet Drop due to Invalid Tunnel Endpoint Identifier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mandatory-ie-check

Description Logging Packet Drop due to Missing Mandatory Information Element

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-message-length-check

Description Logging Packet Drop due to Max Message Length Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-filtering

Description Logging Packet Drop due to Message Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msisdn-filtering

Description Logging Packet Drop due to MSISDN Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msisdn-imsi-correlation

Description Logging Packet Drop due to mismatch in Country Code and Mobile Country Code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out-of-order-ie-check

Description Logging Packet Drop due to Out of Order Information Elements for GTPv1-C

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out-of-state-ie-check

Description Logging Packet Drop due to Out of State Information Elements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rat-type-filtering

Description Logging Packet Drop due to RAT type filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reserved-ie-check

Description Logging Packet Drop due to Presence of Reserved Information Element

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sequence-num-correlation

Description Logging Packet Drop due to mismatch in Sequence number between GTP request and response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit-policy-list_limit-throughput

Specification	Value
Type	*object*

downlink

Description Downlink Throughput limit (Mega Bits per second)

Type: number

Range: 1-1000000

downlink-burstsize

Description Token Bucket Size (Must Exceed Configured Rate) (In Mega Bits per second)

Type: number

Range: 1-1000000

downlink-burstsize-unit

Description 'Mbps': default; 'Kbps': minimum configurable limit is 100 Kbps; 'Gbps': maximum configurable limit is 10000 Gbps;

Type: string

Supported Values: Mbps, Kbps, Gbps

Default: Mbps,

downlink-relaxed

Description Relax the limitation when the policy has more tokens from the parent of policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

downlink-unit

Description 'Mbps': default; 'Kbps': minimum configurable limit is 100 Kbps; 'Gbps': maximum configurable limit is 10000 Gbps;

Type: string

Supported Values: Mbps, Kbps, Gbps

Default: Mbps

total

Description Total Throughput limit (Mega Bits per second)

Type: number

Range: 1-1000000

total-burstsize

Description Token Bucket Size (Must Exceed Configured Rate) (In Mega Bits per second)

Type: number

Range: 1-1000000

total-burstsize-unit

Description 'Mbps': default; 'Kbps': minimum configurable limit is 100 Kbps; 'Gbps': maximum configurable limit is 10000 Gbps;

Type: string

Supported Values: Mbps, Kbps, Gbps

Default: Mbps,

total-relaxed

Description Relax the limitation when the policy has more tokens from the parent of policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

total-unit

Description 'Mbps': default; 'Kbps': minimum configurable limit is 100 Kbps; 'Gbps': maximum configurable limit is 10000 Gbps;

Type: string

Supported Values: Mbps, Kbps, Gbps

Default: Mbps,

uplink

Description Uplink Throughput limit (Mega Bits per second)

Type: number

Range: 1-1000000

uplink-burstsize

Description Token Bucket Size (Must Exceed Configured Rate) (In Mega Bits per second)

Type: number

Range: 1-1000000

uplink-burstsize-unit

Description 'Mbps': default; 'Kbps': minimum configurable limit is 100 Kbps; 'Gbps': maximum configurable limit is 10000 Gbps;

Type: string

Supported Values: Mbps, Kbps, Gbps

Default: Mbps,

uplink-relaxed

Description Relax the limitation when the policy has more tokens from the parent of policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-unit

Description 'Mbps': default; 'Kbps': minimum configurable limit is 100 Kbps; 'Gbps': maximum configurable limit is 10000 Gbps;

Type: string

Supported Values: Mbps, Kbps, Gbps

Default: Mbps

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

limit-policy-list_limit-cps

Specification	Value
Type	*object*

burstsize

Description CPS Token Bucket Size (Must Exceed Configured Rate) (In Connections per second)

Type: number

Range: 1-2147483647

relaxed

Description Relax the limitation when the policy has more tokens from the parent of policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Connections Per Second Rate Limit (Number of Connections per second)

Type: number

Range: 1-2147483647

limit-policy-list_limit-pps

Specification	Value
Type	*object*

ddos-protection-factor

Description Enable DDoS Protection (Multiplier of the downlink PPS)

Type: number

Range: 1-50

downlink

Description Downlink PPS limit (Number of Packets per second)

Type: number

Range: 1-2147483647

downlink-burstsize

Description PPS Token Bucket Size (Must Exceed Configured Rate) (In Packets)

Type: number

Range: 1-2147483647

downlink-relaxed

Description Relax the limitation when the policy has more tokens from the parent of policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

total

Description Total PPS limit (Number of Packets per second)

Type: number

Range: 1-2147483647

total-burstsize

Description PPS Token Bucket Size (Must Exceed Configured Rate) (In Packets)

Type: number

Range: 1-2147483647

total-relaxed

Description Relax the limitation when the policy has more tokens from the parent of policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink

Description Uplink PPS limit (Number of Packets per second)

Type: number

Range: 1-2147483647

uplink-burstsize

Description PPS Token Bucket Size (Must Exceed Configured Rate) (In Packets)

Type: number

Range: 1-2147483647

uplink-relaxed

Description Relax the limitation when the policy has more tokens from the parent of policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

syslog-over-tls

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.139.2 template apps oper

Operational Status for the object apps

apps Specification

Parameter	Value
Type	*Configuration Resource*

2.139.3 template csv

Specify csv template

csv Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*csv-name*
Collection Name	*csv-list*
Collection URI	/axapi/v3/template/csv
Element Name	csv
Element URI	/axapi/v3/template/csv/{csv-name}
Element Attributes	csv_attributes
Partition Visibility	shared
Schema	`csv schema`

Operations Allowed:

Create Object

POST

/axapi/v3/template/csv

csv attributes

```
POST /axapi/v3/template/csv/
Payload:
{
    "csv": {
        "csv-name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/template/csv

csv attributes

Get Object

GET

/axapi/v3/template/csv/{csv-name}

csv attributes

```
GET /axapi/v3/template/csv/a
Reponse:
{
    "csv": {
        "csv-name": "a",
        "delim-num": 44,
        "ipv6-enable": 0,
        "uuid": "256c9f68-b6e1-11ef-8f5a-ae71681635d0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/template/csv/a"
    }
}
```

Get List

GET

/axapi/v3/template/csv

csv-list

Modify Object

POST

/axapi/v3/template/csv/{csv-name}

csv attributes

Replace Object

PUT

/axapi/v3/template/csv/{csv-name}

csv attributes

```
PUT /axapi/v3/template/csv/a
Payload:
{
    "csv": {
        "csv-name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/template/csv

csv-list

Delete Object

DELETE

/axapi/v3/template/csv/{csv-name}

csv attributes

```
DELETE /axapi/v3/template/csv/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

csv-list

csv-list is **JSON List** of *csv attributes*

csv-list : [

{ *csv attributes* },

{ *csv attributes* },

...

]

csv attributes

csv-name

Description Specify name of csv template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

delim-char

Description enter a delimiter character, default ","

Type: string

Format: string-rlx

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: ,

Mutual Exclusion: delim-char and delim-num are mutually exclusive

delim-num

Description enter a delimiter number, default 44 (",")

Type: number

Range: 0-255

Default: 44

Mutual Exclusion: delim-num and delim-char are mutually exclusive

ipv6-enable

Description Support IPv6 IP ranges

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multiple-fields

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

multiple-fields

Specification	Value
Type	*list*
Block object keys	

csv-type

Description 'ip-from': Beginning address of IP range or subnet; 'ip-to-mask': Ending address of IP range or Mask; 'continent': Continent; 'country': Country; 'state': State or province; 'city': City;

Type: string

Supported Values: ip-from, ip-to-mask, continent, country, state, city, ASN

field

Description Field index number (Index of Field)

Type: number

Range: 1-64

2.139.4 template gtp

Define a GTP template

gtp Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	gtp
Element URI	/axapi/v3/template/gtp
Element Attributes	gtp_attributes
Partition Visibility	shared
Schema	`gtp schema`

Operations Allowed:

Get Object

general-policy-list

Specification	Value
Type	*list*
Block object keys	

handover-timeout

Description Tunnel Inactivity Timeout during Handover in minutes (default: 2 mins)

Type: number

Range: 1-63

Default: 2

max-mesg-length-action

Description 'monitor': Forward failed packet; 'drop': drop packet failing check(Default);

Type: string

Supported Values: monitor, drop

Default: drop

maximum-message-length

Description Maximum message length for a GTP message in bytes

Type: number

Range: 64-1500

Default: 1500

name

Description Specify name of the GTP General Policy

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tunnel-timeout

Description Tunnel Inactivity Timeout in minutes (default: 1440 minutes)

Type: number

Range: 5-60000

Default: 1440

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v0-action

Description 'permit': Permit GTP-C version 0; 'drop': Drop GTP-C version 0(Default);

Type: string

Supported Values: permit, drop

Default: drop

Type	*list*
Block object keys	

rat-type-filt-action

Description 'monitor': Forward packet; 'drop': drop packet (default);

Type: string

Supported Values: monitor, drop

Default: drop

rat-type-value

Description 'utran': RAT Type for 3G Networks; 'geran': RAT Type for 2G Networks; 'wlan': RAT Type for WLAN Networks; 'gan': RAT Type for GAN Networks; 'hspa-evolution': RAT Type for HSPA Networks; 'eutran': RAT Type for 4G Networks;

Type: string

Supported Values: utran, geran, wlan, gan, hspa-evolution, eutran

rate-limit-policy-list

Specification	Value
Type	*list*
Block object keys	

gtp-u-downlink-byte-rate

Description Maximum allowed of rate of GTP-U bytes in downlink direction

Type: number

Range: 1-2147483647

gtp-u-downlink-packet-rate

Description Maximum allowed of rate of GTP-U packets in downlink direction

Type: number

Range: 1-2147483647

gtp-u-max-concurrent-tunnels

Description Maximum allowed GTP-U tunnels per Peer/APN Filter

Type: number

Range: 1-2147483647

gtp-u-total-byte-rate

Description Maximum allowed of rate of GTP-U bytes total in both directions

Type: number

Range: 1-2147483647

gtp-u-total-packet-rate

Description Maximum allowed of rate of GTP-U packets total in both directions

Type: number

Range: 1-2147483647

gtp-u-tunnel-create-rate

Description Maximum allowed of rate of GTP-U tunnels

Type: number

Range: 1-2147483647

gtp-u-uplink-byte-rate

Description Maximum allowed of rate of GTP-U bytes in uplink direction

Type: number

Range: 1-2147483647

gtp-u-uplink-packet-rate

Description Maximum allowed of rate of GTP-U packets in uplink direction

Type: number

Range: 1-2147483647

lockout

Description Lockout traffic from the source for a certain time period after rate exceeded (Lockout duration in minutes)

Type: number

Range: 1-1023

name

Description Specify name of the GTP Rate Limit Policy

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rate-limit-action

Description 'monitor': Forward packet exceeding limit; 'drop': drop packet exceeding limit(default);

Type: string

Supported Values: monitor, drop

Default: drop

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v0-agg-message-type-rate

Description Maximum allowed GTPv0-C message rate of all types

Type: number

Range: 1-2147483647

v1-agg-message-type-rate

Description Maximum allowed GTPv1-C message rate of all types

Type: number

Range: 1-2147483647

v1-create-pdp-request-rate

Description Maximum allowed rate of GTPv1-C Create PDP Request message type

Type: number

Range: 1-2147483647

v1-update-pdp-request-rate

Description Maximum allowed rate of GTPv1-C Update PDP Request message type

Type: number

Range: 1-2147483647

v2-agg-message-type-rate

Description Maximum allowed GTPv2-C message rate of all types

Type: number

Range: 1-2147483647

v2-create-session-request-rate

Description Maximum allowed rate of GTPv2-C Create Session Request message type

Type: number

Range: 1-2147483647

v2-modify-bearer-request-rate

Description Maximum allowed rate of GTPv2-C Modify Bearer Request message type

Type: number

Range: 1-2147483647

apn-imsi-list-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'permit': Create a whitelist to permit the packets that match APN IMSI filters; 'deny': Create a blacklist to deny the packets that match APN IMSI filters (default);

Type: string

Supported Values: permit, deny

Default: deny

name

Description Specify name of the GTP APN IMSI list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

str-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

apn-imsi-list-list_str-list

Specification	Value
Type	*list*
Block object keys	

apn

Description Specify the APN filter

Type: string

Format: string-rlx

Maximum Length: 100 characters

Maximum Length: 1 characters

imsi

Description Specify the IMSI filter

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: imsi and selection-mode are mutually exclusive

imsi-selection

Description Specify the IMSI filter

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

selection-mode

Description 'mobilestation': MS provided APN, subscription not verified; 'network': Network provided APN, subscription not verified; 'verified': MS or Network provided APN, subscription verified;

Type: string

Supported Values: mobilestation, network, verified

Mutual Exclusion: selection-mode and imsi are mutually exclusive

logging-policy-list

Specification	Value
Type	*list*
Block object keys	

log

Description: log is a **JSON Block**. Please see below for *logging-policy-list_log*

Type: Object

name

Description Specify name of the GTP Logging Policy

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-policy-list_log

Specification	Value
Type	*object*

anti-spoofing-check

Description Logging Packet Drop due to End User IP Address Spoofing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

apn-imsi-filtering

Description Logging Packet Drop due to APN IMSI filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

crosslayer-correlation

Description Logging Packet Drop due to mismatch in IP address and GTP FTEID/GSN address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-in-gtp-filtering

Description Logging Packet Drop due to GTP in GTP filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

invalid-header-check

Description Logging Packet Drop due to Invalid Header checks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

invalid-teid-check

Description Logging Packet Drop due to Invalid Tunnel Endpoint Identifier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mandatory-ie-check

Description Logging Packet Drop due to Missing Mandatory Information Element

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-message-length-check

Description Logging Packet Drop due to Max Message Length Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-filtering

Description Logging Packet Drop due to Message Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msisdn-filtering

Description Logging Packet Drop due to MSISDN Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msisdn-imsi-correlation

Description Logging Packet Drop due to mismatch in Country Code and Mobile Country Code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out-of-order-ie-check

Description Logging Packet Drop due to Out of Order Information Elements for GTPv1-C

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out-of-state-ie-check

Description Logging Packet Drop due to Out of State Information Elements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rat-type-filtering

Description Logging Packet Drop due to RAT type filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reserved-ie-check

Description Logging Packet Drop due to Presence of Reserved Information Element

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sequence-num-correlation

Description Logging Packet Drop due to mismatch in Sequence number between GTP request and response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

validation-policy-list

Specification	Value
Type	*list*

Maximum Length: 1 characters

log

Specification	Value
Type	*object*

anti-spoofing-check

Description Logging Packet Drop due to End User IP Address Spoofing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

apn-imsi-filtering

Description Logging Packet Drop due to APN IMSI filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

crosslayer-correlation

Description Logging Packet Drop due to mismatch in IP address and GTP FTEID/GSN address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-in-gtp-filtering

Description Logging Packet Drop due to GTP in GTP filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

invalid-header-check

Description Logging Packet Drop due to Invalid Header checks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

invalid-teid-check

Description Logging Packet Drop due to Invalid Tunnel Endpoint Identifier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mandatory-ie-check

Description Logging Packet Drop due to Missing Mandatory Information Element

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-message-length-check

Description Logging Packet Drop due to Max Message Length Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-filtering

Description Logging Packet Drop due to Message Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msisdn-filtering

Description Logging Packet Drop due to MSISDN Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msisdn-imsi-correlation

Description Logging Packet Drop due to mismatch in Country Code and Mobile Country Code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out-of-order-ie-check

Description Logging Packet Drop due to Out of Order Information Elements for GTPv1-C

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out-of-state-ie-check

Description Logging Packet Drop due to Out of State Information Elements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rat-type-filtering

Description Logging Packet Drop due to RAT type filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reserved-ie-check

Description Logging Packet Drop due to Presence of Reserved Information Element

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sequence-num-correlation

Description Logging Packet Drop due to mismatch in Sequence number between GTP request and response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.139.12 template gtp message-filtering-policy version-v2

Configure Message Filtering Policy for GTPv2 Control Messages

version-v2 Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	version-v2
Element URI	/axapi/v3/template/gtp/message-filtering-policy/{name}/version-v2
Element Attributes	version-v2_attributes
Partition Visibility	shared
Schema	`version-v2 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/template/gtp/message-filtering-policy/{name}/version-v2

version-v2 attributes

```
POST /axapi/v3/template/gtp/message-filtering-policy/a/version-v2
Payload:
{
    "version-v2": {
        "enable-disable-action": "enable",
        "message-type": 1,
        "change-notification": "enable"
    }
}
```

Get Object

GET

/axapi/v3/template/gtp/message-filtering-policy/{name}/version-v2

version-v2 attributes

```
GET /axapi/v3/template/gtp/message-filtering-policy/a/version-v2
Reponse:

apn-imsi-flt-message-monitor

Description GTP-C Message forwarded via monitor mode at APN-IMSI filtering policy

Type: number

Format: counter

drop-flt-apn-filtering

Description Filtering Drop: APN IMSI Filtering

Type: number

Format: counter

drop-flt-gtp-in-gtp

Description Filtering Drop: GTP in GTP Tunnel Present

Type: number

Format: counter

drop-flt-message-filtering

Description Filtering Drop: Message Type Not Permitted on Interface

Type: number

Format: counter

drop-flt-msisdn-filtering

Description Filtering Drop: MSISDN Filtering

Type: number

Format: counter

drop-flt-rat-type-filtering

Description Filtering Drop: RAT Type Filtering

Type: number

Format: counter

drop-rl-gtp-u-downlink-byte

Description Rate-limit Drop: GTP-U Downlink byte rate

Type: number

Format: counter

drop-rl-gtp-u-downlink-packet

Description Rate-limit Drop: GTP-U Downlink packet rate

Type: number

Format: counter

drop-rl-gtp-u-max-concurrent-tunnels

Description Rate-limit Drop: GTP-U Concurrent Tunnels

Type: number

Format: counter

drop-rl-gtp-u-total-byte

Description Rate-limit Drop: GTP-U Total byte rate

Type: number

Format: counter

drop-rl-gtp-u-total-packet

Description Rate-limit Drop: GTP-U Total packet rate

Type: number

Format: counter

drop-rl-gtp-u-tunnel-create

Description Rate-limit Drop: GTP-U Tunnel Creation rate

Type: number

Format: counter

drop-rl-gtp-u-uplink-byte

Description Rate-limit Drop: GTP-U Uplink byte rate

Type: number

Format: counter

drop-rl-gtp-u-uplink-packet

Description Rate-limit Drop: GTP-U Uplink packet rate

Type: number

Format: counter

drop-rl-gtp-v0-c-agg

Description Rate-limit Drop: Maximum GTPv0-C Message rate

Type: number

Format: counter

drop-rl-gtp-v1-c-agg

Description Rate-limit Drop: Maximum GTPv1-C Message rate

Type: number

Format: counter

drop-rl-gtp-v1-c-create-pdp-request

Description Rate-limit Drop: GTPv1-C Create PDP Request rate

Type: number

Format: counter

drop-rl-gtp-v1-c-update-pdp-request

Description Rate-limit Drop: GTPv1-C Update PDP Request rate

Type: number

Format: counter

drop-rl-gtp-v2-c-agg

Description Rate-limit Drop: Maximum GTPv2-C Message rate

Type: number

Format: counter

drop-rl-gtp-v2-c-create-session-request

Description Rate-limit Drop: GTPv2-C Create Session Request rate

Type: number

Format: counter

drop-rl-gtp-v2-c-modify-bearer-request

Description Rate-limit Drop: GTPv2-C Modify Bearer Request rate

Type: number

Format: counter

drop-vld-country-code-mismatch

Description Validation Drop: Country Code Mismatch in IMSI and MSISDN

Type: number

Format: counter

drop-vld-cross-layer-correlation

Description Validation Drop: Cross Layer IP Address Mismatch

Type: number

Format: counter

drop-vld-gtp-bearer-count-exceed

Description Validation Drop: GTP Bearer count exceeded max (11)

Type: number

Format: counter

drop-vld-gtp-ie-repeat-count-exceed

Description Validation Drop: GTP repeated IE count exceeded

Type: number

Format: counter

drop-vld-gtp-invalid-apn-len-drop

Description Validation Drop: GTP-C Invalid APN Length Drop

Type: number

Format: counter

drop-vld-gtp-invalid-imsi-len-drop

Description Validation Drop: GTP-C Invalid IMSI Length Drop

Type: number

Format: counter

drop-vld-gtp-u-spoofed-source-address

Description Validation Drop: GTP-U IP Address Spoofed

Type: number

Format: counter

drop-vld-gtp-v0-c-ie-len-exceed-msg-len

Description GTPv0-C IE Length Exceeds Message Length

Type: number

Format: counter

drop-vld-gtp-v0-c-message-length-mismatch

Description GTPv0-C Message Length Mismatch Across Layers

Type: number

Format: counter

drop-vld-gtp-v0-c-message-skipped-apn-filtering-no-apn

Description Validation Drop: GTPv0-C APN/IMSI Filtering Dropped (No APN)

Type: number

Format: counter

drop-vld-gtp-v1-c-ie-len-exceed-msg-len

Description GTPv1-C IE Length Exceeds Message Length

Type: number

Format: counter

drop-vld-gtp-v1-c-message-length-mismatch

Description GTPv1-C Message Length Mismatch Across Layers

Type: number

Format: counter

drop-vld-gtp-v1-c-message-skipped-apn-filtering-no-apn

Description Validation Drop: GTPv1-C APN/IMSI Filtering Dropped (No APN)

Type: number

Format: counter

drop-vld-gtp-v2-c-ie-len-exceed-msg-len

Description GTPv2-C IE Length Exceeds Message Length

Type: number

Format: counter

drop-vld-gtp-v2-c-message-length-mismatch

Description GTPv2-C Message Length Mismatch Across Layers

Type: number

Format: counter

drop-vld-gtp-v2-c-message-skipped-apn-filtering-no-apn

Description Validation Drop: GTPv2-C APN/IMSI Filtering Dropped (No APN)

Type: number

Format: counter

drop-vld-gtp-v2-wrong-lbi-create-bearer-req

Description Validation Drop: GTPV2-C Wrong LBI in Create Bearer Request

Type: number

Format: counter

drop-vld-gtpv0-seqnum-buffer-full

Description Validation Drop: GTPV0-C conn Sequence number Buffer Full

Type: number

Format: counter

drop-vld-gtpv0-subscriber-attr-miss

Description Validation Drop: GTPV0-c Subscriber Attributes Missing

Type: number

Format: counter

drop-vld-gtpv1-seqnum-buffer-full

Description Validation Drop: GTPV1-C conn Sequence number Buffer Full

Type: number

Format: counter

drop-vld-gtpv1-subscriber-attr-miss

Description Validation Drop: GTPV1-c Subscriber Attributes Missing

Type: number

Format: counter

drop-vld-gtpv2-seqnum-buffer-full

Description Validation Drop: GTPV2-C conn Sequence number Buffer Full

Type: number

Format: counter

drop-vld-gtpv2-subscriber-attr-miss

Description Validation Drop: GTPV2-c Subscriber Attributes Missing

Type: number

Format: counter

drop-vld-invalid-flow-label-v0

Description Validation Drop: Invalid Flow Label in GTPv0-C Header

Type: number

Format: counter

drop-vld-invalid-pkt-len-piggyback

Description Validation Drop: Piggyback message invalid packet length

Type: number

Format: counter

drop-vld-invalid-teid

Description Validation Drop: Invalid TEID Value

Type: number

Format: counter

drop-vld-mandatory-ie-in-grouped-ie

Description Validation Drop: Mandatory IE in Grouped IE Not Present

Type: number

Format: counter

drop-vld-mandatory-information-element

Description Validation Drop: Mandatory IE Not Present

Type: number

Format: counter

drop-vld-message-length

Description Validation Drop: Message Length Exceeded

Type: number

Format: counter

drop-vld-out-of-order-ie

Description Validation Drop: GTPv1-C Message Out of Order IE

Type: number

Format: counter

drop-vld-out-of-state

Description Validation Drop: Out Of State GTP Message

Type: number

Format: counter

drop-vld-out-of-state-ie

Description Validation Drop: Unexpected IE Present in Message

Type: number

Format: counter

drop-vld-protocol-flag-unset

Description Validation Drop: Protocol flag in Header Field not Set

Type: number

Format: counter

drop-vld-reserved-field-set

Description Validation Drop: Reserved Header Field Set

Type: number

Format: counter

drop-vld-reserved-information-element

Description Validation Drop: Reserved IE Field Present

Type: number

Format: counter

drop-vld-sanity-failed-piggyback

Description Validation Drop: piggyback message anomaly failed

Type: number

Format: counter

drop-vld-sanity-gtp-v0-c-message-with-teid-zero-expected

Description Validation Drop: GTPv0-C PDU Notification Request with TEID

Type: number

Format: counter

drop-vld-sanity-gtp-v1-c-message-with-teid-zero-expected

Description Validation Drop: GTPv1-C PDU Notification Request with TEID

Type: number

Format: counter

drop-vld-sanity-gtp-v2-c-message-with-teid-zero-expected

Description Validation Drop: GTPv2-C Create Session Request with TEID

Type: number

Format: counter

drop-vld-sequence-num-correlation

Description Validation Drop: GTP-C Sequence number Mismatch

Type: number

Format: counter

drop-vld-tunnel-id-flag

Description Validation Drop: Tunnel Header Flag Not Set

Type: number

Format: counter

drop-vld-v0-reserved-message-drop

Description Validation Drop: GTPv0-C Reserved Message Drop

Type: number

Format: counter

drop-vld-v1-reserved-message-drop

Description Validation Drop: GTPv1-C Reserved Message Drop

Type: number

Format: counter

drop-vld-v2-reserved-message-drop

Description Validation Drop: GTPv2-C Reserved Message Drop

Type: number

Format: counter

drop-vld-version-not-supported

Description Validation Drop: Invalid GTP version

Type: number

Format: counter

flt-message-monitor

Description GTP-C Message forwarded via monitor mode at message filtering policy

Type: number

Format: counter

gen-message-length-monitor

Description GTP Message forwarded via monitor mode at validation policy

Type: number

Format: counter

gtp-c-handover-in-progress-with-conn

Description GTP-C matching a conn with Handover In Progress

Type: number

Format: counter

gtp-in-gtp-flt-message-monitor

Description GTP-C Message forwarded via monitor mode at GTP-IN_GTP filtering policy

Type: number

Format: counter

gtp-path-management-message

Description GTP Path Management Messages Received

Type: number

Format: counter

gtp-u-tunnel-created

Description GTP-U Tunnel Created

Type: number

Format: counter

gtp-u-tunnel-deleted

Description GTP-U Tunnel Deleted

Type: number

Format: counter

gtp-v0-c-create-pdp-resp-unsuccess

Description GTPv0-C Create PDP Context Response Unsuccessful

Type: number

Format: counter

gtp-v0-c-half-open-tunnel-closed

Description GTPv0-C Half open tunnel closed

Type: number

Format: counter

gtp-v0-c-message-skipped-apn-filtering-no-imsi

Description GTPv0-C APN/IMSI Filtering Skipped (No IMSI)

Type: number

Format: counter

gtp-v0-c-message-skipped-msisdn-filtering-no-imsi

Description GTPv0-C MSISDN Filtering Skipped (No MSISDN)

Type: number

Format: counter

gtp-v0-c-packet-dummy-msisdn

Description GTPv0-C Packet With Dummy MSISDN Forwarded

Type: number

Format: counter

gtp-v0-c-pdu-notification-reject-request-forward

Description GTPv0-C PDU Notification Reject Request Forward

Type: number

Format: counter

gtp-v0-c-pdu-notification-request-forward

Description GTPv0-C PDU Notification Request Forward

Type: number

Format: counter

gtp-v0-c-reserved-message-allow

Description Permit GTPv0-C Reserved Messages

Type: number

Format: counter

gtp-v0-c-tunnel-closed

Description GTPv0-C Tunnel Marked Deleted

Type: number

Format: counter

gtp-v0-c-tunnel-created

Description GTPv0-C Tunnel Created

Type: number

Format: counter

gtp-v0-c-tunnel-deleted

Description GTPv0-C Tunnel Deleted

Type: number

Format: counter

gtp-v0-c-tunnel-deleted-restart

Description GTPv0-C Tunnel Deleted with Restart/failure

Type: number

Format: counter

gtp-v0-c-tunnel-half-closed

Description GTPv0-C Tunnel Delete Request

Type: number

Format: counter

gtp-v0-c-tunnel-half-open

Description GTPv0-C Half open tunnel created

Type: number

Format: counter

gtp-v0-c-update-pdp-resp-unsuccess

Description GTPv0-C Update PDP Context Response Unsuccessful

Type: number

Format: counter

gtp-v1-c-create-pdp-resp-unsuccess

Description GTPv1-C Create PDP Context Response Unsuccessful

Type: number

Format: counter

gtp-v1-c-half-open-tunnel-closed

Description GTPv1-C Half open tunnel closed

Type: number

Format: counter

gtp-v1-c-message-skipped-apn-filtering-no-imsi

Description GTPv1-C APN/IMSI Filtering Skipped (No IMSI)

Type: number

Format: counter

rate-limit-policy attributes

gtp-u-downlink-byte-rate

Description Maximum allowed of rate of GTP-U bytes in downlink direction

Type: number

Range: 1-2147483647

gtp-u-downlink-packet-rate

Description Maximum allowed of rate of GTP-U packets in downlink direction

Type: number

Range: 1-2147483647

gtp-u-max-concurrent-tunnels

Description Maximum allowed GTP-U tunnels per Peer/APN Filter

Type: number

Range: 1-2147483647

gtp-u-total-byte-rate

Description Maximum allowed of rate of GTP-U bytes total in both directions

Type: number

Range: 1-2147483647

gtp-u-total-packet-rate

Description Maximum allowed of rate of GTP-U packets total in both directions

Type: number

Range: 1-2147483647

gtp-u-tunnel-create-rate

Description Maximum allowed of rate of GTP-U tunnels

Type: number

Range: 1-2147483647

gtp-u-uplink-byte-rate

Description Maximum allowed of rate of GTP-U bytes in uplink direction

Type: number

Range: 1-2147483647

gtp-u-uplink-packet-rate

Description Maximum allowed of rate of GTP-U packets in uplink direction

Type: number

Range: 1-2147483647

lockout

Description Lockout traffic from the source for a certain time period after rate exceeded (Lockout duration in minutes)

Type: number

Range: 1-1023

name

Description Specify name of the GTP Rate Limit Policy

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rate-limit-action

Description 'monitor': Forward packet exceeding limit; 'drop': drop packet exceeding limit(default);

Type: string

Supported Values: monitor, drop

Default: drop

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v0-agg-message-type-rate

Description Maximum allowed GTPv0-C message rate of all types

Type: number

Range: 1-2147483647

v1-agg-message-type-rate

Description Maximum allowed GTPv1-C message rate of all types

Type: number

Range: 1-2147483647

v1-create-pdp-request-rate

Description Maximum allowed rate of GTPv1-C Create PDP Request message type

Type: number

Range: 1-2147483647

v1-update-pdp-request-rate

Description Maximum allowed rate of GTPv1-C Update PDP Request message type

Type: number

Range: 1-2147483647

v2-agg-message-type-rate

Description Maximum allowed GTPv2-C message rate of all types

Type: number

Range: 1-2147483647

v2-create-session-request-rate

Description Maximum allowed rate of GTPv2-C Create Session Request message type

Type: number

Range: 1-2147483647

v2-modify-bearer-request-rate

Description Maximum allowed rate of GTPv2-C Modify Bearer Request message type

Type: number

Range: 1-2147483647
