Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

lcomm-value

Description Large community value in the format XX:YY:ZZ

Type: string

Format: string-rlx

network-ipv6

Description Specify a network to announce via BGP

Type: string

Format: ipv6-address-plen

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.107.22 router bgp address-family ipv6 network monitor

monitor

monitor Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	monitor
Element URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor
Element Attributes	monitor_attributes
Partition Visibility	shared
Schema	`monitor schema`

Operations Allowed:

Get Object

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor

monitor_attributes

```
GET /axapi/v3/router/bgp/1/address-family/ipv6/network/monitor
Reponse:
{
    "monitor": {
        "default": {
            "network-monitor-default": 1,
            "uuid": "e87f3d7c-09ba-11f0-b934-3fb830de0af9",
            "a10-url": "/axapi/v3/router/bgp/1/address-family/ipv6/network/monitor/
↪default"
        },
        "a10-url": "/axapi/v3/router/bgp/1/address-family/ipv6/network/monitor"
    }
}
```

monitor attributes

default

Description: default is a **JSON Block**. Please see below for *default*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/monitor/default*

default

Specification	Value
Type	*object*

network-monitor-default

Description default route monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.107.23 router bgp address-family ipv6 network monitor default

help default

default Specification

Parameter	Value

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *vip*

Type: Object

ip-nat-list-cfg

Specification	Value
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

lw4o6-cfg

Specification	Value
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nat64-cfg

Specification	Value
Type	*object*

nat64

Description NAT64 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

connected-cfg

Specification	Value
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip

Specification	Value
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *vip_only-not-flagged-cfg*

Type: Object

vip_only-not-flagged-cfg

Specification	Value
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip_only-flagged-cfg

Specification	Value
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip-nat-cfg

Specification	Value
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

floating-ip-cfg

Specification	Value
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

isis-cfg

Specification	Value
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nat-map-cfg

Specification	Value
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rip-cfg

Specification	Value
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf-cfg

Specification	Value
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

public-ip-cfg

Specification	Value
Type	*object*

public-ip

Description Public IPv6/IPv4 Prefixes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

2.107.26 router bgp neighbor

Specify a neighbor router

neighbor Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/neighbor
Element Attributes	neighbor_attributes
Partition Visibility	shared
Schema	`neighbor schema`

Operations Allowed:

Get Object

GET

/axapi/v3/router/bgp/{as-number}/neighbor

neighbor_attributes

neighbor attributes

ethernet-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor/{ethernet}*

ipv4-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor/{trunk}*

ve-neighbor-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}*

ve-neighbor-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

ipv4-neighbor-list

Specification	Value
Type	*list*
Block object keys	

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,update-source-ip, update-source-ipv6, loopback, ve, trunk, lif, and tunnel are mutually exclusive

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lif,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopback,update-source-ip, update-source-ipv6, ethernet, ve, trunk, lif, and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-name,advertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers, and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

telemetry

Description Send BGP update to telemetry db

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunk,update-source-ip, update-source-ipv6, ethernet, loopback, ve, lif, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ip,update-source-ipv6, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6,update-source-ip, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: ve,update-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif, and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv4-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv4-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv4-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv4-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

peer-group-neighbor-list

Specification	Value
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,update-source-ip, update-source-ipv6, loopback, ve, trunk, lif, and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lif,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopback,update-source-ip, update-source-ipv6, ethernet, ve, trunk, lif, and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-route-map-lists

Type: List

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

peer-group-key

Description Configure peer-group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-remote-as

Description Specify AS number of BGP neighbor

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunk,update-source-ip, update-source-ipv6, ethernet, loopback, ve, lif, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and lif are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ip,update-source-ipv6, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6,update-source-ip, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: ve,update-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif, and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

peer-group-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6-neighbor-list

Specification	Value
Type	*list*
Block object keys	

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,update-source-ip, update-source-ipv6, loopback, ve, trunk, lif, and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lif,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopback,update-source-ip, update-source-ipv6, ethernet, ve, trunk, lif, and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-name,advertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers, and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

telemetry

Description Send BGP update to telemetry db

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunk,update-source-ip, update-source-ipv6, ethernet, loopback, ve, lif, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ip,update-source-ipv6, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6,update-source-ip, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: ve,update-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif, and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv6-neighbor-list_distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6-neighbor-list_neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6-neighbor-list_neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6-neighbor-list_neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ethernet-neighbor-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-neighbor-list

Specification	Value
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.107.27 router bgp neighbor ethernet-neighbor

Specify an ethernet unnumbered neighbor

ethernet-neighbor Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*ethernet*
Collection Name	*ethernet-neighbor-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor
Element Name	ethernet-neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor/{ethernet}
Element Attributes	ethernet-neighbor_attributes
Partition Visibility	shared
Schema	`ethernet-neighbor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor

```
ipv4-neighbor-list : [
        { ipv4-neighbor attributes },
        { ipv4-neighbor attributes },
        ...
    ]
```

ipv4-neighbor attributes

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,update-source-ip, update-source-ipv6, loopback, ve, trunk, lif, and tunnel are mutually exclusive

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lif,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopback,update-source-ip, update-source-ipv6, ethernet, ve, trunk, lif, and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-name,advertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers, and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

telemetry

Description Send BGP update to telemetry db

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunk,update-source-ip, update-source-ipv6, ethernet, loopback, ve, lif, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ip,update-source-ipv6, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6,update-source-ip, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: ve,update-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif, and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.107.29 router bgp neighbor ipv6-neighbor

Specify a ipv6 neighbor router

ipv6-neighbor Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*neighbor-ipv6*
Collection Name	*ipv6-neighbor-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor
Element Name	ipv6-neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}
Element Attributes	ipv6-neighbor_attributes
Partition Visibility	shared
Schema	`ipv6-neighbor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor

ipv6-neighbor attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor

ipv6-neighbor attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}

ipv6-neighbor attributes

Get List

GET

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor

ipv6-neighbor-list

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}

ipv6-neighbor attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}

ipv6-neighbor attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor

ipv6-neighbor-list

Delete Object

DELETE

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}

ipv6-neighbor attributes

ipv6-neighbor-list

ipv6-neighbor-list is **JSON List** of *ipv6-neighbor attributes*

```
ipv6-neighbor-list : [
        { ipv6-neighbor attributes },
        { ipv6-neighbor attributes },
        ...
    ]
```

ipv6-neighbor attributes

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,update-source-ip, update-source-ipv6, loopback, ve, trunk, lif, and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lif,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopback,update-source-ip, update-source-ipv6, ethernet, ve, trunk, lif, and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-name,advertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers, and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: all, both, none, standard, extended, large

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

telemetry

Description Send BGP update to telemetry db

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunk,update-source-ip, update-source-ipv6, ethernet, loopback, ve, lif, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ip,update-source-ipv6, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6,update-source-ip, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: ve,update-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif, and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

distribute-lists

Specification	Value
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor-filter-lists

Specification	Value
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-prefix-lists

Specification	Value
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.107.30 router bgp neighbor peer-group-neighbor

Specify a peer-group neighbor router

peer-group-neighbor Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*peer-group*
Collection Name	*peer-group-neighbor-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor

peer-group-neighbor-list : [

{ *peer-group-neighbor attributes* },

{ *peer-group-neighbor attributes* },

...

]

peer-group-neighbor attributes

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernet,update-source-ip, update-source-ipv6, loopback, ve, trunk, lif, and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lif,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopback,update-source-ip, update-source-ipv6, ethernet, ve, trunk, lif, and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-route-map-lists

Type: List

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

peer-group-key

Description Configure peer-group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-remote-as

Description Specify AS number of BGP neighbor

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunk,update-source-ip, update-source-ipv6, ethernet, loopback, ve, lif, and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnel,update-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk, and lif are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ip,update-source-ipv6, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6,update-source-ip, ethernet, loopback, ve, trunk, lif, and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: ve,update-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif, and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor-route-map-lists

Specification	Value
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

2.107.31 router bgp neighbor trunk-neighbor

Specify a trunk unnumbered neighbor

trunk-neighbor Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*trunk*
Collection Name	*trunk-neighbor-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor
Element Name	trunk-neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor/{trunk}
Element Attributes	trunk-neighbor_attributes
Partition Visibility	shared
Schema	`trunk-neighbor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor

trunk-neighbor attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor

trunk-neighbor attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor/{trunk}

trunk-neighbor attributes

Get List

GET

/axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor

trunk-neighbor-list

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor/{trunk}

trunk-neighbor attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor/{trunk}

trunk-neighbor attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor

trunk-neighbor-list

Delete Object

DELETE

/axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor/{trunk}

trunk-neighbor attributes

trunk-neighbor-list

trunk-neighbor-list is **JSON List** of *trunk-neighbor attributes*

```
trunk-neighbor-list : [
        { trunk-neighbor attributes },
        { trunk-neighbor attributes },
        ...
    ]
```

trunk-neighbor attributes

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.107.32 router bgp neighbor ve-neighbor

Specify a VE unnumbered neighbor

ve-neighbor Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*ve*
Collection Name	*ve-neighbor-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor
Element Name	ve-neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}
Element Attributes	ve-neighbor_attributes
Partition Visibility	shared
Schema	`ve-neighbor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor

ve-neighbor attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor

ve-neighbor attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}

ve-neighbor attributes

Get List

GET

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor

ve-neighbor-list

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}

ve-neighbor attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}

ve-neighbor attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor

ve-neighbor-list

Delete Object

DELETE

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}

ve-neighbor attributes

ve-neighbor-list

ve-neighbor-list is **JSON List** of *ve-neighbor attributes*

ve-neighbor-list : [

{ *ve-neighbor attributes* },

{ *ve-neighbor attributes* },

...

]

ve-neighbor attributes

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

2.107.33 router bgp network

Specify a network to announce via BGP

network Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	network
Element URI	/axapi/v3/router/bgp/{as-number}/network
Element Attributes	network_attributes
Partition Visibility	shared
Schema	`network schema`

Operations Allowed:

Get Object

GET

/axapi/v3/router/bgp/{as-number}/network

network_attributes

network attributes

ip-cidr-list

Type: List

Reference Object: */axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}*

monitor

Description: monitor is a **JSON Block**. Please see below for *monitor*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/network/monitor*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *synchronization*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/network/synchronization*

synchronization

Specification	Value
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor

Specification	Value
Type	*object*

default

Description: default is a **JSON Block**. Please see below for *monitor_default*

Type: Object

Reference Object: */axapi/v3/router/bgp/{as-number}/network/monitor/default*

monitor_default

Specification	Value
Type	*object*

network-monitor-default

Description default route monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-cidr-list

Specification	Value
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

lcomm-value

Description Large community value in the format XX:YY:ZZ

Type: string

Format: string-rlx

network-ipv4-cidr

Description Specify network mask

Type: string

Format: ipv4-cidr

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.107.34 router bgp network ip-cidr

Specify a ip network to announce via BGP

ip-cidr Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*network-ipv4-cidr*
Collection Name	*ip-cidr-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/network/ip-cidr
Element Name	ip-cidr
Element URI	/axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}
Element Attributes	ip-cidr_attributes
Partition Visibility	shared
Schema	`ip-cidr schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/network/ip-cidr

ip-cidr attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/network/ip-cidr

ip-cidr attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}

ip-cidr attributes

Get List

GET

/axapi/v3/router/bgp/{as-number}/network/ip-cidr

ip-cidr-list

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}

ip-cidr attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}

ip-cidr attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/network/ip-cidr

ip-cidr-list

Delete Object

DELETE

/axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}

ip-cidr attributes

ip-cidr-list

ip-cidr-list is **JSON List** of *ip-cidr attributes*

```
ip-cidr-list : [
        { ip-cidr attributes },
        { ip-cidr attributes },
        ...
    ]
```

ip-cidr attributes

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

lcomm-value

Description Large community value in the format XX:YY:ZZ

Type: string

Format: string-rlx

network-ipv4-cidr

Description Specify network mask

Type: string

Format: ipv4-cidr

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.107.35 router bgp network monitor

monitor

monitor Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	monitor
Element URI	/axapi/v3/router/bgp/{as-number}/network/monitor

Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *vip_only-not-flagged-cfg*

Type: Object

vip_only-not-flagged-cfg

Specification	Value
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip_only-flagged-cfg

Specification	Value
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip-nat-cfg

Specification	Value
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

floating-ip-cfg

Specification	Value
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

isis-cfg

Specification	Value
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nat-map-cfg

Specification	Value
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rip-cfg

Specification	Value
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf-cfg

Specification	Value
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static-cfg

Specification	Value
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

public-ip-cfg

Specification	Value
Type	*object*

public-ip

Description Public IPv6/IPv4 Prefixes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

2.107.39 router ipv6

IPv6 information

ipv6 Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	ipv6
Element URI	/axapi/v3/router/ipv6
Element Attributes	ipv6_attributes
Partition Visibility	shared
Schema	`ipv6 schema`

Operations Allowed:

Get Object

GET

/axapi/v3/router/ipv6

ipv6_attributes

ipv6 attributes

ospf-list

Type: List

Reference Object: */axapi/v3/router/ipv6/ospf/{process-id}*

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip*

ospf-list

Specification	Value
Type	*list*
Block object keys	

abr-type-option

Description 'cisco': Alternative ABR, Cisco implementation (RFC3509); 'ibm': Alternative ABR, IBM implementation (RFC3509); 'standard': Standard behavior (RFC2328);

Type: string

Supported Values: cisco, ibm, standard

Default: cisco

area-list

Type: List

Reference Object: */axapi/v3/router/ipv6/ospf/{process-id}/area/{area-ipv4}+{area-num}*

auto-cost-reference-bandwidth

Description Use reference bandwidth method to assign OSPF cost (The reference bandwidth in terms of Mbits per second)

Type: number

Range: 1-4294967

Default: 10000

bfd-all-interfaces

Description Enable BFD on all interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-information

Description: default-information is a **JSON Block**. Please see below for *ospf-list_default-information*

Type: Object

Reference Object: */axapi/v3/router/ipv6/ospf/{process-id}/default-information*

default-metric

Description Set metric of redistributed routes (Default metric)

Type: number

Range: 1-16777214

Default: 20

distribute-internal-list

Type: List

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *ospf-list_distribute-list*

Type: Object

ha-standby-extra-cost

Type: List

log-adjacency-changes

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

max-concurrent-dd

Description Maximum number allowed to process DD concurrently (Number of DD process)

Type: number

Range: 1-65535

Default: 5

passive-interface

Description: passive-interface is a **JSON Block**. Please see below for *ospf-list_passive-interface*

Type: Object

process-id

Description OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *ospf-list_redistribute*

Type: Object

Reference Object: */axapi/v3/router/ipv6/ospf/{process-id}/redistribute*

router-id

Description router-id for the OSPF process (OSPFv3 router-id in IPv4 address format)

Type: string

Format: ipv4-address

timers

Description: timers is a **JSON Block**. Please see below for *ospf-list_timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-list_distribute-internal-list

Specification	Value
Type	*list*
Block object keys	

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

Default: 255.255.255.255

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

cost

Description Cost

Type: number

Range: 1-65535

Default: 1

type

Description 'lw4o6': LW4O6 Prefix; 'nat64': NAT64 Prefix; 'static-nat': Static NAT; 'floating-ip': Floating IP; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'vip': Only not flagged Virtual IP (VIP); 'vip-only-flagged': Selected Virtual IP (VIP);

Type: string

Supported Values: lw4o6, nat64, static-nat, public-ip, floating-ip, ip-nat, ip-nat-list, vip, vip-only-flagged

ospf-list_redistribute

Specification	Value
Type	*object*

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

ospf-list_redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'nat64': NAT64 Prefix; 'lw4o6': LW4O6 Prefix; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, nat-map, static-nat, public-ip, nat64, lw4o6, isis, rip, static

ospf-list_redistribute_ospf-list

Specification	Value
Type	*list*
Block object keys	

metric-ospf

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPFV3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf-list_redistribute_ip-nat-floating-list

Specification	Value
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

ip-nat-prefix

Description Address

Type: string

Format: ipv6-address-plen

ospf-list_redistribute_vip-list

Specification	Value
Type	*list*
Block object keys	

metric-type-vip

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

ospf-list_redistribute_vip-floating-list

Specification	Value
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv6-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

ospf-list_distribute-list

Specification	Value
Type	*object*

prefix-list

Description: prefix-list is a **JSON Block**. Please see below for *ospf-list_distribute-list_prefix-list*

Type: Object

ospf-list_distribute-list_prefix-list

Specification	Value
Type	*object*

direction

Description 'in': Filter incoming routing updates;

Type: string

Supported Values: in

value

Description Prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf-list_area-list

Specification	Value
Type	*list*
Block object keys	

area-ipv4

Description OSPFv3 area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPFv3 area ID as a decimal value

Type: number

Range: 0-4294967295

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-list

Type: List

stub

Description Configure OSPFv3 area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

ospf-list_area-list_virtual-link-list

Specification	Value
Type	*list*
Block object keys	

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

instance-id

Description OSPFv3 instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

value

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

ospf-list_area-list_range-list

Specification	Value
Type	*list*
Block object keys	

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

value

Description Area range for IPv6 prefix

Type: string

Format: ipv6-address-plen

ospf-list_default-information

Specification	Value
Type	*object*

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-list_passive-interface

Specification	Value
Type	*object*

eth-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

tunnel-cfg

Type: List

ve-cfg

Type: List

ospf-list_passive-interface_tunnel-cfg

Specification	Value
Type	*list*
Block object keys	

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ospf-list_passive-interface_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ospf-list_passive-interface_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

ospf-list_passive-interface_loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

ospf-list_passive-interface_eth-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

ospf-list_timers

Specification	Value
Type	*object*

spf

Description: spf is a **JSON Block**. Please see below for *ospf-list_timers_spf*

Type: Object

ospf-list_timers_spf

Specification	Value
Type	*object*

exp

Description: exp is a **JSON Block**. Please see below for *ospf-list_timers_spf_exp*

Type: Object

ospf-list_timers_spf_exp

Specification	Value
Type	*object*

max-delay

Description Maximum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min-delay

Description Minimum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

ospf-list_ha-standby-extra-cost

Specification	Value
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

rip

Specification	Value
Type	*object*

aggregate-address-cfg

Type: List

cisco-metric-behavior

Description 'enable': Enables updating metric consistent with Cisco; 'disable': Disables updating metric consistent with Cisco; (Enable/Disable updating metric consistent with Cisco)

Type: string

Supported Values: enable, disable

Default: disable

default-information

Description 'originate': originate; (Distribute default route)

Type: string

Supported Values: originate

default-metric

Description Set a metric of redistribute routes (Default metric)

Type: number

Range: 1-16

Default: 1

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *rip_distribute-list*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip/distribute-list*

offset-list

Description: offset-list is a **JSON Block**. Please see below for *rip_offset-list*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip/offset-list*

passive-interface-list

Type: List

recv-buffer-size

Description Set the RIPNG UDP receive buffer size (the RIPNG UDP receive buffer size value)

Type: number

Range: 8192-2147483647

redistribute

Description: redistribute is a **JSON Block**. Please see below for *rip_redistribute*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip/redistribute*

ripng-neighbor

Description: ripng-neighbor is a **JSON Block**. Please see below for *rip_ripng-neighbor*

Type: Object

route-cfg

Type: List

route-map

Description: route-map is a **JSON Block**. Please see below for *rip_route-map*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip/route-map*

timers

Description: timers is a **JSON Block**. Please see below for *rip_timers*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_offset-list

Specification	Value
Type	*object*

acl-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_offset-list_acl-cfg

Specification	Value
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

metric

Description Metric value

Type: number

Range: 0-16

offset-list-direction

Description 'in': Filter incoming updates; 'out': Filter outgoing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_route-map_map-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

map

Description Route map name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-map-direction

Description 'in': Route map set for input filtering; 'out': Route map set for output filtering;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_passive-interface-list

Format: interface

rip_redistribute

Specification	Value
Type	*object*

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

rip_redistribute_vip-list

Specification	Value
Type	*list*
Block object keys	

vip-metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

rip_redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'isis': ISO IS-IS; 'lw4o6': LW4O6

Prefix; 'nat-map': NAT MAP Prefix; 'nat64': NAT64 Prefix; 'static-nat': Static NAT; 'ospf': Open Shortest Path First (OSPF); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, isis, lw4o6, nat-map, nat64, static-nat, public-ip, ospf, static

rip_route-cfg

Specification	Value
Type	*list*
Block object keys	

route

Description Static route advertisement (debugging purpose) (IP prefix)

Type: string

Format: ipv6-address-plen

rip_timers

Specification	Value
Type	*object*

timers-cfg

Description: timers-cfg is a **JSON Block**. Please see below for *rip_timers_timers-cfg*

Type: Object

rip_timers_timers-cfg

Specification	Value
Type	*object*

basic

Description Basic routing protocol update timers (Routing table update timer value in second. Default is 30)

Type: number

Range: 5-2147483647

val-2

Description Routing information timeout timer. Default is 180

Type: number

Range: 5-2147483647

val-3

Description Garbage collection timer. Default is 120

Type: number

Range: 5-2147483647

rip_aggregate-address-cfg

Specification	Value
Type	*list*
Block object keys	

aggregate-address

Description Set aggregate RIP route announcement (Aggregate network)

Type: string

Format: ipv6-address-plen

rip_distribute-list_prefix_prefix-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

prefix-list

Description Filter prefixes in routing updates (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

2.107.40 router ipv6 ospf

Open Shortest Path First (OSPFv3)

ospf Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*process-id*
Collection Name	*ospf-list*
Collection URI	/axapi/v3/router/ipv6/ospf
Element Name	ospf
Element URI	/axapi/v3/router/ipv6/ospf/{process-id}
Element Attributes	ospf_attributes
Partition Visibility	shared
Schema	`ospf schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/ipv6/ospf

ospf attributes

```
POST /axapi/v3/router/ipv6/ospf/
Payload:
{
    "ospf": {
        "process-id": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/router/ipv6/ospf

ospf attributes

Get Object

GET

/axapi/v3/router/ipv6/ospf/{process-id}

ospf attributes

```
GET /axapi/v3/router/ipv6/ospf/a
Reponse:
{
    "ospf": {
        "process-id": "a",
        "abr-type-option": "cisco",
        "auto-cost-reference-bandwidth": 10000,
        "bfd-all-interfaces": 0,
        "default-metric": 20,
        "max-concurrent-dd": 5,

Delete Object

DELETE

/axapi/v3/router/ipv6/ospf/{process-id}

ospf attributes

```
DELETE /axapi/v3/router/ipv6/ospf/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

ospf-list

ospf-list is **JSON List** of *ospf attributes*

ospf-list : [

{ *ospf attributes* },

{ *ospf attributes* },

...

]

ospf attributes

abr-type-option

Description 'cisco': Alternative ABR, Cisco implementation (RFC3509); 'ibm': Alternative ABR, IBM implementation (RFC3509); 'standard': Standard behavior (RFC2328);

Type: string

Supported Values: cisco, ibm, standard

Default: cisco

area-list

Type: List

Reference Object: */axapi/v3/router/ipv6/ospf/{process-id}/area/{area-ipv4}+{area-num}*

auto-cost-reference-bandwidth

Description Use reference bandwidth method to assign OSPF cost (The reference bandwidth in terms of Mbits per second)

Type: number

Range: 1-4294967

Default: 10000

bfd-all-interfaces

Description Enable BFD on all interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-information

Description: default-information is a **JSON Block**. Please see below for *default-information*

Type: Object

Reference Object: */axapi/v3/router/ipv6/ospf/{process-id}/default-information*

default-metric

Description Set metric of redistributed routes (Default metric)

Type: number

Range: 1-16777214

Default: 20

distribute-internal-list

Type: List

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *distribute-list*

Type: Object

ha-standby-extra-cost

Type: List

log-adjacency-changes

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

max-concurrent-dd

Description Maximum number allowed to process DD concurrently (Number of DD process)

Type: number

Range: 1-65535

Default: 5

passive-interface

Description: passive-interface is a **JSON Block**. Please see below for *passive-interface*

Type: Object

process-id

Description OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *redistribute*

Type: Object

Reference Object: */axapi/v3/router/ipv6/ospf/{process-id}/redistribute*

router-id

Description router-id for the OSPF process (OSPFv3 router-id in IPv4 address format)

Type: string

Format: ipv4-address

timers

Description: timers is a **JSON Block**. Please see below for *timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distribute-internal-list

Specification	Value
Type	*list*
Block object keys	

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

Default: 255.255.255.255

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

cost

Description Cost

Type: number

Range: 1-65535

Default: 1

type

Description 'lw4o6': LW4O6 Prefix; 'nat64': NAT64 Prefix; 'static-nat': Static NAT; 'floating-ip': Floating IP; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'vip': Only not flagged Virtual IP (VIP); 'vip-only-flagged': Selected Virtual IP (VIP);

Type: string

Supported Values: lw4o6, nat64, static-nat, public-ip, floating-ip, ip-nat, ip-nat-list, vip, vip-only-flagged

redistribute

Specification	Value
Type	*object*

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'nat64': NAT64 Prefix; 'lw4o6': LW4O6 Prefix; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, nat-map, static-nat, public-ip, nat64, lw4o6, isis, rip, static

redistribute_ospf-list

Specification	Value
Type	*list*
Block object keys	

metric-ospf

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPFV3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_ip-nat-floating-list

Specification	Value
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

ip-nat-prefix

Description Address

Type: string

Format: ipv6-address-plen

redistribute_vip-list

Specification	Value
Type	*list*
Block object keys	

metric-type-vip

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

redistribute_vip-floating-list

Specification	Value
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv6-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

distribute-list

Specification	Value
Type	*object*

prefix-list

Description: prefix-list is a **JSON Block**. Please see below for *distribute-list_prefix-list*

Type: Object

distribute-list_prefix-list

Specification	Value
Type	*object*

direction

Description 'in': Filter incoming routing updates;

Type: string

Supported Values: in

value

Description Prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

area-list

Specification	Value
Type	*list*
Block object keys	

area-ipv4

Description OSPFv3 area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPFv3 area ID as a decimal value

Type: number

Range: 0-4294967295

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-list

Type: List

stub

Description Configure OSPFv3 area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

area-list_virtual-link-list

Specification	Value
Type	*list*
Block object keys	

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

instance-id

Description OSPFv3 instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

value

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

area-list_range-list

Specification	Value
Type	*list*
Block object keys	

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

value

Description Area range for IPv6 prefix

Type: string

Format: ipv6-address-plen

default-information

Specification	Value
Type	*object*

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

passive-interface

Specification	Value
Type	*object*

eth-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

tunnel-cfg

Type: List

ve-cfg

Type: List

passive-interface_tunnel-cfg

Specification	Value
Type	*list*
Block object keys	

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

passive-interface_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

passive-interface_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

passive-interface_loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

passive-interface_eth-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

timers

Specification	Value
Type	*object*

spf

Description: spf is a **JSON Block**. Please see below for *timers_spf*

Type: Object

timers_spf

Specification	Value
Type	*object*

exp

Description: exp is a **JSON Block**. Please see below for *timers_spf_exp*

Type: Object

timers_spf_exp

Specification	Value
Type	*object*

max-delay

Description Maximum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min-delay

Description Minimum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

ha-standby-extra-cost

Specification	Value
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

    }
}
```

default-information attributes

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.107.43 router ipv6 ospf redistribute

Redistribute information from another routing protocol

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'nat64': NAT64 Prefix; 'lw4o6': LW4O6 Prefix; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, nat-map, static-nat, public-ip, nat64, lw4o6, isis, rip, static

ospf-list

Specification	Value
Type	*list*
Block object keys	

metric-ospf

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPFV3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip-nat-floating-list

Specification	Value
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

ip-nat-prefix

Description Address

Type: string

Format: ipv6-address-plen

vip-list

Specification	Value
Type	*list*
Block object keys	

metric-type-vip

Description '1': Set OSPFV3 External Type 1 metrics; '2': Set OSPFV3 External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPFV3 default metric (OSPFV3 metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

vip-floating-list

Specification	Value
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv6-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

rip attributes

aggregate-address-cfg

Type: List

cisco-metric-behavior

Description 'enable': Enables updating metric consistent with Cisco; 'disable': Disables updating metric consistent with Cisco; (Enable/Disable updating metric consistent with Cisco)

Type: string

Supported Values: enable, disable

Default: disable

default-information

Description 'originate': originate; (Distribute default route)

Type: string

Supported Values: originate

default-metric

Description Set a metric of redistribute routes (Default metric)

Type: number

Range: 1-16

Default: 1

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *distribute-list*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip/distribute-list*

offset-list

Description: offset-list is a **JSON Block**. Please see below for *offset-list*

Type: Object

timers

Description: timers is a **JSON Block**. Please see below for *timers*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

offset-list

Specification	Value
Type	*object*

acl-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

offset-list_acl-cfg

Specification	Value
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

metric

Description Metric value

Type: number

Range: 0-16

offset-list-direction

Description 'in': Filter incoming updates; 'out': Filter outgoing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

route-map

Specification	Value
Type	*object*

map-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route-map_map-cfg

Format: interface

redistribute

Specification	Value
Type	*object*

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

redistribute_vip-list

Specification	Value
Type	*list*
Block object keys	

vip-metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'isis': ISO IS-IS; 'lw4o6': LW4O6 Prefix; 'nat-map': NAT MAP Prefix; 'nat64': NAT64 Prefix; 'static-nat': Static NAT; 'ospf': Open Shortest Path First (OSPF); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, isis, lw4o6, nat-map, nat64, static-nat, public-ip, ospf, static

route-cfg

Specification	Value
Type	*list*
Block object keys	

route

Description Static route advertisement (debugging purpose) (IP prefix)

Type: string

Format: ipv6-address-plen

timers

Specification	Value
Type	*object*

timers-cfg

Description: timers-cfg is a **JSON Block**. Please see below for *timers_timers-cfg*

Type: Object

timers_timers-cfg

Specification	Value
Type	*object*

basic

Description Basic routing protocol update timers (Routing table update timer value in second. Default is 30)

Type: number

Range: 5-2147483647

val-2

Description Routing information timeout timer. Default is 180

Type: number

Range: 5-2147483647

val-3

Description Garbage collection timer. Default is 120

Type: number

Range: 5-2147483647

aggregate-address-cfg

Specification	Value
Type	*list*
Block object keys	

aggregate-address

Description Set aggregate RIP route announcement (Aggregate network)

Type: string

Format: ipv6-address-plen

ripng-neighbor

Specification	Value
Type	*object*

ripng-neighbor-cfg

Type: List

ripng-neighbor_ripng-neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

neighbor-link-local-addr

Description IPv6 link-local address

Type: string

Format: ipv6-address

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

distribute-list

Specification	Value
Type	*object*

acl-cfg

Type: List

prefix

Description: prefix is a **JSON Block**. Please see below for *distribute-list_prefix*

Type: Object

Reference Object: */axapi/v3/router/ipv6/rip/distribute-list/prefix*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distribute-list_acl-cfg

Specification	Value
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

acl-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

prefix attributes

prefix-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

prefix-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

prefix-list

Description Filter prefixes in routing updates (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

2.107.47 router ipv6 rip offset-list

Modify RIP metric

offset-list Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	offset-list
Element URI	/axapi/v3/router/ipv6/rip/offset-list
Element Attributes	offset-list_attributes
Partition Visibility	shared
Schema	`offset-list schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/ipv6/rip/offset-list

offset-list attributes

```
POST /axapi/v3/router/ipv6/rip/offset-list
Payload:
{
    "offset-list": {
        "acl-cfg": [
            {
                "metric": 0,
                "offset-list-direction": "in",
                "acl": "a",
                "ethernet": 1
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/router/ipv6/rip/offset-list

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

vip-list

Specification	Value
Type	*list*
Block object keys	

vip-metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'isis': ISO IS-IS; 'lw4o6': LW4O6 Prefix; 'nat-map': NAT MAP Prefix; 'nat64': NAT64 Prefix; 'static-nat': Static NAT; 'ospf': Open Shortest Path First (OSPF); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, isis, lw4o6, nat-map, nat64, static-nat, public-ip, ospf, static

2.107.49 router ipv6 rip route-map

isis-list

isis-list is **JSON List** of *isis attributes*

isis-list : [

{ *isis attributes* },

{ *isis attributes* },

...

]

isis attributes

address-family

Description: address-family is a **JSON Block**. Please see below for *address-family*

Type: Object

Reference Object: */axapi/v3/router/isis/{tag}/address-family*

adjacency-check

Description Check ISIS neighbor protocol support

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

area-password-cfg

Description: area-password-cfg is a **JSON Block**. Please see below for *area-password-cfg*

Type: Object

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

bfd

Description 'all-interfaces': Enable BFD on all interfaces;

Type: string

Supported Values: all-interfaces

default-information

Description 'originate': Distribute a default route;

Type: string

Supported Values: originate

distance-list

Type: List

domain-password-cfg

Description: domain-password-cfg is a **JSON Block**. Please see below for *domain-password-cfg*

Type: Object

ha-standby-extra-cost

Type: List

ignore-lsp-errors

Description Ignore LSPs with bad checksums

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

is-type

Description 'level-1': Act as a station router only; 'level-1-2': Act as both a station router and an area router; 'level-2-only': Act as an area router only;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1

log-adjacency-changes-cfg

Description: log-adjacency-changes-cfg is a **JSON Block**. Please see below for *log-adjacency-changes-cfg*

Type: Object

lsp-gen-interval-list

Type: List

lsp-refresh-interval

Description Set LSP refresh interval (LSP refresh time in seconds)

Type: number

Range: 1-65535

Default: 900

max-lsp-lifetime

Description Set maximum LSP lifetime (Maximum LSP lifetime in seconds)

Type: number

Range: 350-65535

Default: 1200

metric-style-list

Type: List

net-list

Type: List

passive-interface-list

Type: List

protocol-list

Type: List

redistribute

Description: redistribute is a **JSON Block**. Please see below for *redistribute*

Type: Object

Reference Object: */axapi/v3/router/isis/{tag}/redistribute*

set-overload-bit-cfg

Description: set-overload-bit-cfg is a **JSON Block**. Please see below for *set-overload-bit-cfg*

Type: Object

spf-interval-exp-list

Type: List

summary-address-list

Type: List

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Default:

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-password-cfg

Specification	Value
Type	*object*

authenticate

Description: authenticate is a **JSON Block**. Please see below for *domain-password-cfg_authenticate*

Type: Object

password

Description Set the authentication password for a routing domain (Routing domain password)

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

domain-password-cfg_authenticate

Specification	Value
Type	*object*

snp

Description 'send-only': Send but do not check PDUs on receiving; 'validate': Send and check PDUs on receiving;

Type: string

Supported Values: send-only, validate

set-overload-bit-cfg

Specification	Value
Type	*object*

on-startup

Description: on-startup is a **JSON Block**. Please see below for *set-overload-bit-cfg_on-startup*

Type: Object

set-overload-bit

Description Signal other touers not to use us in SPF

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

suppress-cfg

Description: suppress-cfg is a **JSON Block**. Please see below for *set-overload-bit-cfg_suppress-cfg*

Type: Object

set-overload-bit-cfg_suppress-cfg

Specification	Value
Type	*object*

external

Description If overload-bit set, don't advertise IP prefixes learned from other protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interlevel

Description If overload-bit set, don't advertise IP prefixes learned from another ISIS level

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

set-overload-bit-cfg_on-startup

Specification	Value
Type	*object*

delay

Description Time in seconds to advertise ourself as overloaded after reboot

Type: number

Range: 5-86400

Mutual Exclusion: delay and wait-for-bgp are mutually exclusive

wait-for-bgp

Description Let BGP decide when to unset the overload bit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: wait-for-bgp and delay are mutually exclusive

net-list

Specification	Value
Type	*list*
Block object keys	

net

Description A Network Entity Title for this process (XX.XXXX. . . . .XXXX.XX Network entity title (NET))

Type: string

Format: nasp-string

Maximum Length: 128 characters

Maximum Length: 1 characters

metric-style-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Level-1 only; 'level-1-2': Level-1-2; 'level-2': Level-2 only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-1-2

type

Description 'narrow': Use old style of TLVs with narrow metric; 'wide': Use new style of TLVs to carry wider metric; 'transition': Send and accept both styles of TLVs during transition; 'narrow-transition': Send old style of TLVs with narrow metric with accepting both styles of TLVs; 'wide-transition': Send new style of TLVs to carry wider metric with accepting both styles of TLVs;

Type: string

Supported Values: narrow, wide, transition, narrow-transition, wide-transition

Default: narrow

authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Authentication mode;

Type: string

Supported Values: md5

authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol-list

Specification	Value
Type	*list*
Block object keys	

protocol-topology

Description Protocol Topology

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-adjacency-changes-cfg

Specification	Value
Type	*object*

state

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

spf-interval-exp-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Set interval for level 1 only; 'level-2': Set interval for level 2 only;

Type: string

Supported Values: level-1, level-2

max

Description Maximum Delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min

Description Minimum Delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

passive-interface-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

summary-address-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Summarize into level-1 area; 'level-1-2': Summarize into both area and sub-domain; 'level-2': Summarize into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

prefix

Description IP network prefix

Type: string

Format: ipv4-cidr

address-family

Specification	Value
Type	*object*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *address-family_ipv6*

Type: Object

Reference Object: */axapi/v3/router/isis/{tag}/address-family/ipv6*

address-family_ipv6

Specification	Value
Type	*object*

adjacency-check

Description Check ISIS neighbor protocol support

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

default-information

Description 'originate': Distribute a default route;

Type: string

Supported Values: originate

distance

Description ISIS Administrative Distance (Distance value)

Type: number

Range: 1-255

Default: 115

multi-topology-cfg

Description: multi-topology-cfg is a **JSON Block**. Please see below for *address-family_ipv6_multi-topology-cfg*

Specification	Value
Type	*list*
Block object keys	

vip-level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

vip-metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

vip-metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

address-family_ipv6_redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'lw4o6': LW4O6 Prefix; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'nat64': NAT64 Prefix; 'ospf': Open Shortest Path First (OSPF); 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, lw4o6, nat-map, static-nat, public-ip, nat64, ospf, rip, static

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-2

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

address-family_ipv6_multi-topology-cfg

Specification	Value
Type	*object*

level

Description 'level-1': Level-1 only; 'level-1-2': Level-1-2; 'level-2': Level-2 only;

Type: string

Supported Values: level-1, level-1-2, level-2

Mutual Exclusion: level and transition are mutually exclusive

level-transition

Description Accept and generate both IS-IS IPv6 and Multi-topology IPV6 TLVs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-topology

Description Enable multi-topology mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transition

Description Accept and generate both IS-IS IPv6 and Multi-topology IPV6 TLVs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: transition and level are mutually exclusive

address-family_ipv6_summary-prefix-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Summarize into level-1 area; 'level-1-2': Summarize into both area and sub-domain; 'level-2': Summarize into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

level-2

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

area-password-cfg

Specification	Value
Type	*object*

authenticate

Description: authenticate is a **JSON Block**. Please see below for *area-password-cfg_authenticate*

Type: Object

password

Description Configure the authentication password for an area (Area password)

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

area-password-cfg_authenticate

Specification	Value
Type	*object*

snp

Description 'send-only': Send but do not check PDUs on receiving; 'validate': Send and check PDUs on receiving;

Type: string

Supported Values: send-only, validate

lsp-gen-interval-list

Specification	Value
Type	*list*
Block object keys	

interval

Description Minimum interval in seconds

Type: number

Range: 1-120

Default: 30

level

Description 'level-1': Set interval for level 1 only; 'level-2': Set interval for level 2 only;

Type: string

Supported Values: level-1, level-2

distance-list

Specification	Value
Type	*list*
Block object keys	

System-ID

Description System-ID in XXXX.XXXX.XXXX

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

acl

Description Access list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distance

Description ISIS Administrative Distance (Distance value)

Type: number

Range: 1-255

Default: 115

ha-standby-extra-cost

Specification	Value
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

Block object keys	

level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'lw4o6': LW4O6 Prefix; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'nat64': NAT64 Prefix; 'ospf': Open Shortest Path First (OSPF); 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, lw4o6, nat-map, static-nat, public-ip, nat64, ospf, rip, static

redistribute_isis

Specification	Value
Type	*object*

level-1-from

Description: level-1-from is a **JSON Block**. Please see below for *redistribute_isis_level-1-from*

Type: Object

level-2-from

Description: level-2-from is a **JSON Block**. Please see below for *redistribute_isis_level-2-from*

into-2

Description: into-2 is a **JSON Block**. Please see below for *redistribute_isis_level-2-from_into-2*

Type: Object

redistribute_isis_level-2-from_into-2

Specification	Value
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-1

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute_isis_level-1-from

Specification	Value
Type	*object*

into-1

Description: into-1 is a **JSON Block**. Please see below for *redistribute_isis_level-1-from_into-1*

Type: Object

redistribute_isis_level-1-from_into-1

Specification	Value
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-2

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-topology-cfg

Specification	Value
Type	*object*

level

Description 'level-1': Level-1 only; 'level-1-2': Level-1-2; 'level-2': Level-2 only;

Type: string

Supported Values: level-1, level-1-2, level-2

Mutual Exclusion: level and transition are mutually exclusive

level-transition

Description Accept and generate both IS-IS IPv6 and Multi-topology IPV6 TLVs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-topology

Description Enable multi-topology mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transition

Description Accept and generate both IS-IS IPv6 and Multi-topology IPV6 TLVs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: transition and level are mutually exclusive

summary-prefix-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Summarize into level-1 area; 'level-1-2': Summarize into both area and sub-domain; 'level-2': Summarize into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

2.107.53 router isis address-family ipv6 redistribute

Redistribute information from another routing protocol

redistribute Specification

Parameter	Value
Type	*Configuration Resource*

ospf-list

ospf-list is **JSON List** of *ospf attributes*

ospf-list : [

{ *ospf attributes* },

{ *ospf attributes* },

...

]

ospf attributes

area-list

Type: List

Reference Object: */axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}*

auto-cost-reference-bandwidth

Description Use reference bandwidth method to assign OSPF cost (The reference bandwidth in terms of Mbits per second)

Type: number

Range: 1-4294967

Default: 10000

bfd-all-interfaces

Description Enable BFD on all interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-information

Description: default-information is a **JSON Block**. Please see below for *default-information*

Type: Object

Reference Object: */axapi/v3/router/ospf/{process-id}/default-information*

default-metric

Description Set metric of redistributed routes (Default metric)

Type: number

Range: 1-16777214

Default: 20

distance

Description: distance is a **JSON Block**. Please see below for *distance*

Type: Object

distribute-internal-list

Type: List

distribute-lists

Type: List

extern-lsa-equivalence-check

Description external LSA equivalance check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-standby-extra-cost

Type: List

host-list

Type: List

log-adjacency-changes-cfg

Description: log-adjacency-changes-cfg is a **JSON Block**. Please see below for *log-adjacency-changes-cfg*

Type: Object

max-concurrent-dd

Description Maximum number allowed to process DD concurrently (Number of DD process)

Type: number

Range: 1-65535

Default: 5

maximum-area

Description Maximum number of non-backbone areas (OSPF area limit)

Type: number

Range: 1-4294967294

neighbor-list

Type: List

network-list

Type: List

ospf-1

Description: ospf-1 is a **JSON Block**. Please see below for *ospf-1*

Type: Object

overflow

Description: overflow is a **JSON Block**. Please see below for *overflow*

Type: Object

passive-interface

Description: passive-interface is a **JSON Block**. Please see below for *passive-interface*

Type: Object

process-id

Description OSPF process ID

Type: number

Range: 0-65535

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *redistribute*

Type: Object

Reference Object: */axapi/v3/router/ospf/{process-id}/redistribute*

rfc1583-compatible

Description Compatible with RFC 1583

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router-id

Description: router-id is a **JSON Block**. Please see below for *router-id*

Type: Object

summary-address-list

Type: List

timers

Description: timers is a **JSON Block**. Please see below for *timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distribute-internal-list

Specification	Value
Type	*list*
Block object keys	

di-area-ipv4

Description OSPF area ID as a IP address format

Type: string

Format: ipv4-address

di-area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

di-cost

Description Cost of route

Type: number

Range: 1-65535

Default: 1

di-type

Description 'lw4o6': LW4O6 Prefix; 'floating-ip': Floating IP; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'static-nat': Static NAT; 'vip': Only not flagged Virtual IP (VIP); 'vip-only-flagged': Selected Virtual IP (VIP);

Type: string

Supported Values: lw4o6, floating-ip, ip-nat, ip-nat-list, static-nat, public-ip, vip, vip-only-flagged

distribute-lists

Specification	Value
Type	*list*
Block object keys	

direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

option

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

ospf-id

Description OSPF process ID

Type: number

Range: 1-65535

protocol

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'lw4o6': LW4O6 Prefix; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'static-nat': Static NAT; 'isis': ISO IS-IS; 'ospf': Open Shortest Path First (OSPF); 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, lw4o6, ip-nat, ip-nat-list, static-nat, public-ip, isis, ospf, rip, static

value

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

router-id

Specification	Value
Type	*object*

value

Description OSPF router-id in IPv4 address format

Type: string

Format: ipv4-address

neighbor-list

Specification	Value
Type	*list*
Block object keys	

address

Description Neighbor address

Type: string

Format: ipv4-address

cost

Description OSPF cost for point-to-multipoint neighbor (Metric)

Type: number

Range: 1-65535

poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 1-65535

priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf-1

Specification	Value
Type	*object*

abr-type

Description: abr-type is a **JSON Block**. Please see below for *ospf-1_abr-type*

Type: Object

ospf-1_abr-type

Specification	Value
Type	*object*

option

Description 'cisco': Alternative ABR, Cisco implementation (RFC3509); 'ibm': Alternative ABR, IBM implementation (RFC3509); 'shortcut': Shortcut ABR; 'standard': Standard behavior (RFC2328);

Type: string

Supported Values: cisco, ibm, shortcut, standard

Default: cisco

host-list

Specification	Value
Type	*list*
Block object keys	

area-cfg

Description: area-cfg is a **JSON Block**. Please see below for *host-list_area-cfg*

Type: Object

host-address

Description Host address

Type: string

Format: ipv4-address

host-list_area-cfg

Specification	Value
Type	*object*

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

Mutual Exclusion: area-ipv4 and area-num are mutually exclusive

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

Mutual Exclusion: area-num and area-ipv4 are mutually exclusive

cost

Description Cost of host

Type: number

Range: 0-65535

Default: 0

log-adjacency-changes-cfg

Specification	Value
Type	*object*

state

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

area-list

Specification	Value
Type	*list*
Block object keys	

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *area-list_auth-cfg*

Type: Object

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

filter-lists

Type: List

nssa-cfg

Description: nssa-cfg is a **JSON Block**. Please see below for *area-list_nssa-cfg*

Type: Object

range-list

Type: List

shortcut

Description 'default': Set default shortcutting behavior; 'disable': Disable shortcutting through the area; 'enable': Enable shortcutting through the area;

Type: string

Supported Values: default, disable, enable

Default: default

stub-cfg

Description: stub-cfg is a **JSON Block**. Please see below for *area-list_stub-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

area-list_nssa-cfg

Specification	Value
Type	*object*

default-information-originate

Description Originate Type 7 default into NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

Default: 1

metric-type

Description OSPF metric type (OSPF metric type for default routes)

Type: number

Range: 1-2

Default: 2

no-redistribution

Description No redistribution into this NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-summary

Description Do not send summary LSA into NSSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nssa

Description Specify a NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

translator-role

Description 'always': Translate always; 'candidate': Candidate for translator (default); 'never': Do not translate;

Type: string

Supported Values: always, candidate, never

Default: candidate

area-list_filter-lists

Specification	Value
Type	*list*
Block object keys	

acl-direction

Description 'in': Filter networks sent to this area; 'out': Filter networks sent from this area;

Type: string

Supported Values: in, out

acl-name

Description Filter networks by access-list (Name of an access-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list

Description Filter networks between OSPF areas

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

plist-direction

Description 'in': Filter networks sent to this area; 'out': Filter networks sent from this area;

Type: string

Supported Values: in, out

plist-name

Description Filter networks by prefix-list (Name of an IP prefix-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

area-list_virtual-link-list

Specification	Value
Type	*list*
Block object keys	

authentication-key

Description Set authentication key (Authentication key (8 chars))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

md5

Description Use MD5 algorithm (Authentication key (16 chars))

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Set message digest key (Key ID)

Type: number

Range: 1-255

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

virtual-link-auth-type

Description 'message-digest': Use message-digest authentication; 'null': Use null authentication;

Type: string

Supported Values: message-digest, null

virtual-link-authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

virtual-link-ip-addr

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

area-list_stub-cfg

Specification	Value
Type	*object*

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stub

Description Configure OSPF area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

area-list_auth-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest

Description Use message-digest authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

area-list_range-list

Specification	Value
Type	*list*
Block object keys	

area-range-prefix

Description Area range for IPv4 prefix

Type: string

Format: ipv4-cidr

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

Default: advertise

summary-address-list

Specification	Value
Type	*list*
Block object keys	

not-advertise

Description Suppress routes that match the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-address

Description Configure IP address summaries (Summary prefix)

Type: string

Format: ipv4-cidr

tag

Description Set tag (32-bit tag value)

Type: number

Range: 0-4294967295

passive-interface

Specification	Value
Type	*object*

eth-cfg

Type: List

lif-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

tunnel-cfg

Type: List

ve-cfg

Type: List

passive-interface_tunnel-cfg

Specification	Value
Type	*list*
Block object keys	

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

tunnel-address

Description Address of Interface

Type: string

Format: ipv4-address

passive-interface_loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

loopback-address

Description Address of Interface

Type: string

Format: ipv4-address

passive-interface_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ve-address

Description Address of Interface

Type: string

Format: ipv4-address

passive-interface_lif-cfg

Specification	Value
Type	*list*
Block object keys	

lif

Description Logical interface (Lif interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

lif-address

Description Address of Interface

Type: string

Format: ipv4-address

passive-interface_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

trunk-address

Description Address of Interface

Type: string

Format: ipv4-address

passive-interface_eth-cfg

Specification	Value
Type	*list*
Block object keys	

eth-address

Description Address of Interface

Type: string

Format: ipv4-address

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

default-information

Specification	Value
Type	*object*

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

overflow

Specification	Value
Type	*object*

database

Description: database is a **JSON Block**. Please see below for *overflow_database*

Type: Object

overflow_database

Specification	Value
Type	*object*

count

Description Maximum number of LSAs

Type: number

Range: 0-4294967294

Default: 4294967294

db-external

Description Maximum number of LSAs

Type: number

Range: 0-2147483647

Default: 2147483647

limit

Description 'hard': Hard limit: Instance will be shutdown if exceeded; 'soft': Soft limit: Warning will be given if exceeded;

Type: string

Supported Values: hard, soft

Default: hard

recovery-time

Description Time to recover (0 not recover)

Type: number

Range: 0-65535

Default: 0

distance

Specification	Value
Type	*object*

distance-ospf

Description: distance-ospf is a **JSON Block**. Please see below for *distance_distance-ospf*

Type: Object

distance-value

Description OSPF Administrative distance

Type: number

Range: 1-255

Default: 110

distance_distance-ospf

Specification	Value
Type	*object*

distance-external

Description External routes (Distance for external routes)

Type: number

Range: 1-255

distance-inter-area

Description Inter-area routes (Distance for inter-area routes)

Type: number

Range: 1-255

distance-intra-area

Description Intra-area routes (Distance for intra-area routes)

Type: number

Range: 1-255

redistribute

Specification	Value
Type	*object*

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-ip-nat

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-4294967295

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'lw4o6': LW4O6 Prefix; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, lw4o6, nat-map, static-nat, public-ip, isis, rip, static

redistribute_ospf-list

Specification	Value
Type	*list*
Block object keys	

metric-ospf

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPF process ID

Type: number

Range: 1-65535

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-ospf

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-4294967295

redistribute_ip-nat-floating-list

Specification	Value
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv4-address

ip-nat-prefix

Description Address

Type: string

Format: ipv4-cidr

redistribute_vip-list

Specification	Value
Type	*list*
Block object keys	

metric-type-vip

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-vip

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-2147483647

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

redistribute_vip-floating-list

Specification	Value
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv4-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv4-address

network-list

Specification	Value
Type	*list*
Block object keys	

network-area

Description: network-area is a **JSON Block**. Please see below for *network-list_network-area*

Type: Object

network-ipv4

Description Network number

Type: string

Format: ipv4-address

network-ipv4-cidr

Description OSPF network prefix

Type: string

Format: ipv4-cidr

network-ipv4-mask

Description OSPF wild card bits

Type: string

Format: ipv4-rev-netmask

network-list_network-area

Specification	Value
Type	*object*

instance-value

Description Instance ID

Type: number

Range: 0-255

Default: 0

network-area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

network-area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

timers

Specification	Value
Type	*object*

spf

Description: spf is a **JSON Block**. Please see below for *timers_spf*

Type: Object

timers_spf

Specification	Value
Type	*object*

exp

Description: exp is a **JSON Block**. Please see below for *timers_spf_exp*

Type: Object

timers_spf_exp

Specification	Value
Type	*object*

max-delay

Description Maximum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min-delay

Description Minimum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

ha-standby-extra-cost

Specification	Value
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

2.107.59 router ospf area

OSPF area parameters

area Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*area-ipv4, area-num*
Collection Name	*area-list*
Collection URI	/axapi/v3/router/ospf/{process-id}/area
Element Name	area
Element URI	/axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}
Element Attributes	area_attributes
Partition Visibility	shared
Schema	`area schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/ospf/{process-id}/area

area attributes

Create List

POST

/axapi/v3/router/ospf/{process-id}/area

area attributes

Get Object

GET

/axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}

area attributes

Get List

GET

/axapi/v3/router/ospf/{process-id}/area

area-list

Modify Object

POST

/axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}

area attributes

Replace Object

PUT

/axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}

area attributes

Replace List

PUT

/axapi/v3/router/ospf/{process-id}/area

area-list

Delete Object

DELETE

/axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}

area attributes

area-list

area-list is **JSON List** of *area attributes*

```
area-list : [
        { area attributes },
        { area attributes },
        ...
    ]
```

area attributes

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *auth-cfg*

Type: Object

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

filter-lists

Type: List

nssa-cfg

Description: nssa-cfg is a **JSON Block**. Please see below for *nssa-cfg*

Type: Object

range-list

Type: List

shortcut

Description 'default': Set default shortcutting behavior; 'disable': Disable shortcutting through the area; 'enable': Enable shortcutting through the area;

Type: string

Supported Values: default, disable, enable

Default: default

stub-cfg

Description: stub-cfg is a **JSON Block**. Please see below for *stub-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

nssa-cfg

Specification	Value
Type	*object*

default-information-originate

Description Originate Type 7 default into NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

Default: 1

metric-type

Description OSPF metric type (OSPF metric type for default routes)

Type: number

Range: 1-2

Default: 2

no-redistribution

Description No redistribution into this NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-summary

Description Do not send summary LSA into NSSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nssa

Description Specify a NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

translator-role

Description ‘always’: Translate always; ‘candidate’: Candidate for translator (default); ‘never’: Do not translate;

Type: string

Supported Values: always, candidate, never

Default: candidate

filter-lists

Specification	Value
Type	*list*
Block object keys	

acl-direction

Description 'in': Filter networks sent to this area; 'out': Filter networks sent from this area;

Type: string

Supported Values: in, out

acl-name

Description Filter networks by access-list (Name of an access-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list

Description Filter networks between OSPF areas

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

plist-direction

Description 'in': Filter networks sent to this area; 'out': Filter networks sent from this area;

Type: string

Supported Values: in, out

plist-name

Description Filter networks by prefix-list (Name of an IP prefix-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

virtual-link-list

Specification	Value
Type	*list*
Block object keys	

authentication-key

Description Set authentication key (Authentication key (8 chars))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

md5

Description Use MD5 algorithm (Authentication key (16 chars))

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Set message digest key (Key ID)

Type: number

Range: 1-255

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

virtual-link-auth-type

Description 'message-digest': Use message-digest authentication; 'null': Use null authentication;

Type: string

Supported Values: message-digest, null

virtual-link-authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

virtual-link-ip-addr

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

stub-cfg

Specification	Value
Type	*object*

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stub

Description Configure OSPF area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest

Description Use message-digest authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-list

Specification	Value
Type	*list*
Block object keys	

area-range-prefix

Description Area range for IPv4 prefix

Type: string

Format: ipv4-cidr

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

Default: advertise

2.107.60 router ospf default-information

Control distribution of default information

default-information Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	default-information
Element URI	/axapi/v3/router/ospf/{process-id}/default-information
Element Attributes	default-information_attributes
Partition Visibility	shared
Schema	`default-information schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/ospf/{process-id}/default-information

default-information attributes

```
POST /axapi/v3/router/ospf/1/default-information
Payload:
{
    "default-information": {
        "originate": 1,
        "always": 1
    }
}
```

Get Object

GET

/axapi/v3/router/ospf/{process-id}/default-information

default-information attributes

```
GET /axapi/v3/router/ospf/1/default-information
Reponse:
{
    "default-information": {
        "originate": 1,
        "always": 1,
        "metric-type": 2,
        "uuid": "a418f982-09c6-11f0-b934-3fb830de0af9",
        "a10-url": "/axapi/v3/router/ospf/1/default-information"
    }
}
```

Modify Object

POST

/axapi/v3/router/ospf/{process-id}/default-information

default-information attributes

Replace Object

PUT

/axapi/v3/router/ospf/{process-id}/default-information

default-information attributes

```
PUT /axapi/v3/router/ospf/1/default-information
Payload:
{
    "default-information": {
        "originate": 1,
        "always": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/router/ospf/{process-id}/default-information

default-information attributes

```
DELETE /axapi/v3/router/ospf/1/default-information
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

default-information attributes

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.107.61 router ospf redistribute

Redistribute information from another routing protocol

redistribute Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	redistribute
Element URI	/axapi/v3/router/ospf/{process-id}/redistribute
Element Attributes	redistribute_attributes
Partition Visibility	shared
Schema	`redistribute schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/ospf/{process-id}/redistribute

redistribute attributes

```
POST /axapi/v3/router/ospf/1/redistribute
Payload:
{
    "redistribute": {
        "redist-list": [
            {
                "type": "bgp",
                "metric": 0
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/router/ospf/{process-id}/redistribute

redistribute attributes

```
GET /axapi/v3/router/ospf/1/redistribute
Reponse:
{
    "redistribute": {
        "redist-list": [
            {
                "type": "bgp",
                "metric": 0,
                "metric-type": "2"
            }
        ],
        "ip-nat": 0,
        "uuid": "bca9b13a-09c6-11f0-b934-3fb830de0af9",

    }
}
```

redistribute attributes

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-ip-nat

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-4294967295

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'lw4o6': LW4O6 Prefix; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, lw4o6, nat-map, static-nat, public-ip, isis, rip, static

ospf-list

Specification	Value
Type	*list*
Block object keys	

metric-ospf

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPF process ID

Type: number

Range: 1-65535

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-ospf

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-4294967295

ip-nat-floating-list

Specification	Value
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv4-address

ip-nat-prefix

Description Address

Type: string

Format: ipv4-cidr

vip-list

Specification	Value
Type	*list*
Block object keys	

metric-type-vip

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-vip

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-2147483647

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

vip-floating-list

Specification	Value
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv4-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv4-address

2.107.62 router rip

Routing Information Protocol (RIP)

rip Specification

Parameter	Value

    }
}
```

rip attributes

cisco-metric-behavior

Description 'enable': Enables updating metric consistent with Cisco; 'disable': Disables updating metric consistent with Cisco; (Enable/Disable updating metric consistent with Cisco)

Type: string

Supported Values: enable, disable

Default: disable

default-information

Description 'originate': originate; (Distribute default route)

Type: string

Supported Values: originate

default-metric

Description Set a metric of redistribute routes (Default metric)

Type: number

Range: 1-16

Default: 1

distance-list-cfg

Type: List

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *distribute-list*

Type: Object

Reference Object: */axapi/v3/router/rip/distribute-list*

neighbor

Type: List

network-addresses

Type: List

network-interface-list-cfg

offset-list

Description: offset-list is a **JSON Block**. Please see below for *offset-list*

Type: Object

Reference Object: */axapi/v3/router/rip/offset-list*

passive-interface-list

Type: List

recv-buffer-size

Description Set the RIP UDP receive buffer size (the RIP UDP receive buffer size value)

Type: number

Range: 8192-2147483647

redistribute

Description: redistribute is a **JSON Block**. Please see below for *redistribute*

Type: Object

Reference Object: */axapi/v3/router/rip/redistribute*

rip-maximum-prefix-cfg

Description: rip-maximum-prefix-cfg is a **JSON Block**. Please see below for *rip-maximum-prefix-cfg*

Type: Object

route-cfg

Type: List

timers

Description: timers is a **JSON Block**. Please see below for *timers*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description Set routing protocol version (RIP version)

Type: number

Range: 1-2

Default: 2

rip-maximum-prefix-cfg

Specification	Value
Type	*object*

maximum-prefix

Description Set the maximum number of RIP routes

Type: number

Range: 1-2048

maximum-prefix-thres

Description Percentage of maximum routes to generate a warning (Default 75%)

Type: number

Range: 1-100

Default: 75

route-cfg

Specification	Value
Type	*list*
Block object keys	

route

Description Static route advertisement (debugging purpose) (IP prefix network/length)

Type: string

Format: ipv4-cidr

passive-interface-list

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

redistribute

Specification	Value
Type	*object*

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

redistribute_vip-list

Specification	Value
Type	*list*
Block object keys	

vip-metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

redistribute_redist-list

Specification	Value
Type	*list*
Block object keys	

metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'isis': ISO IS-IS; 'lw4o6': LW4O6

Prefix; 'nat-map': NAT MAP Prefix; 'static-nat': Static NAT; 'ospf': Open Shortest Path First (OSPF); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, isis, lw4o6, nat-map, static-nat, public-ip, ospf, static

network-interface-list-cfg

Specification	Value
Type	*list*

Type	*object*

basic

Description Basic routing protocol update timers (Routing table update timer value in second. Default is 30)

Type: number

Range: 5-2147483647

val-2

Description Routing information timeout timer. Default is 180

Type: number

Range: 5-2147483647

val-3

Description Garbage collection timer. Default is 120

Type: number

Range: 5-2147483647

neighbor

Specification	Value
Type	*list*
Block object keys	

value

Description Neighbor address

Type: string

Format: ipv4-address

offset-list

Specification	Value
Type	*object*

acl-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

offset-list_acl-cfg

Specification	Value
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

metric

Description Metric value

Type: number

Range: 0-16

offset-list-direction

Description 'in': Filter incoming updates; 'out': Filter outgoing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

distribute-list

Specification	Value
Type	*object*

acl-cfg

Type: List

prefix

Description: prefix is a **JSON Block**. Please see below for *distribute-list_prefix*

Type: Object

Reference Object: */axapi/v3/router/rip/distribute-list/prefix*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distribute-list_acl-cfg

Specification	Value
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

acl-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

distribute-list_prefix

Specification	Value
Type	*object*

prefix-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distribute-list_prefix_prefix-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

prefix-list

Description Filter prefixes in routing updates (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

distance-list-cfg

Specification	Value
Type	*list*
Block object keys	

distance

Description Administrative distance (Distance value)

Type: number

Range: 1-255

Default: 120

distance-acl

Description Access list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distance-ipv4-mask

Description IP source prefix

Type: string

Format: ipv4-cidr

network-addresses

Specification	Value
Type	*list*
Block object keys	

network-ipv4-mask

Description IP prefix network/length, e.g., 35.0.0.0/8

Type: string

Format: ipv4-cidr

2.107.63 router rip distribute-list

Filter networks in routing updates

Range: 1-1023

cgnv6-lsn-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cgnv6-policy

Description 'lsn-lid': Apply specified CGNv6 LSN LID; 'fixed-nat': Apply CGNv6 Fixed NAT; 'ds-lite': Apply CGNv6 DS-Lite;

Type: string

Supported Values: lsn-lid, fixed-nat, ds-lite

Mutual Exclusion: cgnv6-policy and cgnv6-log are mutually exclusive

dest-list

Type: List

dscp-list

Type: List

dst-class-list

Description Match destination IP against class-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-class-list,dst-ipv4-any, dst-ipv6-any, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, and dst-slb-vserver are mutually exclusive

Reference Object: */axapi/v3/class-list*

dst-domain-list

Description Match destination IP against domain-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-domain-list, dst-ipv4-any, and dst-ipv6-any are mutually exclusive

Reference Object: */axapi/v3/domain-list*

dst-geoloc-list

Description Geolocation name list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-geoloc-list,dst-geoloc-name, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, and dst-slb-vserver are mutually exclusive

dst-geoloc-list-shared

Description Use Geolocation list from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-geoloc-name

Description Single geolocation name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-geoloc-name,dst-geoloc-list, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, and dst-slb-vserver are mutually exclusive

dst-ipv4-any

Description 'any': Any IPv4 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: dst-ipv4-any,dst-ipv6-any, dst-class-list, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, dst-slb-vserver, and dst-domain-list are mutually exclusive

dst-ipv6-any

Description 'any': Any IPv6 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: dst-ipv6-any,dst-ipv4-any, dst-class-list, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, dst-slb-vserver, and dst-domain-list are mutually exclusive

dst-threat-list

Description Bind threat-list for destination IP based filtering

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/threat-intel/threat-list*

dst-zone

Description Zone name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-zone and dst-zone-any are mutually exclusive

Reference Object: */axapi/v3/zone*

dst-zone-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: dst-zone-any and dst-zone are mutually exclusive

forward-listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fw-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fwlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-template

Description Configure GTP Policy Template (GTP Template Policy Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/template/gtp-policy*

idle-timeout

Description TCP/UDP idle-timeout

Type: number

Range: 1-2097151

inspect-payload

Description Enable DS-Lite tunnel inspection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-version

Description 'v4': IPv4 rule; 'v6': IPv6 rule;

Type: string

Supported Values: v4, v6

Default: v4

lid

Description Apply a Template LID

Type: number

Range: 1-1023

lidlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: listen-on-port and log are mutually exclusive

listen-on-port-lid

Description Apply a Template LID

Type: number

Range: 1-1023

listen-on-port-lidlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: log, listen-on-port, and policy are mutually exclusive

move-rule

Description: move-rule is a **JSON Block**. Please see below for *rule-list_move-rule*

Type: Object

Reference Object: */axapi/v3/rule-set/{name}/rule/{name}/move-rule*

name

Description Rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/rule-set-rule-tmpl*

policy

Description 'cgnv6': Apply CGNv6 policy; 'forward': Forward packet; 'ipsec': Apply IPsec encapsulation; 'ipsec-group': Apply IPsec encapsulation from a group;

Type: string

Supported Values: cgnv6, forward, ipsec, ipsec-group

Mutual Exclusion: policy and log are mutually exclusive

remark

Description Rule entry comment (Notes for this rule)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

reset-lid

Description Apply a Template LID

Type: number

Range: 1-1023

reset-lidlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

service-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: service-any,protocols, proto-id, obj-grp-service, icmp, and icmpv6 are mutually exclusive

service-list

Type: List

source-list

Type: List

src-class-list

Description Match source IP against class-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-class-list,src-ipv4-any, src-ipv6-any, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network, and src-slb-server are mutually exclusive

Reference Object: */axapi/v3/class-list*

src-geoloc-list

Description Geolocation name list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-geoloc-list,src-geoloc-name, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network, and src-slb-server are mutually exclusive

src-geoloc-list-shared

Description Use Geolocation list from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-geoloc-name

Description Single geolocation name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: src-geoloc-name,src-geoloc-list, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network, and src-slb-server are mutually exclusive

src-ipv4-any

Description 'any': Any IPv4 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: src-ipv4-any,src-ipv6-any, src-class-list, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network, and src-slb-server are mutually exclusive

src-ipv6-any

Description 'any': Any IPv6 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: src-ipv6-any,src-ipv4-any, src-class-list, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network, and src-slb-server are mutually exclusive

src-threat-list

Description Bind threat-list for source IP based filtering

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/threat-intel/threat-list*

src-zone

Description Zone name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: src-zone and src-zone-any are mutually exclusive

Reference Object: */axapi/v3/zone*

src-zone-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: src-zone-any and src-zone are mutually exclusive

status

Description 'enable': Enable rule; 'disable': Disable rule;

Type: string

Supported Values: enable, disable

Default: enable

track-application

Description Enable application statistic (functional only in action permit)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vpn-ipsec-group-name

Description VPN IPsec Group name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ipsec-group*

vpn-ipsec-name

Description VPN IPsec name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ipsec*

rule-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hit-count': Hit counts; 'permit-bytes': Permitted bytes counter; 'deny-bytes': Denied bytes counter; 'reset-bytes': Reset bytes counter; 'permit-packets': Permitted packets counter; 'deny-packets': Denied packets counter; 'reset-packets': Reset packets counter; 'active-session-tcp': Active TCP session counter; 'active-session-udp': Active UDP session counter; 'active-session-icmp': Active ICMP session counter; 'active-session-other': Active other protocol session counter; 'session-tcp': TCP session counter; 'session-udp': UDP session counter; 'session-icmp': ICMP session counter; 'session-other': Other protocol session counter; 'active-session-sctp': Active SCTP session counter; 'session-sctp': SCTP session counter; 'hitcount-timestamp': Last hit counts timestamp; 'rate-limit-drops': Rate Limit Drops;

Type: string

Supported Values: all, hit-count, permit-bytes, deny-bytes, reset-bytes, permit-packets, deny-packets, reset-packets, active-session-tcp, active-session-udp, active-session-icmp, active-session-other, session-tcp, session-udp, session-icmp, session-other, active-session-sctp, session-sctp, hitcount-timestamp, rate-limit-drops, syn-cookie-syn-ack-sent, syn-cookie-verification-passed, syn-cookie-verification-failed, syn-cookie-conn-setup-failed, tcp-half-open-count

rule-list_dscp-list

Specification	Value
Type	*list*
Block object keys	

dscp-range-end

Description Ending DSCP Number

Type: number

Range: 1-63

dscp-range-start

Description Start DSCP Number

Type: number

Range: 1-63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110);

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef

Mutual Exclusion: dscp-value and dscp-range are mutually exclusive

rule-list_app-list

Specification	Value
Type	*list*
Block object keys	

obj-grp-application

Description Application object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: obj-grp-application and application-any are mutually exclusive

Reference Object: */axapi/v3/object-group/application*

protocol

Description Specify application(s)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: protocol and application-any are mutually exclusive

protocol-tag

Description 'aaa': Protocol/application used for AAA (Authentification, Authorization and Accounting) purposes.; 'adult-content': Adult content protocol/application.; 'advertising': Advertising networks and applications.; 'application-enforcing-tls': Application known to enforce HSTS and thus use of TLS.; 'analytics-and-statistics': User analytics and statistics protocol/application.; 'anonymizers-and-proxies': Traffic-anonymization protocol/application.; 'audio-chat': Protocol/application used for Audio Chat.; 'basic': Covers all protocols required for basic classification, including most networking protocols as well as standard protocols like HTTP.; 'blog': Blogging platform protocol/application.; 'cdn': Protocol/application used for Content-Delivery Networks.; 'certification-authority': Certification Authority for SSL/TLS certificate.; 'chat': Protocol/application used for Text Chat.; 'classified-ads': Protocol/application used for Classified Advertisements.; 'cloud-based-services': SaaS and/or PaaS cloud based services.; 'crowdfunding': Service for funding a project or venture by raising small amounts of money from a large number of people, typically via the Internet.; 'cryptocurrency': Services for mining cryptocurrencies, for example a Crypto Web Browser (an application that mines crypto currency in the background while its user browses the web).; 'database': Database-specific protocols.; 'disposable-email': Service offering Disposable Email Accounts (DEA). DEA is a technique to share temporary email address between many users.; 'ebook-reader': Services for e-book readers, i.e. connected devices that display electronic books (typically using e-ink displays to reduce glare and eye strain).; 'education': Protocols offering education services and online courses.; 'email': Native email protocol.; 'enterprise': Protocol/application used in an enterprise network.; 'file-management': Protocol/application designed specifically for file management and exchange. This can include bona fide network protocols (like SMB) as well as web/cloud services (like Dropbox).; 'file-transfer': Protocol that offers file transferring as a secondary feature. This typically includes IM, Web-Mail, and other protocols that allow file transfers in addition to their principal function.; 'forum': Online forum protocol/application.; 'gaming': Protocol/application used by games.; 'healthcare': Protocols offering medical services, i.e protocols used in medical environment.; 'instant-messaging-and-multimedia-conferencing': Protocol/application used for Instant Messaging or Multi-Conferencing.; 'internet-of-things': Internet Of Things protocol/application.; 'map-service': Digital Maps service (web site and their related API).; 'mobile': Mobile-specific protocol/application.; 'multimedia-streaming': Protocol/application used for multimedia streaming.; 'networking': Protocol used for (inter) networking purpose.; 'news-portal': Protocol/application used for News Portals.; 'payment-service': Application offering online services for accepting electronic payments by a variety of payment methods (credit card, bank-based payments such as direct debit, bank transfer, etc).; 'peer-to-peer': Protocol/application used for Peer-to-peer purposes.; 'remote-access': Protocol/application used for remote access.; 'scada': SCADA (Supervisory control and data acquisition) protocols, all generations.; 'social-networks': Social networking application.; 'software-update': Auto-update protocol.; 'speedtest': Speedtest application allowing to access quality of Internet connection (upload, download, latency, etc).; 'standards-based': Protocol issued from standardized bodies such as IETF, ITU, IEEE, ETSI, OIF.; 'transportation': Transportation services, for example smartphone applications that allow users to hail a taxi.; 'video-chat': Protocol/application used for

Video Chat.; 'voip': Application used for Voice-Over-IP.; 'vpn-tunnels': Protocol/application used for VPN or tunneling purposes.; 'web': Application based on HTTP/HTTPS.; 'web-e-commerce': Protocol/application used for E-commerce websites.; 'web-search-engines': Protocol/application used for Web search portals.; 'web-websites': Protocol/application used for Company Websites.; 'webmails': Web-based e-mail application.; 'web-ext-adult': Web Extension Adult; 'web-ext-auctions': Web Extension Auctions; 'web-ext-blogs': Web Extension Blogs; 'web-ext-business-and-economy': Web Extension Business and Economy; 'web-ext-cdns': Web Extension CDNs; 'web-ext-collaboration': Web Extension Collaboration; 'web-ext-computer-and-internet-info': Web Extension Computer and Internet Info; 'web-ext-computer-and-internet-security': Web Extension Computer and Internet Security; 'web-ext-dating': Web Extension Dating; 'web-ext-educational-institutions': Web Extension Educational Institutions; 'web-ext-entertainment-and-arts': Web Extension Entertainment and Arts; 'web-ext-fashion-and-beauty': Web Extension Fashion and Beauty; 'web-ext-file-share': Web Extension File Share; 'web-ext-financial-services': Web Extension Financial Services; 'web-ext-gambling': Web Extension Gambling; 'web-ext-games': Web Extension Games; 'web-ext-government': Web Extension Government; 'web-ext-health-and-medicine': Web Extension Health and Medicine; 'web-ext-individual-stock-advice-and-tools': Web Extension Individual Stock Advice and Tools; 'web-ext-internet-portals': Web Extension Internet Portals; 'web-ext-job-search': Web Extension Job Search; 'web-ext-local-information': Web Extension Local Information; 'web-ext-malware': Web Extension Malware; 'web-ext-motor-vehicles': Web Extension Motor Vehicles; 'web-ext-music': Web Extension Music; 'web-ext-news': Web Extension News; 'web-ext-p2p': Web Extension P2P; 'web-ext-parked-sites': Web Extension Parked Sites; 'web-ext-proxy-avoid-and-anonymizers': Web Extension Proxy Avoid and Anonymizers; 'web-ext-real-estate': Web Extension Real Estate; 'web-ext-reference-and-research': Web Extension Reference and Research; 'web-ext-search-engines': Web Extension Search Engines; 'web-ext-shopping': Web Extension Shopping; 'web-ext-social-network': Web Extension Social Network; 'web-ext-society': Web Extension Society; 'web-ext-software': Web Extension Software; 'web-ext-sports': Web Extension Sports; 'web-ext-streaming-media': Web Extension Streaming Media; 'web-ext-training-and-tools': Web Extension Training and Tools; 'web-ext-translation': Web Extension Translation; 'web-ext-travel': Web Extension Travel; 'web-ext-web-advertisements': Web Extension Web Advertisements; 'web-ext-web-based-email': Web Extension Web based Email; 'web-ext-web-hosting': Web Extension Web Hosting; 'web-ext-web-service': Web Extension Web Service;

Type: string

Supported Values: aaa, adult-content, advertising, application-enforcing-tls, analytics-and-statistics, anonymizers-and-proxies, audio-chat, basic, blog, cdn, certification-authority, chat, classified-ads, cloud-based-services, crowdfunding, cryptocurrency, database, disposable-email, ebook-reader, education, email, enterprise, file-management, file-transfer, forum, gaming, healthcare, instant-messaging-and-multimedia-conferencing, internet-of-things, map-service, mobile, multimedia-streaming, networking, news-portal, payment-service, peer-to-peer, remote-access, scada, social-networks, software-update, speedtest, standards-based, transportation, video-chat, voip, vpn-tunnels, web, web-e-commerce, web-search-engines, web-websites, webmails, web-ext-adult, web-ext-auctions, web-ext-blogs, web-ext-business-and-economy, web-ext-cdns, web-ext-collaboration, web-ext-computer-and-internet-info, web-ext-computer-and-internet-security, web-ext-dating, web-ext-educational-institutions, web-ext-entertainment-and-arts, web-ext-fashion-and-beauty, web-ext-file-share, web-ext-financial-services, web-ext-gambling, web-ext-games, web-ext-government, web-ext-health-and-medicine, web-ext-individual-stock-advice-and-tools, web-ext-internet-portals, web-ext-job-search, web-ext-local-information, web-ext-malware, web-ext-motor-vehicles, web-ext-music, web-ext-news, web-ext-p2p, web-ext-parked-sites, web-ext-proxy-avoid-and-anonymizers, web-ext-real-estate, web-ext-reference-and-research, web-ext-search-engines, web-ext-shopping, web-ext-social-network, web-ext-society, web-ext-software, web-ext-sports, web-ext-streaming-media, web-ext-training-and-tools, web-ext-translation,

web-ext-travel, web-ext-web-advertisements, web-ext-web-based-email, web-ext-web-hosting, web-ext-web-service

Mutual Exclusion: protocol-tag and application-any are mutually exclusive

rule-list_action-group

Specification	Value
Type	*object*

cgnv6

Description Apply CGNv6 policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cgnv6,listen-on-port, forward, ipsec, and ipsec-group are mutually exclusive

cgnv6-ds-lite

Description 'lsn-lid': Apply specified CGNv6 LSN LID;

Type: string

Supported Values: lsn-lid

cgnv6-ds-lite-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-policy

Description 'lsn-lid': Apply specified CGNv6 LSN LID; 'fixed-nat': Apply CGNv6 Fixed NAT; 'ds-lite': Apply CGNv6 DS-Lite;

Type: string

Supported Values: lsn-lid, fixed-nat, ds-lite

deny-fw-log

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/fw/template/logging*

deny-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deny-log-template-type

Description 'fw-logging-template': Logging with specified fw template;

Type: string

Supported Values: fw-logging-template

deny-reset-limit-policy

Description Limit policy Template (only works for inbound rule)

Type: number

Range: 1-1023

Mutual Exclusion: deny-reset-limit-policy and ipsec are mutually exclusive

Reference Object: */axapi/v3/template/limit-policy*

dscp-number

Description DSCP Number

Type: number

Range: 0-63

Mutual Exclusion: dscp-number and dscp-value are mutually exclusive

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110);

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef

Mutual Exclusion: dscp-value and dscp-number are mutually exclusive

forward

Description Forward packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward,ipsec, ipsec-group, and cgnv6 are mutually exclusive

inspect-payload

Description Enable DS-Lite tunnel inspection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipsec

Description Apply IPsec encapsulation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipsec,permit-log, listen-on-port, forward, ipsec-group, cgnv6, permit-limit-policy, deny-reset-limit-policy, and permit-respond-to-user-mac are mutually exclusive

ipsec-group

Description Apply IPsec Group encapsulation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipsec-group,permit-log, listen-on-port, forward, ipsec, and cgnv6 are mutually exclusive

listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: listen-on-port,ipsec, ipsec-group, and cgnv6 are mutually exclusive

logging-template-list

Type: List

on-timeout

Description on-timeout for Syn-cookie (Timeout in seconds, default is 120 seconds (2 minutes))

Type: number

Range: 1-300000

Default: 120

permit-limit-policy

Description Limit policy Template

Type: number

Range: 1-1023

Mutual Exclusion: permit-limit-policy and ipsec are mutually exclusive

Reference Object: */axapi/v3/template/limit-policy*

permit-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit-log, ipsec, and ipsec-group are mutually exclusive

permit-respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit-respond-to-user-mac and ipsec are mutually exclusive

reset-fw-log

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/fw/template/logging*

reset-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-log-template-type

Description 'fw-logging-template': Logging with specified fw template;

Type: string

Supported Values: fw-logging-template

reset-respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

set-dscp

Description DSCP setting

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip-urpf-check

Description Skip Unicast Reverse Path Forwarding check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie

Description Configure Firewall rule Syn-Cookie Protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie-enable

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

tcp

Description Firewall rule TCP parameters

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold-val

Description Decimal number

Type: number

Range: 1-1000000

type

Description 'permit': permit; 'deny': deny; 'reset': reset;

Type: string

Supported Values: permit, deny, reset

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vpn-ipsec-group-name

Description VPN IPsec Group name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ipsec-group*

vpn-ipsec-name

Description VPN IPsec name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ipsec*

rule-list_action-group_logging-template-list

Specification	Value
Type	*list*
Block object keys	

permit-cgnv6-log

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/logging*

permit-fw-log

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/fw/template/logging*

permit-log-template-type

Description 'fw-logging-template': Logging with specified fw template; 'cgnv6-logging-template': Logging with specified cgnv6 template; 'netflow-monitor': Logging with specified netflow/ipfix monitor;

Type: string

Supported Values: fw-logging-template, cgnv6-logging-template, netflow-monitor

permit-netflow-log

Description Name of netflow monitor

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/netflow/monitor*

rule-list_dest-list

Specification	Value
Type	*list*
Block object keys	

dst-ip-subnet

Description IPv4 IP Address

Type: string

Format: ipv4-cidr

Mutual Exclusion: dst-ip-subnet,dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any, dst-class-list, and dst-ipv6-subnet are mutually exclusive

dst-ipv6-subnet

Description IPv6 IP Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: dst-ipv6-subnet,dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any, dst-class-list, and dst-ip-subnet are mutually exclusive

dst-obj-grp-network

Description Network object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-obj-grp-network,dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any, and dst-class-list are mutually exclusive

Reference Object: */axapi/v3/object-group/network*

dst-obj-network

Description Network object

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-obj-network,dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any, and dst-class-list are mutually exclusive

Reference Object: */axapi/v3/object/network*

dst-slb-server

Description SLB Real server name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-slb-server,dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any, and dst-class-list are mutually exclusive

Reference Object: */axapi/v3/slb/server*

dst-slb-vserver

Description SLB Virtual server name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-slb-vserver,dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any, and dst-class-list are mutually exclusive

Reference Object: */axapi/v3/slb/virtual-server*

rule-list_move-rule

Specification	Value
Type	*object*

location

Description 'top': top; 'before': before; 'after': after; 'bottom': bottom;

Type: string

Supported Values: top, before, after, bottom

Default: bottom

target-rule

Description

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-list_source-list

Specification	Value
Type	*list*
Block object keys	

src-ip-subnet

Description IPv4 IP Address

Type: string

Format: ipv4-cidr

Mutual Exclusion: src-ip-subnet,src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any, src-class-list, and src-ipv6-subnet are mutually exclusive

src-ipv6-subnet

Description IPv6 IP Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: src-ipv6-subnet,src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any, src-class-list, and src-ip-subnet are mutually exclusive

src-obj-grp-network

Description Network object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-obj-grp-network,src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any, and src-class-list are mutually exclusive

Reference Object: */axapi/v3/object-group/network*

src-obj-network

Description Network object

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-obj-network,src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any, and src-class-list are mutually exclusive

Reference Object: */axapi/v3/object/network*

src-slb-server

Description SLB Real server name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: src-slb-server,src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any, and src-class-list are mutually exclusive

Reference Object: */axapi/v3/slb/server*

rule-list_service-list

Specification	Value
Type	*list*
Block object keys	

alg

Description 'FTP': FTP; 'TFTP': TFTP; 'SIP': SIP; 'DNS': DNS; 'PPTP': PPTP; 'RTSP': RTSP; 'ESP': ESP;

Type: string

Supported Values: FTP, TFTP, SIP, DNS, PPTP, RTSP, ESP

eq-dst-port

Description Equal to the port number

Type: number

Range: 1-65535

eq-src-port

Description Equal to the port number

Type: number

Range: 1-65535

gt-dst-port

Description Greater than the port number

Type: number

Range: 1-65534

gt-src-port

Description Greater than the port number

Type: number

Range: 1-65534

icmp

Description ICMP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmp, service-any, and icmpv6 are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type and special-type are mutually exclusive

icmpv6

Description ICMPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmpv6, service-any, and icmp are mutually exclusive

icmpv6-code

Description ICMPv6 code number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-code and special-v6-code are mutually exclusive

icmpv6-type

Description ICMPv6 type number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-type and special-v6-type are mutually exclusive

lt-dst-port

Description Lower than the port number

Type: number

Range: 2-65535

lt-src-port

Description Lower than the port number

Type: number

Range: 2-65535

obj-grp-service

Description service object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: obj-grp-service and service-any are mutually exclusive

Reference Object: */axapi/v3/object-group/service*

port-num-end-dst

Description Ending Port Number

Type: number

Range: 1-65535

port-num-end-src

Description Ending Port Number

Type: number

Range: 1-65535

proto-id

Description Protocol ID

Type: number

Range: 0-255

Mutual Exclusion: proto-id and service-any are mutually exclusive

protocols

Description 'tcp': tcp; 'udp': udp; 'sctp': sctp;

Type: string

Supported Values: tcp, udp, sctp

Mutual Exclusion: protocols and service-any are mutually exclusive

range-dst-port

Description Port range (Starting Port Number)

Type: number

Range: 1-65535

range-src-port

Description Port range (Starting Port Number)

Type: number

Range: 1-65535

sctp-template

Description SCTP Template

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/template/sctp*

special-code

Description 'any-code': Any ICMP code; 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: any-code, frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code and icmp-code are mutually exclusive

special-type

Description 'any-type': Any ICMP type; 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5,

redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: any-type, echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type and icmp-type are mutually exclusive

special-v6-code

Description 'any-code': Any ICMPv6 code; 'addr-unreachable': Code 3, address unreachable; 'admin-prohibited': Code 1, admin prohibited; 'no-route': Code 0, no route to destination; 'not-neighbour': Code 2, not neighbor; 'port-unreachable': Code 4, destination port unreachable;

Type: string

Supported Values: any-code, addr-unreachable, admin-prohibited, no-route, not-neighbour, port-unreachable

Mutual Exclusion: special-v6-code and icmpv6-code are mutually exclusive

special-v6-type

Description 'any-type': Any ICMPv6 type; 'dest-unreachable': Type 1, destination unreachable; 'echo-reply': Type 129, echo reply; 'echo-request': Type 128, echo request; 'packet-too-big': Type 2, packet too big; 'param-prob': Type 4, parameter problem; 'time-exceeded': Type 3, time exceeded;

Type: string

Supported Values: any-type, dest-unreachable, echo-reply, echo-request, packet-too-big, param-prob, time-exceeded

Mutual Exclusion: special-v6-type and icmpv6-type are mutually exclusive

rules-by-zone

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rules-by-zone_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'dummy': Entry for a10countergen;

Type: string

Supported Values: all, dummy

2.109.2 rule-set app

Application statistics in Rule Set

app Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	app
Element URI	/axapi/v3/rule-set/{name}/app
Element Attributes	app_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/rule-set/{name}/app/stats
Schema	`app schema`

Operations Allowed:

Create Object

POST

/axapi/v3/rule-set/{name}/app

app attributes

Get Object

GET

/axapi/v3/rule-set/{name}/app

app attributes

Modify Object

POST

/axapi/v3/rule-set/{name}/app

app attributes

app attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.109.3 rule-set app stats

Statistics for the object app

app Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	app
Element URI	/axapi/v3/rule-set/{name}/app/stats
Element Attributes	app_attributes
Partition Visibility	None
Schema	`app schema`

Operations Allowed:

Create Object

POST

/axapi/v3/rule-set/{name}/app/stats

app attributes

rule-list

rule-list is **JSON List** of *rule attributes*

rule-list : [

{ *rule attributes* },

{ *rule attributes* },

…

]

rule attributes

action

Description 'permit': permit; 'deny': deny; 'reset': reset;

Type: string

Supported Values: permit, deny, reset

action-group

Description: action-group is a **JSON Block**. Please see below for *action-group*

Type: Object

Reference Object: */axapi/v3/rule-set/{name}/rule/{name}/action-group*

app-list

Type: List

application-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: application-any,obj-grp-application, protocol, and protocol-tag are mutually exclusive

cgnv6-ds-lite

Description 'lsn-lid': Apply specified CGNv6 LSN LID;

Type: string

Supported Values: lsn-lid

cgnv6-ds-lite-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cgnv6-ds-lite-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-fixed-nat-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cgnv6-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cgnv6-log and cgnv6-policy are mutually exclusive

cgnv6-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-lsn-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cgnv6-policy

Description 'lsn-lid': Apply specified CGNv6 LSN LID; 'fixed-nat': Apply CGNv6 Fixed NAT; 'ds-lite': Apply CGNv6 DS-Lite;

Type: string

Supported Values: lsn-lid, fixed-nat, ds-lite

Mutual Exclusion: cgnv6-policy and cgnv6-log are mutually exclusive

dest-list

Type: List

dscp-list

Type: List

dst-class-list

Description Match destination IP against class-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-class-list,dst-ipv4-any, dst-ipv6-any, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, and dst-slb-vserver are mutually exclusive

Reference Object: */axapi/v3/class-list*

dst-domain-list

Description Match destination IP against domain-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-domain-list, dst-ipv4-any, and dst-ipv6-any are mutually exclusive

Reference Object: */axapi/v3/domain-list*

dst-geoloc-list

Description Geolocation name list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-geoloc-list,dst-geoloc-name, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, and dst-slb-vserver are mutually exclusive

dst-geoloc-list-shared

Description Use Geolocation list from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-geoloc-name

Description Single geolocation name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-geoloc-name,dst-geoloc-list, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, and dst-slb-vserver are mutually exclusive

dst-ipv4-any

Description 'any': Any IPv4 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: dst-ipv4-any,dst-ipv6-any, dst-class-list, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, dst-slb-vserver, and dst-domain-list are mutually exclusive

dst-ipv6-any

Description 'any': Any IPv6 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: dst-ipv6-any,dst-ipv4-any, dst-class-list, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, dst-slb-vserver, and dst-domain-list are mutually exclusive

dst-threat-list

Description Bind threat-list for destination IP based filtering

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/threat-intel/threat-list*

dst-zone

Description Zone name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-zone and dst-zone-any are mutually exclusive

Reference Object: */axapi/v3/zone*

dst-zone-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: dst-zone-any and dst-zone are mutually exclusive

forward-listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fw-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fwlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-template

Description Configure GTP Policy Template (GTP Template Policy Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/template/gtp-policy*

idle-timeout

Description TCP/UDP idle-timeout

Type: number

Range: 1-2097151

inspect-payload

Description Enable DS-Lite tunnel inspection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-version

Description 'v4': IPv4 rule; 'v6': IPv6 rule;

Type: string

Supported Values: v4, v6

Default: v4

lid

Description Apply a Template LID

Type: number

Range: 1-1023

lidlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: listen-on-port and log are mutually exclusive

listen-on-port-lid

Description Apply a Template LID

Type: number

Range: 1-1023

listen-on-port-lidlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: log, listen-on-port, and policy are mutually exclusive

move-rule

Description: move-rule is a **JSON Block**. Please see below for *move-rule*

Type: Object

Reference Object: */axapi/v3/rule-set/{name}/rule/{name}/move-rule*

name

Description Rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/rule-set-rule-tmpl*

policy

Description 'cgnv6': Apply CGNv6 policy; 'forward': Forward packet; 'ipsec': Apply IPsec encapsulation; 'ipsec-group': Apply IPsec encapsulation from a group;

Type: string

Supported Values: cgnv6, forward, ipsec, ipsec-group

Mutual Exclusion: policy and log are mutually exclusive

remark

Description Rule entry comment (Notes for this rule)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

reset-lid

Description Apply a Template LID

Type: number

Range: 1-1023

reset-lidlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

service-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: service-any,protocols, proto-id, obj-grp-service, icmp, and icmpv6 are mutually exclusive

service-list

Type: List

source-list

Type: List

src-class-list

Description Match source IP against class-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-class-list,src-ipv4-any, src-ipv6-any, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network, and src-slb-server are mutually exclusive

Reference Object: */axapi/v3/class-list*

src-geoloc-list

Description Geolocation name list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-geoloc-list,src-geoloc-name, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network, and src-slb-server are mutually exclusive

src-geoloc-list-shared

Description Use Geolocation list from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-geoloc-name

Description Single geolocation name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: src-geoloc-name,src-geoloc-list, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network, and src-slb-server are mutually exclusive

src-ipv4-any

Description 'any': Any IPv4 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: src-ipv4-any,src-ipv6-any, src-class-list, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network, and src-slb-server are mutually exclusive

src-ipv6-any

Description 'any': Any IPv6 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: src-ipv6-any,src-ipv4-any, src-class-list, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network, and src-slb-server are mutually exclusive

src-threat-list

Description Bind threat-list for source IP based filtering

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/threat-intel/threat-list*

src-zone

Description Zone name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: src-zone and src-zone-any are mutually exclusive

Reference Object: */axapi/v3/zone*

src-zone-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: src-zone-any and src-zone are mutually exclusive

status

Description 'enable': Enable rule; 'disable': Disable rule;

Type: string

Supported Values: enable, disable

Default: enable

track-application

Description Enable application statistic (functional only in action permit)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vpn-ipsec-group-name

Description VPN IPsec Group name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ipsec-group*

vpn-ipsec-name

Description VPN IPsec name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ipsec*

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hit-count': Hit counts; 'permit-bytes': Permitted bytes counter; 'deny-bytes': Denied bytes counter; 'reset-bytes': Reset bytes counter; 'permit-packets': Permitted packets counter; 'deny-packets': Denied packets counter; 'reset-packets': Reset packets counter; 'active-session-tcp': Active TCP session counter; 'active-session-udp': Active UDP session counter; 'active-session-icmp': Active ICMP session counter; 'active-session-other': Active other protocol session counter; 'session-tcp': TCP session counter; 'session-udp': UDP session counter; 'session-icmp': ICMP session counter; 'session-other': Other protocol session counter; 'active-session-sctp': Active SCTP session counter; 'session-sctp': SCTP session counter; 'hitcount-timestamp': Last hit counts timestamp; 'rate-limit-drops': Rate Limit Drops;

Type: string

Supported Values: all, hit-count, permit-bytes, deny-bytes, reset-bytes, permit-packets, deny-packets, reset-packets, active-session-tcp, active-session-udp, active-session-icmp, active-session-other, session-tcp, session-udp, session-icmp, session-other, active-session-sctp, session-sctp, hitcount-timestamp, rate-limit-drops, syn-cookie-syn-ack-sent, syn-cookie-verification-passed, syn-cookie-verification-failed, syn-cookie-conn-setup-failed, tcp-half-open-count

dscp-list

Specification	Value
Type	*list*
Block object keys	

dscp-range-end

Description Ending DSCP Number

Type: number

Range: 1-63

dscp-range-start

Description Start DSCP Number

Type: number

Range: 1-63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110);

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef

Mutual Exclusion: dscp-value and dscp-range are mutually exclusive

app-list

Specification	Value
Type	*list*
Block object keys	

obj-grp-application

Description Application object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: obj-grp-application and application-any are mutually exclusive

Reference Object: */axapi/v3/object-group/application*

protocol

Description Specify application(s)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: protocol and application-any are mutually exclusive

protocol-tag

Description 'aaa': Protocol/application used for AAA (Authentification, Authorization and Accounting) purposes.; 'adult-content': Adult content protocol/application.; 'advertising': Advertising networks and applications.; 'application-enforcing-tls': Application known to enforce HSTS and thus use of TLS.; 'analytics-and-statistics': User analytics and statistics protocol/application.; 'anonymizers-and-proxies': Traffic-anonymization protocol/application.; 'audio-chat': Protocol/application used for Audio Chat.; 'basic': Covers all protocols required for basic classification, including most networking protocols as well as standard protocols like HTTP.; 'blog': Blogging platform protocol/application.; 'cdn': Protocol/application used for Content-Delivery Networks.; 'certification-authority': Certification Authority for SSL/TLS certificate.; 'chat': Protocol/application used for Text Chat.; 'classified-ads': Protocol/application used for Classified Advertisements.; 'cloud-based-services': SaaS and/or PaaS cloud based services.; 'crowdfunding': Service for funding a project or venture by raising small amounts of money from a large number of people, typically via the Internet.; 'cryptocurrency': Services for mining cryptocurrencies, for example a Crypto Web Browser (an application that mines crypto currency in the background while its user browses the web).; 'database': Database-specific protocols.; 'disposable-email': Service offering Disposable Email Accounts (DEA). DEA is a technique to share temporary email address between many users.; 'ebook-reader': Services for e-book readers, i.e. connected devices that display electronic books (typically using e-ink displays to reduce glare and eye strain).; 'education': Protocols offering education services and online courses.; 'email': Native email protocol.; 'enterprise': Protocol/application used in an enterprise network.; 'file-management': Protocol/application designed specifically for file management and exchange. This can include bona fide network protocols (like SMB) as well as web/cloud services (like Dropbox).; 'file-transfer': Protocol that offers file transferring as a secondary feature. This typically includes IM, Web-Mail, and other protocols that allow file transfers in addition to their principal function.; 'forum': Online forum protocol/application.; 'gaming': Protocol/application used by games.; 'healthcare': Protocols offering medical services, i.e protocols used in medical environment.; 'instant-messaging-and-multimedia-conferencing': Protocol/application used for Instant Messaging or Multi-Conferencing.; 'internet-of-things': Internet Of Things protocol/application.; 'map-service': Digital Maps service (web site and their related API).; 'mobile': Mobile-specific protocol/application.; 'multimedia-streaming': Protocol/application used for multimedia streaming.; 'networking': Protocol used for (inter) networking purpose.; 'news-portal': Protocol/application used for News Portals.; 'payment-service': Application offering online services for accepting electronic payments by a variety of payment methods (credit card, bank-based payments such as direct debit, bank transfer, etc).; 'peer-to-peer': Protocol/application used for Peer-to-peer purposes.; 'remote-access': Protocol/application used for remote access.; 'scada': SCADA (Supervisory control and data acquisition) protocols, all generations.; 'social-networks': Social networking application.; 'software-update': Auto-update protocol.; 'speedtest': Speedtest application allowing to access quality of Internet connection (upload, download, latency, etc).; 'standards-based': Protocol issued from standardized bodies such as IETF, ITU, IEEE, ETSI, OIF.; 'transportation': Transportation services, for example smartphone applications that allow users to hail a taxi.; 'video-chat': Protocol/application used for Video Chat.; 'voip': Application used for Voice-Over-IP.; 'vpn-tunnels': Protocol/application used for VPN or tunneling purposes.; 'web': Application based on HTTP/HTTPS.; 'web-e-commerce': Protocol/application used for E-commerce websites.; 'web-search-engines': Protocol/application used for Web search portals.; 'web-websites': Protocol/application used for Company Websites.; 'webmails': Web-based e-mail application.; 'web-ext-adult': Web Extension Adult; 'web-ext-auctions': Web Extension Auctions; 'web-ext-blogs': Web Extension Blogs; 'web-ext-business-and-economy': Web Extension Business and Economy; 'web-ext-cdns': Web Extension CDNs; 'web-ext-collaboration': Web Extension Collaboration; 'web-ext-computer-and-internet-info': Web Extension Computer and Internet Info; 'web-ext-computer-and-internet-security': Web Extension Computer and Internet Security; 'web-ext-dating': Web Extension Dating; 'web-ext-educational-institutions': Web Extension Educational Institutions; 'web-ext-entertainment-and-arts': Web Extension Entertainment and Arts;

'web-ext-fashion-and-beauty': Web Extension Fashion and Beauty; 'web-ext-file-share': Web Extension File Share; 'web-ext-financial-services': Web Extension Financial Services; 'web-ext-gambling': Web Extension Gambling; 'web-ext-games': Web Extension Games; 'web-ext-government': Web Extension Government; 'web-ext-health-and-medicine': Web Extension Health and Medicine; 'web-ext-individual-stock-advice-and-tools': Web Extension Individual Stock Advice and Tools; 'web-ext-internet-portals': Web Extension Internet Portals; 'web-ext-job-search': Web Extension Job Search; 'web-ext-local-information': Web Extension Local Information; 'web-ext-malware': Web Extension Malware; 'web-ext-motor-vehicles': Web Extension Motor Vehicles; 'web-ext-music': Web Extension Music; 'web-ext-news': Web Extension News; 'web-ext-p2p': Web Extension P2P; 'web-ext-parked-sites': Web Extension Parked Sites; 'web-ext-proxy-avoid-and-anonymizers': Web Extension Proxy Avoid and Anonymizers; 'web-ext-real-estate': Web Extension Real Estate; 'web-ext-reference-and-research': Web Extension Reference and Research; 'web-ext-search-engines': Web Extension Search Engines; 'web-ext-shopping': Web Extension Shopping; 'web-ext-social-network': Web Extension Social Network; 'web-ext-society': Web Extension Society; 'web-ext-software': Web Extension Software; 'web-ext-sports': Web Extension Sports; 'web-ext-streaming-media': Web Extension Streaming Media; 'web-ext-training-and-tools': Web Extension Training and Tools; 'web-ext-translation': Web Extension Translation; 'web-ext-travel': Web Extension Travel; 'web-ext-web-advertisements': Web Extension Web Advertisements; 'web-ext-web-based-email': Web Extension Web based Email; 'web-ext-web-hosting': Web Extension Web Hosting; 'web-ext-web-service': Web Extension Web Service;

Type: string

Supported Values: aaa, adult-content, advertising, application-enforcing-tls, analytics-and-statistics, anonymizers-and-proxies, audio-chat, basic, blog, cdn, certification-authority, chat, classified-ads, cloud-based-services, crowdfunding, cryptocurrency, database, disposable-email, ebook-reader, education, email, enterprise, file-management, file-transfer, forum, gaming, healthcare, instant-messaging-and-multimedia-conferencing, internet-of-things, map-service, mobile, multimedia-streaming, networking, news-portal, payment-service, peer-to-peer, remote-access, scada, social-networks, software-update, speedtest, standards-based, transportation, video-chat, voip, vpn-tunnels, web, web-e-commerce, web-search-engines, web-websites, webmails, web-ext-adult, web-ext-auctions, web-ext-blogs, web-ext-business-and-economy, web-ext-cdns, web-ext-collaboration, web-ext-computer-and-internet-info, web-ext-computer-and-internet-security, web-ext-dating, web-ext-educational-institutions, web-ext-entertainment-and-arts, web-ext-fashion-and-beauty, web-ext-file-share, web-ext-financial-services, web-ext-gambling, web-ext-games, web-ext-government, web-ext-health-and-medicine, web-ext-individual-stock-advice-and-tools, web-ext-internet-portals, web-ext-job-search, web-ext-local-information, web-ext-malware, web-ext-motor-vehicles, web-ext-music, web-ext-news, web-ext-p2p, web-ext-parked-sites, web-ext-proxy-avoid-and-anonymizers, web-ext-real-estate, web-ext-reference-and-research, web-ext-search-engines, web-ext-shopping, web-ext-social-network, web-ext-society, web-ext-software, web-ext-sports, web-ext-streaming-media, web-ext-training-and-tools, web-ext-translation, web-ext-travel, web-ext-web-advertisements, web-ext-web-based-email, web-ext-web-hosting, web-ext-web-service

Mutual Exclusion: protocol-tag and application-any are mutually exclusive

action-group

Specification	Value
Type	*object*

cgnv6

Description Apply CGNv6 policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cgnv6,listen-on-port, forward, ipsec, and ipsec-group are mutually exclusive

cgnv6-ds-lite

Description 'lsn-lid': Apply specified CGNv6 LSN LID;

Type: string

Supported Values: lsn-lid

cgnv6-ds-lite-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-policy

Description 'lsn-lid': Apply specified CGNv6 LSN LID; 'fixed-nat': Apply CGNv6 Fixed NAT; 'ds-lite': Apply CGNv6 DS-Lite;

Type: string

Supported Values: lsn-lid, fixed-nat, ds-lite

deny-fw-log

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/fw/template/logging*

deny-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deny-log-template-type

Description 'fw-logging-template': Logging with specified fw template;

Type: string

Supported Values: fw-logging-template

deny-reset-limit-policy

Description Limit policy Template (only works for inbound rule)

Type: number

Range: 1-1023

Mutual Exclusion: deny-reset-limit-policy and ipsec are mutually exclusive

Reference Object: */axapi/v3/template/limit-policy*

dscp-number

Description DSCP Number

Type: number

Range: 0-63

Mutual Exclusion: dscp-number and dscp-value are mutually exclusive

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110);

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef

Mutual Exclusion: dscp-value and dscp-number are mutually exclusive

forward

Description Forward packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward,ipsec, ipsec-group, and cgnv6 are mutually exclusive

inspect-payload

Description Enable DS-Lite tunnel inspection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipsec

Description Apply IPsec encapsulation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipsec,permit-log, listen-on-port, forward, ipsec-group, cgnv6, permit-limit-policy, deny-reset-limit-policy, and permit-respond-to-user-mac are mutually exclusive

ipsec-group

Description Apply IPsec Group encapsulation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipsec-group,permit-log, listen-on-port, forward, ipsec, and cgnv6 are mutually exclusive

listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: listen-on-port,ipsec, ipsec-group, and cgnv6 are mutually exclusive

logging-template-list

Type: List

on-timeout

Description on-timeout for Syn-cookie (Timeout in seconds, default is 120 seconds (2 minutes))

Type: number

Range: 1-300000

Default: 120

permit-limit-policy

Description Limit policy Template

Type: number

Range: 1-1023

Mutual Exclusion: permit-limit-policy and ipsec are mutually exclusive

Reference Object: */axapi/v3/template/limit-policy*

permit-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit-log, ipsec, and ipsec-group are mutually exclusive

permit-respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit-respond-to-user-mac and ipsec are mutually exclusive

reset-fw-log

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/fw/template/logging*

reset-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-log-template-type

Description 'fw-logging-template': Logging with specified fw template;

Type: string

Supported Values: fw-logging-template

reset-respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

set-dscp

Description DSCP setting

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip-urpf-check

Description Skip Unicast Reverse Path Forwarding check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie

Description Configure Firewall rule Syn-Cookie Protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie-enable

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

tcp

Description Firewall rule TCP parameters

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold-val

Description Decimal number

Type: number

Range: 1-1000000

type

Description 'permit': permit; 'deny': deny; 'reset': reset;

Type: string

Supported Values: permit, deny, reset

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vpn-ipsec-group-name

Description VPN IPsec Group name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ipsec-group*

vpn-ipsec-name

Description VPN IPsec name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ipsec*

action-group_logging-template-list

Specification	Value
Type	*list*
Block object keys	

permit-cgnv6-log

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/logging*

permit-fw-log

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/fw/template/logging*

permit-log-template-type

Description 'fw-logging-template': Logging with specified fw template; 'cgnv6-logging-template': Logging with specified cgnv6 template; 'netflow-monitor': Logging with specified netflow/ipfix monitor;

Type: string

Supported Values: fw-logging-template, cgnv6-logging-template, netflow-monitor

permit-netflow-log

Description Name of netflow monitor

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/netflow/monitor*

dest-list

Specification	Value
Type	*list*
Block object keys	

dst-ip-subnet

Description IPv4 IP Address

Type: string

Format: ipv4-cidr

Mutual Exclusion: dst-ip-subnet,dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any, dst-class-list, and dst-ipv6-subnet are mutually exclusive

dst-ipv6-subnet

Description IPv6 IP Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: dst-ipv6-subnet,dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any, dst-class-list, and dst-ip-subnet are mutually exclusive

dst-obj-grp-network

Description Network object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-obj-grp-network,dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any, and dst-class-list are mutually exclusive

Reference Object: */axapi/v3/object-group/network*

dst-obj-network

Description Network object

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-obj-network,dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any, and dst-class-list are mutually exclusive

Reference Object: */axapi/v3/object/network*

dst-slb-server

Description SLB Real server name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-slb-server,dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any, and dst-class-list are mutually exclusive

Reference Object: */axapi/v3/slb/server*

dst-slb-vserver

Description SLB Virtual server name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-slb-vserver,dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any, and dst-class-list are mutually exclusive

Reference Object: */axapi/v3/slb/virtual-server*

move-rule

Specification	Value
Type	*object*

location

Description 'top': top; 'before': before; 'after': after; 'bottom': bottom;

Type: string

Supported Values: top, before, after, bottom

Default: bottom

target-rule

Description

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

source-list

Specification	Value
Type	*list*
Block object keys	

src-ip-subnet

Description IPv4 IP Address

Type: string

Format: ipv4-cidr

Mutual Exclusion: src-ip-subnet,src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any, src-class-list, and src-ipv6-subnet are mutually exclusive

src-ipv6-subnet

Description IPv6 IP Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: src-ipv6-subnet,src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any, src-class-list, and src-ip-subnet are mutually exclusive

src-obj-grp-network

Description Network object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-obj-grp-network,src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any, and src-class-list are mutually exclusive

Reference Object: */axapi/v3/object-group/network*

src-obj-network

Description Network object

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-obj-network,src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any, and src-class-list are mutually exclusive

Reference Object: */axapi/v3/object/network*

src-slb-server

Description SLB Real server name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: src-slb-server,src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any, and src-class-list are mutually exclusive

Reference Object: */axapi/v3/slb/server*

service-list

Specification	Value
Type	*list*
Block object keys	

alg

Description 'FTP': FTP; 'TFTP': TFTP; 'SIP': SIP; 'DNS': DNS; 'PPTP': PPTP; 'RTSP': RTSP; 'ESP': ESP;

Type: string

Supported Values: FTP, TFTP, SIP, DNS, PPTP, RTSP, ESP

eq-dst-port

Description Equal to the port number

Type: number

Range: 1-65535

eq-src-port

Description Equal to the port number

Type: number

Range: 1-65535

gt-dst-port

Description Greater than the port number

Type: number

Range: 1-65534

gt-src-port

Description Greater than the port number

Type: number

Range: 1-65534

icmp

Description ICMP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmp, service-any, and icmpv6 are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type and special-type are mutually exclusive

icmpv6

Description ICMPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmpv6, service-any, and icmp are mutually exclusive

icmpv6-code

Description ICMPv6 code number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-code and special-v6-code are mutually exclusive

icmpv6-type

Description ICMPv6 type number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-type and special-v6-type are mutually exclusive

lt-dst-port

Description Lower than the port number

Type: number

Range: 2-65535

lt-src-port

Description Lower than the port number

Type: number

Range: 2-65535

obj-grp-service

Description service object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: obj-grp-service and service-any are mutually exclusive

Reference Object: */axapi/v3/object-group/service*

port-num-end-dst

Description Ending Port Number

Type: number

Range: 1-65535

port-num-end-src

Description Ending Port Number

Type: number

Range: 1-65535

proto-id

Description Protocol ID

Type: number

Range: 0-255

Mutual Exclusion: proto-id and service-any are mutually exclusive

protocols

Description 'tcp': tcp; 'udp': udp; 'sctp': sctp;

Type: string

Supported Values: tcp, udp, sctp

Mutual Exclusion: protocols and service-any are mutually exclusive

range-dst-port

Description Port range (Starting Port Number)

Type: number

Range: 1-65535

range-src-port

Description Port range (Starting Port Number)

Type: number

Range: 1-65535

sctp-template

Description SCTP Template

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/template/sctp*

special-code

Description 'any-code': Any ICMP code; 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: any-code, frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code and icmp-code are mutually exclusive

special-type

Description 'any-type': Any ICMP type; 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5, redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: any-type, echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type and icmp-type are mutually exclusive

special-v6-code

Description 'any-code': Any ICMPv6 code; 'addr-unreachable': Code 3, address unreachable; 'admin-prohibited': Code 1, admin prohibited; 'no-route': Code 0, no route to destination; 'not-neighbour': Code 2, not neighbor; 'port-unreachable': Code 4, destination port unreachable;

Type: string

Supported Values: any-code, addr-unreachable, admin-prohibited, no-route, not-neighbour, port-unreachable

Mutual Exclusion: special-v6-code and icmpv6-code are mutually exclusive

special-v6-type

Description 'any-type': Any ICMPv6 type; 'dest-unreachable': Type 1, destination unreachable; 'echo-reply': Type 129, echo reply; 'echo-request': Type 128, echo request; 'packet-too-big': Type 2, packet too big; 'param-prob': Type 4, parameter problem; 'time-exceeded': Type 3, time exceeded;

Type: string

Supported Values: any-type, dest-unreachable, echo-reply, echo-request, packet-too-big, param-prob, time-exceeded

Mutual Exclusion: special-v6-type and icmpv6-type are mutually exclusive

2.109.8 rule-set rule action-group

Configure action-group

action-group Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	action-group

action-group attributes

cgnv6

Description Apply CGNv6 policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cgnv6,listen-on-port, forward, ipsec, and ipsec-group are mutually exclusive

cgnv6-ds-lite

Description 'lsn-lid': Apply specified CGNv6 LSN LID;

Type: string

Supported Values: lsn-lid

cgnv6-ds-lite-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-policy

Description 'lsn-lid': Apply specified CGNv6 LSN LID; 'fixed-nat': Apply CGNv6 Fixed NAT; 'ds-lite': Apply CGNv6 DS-Lite;

Type: string

Supported Values: lsn-lid, fixed-nat, ds-lite

deny-fw-log

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/fw/template/logging*

deny-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deny-log-template-type

Description 'fw-logging-template': Logging with specified fw template;

Type: string

Supported Values: fw-logging-template

deny-reset-limit-policy

Description Limit policy Template (only works for inbound rule)

Type: number

Range: 1-1023

Mutual Exclusion: deny-reset-limit-policy and ipsec are mutually exclusive

Reference Object: */axapi/v3/template/limit-policy*

dscp-number

Description DSCP Number

Type: number

Range: 0-63

Mutual Exclusion: dscp-number and dscp-value are mutually exclusive

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110);

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef

Mutual Exclusion: dscp-value and dscp-number are mutually exclusive

forward

Description Forward packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward,ipsec, ipsec-group, and cgnv6 are mutually exclusive

inspect-payload

Description Enable DS-Lite tunnel inspection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipsec

Description Apply IPsec encapsulation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipsec,permit-log, listen-on-port, forward, ipsec-group, cgnv6, permit-limit-policy, deny-reset-limit-policy, and permit-respond-to-user-mac are mutually exclusive

ipsec-group

Description Apply IPsec Group encapsulation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipsec-group,permit-log, listen-on-port, forward, ipsec, and cgnv6 are mutually exclusive

listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: listen-on-port,ipsec, ipsec-group, and cgnv6 are mutually exclusive

logging-template-list

Type: List

on-timeout

Description on-timeout for Syn-cookie (Timeout in seconds, default is 120 seconds (2 minutes))

Type: number

Range: 1-300000

Default: 120

permit-limit-policy

Description Limit policy Template

Type: number

Range: 1-1023

Mutual Exclusion: permit-limit-policy and ipsec are mutually exclusive

Reference Object: */axapi/v3/template/limit-policy*

permit-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit-log, ipsec, and ipsec-group are mutually exclusive

permit-respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit-respond-to-user-mac and ipsec are mutually exclusive

reset-fw-log

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/fw/template/logging*

reset-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-log-template-type

Description 'fw-logging-template': Logging with specified fw template;

Type: string

Supported Values: fw-logging-template

reset-respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

set-dscp

Description DSCP setting

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip-urpf-check

Description Skip Unicast Reverse Path Forwarding check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie

Description Configure Firewall rule Syn-Cookie Protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie-enable

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

tcp

Description Firewall rule TCP parameters

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold-val

Description Decimal number

Type: number

Range: 1-1000000

type

Description 'permit': permit; 'deny': deny; 'reset': reset;

Type: string

Supported Values: permit, deny, reset

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vpn-ipsec-group-name

Description VPN IPsec Group name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ipsec-group*

vpn-ipsec-name

Description VPN IPsec name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ipsec*

logging-template-list

Specification	Value
Type	*list*
Block object keys	

permit-cgnv6-log

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/cgnv6/template/logging*

permit-fw-log

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/fw/template/logging*

permit-log-template-type

Description 'fw-logging-template': Logging with specified fw template; 'cgnv6-logging-template': Logging with specified cgnv6 template; 'netflow-monitor': Logging with specified netflow/ipfix monitor;

Type: string

Supported Values: fw-logging-template, cgnv6-logging-template, netflow-monitor

permit-netflow-log

Description Name of netflow monitor

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/netflow/monitor*

cgn

Description: cgn is a **JSON Block**. Please see below for *distributed-forwarding_cgn*

Type: Object

Reference Object: */axapi/v3/scaleout/distributed-forwarding/cgn*

fw

Description: fw is a **JSON Block**. Please see below for *distributed-forwarding_fw*

Type: Object

Reference Object: */axapi/v3/scaleout/distributed-forwarding/fw*

slb

Description: slb is a **JSON Block**. Please see below for *distributed-forwarding_slb*

Type: Object

Reference Object: */axapi/v3/scaleout/distributed-forwarding/slb*

distributed-forwarding_fw

Specification	Value
Type	*object*

enable

Description Enable distributed-forwarding for Firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-offload-direction

Description 'uplink': Enable session offload only in uplink direction; 'downlink': Enable session offload in downlink direction; 'both': Enable session offload in both direction;

Type: string

Supported Values: uplink, downlink, both

Default: both

threshold

Description: threshold is a **JSON Block**. Please see below for *distributed-forwarding_fw_threshold*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distributed-forwarding_fw_threshold

Specification	Value
Type	*object*

global-threshold

Description configure packet threshold value to offload sessions of any(TCP and UDP) protocol(default 5)

Type: number

Range: 4-63

Default: 5

Mutual Exclusion: global-threshold and protocol-value are mutually exclusive

protocol-threshold

Type: List

distributed-forwarding_fw_threshold_protocol-threshold

Specification	Value
Type	*list*
Block object keys	

protocol-value

Description 'UDP': configure threshold for udp session offload; 'TCP': configure threshold for tcp session offload;

Type: string

Supported Values: UDP, TCP

Mutual Exclusion: protocol-value and global-threshold are mutually exclusive

threshold-value

Description configure packet threshold value to offload sessions(default 5)

Type: number

Range: 4-63

Default: 5

distributed-forwarding_slb

Specification	Value
Type	*object*

slb-value

Description 'enable': Enable SLB; 'disable': Disable SLB;

Type: string

Supported Values: enable, disable

Default: disable

tcp-threshold

Description configure packet threshold value to offload TCP sessions(default 5)

Type: number

Range: 4-63

Default: 5

udp-threshold

Description configure packet threshold value to offload UDP sessions(default 5)

Type: number

Range: 4-63

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distributed-forwarding_cgn

Specification	Value
Type	*object*

enable

Description Enable distributed-forwarding for CGN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

user-group-assignment

Specification	Value
Type	*object*

address

Description: address is a **JSON Block**. Please see below for *user-group-assignment_address*

Type: Object

Reference Object: */axapi/v3/scaleout/user-group-assignment/address*

template-info

Description: template-info is a **JSON Block**. Please see below for *user-group-assignment_template-info*

Type: Object

Reference Object: */axapi/v3/scaleout/user-group-assignment/template-info*

user-group-assignment_template-info

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

user-group-assignment_address

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug

Specification	Value
Type	*object*

cluster

Description: cluster is a **JSON Block**. Please see below for *debug_cluster*

Type: Object

Reference Object: */axapi/v3/scaleout/debug/cluster*

hash-table

Description: hash-table is a **JSON Block**. Please see below for *debug_hash-table*

traffic-map

Description: traffic-map is a **JSON Block**. Please see below for *debug_traffic-map*

Type: Object

Reference Object: */axapi/v3/scaleout/debug/traffic-map*

debug_info

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_resource-tracking

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_cluster

Specification	Value
Type	*object*

database

Description: database is a **JSON Block**. Please see below for *debug_cluster_database*

Type: Object

Reference Object: */axapi/v3/scaleout/debug/cluster/database*

status

Description: status is a **JSON Block**. Please see below for *debug_cluster_status*

Type: Object

Reference Object: */axapi/v3/scaleout/debug/cluster/status*

debug_cluster_status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_cluster_database

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_nat-map

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_traffic-map

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_nat-list

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_reachability

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_role

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_redirect-table

Specification	Value
Type	*object*

l2

Description: l2 is a **JSON Block**. Please see below for *debug_redirect-table_l2*

Type: Object

Reference Object: */axapi/v3/scaleout/debug/redirect-table/l2*

l3

Description: l3 is a **JSON Block**. Please see below for *debug_redirect-table_l3*

Type: Object

Reference Object: */axapi/v3/scaleout/debug/redirect-table/l3*

debug_redirect-table_l2

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_redirect-table_l3

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_ipv6

Specification	Value
Type	*object*

reachability

Description: reachability is a **JSON Block**. Please see below for *debug_ipv6_reachability*

Type: Object

Reference Object: */axapi/v3/scaleout/debug/ipv6/reachability*

l3

Description: l3 is a **JSON Block**. Please see below for *debug_ipv6_redirect-table_l3*

Type: Object

Reference Object: */axapi/v3/scaleout/debug/ipv6/redirect-table/l3*

debug_ipv6_redirect-table_l2

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_ipv6_redirect-table_l3

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug_hash-table

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

user-group-assignment-template-list

Specification	Value
Type	*list*
Block object keys	

name

Description Scaleout User Group Assignment Template Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-assignment-list

Type: List

Reference Object: */axapi/v3/scaleout/user-group-assignment-template/{name}/v4-assignment/{ipv4-prefix}*

v6-assignment-list

Type: List

Reference Object: */axapi/v3/scaleout/user-group-assignment-template/{name}/v6-assignment/{ipv6-prefix}*

user-group-assignment-template-list_v6-assignment-list

Specification	Value
Type	*list*
Block object keys	

assignment-prefix-length

Description User group assignment prefix length, default is 128

Type: number

Range: 1-128

Default: 128

ipv6-prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

service-config-template

Description Configure a scaleout service config template to use

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

user-group-range-end

Description User group range end

Type: number

Range: 0-255

user-group-range-start

Description User group range start

Type: number

Range: 0-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

user-group-assignment-template-list_v4-assignment-list

Specification	Value
Type	*list*
Block object keys	

assignment-prefix-length

Description User group assignment prefix length, default is 32

Type: number

Range: 1-32

Default: 32

ipv4-prefix

Description IPv4 prefix

Type: string

Format: ipv4-cidr

service-config-template

Description

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

user-group-range-end

Description User group range end

Type: number

Range: 0-255

user-group-range-start

Description User group range start

Type: number

Range: 0-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list

Specification	Value
Type	*list*
Block object keys	

cluster-devices

Description: cluster-devices is a **JSON Block**. Please see below for *cluster-list_cluster-devices*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/cluster-devices*

cluster-id

Description Scaleout cluster-id

Type: number

Range: 1-64

db-config

Description: db-config is a **JSON Block**. Please see below for *cluster-list_db-config*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/db-config*

device-groups

Description: device-groups is a **JSON Block**. Please see below for *cluster-list_device-groups*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/device-groups*

local-device

Description: local-device is a **JSON Block**. Please see below for *cluster-list_local-device*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device*

service-config

Description: service-config is a **JSON Block**. Please see below for *cluster-list_service-config*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/service-config*

slog-level

Description Set the level of slog for Scaleout

Type: number

Range: 1-8

Default: 5

tracking-template

Description: tracking-template is a **JSON Block**. Please see below for *cluster-list_tracking-template*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/tracking-template*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_local-device

Specification	Value
Type	*object*

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

cluster-mode

Description 'layer-2': Nodes in cluster are layer 2 connected (default mode); 'layer-3': Nodes in cluster are l3 connected;

Type: string

Supported Values: layer-2, layer-3

Default: layer-2

exclude-interfaces

Description: exclude-interfaces is a **JSON Block**. Please see below for *cluster-list_local-device_exclude-interfaces*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/exclude-interfaces*

id

Description

Type: number

Range: 1-16

l2-redirect

Description: l2-redirect is a **JSON Block**. Please see below for *cluster-list_local-device_l2-redirect*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/l2-redirect*

priority

Description

Type: number

Range: 1-255

session-sync

Description: session-sync is a **JSON Block**. Please see below for *cluster-list_local-device_session-sync*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync*

start-delay

Description

Type: number

Range: 10-300

tracking-template

Description: tracking-template is a **JSON Block**. Please see below for *cluster-list_local-device_tracking-template*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/tracking-template*

traffic-redirection

Description: traffic-redirection is a **JSON Block**. Please see below for *cluster-list_local-device_traffic-redirection*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_local-device_session-sync

Specification	Value
Type	*object*

follow-shared

Description Follow shared partition for session sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interfaces

Description: interfaces is a **JSON Block**. Please see below for *cluster-list_local-device_session-sync_interfaces*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync/interfaces*

reachability-options

Description: reachability-options is a **JSON Block**. Please see below for *cluster-list_local-device_session-sync_reachability-options*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync/reachability-options*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_local-device_session-sync_interfaces

Specification	Value
Type	*object*

eth-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

cluster-list_local-device_session-sync_interfaces_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve

Description Virtual ethernet Interface (Virtual ethernet interface number)

Type: number

Range: 2-4094

cluster-list_local-device_session-sync_interfaces_loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback Interface(Not applicable in 'layer-2' mode) (Loopback interface number)

Type: number

Range: 0-10

cluster-list_local-device_session-sync_interfaces_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk Interface (Trunk interface number)

Type: number

Range: 1-4096

cluster-list_local-device_session-sync_interfaces_eth-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet Interface (Ethernet interface number)

Type: number

Format: interface

cluster-list_local-device_session-sync_reachability-options

Specification	Value
Type	*object*

skip-default-route

Description Do not choose default route for redirection(Not applicable in 'layer-2' mode)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_local-device_exclude-interfaces

Specification	Value
Type	*object*

eth-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

cluster-list_local-device_exclude-interfaces_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve

Description Virtual ethernet Interface (Virtual ethernet interface number)

Type: number

Range: 2-4094

cluster-list_local-device_exclude-interfaces_loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback Interface (Loopback interface number)

Type: number

Range: 0-10

cluster-list_local-device_exclude-interfaces_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk Interface (Trunk interface number)

Type: number

Range: 1-4096

cluster-list_local-device_exclude-interfaces_eth-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet Interface (Ethernet interface number)

Type: number

Format: interface

cluster-list_local-device_l2-redirect

Specification	Value
Type	*object*

ethernet-vlan

Description VLAN ID

Type: number

Range: 2-4094

redirect-eth

Description Ethernet port (Port Value)

Type: number

Format: interface

Mutual Exclusion: redirect-eth and redirect-trunk are mutually exclusive

redirect-trunk

Description L2 Trunk group

Type: number

Range: 1-4096

Mutual Exclusion: redirect-trunk and redirect-eth are mutually exclusive

trunk-vlan

Description VLAN ID

Type: number

Range: 2-4094

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_local-device_traffic-redirection

Specification	Value
Type	*object*

encap

Description: encap is a **JSON Block**. Please see below for *cluster-list_local-device_traffic-redirection_encap*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection/encap*

follow-shared

Description Follow shared partition for redirection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interfaces

Description: interfaces is a **JSON Block**. Please see below for *cluster-list_local-device_traffic-redirection_interfaces*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection/interfaces*

reachability-options

Description: reachability-options is a **JSON Block**. Please see below for *cluster-list_local-device_traffic-redirection_reachability-options*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection/reachability-options*

ve

Description Virtual ethernet Interface (Virtual ethernet interface number)

Type: number

Range: 2-4094

cluster-list_local-device_traffic-redirection_interfaces_loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback Interface (Loopback interface number)

Type: number

Range: 0-10

cluster-list_local-device_traffic-redirection_interfaces_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk Interface (Trunk interface number)

Type: number

Range: 1-4096

cluster-list_local-device_traffic-redirection_interfaces_eth-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet Interface (Ethernet interface number)

Type: number

Format: interface

cluster-list_local-device_traffic-redirection_reachability-options

Specification	Value
Type	*object*

skip-default-route

Description Do not choose default route for redirection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_local-device_traffic-redirection_encap

Specification	Value
Type	*object*

type

Description 'vxlan': Use vxlan for encapsulation;

Type: string

Supported Values: vxlan

Default: vxlan

use-v4-vxlan

Description Always use IPv4 VxLAN for redirection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_local-device_tracking-template

Specification	Value
Type	*object*

multi-template-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/tracking-template/multi-template/{multi-template}+{ip-version}*

template-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/tracking-template/template/{template}+{ip-version}*

cluster-list_local-device_tracking-template_multi-template-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': node stops processing user traffic; 'exit-cluster': node exits scaleout cluster;

Type: string

Supported Values: down, exit-cluster

ip-version

Description 'ipv4': take action for IPv4 traffic-only; 'ipv6': take action for IPv6 traffic-only;

Type: string

Supported Values: ipv4, ipv6

multi-template

Description bind multi tracking template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

template

Type: List

threshold

Description action triggering threshold

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_local-device_tracking-template_multi-template-list_template

Specification	Value
Type	*list*
Block object keys	

partition-name

Description Partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

template-name

Description bind tracking template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

cluster-list_local-device_tracking-template_template-list

Specification	Value
Type	*list*
Block object keys	

ip-version

Description 'ipv4': take action for IPv4 traffic-only; 'ipv6': take action for IPv6 traffic-only;

Type: string

Supported Values: ipv4, ipv6

template

Description bind tracking template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold-cfg

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_local-device_tracking-template_template-list_threshold-cfg

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': node stops processing user traffic; 'exit-cluster': node exits scaleout cluster;

Type: string

Supported Values: down, exit-cluster

threshold

Description action triggering threshold

Type: number

Range: 1-65535

cluster-list_cluster-devices

Specification	Value
Type	*object*

cluster-discovery-timeout

Description: cluster-discovery-timeout is a **JSON Block**. Please see below for *cluster-list_cluster-devices_cluster-discovery-timeout*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/cluster-devices/cluster-discovery-timeout*

device-id-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/cluster-devices/device-id/{device-id}*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

minimum-nodes

Description: minimum-nodes is a **JSON Block**. Please see below for *cluster-list_cluster-devices_minimum-nodes*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/cluster-devices/minimum-nodes*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_cluster-devices_cluster-discovery-timeout

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_cluster-devices_device-id-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

ip

Description

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_cluster-devices_minimum-nodes

Specification	Value
Type	*object*

minimum-nodes-num

Description Specify the minimum number of the node required to start service

Type: number

Range: 0-16

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_device-groups

Specification	Value
Type	*object*

device-group-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/device-groups/device-group/{device-group}*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_device-groups_device-group-list

Specification	Value
Type	*list*
Block object keys	

device-group

Description scaleout device group

Type: number

Range: 1-16

device-id-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_device-groups_device-group-list_device-id-list

Specification	Value
Type	*list*
Block object keys	

device-id-end

Description

Type: number

device-id-start

Description

Type: number

cluster-list_service-config

Specification	Value
Type	*object*

default-user-group-count

Description Number of default traffic buckets

Type: number

Range: 64-256

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/service-config/template/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_service-config_template-list

Specification	Value
Type	*list*
Block object keys	

name

Description Scaleout template Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-group-count

Description Number of traffic buckets

Type: number

Range: 1-256

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_db-config

Specification	Value
Type	*object*

broken-detect-timeout

Description database connection broken detection timeout (mseconds) (12000 mseconds for default)

Type: number

Range: 500-120000

Default: 12000

client-recv-timeout

Description

Type: number

Range: 50-100000

Default: 13000

clientPort

Description client session port

Type: number

Range: 100-65535

elect-conn-timeout

Description election connection timeout (mseconds) (1200 for default)

Type: number

Range: 50-15000

Default: 1200

initLimit

Description

Type: number

Range: 1-500

loopback-intf-support

Description support loopback interface for scaleout database (enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

maxSessionTimeout

Description

Type: number

Range: 50-100000

Default: 30000

minSessionTimeout

Description

Type: number

Range: 50-100000

Default: 100

more-election-packet

Description send more election packet in election period (enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

syncLimit

Description

Type: number

Range: 1-500

tickTime

Description

Type: number

Range: 50-10000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_tracking-template

Specification	Value
Type	*object*

template-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/tracking-template/template/{template}*

cluster-list_tracking-template_template-list

Specification	Value
Type	*list*
Block object keys	

template

Description bind tracking template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold-cfg

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_tracking-template_template-list_threshold-cfg

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': node stops processing user traffic; 'exit-cluster': node exits scaleout cluster;

Type: string

Supported Values: down, exit-cluster

threshold

Description action triggering threshold

Type: number

Range: 1-65535

2.111.2 scaleout active-user-group-assignment

Active scaleout user group assignment template

active-user-group-assignment Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	active-user-group-assignment
Element URI	/axapi/v3/scaleout/active-user-group-assignment
Element Attributes	active-user-group-assignment_attributes
Partition Visibility	shared
Schema	`active-user-group-assignment schema`

Operations Allowed:

Create Object

POST

/axapi/v3/scaleout/active-user-group-assignment

active-user-group-assignment attributes

Get Object

GET

/axapi/v3/scaleout/active-user-group-assignment

active-user-group-assignment attributes

Modify Object

POST

/axapi/v3/scaleout/active-user-group-assignment

active-user-group-assignment attributes

Replace Object

PUT

/axapi/v3/scaleout/active-user-group-assignment

active-user-group-assignment attributes

Delete Object

DELETE

/axapi/v3/scaleout/active-user-group-assignment

active-user-group-assignment attributes

active-user-group-assignment attributes

name

Description Scaleout user group assignment template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/scaleout/user-group-assignment-template*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.111.3 scaleout apps

Enable Scaleout for apps

apps Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	apps
Element URI	/axapi/v3/scaleout/apps
Element Attributes	apps_attributes
Partition Visibility	shared
Schema	`apps schema`

Operations Allowed:

Create Object

POST

/axapi/v3/scaleout/apps

apps attributes

```
POST /axapi/v3/scaleout/apps
Payload:
{
    "apps": {
        "enable": 1
    }
}
```

Get Object

GET

/axapi/v3/scaleout/apps

apps attributes

Modify Object

POST

/axapi/v3/scaleout/apps

apps attributes

Replace Object

PUT

/axapi/v3/scaleout/apps

apps attributes

Delete Object

DELETE

/axapi/v3/scaleout/apps

apps attributes

apps attributes

enable

Description Enable Scaleout for apps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip-mac-overwrite

Description: skip-mac-overwrite is a **JSON Block**. Please see below for *skip-mac-overwrite*

Type: Object

Reference Object: */axapi/v3/scaleout/apps/skip-mac-overwrite*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

skip-mac-overwrite

Specification	Value
Type	*object*

enable

Description Skips overwriting dest MAC of flooded packets on Active node

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.111.4 scaleout apps skip-mac-overwrite

Skips overwriting dest MAC of flooded packets on Active node

skip-mac-overwrite Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	skip-mac-overwrite
Element URI	/axapi/v3/scaleout/apps/skip-mac-overwrite
Element Attributes	skip-mac-overwrite_attributes
Partition Visibility	shared
Schema	`skip-mac-overwrite schema`

Operations Allowed:

Create Object

POST

/axapi/v3/scaleout/apps/skip-mac-overwrite

skip-mac-overwrite attributes

```
POST /axapi/v3/scaleout/apps/skip-mac-overwrite
Payload:
{
    "skip-mac-overwrite": {
        "enable": 1
    }
}
```

Get Object

GET

/axapi/v3/scaleout/apps/skip-mac-overwrite

skip-mac-overwrite attributes

```
GET /axapi/v3/scaleout/apps/skip-mac-overwrite
Reponse:
{
    "skip-mac-overwrite": {
        "enable": 1,
        "uuid": "86507018-b6d5-11ef-8f5a-ae71681635d0",
        "a10-url": "/axapi/v3/scaleout/apps/skip-mac-overwrite"
    }
}
```

Modify Object

POST

/axapi/v3/scaleout/apps/skip-mac-overwrite

skip-mac-overwrite attributes

Replace Object

PUT

/axapi/v3/scaleout/apps/skip-mac-overwrite

skip-mac-overwrite attributes

```
PUT /axapi/v3/scaleout/apps/skip-mac-overwrite
Payload:
{
    "skip-mac-overwrite": {
        "enable": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/scaleout/apps/skip-mac-overwrite

skip-mac-overwrite attributes

```
DELETE /axapi/v3/scaleout/apps/skip-mac-overwrite
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

skip-mac-overwrite attributes

enable

Description Skips overwriting dest MAC of flooded packets on Active node

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.111.5 scaleout cluster

Configure scaleout cluster

cluster Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*cluster-id*
Collection Name	*cluster-list*
Collection URI	/axapi/v3/scaleout/cluster
Element Name	cluster
Element URI	/axapi/v3/scaleout/cluster/{cluster-id}
Element Attributes	cluster_attributes
Partition Visibility	shared
Schema	`cluster schema`

Operations Allowed:

Create Object

POST

/axapi/v3/scaleout/cluster

cluster attributes

```
POST /axapi/v3/scaleout/cluster/
Payload:
{
    "cluster": {
        "cluster-id": 1
    }
}
```

Create List

POST

/axapi/v3/scaleout/cluster

cluster attributes

Get Object

GET

/axapi/v3/scaleout/cluster/{cluster-id}

cluster attributes

```
GET /axapi/v3/scaleout/cluster/1
Reponse:
{
    "cluster": {
        "cluster-id": 1,
        "uuid": "ab1a33ac-b6d5-11ef-8f5a-ae71681635d0",
        "db-config": {
            "uuid": "ab1b6876-b6d5-11ef-8f5a-ae71681635d0",
            "a10-url": "/axapi/v3/scaleout/cluster/1/db-config"
        },
        "a10-url": "/axapi/v3/scaleout/cluster/1"
    }
}
```

Get List

GET

/axapi/v3/scaleout/cluster

cluster-list

Modify Object

POST

/axapi/v3/scaleout/cluster/{cluster-id}

cluster attributes

Replace Object

PUT

/axapi/v3/scaleout/cluster/{cluster-id}

cluster attributes

```
PUT /axapi/v3/scaleout/cluster/1
Payload:
{
    "cluster": {
        "cluster-id": 1
    }
}
```

Replace List

PUT

/axapi/v3/scaleout/cluster

cluster-list

Delete Object

DELETE

/axapi/v3/scaleout/cluster/{cluster-id}

cluster attributes

```
DELETE /axapi/v3/scaleout/cluster/1
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

cluster-list

cluster-list is **JSON List** of *cluster attributes*

cluster-list : [

{ *cluster attributes* },

{ *cluster attributes* },

...

]

cluster attributes

cluster-devices

Description: cluster-devices is a **JSON Block**. Please see below for *cluster-devices*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/cluster-devices*

cluster-id

Description Scaleout cluster-id

Type: number

Range: 1-64

db-config

Description: db-config is a **JSON Block**. Please see below for *db-config*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/db-config*

device-groups

Description: device-groups is a **JSON Block**. Please see below for *device-groups*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/device-groups*

local-device

Description: local-device is a **JSON Block**. Please see below for *local-device*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device*

service-config

Description: service-config is a **JSON Block**. Please see below for *service-config*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/service-config*

slog-level

Description Set the level of slog for Scaleout

Type: number

Range: 1-8

Default: 5

tracking-template

Description: tracking-template is a **JSON Block**. Please see below for *tracking-template*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/tracking-template*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-device

Specification	Value
Type	*object*

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

cluster-mode

Description 'layer-2': Nodes in cluster are layer 2 connected (default mode); 'layer-3': Nodes in cluster are l3 connected;

Type: string

Supported Values: layer-2, layer-3

Default: layer-2

exclude-interfaces

Description: exclude-interfaces is a **JSON Block**. Please see below for *local-device_exclude-interfaces*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/exclude-interfaces*

id

Description

Type: number

Range: 1-16

l2-redirect

Description: l2-redirect is a **JSON Block**. Please see below for *local-device_l2-redirect*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/l2-redirect*

priority

Description

Type: number

Range: 1-255

session-sync

Description: session-sync is a **JSON Block**. Please see below for *local-device_session-sync*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync*

start-delay

Description

Type: number

Range: 10-300

tracking-template

Description: tracking-template is a **JSON Block**. Please see below for *local-device_tracking-template*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/tracking-template*

traffic-redirection

Description: traffic-redirection is a **JSON Block**. Please see below for *local-device_traffic-redirection*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-device_session-sync

Specification	Value
Type	*object*

follow-shared

Description Follow shared partition for session sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interfaces

Description: interfaces is a **JSON Block**. Please see below for *local-device_session-sync_interfaces*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync/interfaces*

reachability-options

Description: reachability-options is a **JSON Block**. Please see below for *local-device_session-sync_reachability-options*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync/reachability-options*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-device_session-sync_interfaces

Specification	Value
Type	*object*

eth-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

local-device_session-sync_interfaces_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve

Description Virtual ethernet Interface (Virtual ethernet interface number)

Type: number

Range: 2-4094

local-device_session-sync_interfaces_loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback Interface(Not applicable in 'layer-2' mode) (Loopback interface number)

Type: number

Range: 0-10

local-device_session-sync_interfaces_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk Interface (Trunk interface number)

Type: number

Range: 1-4096

local-device_session-sync_interfaces_eth-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet Interface (Ethernet interface number)

Type: number

Format: interface

local-device_session-sync_reachability-options

Specification	Value
Type	*object*

skip-default-route

Description Do not choose default route for redirection(Not applicable in 'layer-2' mode)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-device_exclude-interfaces

Specification	Value
Type	*object*

eth-cfg

Type: List

loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback Interface (Loopback interface number)

Type: number

Range: 0-10

local-device_exclude-interfaces_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk Interface (Trunk interface number)

Type: number

Range: 1-4096

local-device_exclude-interfaces_eth-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet Interface (Ethernet interface number)

Type: number

Format: interface

local-device_l2-redirect

Specification	Value
Type	*object*

ethernet-vlan

Description VLAN ID

Type: number

Range: 2-4094

redirect-eth

Description Ethernet port (Port Value)

Type: number

Format: interface

Mutual Exclusion: redirect-eth and redirect-trunk are mutually exclusive

redirect-trunk

Description L2 Trunk group

Type: number

Range: 1-4096

Mutual Exclusion: redirect-trunk and redirect-eth are mutually exclusive

trunk-vlan

Description VLAN ID

Type: number

Range: 2-4094

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-device_traffic-redirection

Specification	Value
Type	*object*

encap

Description: encap is a **JSON Block**. Please see below for *local-device_traffic-redirection_encap*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection/encap*

follow-shared

Description Follow shared partition for redirection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interfaces

Description: interfaces is a **JSON Block**. Please see below for *local-device_traffic-redirection_interfaces*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection/interfaces*

reachability-options

Description: reachability-options is a **JSON Block**. Please see below for *local-device_traffic-redirection_reachability-options*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection/reachability-options*

uuid

Block object keys	

ethernet

Description Ethernet Interface (Ethernet interface number)

Type: number

Format: interface

local-device_traffic-redirection_reachability-options

Specification	Value
Type	*object*

skip-default-route

Description Do not choose default route for redirection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-device_traffic-redirection_encap

Specification	Value
Type	*object*

type

Description 'vxlan': Use vxlan for encapsulation;

Type: string

Supported Values: vxlan

Default: vxlan

use-v4-vxlan

Description Always use IPv4 VxLAN for redirection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-device_tracking-template

Specification	Value
Type	*object*

multi-template-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/tracking-template/multi-template/{multi-template}+{ip-version}*

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/tracking-template/template/{template}+{ip-version}*

local-device_tracking-template_multi-template-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': node stops processing user traffic; 'exit-cluster': node exits scaleout cluster;

Type: string

Supported Values: down, exit-cluster

ip-version

Description 'ipv4': take action for IPv4 traffic-only; 'ipv6': take action for IPv6 traffic-only;

Type: string

Supported Values: ipv4, ipv6

multi-template

Description bind multi tracking template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

template

Type: List

threshold

Description action triggering threshold

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-device_tracking-template_multi-template-list_template

Specification	Value
Type	*list*
Block object keys	

partition-name

Description Partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

template-name

Description bind tracking template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

local-device_tracking-template_template-list

Specification	Value
Type	*list*
Block object keys	

ip-version

Description 'ipv4': take action for IPv4 traffic-only; 'ipv6': take action for IPv6 traffic-only;

Type: string

Supported Values: ipv4, ipv6

template

Description bind tracking template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold-cfg

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-device_tracking-template_template-list_threshold-cfg

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': node stops processing user traffic; 'exit-cluster': node exits scaleout cluster;

Type: string

Supported Values: down, exit-cluster

threshold

Description action triggering threshold

Type: number

Range: 1-65535

cluster-devices

Specification	Value
Type	*object*

cluster-discovery-timeout

Description: cluster-discovery-timeout is a **JSON Block**. Please see below for *cluster-devices_cluster-discovery-timeout*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/cluster-devices/cluster-discovery-timeout*

device-id-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/cluster-devices/device-id/{device-id}*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

minimum-nodes

Description: minimum-nodes is a **JSON Block**. Please see below for *cluster-devices_minimum-nodes*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/cluster-devices/minimum-nodes*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-devices_cluster-discovery-timeout

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-devices_device-id-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

ip

Description

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-devices_minimum-nodes

Specification	Value
Type	*object*

minimum-nodes-num

Description Specify the minimum number of the node required to start service

Type: number

Range: 0-16

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

device-groups

Specification	Value
Type	*object*

device-group-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/device-groups/device-group/{device-group}*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

device-groups_device-group-list

Specification	Value
Type	*list*
Block object keys	

device-group

Description scaleout device group

Type: number

Range: 1-16

device-id-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

device-groups_device-group-list_device-id-list

Specification	Value
Type	*list*
Block object keys	

device-id-end

Description

Type: number

device-id-start

Description

Type: number

service-config

Specification	Value
Type	*object*

default-user-group-count

Description Number of default traffic buckets

Type: number

Range: 64-256

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/service-config/template/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-config_template-list

Specification	Value
Type	*list*
Block object keys	

name

Description Scaleout template Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-group-count

Description Number of traffic buckets

Type: number

Range: 1-256

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

db-config

Specification	Value
Type	*object*

broken-detect-timeout

Description database connection broken detection timeout (mseconds) (12000 mseconds for default)

Type: number

Range: 500-120000

Default: 12000

client-recv-timeout

Description

Type: number

Range: 50-100000

Default: 13000

clientPort

Description client session port

Type: number

Range: 100-65535

elect-conn-timeout

Description election connection timeout (mseconds) (1200 for default)

Type: number

Range: 50-15000

Default: 1200

initLimit

Description

Type: number

Range: 1-500

loopback-intf-support

Description support loopback interface for scaleout database (enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

maxSessionTimeout

Description

Type: number

Range: 50-100000

Default: 30000

minSessionTimeout

Description

Type: number

Range: 50-100000

Default: 100

more-election-packet

Description send more election packet in election period (enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

syncLimit

Description

Type: number

Range: 1-500

tickTime

Description

Type: number

Range: 50-10000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tracking-template

Specification	Value
Type	*object*

template-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/tracking-template/template/{template}*

tracking-template_template-list

Specification	Value
Type	*list*
Block object keys	

template

Description bind tracking template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold-cfg

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tracking-template_template-list_threshold-cfg

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': node stops processing user traffic; 'exit-cluster': node exits scaleout cluster;

Type: string

Supported Values: down, exit-cluster

threshold

Description action triggering threshold

Type: number

Range: 1-65535

2.111.6 scaleout cluster cluster-devices

Configure devices in the cluster

cluster-devices Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	cluster-devices
Element URI	/axapi/v3/scaleout/cluster/{cluster-id}/cluster-devices
Element Attributes	cluster-devices_attributes
Partition Visibility	shared
Schema	`cluster-devices schema`

Operations Allowed:

Create Object

POST

/axapi/v3/scaleout/cluster/{cluster-id}/cluster-devices

cluster-devices attributes

```
POST /axapi/v3/scaleout/cluster/1/cluster-devices
Payload:
{
    "cluster-devices": {
```

Maximum Length: 1 characters

session-sync

Specification	Value
Type	*object*

follow-shared

Description Follow shared partition for session sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interfaces

Description: interfaces is a **JSON Block**. Please see below for *session-sync_interfaces*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync/interfaces*

reachability-options

Description: reachability-options is a **JSON Block**. Please see below for *session-sync_reachability-options*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync/reachability-options*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

session-sync_interfaces

Specification	Value
Type	*object*

eth-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

session-sync_interfaces_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve

Description Virtual ethernet Interface (Virtual ethernet interface number)

Type: number

Range: 2-4094

session-sync_interfaces_loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback Interface(Not applicable in 'layer-2' mode) (Loopback interface number)

Type: number

Range: 0-10

session-sync_interfaces_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk Interface (Trunk interface number)

Type: number

Range: 1-4096

session-sync_interfaces_eth-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet Interface (Ethernet interface number)

Type: number

Format: interface

session-sync_reachability-options

Specification	Value
Type	*object*

skip-default-route

Description Do not choose default route for redirection(Not applicable in 'layer-2' mode)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

exclude-interfaces

Specification	Value
Type	*object*

eth-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

exclude-interfaces_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve

Description Virtual ethernet Interface (Virtual ethernet interface number)

Type: number

Range: 2-4094

exclude-interfaces_loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback Interface (Loopback interface number)

Type: number

Range: 0-10

exclude-interfaces_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk Interface (Trunk interface number)

Type: number

Range: 1-4096

exclude-interfaces_eth-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet Interface (Ethernet interface number)

Type: number

Format: interface

l2-redirect

Specification	Value
Type	*object*

ethernet-vlan

Description VLAN ID

Type: number

Range: 2-4094

redirect-eth

Description Ethernet port (Port Value)

Type: number

Format: interface

Mutual Exclusion: redirect-eth and redirect-trunk are mutually exclusive

redirect-trunk

Description L2 Trunk group

Type: number

Range: 1-4096

Mutual Exclusion: redirect-trunk and redirect-eth are mutually exclusive

trunk-vlan

Description VLAN ID

Type: number

Range: 2-4094

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traffic-redirection

Specification	Value
Type	*object*

encap

Description: encap is a **JSON Block**. Please see below for *traffic-redirection_encap*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection/encap*

follow-shared

Description Follow shared partition for redirection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interfaces

Description: interfaces is a **JSON Block**. Please see below for *traffic-redirection_interfaces*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection/interfaces*

reachability-options

Description: reachability-options is a **JSON Block**. Please see below for *traffic-redirection_reachability-options*

Type: Object

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection/reachability-options*

uuid

Description uuid of the object

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

traffic-redirection_interfaces_ve-cfg

Specification	Value
Type	*list*
Block object keys	

ve

Description Virtual ethernet Interface (Virtual ethernet interface number)

Type: number

Range: 2-4094

traffic-redirection_interfaces_loopback-cfg

Specification	Value
Type	*list*
Block object keys	

loopback

Description Loopback Interface (Loopback interface number)

Type: number

Range: 0-10

traffic-redirection_interfaces_trunk-cfg

Specification	Value
Type	*list*
Block object keys	

trunk

Description Trunk Interface (Trunk interface number)

Type: number

Range: 1-4096

traffic-redirection_interfaces_eth-cfg

Specification	Value
Type	*list*
Block object keys	

ethernet

Description Ethernet Interface (Ethernet interface number)

Type: number

Format: interface

traffic-redirection_reachability-options

Specification	Value
Type	*object*

skip-default-route

Description Do not choose default route for redirection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traffic-redirection_encap

Specification	Value
Type	*object*

type

Description 'vxlan': Use vxlan for encapsulation;

Type: string

Supported Values: vxlan

Default: vxlan

use-v4-vxlan

Description Always use IPv4 VxLAN for redirection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tracking-template

Specification	Value
Type	*object*

multi-template-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/tracking-template/multi-template/{multi-template}+{ip-version}*

template-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/tracking-template/template/{template}+{ip-version}*

tracking-template_multi-template-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': node stops processing user traffic; 'exit-cluster': node exits scaleout cluster;

Type: string

Supported Values: down, exit-cluster

ip-version

Description 'ipv4': take action for IPv4 traffic-only; 'ipv6': take action for IPv6 traffic-only;

Type: string

Supported Values: ipv4, ipv6

multi-template

Description bind multi tracking template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

template

Type: List

threshold

Description action triggering threshold

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tracking-template_multi-template-list_template

Specification	Value
Type	*list*
Block object keys	

partition-name

Description Partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

template-name

Description bind tracking template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

tracking-template_template-list

Specification	Value
Type	*list*
Block object keys	

ip-version

Description 'ipv4': take action for IPv4 traffic-only; 'ipv6': take action for IPv6 traffic-only;

Type: string

Supported Values: ipv4, ipv6

template

Description bind tracking template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold-cfg

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tracking-template_template-list_threshold-cfg

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': node stops processing user traffic; 'exit-cluster': node exits scaleout cluster;

Type: string

Supported Values: down, exit-cluster

threshold

Description action triggering threshold

Type: number

Range: 1-65535

2.111.14 scaleout cluster local-device exclude-interfaces

Interfaces for peers to exclude from scaleout redirection and session sync

exclude-interfaces Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	exclude-interfaces
Element URI	/axapi/v3/scaleout/cluster/{cluster-id}/local-device/exclude-interfaces
Element Attributes	exclude-interfaces_attributes
Partition Visibility	shared
Schema	`exclude-interfaces schema`

Operations Allowed:

Create Object

POST

/axapi/v3/scaleout/cluster/{cluster-id}/local-device/exclude-interfaces

exclude-interfaces attributes

```
POST /axapi/v3/scaleout/cluster/1/local-device/exclude-interfaces
Payload:
{
    "exclude-interfaces": {
        "eth-cfg": [
            {
                "ethernet": 1
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/scaleout/cluster/{cluster-id}/local-device/exclude-interfaces

exclude-interfaces attributes

```
GET /axapi/v3/scaleout/cluster/1/local-device/exclude-interfaces
Reponse:
{
    "exclude-interfaces": {
        "loopback-cfg": [
            {
                "loopback": 0
            }
        ],
        "uuid": "081e7eb2-b6d8-11ef-8f5a-ae71681635d0",
        "a10-url": "/axapi/v3/scaleout/cluster/1/local-device/exclude-interfaces"
    }
}
```

Modify Object

POST

/axapi/v3/scaleout/cluster/{cluster-id}/local-device/exclude-interfaces

exclude-interfaces attributes

Replace Object

PUT

/axapi/v3/scaleout/cluster/{cluster-id}/local-device/exclude-interfaces

exclude-interfaces attributes

```
PUT /axapi/v3/scaleout/cluster/1/local-device/exclude-interfaces
Payload:
{
    "exclude-interfaces": {
        "loopback-cfg": [
            {
                "loopback": 1
            }
        ]
    }
}
```

Delete Object

DELETE

/axapi/v3/scaleout/cluster/{cluster-id}/local-device/exclude-interfaces

exclude-interfaces attributes

```
DELETE /axapi/v3/scaleout/cluster/1/local-device/exclude-interfaces
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

exclude-interfaces attributes

tracking-template attributes

template-list

Type: List

Reference Object: */axapi/v3/scaleout/cluster/{cluster-id}/tracking-template/template/{template}*

template-list

Specification	Value
Type	*list*
Block object keys	

template

Description bind tracking template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold-cfg

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_threshold-cfg

Specification	Value
Type	*list*
Block object keys	

action

Description 'down': node stops processing user traffic; 'exit-cluster': node exits scaleout cluster;

Type: string

Supported Values: down, exit-cluster

threshold

Description action triggering threshold

Type: number

Range: 1-65535

2.111.29 scaleout cluster tracking-template template

Configure tracking template to be used by scaleout [OBSOLETED!]

template Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*template*
Collection Name	*template-list*
Collection URI	/axapi/v3/scaleout/cluster/{cluster-id}/tracking-template/template

        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

service-partition-list

service-partition-list is **JSON List** of *service-partition attributes*

service-partition-list : [

{ *service-partition attributes* },

{ *service-partition attributes* },

...

]

service-partition attributes

application-type

Description 'adc': Application type ADC;

Type: string

Supported Values: adc

follow-vrid

Description Join a vrrp group (Specify ha VRRP-A vrid)

Type: number

Range: 0-31

Default: 0

Reference Object: */axapi/v3/vrrp-a/vrid*

id

Description Specify unique service partition id

Type: number

partition-name

Description Object service partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.115 session-filter

Maximum Length: 64 characters

Maximum Length: 1 characters

filter-cfg

Specification	Value
Type	*object*

app

Description Specify application(s), separated by comma (For example: http,tcp)

Type: string

Format: string-rlx

Maximum Length: 1024 characters

Maximum Length: 1 characters

app-category

Description 'aaa': Protocol/application used for AAA (Authentification, Authorization and Accounting) purposes.; 'adult-content': Adult content protocol/application.; 'advertising': Advertising networks and applications.; 'application-enforcing-tls': Application known to enforce HSTS and thus use of TLS.; 'analytics-and-statistics': User analytics and statistics protocol/application.; 'anonymizers-and-proxies': Traffic-anonymization protocol/application.; 'audio-chat': Protocol/application used for Audio Chat.; 'basic': Covers all protocols required for basic classification, including most networking protocols as well as standard protocols like HTTP.; 'blog': Blogging platform protocol/application.; 'cdn': Protocol/application used for Content-Delivery Networks.; 'certification-authority': Certification Authority for SSL/TLS certificate.; 'chat': Protocol/application used for Text Chat.; 'classified-ads': Protocol/application used for Classified Advertisements.; 'cloud-based-services': SaaS and/or PaaS cloud based services.; 'crowdfunding': Service for funding a project or venture by raising small amounts of money from a large number of people, typically via the Internet.; 'cryptocurrency': Services for mining cryptocurrencies, for example a Crypto Web Browser (an application that mines crypto currency in the background while its user browses the web).; 'database': Database-specific protocols.; 'disposable-email': Service offering Disposable Email Accounts (DEA). DEA is a technique to share temporary email address between many users.; 'ebook-reader': Services for e-book readers, i.e. connected devices that display electronic books (typically using e-ink displays to reduce glare and eye strain).; 'education': Protocols offering education services and online courses.; 'email': Native email protocol.; 'enterprise': Protocol/application used in an enterprise network.; 'file-management': Protocol/application designed specifically for file management and exchange. This can include bona fide network protocols (like SMB) as well as web/cloud services (like Dropbox).; 'file-transfer': Protocol that offers file transferring as a secondary feature. This typically includes IM, Web-Mail, and other protocols that allow file transfers in addition to their principal function.; 'forum': Online forum protocol/application.; 'gaming': Protocol/application used by games.; 'healthcare': Protocols offering medical services, i.e protocols used in medical environment.;

'instant-messaging-and-multimedia-conferencing': Protocol/application used for Instant Messaging or Multi-Conferencing.; 'internet-of-things': Internet Of Things protocol/application.; 'map-service': Digital Maps service (web site and their related API).; 'mobile': Mobile-specific protocol/application.; 'multimedia-streaming': Protocol/application used for multimedia streaming.; 'networking': Protocol used for (inter) networking purpose.; 'news-portal': Protocol/application used for News Portals.; 'payment-service': Application offering online services for accepting electronic payments by a variety of payment methods (credit card, bank-based payments such as direct debit, bank transfer, etc).; 'peer-to-peer': Protocol/application used for Peer-to-peer purposes.; 'remote-access': Protocol/application used for remote access.; 'scada': SCADA (Supervisory control and data acquisition) protocols, all generations.; 'social-networks': Social networking application.; 'software-update': Auto-update protocol.; 'speedtest': Speedtest application allowing to access quality of Internet connection (upload, download, latency, etc).; 'standards-based': Protocol issued from standardized bodies such as IETF, ITU, IEEE, ETSI, OIF.; 'transportation': Transportation services, for example smartphone applications that allow users to hail a taxi.; 'video-chat': Protocol/application used for Video Chat.; 'voip': Application used for Voice-Over-IP.; 'vpn-tunnels': Protocol/application used for VPN or tunneling purposes.; 'web': Application based on HTTP/HTTPS.; 'web-e-commerce': Protocol/application used for E-commerce websites.; 'web-search-engines': Protocol/application used for Web search portals.; 'web-websites': Protocol/application used for Company Websites.; 'webmails': Web-based e-mail application.; 'web-ext-adult': Web Extension Adult; 'web-ext-auctions': Web Extension Auctions; 'web-ext-blogs': Web Extension Blogs; 'web-ext-business-and-economy': Web Extension Business and Economy; 'web-ext-cdns': Web Extension CDNs; 'web-ext-collaboration': Web Extension Collaboration; 'web-ext-computer-and-internet-info': Web Extension Computer and Internet Info; 'web-ext-computer-and-internet-security': Web Extension Computer and Internet Security; 'web-ext-dating': Web Extension Dating; 'web-ext-educational-institutions': Web Extension Educational Institutions; 'web-ext-entertainment-and-arts': Web Extension Entertainment and Arts; 'web-ext-fashion-and-beauty': Web Extension Fashion and Beauty; 'web-ext-file-share': Web Extension File Share; 'web-ext-financial-services': Web Extension Financial Services; 'web-ext-gambling': Web Extension Gambling; 'web-ext-games': Web Extension Games; 'web-ext-government': Web Extension Government; 'web-ext-health-and-medicine': Web Extension Health and Medicine; 'web-ext-individual-stock-advice-and-tools': Web Extension Individual Stock Advice and Tools; 'web-ext-internet-portals': Web Extension Internet Portals; 'web-ext-job-search': Web Extension Job Search; 'web-ext-local-information': Web Extension Local Information; 'web-ext-malware': Web Extension Malware; 'web-ext-motor-vehicles': Web Extension Motor Vehicles; 'web-ext-music': Web Extension Music; 'web-ext-news': Web Extension News; 'web-ext-p2p': Web Extension P2P; 'web-ext-parked-sites': Web Extension Parked Sites; 'web-ext-proxy-avoid-and-anonymizers': Web Extension Proxy Avoid and Anonymizers; 'web-ext-real-estate': Web Extension Real Estate; 'web-ext-reference-and-research': Web Extension Reference and Research; 'web-ext-search-engines': Web Extension Search Engines; 'web-ext-shopping': Web Extension Shopping; 'web-ext-social-network': Web Extension Social Network; 'web-ext-society': Web Extension Society; 'web-ext-software': Web Extension Software; 'web-ext-sports': Web Extension Sports; 'web-ext-streaming-media': Web Extension Streaming Media; 'web-ext-training-and-tools': Web Extension Training and Tools; 'web-ext-translation': Web Extension Translation; 'web-ext-travel': Web Extension Travel; 'web-ext-web-advertisements': Web Extension Web Advertisements; 'web-ext-web-based-email': Web Extension Web based Email; 'web-ext-web-hosting': Web Extension Web Hosting; 'web-ext-web-service': Web Extension Web Service;

Type: string

Supported Values: aaa, adult-content, advertising, application-enforcing-tls, analytics-and-statistics, anonymizers-and-proxies, audio-chat, basic, blog, cdn, certification-authority, chat, classified-ads, cloud-based-services, crowdfunding, cryptocurrency, database, disposable-email, ebook-reader, education, email, enterprise, file-management, file-transfer, forum,

gaming, healthcare, instant-messaging-and-multimedia-conferencing, internet-of-things, map-service, mobile, multimedia-streaming, networking, news-portal, payment-service, peer-to-peer, remote-access, scada, social-networks, software-update, speedtest, standards-based, transportation, video-chat, voip, vpn-tunnels, web, web-e-commerce, web-search-engines, web-websites, webmails, web-ext-adult, web-ext-auctions, web-ext-blogs, web-ext-business-and-economy, web-ext-cdns, web-ext-collaboration, web-ext-computer-and-internet-info, web-ext-computer-and-internet-security, web-ext-dating, web-ext-educational-institutions, web-ext-entertainment-and-arts, web-ext-fashion-and-beauty, web-ext-file-share, web-ext-financial-services, web-ext-gambling, web-ext-games, web-ext-government, web-ext-health-and-medicine, web-ext-individual-stock-advice-and-tools, web-ext-internet-portals, web-ext-job-search, web-ext-local-information, web-ext-malware, web-ext-motor-vehicles, web-ext-music, web-ext-news, web-ext-p2p, web-ext-parked-sites, web-ext-proxy-avoid-and-anonymizers, web-ext-real-estate, web-ext-reference-and-research, web-ext-search-engines, web-ext-shopping, web-ext-social-network, web-ext-society, web-ext-software, web-ext-sports, web-ext-streaming-media, web-ext-training-and-tools, web-ext-translation, web-ext-travel, web-ext-web-advertisements, web-ext-web-based-email, web-ext-web-hosting, web-ext-web-service

dest-addr

Description Forward Destination IP (Destination IP address)

Type: string

Format: ipv4-address

dest-mask

Description Forward Destination IP Subnet (Destination Netmask)

Type: string

Format: ipv4-netmask

dport2

Description Forward Destination Port (Dest Port)

Type: number

Range: 1-65535

session-type

Description ‘ipv6’: Display ipv6 sessions only; ‘sip’: SIP sessions;

Type: string

Supported Values: ipv6, sip

source-addr

Description Forward Source IP (Source IP address)

Type: string

Format: ipv4-address

source-mask

Description Forward Source IP Subnet (Source Netmask)

Type: string

Format: ipv4-netmask

source-port

Description Forward Source Port

Type: number

Range: 1-65535

2.116 session-filter-extended

Objects:

2.116.1 session-filter-extended

Create a extended convenience Filter to display/clear sessions

session-filter-extended Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*session-filter-extended-list*
Collection URI	/axapi/v3/session-filter-extended
Element Name	session-filter-extended
Element URI	/axapi/v3/session-filter-extended/{name}
Element Attributes	session-filter-extended_attributes
Partition Visibility	shared
Schema	`session-filter-extended schema`

Operations Allowed:

Create Object

POST

/axapi/v3/session-filter-extended

session-filter-extended attributes

```
POST /axapi/v3/session-filter-extended/
Payload:
{
    "session-filter-extended": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/session-filter-extended

session-filter-extended attributes

Get Object

GET

/axapi/v3/session-filter-extended/{name}

session-filter-extended attributes

```
GET /axapi/v3/session-filter-extended/a
Reponse:
{
    "session-filter-extended": {
        "name": "a",
        "filter-rel": "AND",
        "uuid": "9c4cb8fa-b6de-11ef-8f5a-ae71681635d0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/session-filter-extended/a"
    }
}
```

GET

/axapi/v3/session-filter-extended

session-filter-extended-list

Modify Object

POST

/axapi/v3/session-filter-extended/{name}

session-filter-extended attributes

Replace Object

PUT

/axapi/v3/session-filter-extended/{name}

session-filter-extended attributes

```
PUT /axapi/v3/session-filter-extended/a
Payload:
{
    "session-filter-extended": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/session-filter-extended

session-filter-extended-list

Delete Object

DELETE

/axapi/v3/session-filter-extended/{name}

session-filter-extended attributes

```
DELETE /axapi/v3/session-filter-extended/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

session-filter-extended-list

session-filter-extended-list is **JSON List** of *session-filter-extended attributes*

session-filter-extended-list : [

{ *session-filter-extended attributes* },

{ *session-filter-extended attributes* },

...

]

session-filter-extended attributes

filter-rel

Description 'AND': both forward and reverse tuple-filter match; 'OR': either forward or reverse tuple-filter match;

Type: string

Supported Values: AND, OR

Default: AND

fwd-filter

Description Specify forward tuple-filter name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/tuple-filter*

name

Description Session filter name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

rev-filter

Description Specify reverse tuple-filter name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/tuple-filter*

session-type

Description 'sip': SIP sessions;

Type: string

Supported Values: sip

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

agent

Description: agent is a **JSON Block**. Please see below for *agent*

Type: Object

Reference Object: */axapi/v3/sflow/agent*

collector

Description: collector is a **JSON Block**. Please see below for *collector*

Type: Object

Reference Object: */axapi/v3/sflow/collector*

event-notification

Description: event-notification is a **JSON Block**. Please see below for *event-notification*

Type: Object

Reference Object: */axapi/v3/sflow/event-notification*

global

Description: global is a **JSON Block**. Please see below for *global*

Type: Object

Reference Object: */axapi/v3/sflow/global*

polling

Description: polling is a **JSON Block**. Please see below for *polling*

Type: Object

Reference Object: */axapi/v3/sflow/polling*

sampling

Description: sampling is a **JSON Block**. Please see below for *sampling*

Type: Object

Reference Object: */axapi/v3/sflow/sampling*

setting

Description: setting is a **JSON Block**. Please see below for *setting*

Type: Object

Reference Object: */axapi/v3/sflow/setting*

source-address

Description: source-address is a **JSON Block**. Please see below for *source-address*

Type: Object

Reference Object: */axapi/v3/sflow/source-address*

source-address

Specification	Value
Type	*object*

ip

Description Source IPv4 address

Type: string

Format: ipv4-address

ipv6

Description Source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total-packet-sample-records': Total packet sample records; 'total-counter-sample-records': Total counter sample records; 'total-sflow-packets-sent': Total sflow packets sent; 'total-sflow-local-packets-sent': Total sflow packets sent desc {}; 'total-sflow-packets-sent-mgmt': Total sflow packets sent via Mgmt Interface; 'total-sflow-packets-drop-mgmt': sflow packets dropped because of rate limit via Mgmt Interface;

Type: string

Supported Values: all, total-packet-sample-records, total-counter-sample-records, total-sflow-packets-sent, total-sflow-local-packets-sent, total-sflow-packets-sent-mgmt, total-sflow-packets-drop-mgmt

agent

Specification	Value
Type	*object*

address

Description: address is a **JSON Block**. Please see below for *agent_address*

Type: Object

Reference Object: */axapi/v3/sflow/agent/address*

agent_address

Specification	Value
Type	*object*

ip

Description Configure sFlow agent IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ip and ipv6 are mutually exclusive

ipv6

Description Configure sFlow agent IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 and ip are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling

Specification	Value
Type	*object*

eth-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list

Type: List

sampling_eth-list

Specification	Value
Type	*list*
Block object keys	

eth-end

Description Ethernet interface to sample

Type: number

Format: interface

eth-start

Description Ethernet interface to sample

Type: number

Format: interface

sampling_ve-list

Specification	Value
Type	*list*
Block object keys	

ve-end

Description VE interface to sample

Type: number

Reference Object: */axapi/v3/interface/ve*

ve-start

Description VE interface to sample

Type: number

Reference Object: */axapi/v3/interface/ve*

event-notification

Specification	Value
Type	*object*

ddos

Description: ddos is a **JSON Block**. Please see below for *event-notification_ddos*

Type: Object

Reference Object: */axapi/v3/sflow/event-notification/ddos*

event-notification_ddos

Specification	Value
Type	*object*

toggle

Description 'enable': Enable sflow notification for DDOS events; 'disable': Disable sflow notification for DDOS events;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

setting

Specification	Value
Type	*object*

append-mapping-info

Description Allow TPS to always send mapping ctr block (260, 271, and 272)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

counter-polling-interval

Description sFlow counter polling interval, default is 20

Type: number

Range: 1-200

Default: 20

ddos-source-id-export

Description Enable exporting DDoS sourceID in sflow packet sample

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-counter-polling-mtu

Description Default MTU for counter-polling packets - DDoS 3.2 format only (Default: 1500)

Type: number

Range: 1200-1500

Default: 1500

enlarge-zone-name

Description Allow TPS to packet up to 127 character zone names

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-collection

Description 'enable': Enable local sflow collection (Default); 'disable': Disable local sflow collection;

Type: string

Supported Values: enable, disable

Default: disable

local-t1-polling-interval

Description Set sFlow local counter polling interval for T1 stats

Type: number

Range: 1-18000

local-t2-polling-interval

Description Set sFlow local counter polling interval for T2 stats

Type: number

Range: 1-18000

management-link-utilization

Description limit management link speed in (Mbps)

Type: number

Range: 1-10000

Mutual Exclusion: management-link-utilization and management-link-utilization-percentage are mutually exclusive

management-link-utilization-percentage

Description percentage limit of the management link speed (Default is 30%)

Type: number

Range: 1-100

Default: 30

Mutual Exclusion: management-link-utilization-percentage and management-link-utilization are mutually exclusive

max-header

Description Configure maximum number of bytes that should be copied from a sampled packet (default: 128) (The maximum number of bytes (Default: 128))

Type: number

Range: 14-512

one-blk-per-pkt

Description Forces sFlow packet to only contain one sFlow counter block

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-sampling-rate

Description sFlow packet sampling rate, default is 1000

Type: number

Range: 10-10000

Default: 1000

port-range-end

Description Source port-range end

Type: number

Range: 2049-63640

port-range-start

Description Source port-range

Type: number

Range: 2049-63640

randomize-source-port

Description 'enable': Randomize source port; 'disable': Fix source port 6343; 'packet-sampling-only': Only randomized source port for packet-sampling (Default);

Type: string

Supported Values: enable, disable, packet-sampling-only

Default: packet-sampling-only

source-ip-use-mgmt

Description Use management interface's IP address for source IP of sFlow packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

polling

Specification	Value
Type	*object*

a10-proprietary

Description: a10-proprietary is a **JSON Block**. Please see below for *polling_a10-proprietary*

Type: Object

Reference Object: */axapi/v3/sflow/polling/a10-proprietary*

acos-info

Description: acos-info is a **JSON Block**. Please see below for *polling_acos-info*

Type: Object

Reference Object: */axapi/v3/sflow/polling/acos-info*

cpu-usage

Description Polling CPU usage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ddos

Description: ddos is a **JSON Block**. Please see below for *polling_ddos*

Type: Object

Reference Object: */axapi/v3/sflow/polling/ddos*

eth-list

Type: List

ethernet-ext-list

Type: List

Reference Object: */axapi/v3/sflow/polling/ethernet-ext/{start}*

ethernet-list

Type: List

Reference Object: */axapi/v3/sflow/polling/ethernet/{start}*

http

Description: http is a **JSON Block**. Please see below for *polling_http*

Type: Object

Reference Object: */axapi/v3/sflow/polling/http*

http-counter

Description Polling HTTP counters

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-health

Description: system-health is a **JSON Block**. Please see below for *polling_system-health*

Type: Object

Reference Object: */axapi/v3/sflow/polling/system-health*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list

Type: List

polling_eth-list

Specification	Value
Type	*list*
Block object keys	

eth-end

Description Ethernet interface to sample

Type: number

Format: interface

eth-start

Description Ethernet interface to sample

Type: number

Format: interface

polling_http

Specification	Value
Type	*object*

toggle

Description 'enable': Enable polling HTTP counters; 'disable': Disable polling HTTP counters;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

polling_ve-list

Specification	Value
Type	*list*
Block object keys	

ve-end

Description VE interface to sample

Type: number

Reference Object: */axapi/v3/interface/ve*

ve-start

Description VE interface to sample

Type: number

Reference Object: */axapi/v3/interface/ve*

polling_acos-info

Specification	Value
Type	*object*

toggle

Description 'enable': Enable polling ACOS Information; 'disable': Disable polling ACOS Information;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

polling_ethernet-list

Specification	Value
Type	*list*
Block object keys	

start

Description Ethernet interface to poll

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

polling_ddos

Specification	Value
Type	*object*

dns-cache-zone-stats

Description Enable polling for dns cache per instance and per zone statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dyn-entry-stats

Description Enable polling for dynamic entry statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-anomaly-stats

Description Enable Polling for system wide anomaly statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

toggle

Description 'enable': Enable sflow polling for DDOS statistics; 'disable': Disable sflow polling for DDOS statistics;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

polling_ethernet-ext-list

Specification	Value
Type	*list*
Block object keys	

start

Description Ethernet interface to poll

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

polling_a10-proprietary

Specification	Value
Type	*object*

export-deprecated-counters

Description Export deprecated counters

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

polling_system-health

Specification	Value
Type	*object*

license-statistics

Description 'enable': Enable polling license statistics; 'disable': Disable polling license statistics;

Type: string

Supported Values: enable, disable

Default: disable

per-control-cpu-usage

Description 'enable': Enable polling control cpu; 'disable': Disable polling control cpu usage;

Type: string

Supported Values: enable, disable

Default: disable

per-data-cpu-usage

Description 'enable': Enable polling data cpu; 'disable': Disable polling data cpu usage;

Type: string

Supported Values: enable, disable

Default: disable

system-health-usage

Description 'enable': Enable polling system health information; 'disable': Disable polling system health information;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

collector

Specification	Value
Type	*object*

custom-list

Type: List

Reference Object: */axapi/v3/sflow/collector/custom/{name}*

host-list

Type: List

Reference Object: */axapi/v3/sflow/collector/host/{name}+{port}*

ip-list

Type: List

Reference Object: */axapi/v3/sflow/collector/ip/{addr}+{port}*

ipv6-list

Type: List

Reference Object: */axapi/v3/sflow/collector/ipv6/{addr}+{port}*

collector_custom-list

Specification	Value
Type	*list*
Block object keys	

ipv4_addr

Description Configure IP address of the sFlow Receiver

Type: string

Format: ipv4-address

ipv6_addr

Description Configure IPv6 address of the sFlow Receiver

Type: string

Format: ipv6-address

name

Description Configure name of sFlow Receiver

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

collector_host-list

Specification	Value
Type	*list*
Block object keys	

customized-setting

Description: customized-setting is a **JSON Block**. Please see below for *collector_host-list_customized-setting*

Type: Object

Reference Object: */axapi/v3/sflow/collector/host/{name}+{port}/customized-setting*

name

Description Configure FQDN name of sFlow Receiver

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

port

Description Port number (default is 6343)

Type: number

Range: 1-65535

Default: 6343

use-mgmt-port

Description sFlow collector is through out-of-band management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

collector_host-list_customized-setting

Specification	Value
Type	*object*

a10-proprietary-polling

Description Enable counters for ACOS control blocks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

counter-polling

Description Enable counter polling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event-notification

Description Enable event notification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

export-enable

Description 'export': Customizes export settings for collector;

Type: string

Supported Values: export

packet-sampling

Description Enable packet sampling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

collector_ip-list

Specification	Value
Type	*list*
Block object keys	

addr

Description Configure sFlow collector IP address

Type: string

Format: ipv4-address

customized-setting

Description: customized-setting is a **JSON Block**. Please see below for *collector_ip-list_customized-setting*

Type: Object

Reference Object: */axapi/v3/sflow/collector/ip/{addr}+{port}/customized-setting*

port

Description Port number (default is 6343)

Type: number

Range: 1-65535

Default: 6343

use-mgmt-port

Description sFlow collector is through out-of-band management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

collector_ip-list_customized-setting

Specification	Value
Type	*object*

a10-proprietary-polling

Description Enable counters for ACOS control blocks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

counter-polling

Description Enable counter polling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event-notification

Description Enable event notification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

export-enable

Description 'export': Export settings;

Type: string

Supported Values: export

packet-sampling

Description Enable packet sampling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

collector_ipv6-list

Specification	Value
Type	*list*
Block object keys	

addr

Description Configure sFlow collector IPv6 address

Type: string

Format: ipv6-address

customized-setting

Description: customized-setting is a **JSON Block**. Please see below for *collector_ipv6-list_customized-setting*

Type: Object

Reference Object: */axapi/v3/sflow/collector/ipv6/{addr}+{port}/customized-setting*

port

Description Port number (default is 6343)

Type: number

Range: 1-65535

Default: 6343

use-mgmt-port

Description sFlow collector is through out-of-band management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

collector_ipv6-list_customized-setting

Specification	Value
Type	*object*

a10-proprietary-polling

Description Enable counters for ACOS control blocks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

counter-polling

Description Enable counter polling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event-notification

Description Enable event notification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

export-enable

Description 'export': Customizes export settings for collector;

Type: string

Supported Values: export

packet-sampling

Description Enable packet sampling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.118.2 sflow agent

Configure sFlow agent

agent Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	agent
Element URI	/axapi/v3/sflow/agent
Element Attributes	agent_attributes
Partition Visibility	shared
Schema	`agent schema`

Operations Allowed:

Get Object

GET

/axapi/v3/sflow/agent

agent_attributes

agent attributes

address

Description: address is a **JSON Block**. Please see below for *address*

Type: Object

Reference Object: */axapi/v3/sflow/agent/address*

address

Specification	Value
Type	*object*

ip

Description Configure sFlow agent IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ip and ipv6 are mutually exclusive

ipv6

Description Configure sFlow agent IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 and ip are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.118.3 sflow agent address

Configure agent address used in sFlow datagram, default use management IP address

address Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	address
Element URI	/axapi/v3/sflow/agent/address
Element Attributes	address_attributes
Partition Visibility	shared
Schema	`address schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sflow/agent/address

address attributes

```
POST /axapi/v3/sflow/agent/address
Payload:
{
    "address": {
        "ip": "3.3.3.3"
    }
}
```

Get Object

GET

/axapi/v3/sflow/agent/address

address attributes

```
GET /axapi/v3/sflow/agent/address
Reponse:
{
    "address": {
        "ip": "3.3.3.3",
        "uuid": "f1eb1ab8-08ff-11f0-8ff3-bb094934892a",
        "a10-url": "/axapi/v3/sflow/agent/address"
    }
}
```

Modify Object

POST

/axapi/v3/sflow/agent/address

address attributes

Replace Object

PUT

/axapi/v3/sflow/agent/address

address attributes

```
PUT /axapi/v3/sflow/agent/address
Payload:
{
    "address": {
        "ip": "3.3.3.4"
```

(continues on next page)

(continued from previous page)

```
    }
}
```

Delete Object

DELETE

/axapi/v3/sflow/agent/address

address attributes

```
DELETE /axapi/v3/sflow/agent/address
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

address attributes

ip

Description Configure sFlow agent IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ip and ipv6 are mutually exclusive

ipv6

Description Configure sFlow agent IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 and ip are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.118.4 sflow collector

Configure sFlow collector (a.k.a. receiver)

collector Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	collector
Element URI	/axapi/v3/sflow/collector
Element Attributes	collector_attributes
Partition Visibility	shared
Schema	`collector schema`

Operations Allowed:

Get Object

GET

/axapi/v3/sflow/collector

collector_attributes

collector attributes

custom-list

Type: List

Reference Object: */axapi/v3/sflow/collector/custom/{name}*

ipv6-list

Type: List

Reference Object: */axapi/v3/sflow/collector/ipv6/{addr}+{port}*

custom-list

Specification	Value
Type	*list*
Block object keys	

ipv4_addr

Description Configure IP address of the sFlow Receiver

Type: string

Format: ipv4-address

ipv6_addr

Description Configure IPv6 address of the sFlow Receiver

Type: string

Format: ipv6-address

name

Description Configure name of sFlow Receiver

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host-list

Specification	Value
Type	*list*
Block object keys	

customized-setting

Description: customized-setting is a **JSON Block**. Please see below for *host-list_customized-setting*

Type: Object

Reference Object: */axapi/v3/sflow/collector/host/{name}+{port}/customized-setting*

name

Description Configure FQDN name of sFlow Receiver

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

port

Description Port number (default is 6343)

Type: number

Range: 1-65535

Default: 6343

use-mgmt-port

Description sFlow collector is through out-of-band management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host-list_customized-setting

Specification	Value
Type	*object*

a10-proprietary-polling

Description Enable counters for ACOS control blocks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

counter-polling

Description Enable counter polling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event-notification

Description Enable event notification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

export-enable

Description 'export': Customizes export settings for collector;

Type: string

Supported Values: export

packet-sampling

Description Enable packet sampling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list

Specification	Value
Type	*list*
Block object keys	

addr

Description Configure sFlow collector IP address

Type: string

port

Description Port number (default is 6343)

Type: number

Range: 1-65535

Default: 6343

use-mgmt-port

Description sFlow collector is through out-of-band management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list_customized-setting

Specification	Value
Type	*object*

a10-proprietary-polling

Description Enable counters for ACOS control blocks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

counter-polling

Description Enable counter polling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event-notification

Description Enable event notification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

export-enable

Description 'export': Export settings;

Type: string

Supported Values: export

packet-sampling

Description Enable packet sampling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6-list

Specification	Value
Type	*list*
Block object keys	

addr

Description Configure sFlow collector IPv6 address

Type: string

Format: ipv6-address

customized-setting

Description: customized-setting is a **JSON Block**. Please see below for *ipv6-list_customized-setting*

Type: Object

Reference Object: */axapi/v3/sflow/collector/ipv6/{addr}+{port}/customized-setting*

port

Description Port number (default is 6343)

Type: number

Range: 1-65535

Default: 6343

use-mgmt-port

Description sFlow collector is through out-of-band management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6-list_customized-setting

Specification	Value
Type	*object*

a10-proprietary-polling

Description Enable counters for ACOS control blocks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

counter-polling

Description Enable counter polling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event-notification

Description Enable event notification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

export-enable

Description 'export': Customizes export settings for collector;

Type: string

Supported Values: export

packet-sampling

Description Enable packet sampling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.118.5 sflow collector custom

Configure Custom sFlow collector

custom Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*custom-list*
Collection URI	/axapi/v3/sflow/collector/custom
Element Name	custom
Element URI	/axapi/v3/sflow/collector/custom/{name}
Element Attributes	custom_attributes
Partition Visibility	shared
Schema	`custom schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sflow/collector/custom

custom attributes

Create List

POST

/axapi/v3/sflow/collector/custom

custom attributes

Get Object

GET

/axapi/v3/sflow/collector/custom/{name}

custom attributes

Get List

GET

/axapi/v3/sflow/collector/custom

custom-list

Modify Object

POST

/axapi/v3/sflow/collector/custom/{name}

custom attributes

Delete Object

DELETE

/axapi/v3/sflow/collector/custom/{name}

custom attributes

custom-list

custom-list is **JSON List** of *custom attributes*

```
custom-list : [
        { custom attributes },
        { custom attributes },
        ...
    ]
```

custom attributes

ipv4_addr

Description Configure IP address of the sFlow Receiver

Type: string

Format: ipv4-address

ipv6_addr

Description Configure IPv6 address of the sFlow Receiver

Type: string

Format: ipv6-address

name

Description Configure name of sFlow Receiver

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.118.6 sflow collector host

Configure sFlow collector using FQDN

host Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name, port*
Collection Name	*host-list*
Collection URI	/axapi/v3/sflow/collector/host
Element Name	host
Element URI	/axapi/v3/sflow/collector/host/{name}+{port}
Element Attributes	host_attributes
Partition Visibility	shared
Schema	`host schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sflow/collector/host

host attributes

Create List

POST

/axapi/v3/sflow/collector/host

host attributes

Get Object

GET

/axapi/v3/sflow/collector/host/{name}+{port}

host attributes

Get List

GET

/axapi/v3/sflow/collector/host

host-list

Modify Object

POST

host-list

Delete Object

DELETE

/axapi/v3/sflow/collector/host/{name}+{port}

host attributes

host-list

host-list is **JSON List** of *host attributes*

host-list : [

{ *host attributes* },

{ *host attributes* },

...

]

host attributes

customized-setting

Description: customized-setting is a **JSON Block**. Please see below for *customized-setting*

Type: Object

Reference Object: */axapi/v3/sflow/collector/host/{name}+{port}/customized-setting*

name

Description Configure FQDN name of sFlow Receiver

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

port

Description Port number (default is 6343)

Type: number

Range: 1-65535

Default: 6343

use-mgmt-port

Description sFlow collector is through out-of-band management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

customized-setting

Specification	Value
Type	*object*

a10-proprietary-polling

Description Enable counters for ACOS control blocks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

counter-polling

Description Enable counter polling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event-notification

Description Enable event notification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

export-enable

Description 'export': Customizes export settings for collector;

Type: string

Supported Values: export

packet-sampling

Description Enable packet sampling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.118.7 sflow collector host customized-setting

Customize export settings for collector

customized-setting Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	customized-setting
Element URI	/axapi/v3/sflow/collector/host/{name}+{port}/customized-setting
Element Attributes	customized-setting_attributes
Partition Visibility	shared
Schema	`customized-setting schema`

Operations Allowed:

Delete Object

DELETE

/axapi/v3/sflow/collector/host/{name}+{port}/customized-setting

customized-setting attributes

customized-setting attributes

a10-proprietary-polling

Description Enable counters for ACOS control blocks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

counter-polling

Description Enable counter polling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event-notification

Description Enable event notification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

export-enable

Description 'export': Customizes export settings for collector;

Type: string

Supported Values: export

packet-sampling

Description Enable packet sampling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.118.8 sflow collector ip

Configure sFlow IPv4 collector

ip Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*addr, port*
Collection Name	*ip-list*
Collection URI	/axapi/v3/sflow/collector/ip
Element Name	ip
Element URI	/axapi/v3/sflow/collector/ip/{addr}+{port}
Element Attributes	ip_attributes
Partition Visibility	shared
Schema	`ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sflow/collector/ip

ip attributes

```
POST /axapi/v3/sflow/collector/ip/
Payload:
{
    "ip": {
        "addr": "3.3.3.3",
        "port": 1,
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/sflow/collector/ip

ip attributes

Get Object

GET

/axapi/v3/sflow/collector/ip/{addr}+{port}

ip attributes

```
GET /axapi/v3/sflow/collector/ip/3.3.3.3+1
Reponse:
{
    "ip": {
        "addr": "3.3.3.3",
        "port": 1,
        "use-mgmt-port": 0,
        "uuid": "252fd1c0-0900-11f0-8ff3-bb094934892a",
        "user-tag": "a",
        "a10-url": "/axapi/v3/sflow/collector/ip/3.3.3.3+1"
    }
}
```

Get List

GET

/axapi/v3/sflow/collector/ip

ip-list

Modify Object

POST

/axapi/v3/sflow/collector/ip/{addr}+{port}

ip attributes

Replace Object

PUT

/axapi/v3/sflow/collector/ip/{addr}+{port}

ip attributes

```
PUT /axapi/v3/sflow/collector/ip/3.3.3.3+1
Payload:
{
    "ip": {
        "addr": "3.3.3.3",
        "port": 1,
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/sflow/collector/ip

ip-list

Delete Object

DELETE

/axapi/v3/sflow/collector/ip/{addr}+{port}

ip attributes

```
DELETE /axapi/v3/sflow/collector/ip/3.3.3.3+1
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

ip-list

ip-list is **JSON List** of *ip attributes*

ip-list : [

{ *ip attributes* },

{ *ip attributes* },

...

]

ip attributes

addr

Description Configure sFlow collector IP address

Type: string

Format: ipv4-address

customized-setting

Description: customized-setting is a **JSON Block**. Please see below for *customized-setting*

Reference Object: */axapi/v3/sflow/collector/ip/{addr}+{port}/customized-setting*

port

Description Port number (default is 6343)

Type: number

Range: 1-65535

Default: 6343

use-mgmt-port

Description sFlow collector is through out-of-band management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

customized-setting

Specification	Value
Type	*object*

a10-proprietary-polling

Description Enable counters for ACOS control blocks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

counter-polling

Description Enable counter polling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event-notification

Description Enable event notification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

export-enable

Description 'export': Export settings;

Type: string

Supported Values: export

packet-sampling

Description Enable packet sampling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.118.9 sflow collector ip customized-setting

Customize settings for collector

customized-setting Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	customized-setting

Description VE interface to sample

Type: number

Reference Object: */axapi/v3/interface/ve*

acos-info

Specification	Value
Type	*object*

toggle

Description 'enable': Enable polling ACOS Information; 'disable': Disable polling ACOS Information;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list

Specification	Value
Type	*list*
Block object keys	

start

Description Ethernet interface to poll

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ddos

Specification	Value
Type	*object*

dns-cache-zone-stats

Description Enable polling for dns cache per instance and per zone statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dyn-entry-stats

Description Enable polling for dynamic entry statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-anomaly-stats

Description Enable Polling for system wide anomaly statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

toggle

Description 'enable': Enable sflow polling for DDOS statistics; 'disable': Disable sflow polling for DDOS statistics;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-ext-list

Specification	Value
Type	*list*
Block object keys	

start

Description Ethernet interface to poll

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

a10-proprietary

Specification	Value
Type	*object*

export-deprecated-counters

Description Export deprecated counters

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

system-health

Specification	Value
Type	*object*

license-statistics

Description 'enable': Enable polling license statistics; 'disable': Disable polling license statistics;

setting attributes

append-mapping-info

Description Allow TPS to always send mapping ctr block (260, 271, and 272)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

counter-polling-interval

Description sFlow counter polling interval, default is 20

Type: number

Range: 1-200

Default: 20

ddos-source-id-export

Description Enable exporting DDoS sourceID in sflow packet sample

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-counter-polling-mtu

Description Default MTU for counter-polling packets - DDoS 3.2 format only (Default: 1500)

Type: number

Range: 1200-1500

Default: 1500

enlarge-zone-name

Description Allow TPS to packet up to 127 character zone names

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-collection

Description 'enable': Enable local sflow collection (Default); 'disable': Disable local sflow collection;

Type: string

Supported Values: enable, disable

Default: disable

local-t1-polling-interval

Description Set sFlow local counter polling interval for T1 stats

Type: number

Range: 1-18000

local-t2-polling-interval

Description Set sFlow local counter polling interval for T2 stats

Type: number

Range: 1-18000

management-link-utilization

Description limit management link speed in (Mbps)

Type: number

Range: 1-10000

Mutual Exclusion: management-link-utilization and management-link-utilization-percentage are mutually exclusive

management-link-utilization-percentage

Description percentage limit of the management link speed (Default is 30%)

Type: number

Range: 1-100

Default: 30

Mutual Exclusion: management-link-utilization-percentage and management-link-utilization are mutually exclusive

max-header

Description Configure maximum number of bytes that should be copied from a sampled packet (default: 128) (The maximum number of bytes (Default: 128))

Type: number

Range: 14-512

one-blk-per-pkt

Description Forces sFlow packet to only contain one sFlow counter block

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-sampling-rate

Description sFlow packet sampling rate, default is 1000

Type: number

Range: 10-10000

Default: 1000

port-range-end

Description Source port-range end

Type: number

Range: 2049-63640

port-range-start

Description Source port-range

Type: number

Range: 2049-63640

randomize-source-port

Description 'enable': Randomize source port; 'disable': Fix source port 6343; 'packet-sampling-only': Only randomized source port for packet-sampling (Default);

Type: string

Supported Values: enable, disable, packet-sampling-only

Default: packet-sampling-only

source-ip-use-mgmt

Description Use management interface's IP address for source IP of sFlow packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.118.27 sflow source-address

Specify source address of sFlow packet

source-address Specification

Parameter	Value
Type	*Configuration Resource*

Specification	Value
Type	*object*

sni-automap-attributes

Description: sni-automap-attributes is a **JSON Block**. Please see below for *ssl_sni-automap-attributes*

Type: Object

Reference Object: */axapi/v3/slb/ssl/sni-automap-attributes*

ssl_sni-automap-attributes

Specification	Value
Type	*object*

sni-delete-factor

Description Contexts are deleted in groups of this value. Default is 50

Type: number

Range: 1-10000

Default: 50

sni-lower-limit

Description Lower limit for free SNI contexts count. Default is 500

Type: number

Range: 1-65536

Default: 500

sni-upper-limit

Description Upper limit for free SNI contexts count. Default is 2000

Type: number

Range: 1-65536

Default: 2000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ftp-data

Specification	Value
Type	*object*

common

Specification	Value
Type	*object*

N5-new

Description HW assisted N5 SSL module with TLS 1.3 and TLS 1.2 support using OpenSSL 1.1.1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: N5-new,software, software-tls13, QAT, QAT4, N5-old, and software-tls13-offload are mutually exclusive

N5-old

Description HW assisted N5 SSL module with TLS 1.2 support using OpenSSL 0.9.7

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: N5-old,software, software-tls13, QAT, QAT4, N5-new, and software-tls13-offload are mutually exclusive

QAT

Description HW assisted QAT SSL module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: QAT,software, software-tls13, QAT4, N5-new, N5-old, and software-tls13-offload are mutually exclusive

QAT4

Description HW assisted QAT Gen4 SSL module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: QAT4,software, software-tls13, QAT, QAT4, N5-new, N5-old, and software-tls13-offload are mutually exclusive

aflex-persist-uie-chassis-sync-enable

Description Enable aflex persist uie cross PU sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aflex-table-entry-aging-interval

Description aFleX table entry aging interval in second

Type: number

Range: 1-3600

Default: 1

aflex-table-entry-sync

Description: aflex-table-entry-sync is a **JSON Block**. Please see below for *common_aflex-table-entry-sync*

Type: Object

Reference Object: */axapi/v3/slb/common/aflex-table-entry-sync*

after-disable

Description Graceful shutdown after disable server/port and/or virtual server/port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-in-gateway-mode

Description Use source NAT gateway for L3 traffic for gateway mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

attack-resp-code

Description Custom response code

Type: number

Range: 400-599

Default: 410

auto-nat-no-ip-refresh

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

auto-translate-port

Description Auto Translate Port range

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

buff-thresh

Description Set buffer threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

buff-thresh-hw-buff

Description Set hardware buffer threshold

Type: number

Range: 1-2147483647

buff-thresh-relieve-thresh

Description Relieve threshold

Type: number

Range: 0-2147483647

buff-thresh-sys-buff-high

Description Set high water mark of system buffer

Type: number

Range: 0-2147483647

buff-thresh-sys-buff-low

Description Set low water mark of system buffer

Type: number

Range: 0-2147483647

cache-expire-time

Description Cache expiration time, default is 1 minute

Type: number

Range: 1-480

Default: 1

cancel-stream-loop-limit

Description Set global cancel stream loop limit (cancel stream loop limit, default is 5)

Type: number

Range: 0-50

Default: 5

cert-pinning

Description: cert-pinning is a **JSON Block**. Please see below for *common_cert-pinning*

Type: Object

Reference Object: */axapi/v3/slb/common/cert-pinning*

clientside-ip

Description Clientside IP address

Type: string

Format: ipv4-address

clientside-ipv6

Description Clientside IPv6 address

Type: string

Format: ipv6-address

compress-block-size

Description Set compression block size (Compression block size in bytes)

Type: number

Range: 6000-131008

conn-rate-limit

Description: conn-rate-limit is a **JSON Block**. Please see below for *common_conn-rate-limit*

Type: Object

Reference Object: */axapi/v3/slb/common/conn-rate-limit*

custom-message

Description Block message

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-message and custom-page are mutually exclusive

custom-page

Description Specify the custom webpage name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-page and custom-message are mutually exclusive

custom-signal-clist

Description Provide custom signal names

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

ddos-pkt-count-thresh

Description Set packet count threshold for DDOS, default is 100

Type: number

Range: 1-256

Default: 100

ddos-pkt-size-thresh

Description Set data packet size threshold for DDOS, default is 64 bytes

Type: number

Range: 1-256

Default: 64

ddos-protection

Description: ddos-protection is a **JSON Block**. Please see below for *common_ddos-protection*

Type: Object

disable-adaptive-resource-check

Description Disable adaptive resource check based on buffer usage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-persist-scoring

Description Disable Persist Scoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-port-masking

Description Disable masking of ports for CPU hashing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-server-auto-reselect

Description Disable auto reselection of server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache-age

Description Set DNS cache entry age, default is 300 seconds (1-1000000 seconds, default is 300 seconds)

Type: number

Range: 1-1000000

Default: 300

dns-cache-age-min-threshold

Description Set DNS cache entry age minimum threshold, default is 0 seconds (1-1000000 seconds, default is 0 seconds)

Type: number

Range: 0-1000000

Default: 0

dns-cache-aging-weight

Description Set DNS cache entry weight, default is 1

Type: number

Range: 1-7

Default: 1

dns-cache-enable

Description Enable DNS cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache-entry-size

Description Set DNS cache entry size, default is 256 bytes (1-4096 bytes, default is 256 bytes)

Type: number

Range: 1-4096

Default: 256

dns-cache-hitcount-enable

Description Enable DNS cache entry hit count

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache-sync

Description Enable DNS cache HA sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache-sync-entry-size

Description Only sync DNS cache with smaller size (1-4096 bytes, default is 256 bytes)

Type: number

Range: 1-4096

Default: 256

dns-cache-sync-ttl-threshold

Description Only sync DNS cache with longer TTL (0-10000000 seconds, default is 0 second)

Type: number

Range: 0-10000000

Default: 0

dns-cache-ttl-adjustment-enable

Description Enable DNS cache response ttl adjustment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cookie-cache-policy

Description 'served-by-cache': Answer from cache for requests with cookie; 'served-by-backend': Answer from server for requests with cookie;

Type: string

Supported Values: served-by-cache, served-by-backend

dns-negative-cache-bypass-threshold

Description Query bypass threshold of negative cache entry, default is 100

Type: number

Range: 1-65535

Default: 100

dns-negative-cache-caching-non-valid

Description Enable caching non-valid negative response, otherwise will only cache valid negative response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-negative-cache-enable

Description Enable DNS negative cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-persistent-cache-enable

Description Enable persistent DNS cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-persistent-cache-hit-threshold

Description Only save DNS cache with larger hit count (0-10000000, default is 0)

Type: number

Range: 0-10000000

Default: 0

dns-persistent-cache-ttl-threshold

Description Only save DNS cache with longer TTL (0-10000000 seconds, default is 0 second)

Type: number

Range: 0-10000000

Default: 0

dns-response-rate-limiting

Description: dns-response-rate-limiting is a **JSON Block**. Please see below for *common_dns-response-rate-limiting*

Type: Object

Reference Object: */axapi/v3/slb/common/dns-response-rate-limiting*

dns-vip-stateless

Description Enable DNS VIP stateless mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-icmp-to-vip-when-vip-down

Description Drop ICMP to VIP when VIP down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dsr-health-check-enable

Description Enable dsr-health-check (direct server return health check)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ecmp-hash

Description 'system-default': Use system default ecmp hashing algorithm; 'connection-based': Use connection information for hashing;

Type: string

Supported Values: system-default, connection-based

Default: system-default

enable-ddos

Description Enable DDoS protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-fast-path-rerouting

Description Enable Fast-Path Rerouting

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-l7-req-acct

Description Enable L7 request accounting

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

entity

Description 'server': Graceful shutdown server/port only; 'virtual-server': Graceful shutdown virtual server/port only;

Type: string

Supported Values: server, virtual-server

exclude-destination

Description 'local': Maximum local rate; 'remote': Maximum remote rate; (Maximum rates)

Type: string

Supported Values: local, remote

extended-stats

Description Enable global slb extended statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-path-disable

Description Disable fast path in SLB processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-health-check

Description Enable gateway health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

global-dns-cache

Description: global-dns-cache is a **JSON Block**. Please see below for *common_global-dns-cache*

Type: Object

Reference Object: */axapi/v3/slb/common/global-dns-cache*

graceful-shutdown

Description 1-65535, in unit of seconds

Type: number

Range: 1-65535

graceful-shutdown-enable

Description Enable graceful shutdown

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check-to-all-vip

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

honor-server-response-ttl

Description Honor the server reponse TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-fast-enable

Description Enable Http Fast in SLB processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hw-compression

Description Use hardware compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hw-syn-rr

Description Configure hardware SYN round robin (range 1-500000)

Type: number

Range: 1-500000

interval

Description Specify the healthcheck interval, default is 5 seconds (Interval Value, in seconds (default 5))

Type: number

Range: 1-180

Default: 5

ipv4-offset

Description IPv4 Octet Offset for Hash

Type: number

Range: 0-3

Default: 0

ipv6-subnet

Description IPv6 Octet Valid Subnet Length for Hash

Type: number

Range: 0-15

Default: 0

l2l3-trunk-lb-disable

Description Disable L2/L3 trunk LB

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-for-reset-unknown-conn

Description Log when rate exceed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

low-latency

Description Enable low latency mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-buff-queued-per-conn

Description Set per connection buffer threshold (Buffer value range 128-4096)

Type: number

Range: 128-4096

Default: 1000

max-http-header-count

Description Set maximum number of HTTP headers allowed

Type: number

Range: 90-255

Default: 90

max-local-rate

Description Set maximum local rate

Type: number

Range: 1-500

Default: 64

max-persistent-cache

Description Define maximum persistent cache (Maximum persistent cache entry)

Type: number

max-remote-rate

Description Set maximum remote rate

Type: number

Range: 1-1000000

Default: 15000

monitor-mode-enable

Description Enable NG-WAF monitor mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msl-time

Description Configure maximum session life, default is 2 seconds (1-39 seconds, default is 2 seconds)

Type: number

Range: 1-39

Default: 2

mss-table

Description Set MSS table (128-750, default is 536)

Type: number

Range: 128-750

Default: 536

ngwaf-proxy-ipv4

Description IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: ngwaf-proxy-ipv4 and ngwaf-proxy-ipv6 are mutually exclusive

ngwaf-proxy-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ngwaf-proxy-ipv6 and ngwaf-proxy-ipv4 are mutually exclusive

ngwaf-proxy-port

Description Port

Type: number

Range: 1-65534

no-auto-up-on-aflex

Description Don't automatically mark vport up when aFleX is bound

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

odd-even-nat-enable

Description Enable odd even nat pool allocation in dual blade systems

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

odd-even-nat-one-arm

Description Enable odd even nat pool allocation in one-arm deployment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-server-conn-hm-rate

Description One Server Conn Health Check Rate

Type: number

Range: 1-60

override-port

Description Enable override port in DSR health check mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pbslb-entry-age

Description Set global pbslb entry age (minute)

Type: number

Range: 1-127

Default: 6

pbslb-overflow-glid

Description Apply global limit id to overflow pbslb entry

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/glid*

per-thr-percent

Description Percentage of default session count to use for per thread session table size

Type: number

Range: 1-100

ping-sweep-detection

Description 'enable': Enable ping sweep detection; 'disable': Disable ping sweep detection(default);

Type: string

Supported Values: enable, disable

Default: disable

pkt-rate-for-reset-unknown-conn

Description

Type: number

Range: 1-1048575

player-id-check-enable

Description Enable the Player id check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Serverside port number for SNI transmission

Type: number

Range: 1-65535

port-scan-detection

Description 'enable': Enable port scan detection; 'disable': Disable port scan detection(default);

Type: string

Supported Values: enable, disable

Default: disable

pre-process-enable

Description Enable NG-WAF pre-processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

quic

Description: quic is a **JSON Block**. Please see below for *common_quic*

Type: Object

Reference Object: */axapi/v3/slb/common/quic*

range

Description auto translate port range

Type: number

Range: 1-3

range-end

Description port range end

Type: number

Range: 0-65535

range-start

Description port range start

Type: number

Range: 0-65535

rate-limit-logging

Description Configure rate limit logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recursive-ns-cache

Description 'honor-packet-ttl': Honor the lowest TTL among NS records in the server response; 'honor-age-config': Honor the ttl/age settings based on acos dns cache configuration;

Type: string

Supported Values: honor-packet-ttl, honor-age-config

Default: honor-packet-ttl

redirect-dummy-ethernet

Description Ethernet interface (Ethernet interface number)

Type: number

Format: interface

redirect-dummy-vlan

Description VLAN Id

Type: number

Range: 2-4094

Reference Object: */axapi/v3/network/vlan*

reset-stale-session

Description Send reset if session in delete queue receives a SYN packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resolve-port-conflict

Description Enable client port service port conflicts

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-type

Description 'single-answer': Only cache DNS response with single answer; 'round-robin': Round robin;

Type: string

Supported Values: single-answer, round-robin

scale-out

Description Enable SLB scale out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

scale-out-traffic-map

Description Set SLB scaleout traffic-map

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

serverside-ip

Description Serverside IP address

Type: string

Format: ipv4-address

serverside-ipv6

Description Serverside IPv6 address

Type: string

Format: ipv6-address

service-group-on-no-dest-nat-vports

Description 'allow-same': Allow the binding service-group on no-dest-nat virtual ports; 'enforce-different': Enforce that the same service-group can not be bound on different no-dest-nat virtual ports;

Type: string

Supported Values: allow-same, enforce-different

Default: enforce-different

show-slb-server-legacy-cmd

Description Enable show slb server legacy command

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show-slb-service-group-legacy-cmd

Description Enable show slb service-group legacy command

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show-slb-virtual-server-legacy-cmd

Description Enable show slb virtual-server legacy command

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-gwy-for-l3

Description Use source NAT gateway for L3 traffic for transparent mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-on-vip

Description Enable source NAT traffic against VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-preserve

Description: snat-preserve is a **JSON Block**. Please see below for *common_snat-preserve*

Type: Object

software

Description Software

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: software,software-tls13, QAT, QAT4, N5-new, N5-old, and software-tls13-offload are mutually exclusive

software-tls13

Description Software TLS1.3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: software-tls13,software, QAT, QAT4, N5-new, N5-old, and software-tls13-offload are mutually exclusive

software-tls13-offload

Description Software TLS1.3 with CPU Offload Support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: software-tls13-offload,software, software-tls13, QAT, QAT4, N5-new, and N5-old are mutually exclusive

sort-res

Description Enable SLB sorting of resource names

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-module-usage-enable

Description Enable SSL module usage calculations for QAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-n5-delay-tx-enable

Description Enable delay transmission for N5-new

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-ratelimit-cfg

Description: ssl-ratelimit-cfg is a **JSON Block**. Please see below for *common_ssl-ratelimit-cfg*

Type: Object

ssli-cert-not-ready-inspect-limit

Description SSLI asynchronized connection max number, default is 2000 (set to 0 for unlimited size)

Type: number

Range: 0-2147483647

Default: 2000

ssli-cert-not-ready-inspect-timeout

Description SSLI asynchronized connection timeout, default is 10 seconds (seconds, set to 0 for never timeout)

Type: number

Range: 0-2147483647

Default: 10

ssli-silent-termination-enable

Description Terminate the SSLi sessions silently without sending RST/FIN packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssli-sni-hash-enable

Description Enable SSLi SNI hash table

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateless-sg-multi-binding

Description Enable stateless service groups to be assigned to multiple L2/L3 DSR VIPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-disable

Description Disable global slb data statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

substitute-source-mac

Description Substitute Source MAC Address to that of the outgoing interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the healthcheck timeout value, default is 15 seconds (Timeout Value, in seconds (default 15))

Type: number

Range: 1-360

Default: 15

traffic-map-type

Description 'vport': traffic-map per vport; 'global': global traffic-map;

Type: string

Supported Values: vport, global

Default: vport

ttl-threshold

Description Only cache DNS response with longer TTL

Type: number

Range: 1-10000000

use-default-sess-count

Description Use default session count

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-https-proxy

Description NG-WAF connects to Cloud through proxy server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port to connect

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mss-tab

Description Use MSS based on internal table for SLB processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vport-global

Description Configure periodic showtech vport paging global limit

Type: number

Range: 0-512

vport-l3v

Description Configure periodic showtech vport paging l3v limit

Type: number

Range: 0-128

common_aflex-table-entry-sync

Specification	Value
Type	*object*

aflex-table-entry-sync-enable

Description Enable aflex table sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aflex-table-entry-sync-max-key-len

Description aflex table entry max key length to sync

Type: number

Range: 0-1000

Default: 1000

aflex-table-entry-sync-max-value-len

Description aflex table entry max value length to sync

Type: number

Range: 0-1000

Default: 1000

aflex-table-entry-sync-min-lifetime

Description aflex table entry minimum lifetime to sync

Type: number

Range: 0-65535

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_cert-pinning

Specification	Value
Type	*object*

candidate-list-feedback-opt-in

Description: candidate-list-feedback-opt-in is a **JSON Block**. Please see below for *common_cert-pinning_candidate-list-feedback-opt-in*

Type: Object

Reference Object: */axapi/v3/slb/common/cert-pinning/candidate-list-feedback-opt-in*

ttl

Description The ttl of local cert pinning candidate list, multiple of 10 minutes, default is 144 (1440 minutes)

Type: number

Range: 1-1008

Default: 144

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_cert-pinning_candidate-list-feedback-opt-in

Specification	Value
Type	*object*

daily

Description Every day

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: daily and weekly are mutually exclusive

day-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

enable

Description Enable the feedback function

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

schedule

Description schedule the uploading time, default is daily 00:00

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port to connect

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

week-day

Description 'Monday': Monday; 'Tuesday': Tuesday; 'Wednesday': Wednesday; 'Thursday': Thursday; 'Friday': Friday; 'Saturday': Saturday; 'Sunday': Sunday;

Type: string

Supported Values: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday

week-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

weekly

Description Every week

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: weekly and daily are mutually exclusive

common_dns-response-rate-limiting

Specification	Value
Type	*object*

max-table-entries

Description Maximum number of entries allowed

Type: number

Range: 1000-4194304

source-entry-age

Description Source entry age in minutes (default 2)

Type: number

Range: 1-60

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_ssl-ratelimit-cfg

Specification	Value
Type	*object*

disable-rate

Description Disable HW SSL Rate limit for N5-new

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-rate, tls12-rate, and tls13-rate are mutually exclusive

tls12-rate

Description Enabling Rateliming for TLS1.2 HW requests per chip in 1K - default 120

Type: number

Range: 1-1000

Default: 120

Mutual Exclusion: tls12-rate and disable-rate are mutually exclusive

tls13-rate

Description Enabling Rateliming for TLS1.3 HW requests per chip in 1K - default 72

Type: number

Range: 1-200

Default: 72

Mutual Exclusion: tls13-rate and disable-rate are mutually exclusive

common_quic

Specification	Value
Type	*object*

cid-len

Description Length of CID

Type: number

Range: 4-20

Default: 4

cpu-offset

Description Offset for Encoded CPU

Type: number

Range: 0-15

Default: 12

enable-hash

Description Enable CID Hashing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-signature

Description Enable CID Signature Validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

quic-lb-offset

Description Offset for QUIC-LB

Type: number

Range: 0-15

Default: 8

signature

Description Set CID Signature

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

signature-len

Description Offset for CID Signature

Type: number

Range: 1-4

Default: 3

signature-offset

Description Offset for CID Signature

Type: number

Range: 0-15

Default: 4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_global-dns-cache

Specification	Value
Type	*object*

class-list

Description: class-list is a **JSON Block**. Please see below for *common_global-dns-cache_class-list*

Type: Object

Reference Object: */axapi/v3/slb/common/global-dns-cache/class-list*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_global-dns-cache_class-list

Specification	Value
Type	*object*

lid-list

Type: List

Reference Object: */axapi/v3/slb/common/global-dns-cache/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_global-dns-cache_class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *common_global-dns-cache_class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description 'ignore': Ignore the limit and proceed; 'drop': Drop the query when it exceeds limit;

Type: string

Supported Values: ignore, drop

Default: drop

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_global-dns-cache_class-list_lid-list_dns

Specification	Value
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-enable

honor-server-response-ttl

Description Honor the server response TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

Default: 300

weight

Description Weight for cache entry

Type: number

Range: 1-7

Default: 1

common_conn-rate-limit

Specification	Value
Type	*object*

src-ip-list

Type: List

Reference Object: */axapi/v3/slb/common/conn-rate-limit/src-ip/{disable-ipv6-support}+{protocol}*

common_conn-rate-limit_src-ip-list

Specification	Value
Type	*list*
Block object keys	

disable-ipv6-support

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exceed-action

Description Set action if threshold exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit

Description Set max connections per period

Type: number

Range: 1-1000000

limit-period

Description '100': 100 ms; '1000': 1000 ms;

Type: string

Supported Values: 100, 1000

lock-out

Description Set lockout period in seconds if threshold exceeded

Type: number

Range: 1-3600

log

Description Send log if threshold exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': Set TCP connection rate limit; 'udp': Set UDP packet rate limit;

Type: string

Supported Values: tcp, udp

shared

Description Set threshold shared amongst all virtual ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_ddos-protection

Specification	Value
Type	*object*

ipd-enable-toggle

Description 'enable': Enable SLB DDoS protection; 'disable': Disable SLB DDoS protection (default);

Type: string

Supported Values: enable, disable

Default: disable

logging

Description: logging is a **JSON Block**. Please see below for *common_ddos-protection_logging*

Type: Object

packets-per-second

Description: packets-per-second is a **JSON Block**. Please see below for *common_ddos-protection_packets-per-second*

Type: Object

common_ddos-protection_packets-per-second

Specification	Value
Type	*object*

ipd-tcp

Description Configure packets-per-second threshold per TCP port (default: 200)

Type: number

Range: 0-65535

Default: 200

ipd-udp

Description Configure packets-per-second threshold per UDP port (default: 200)

Type: number

Range: 0-65535

Default: 200

common_ddos-protection_logging

Specification	Value
Type	*object*

ipd-logging-toggle

Description 'enable': Enable SLB DDoS protection logging (default); 'disable': Disable SLB DDoS protection logging;

Type: string

Supported Values: enable, disable

Default: enable

common_snat-preserve

Specification	Value
Type	*object*

range

Type: List

common_snat-preserve_range

Specification	Value
Type	*list*
Block object keys	

port1

Description start port

Type: number

Range: 1025-65535

Default: 1025

port2

Description end port which is greater than start

Type: number

Range: 1025-65535

Default: 1025

ssl-scep-cert-status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-cert-pinning-candidate-list

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ac-class-list-list

Specification	Value
Type	*list*
Block object keys	

ac-list

Type: List

name

Description Specify name of the class list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: test

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ac-class-list-list_ac-list

Specification	Value
Type	*list*
Block object keys	

ac-key-string

Description Specify key string

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ac-key-value

Description Specify value string

Type: string

Format: string-rlx

Maximum Length: 639 characters

Maximum Length: 1 characters

ac-match-type

Description 'contains': String contains another string; 'ends-with': String ends with another string; 'equals': String equals another string; 'starts-with': String starts with another string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

action

Description 'add': Add the entry; 'delete': Delete the entry;

Type: string

Supported Values: add, delete

health-check-details

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

health-stat

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

health-stat_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_burst': Number of burst; 'max_jiffie': Maximum number of jiffies; 'min_jiffie': Minimum number of jiffies; 'avg_jiffie': Average number of jiffies; 'open_socket': Number of open sockets; 'open_socket_failed': Number of failed open sockets; 'close_socket': Number of closed sockets; 'connect_failed': Number of failed connections; 'send_packet': Number of packets sent; 'send_packet_failed': Number of packet

send failures; 'recv_packet': Number of received packets; 'recv_packet_failed': Number of failed packet receives; 'retry_times': Retry times; 'timeout': Timouet value; 'unexpected_error': Number of unexpected errors; 'conn_imdt_succ': Number of connection immediete success; 'sock_close_before_17': Number of sockets closed before l7; 'sock_close_without_notify': Number of sockets closed without notify; 'curr_health_rate': Current health rate; 'ext_health_rate': External health rate; 'ext_health_rate_val': External health rate value; 'total_number': Total number; 'status_up': Number of status ups; 'status_down': Number of status downs; 'status_unkn': Number of status unknowns; 'status_other': Number of other status; 'running_time': Running time; 'config_health_rate': Config health rate; 'ssl_post_handshake_packet': Number of ssl post handshake packets before client sends request; 'timeout_with_packet': Number of pin timeouts while socket has packets;

Type: string

Supported Values: all, num_burst, max_jiffie, min_jiffie, avg_jiffie, open_socket, open_socket_failed, close_socket, connect_failed, send_packet, send_packet_failed, recv_packet, recv_packet_failed, retry_times, timeout, unexpected_error, conn_imdt_succ, sock_close_before_17, sock_close_without_notify, curr_health_rate, ext_health_rate, ext_health_rate_val, total_number, status_up, status_down, status_unkn, status_other, running_time, config_health_rate, ssl_post_handshake_packet, timeout_with_packet

fwd-policy-snat-pt-only

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-stats

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-response-rate-limiting

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-response-rate-limiting_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_entries': Current Entry Count; 'total_created': Total Entry Created; 'total_inserted': Total Entry Inserted; 'total_withdrew': Total Entry Withdrew; 'total_ready_to_free': Total Entry Ready To Free; 'total_freed': Total Entry Freed; 'total_logs': Total Logs; 'total_overflow_entry_hits': Total Overflow Entry Hits; 'total_refill': Total Refills; 'total_credit_exceeded': Total Credit Exceeded; 'other_thread_refill': Other Thread Refilling; 'err_entry_create_failed': Entry Creation Failure; 'err_entry_create_oom': Entry Creation Out of Memory; 'err_entry_ext_create_oom': Entry Extension Creation Out of Memory; 'err_entry_insert_failed': Entry Insert Failed; 'err_vport_fail_match': Failed to Match Vport;

Type: string

Supported Values: all, curr_entries, total_created, total_inserted, total_withdrew, total_ready_to_free, total_freed, total_logs, total_overflow_entry_hits, total_refill, total_credit_exceeded, other_thread_refill, err_entry_create_failed, err_entry_create_oom, err_entry_ext_create_oom, err_entry_insert_failed, err_vport_fail_match

ssl-cmp-cert-status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

player-id-list

Specification	Value
Type	*object*

player-record

Type: List

player-id-list_player-record

Specification	Value
Type	*list*
Block object keys	

game-server-ipv4

Description Specify IP address

Type: string

Format: ipv4-address

game-server-ipv6

Description Specify IPv6 address

Type: string

Format: ipv6-address

game-server-port-v4

Description Port

Type: number

Range: 0-65534

game-server-port-v6

Description Port

Type: number

Range: 0-65534

player-id

Description 64/32 bit player id based on config

Type: number

Range: 0-2147483647

template

template_logging-list

Specification	Value
Type	*list*
Block object keys	

auto

Description 'auto': Configure auto NAT for logging, default is auto enabled;

Type: string

Supported Values: auto

Default: auto

Mutual Exclusion: auto and pool are mutually exclusive

format

Description Specify a format string for web logging (format string(less than 250 characters) for web logging)

Type: string

Format: string-rlx

Maximum Length: 250 characters

Maximum Length: 1 characters

keep-end

Description Number of unmasked characters at the end (default: 0)

Type: number

Range: 0-65535

Default: 0

keep-start

Description Number of unmasked characters at the beginning (default: 0)

Type: number

Range: 0-65535

Default: 0

local-logging

Description 1 to enable local logging (1 to enable local logging, default 0)

Type: number

Range: 0-1

Default: 0

mask

Description Character to mask the matched pattern (default: X)

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: X

name

Description Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pcre-mask

Description Mask matched PCRE pattern in the log

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: pool, shared-partition-pool, and auto are mutually exclusive

pool-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

service-group

Description Bind a Service Group to the logging template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

shared-partition-pool

Description Reference a NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and pool are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_cache-list

Specification	Value
Type	*list*
Block object keys	

accept-reload-req

Description Accept reload requests via cache-control directives in HTTP headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

age

Description Specify duration in seconds cached content valid, default is 3600 seconds (seconds that the cached content is valid (default 3600 seconds))

Type: number

Range: 1-999999

Default: 3600

default-policy-nocache

Description Specify default policy to be to not cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-insert-age

Description Disable insertion of age header in response served from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-insert-via

Description Disable insertion of via header in response served from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-uri-policy

Type: List

logging

Description Specify logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

max-cache-size

Description Specify maximum cache size in megabytes, default is 80MB (RAM cache size in megabytes (default 80MB))

Type: number

Range: 1-4096

Default: 80

max-content-size

Description Maximum size (bytes) of response that can be cached - default 81920 (80KB)

Type: number

Range: 0-268435455

Default: 81920

min-content-size

Description Minimum size (bytes) of response that can be cached - default 512

Type: number

Range: 0-268435455

Default: 512

name

Description Specify cache template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/slb-templ-cache-tmpl*

remove-cookies

Description Remove cookies in response and cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

replacement-policy

Description 'LFU': LFU;

Type: string

Supported Values: LFU

Default: LFU

sampling-enable

Type: List

uri-policy

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-host

Description Verify request using host before sending response from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_cache-list_local-uri-policy

Specification	Value
Type	*list*
Block object keys	

local-uri

Description Specify Local URI for caching (Specify URI pattern that the policy should be applied to, maximum 63 charaters)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_cache-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Cache hits; 'miss': Cache misses; 'bytes_served': Bytes served from cache; 'total_req': Total requests received; 'caching_req': Total requests to cache; 'nc_req_header': slbTemplateCacheNcReqHeader, help nc_req_header; 'nc_res_header': slbTemplateCacheNcResHeader, help nc_res_header; 'rv_success': some help string; 'rv_failure': slbTemplateCacheRvFailure, help rv_failure; 'ims_request': some help string; 'nm_response': some help string; 'rsp_type_CL': some help string; 'rsp_type_CE': some help string; 'rsp_type_304': some help string; 'rsp_type_other': some help string; 'rsp_no_compress': some help string; 'rsp_gzip': some help string; 'rsp_deflate': some help string; 'rsp_other': some help string; 'nocache_match': some help string; 'match': some help string; 'invalidate_match': some help string; 'content_toobig': slbTemplateCacheContentToobig, help content_toobig; 'content_toosmall': slbTemplateCacheContentToosmall, help content_toosmall; 'entry_create_failures': slbTemplateCacheEntryCreateFailures, help entry_create_failures; 'mem_size': some help string; 'entry_num': some help string; 'replaced_entry': some help string; 'aging_entry': some help string; 'cleaned_entry': some help string; 'rsp_type_stream': some help string; 'header_save_error': some help string; 'rsp_br': rsp_br;

Type: string

Supported Values: all, hits, miss, bytes_served, total_req, caching_req, nc_req_header, nc_res_header, rv_success, rv_failure, ims_request, nm_response, rsp_type_CL, rsp_type_CE, rsp_type_304, rsp_type_other, rsp_no_compress, rsp_gzip, rsp_deflate, rsp_other, nocache_match, match, invalidate_match, content_toobig, content_toosmall, entry_create_failures, mem_size, entry_num, replaced_entry, aging_entry, cleaned_entry, rsp_type_stream, header_save_error, rsp_br

template_cache-list_uri-policy

Specification	Value
Type	*list*
Block object keys	

cache-action

Description 'cache': Specify if certain URIs should be cached; 'nocache': Specify if certain URIs should not be cached;

Type: string

Supported Values: cache, nocache

cache-value

Description Specify seconds that content should be cached, default is age specified in cache template

Type: number

Range: 1-999999

invalidate

Description Specify if URI should invalidate cache entries matching pattern (pattern that would match entries to be invalidated (64 chars max))

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uri

Description Specify URI for cache policy (Specify URI pattern that the policy should be applied to, maximum 63 charaters)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_port-list

Specification	Value
Type	*list*
Block object keys	

add

Description Slow start connection limit add by a number every interval (Add by this number every interval)

Type: number

Range: 1-4095

Mutual Exclusion: add and times are mutually exclusive

bw-rate-limit

Description Configure bandwidth rate limit on real server port (Bandwidth rate limit in Kbps)

Type: number

Range: 1-16777216

bw-rate-limit-duration

Description Duration in seconds the observed rate needs to honor

Type: number

Range: 1-250

bw-rate-limit-no-logging

Description Do not log bandwidth rate limit related state transitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Resume server selection after bandwidth drops below this threshold (in Kbps) (Bandwidth rate limit resume threshold (in Kbps))

Type: number

Range: 1-16777216

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-flaps

Description service dampening flaps count (max-flaps allowed in flap period)

Type: number

Range: 1-255

decrement

Description Decrease after every round of DNS query (default is 0)

Type: number

Range: 0-7

Default: 0

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-nat

Description Destination NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

down-grace-period

Description Port down grace period (Down grace period in seconds)

Type: number

Range: 1-86400

down-timer

Description The timer to bring the marked down server/port to up (default is 0, never bring up) (The timer to bring up server (in second, default is 0))

Type: number

Range: 0-255

Default: 0

dscp

Description Differentiated Services Code Point (DSCP to Real Server IP Mapping Value)

Type: number

Range: 1-63

dynamic-member-priority

Description Set dynamic member's priority (Initial priority (default is 16))

Type: number

Range: 1-16

Default: 16

every

Description Slow start connection limit increment interval (default 10)

Type: number

Range: 1-60

Default: 10

extended-stats

Description Enable extended statistics on real server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

flap-period

Description take service out of rotation if max-flaps exceeded within time in seconds

Type: number

Range: 1-255

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

inband-health-check

Description Use inband traffic to detect port's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

initial-slow-start

Description Initial slow start connection limit (default 128)

Type: number

Range: 1-4095

Default: 128

name

Description Port template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

no-ssl

Description No SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

reassign

Description Maximum reassign times before declear the server/port down (default is 25) (The maximum reassign number)

Type: number

Range: 0-255

Default: 25

request-rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

request-rate-limit

Description Request rate limit

Type: number

Range: 1-1048575

request-rate-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resel-on-reset

Description When receiving reset from server, do the server/port reselection (default is 0, don't do reselection)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restore-svc-time

Description put the service back to the rotation after time in seconds

Type: number

Range: 1-4095

resume

Description Resume accepting new connection after connection number drops below threshold (Connection resume threshold)

Type: number

Range: 1-1048575

retry

Description Maximum retry times before reassign this connection to another server/port (default is 2) (The maximum retry number)

Type: number

Range: 0-7

Default: 2

shared-partition-pool

Description Reference a NAT pool or pool-group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and source-nat are mutually exclusive

slow-start

Description Slowly ramp up the connection number after port is up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-nat

Description Source NAT (IP NAT Pool or pool group name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: source-nat and shared-partition-pool are mutually exclusive

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server port; 'stats-data-disable': Disable statistical data collection for real server port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

sub-group

Description Divide service group members into different sub groups (Sub group ID (default is 0))

Type: number

Range: 0-15

Default: 0

template-port-pool-shared

Description Source NAT (IP NAT Pool or pool group name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

till

Description Slow start ends when slow start connection limit reaches a number (default 4096) (Slow start ends when connection limit reaches this number)

Type: number

Range: 1-65535

Default: 4096

times

Description Slow start connection limit multiply by a number every interval (default 2) (Multiply by this number every interval)

Type: number

Range: 2-10

Default: 2

Mutual Exclusion: times and add are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight (port weight)

Type: number

Range: 1-1000

Default: 1

template_connection-reuse-list

Specification	Value
Type	*list*
Block object keys	

add-header

Description Insert HTTP Connection: keep-alive header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

keep-alive-conn

Description Keep a number of server connections open

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit-per-server

Description Max Server Connections allowed (Connections per Server Port (default 1000))

Type: number

Range: 0-65535

Default: 1000

name

Description Connection Reuse Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

num-conn-per-port

Description Connections per Server Port (default 100)

Type: number

Range: 1-1024

Default: 100

preopen

Description Preopen server connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout in seconds. Multiple of 60 (default 2400)

Type: number

Range: 60-3600

Default: 2400

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_link-cost-list

Specification	Value
Type	*list*
Block object keys	

bandwidth-interval

Description Interval duration in seconds

Type: number

Range: 1-60

Default: 5

name

Description Server Link-Cost Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

overage-bandwidth-cost

Description Configure overage bandwidth cost on real server (Overage bandwidth cost per Mbpi)

Type: number

Range: 0-4294967295

Default: 0

prepaid-bandwidth

Description Configure prepaid bandwidth on real server (Prepaid Bandwidth in Mbpi)

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_link-cost-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'link_total_fwd_bytes': Total bytes fwd for link; 'interval_fwd_bytes': Link Cost bytes processed in forward direction per interval; 'link_total_conn': Link Cost total connection; 'interval_avg_throughput': Link Cost average throughput per interval; 'interval_max_throughput': Link Cost max throughput per interval;

Type: string

Supported Values: all, link_total_fwd_bytes, interval_fwd_bytes, link_total_conn, interval_avg_throughput, interval_max_throughput

template_reqmod-icap-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

allowed-http-methods

Description List of allowed HTTP methods. Default is "Allow All". (List of HTTP methods allowed (default "Allow All"))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

bypass-ip-cfg

Type: List

disable-http-server-reset

Description Don't reset http server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-close

Description When template sg is down mark vport down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

include-protocol-in-uri

Description Include protocol and port in HTTP URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-only-allowed-method

Description Only log allowed HTTP method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description logging template (Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

min-payload-size

Description min-payload-size value 0 - 65535, default is 0

Type: number

Range: 0-65535

Default: 0

name

Description Reqmod ICAP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

preview

Description Preview value 1 - 32768, default is 32768

Type: number

Range: 1-32768

Default: 32768

server-ssl

Description Server SSL template (Server SSL template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

service-url

Description URL to send to ICAP server (Service URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

x-auth-url

Description Use URL format for authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_reqmod-icap-list_bypass-ip-cfg

Specification	Value
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass reqmod-icap service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

template_smpp-list

Specification	Value
Type	*list*
Block object keys	

client-enquire-link

Description Respond client ENQUIRE_LINK packet directly instead of forwarding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SMPP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password

Description Configure the password used to bind

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-enquire-link

Description Send server ENQUIRE_LINK packet for every persist connection when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-enquire-link-val

Description Set interval of keep-alive packet for each persistent connection (second, default is 30)

Type: number

Range: 5-300

Default: 30

server-selection-per-request

Description Force server selection on every SMPP request when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user

Description Configure the user to bind (The name used to bind)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_smtp-list

Specification	Value
Type	*list*
Block object keys	

LF-to-CRLF

Description Change the LF to CRLF for smtp end of line

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-domain-switching

Type: List

client-starttls-type

Description 'optional': STARTTLS is optional requirement; 'enforced': Must issue START-TLS command before mail transaction;

Type: string

Supported Values: optional, enforced

command-disable

Type: List

error-code-to-client

Description Would transfer error code(554) to client, when getting it from connection establishing with real-server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SMTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-domain

Description Config the domain of the email servers (Server's domain, default is "mail-server-domain")

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

Default: mail-server-domain

server-starttls-type

Description 'optional': STARTTLS is optional requirement; 'enforced': Must issue START-TLS command before mail transaction;

Type: string

Supported Values: optional, enforced

service-ready-msg

Description Set SMTP service ready message (SMTP service ready message, default is "ESMTP mail service ready")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: ESMTP mail service ready

template

Description: template is a **JSON Block**. Please see below for *template_smtp-list_template*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_smtp-list_client-domain-switching

Specification	Value
Type	*list*
Block object keys	

match-string

Description Domain name string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

service-group

Description Select service group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

switching-type

Description 'contains': Specify domain name string if domain contains another string; 'ends-with': Specify domain name string if domain ends with another string; 'starts-with': Specify domain string if domain starts with another string;

Type: string

Supported Values: contains, ends-with, starts-with

template_smtp-list_template

Specification	Value
Type	*object*

logging

Description Logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

template_smtp-list_command-disable

Specification	Value
Type	*list*
Block object keys	

disable-type

Description 'expn': Disable SMTP EXPN commands; 'turn': Disable SMTP TURN commands; 'vrfy': Disable SMTP VRFY commands;

Type: string

Supported Values: expn, turn, vrfy

template_external-service-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

bypass-ip-cfg

Type: List

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

name

Description External Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

request-header-forward-list

Type: List

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

type

Description 'skyfire-icap': Skyfire ICAP service; 'url-filter': URL filtering service;

Type: string

Supported Values: skyfire-icap, url-filter

Default: url-filter

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_external-service-list_bypass-ip-cfg

Specification	Value
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass external service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

template_external-service-list_request-header-forward-list

Specification	Value
Type	*list*
Block object keys	

request-header-forward

Description Request header to be forwarded to external service (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_tcp-list

Specification	Value
Type	*list*
Block object keys	

alive-if-active

Description keep connection alive if active traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description send reset to client when server is disabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and down are mutually exclusive

down

Description send reset to client when server is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: down and disable are mutually exclusive

force-delete-timeout

Description The maximum time that a session can stay in the system before being delete (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being delete (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default off (half close idle timeout in second, default off)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default off (half open idle timeout in second, default off)

Type: number

Range: 1-60

idle-timeout

Description Idle Timeout value (Interval of 60 seconds), default 120 seconds (idle timeout in second, default 120)

Type: number

Range: 1-2097151

Default: 120

initial-window-size

Description Set the initial window size (number)

Type: number

Range: 1-65535

insert-client-ip

Description Insert client ip into TCP option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lan-fast-ack

Description Enable fast TCP ack on LAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description 'init': init only log; 'term': termination only log; 'both': both initial and termination log;

Type: string

Supported Values: init, term, both

name

Description Fast TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

proxy-header

Description: proxy-header is a **JSON Block**. Please see below for *template_tcp-list_proxy-header*

Type: Object

qos

Description QOS level (number)

Type: number

Range: 1-63

re-select-if-server-down

Description re-select another server if service port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-follow-fin

Description send reset to client or server upon receiving first fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-fwd

Description send reset to server if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-rev

Description send reset to client if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_tcp-list_proxy-header

Specification	Value
Type	*object*

proxy-header-action

Description 'insert': Insert proxy header;

Type: string

Supported Values: insert

proxy-header-version

Description 'v1': version 1; 'v2': version 2;

Type: string

Supported Values: v1, v2

template_diameter-list

Specification	Value
Type	*list*
Block object keys	

avp-code

Description avp code

Type: number

Range: 1-2147483647

avp-list

Type: List

avp-string

Description pattern to be matched in the avp string name, max length 127 bytes

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

customize-cea

Description customizing cea response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dwr-time

Description dwr health-check timer interval (in 100 milli second unit, default is 100, 0 means unset this option)

Type: number

Range: 0-2147483647

Default: 100

dwr-up-retry

Description number of successful dwr health-check before declaring target up

Type: number

Range: 1-7

Default: 3

forward-to-latest-server

Description Forward client message to the latest server that sends message with the same session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-unknown-session-id

Description Forward server message even it has unknown session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

idle-timeout

Description user sesison idle timeout (in minutes, default is 5)

Type: number

Range: 1-65535

Default: 5

load-balance-on-session-id

Description Load balance based on the session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-code-list

Type: List

multiple-origin-host

Description allowing multiple origin-host to a single server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description diameter template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

origin-host

Description: origin-host is a **JSON Block**. Please see below for *template_diameter-list_origin-host*

Type: Object

Reference Object: */axapi/v3/slb/template/diameter/{name}/origin-host*

origin-realm

Description origin-realm name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

product-name

Description product name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

relaxed-origin-host

Description Relaxed Origin-Host Format

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-name

Description service group name, this is the service group that the message needs to be copied to

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

session-age

Description user session age allowed (default 10), this is not idle-time (in minutes)

Type: number

Range: 1-65535

Default: 10

terminate-on-cca-t

Description remove diameter session when receiving CCA-T message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vendor-id

Description vendor-id avp (Vendor Id)

Type: number

Range: 0-2147483647

Default: 0

template_diameter-list_message-code-list

Specification	Value
Type	*list*
Block object keys	

message-code

Description

Type: number

Range: 1-2147483647

template_diameter-list_avp-list

Specification	Value
Type	*list*
Block object keys	

avp

Description customize avps for cer to the server (avp number)

Type: number

Range: 0-2147483647

int32

Description 32 bits integer

Type: number

Range: 0-2147483647

Mutual Exclusion: int32, int64, and string are mutually exclusive

int64

Description 64 bits integer

Type: number

Range: 0-2147483647

Mutual Exclusion: int64, int32, and string are mutually exclusive

mandatory

Description mandatory avp

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

string

Description String (string name, max length 127 bytes)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: string, int32, and int64 are mutually exclusive

template_diameter-list_origin-host

Specification	Value
Type	*object*

origin-host-name

Description origin-host name avp

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_udp-list

Specification	Value
Type	*list*
Block object keys	

age

Description short age (in sec), default is 31

Type: number

Range: 1-31

avp

Description '4': NAS-IP-address; '8': Framed-IP-Address;

Type: string

Supported Values: 4, 8

disable-clear-session

Description Disable immediate clearing of session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

idle-timeout

Description Idle Timeout value (Interval of 60 seconds), default 120 seconds (idle timeout in second, default 120)

Type: number

Range: 1-2097151

Default: 120

immediate

Description Immediate Removal after Transaction

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: immediate and short are mutually exclusive

name

Description Fast UDP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

qos

Description QOS level (number)

Type: number

Range: 1-63

radius-lb-method-hash-type

Description 'ip': IP-Hash;

Type: string

Supported Values: ip, ipv6

re-select-if-server-down

Description re-select another server if service port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

short

Description Short lived session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: short and immediate are mutually exclusive

stateless-conn-timeout

Description Stateless Current Connection Timeout value (5 - 120 seconds) (idle timeout in second, default 120)

Type: number

Range: 5-120

Default: 120

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v6avp

Description '168': Framed-IPv6-Address; '97': Framed-IPv6-PrefixFramed-IPv6-Prefix;

Type: string

Supported Values: 168, 97

template_link-down-on-restart

Specification	Value
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_http-policy-list

Specification	Value
Type	*list*
Block object keys	

cookie-name

Description name of cookie to match (Cookie Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

geo-location-match

Type: List

http-policy-match

Type: List

multi-match-rule-list

Type: List

Reference Object: */axapi/v3/slb/template/http-policy/{name}/multi-match-rule/{multi-match}*

name

Description http-policy template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_http-policy-list_http-policy-match

Specification	Value
Type	*list*
Block object keys	

match-string

Description URL String, use "[no-name]" for empty query-param-name match, use "[no-value]" for empty query-param-value match

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

match-type

Description 'contains': Select service group if URL string contains another string; 'ends-with': Select service group if URL string ends with another string; 'equals': Select service group if URL string equals another string; 'starts-with': Select service group if URL string starts with another string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

type

Description 'cookie': cookie value match; 'host': hostname match; 'url': URL match; 'header-name': header name match; 'header-value': header value match; 'query-param-name': query parameter name; 'query-param-value': query parameter value;

Type: string

Supported Values: cookie, host, url, header-name, header-value, query-param-name, query-param-value

template_http-policy-list_multi-match-rule-list

Specification	Value
Type	*list*
Block object keys	

cookie-name-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-contains-type

Description 'contains': Cookie name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-name-contains-type,cookie-name-equals-type, cookie-name-starts-with-type, and cookie-name-ends-with-type are mutually exclusive

cookie-name-ends-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-ends-with-type

Description 'ends-with': Cookie name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-name-ends-with-type,cookie-name-equals-type, cookie-name-contains-type, and cookie-name-starts-with-type are mutually exclusive

cookie-name-equals-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-equals-type

Description 'equals': Cookie name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-name-equals-type,cookie-name-contains-type, cookie-name-starts-with-type, and cookie-name-ends-with-type are mutually exclusive

cookie-name-starts-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-starts-with-type

Description 'starts-with': Cookie name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-name-starts-with-type,cookie-name-equals-type, cookie-name-contains-type, and cookie-name-ends-with-type are mutually exclusive

cookie-name-value-match

Description When enabled, the rule will match only when both cookie-name and cookie-value matches with same cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cookie-value-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-contains-type

Description 'contains': Cookie value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-value-contains-type,cookie-value-equals-type, cookie-value-starts-with-type, and cookie-value-ends-with-type are mutually exclusive

cookie-value-ends-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-ends-with-type

Description 'ends-with': Cookie value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-value-ends-with-type,cookie-value-equals-type, cookie-value-contains-type, and cookie-value-starts-with-type are mutually exclusive

cookie-value-equals-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-equals-type

Description 'equals': Cookie value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-value-equals-type,cookie-value-contains-type, cookie-value-starts-with-type, and cookie-value-ends-with-type are mutually exclusive

cookie-value-starts-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-starts-with-type

Description 'starts-with': Cookie value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-value-starts-with-type,cookie-value-equals-type, cookie-value-contains-type, and cookie-value-ends-with-type are mutually exclusive

header-name-contains-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-contains-type

Description 'contains': Header name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-name-contains-type,header-name-equals-type, header-name-starts-with-type, and header-name-ends-with-type are mutually exclusive

header-name-ends-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-ends-with-type

Description 'ends-with': Header name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-name-ends-with-type,header-name-equals-type, header-name-contains-type, and header-name-starts-with-type are mutually exclusive

header-name-equals-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-equals-type

Description 'equals': Header name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-name-equals-type,header-name-contains-type, header-name-starts-with-type, and header-name-ends-with-type are mutually exclusive

header-name-starts-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-starts-with-type

Description 'starts-with': Header name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-name-starts-with-type,header-name-equals-type, header-name-contains-type, and header-name-ends-with-type are mutually exclusive

header-name-value-match

Description When enabled, the rule will match only when both header-name and header-value matches with same header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-value-contains-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-contains-type

Description 'contains': Header value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-value-contains-type,header-value-equals-type, header-value-starts-with-type, and header-value-ends-with-type are mutually exclusive

header-value-ends-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-ends-with-type

Description 'ends-with': Header value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-value-ends-with-type,header-value-equals-type, header-value-contains-type, and header-value-starts-with-type are mutually exclusive

header-value-equals-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-equals-type

Description 'equals': Header value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-value-equals-type,header-value-contains-type, header-value-starts-with-type, and header-value-ends-with-type are mutually exclusive

header-value-starts-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-starts-with-type

Description 'starts-with': Header value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-value-starts-with-type,header-value-equals-type, header-value-contains-type, and header-value-ends-with-type are mutually exclusive

host-contains-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-contains-type

Description 'contains': Host contains string;

Type: string

Supported Values: contains

Mutual Exclusion: host-contains-type,host-equals-type, host-starts-with-type, and host-ends-with-type are mutually exclusive

host-ends-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-ends-with-type

Description 'ends-with': Host ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: host-ends-with-type,host-equals-type, host-contains-type, and host-starts-with-type are mutually exclusive

host-equals-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-equals-type

Description 'equals': Host equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: host-equals-type,host-contains-type, host-starts-with-type, and host-ends-with-type are mutually exclusive

host-starts-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-starts-with-type

Description 'starts-with': Host starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: host-starts-with-type,host-equals-type, host-contains-type, and host-ends-with-type are mutually exclusive

multi-match

Description Specify a multi-match-rule name

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

query-param-name-contains-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-contains-type

Description 'contains': query parameter name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-name-contains-type,query-param-name-equals-type, query-param-name-starts-with-type, and query-param-name-ends-with-type are mutually exclusive

query-param-name-ends-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-ends-with-type

Description 'ends-with': query parameter name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-name-ends-with-type,query-param-name-equals-type, query-param-name-contains-type, and query-param-name-starts-with-type are mutually exclusive

query-param-name-equals-string

Description query parameter name string, use "[no-name]" for empty query-param-name match

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-equals-type

Description 'equals': query parameter name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-name-equals-type,query-param-name-contains-type, query-param-name-starts-with-type, and query-param-name-ends-with-type are mutually exclusive

query-param-name-starts-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-starts-with-type

Description 'starts-with': query parameter name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-name-starts-with-type,query-param-name-equals-type, query-param-name-contains-type, and query-param-name-ends-with-type are mutually exclusive

query-param-value-contains-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-contains-type

Description 'contains': query parameter value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-value-contains-type,query-param-value-equals-type, query-param-value-starts-with-type, and query-param-value-ends-with-type are mutually exclusive

query-param-value-ends-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-ends-with-type

Description 'ends-with': query parameter value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-value-ends-with-type,query-param-value-equals-type, query-param-value-contains-type, and query-param-value-starts-with-type are mutually exclusive

query-param-value-equals-string

Description query parameter value string, use "[no-value]" for empty query-param-value match

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-equals-type

Description 'equals': query parameter value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-value-equals-type,query-param-value-contains-type, query-param-value-starts-with-type, and query-param-value-ends-with-type are mutually exclusive

query-param-value-starts-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-starts-with-type

Description 'starts-with': query parameter value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-value-starts-with-type,query-param-value-equals-type, query-param-value-contains-type, and query-param-value-ends-with-type are mutually exclusive

seq-num

Description Specify a sequence number

Type: number

Range: 1-8192

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

url-contains-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-contains-type

Description 'contains': URL contains string;

Type: string

Supported Values: contains

Mutual Exclusion: url-contains-type,url-equals-type, url-starts-with-type, and url-ends-with-type are mutually exclusive

url-ends-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-ends-with-type

Description 'ends-with': URL ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: url-ends-with-type,url-equals-type, url-contains-type, and url-starts-with-type are mutually exclusive

url-equals-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-equals-type

Description 'equals': URL equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: url-equals-type,url-contains-type, url-starts-with-type, and url-ends-with-type are mutually exclusive

url-starts-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

url-starts-with-type

Description 'starts-with': URL starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: url-starts-with-type,url-equals-type, url-contains-type, and url-ends-with-type are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_http-policy-list_geo-location-match

Specification	Value
Type	*list*
Block object keys	

geo-location

Description Geolocation name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

geo-location-service-group

Description Service Group to be used (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

template_link-probe-list

Specification	Value
Type	*list*
Block object keys	

destination

Description: destination is a **JSON Block**. Please see below for *template_link-probe-list_destination*

Type: Object

Reference Object: */axapi/v3/slb/template/link-probe/{name}/destination*

disable

Description Disable Probe template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

expected-status-code

Description Specify response code range (e.g. 200,400-430), default is 200 (Format is xx,xx-xx (xx between [100, 899]), default is 200)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: 200

name

Description probe template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

probe-interval

Description Time between each probe that needs to be sent out (in seconds, default is 5)

Type: number

Range: 1-7200

Default: 5

probes-per-test

Description Total number of probes to be sent out for each test

Type: number

Range: 1-10

Default: 5

rtt-method

Description 'http-rtt': Calculate Round Trip Time between HTTP request and response; 'tcp-srtt': Use TCP Smoothed round trip time in the HTTP connection;

Type: string

Supported Values: http-rtt, tcp-srtt

Default: http-rtt

selection-rule

Description 'threshold': Use all links below a threshold before selecting the fastest link; 'fastest-link-always': Always use the link with the lowest average latency;

Type: string

Supported Values: threshold, fastest-link-always

Default: fastest-link-always

test-interval

Description time interval between subsequent tests (in seconds, default is 60)

Type: number

Range: 1-7200

Default: 60

threshold-value

Description Use all links below a threshold before selecting the fastest link (RTT in milliseconds)

Type: number

Range: 0-65534

Default: 0

url

Description Specify URL to which probes should be sent out. Default is /

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Default: /

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_link-probe-list_destination

Specification	Value
Type	*object*

hostname

Description Target Hostname

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve the configured hostname; 'resolve-to-ipv6': Use AAAA Query only to resolve the configured hostname;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6

Mutual Exclusion: resolve-as, static-ipv4-addr, and static-ipv6-addr are mutually exclusive

static-ipv4-addr

Description Target IPv4 Address

Type: string

Format: ipv4-address

Mutual Exclusion: static-ipv4-addr, resolve-as, and static-ipv6-addr are mutually exclusive

static-ipv6-addr

Description Target IPv6 Address

Type: string

Format: ipv6-address

Mutual Exclusion: static-ipv6-addr, resolve-as, and static-ipv4-addr are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_client-ssl-list

Specification	Value
Type	*list*
Block object keys	

ad-group-list

Description Forward proxy bypass if ad-group matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

alert-type

Description 'fatal': Log fatal alerts;

Type: string

Supported Values: fatal

auth-sg

Description Specify authorization LDAP service group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: auth-sg and authen-name are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

auth-sg-dn

Description Use Subject DN as LDAP search base DN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-sg-filter

Description Specify LDAP search filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

auth-username

Description Specify the Username Field in the Client Certificate(If multi-fields are specificed, prior one has higher priority)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-username-attribute

Description Specify attribute name of username for client SSL authorization

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

authen-name

Description Specify authorization LDAP server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: authen-name and auth-sg are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/ldap*

authorization

Description Specify LDAP server for client SSL authorizaiton

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bypass-cert-issuer-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-issuer-class-list-name and bypass-cert-issuer-multi-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

bypass-cert-issuer-multi-class-list

Type: List

bypass-cert-san-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-san-class-list-name and bypass-cert-san-multi-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

bypass-cert-san-multi-class-list

Type: List

bypass-cert-subject-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-subject-class-list-name and bypass-cert-subject-multi-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

bypass-cert-subject-multi-class-list

Type: List

ca-certs

Type: List

cache-persistence-list-name

Description Class List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

case-insensitive

Description Case insensitive forward proxy bypass

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

central-cert-pin-list

Description Forward proxy bypass if SNI string is contained in central updated cert-pinning-candidate list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cert-revoke-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection; 'block': block the connection with a warning page;

Type: string

Supported Values: bypass, continue, drop, block

Default: bypass

cert-unknown-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection; 'block': block the connection with a warning page;

Type: string

Supported Values: bypass, continue, drop, block

Default: bypass

certificate-issuer-contains-list

Type: List

certificate-issuer-ends-with-list

Type: List

certificate-issuer-equals-list

Type: List

certificate-issuer-starts-with-list

Type: List

certificate-list

Type: List

Reference Object: */axapi/v3/slb/template/client-ssl/{name}/certificate/{cert}*

certificate-san-contains-list

Type: List

certificate-san-ends-with-list

Type: List

certificate-san-equals-list

Type: List

certificate-san-starts-with-list

Type: List

certificate-subject-contains-list

Type: List

certificate-subject-ends-with-list

Type: List

certificate-subject-equals-list

Type: List

certificate-subject-starts-with-list

Type: List

chain-cert

Description Chain Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-cert and chain-cert-shared-str are mutually exclusive

chain-cert-shared-str

Description Chain Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-cert-shared-str and chain-cert are mutually exclusive

cipher-without-prio-list

Type: List

class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: class-list-name and multi-clist-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

client-auth-case-insensitive

Description Case insensitive forward proxy client auth bypass

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-auth-class-list

Description Forward proxy client auth bypass if SNI string matches class-list (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-auth-contains-list

Type: List

client-auth-ends-with-list

Type: List

client-auth-equals-list

Type: List

client-auth-starts-with-list

Type: List

client-certificate

Description 'Ignore': Don't request client certificate; 'Require': Require client certificate; 'Request': Request client certificate;

Type: string

Supported Values: Ignore, Require, Request

Default: Ignore

client-ipv4-list

Type: List

client-ipv6-list

Type: List

close-notify

Description Send close notification when terminate connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

contains-list

Type: List

crl-certs

Type: List

dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 30-34

Default: 31

dh-type

Description '1024': 1024; '1024-dsa': 1024-dsa; '2048': 2048;

Type: string

Supported Values: 1024, 1024-dsa, 2048

direct-client-server-auth

Description Let backend server does SSL client authentication directly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv3

Description Reject Client requests for SSL version 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

early-data

Description Enable TLS 1.3 early data (0-RTT)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Type: List

enable-ssli-ftp-alg

Description Enable SSLi FTP over TLS support at which port

Type: number

Range: 1-65535

enable-tls-alert-logging

Description Enable TLS alert logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ends-with-list

Type: List

equals-list

Type: List

exception-ad-group-list

Description Exceptions to forward proxy bypass if ad-group matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-certificate-issuer-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-certificate-san-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-certificate-subject-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-client-ipv4-list

Type: List

exception-client-ipv6-list

Type: List

exception-server-ipv4-list

Type: List

exception-server-ipv6-list

Type: List

exception-sni-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-user-name-list

Description Exceptions to forward proxy bypass if user-name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

exception-web-category

Description: exception-web-category is a **JSON Block**. Please see below for *template_client-ssl-list_exception-web-category*

Type: Object

exception-web-reputation

Description: exception-web-reputation is a **JSON Block**. Please see below for *template_client-ssl-list_exception-web-reputation*

Type: Object

expire-hours

Description Certificate lifetime in hours

Type: number

Range: 1-168

forward-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: forward-encrypted and fp-ca-certificate are mutually exclusive

forward-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-passphrase and fp-ca-certificate are mutually exclusive

forward-proxy-alt-sign

Description Forward proxy alternate signing cert and key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-block-message

Description Message to be included on the block page (Message, enclose in quotes if spaces are present)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

forward-proxy-ca-cert

Description CA Certificate for forward proxy (SSL forward proxy CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-proxy-ca-cert,fp-ca-certificate, fp-ca-key, fp-ca-key-pass-phrase, fp-ca-key-passphrase, fp-ca-key-encrypted, fp-ca-chain-cert, and fp-ca-certificate-shared are mutually exclusive

forward-proxy-ca-key

Description CA Private Key for forward proxy (SSL forward proxy CA Key Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-proxy-ca-key,fp-ca-certificate, fp-ca-key, fp-ca-key-pass-phrase, fp-ca-key-passphrase, fp-ca-key-encrypted, fp-ca-chain-cert, and fp-ca-certificate-shared are mutually exclusive

forward-proxy-cert-cache-limit

Description Certificate cache size limit, default is 524288 (set to 0 for unlimited size)

Type: number

Range: 0-2147483647

Default: 524288

forward-proxy-cert-cache-timeout

Description Certificate cache timeout, default is 1 hour (seconds, set to 0 for never timeout)

Type: number

Range: 0-2147483647

Default: 3600

forward-proxy-cert-expiry

Description Adjust certificate expiry relative to the time when it is created on the device

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-cert-not-ready-action

Description 'bypass': bypass the connection; 'reset': reset the connection; 'intercept': wait for cert and then inspect the connection;

Type: string

Supported Values: bypass, reset, intercept

Default: bypass

forward-proxy-cert-revoke-action

Description Action taken if a certificate is irreversibly revoked, bypass SSLi processing by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-cert-unknown-action

Description Action taken if a certificate revocation status is unknown, bypass SSLi processing by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-crl-disable

Description Disable Certificate Revocation List checking for forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-decrypted-dscp

Description Apply a DSCP to decrypted and bypassed traffic (DSCP to apply to decrypted traffic)

Type: number

Range: 1-63

forward-proxy-decrypted-dscp-bypass

Description DSCP to apply to bypassed traffic

Type: number

Range: 1-63

forward-proxy-enable

Description Enable SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward-proxy-enable and ssli-inbound-enable are mutually exclusive

forward-proxy-esni-action

Description Action taken if receiving encrypted server name indication extension in client hello MSG, bypass the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-failsafe-disable

Description Disable Failsafe for SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-hash-persistence-interval

Description Set the time interval to save the hash persistence certs (Interval value, in minutes)

Type: number

Range: 1-720

Default: 30

forward-proxy-log-disable

Description Disable SSL forward proxy logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-no-shared-cipher-action

Description Action taken if handshake fails due to no shared ciper, close the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-no-sni-action

Description 'intercept': intercept in no SNI case; 'bypass': bypass in no SNI case; 'reset': reset in no SNI case;

Type: string

Supported Values: intercept, bypass, reset

Default: intercept

forward-proxy-ocsp-disable

Description Disable ocsp-stapling for forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-require-sni-cert-matched

Description 'no-match-action-inspect': Inspected if not matched; 'no-match-action-drop': Dropped if not matched;

Type: string

Supported Values: no-match-action-inspect, no-match-action-drop

forward-proxy-selfsign-redir

Description Redirect connections to pages with self signed certs to a warning page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-ssl-version

Description TLS/SSL version, default is TLS1.2 (TLS/SSL version: 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 31-34

Default: 33

forward-proxy-trusted-ca-lists

Type: List

forward-proxy-verify-cert-fail-action

Description Action taken if certificate verification fails, close the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fp-alt-cert

Description CA Certificate for forward proxy alternate signing (Certificate name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

fp-alt-key

Description CA Private Key for forward proxy alternate signing (Key name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

fp-alt-shared

Description Alternate CA Certificate and Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-ca-certificate

Description CA Certificate for forward proxy (SSL forward proxy CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-certificate,forward-proxy-ca-cert, fp-ca-shared, forward-proxy-ca-key, forward-passphrase, forward-encrypted, and fp-ca-key-shared are mutually exclusive

fp-ca-certificate-shared

Description CA Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-certificate-shared, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-chain-cert, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-key

Description CA Private Key for forward proxy (SSL forward proxy CA Key Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-key, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: fp-ca-key-encrypted, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-key-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-key-passphrase, forward-proxy-ca-cert, and forward-proxy-ca-key are mutually exclusive

fp-ca-key-shared

Description CA Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-key-shared and fp-ca-certificate are mutually exclusive

fp-ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-shared and fp-ca-certificate are mutually exclusive

fp-cert-ext-aia-ca-issuers

Description CA Issuers (Authority Information Access URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-ext-aia-ca-issuers and fp-cert-ext-aia-ocsp are mutually exclusive

fp-cert-ext-aia-ocsp

Description OCSP (Authority Information Access URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-ext-aia-ocsp and fp-cert-ext-aia-ca-issuers are mutually exclusive

fp-cert-ext-crldp

Description CRL Distribution Point (CRL Distribution Point URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

fp-cert-fetch-autonat

Description 'auto': Configure auto NAT for server certificate fetching;

Type: string

Supported Values: auto

Mutual Exclusion: fp-cert-fetch-autonat and fp-cert-fetch-natpool-name are mutually exclusive

fp-cert-fetch-autonat-precedence

Description Set this NAT pool as higher precedence than other source NAT like configued under template policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-cert-fetch-natpool-name

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-fetch-natpool-name, shared-partition-pool, and fp-cert-fetch-autonat are mutually exclusive

fp-cert-fetch-natpool-name-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

fp-cert-fetch-natpool-precedence

Description Set this NAT pool as higher precedence than other source NAT like configued under template policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-esni-action

Description 'bypass': bypass SSLi processing; 'drop': close the connection;

Type: string

Supported Values: bypass, drop

Default: bypass

handshake-logging-enable

Description Enable SSL handshake logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hsm-type

Description 'thales-embed': Thales embed key; 'thales-hwcrhk': Thales hwcrhk Key;

Type: string

Supported Values: thales-embed, thales-hwcrhk

inspect-certificate-issuer-cl-name

Description Forward proxy Inspect if Certificate issuer matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

inspect-certificate-san-cl-name

Description Forward proxy Inspect if Certificate Subject Alternative Name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

inspect-certificate-subject-cl-name

Description Forward proxy Inspect if Certificate Subject matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

inspect-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

ja3-enable

Description Enable JA3 features

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ja3-insert-http-header

Description Insert the JA3 hash into this request as a HTTP header (HTTP Header Name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ja3-reject-class-list

Description Drop request if the JA3 hash matches this class-list (type string-case-insensitive) (Class-List Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

ja3-reject-max-number-per-host

Description Drop request if numbers of JA3 of this client address exceeded

Type: number

Range: 1-256

ja3-ttl

Description seconds to keep each JA3 record

Type: number

Range: 1-86400

Default: 600

ja4-enable

Description Enable JA4 features

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ja4-insert-http-header

Description Insert the JA4 hash into this request as a HTTP header (HTTP Header Name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ja4-reject-class-list

Description Drop request if the JA4 hash matches this class-list (type string-case-insensitive) (Class-List Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

ja4-reject-max-number-per-host

Description Drop request if numbers of JA4 of this client address exceeded

Type: number

Range: 1-256

ja4-ttl

Description seconds to keep each JA4 record

Type: number

Range: 1-86400

Default: 600

ldap-base-dn-from-cert

Description Use Subject DN as LDAP search base DN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-search-filter

Description Specify LDAP search filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

local-cert-pin-list

Description: local-cert-pin-list is a **JSON Block**. Please see below for *template_client-ssl-list_local-cert-pin-list*

Type: Object

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-class-list

Type: List

name

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-anti-replay

Description Disable anti-replay protection for TLS 1.3 early data (0-RTT data)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-shared-cipher-action

Description 'bypass': bypass SSLi processing; 'drop': close the connection;

Type: string

Supported Values: bypass, drop

Default: drop

non-ssl-bypass-l4session

Description Handle the non-ssl session as L4 for performance optimization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

non-ssl-bypass-service-group

Description Service Group for Bypass non-ssl traffic (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

notafter

Description notAfter date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notafterday

Description Day

Type: number

Range: 1-31

notaftermonth

Description Month

Type: number

Range: 1-12

notafteryear

Description Year

Type: number

Range: 2005-2035

notbefore

Description notBefore date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notbeforeday

Description Day

Type: number

Range: 1-31

notbeforemonth

Description Month

Type: number

Range: 1-12

notbeforeyear

Description Year

Type: number

Range: 2005-2035

ocsp-stapling

Description Config OCSP stapling support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocspst-ca-cert

Description CA certificate

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

ocspst-ocsp

Description Specify OCSP Authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocspst-sg

Description Specify authentication service group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: ocspst-sg and ocspst-srvr are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/service-group*

ocspst-sg-days

Description Specify update period, in days

Type: number

Range: 1-31

Mutual Exclusion: ocspst-sg-days, ocspst-sg-hours, and ocspst-sg-minutes are mutually exclusive

ocspst-sg-hours

Description Specify update period, in hours

Type: number

Range: 1-23

Default: 1

Mutual Exclusion: ocspst-sg-hours, ocspst-sg-days, and ocspst-sg-minutes are mutually exclusive

ocspst-sg-minutes

Description Specify update period, in minutes

Type: number

Range: 1-59

Mutual Exclusion: ocspst-sg-minutes, ocspst-sg-days, and ocspst-sg-hours are mutually exclusive

ocspst-sg-timeout

Description Specify retry timeout (Default is 30 mins)

Type: number

Range: 1-44640

Default: 30

ocspst-srvr

Description Specify OCSP authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ocspst-srvr and ocspst-sg are mutually exclusive

Reference Object: */axapi/v3/aam/authentication/server/ocsp*

ocspst-srvr-days

Description Specify update period, in days

Type: number

Range: 1-31

Mutual Exclusion: ocspst-srvr-days, ocspst-srvr-hours, and ocspst-srvr-minutes are mutually exclusive

ocspst-srvr-hours

Description Specify update period, in hours

Type: number

Range: 1-23

Default: 1

Mutual Exclusion: ocspst-srvr-hours, ocspst-srvr-days, and ocspst-srvr-minutes are mutually exclusive

ocspst-srvr-minutes

Description Specify update period, in minutes

Type: number

Range: 1-59

Mutual Exclusion: ocspst-srvr-minutes, ocspst-srvr-days, and ocspst-srvr-hours are mutually exclusive

ocspst-srvr-timeout

Description Specify retry timeout (Default is 30 mins)

Type: number

Range: 1-44640

Default: 30

renegotiation-disable

Description Disable SSL renegotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-ca-lists

Type: List

require-sni-cert-matched

Description SNI is required to match configured certificate subject or SAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

require-web-category

Description Wait for web category to be resolved before taking bypass decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

server-ipv4-list

Type: List

server-ipv6-list

Type: List

server-name-auto-map

Description Enable automatic mapping of server name indication in Client hello extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-list

Type: List

session-cache-size

Description Session Cache Size (Maximum cache size. Default value 0 (Session ID reuse disabled))

Type: number

session-cache-timeout

Description Session Cache Timeout (Timeout value, in seconds. Default value 0 (Session cache timeout disabled))

Type: number

Range: 0-604800

Default: 0

session-key-logging-enable

Description Enable SSL session key logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-ticket-disable

Description Disable client side session ticket support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-ticket-lifetime

Description Session ticket lifetime in seconds from stateless session resumption (Lifetime value in seconds. Default value 0 (Session ticket lifetime is 7200 seconds))

Type: number

Range: 0-2147483647

Default: 0

shared-partition-cipher-template

Description Reference a cipher template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cipher-template, template-cipher, and cipher-wo-prio are mutually exclusive

shared-partition-pool

Description Reference a NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and fp-cert-fetch-natpool-name are mutually exclusive

sni-bypass-enable-log

Description Enable logging when bypass event happens, disabled by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-bypass-expired-cert

Description Bypass when certificate expired

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-bypass-explicit-list

Description Bypass when matched explicit bypass list (Specify class list name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

sni-bypass-missing-cert

Description Bypass when missing cert/key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-enable-log

Description Enable logging of sni-auto-map failures. Disable by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-false-start-disable

Description disable SSL False Start

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssli-inbound-enable

Description Enable inbound SSLi

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ssli-inbound-enable and forward-proxy-enable are mutually exclusive

ssli-logging

Description SSLi logging level, default is error logging only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sslilogging

Description 'disable': Disable all logging; 'all': enable all logging(error, info);

Type: string

Supported Values: disable, all

sslv2-bypass-service-group

Description Service Group for Bypass SSLV2 (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

starts-with-list

Type: List

template-cipher

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-cipher, shared-partition-cipher-template, and cipher-wo-prio are mutually exclusive

Reference Object: */axapi/v3/slb/template/cipher*

template-cipher-shared

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/cipher*

template-hsm

Description HSM Template (HSM Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/hsm/template*

user-name-list

Description Forward proxy bypass if user-name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-cert-fail-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection; 'block': block the connection with a warning page;

Type: string

Supported Values: bypass, continue, drop, block

Default: drop

version

Description TLS/SSL version, default is the highest number supported (TLS/SSL version: 30-SSLv3.0, 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 1-34

web-category

Description: web-category is a **JSON Block**. Please see below for *template_client-ssl-list_web-category*

Type: Object

web-reputation

Description: web-reputation is a **JSON Block**. Please see below for *template_client-ssl-list_web-reputation*

Type: Object

template_client-ssl-list_bypass-cert-subject-multi-class-list

Specification	Value
Type	*list*
Block object keys	

bypass-cert-subject-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-subject-multi-class-list-name and bypass-cert-subject-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

template_client-ssl-list_certificate-san-contains-list

Specification	Value
Type	*list*
Block object keys	

certificate-san-contains

Description Forward proxy bypass if Certificate SAN contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_equals-list

Specification	Value
Type	*list*
Block object keys	

equals

Description Forward proxy bypass if SNI string equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_client-ipv6-list

Specification	Value
Type	*list*
Block object keys	

client-ipv6-list-name

Description IPV6 client class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

template_client-ssl-list_forward-proxy-trusted-ca-lists

Specification	Value
Type	*list*
Block object keys	

forward-proxy-trusted-ca

Description Forward proxy trusted CA file (CA file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

fp-trusted-ca-shared

Description Trusted CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_client-ssl-list_ec-list

Specification	Value
Type	*list*
Block object keys	

ec

Description 'secp256r1': X9_62_prime256v1; 'secp384r1': secp384r1;

Type: string

Supported Values: secp256r1, secp384r1, secp521r1, x25519

template_client-ssl-list_contains-list

Specification	Value
Type	*list*
Block object keys	

contains

Description Forward proxy bypass if SNI string contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_ends-with-list

Specification	Value
Type	*list*
Block object keys	

ends-with

Description Forward proxy bypass if SNI string ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_ca-certs

Specification	Value
Type	*list*
Block object keys	

ca-cert

Description CA Certificate (CA Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ocsp

Description Specify ocsp authentication server(s) for client certificate verification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ocsp-sg

Description Specify service-group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/service-group*

client-ocsp-srvr

Description Specify authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/server/ocsp/instance*

template_client-ssl-list_client-auth-contains-list

Specification	Value
Type	*list*
Block object keys	

client-auth-contains

Description Forward proxy bypass if SNI string contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_certificate-subject-contains-list

Specification	Value
Type	*list*
Block object keys	

certificate-subject-contains

Description Forward proxy bypass if Certificate Subject contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_req-ca-lists

Specification	Value
Type	*list*
Block object keys	

client-cert-req-ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-certificate-Request-CA

Description Send CA lists in certificate request (CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

template_client-ssl-list_certificate-subject-starts-with-list

Specification	Value
Type	*list*
Block object keys	

certificate-subject-starts

Description Forward proxy bypass if Certificate Subject starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_web-reputation

Specification	Value
Type	*object*

bypass-low-risk

Description Bypass when reputation score is greater than or equal to 61

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-low-risk,bypass-trustworthy, bypass-moderate-risk, bypass-suspicious, bypass-malicious, and bypass-threshold are mutually exclusive

bypass-malicious

Description Bypass when reputation score is greater than or equal to 1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-malicious,bypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-suspicious, and bypass-threshold are mutually exclusive

bypass-moderate-risk

Description Bypass when reputation score is greater than or equal to 41

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-moderate-risk,bypass-trustworthy, bypass-low-risk, bypass-suspicious, bypass-malicious, and bypass-threshold are mutually exclusive

bypass-suspicious

Description Bypass when reputation score is greater than or equal to 21

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-suspicious,bypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-malicious, and bypass-threshold are mutually exclusive

bypass-threshold

Description Bypass when reputation score is greater than or equal to the customized score (1-100)

Type: number

Range: 1-100

Mutual Exclusion: bypass-threshold,bypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-suspicious, and bypass-malicious are mutually exclusive

bypass-trustworthy

Description Bypass when reputation score is greater than or equal to 81

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-trustworthy,bypass-low-risk, bypass-moderate-risk, bypass-suspicious, bypass-malicious, and bypass-threshold are mutually exclusive

template_client-ssl-list_bypass-cert-issuer-multi-class-list

Specification	Value
Type	*list*
Block object keys	

bypass-cert-issuer-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-issuer-multi-class-list-name and bypass-cert-issuer-class-list-name are mutually exclusive

Reference Object: */axapi/v3/class-list*

template_client-ssl-list_client-auth-equals-list

Specification	Value
Type	*list*
Block object keys	

client-auth-equals

Description Forward proxy bypass if SNI string equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_certificate-issuer-equals-list

Specification	Value
Type	*list*
Block object keys	

certificate-issuer-equals

Description Forward proxy bypass if Certificate issuer equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_certificate-san-ends-with-list

Specification	Value
Type	*list*
Block object keys	

certificate-san-ends-with

Description Forward proxy bypass if Certificate SAN ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_crl-certs

Specification	Value
Type	*list*
Block object keys	

crl

Description Certificate Revocation Lists (Certificate Revocation Lists file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

crl-shared

Description Certificate Revocation Lists Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_client-ssl-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'real-estate': real estate category; 'computer-and-internet-security': computer and internet security category; 'financial-services': financial services category; 'business-and-economy': business and economy category; 'computer-and-internet-info': computer and internet info category; 'auctions': auctions category; 'shopping': shopping category; 'cult-and-occult': cult and occult category; 'travel': travel category; 'drugs': drugs category; 'adult-and-pornography': adult and pornography category; 'home-and-garden': home and garden category; 'military': military category; 'social-network': social network category; 'dead-sites': dead sites category; 'stock-advice-and-tools': stock advice and tools category; 'training-and-tools': training and tools category; 'dating': dating category; 'sex-education': sex education category; 'religion': religion category; 'entertainment-and-arts': entertainment and arts category; 'personal-sites-and-blogs': personal sites and blogs category; 'legal': legal category; 'local-information': local information category; 'streaming-media': streaming media category;

Type: string

Supported Values: all, real-estate, computer-and-internet-security, financial-services, business-and-economy, computer-and-internet-info, auctions, shopping, cult-and-occult, travel, drugs, adult-and-pornography, home-and-garden, military, social-network, dead-sites, stock-advice-and-tools, training-and-tools, dating, sex-education, religion, entertainment-and-arts, personal-sites-and-blogs, legal, local-information, streaming-media, job-search, gambling, translation, reference-and-research, shareware-and-freeware, peer-to-peer, marijuana, hacking, games, philosophy-and-politics, weapons, pay-to-surf, hunting-and-fishing, society, educational-institutions, online-greeting-cards, sports, swimsuits-and-intimate-apparel, questionable, kids, hate-and-racism, personal-storage, violence, keyloggers-and-monitoring, search-engines, internet-portals, web-advertisements, cheating, gross, web-based-email, malware-sites, phishing-and-other-fraud, proxy-avoid-and-anonymizers, spyware-and-adware, music, government, nudity, news-and-media, illegal, CDNs, internet-communications, bot-nets, abortion, health-and-medicine, confirmed-SPAM-sources, SPAM-URLs, unconfirmed-SPAM-sources, open-HTTP-proxies, dynamically-generated-content, parked-domains, alcohol-and-tobacco, private-IP-addresses, image-and-video-search, fashion-and-beauty, recreation-and-hobbies, motor-vehicles, web-hosting-sites, food-and-dining, dummy-item, self-harm, dns-over-https, low-thc-cannabis-products, generative-ai, nudity-

artistic, illegal-pornography, uncategorised, other-category, trustworthy, low-risk, moderate-risk, suspicious, malicious

template_client-ssl-list_certificate-list

Specification	Value
Type	*list*
Block object keys	

cert

Description Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

key

Description Server Private Key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description Server Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Description Server Certificate associated to SNI (Server Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-cert-regex

Description Server Certificate associated to SNI regex (Server Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-chain

Description Server Certificate Chain associated to SNI (Server Certificate Chain Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-chain-regex

Description Server Certificate Chain associated to SNI regex (Server Certificate Chain Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

server-encrypted-regex

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

server-key

Description Server Private Key associated to SNI (Server Private Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-key-regex

Description Server Private Key associated to SNI regex (Server Private Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-name

Description Server name indication in Client hello extension (Server name String)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server-name-alternate

Description Specific the second certifcate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-regex

Description Server name indication in Client hello extension with regular expression (Server name String with regex)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-name-regex-alternate

Description Specific the second certifcate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-passphrase

Description help Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

server-passphrase-regex

Description help Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

server-shared

Description Server Name Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-shared-regex

Description Server Name Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-regex-shared-partition-client-ssl-template

Description Reference a Client SSL template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-regex-template

Description Template associated to SNI regex

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-regex-template-client-ssl

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

sni-regex-template-client-ssl-shared-name

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

sni-shared-partition-client-ssl-template

Description Reference a Client SSL template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-template

Description Template associated to SNI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-template-client-ssl

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

sni-template-client-ssl-shared-name

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

template_client-ssl-list_exception-web-category

Specification	Value
Type	*object*

exception-category

Description 'uncategorized': Uncategorized URLs; 'real-estate': Category Real Estate; 'computer-and-internet-security': Category Computer and Internet Security; 'financial-services': Category Financial Services; 'business-and-economy': Category Business and Economy; 'computer-and-internet-info': Category Computer and Internet Info; 'auctions': Category Auctions; 'shopping': Category Shopping; 'cult-and-occult': Category Cult and Occult; 'travel': Category Travel; 'drugs': Category Abused Drugs; 'adult-and-pornography': Category Adult and Pornography; 'home-and-garden': Category Home and Garden; 'military': Category Military; 'social-network': Category Social Network; 'dead-sites': Category Dead Sites (db Ops only); 'stock-advice-and-tools': Category Stock Advice and Tools; 'training-and-tools': Category Training and Tools; 'dating': Category Dating; 'sex-education': Category Sex Education; 'religion': Category Religion; 'entertainment-and-arts': Category Entertainment and Arts; 'personal-sites-and-blogs': Category Personal sites and Blogs; 'legal': Category Legal; 'local-information': Category Local Information; 'streaming-media': Category Streaming Media; 'job-search': Category Job Search; 'gambling': Category Gambling; 'translation': Category Translation; 'reference-and-research': Category Reference and Research; 'shareware-and-freeware': Category Shareware and Freeware; 'peer-to-peer': Category Peer to Peer; 'marijuana': Category Marijuana; 'hacking': Category Hacking; 'games': Category Games; 'philosophy-and-politics': Category Philosophy and Political Advocacy; 'weapons': Category Weapons; 'pay-to-surf': Category Pay to Surf; 'hunting-and-fishing': Category Hunting and Fishing; 'society': Category Society; 'educational-institutions': Category Educational Institutions; 'online-greeting-cards': Category Online Greeting cards; 'sports': Category Sports; 'swimsuits-and-intimate-apparel': Category Swimsuits and Intimate Apparel; 'questionable': Category Questionable; 'kids': Category Kids; 'hate-and-racism': Category Hate and Racism; 'personal-storage': Category Personal Storage; 'violence': Category Violence; 'keyloggers-and-monitoring': Category Keyloggers and Monitoring; 'search-engines': Category Search Engines; 'internet-portals': Category Internet Portals; 'web-advertisements': Category Web Advertisements; 'cheating': Category Cheating; 'gross': Category Gross; 'web-based-email': Category Web based email; 'malware-sites': Category Malware Sites; 'phishing-and-other-fraud': Category Phishing and Other Frauds; 'proxy-avoid-and-anonymizers': Category Proxy Avoid and Anonymizers; 'spyware-and-adware': Category Spyware and Adware; 'music': Category Music; 'government': Category Government; 'nudity': Category Nudity; 'news-and-media': Category News and Media; 'illegal': Category Illegal; 'cdns': Category CDNs; 'internet-communications': Category Internet Communications; 'bot-nets': Category Bot Nets; 'abortion': Category Abortion; 'health-and-medicine': Category Health and Medicine; 'spam-urls': Category SPAM URLs; 'dynamically-generated-content': Category Dynamically Generated Content; 'parked-domains': Category Parked Domains; 'alcohol-and-tobacco': Category Alcohol and Tobacco; 'image-and-video-search': Category Image and Video Search; 'fashion-and-beauty': Category Fashion and Beauty; 'recreation-and-hobbies': Category Recreation and Hobbies; 'motor-vehicles': Category Motor Vehicles; 'web-hosting-sites': Category Web Hosting Sites; 'self-harm': Category Self Harm; 'dns-over-https': Category DNS over HTTPs; 'low-thc-cannabis-products': Category Low-THC Cannabis Products; 'generative-ai': Category Generative AI; 'nudity-artistic': Category Artistic Nudity; 'illegal-pornography': Category Illegal Pornography eg. Child Sexual Abuse;

Type: string

Supported Values: uncategorized, real-estate, computer-and-internet-security, financial-

services, business-and-economy, computer-and-internet-info, auctions, shopping, cult-and-occult, travel, drugs, adult-and-pornography, home-and-garden, military, social-network, dead-sites, stock-advice-and-tools, training-and-tools, dating, sex-education, religion, entertainment-and-arts, personal-sites-and-blogs, legal, local-information, streaming-media, job-search, gambling, translation, reference-and-research, shareware-and-freeware, peer-to-peer, marijuana, hacking, games, philosophy-and-politics, weapons, pay-to-surf, hunting-and-fishing, society, educational-institutions, online-greeting-cards, sports, swimsuits-and-intimate-apparel, questionable, kids, hate-and-racism, personal-storage, violence, keyloggers-and-monitoring, search-engines, internet-portals, web-advertisements, cheating, gross, web-based-email, malware-sites, phishing-and-other-fraud, proxy-avoid-and-anonymizers, spyware-and-adware, music, government, nudity, news-and-media, illegal, cdns, internet-communications, botnets, abortion, health-and-medicine, spam-urls, dynamically-generated-content, parked-domains, alcohol-and-tobacco, image-and-video-search, fashion-and-beauty, recreation-and-hobbies, motor-vehicles, web-hosting-sites, self-harm, dns-over-https, low-thc-cannabis-products, generative-ai, nudity-artistic, illegal-pornography

template_client-ssl-list_exception-server-ipv6-list

Specification	Value
Type	*list*
Block object keys	

exception-server-ipv6-list-name

Description IPV6 exception server class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

template_client-ssl-list_certificate-issuer-starts-with-list

Specification	Value
Type	*list*
Block object keys	

certificate-issuer-starts

Description Forward proxy bypass if Certificate issuer starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_certificate-san-starts-with-list

Specification	Value
Type	*list*
Block object keys	

certificate-san-starts

Description Forward proxy bypass if Certificate SAN starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_server-ipv4-list

Specification	Value
Type	*list*
Block object keys	

server-ipv4-list-name

Description IPV4 server class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

template_client-ssl-list_client-auth-ends-with-list

Specification	Value
Type	*list*
Block object keys	

client-auth-ends-with

Description Forward proxy bypass if SNI string ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_exception-client-ipv6-list

Specification	Value
Type	*list*
Block object keys	

exception-client-ipv6-list-name

Description IPV6 exception client class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

template_client-ssl-list_exception-web-reputation

Specification	Value
Type	*object*

exception-low-risk

Description Intercept when reputation score is less than or equal to 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-low-risk,exception-trustworthy, exception-moderate-risk, exception-suspicious, exception-malicious, and exception-threshold are mutually exclusive

exception-malicious

Description Intercept when reputation score is less than or equal to 20

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-malicious,exception-trustworthy, exception-low-risk, exception-moderate-risk, exception-suspicious, and exception-threshold are mutually exclusive

exception-moderate-risk

Description Intercept when reputation score is less than or equal to 60

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-moderate-risk,exception-trustworthy, exception-low-risk, exception-suspicious, exception-malicious, and exception-threshold are mutually exclusive

exception-suspicious

Description Intercept when reputation score is less than or equal to 40

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-suspicious,exception-trustworthy, exception-low-risk, exception-moderate-risk, exception-malicious, and exception-threshold are mutually exclusive

exception-threshold

Description Intercept when reputation score is less than or equal to a customized value (1-100)

Type: number

Range: 1-100

Mutual Exclusion: exception-threshold,exception-trustworthy, exception-low-risk, exception-moderate-risk, exception-suspicious, and exception-malicious are mutually exclusive

exception-trustworthy

Description Intercept when reputation score is less than or equal to 100

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-trustworthy,exception-low-risk, exception-moderate-risk, exception-suspicious, exception-malicious, and exception-threshold are mutually exclusive

template_client-ssl-list_local-cert-pin-list

Specification	Value
Type	*object*

local-cert-pin-list-bypass-fail-count

Description Set the connection fail count as bypass criteria (Bypass when connection failure count is greater than the criteria (1-65536))

Type: number

Range: 1-65536

template_client-ssl-list_server-ipv6-list

Specification	Value
Type	*list*
Block object keys	

server-ipv6-list-name

Description IPV6 server class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

template_client-ssl-list_certificate-subject-equals-list

Specification	Value
Type	*list*
Block object keys	

certificate-subject-equals

Description Forward proxy bypass if Certificate Subject equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_cipher-without-prio-list

Specification	Value
Type	*list*
Block object keys	

cipher-wo-prio

Description 'SSL3_RSA_DES_192_CBC3_SHA': TLS_RSA_WITH_3DES_EDE_CBC_SHA (0x000A); 'SSL3_RSA_RC4_128_MD5': TLS_RSA_WITH_RC4_128_MD5 (0x0004); 'SSL3_RSA_RC4_128_SHA': TLS_RSA_WITH_RC4_128_SHA (0x0005); 'TLS1_RSA_AES_128_SHA': TLS_RSA_WITH_AES_128_CBC_SHA (0x002F); 'TLS1_RSA_AES_256_SHA': TLS_RSA_WITH_AES_256_CBC_SHA (0x0035); 'TLS1_RSA_AES_128_SHA256': TLS_RSA_WITH_AES_128_CBC_SHA256 (0x003C); 'TLS1_RSA_AES_256_SHA256': TLS_RSA_WITH_AES_256_CBC_SHA256 (0x003D); 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS_DHE_RSA_WITH_AES_128_GCM_SHA256

(0x009E); 'TLS1_DHE_RSA_AES_128_SHA': TLS_DHE_RSA_WITH_AES_128_CBC_SHA (0x0033); 'TLS1_DHE_RSA_AES_128_SHA256': TLS_DHE_RSA_WITH_AES_128_CBC_SHA256 (0x0067); 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS_DHE_RSA_WITH_AES_256_GCM_SHA384 (0x009F); 'TLS1_DHE_RSA_AES_256_SHA': TLS_DHE_RSA_WITH_AES_256_CBC_SHA (0x0039); 'TLS1_DHE_RSA_AES_256_SHA256': TLS_DHE_RSA_WITH_AES_256_CBC_SHA256 (0x006B); 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256 (0xC02B); 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA (0xC009); 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256 (0xC023); 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384 (0xC02C); 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA (0xC00A); 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256 (0xC02F); 'TLS1_ECDHE_RSA_AES_128_SHA': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA (0xC013); 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256 (0xC027); 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 (0xC030); 'TLS1_ECDHE_RSA_AES_256_SHA': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA (0xC014); 'TLS1_RSA_AES_128_GCM_SHA256': TLS_RSA_WITH_AES_128_GCM_SHA256 (0x009C); 'TLS1_RSA_AES_256_GCM_SHA384': TLS_RSA_WITH_AES_256_GCM_SHA384 (0x009D); 'TLS1_ECDHE_RSA_AES_256_SHA384': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384 (0xC028); 'TLS1_ECDHE_ECDSA_AES_256_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384 (0xC024); 'TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA8); 'TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_ECDSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA9); 'TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256': TLS_DHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCAA);

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256

Mutual Exclusion: cipher-wo-prio, template-cipher, and shared-partition-cipher-template are mutually exclusive

template_client-ssl-list_starts-with-list

Specification	Value
Type	*list*
Block object keys	

starts-with

Description Forward proxy bypass if SNI string starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_quic-list

Specification	Value
Type	*list*
Block object keys	

burst-len

Description Number of burst packet, default 16

Type: number

Range: 16-360

connection-id-length

Description Connection id length in byte, default 8 bytes

Type: number

Range: 1-20

idle-timeout

Description Idle Timeout (interval of 60 seconds), default 120 seconds (idle timeout in second, default 120)

Type: number

Range: 1-3600

initial-wnd

Description Initial window size in byte, default 10000 (Initial window size, default 10000)

Type: number

Range: 10000-100000

key-update-to-client

Description Initiate key update on the client-side

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-update-to-server

Description Initiate key update on the server-side

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description QUIC Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

receive-buffer

Description Receive buffer size in byte, default 200000 (Receive buffer size, default 200000)

Type: number

Range: 30000-400000

server-retry

Description Enable server retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_link-block-as-down

Specification	Value
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dynamic-service-list

Specification	Value
Type	*list*
Block object keys	

class-list-list

Type: List

Reference Object: */axapi/v3/slb/template/dynamic-service/{name}/class-list/{dns-class-list}*

dns-server

Type: List

name

Description Dynamic Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dynamic-service-list_dns-server

Specification	Value
Type	*list*
Block object keys	

ipv4-dns-server

Description DNS Server IPv4 Address

Type: string

Format: ipv4-address

ipv6-dns-server

Description DNS Server IPv6 Address

Type: string

Format: ipv6-address

template_dynamic-service-list_class-list-list

Specification	Value
Type	*list*
Block object keys	

dns-class-list

Description Name of Aho-Corasick class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dns-server

Type: List

priority

Description Priority of the class-list(the larger number, the higher priority)

Type: number

Range: 1-64

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dynamic-service-list_class-list-list_dns-server

Specification	Value
Type	*list*
Block object keys	

ipv4-dns-server

Description DNS Server IPv4 Address

Type: string

Format: ipv4-address

ipv6-dns-server

Description DNS Server IPv6 Address

Type: string

Format: ipv6-address

template_dblb-list

Specification	Value
Type	*list*
Block object keys	

calc-sha1

Description: calc-sha1 is a **JSON Block**. Please see below for *template_dblb-list_calc-sha1*

Type: Object

Reference Object: */axapi/v3/slb/template/dblb/{name}/calc-sha1*

class-list

Description Specify user/password string class list (Class list name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description DBLB template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-version

Description 'MSSQL2008': MSSQL server 2008 or 2008 R2; 'MSSQL2012': MSSQL server 2012; 'MySQL': MySQL server (any version);

Type: string

Supported Values: MSSQL2008, MSSQL2012, MySQL

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dblb-list_calc-sha1

Specification	Value
Type	*object*

sha1-value

Description Cleartext password

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

template_fix-list

Specification	Value
Type	*list*
Block object keys	

insert-client-ip

Description Insert client ip to tag 11447

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description 'init': init only log; 'term': termination only log; 'both': both initial and termination log;

Type: string

Supported Values: init, term, both

name

Description FIX Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

tag-switching

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_fix-list_tag-switching

Specification	Value
Type	*list*
Block object keys	

equals

Description Equals (Tag String)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

switching-type

Description 'sender-comp-id': Select service group based on SenderCompID; 'target-comp-id': Select service group based on TargetCompID;

Type: string

Supported Values: sender-comp-id, target-comp-id

template_persist

Specification	Value
Type	*object*

Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of destination IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Destination IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_persist_source-ip-list

Specification	Value
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforce-higher-priority

Description Enforce to use high priority node if available

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of source IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-dst-ip

Description Include destination IP on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-sport

Description Include source port on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Source IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

primary-port

Description Primary port to create the persist session

Type: number

Range: 1-65534

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-4321

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_persist_cookie-list

Specification	Value
Type	*list*
Block object keys	

cookie-name

Description Set cookie name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: sto-id

domain

Description Set cookie domain

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypt-level

Description Encryption level for cookie name / value

Type: number

Range: 0-1

Default: 1

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

expire

Description Set cookie expiration time (Expiration in seconds)

Type: number

Range: 0-31536000

Default: 31536000

httponly

Description Enable HttpOnly attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-always

Description Insert persist cookie to every reponse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persist for server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pass-phrase

Description Set passphrase for encryption

Type: string

Format: password

Maximum Length: 8 characters

Maximum Length: 8 characters

Default: ACOS4KEY

pass-thru

Description Pass thru mode - Server sends the persist cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

path

Description Set cookie path (Cookie path, default is "/")

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: /

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute;

Type: string

Supported Values: host, secure

samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

scan-all-members

Description Persist within the same server SCAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secure

Description Enable secure attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

server-service-group

Description Persist to the same server and within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

use-attribute

Description 'max-age': Use the Max-Age attribute; 'expires': Use the Expires attribute; 'all': Use all attributes;

Type: string

Supported Values: max-age, expires, all

Default: expires

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_persist_ssl-sid-list

Specification	Value
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SSL session ID persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_doh-list

Specification	Value
Type	*list*
Block object keys	

conn-reuse

Description 'enable': Enable Connection Reuse; 'disable': Disable Connection-Reuse (Default);

Type: string

Supported Values: enable, disable

Default: disable

dns

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dns and shared-partition-dns-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/dns*

dns-retry

Description: dns-retry is a **JSON Block**. Please see below for *template_doh-list_dns-retry*

Type: Object

Reference Object: */axapi/v3/slb/template/doh/{name}/dns-retry*

forwarder

Description: forwarder is a **JSON Block**. Please see below for *template_doh-list_forwarder*

Type: Object

Reference Object: */axapi/v3/slb/template/doh/{name}/forwarder*

name

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

non-dns-request

Description 'allow': Forward Non-DoH request to http server bound to vport; 'reject': Reject Non-DoH requests with HTTP 400 Bad Request (Default);

Type: string

Supported Values: allow, reject

Default: reject

reject-status-code

Description '400': Status Code 400 BAD Request (Default); '500': Status Code 500 Internal Server Error; '501': Status Code 501 Not Implemented;

Type: string

Supported Values: 400, 500, 501

Default: 400

shared-partition-dns-template

Description Reference a DNS template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dns-template and dns are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

snat-pool

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

source-nat

Description 'auto': Perform Source NAT Auto for service-group(Default) (Not supported with forwarding-ip); 'disable': Don't perform source-nat for server side DNS queries; 'pool': Perform Source NAT with specific pool;

Type: string

Supported Values: auto, disable, pool

Default: auto

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-dns-shared

Description DNS Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dns*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_doh-list_forwarder

Specification	Value
Type	*object*

bypass-doh

Description Forward valid DoH HTTP request as is, no DNS packet extraction (Bypass DoH)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-doh,forwarding-ipv4, forwarding-ipv6, tcp-service-group, and udp-service-group are mutually exclusive

forwarding-ipv4

Description SLB VIP IPv4 address to forward DOH query (IP address)

Type: string

Format: ipv4-address

Mutual Exclusion: forwarding-ipv4,forwarding-ipv6, tcp-service-group, udp-service-group, and bypass-doh are mutually exclusive

forwarding-ipv6

Description SLB VIP IPv6 address to forward DOH query (IP address)

Type: string

Format: ipv6-address

Mutual Exclusion: forwarding-ipv6,forwarding-ipv4, tcp-service-group, udp-service-group, and bypass-doh are mutually exclusive

tcp-service-group

Description Bind a TCP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-service-group,forwarding-ipv4, forwarding-ipv6, and bypass-doh are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

udp-service-group

Description Bind a UDP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: udp-service-group,forwarding-ipv4, forwarding-ipv6, and bypass-doh are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v4-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v4-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

v6-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v6-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

template_doh-list_dns-retry

Specification	Value
Type	*object*

after-timeout

Description 'close': Close client side connection; 'retry-with-tcp': Retry DNS query to server using TCP (If UDP was tried initially. Close after.);

Type: string

Supported Values: close, retry-with-tcp

Default: close

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_sip-list

Specification	Value
Type	*list*
Block object keys	

acl-id

Description ACL id

Type: number

Range: 100-199

Mutual Exclusion: acl-id and acl-name-value are mutually exclusive

acl-name-value

Description IPv4 Access List Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-value and acl-id are mutually exclusive

Reference Object: */axapi/v3/ip/access-list*

alg-dest-nat

Description Translate VIP to real server IP in SIP message when destination NAT is used

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

alg-source-nat

Description Translate source IP to NAT IP in SIP message when source NAT is used

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

call-id-persist-disable

Description Disable call-ID persistence

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-keep-alive

Description Respond client keep-alive packet directly instead of forwarding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-request-header

Type: List

client-response-header

Type: List

dialog-aware

Description Permit system processes dialog session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-when-client-fail

Description Drop current SIP message when select client fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop-when-client-fail and failed-client-selection-message are mutually exclusive

drop-when-server-fail

Description Drop current SIP message when select server fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop-when-server-fail and failed-server-selection-message are mutually exclusive

exclude-translation

Type: List

failed-client-selection

Description Define action when select client fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failed-client-selection-message

Description Send SIP message (includs status code) to server when select client fail(Format: 3 digits(1XX~6XX) space reason)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: failed-client-selection-message and drop-when-client-fail are mutually exclusive

failed-server-selection

Description Define action when select server fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failed-server-selection-message

Description Send SIP message (includs status code) to client when select server fail(Format: 3 digits(1XX~6XX) space reason)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: failed-server-selection-message and drop-when-server-fail are mutually exclusive

insert-client-ip

Description Insert Client IP address into SIP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description The interval of keep-alive packet for each persist connection (second)

Type: number

Range: 5-300

Default: 30

keep-server-ip-if-match-acl

Description Use Real Server IP for addresses matching the ACL for a Call-Id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SIP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pstn-gw

Description configure pstn gw host name for tel: uri translate to sip: uri (Hostname String, default is "pstn")

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: pstn

server-keep-alive

Description Send server keep-alive packet for every persist connection when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-request-header

Type: List

server-response-header

Type: List

server-selection-per-request

Description Force server selection on every SIP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description service group name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

smp-call-id-rtp-session

Description Create the across cpu call-id rtp session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Time in minutes

Type: number

Range: 1-250

Default: 30

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_sip-list_server-request-header

Specification	Value
Type	*list*
Block object keys	

insert-condition-server-request

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

server-request-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-request-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-request-header-insert

Description Insert a SIP header (Header Content (Format: "name:value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

template_sip-list_server-response-header

Specification	Value
Type	*list*
Block object keys	

insert-condition-server-response

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

server-response-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-response-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-response-header-insert

Description Insert a SIP header (Header Content (Format: "name:value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

template_sip-list_client-request-header

Specification	Value
Type	*list*
Block object keys	

client-request-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-request-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-request-header-insert

Description Insert a SIP header (Header Content (Format: “name:value”))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

insert-condition-client-request

Description ‘insert-if-not-exist’: Only insert the header when it does not exist; ‘insert-always’: Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

template_sip-list_client-response-header

Specification	Value
Type	*list*
Block object keys	

client-response-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-response-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-response-header-insert

Description Insert a SIP header (Header Content (Format: “name:value”))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

insert-condition-client-response

Description ‘insert-if-not-exist’: Only insert the header when it does not exist; ‘insert-always’: Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

template_sip-list_exclude-translation

Specification	Value
Type	*list*
Block object keys	

header-string

Description SIP header name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

translation-value

Description 'start-line': SIP request line or status line; 'header': SIP message headers; 'body': SIP message body;

Type: string

Supported Values: start-line, header, body

template_respmod-icap-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

bypass-ip-cfg

Type: List

disable-http-server-reset

Description Don't reset http server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-close

Description When template sg is down mark vport down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

include-protocol-in-uri

Description Include protocol and port in HTTP URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-only-allowed-method

Description Only log allowed HTTP method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description logging template (Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

min-payload-size

Description min-payload-size value 0 - 65535, default is 0

Type: number

Range: 0-65535

Default: 0

name

Description Reqmod ICAP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

preview

Description Preview value 1 - 32768, default is 32768

Type: number

Range: 1-32768

Default: 32768

server-ssl

Description Server SSL template (Server SSL template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

service-url

Description URL to send to ICAP server (Service URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

x-auth-url

Description Use URL format for authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_respmod-icap-list_bypass-ip-cfg

Specification	Value
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass respmod-icap service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

template_virtual-server-list

Specification	Value
Type	*list*
Block object keys	

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit-reset

Description Send client reset when connection over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit-reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-when-all-ports-down

Description Disable Virtual Server when all member ports are down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-when-all-ports-down and disable-when-any-port-down are mutually exclusive

disable-when-any-port-down

Description Disable Virtual Server when any member port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-when-any-port-down and disable-when-all-ports-down are mutually exclusive

icmp-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmp-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmp-rate-limit

Description ICMP rate limit (Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit)

Type: number

Range: 1-65535

icmpv6-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmpv6-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmpv6-rate-limit

Description ICMPv6 rate limit (Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit)

Type: number

Range: 1-65535

name

Description Virtual server template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

subnet-gratuitous-arp

Description Send gratuitous ARP for every IP in the subnet virtual server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-stack-tfo-active-conn-limit

Description The allowed active layer 7 tcp fast-open connection limit, default is zero (number)

Type: number

Range: 0-10000

Default: 0

tcp-stack-tfo-backoff-time

Description The time tcp stack will wait before allowing new fast-open requests after security condition, default 600 seconds (number)

Type: number

Range: 1-14400

Default: 600

tcp-stack-tfo-cookie-time-limit

Description The time limit (in seconds) that a layer 7 tcp fast-open cookie is valid, default is 60 seconds (number)

Type: number

Range: 1-14400

Default: 60

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_client-ssh-list

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

forward-proxy-enable

Description Enable SSH forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-hostkey

Description Specify private-key (Key Name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

name

Description Client SSH Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_ssli-list

Specification	Value
Type	*list*
Block object keys	

name

Description SSLi Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

type

Description 'http': HTTP service; 'xmpp': XMPP service; 'smtp': SMTP service; 'pop': POP service; 'ldap': LDAP service; 'ftp': FTP service;

Type: string

Supported Values: http, xmpp, smtp, pop, ldap, ftp

Default: http

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_server-ssh-list

Specification	Value
Type	*list*
Block object keys	

forward-proxy-enable

Description Enable SSH forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Server SSH Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list

Specification	Value
Type	*list*
Block object keys	

add-padding-to-client

Description 'block-length': Block-Length Padding; 'random-block-length': Random-Block-Length Padding;

Type: string

Supported Values: block-length, random-block-length

cache-hitcount-enable

Description Enable DNS cache entry hit count

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-record-serving-policy

Description 'global': Follow global cofiguration (Default); 'no-change': No change in record order; 'round-robin': Round-robin;

Type: string

Supported Values: global, no-change, round-robin

cache-ttl-adjustment-enable

Description enable the ttl adjustment for dns cache response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

category-lookup-bypass

Description DNS type class-lists for bypassing category lookup

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

category-lookup-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/category-lookup/{category-name}*

category-lookup-online-lookup

Description Enable online webroot lookup

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

class-list

Description: class-list is a **JSON Block**. Please see below for *template_dns-list_class-list*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/class-list*

default-policy

Description 'nocache': Cache disable; 'cache': Cache enable;

Type: string

Supported Values: nocache, cache

Default: nocache

disable-dns-template

Description Disable DNS template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-ra-cached-resp

Description Disable DNS recursive available flag in cached response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-rpz-attach-soa

Description Disable attaching SOA due to RPZ

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cookie-cache-policy

Description 'served-by-cache': Answer from cache for requests with cookie; 'served-by-backend': Answer from server for requests with cookie;

Type: string

Supported Values: served-by-cache, served-by-backend

dns-logging

Description dns logging template (DNS Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dns-logging*

dns64

Description: dns64 is a **JSON Block**. Please see below for *template_dns-list_dns64*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/dns64*

dnssec-service-group

Description Use different service group if DNSSEC DO bit set (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

drop

Description Drop the malformed query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop and forward are mutually exclusive

enable-cache-sharing

Description Enable DNS cache sharing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward

Description Forward to service group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: forward and drop are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

insert-ipv4

Description prefix-length to insert for IPv4

Type: number

Range: 0-32

insert-ipv6

Description prefix-length to insert for IPv6

Type: number

Range: 0-128

label-count-filter

Description: label-count-filter is a **JSON Block**. Please see below for *template_dns-list_label-count-filter*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/label-count-filter*

label-length-filter

Description: label-length-filter is a **JSON Block**. Please see below for *template_dns-list_label-length-filter*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/label-length-filter*

local-dns-resolution

Description: local-dns-resolution is a **JSON Block**. Please see below for *template_dns-list_local-dns-resolution*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/local-dns-resolution*

max-cache-entry-size

Description Define maximum cache entry size (Maximum cache entry size per VIP (default 1024))

Type: number

Range: 1-4096

Default: 1024

max-cache-size

Description Define maximum cache size (Maximum cache entry per VIP)

Type: number

max-query-length

Description Define Maximum DNS Query Length, default is unlimited (Specify Maximum Length)

Type: number

Range: 1-4095

name

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

negative-dns-cache

Description: negative-dns-cache is a **JSON Block**. Please see below for *template_dns-list_negative-dns-cache*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/negative-dns-cache*

period

Description Period in minutes

Type: number

Range: 1-10000

qps-log-high

Description high threshold for QPS logging (queries per second)

Type: number

Range: 1-64000000

qps-log-low

Description low threshold for QPS logging (queries per second)

Type: number

Range: 1-63999999

qps-threshold-log

Description enable threshold log for DNS QPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-class-filter

Description: query-class-filter is a **JSON Block**. Please see below for *template_dns-list_query-class-filter*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/query-class-filter*

query-id-switch

Description Use DNS query ID to create sesion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-type-filter

Description: query-type-filter is a **JSON Block**. Please see below for *template_dns-list_query-type-filter*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/query-type-filter*

recursive-dns-resolution

Description: recursive-dns-resolution is a **JSON Block**. Please see below for *template_dns-list_recursive-dns-resolution*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution*

redirect-to-tcp-port

Description Direct the client to retry with TCP for DNS UDP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-aa-flag

Description Make answers created from cache non-authoritative

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-csubnet

Description Remove EDNS(0) client subnet from client queries

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-padding-to-server

Description Remove EDNS(0) padding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-rate-limiting

Description: response-rate-limiting is a **JSON Block**. Please see below for *template_dns-list_response-rate-limiting*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting*

rpz-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/rpz/{seq-id}*

tld-filter-log-enable

Description Enable dns tld filter logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tld-filter-white-list

Description white-list class-list name (string-insensitive type)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

udp-retransmit

Description: udp-retransmit is a **JSON Block**. Please see below for *template_dns-list_udp-retransmit*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/udp-retransmit*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_response-rate-limiting

Specification	Value
Type	*object*

TC-rate

Description Every n'th response that would be rate-limited will respond with TC bit

Type: number

Range: 2-10

Mutual Exclusion: TC-rate and slip-rate are mutually exclusive

action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filter-response-rate

Description Maximum allowed request rate for the filter. This should match average traffic. (default 10 per seconds)

Type: number

Range: 1-1000

Default: 10

match-subnet

Description IP subnet mask (response rate by IP subnet mask)

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

match-subnet-v6

Description IPV6 subnet mask (response rate by IPv6 subnet mask)

Type: number

Range: 1-128

Default: 128

nx-response-rate

Description Queries from entries whose NX Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

rrl-class-list-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}*

slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

Mutual Exclusion: slip-rate and TC-rate are mutually exclusive

src-ip-only

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

template_dns-list_response-rate-limiting_rrl-class-list-list

Specification	Value
Type	*list*
Block object keys	

lid-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}/lid/{lidnum}*

name

Description Class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_response-rate-limiting_rrl-class-list-list_lid-list

Specification	Value
Type	*list*
Block object keys	

lid-action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

lid-enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lid-match-subnet

Description IP subnet mask (response rate by IP subnet mask)

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

lid-match-subnet-v6

Description IPV6 subnet mask (response rate by IPv6 subnet mask)

Type: number

Range: 1-128

Default: 128

lid-nx-response-rate

Description Queries from entries whose NX Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-16000000

Default: 5

lid-response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 0-16000000

Default: 5

lid-slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

Mutual Exclusion: lid-slip-rate and lid-tc-rate are mutually exclusive

lid-src-ip-only

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lid-tc-rate

Description Every n'th response that would be rate-limited will respond with TC bit

Type: number

Range: 2-10

Mutual Exclusion: lid-tc-rate and lid-slip-rate are mutually exclusive

lid-window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_recursive-dns-resolution

Specification	Value
Type	*object*

csubnet-retry

Description retry when server REFUSED AX inserted EDNS(0) subnet, works only when insert-client-subnet is configured

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-recursive

Description Default recursive mode, forward query to bound service-group if hostnames matched

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dnssec-validation

Description 'enabled': Enable DNSSEC validation; 'disabled': Disable DNSSEC validation;

Type: string

Supported Values: enabled, disabled

Default: disabled

fast-ns-selection

Description 'enabled': Enable fast NS selection; 'disabled': Disable fast NS selection;

Type: string

Supported Values: enabled, disabled

Default: enabled

force-cname-resolution

Description 'enabled': Force CNAME resolution always; 'disabled': Use answer record in CNAME response if it exists, else resolve;

Type: string

Supported Values: enabled, disabled

Default: enabled

full-response

Description Serve all records (authority and additional) when applicable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-health-check

Description: gateway-health-check is a **JSON Block**. Please see below for *template_dns-list_recursive-dns-resolution_gateway-health-check*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution/gateway-health-check*

host-list-cfg

Type: List

ipv4-nat-pool

Description IPv4 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv6-nat-pool

Description IPv6 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

lookup-order

Description: lookup-order is a **JSON Block**. Please see below for *template_dns-list_recursive-dns-resolution_lookup-order*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution/lookup-order*

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 255

Type: number

Range: 1-255

Default: 255

ns-cache-lookup

Description 'disabled': Disable NS Cache Lookup; 'enabled': Enable NS Cache Lookup;

Type: string

Supported Values: disabled, enabled

Default: enabled

ns-longest-match

Description 'disabled': Look up NS of top level label, do a nearly-full resolution; 'enabled': Enable NS cache longest match;

Type: string

Supported Values: disabled, enabled

Default: enabled

parallel-queries

Description Number of parallel queries to send to servers

Type: number

Range: 1-15

Default: 1

request-for-pending-resolution

Description 'drop': Drop of the request during ongoing; 'respond-with-servfail': Respond with SERVFAIL of the request during ongoing; 'start-new-resolution': Start new resolution of the request during ongoing;

Type: string

Supported Values: drop, respond-with-servfail, start-new-resolution

Default: respond-with-servfail

retries-per-level

Description Number of DNS query retries at each server level before closing client connection, default 6

Type: number

Range: 1-6

Default: 6

udp-initial-interval

Description UDP DNS Retry Interval value 1-6, default is 5 sec (1-6, default is 5sec)

Type: number

Range: 1-6

Default: 5

udp-retry-interval

Description UDP DNS Retry Interval value 1-6, default is 1 sec (1-6 , default is 1 sec)

Type: number

Range: 1-6

Default: 1

use-client-qid

Description Use client side query id for recursive query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-service-group-response

Description 'disabled': Start Recursive Resolver if Server response doesnt have final answer; 'enabled': Forward Backend Server response to client and dont start recursive resolver;

Type: string

Supported Values: disabled, enabled

Default: enabled

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_recursive-dns-resolution_gateway-health-check

Specification	Value
Type	*object*

gwhc-ns-cache-lookup

Description 'disabled': Disable NS Cache Lookup; 'enabled': Enable NS Cache Lookup;

Type: string

Supported Values: disabled, enabled

Default: disabled

interval

Description Specify the health check interval, default is 10 sec (Interval value, in seconds (default 10))

Type: number

Range: 1-300

Default: 10

num-query-type

Description Other record type value

Type: number

Range: 1-65535

Mutual Exclusion: num-query-type and str-query-type are mutually exclusive

query-name

Description Specify the query name used in probe queries, default "a10networks.com"

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Default: a10networks.com

retry

Description Maximum number of DNS query retries at each server level before health check fails, default 6 (Retry count (default 6))

Type: number

Range: 1-6

Default: 6

retry-multi

Description Specify number of times that health check consecutively fails before declaring gateway DOWN, default 1 (retry-multi count (default 1))

Type: number

Range: 1-10

Default: 1

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT

Default: A

Mutual Exclusion: str-query-type and num-query-type are mutually exclusive

timeout

Description Specify the health check timeout before retrying or finish, default is 5 sec (Timeout value, in seconds (default 5))

Type: number

Range: 1-6

Default: 5

up-retry

Description Specify number of times that health check consecutively passes before declaring gateway UP, default 1 (up-retry count (default 1))

Type: number

Range: 1-10

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_recursive-dns-resolution_lookup-order

Specification	Value
Type	*object*

query-type

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_recursive-dns-resolution_lookup-order_query-type

Specification	Value
Type	*list*
Block object keys	

num-query-type

Description Other query type value

Type: number

Range: 1-65535

order

Description 'ipv4-precede-ipv6': Recursive lookup via IPv4 then IPv6; 'ipv6-precede-ipv4': Recursive lookup via IPv6 then IPv4;

Type: string

Supported Values: ipv4-precede-ipv6, ipv6-precede-ipv4

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record; 'ANY': All cached record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT, ANY

template_dns-list_recursive-dns-resolution_host-list-cfg

Specification	Value
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (dns type), perform resolution while query name matched

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

template_dns-list_label-length-filter

Specification	Value
Type	*object*

drop-log-enable

Description enable the log when hit the rule

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fqdn-label-length

Type: List

label-length-filter-action

Description 'drop': drop; 'ignore': ignore;

Type: string

Supported Values: drop, ignore

Default: drop

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_label-length-filter_fqdn-label-length

Specification	Value
Type	*list*
Block object keys	

length

Description fqdn label length

Type: number

Range: 1-63

suffix

Description

Type: number

Range: 1-5

template_dns-list_class-list

Specification	Value
Type	*object*

lid-list

Type: List

Reference Object: */axapi/v3/slb/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *template_dns-list_class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_class-list_lid-list_dns

Specification	Value
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

honor-server-response-ttl

Description Honor the server reponse TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

template_dns-list_dns64

Specification	Value
Type	*object*

cache

Description Use a cached A-query response to provide AAAA query responses for the same hostname

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-query

Description Always change incoming AAAA DNS Query to A

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable DNS64 (Need to config this option before config any other dns64 options)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parallel-query

Description Forward AAAA Query & generate A Query in parallel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retry

Description Retry count, default is 3 (Retry Number)

Type: number

Range: 0-15

Default: 3

single-response-disable

Description Disable Single Response which is used to avoid ambiguity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout to send additional Queries, unit: second, default is 1

Type: number

Range: 0-15

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_udp-retransmit

Specification	Value
Type	*object*

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_query-class-filter

Specification	Value
Type	*object*

query-class

Type: List

query-class-action

Description 'allow': Allow only certain DNS query classes; 'deny': Deny only certain DNS query classes;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_query-class-filter_query-class

Specification	Value
Type	*list*
Block object keys	

num-query-class

Description Other query class value

Type: number

Range: 1-65535

str-query-class

Description 'INTERNET': INTERNET query class; 'CHAOS': CHAOS query class; 'HESIOD': HESIOD query class; 'NONE': NONE query class; 'ANY': ANY query class;

Type: string

Supported Values: INTERNET, CHAOS, HESIOD, NONE, ANY

template_dns-list_category-lookup-list

Specification	Value
Type	*list*
Block object keys	

category-name

Description category-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

drop

Description Deny matching DNS domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop,permit, respond, respond-nxdomain, respond-ip-addr, respond-ipv6-addr, and respond-cname-str are mutually exclusive

permit

Description Permit matching DNS domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit,drop, respond, respond-nxdomain, respond-ip-addr, respond-ipv6-addr, and respond-cname-str are mutually exclusive

respond

Description Respond to matching DNS domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: respond, permit, and drop are mutually exclusive

respond-cname-str

Description CNAME to respond (Canonical name)

Type: string

Maximum Length: 256 characters

Maximum Length: 1 characters

Mutual Exclusion: respond-cname-str,permit, drop, and respond-nxdomain are mutually exclusive

respond-ip-addr

Description Type A record to respond (IPv4 address)

Type: string

Format: ipv4-address

Mutual Exclusion: respond-ip-addr,permit, drop, and respond-nxdomain are mutually exclusive

respond-ipv6-addr

Description TYPE AAAA record to respond (IPv6 address)

Type: string

Format: ipv6-address

Mutual Exclusion: respond-ipv6-addr,permit, drop, and respond-nxdomain are mutually exclusive

respond-nxdomain

Description Respond with NXDOMAIN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: respond-nxdomain,permit, drop, respond-ip-addr, respond-ipv6-addr, and respond-cname-str are mutually exclusive

response-ttl

Description Set response TTL in seconds (TTL value in seconds)

Type: number

Range: 1-259200

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_local-dns-resolution

Specification	Value
Type	*object*

host-list-cfg

Type: List

local-resolver-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_local-dns-resolution_host-list-cfg

Specification	Value
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (dns type)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

template_dns-list_local-dns-resolution_local-resolver-cfg

Specification	Value
Type	*list*
Block object keys	

local-resolver

Description Local dns servers (address)

Type: string

Format: ipv4-address

template_dns-list_label-count-filter

Specification	Value
Type	*object*

drop-log-enable

Description enable the log when hit the rule

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

label-count-filter-action

Description 'drop': drop; 'ignore': ignore;

Type: string

Supported Values: drop, ignore

Default: drop

max-fqdn-label-count

Description Maximum number of FQDN labels per FQDN

Type: number

Range: 1-31

min-fqdn-label-count

Description Minimum number of FQDN labels per FQDN

Type: number

Range: 1-7

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_negative-dns-cache

Specification	Value
Type	*object*

bypass-query-threshold

Description the threshold bypass the query, default is 100

Type: number

Range: 1-65535

Default: 100

cache-non-valid

Description Enable caching non-valid negative response, otherwise will only cache valid negative response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-negative-dns-cache

Description Enable DNS negative cache (Need to turn-on the dns-cache for this feature)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-negative-cache-ttl

Description Max negative cache ttl, default is 2 hours

Type: number

Range: 0-604800

Default: 7200

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_query-type-filter

Specification	Value
Type	*object*

query-type

Type: List

query-type-action

Description 'allow': Allow only certain DNS query types; 'deny': Deny only certain DNS query types;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_query-type-filter_query-type

Specification	Value
Type	*list*
Block object keys	

num-query-type

Description Other record type value

Type: number

Range: 1-65535

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record; 'ANY': All cached record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT, ANY

template_dns-list_rpz-list

Specification	Value
Type	*list*
Block object keys	

logging

Description: logging is a **JSON Block**. Please see below for *template_dns-list_rpz-list_logging*

Type: Object

Reference Object: */axapi/v3/slb/template/dns/{name}/rpz/{seq-id}/logging*

name

Description Specify a Response Policy Zone name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-id

Description sequential id of RPZ

Type: number

Range: 1-8

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_rpz-list_logging

Specification	Value
Type	*object*

enable

Description Log RPZ triggered action

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpz-action

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_rpz-list_logging_rpz-action

Specification	Value
Type	*list*
Block object keys	

str-rpz-action

Description 'drop': Log RPZ due to drop action; 'pass-thru': Log RPZ due to pass-thru action; 'nxdomain': Log RPZ due to nxdomain action; 'nodata': Log RPZ due to nodata action; 'tcp-only': Log RPZ due to tcp-only action; 'local-data': Log RPZ due to local-data action;

Type: string

Supported Values: drop, pass-thru, nxdomain, nodata, tcp-only, local-data

template_http-list

Specification	Value
Type	*list*
Block object keys	

100-cont-wait-for-req-complete

Description When REQ has Expect 100 and response is not 100, then wait for whole request to be sent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowed-methods

Description Enable allowed-method check (List of allowed HTTP methods)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: allowed-methods and disallowed-methods are mutually exclusive

allowed-methods-action

Description 'drop': Respond 400 directly;

Type: string

Supported Values: drop

Default: drop

bypass-sg

Description Select service group for non-http traffic (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

client-idle-timeout

Description Client session timeout if the next request is not received (timeout in seconds. 0 means disable, default is 0)

Type: number

Range: 0-120

Default: 0

client-ip-hdr-replace

Description Replace the existing header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-port-hdr-replace

Description Replace the existing header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-auto-disable-on-high-cpu

Description Auto-disable software compression on high cpu usage (Disable compression if cpu usage is above threshold. Default is off.)

Type: number

Range: 1-100

compression-br-level

Description brotli compression level, default 1 (brotli compression level value, default is 1)

Type: number

Range: 1-9

Default: 1

compression-br-sliding-window-size

Description brotli compression sliding window size, default 10 (brotli compression sliding window size in the form of log (i.e., 10 means 1k-16MB bytes))

Type: number

Range: 10-24

compression-content-type

Type: List

compression-enable

Description Enable Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-exclude-content-type

Type: List

compression-exclude-uri

Type: List

compression-keep-accept-encoding

Description Keep accept encoding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-keep-accept-encoding-enable

Description Enable Server Accept Encoding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-level

Description gzip compression level, default 1 (gzip compression level value, default is 1)

Type: number

Range: 1-9

Default: 1

compression-method-order

Description Method Order (Order to decide which compression algorithm to be applied when multiple algorithms are acceptable)

Type: string

Format: string-rlx

Maximum Length: 11 characters

Maximum Length: 11 characters

compression-minimum-content-length

Description Minimum Content Length (Minimum content length for compression in bytes. Default is 120.)

Type: number

Range: 1-2147483647

Default: 120

cookie-format

Description 'rfc6265': Follow rfc6265;

Type: string

Supported Values: rfc6265

cookie-samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

default-charset

Description 'iso-8859-1': Use ISO-8859-1 as the default charset; 'utf-8': Use UTF-8 as the default charset; 'us-ascii': Use US-ASCII as the default charset;

Type: string

Supported Values: iso-8859-1, utf-8, us-ascii

Default: utf-8

disallowed-methods

Description Enable disallowed-method check (List of disallowed HTTP methods)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: disallowed-methods and allowed-methods are mutually exclusive

disallowed-methods-action

Description 'drop': Respond 400 directly;

Type: string

Supported Values: drop

Default: drop

failover-url

Description Failover to this URL (Failover URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

frame-limit

Description Limit the number of CONTINUATION, PING, PRIORITY, RESET, SETTINGS and empty frames in one HTTP2 connection, default 10000

Type: number

Range: 0-65535

Default: 10000

host-switching

Type: List

http-protocol-check

Description: http-protocol-check is a **JSON Block**. Please see below for *template_http-list_http-protocol-check*

Type: Object

Reference Object: */axapi/v3/slb/template/http/{name}/http-protocol-check*

http2-client-no-snat

Description Set max-concurrent-stream = 1 when the client side is HTTP2 and no source-nat configuration is under vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-ip

Description Insert Client IP address into HTTP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-ip-header-name

Description HTTP Header Name for inserting Client IP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

insert-client-port

Description Insert Client Port address into HTTP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-port-header-name

Description HTTP Header Name for inserting Client Port

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

keep-client-alive

Description Keep client alive

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-retry

Description log when HTTP request retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-concurrent-streams

Description (http2 only) Max concurrent streams, default 50

Type: number

Range: 1-1000

Default: 50

max-transaction-allowed

Description Max transactions allowed, default 0 (no limit)

Type: number

Range: 0-65535

Default: 0

name

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

non-http-bypass

Description Bypass non-http traffic instead of dropping

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

persist-on-401

Description Persist to the same server if the response code is 401

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute; 'check': check server prefix and enforce prefix format;

Type: string

Supported Values: host, secure, check

rd-port

Description Port (Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: rd-port and rd-simple-loc are mutually exclusive

rd-resp-code

Description '301': Moved Permanently; '302': Found; '303': See Other; '307': Temporary Redirect;

Type: string

Supported Values: 301, 302, 303, 307

rd-secure

Description Use HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rd-secure and rd-simple-loc are mutually exclusive

rd-simple-loc

Description Redirect location tag absolute URI string

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: rd-simple-loc, rd-secure, and rd-port are mutually exclusive

redirect

Description Automatically send a redirect response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirect-rewrite

Description: redirect-rewrite is a **JSON Block**. Please see below for *template_http-list_redirect-rewrite*

Type: Object

req-hdr-wait-time

Description HTTP request header wait time before abort connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-hdr-wait-time-val

Description Number of seconds wait for client request header (default is 7)

Type: number

Range: 1-31

Default: 7

request-header-erase-list

Type: List

request-header-insert-list

Type: List

request-line-case-insensitive

Description Parse http request line as case insensitive

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-timeout

Description Request timeout if response not received (timeout in seconds)

Type: number

Range: 1-120

response-content-replace-list

Type: List

response-header-erase-list

Type: List

response-header-insert-list

Type: List

retry-on-5xx

Description Retry http request on HTTP 5xx code and request timeout

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: retry-on-5xx and retry-on-5xx-per-req are mutually exclusive

retry-on-5xx-per-req

Description Retry http request on HTTP 5xx code for each request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: retry-on-5xx-per-req and retry-on-5xx are mutually exclusive

retry-on-5xx-per-req-val

Description Number of times to retry (default is 3)

Type: number

Range: 1-3

Default: 3

retry-on-5xx-val

Description Number of times to retry (default is 3)

Type: number

Range: 1-3

Default: 3

server-support-http2-only

Description Notify the vport regarding whether server supports http2 only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-support-http2-only-value

Description 'auto-detect': Commuincate with the server via HTTP/2 when an support-http2-only rport is detected; 'force': Communicate with the server via HTTP/2 when possible;

Type: string

Supported Values: auto-detect, force

Default: auto-detect

stream-cancellation-limit

Description cancellation limit, default 0 (accumulated cancellation limit value, default is 0)

Type: number

Range: 0-1000

Default: 0

stream-cancellation-rate

Description cancellation rate, default 10 (cancellation rate value, default is 10)

Type: number

Range: 0-1000

Default: 10

strict-transaction-switch

Description Force server selection on every HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template

Description: template is a **JSON Block**. Please see below for *template_http-list_template*

Type: Object

term-11client-hdr-conn-close

Description Terminate HTTP 1.1 client when req has Connection: close

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

url-hash-first

Description Use the begining part of URL to calculate hash value (URL string length to calculate hash value)

Type: number

Range: 4-128

Mutual Exclusion: url-hash-first and url-hash-last are mutually exclusive

url-hash-last

Description Use the end part of URL to calculate hash value (URL string length to calculate hash value)

Type: number

Range: 4-128

Mutual Exclusion: url-hash-last and url-hash-first are mutually exclusive

url-hash-offset

Description Skip part of URL to calculate hash value (Offset of the URL string)

Type: number

Range: 0-255

url-hash-persist

Description Use URL's hash value to select server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

url-switching

Type: List

use-server-status

Description Use Server-Status header to do URL hashing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_http-list_request-header-erase-list

Specification	Value
Type	*list*
Block object keys	

request-header-erase

Description Erase a header from HTTP request (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_http-list_redirect-rewrite

Specification	Value
Type	*object*

match-list

Type: List

redirect-secure

Description Use HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirect-secure-port

Description Port (Port Number)

Type: number

Range: 1-65535

Default: 443

template_http-list_redirect-rewrite_match-list

Specification	Value
Type	*list*
Block object keys	

redirect-match

Description URL Matching (Pattern URL String)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rewrite-to

Description Rewrite to Destination URL String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_http-list_response-header-insert-list

Specification	Value
Type	*list*
Block object keys	

response-header-insert

Description Insert a header into HTTP response (Header Content (Format: "[name]:[value]"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-header-insert-type

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

template_http-list_response-header-erase-list

Specification	Value
Type	*list*
Block object keys	

response-header-erase

Description Erase a header from HTTP response (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_http-list_template

Specification	Value
Type	*object*

logging

Description Logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

template_http-list_url-switching

Specification	Value
Type	*list*
Block object keys	

url-match-string

Description URL String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

url-switching-type

Description 'contains': Select service group if URL string contains another string; 'ends-with': Select service group if URL string ends with another string; 'equals': Select service group if URL string equals another string; 'starts-with': Select service group if URL string starts with another string; 'regex-match': Select service group if URL string matches with regular expression; 'url-case-insensitive': Case insensitive URL switching; 'url-hits-enable': Enables URL Hits;

Type: string

Supported Values: contains, ends-with, equals, starts-with, regex-match, url-case-insensitive, url-hits-enable

template_http-list_response-content-replace-list

Specification	Value
Type	*list*
Block object keys	

response-content-replace

Description replace the data from HTTP response content (String in the http content need to be replaced)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-new-string

Description String will be in the http content

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

template_http-list_http-protocol-check

Specification	Value
Type	*object*

get-and-payload

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

h2up-content-length-alias

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

h2up-with-host-and-auth

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

h2up-with-transfer-encoding

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

header-filter-rule-list

Type: List

Reference Object: */axapi/v3/slb/template/http/{name}/http-protocol-check/header-filter-rule/{seq-num}*

malformed-h2up-header-value

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

malformed-h2up-scheme-value

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

multiple-content-length

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

multiple-transfer-encoding

Description 'drop': Drop the request and send 400 to the client side;

Type: string

Supported Values: drop

transfer-encoding-and-content-length

Description 'drop': Drop the request and Send 400 to the client side;

Type: string

Supported Values: drop

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_http-list_http-protocol-check_header-filter-rule-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'drop': Drop the request;

Type: string

Supported Values: drop

header-name-value

Description Header name value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-value

Description Header value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

match-type-value

Description 'full-text': Full text match; 'pcre': PCRE match;

Type: string

Supported Values: full-text, pcre

seq-num

Description Specify a sequence number

Type: number

Range: 0-4

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_http-list_request-header-insert-list

Specification	Value
Type	*list*
Block object keys	

request-header-insert

Description Insert a header into HTTP request (Header Content (Format: "[name]:[value]"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

request-header-insert-type

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

template_http-list_host-switching

Specification	Value
Type	*list*
Block object keys	

host-match-string

Description Hostname String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

host-switching-type

Description 'contains': Select service group if hostname contains another string; 'ends-with': Select service group if hostname ends with another string; 'equals': Select service group if hostname equals another string; 'starts-with': Select service group if hostname starts with another string; 'regex-match': Select service group if URL string matches with regular expression; 'host-hits-enable': Enables Host Hits counters;

Type: string

Supported Values: contains, ends-with, equals, starts-with, regex-match, host-hits-enable

template_http-list_compression-content-type

Specification	Value
Type	*list*
Block object keys	

content-type

Description Compression content-type

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

template_http-list_compression-exclude-uri

Specification	Value
Type	*list*
Block object keys	

exclude-uri

Description Compression exclude uri

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

template_http-list_compression-exclude-content-type

Specification	Value
Type	*list*
Block object keys	

exclude-content-type

Description Compression exclude content-type (Compression exclude content type)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

template_dns-logging-list

Specification	Value
Type	*list*
Block object keys	

custom-log-list

Type: List

Reference Object: */axapi/v3/slb/template/dns-logging/{name}/custom-log/{trigger-reason}*

disable

Description Disable DNS Logging template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-logging-protocol

Description 'both': Log DNS over tcp and udp; 'tcp': Log DNS over tcp; 'udp': Log DNS over udp;

Type: string

Supported Values: both, tcp, udp

dns-logging-request-section

Description 'all': Log DNS header and question section; 'header': Log DNS header information; 'question': Log DNS question section;

Type: string

Supported Values: all, header, question

dns-logging-response-section

Description 'all': Log DNS header information, answer, authority, additional section content; 'header': Log DNS header information; 'answer': Log DNS header information and answer section content;

Type: string

Supported Values: all, header, answer

dns-logging-type

Description 'query': DNS Query Logging; 'response': DNS Response Logging; 'both': DNS Query and Response Logging;

Type: string

Supported Values: query, response, both

name

Description DNS Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-include-rcode

Description Log DNS Rcode with Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-type

Description: response-type is a **JSON Block**. Please see below for *template_dns-logging-list_response-type*

Type: Object

Reference Object: */axapi/v3/slb/template/dns-logging/{name}/response-type*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-logging-list_response-type

Specification	Value
Type	*object*

config

Description start config the response type detail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

type-list

Type: List

Reference Object: */axapi/v3/slb/template/dns-logging/{name}/response-type/type/{response-type-name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-logging-list_response-type_type-list

Specification	Value
Type	*list*
Block object keys	

caa-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: caa-type-limit-num and caa-type-no-limit are mutually exclusive

caa-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: caa-type-no-limit and caa-type-limit-num are mutually exclusive

digest

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dnskey-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: dnskey-type-limit-num and dnskey-type-no-limit are mutually exclusive

dnskey-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dnskey-type-no-limit and dnskey-type-limit-num are mutually exclusive

ds-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: ds-type-limit-num and ds-type-no-limit are mutually exclusive

ds-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ds-type-no-limit and ds-type-limit-num are mutually exclusive

length-limit-flag

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

naptr-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: naptr-type-limit-num and naptr-type-no-limit are mutually exclusive

naptr-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: naptr-type-no-limit and naptr-type-limit-num are mutually exclusive

opt-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: opt-type-limit-num and opt-type-no-limit are mutually exclusive

opt-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: opt-type-no-limit and opt-type-limit-num are mutually exclusive

other-data

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

public-key

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rdata-field

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-type-name

Description 'TXT': TXT; 'RRSIG': RRSIG; 'TSIG': TSIG; 'DNSKEY': DNSKEY; 'DS': DS; 'CAA': CAA; 'NAPTR': NAPTR; 'OPT': OPT;

Type: string

Supported Values: TXT, RRSIG, TSIG, DNSKEY, DS, CAA, NAPTR, OPT

rrsig-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: rrsig-type-limit-num and rrsig-type-no-limit are mutually exclusive

rrsig-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rrsig-type-no-limit and rrsig-type-limit-num are mutually exclusive

service-field

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

signature

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tsig-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: tsig-type-limit-num and tsig-type-no-limit are mutually exclusive

tsig-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tsig-type-no-limit and tsig-type-limit-num are mutually exclusive

txt-data

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

txt-type-limit-num

Description Limit the field length

Type: number

Range: 0-256

Default: 0

Mutual Exclusion: txt-type-limit-num and txt-type-no-limit are mutually exclusive

txt-type-no-limit

Description Print the field as much as possible

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: txt-type-no-limit and txt-type-limit-num are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value-field

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_dns-logging-list_custom-log-list

Specification	Value
Type	*list*
Block object keys	

enable

Description Enable this log

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

format

Description Request Message (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

trigger-reason

Description 'request': log when request comes from client; 'response': log when response to client;

Type: string

Supported Values: request, response

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_virtual-port-list

Specification	Value
Type	*list*
Block object keys	

aflow

Description Use aFlow to eliminate the traffic surge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-syn-otherflags

Description Allow initial SYN packet with other flags

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-vip-to-rport-mapping

Description Allow mapping of VIP to real port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit-reset

Description Send client reset when connection over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit-reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-unknown-conn

Description Drop conection if receives TCP packet without SYN or RST flag and it does not belong to any existing connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dscp

Description Differentiated Services Code Point (DSCP to Real Server IP Mapping Value)

Type: number

Range: 1-63

ignore-tcp-msl

Description reclaim TCP resource immediately without MSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-options

Description 'no-logging': Do not log over limit event; 'no-repeat-logging': log once for over limit event. Default is log once per minute;

Type: string

Supported Values: no-logging, no-repeat-logging

name

Description Virtual port template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

non-syn-initiation

Description Allow initial TCP packet to be non-SYN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pkt-rate-interval

Description '100ms': Source IP and port rate limit per 100ms; 'second': Source IP and port rate limit per second (default);

Type: string

Supported Values: 100ms, second

Default: second

pkt-rate-limit-reset

Description send client-side reset (reset after packet limit)

Type: number

Range: 0-1048575

Default: 0

pkt-rate-type

Description 'src-ip-port': Source IP and port rate limit; 'src-port': Source port rate limit;

Type: string

Supported Values: src-ip-port, src-port

rate

Description Source IP and port rate limit (Packet rate limit)

Type: number

Range: 1-1048575

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

reset-l7-on-failover

Description Send reset to L7 client and server connection upon a failover

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-unknown-conn

Description Send reset back if receives TCP packet without SYN or RST flag and it does not belong to any existing connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-msl

Description Source NAT MSL (Source NAT MSL value (seconds))

Type: number

Range: 1-1800

snat-port-preserve

Description Source NAT Port Preservation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

when-rr-enable

Description Only do rate limit if CPU RR triggered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_mqtt-list

Specification	Value
Type	*list*
Block object keys	

clientid-hash-first

Description Use the begining part of client ID to calculate hash value (client ID string length to calculate hash value)

Type: number

Range: 4-128

clientid-hash-last

Description Use the end part of Client ID to calculate hash value (Client ID length to calculate hash value)

Type: number

Range: 4-128

clientid-hash-offset

Description Skip part of Client ID to calculate hash value (Offset of the Client ID)

Type: number

Range: 0-255

clientid-hash-persist

Description Use Client ID's hash value to select server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description MQTT Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_cipher-list

Specification	Value
Type	*list*
Block object keys	

cipher-cfg

Type: List

cipher13-cfg

Type: List

name

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_cipher-list_cipher13-cfg

Specification	Value
Type	*list*
Block object keys	

cipher13-suite

Description 'TLS_AES_256_GCM_SHA384': TLS_AES_256_GCM_SHA384 (0x1302); 'TLS_CHACHA20_POLY1305_SHA256': TLS_CHACHA20_POLY1305_SHA256 (0x1303); 'TLS_AES_128_GCM_SHA256': TLS_AES_128_GCM_SHA256 (0x1301);

Type: string

Supported Values: TLS_AES_256_GCM_SHA384, TLS_CHACHA20_POLY1305_SHA256, TLS_AES_128_GCM_SHA256

priority

Description Cipher priority (Cipher priority (default 1))

Type: number

Range: 1-100

Default: 1

template_cipher-list_cipher-cfg

Specification	Value
Type	*list*
Block object keys	

cipher-suite

Description 'SSL3_RSA_DES_192_CBC3_SHA': TLS_RSA_WITH_3DES_EDE_CBC_SHA (0x000A); 'SSL3_RSA_RC4_128_MD5': TLS_RSA_WITH_RC4_128_MD5 (0x0004); 'SSL3_RSA_RC4_128_SHA': TLS_RSA_WITH_RC4_128_SHA (0x0005); 'TLS1_RSA_AES_128_SHA': TLS_RSA_WITH_AES_128_CBC_SHA (0x002F); 'TLS1_RSA_AES_256_SHA': TLS_RSA_WITH_AES_256_CBC_SHA (0x0035); 'TLS1_RSA_AES_128_SHA256': TLS_RSA_WITH_AES_128_CBC_SHA256 (0x003C); 'TLS1_RSA_AES_256_SHA256': TLS_RSA_WITH_AES_256_CBC_SHA256 (0x003D); 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS_DHE_RSA_WITH_AES_128_GCM_SHA256 (0x009E); 'TLS1_DHE_RSA_AES_128_SHA': TLS_DHE_RSA_WITH_AES_128_CBC_SHA (0x0033); 'TLS1_DHE_RSA_AES_128_SHA256': TLS_DHE_RSA_WITH_AES_128_CBC_SHA256 (0x0067); 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS_DHE_RSA_WITH_AES_256_GCM_SHA384 (0x009F); 'TLS1_DHE_RSA_AES_256_SHA': TLS_DHE_RSA_WITH_AES_256_CBC_SHA (0x0039); 'TLS1_DHE_RSA_AES_256_SHA256': TLS_DHE_RSA_WITH_AES_256_CBC_SHA256 (0x006B); 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256 (0xC02B); 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA (0xC009); 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256 (0xC023); 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384 (0xC02C); 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA

(0xC00A); 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256 (0xC02F); 'TLS1_ECDHE_RSA_AES_128_SHA': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA (0xC013); 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256 (0xC027); 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 (0xC030); 'TLS1_ECDHE_RSA_AES_256_SHA': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA (0xC014); 'TLS1_RSA_AES_128_GCM_SHA256': TLS_RSA_WITH_AES_128_GCM_SHA256 (0x009C); 'TLS1_RSA_AES_256_GCM_SHA384': TLS_RSA_WITH_AES_256_GCM_SHA384 (0x009D); 'TLS1_ECDHE_RSA_AES_256_SHA384': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384 (0xC028); 'TLS1_ECDHE_ECDSA_AES_256_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384 (0xC024); 'TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA8); 'TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_ECDSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA9); 'TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256': TLS_DHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCAA); 'TLS1_ECDHE_SM2_WITH_SMS4_SM3': TLS_ECDHE_SM2_WITH_SMS4_SM3 (0xE102); 'TLS1_ECDHE_SM2_WITH_SMS4_SHA256': TLS_ECDHE_SM2_WITH_SMS4_SHA256 (0xE105); 'TLS1_ECDHE_SM2_WITH_SMS4_GCM_SM3': TLS_ECDHE_SM2_WITH_SMS4_GCM_SM3 (0xE107);

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_SM2_WITH_SMS4_SM3, TLS1_ECDHE_SM2_WITH_SMS4_SHA256, TLS1_ECDHE_SM2_WITH_SMS4_GCM_SM3

priority

Description Cipher priority (Cipher priority (default 1))

Type: number

Range: 1-100

Default: 1

template_policy-list

Specification	Value
Type	*list*
Block object keys	

bw-list-id

Type: List

bw-list-name

Description Specify a blacklist/whitelist name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

class-list

Description: class-list is a **JSON Block**. Please see below for *template_policy-list_class-list*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/class-list*

forward-policy

Description: forward-policy is a **JSON Block**. Please see below for *template_policy-list_forward-policy*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy*

full-domain-tree

Description Share counters between geo-location and sub regions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Log interval (minute)

Type: number

Range: 1-255

name

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

over-limit

Description Specify operation in case over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-lockup

Description Don't accept any new connection for certain time (Lockup duration (minute))

Type: number

Range: 1-127

over-limit-logging

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-reset

Description Reset the connection when it exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

overlap

Description Use overlap mode for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

share

Description Share counters between virtual ports and virtual servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Define timeout value of PBSLB dynamic entry (Timeout value (minute, default is 5))

Type: number

Range: 1-127

Default: 5

use-destination-ip

Description Use destination IP to match the policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy

Specification	Value
Type	*object*

acos-event-log

Description Enable acos event logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/action/{name}*

dual-stack-action-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/dual-stack-action/{name}*

enable-adv-match

Description Enable adv-match rules and deactive all the other kinds of destination rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filtering

Type: List

forward-http-connect-to-icap

Description Forward HTTP CONNECT request to ICAP server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-client-conn-reuse

Description Inspects only first request of a connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reqmod-icap

Description ICAP reqmod template (Reqmod ICAP Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/reqmod-icap*

require-web-category

Description Wait for web category to be resolved before taking proxy decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

san-filtering

Type: List

source-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy_filtering

Specification	Value
Type	*list*
Block object keys	

ssli-url-filtering

Description 'bypassed-sni-disable': Disable SNI filtering for bypassed URL's(enabled by default); 'intercepted-sni-enable': Enable SNI filtering for intercepted URL's(disabled by default); 'intercepted-http-disable': Disable HTTP(host/URL) filtering for intercepted URL's(enabled by default); 'no-sni-allow': Allow connection if SNI filtering is enabled and SNI header is not present(Drop by default);

Type: string

Supported Values: bypassed-sni-disable, intercepted-sni-enable, intercepted-http-disable, no-sni-allow

template_policy-list_forward-policy_san-filtering

Specification	Value
Type	*list*
Block object keys	

ssli-url-filtering-san

Description 'enable-san': Enable SAN filtering(disabled by default); 'bypassed-san-disable': Disable SAN filtering for bypassed URL's(enabled by default); 'intercepted-san-enable': Enable SAN filtering for intercepted URL's(disabled by default); 'no-san-allow': Allow connection if SAN filtering is enabled and SAN field is not present(Drop by default);

Type: string

Supported Values: enable-san, bypassed-san-disable, intercepted-san-enable, no-san-allow

template_policy-list_forward-policy_action-list

Specification	Value
Type	*list*
Block object keys	

action1

Description 'forward-to-internet': Forward request to Internet; 'forward-to-service-group': Forward request to service group; 'forward-to-proxy': Forward request to HTTP proxy server; 'drop': Drop request;

Type: string

Supported Values: forward-to-internet, forward-to-service-group, forward-to-proxy, drop

drop-message

Description drop-message sent to the client as webpage(html tags are included and quotation marks are required for white spaces)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-message and drop-redirect-url are mutually exclusive

drop-redirect-url

Description Specify URL to which client request is redirected upon being dropped

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-redirect-url, drop-response-code, and drop-message are mutually exclusive

drop-response-code

Description Specify response code for drop action

Type: number

Range: 100-599

Mutual Exclusion: drop-response-code and drop-redirect-url are mutually exclusive

fake-sg

Description service group to forward the packets to Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back

Description Fallback service group for Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back-snat

Description Source NAT pool or pool group for fallback server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fall-back-snat and fall-back-snat-pt-only are mutually exclusive

fall-back-snat-pt-only

Description Source port translation only for fallback server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fall-back-snat-pt-only and fall-back-snat are mutually exclusive

forward-snat

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-snat and forward-snat-pt-only are mutually exclusive

forward-snat-pt-only

Description Source port translation only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward-snat-pt-only and forward-snat are mutually exclusive

http-status-code

Description '301': Moved permanently; '302': Found;

Type: string

Supported Values: 301, 302

Default: 302

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action policy name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

proxy-chaining

Description Enable proxy chaining feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-chaining-bypass

Description Forward all https packets to upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

real-sg

Description service group to forward the packets

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-cert-fetch

Description Fetch server certificate by upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy_action-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

template_policy-list_forward-policy_dual-stack-action-list

Specification	Value
Type	*list*
Block object keys	

fall-back

Description Fallback service group

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

fall-back-snat

Description Source NAT pool or pool group for fallback

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4

Description IPv4 service group to forward

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

ipv4-snat

Description IPv4 source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv6

Description IPv6 service group to forward

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

ipv6-snat

Description IPv6 source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy_dual-stack-action-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests forward by this action;

Type: string

Supported Values: all, hits

template_policy-list_forward-policy_source-list

Specification	Value
Type	*list*
Block object keys	

destination

Description: destination is a **JSON Block**. Please see below for *template_policy-list_forward-policy_source-list_destination*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination*

match-any

Description Match any source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: match-any and match-class-list are mutually exclusive

match-authorize-policy

Description Authorize-policy for user and group based policy

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authorization/policy*

match-class-list

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: match-class-list and match-any are mutually exclusive

name

Description source destination match rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority of the source(higher the number higher the priority, default 0)

Type: number

Range: 1-2000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy_source-list_destination

Specification	Value
Type	*object*

adv-match-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/adv-match/{priority}*

any

Description: any is a **JSON Block**. Please see below for *template_policy-list_forward-policy_source-list_destination_any*

Type: Object

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/any*

class-list-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/class-list/{dest-class-list}*

web-category-list-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/web-category-list/{web-category-list}*

web-reputation-scope-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/web-reputation-scope/{web-reputation-scope}*

template_policy-list_forward-policy_source-list_destination_class-list-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dest-class-list

Description Destination Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': Match URL; 'ip': Match destination IP address;

Type: string

Supported Values: host, url, ip

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy_source-list_destination_web-category-list-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-category-list

Description Destination Web Category List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

template_policy-list_forward-policy_source-list_destination_any

Specification	Value
Type	*object*

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: action and dual-stack-action are mutually exclusive

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dual-stack-action and action are mutually exclusive

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy_source-list_destination_any_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

template_policy-list_forward-policy_source-list_destination_adv-match-list

Specification	Value
Type	*list*
Block object keys	

action

Description Forwading action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: action and dual-stack-action are mutually exclusive

disable-reqmod-icap

Description Disable REQMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-respmod-icap

Description Disable RESPMOD ICAP template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dual-stack-action

Description Forwarding action of this rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dual-stack-action and action are mutually exclusive

match-host

Description Match request host (HTTP stage) or SNI/SAN (SSL stage)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-encoding

Description Match the value of HTTP header "Content-Encoding"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-content-length-range-begin

Description Match the value of HTTP header "Content-Length" with an inclusive range

Type: number

Range: 0-2147483647

match-http-content-length-range-end

Description End of the "Content-Length" range

Type: number

Range: 0-2147483647

match-http-content-type

Description Match the value of HTTP header "Content-Type"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-header

Description Matching the name of all request headers

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-method-connect

Description Match HTTP request method CONNECT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-delete

Description Match HTTP request method DELETE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-get

Description Match HTTP request method GET

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-head

Description Match HTTP request method HEAD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-options

Description Match HTTP request method OPTIONS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-patch

Description Match HTTP request method PATCH

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-post

Description Match HTTP request method POST

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-put

Description Match HTTP request method PUT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-method-trace

Description Match HTTP request method TRACE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-http-request-file-extension

Description Match file extension of URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url

Description Match URL in HTTP request line

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-http-url-regex

Description Match URI in HTTP request line by given regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-http-user-agent

Description Matching the value of HTTP header "User-Agent"

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-server-address

Description Match target server IP address

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

match-server-port

Description Match target server port number

Type: number

Range: 1-65535

Mutual Exclusion: match-server-port and match-server-port-range-begin are mutually exclusive

match-server-port-range-begin

Description Math targer server port range inclusively

Type: number

Range: 1-65535

Mutual Exclusion: match-server-port-range-begin and match-server-port are mutually exclusive

match-server-port-range-end

Description End of port range

Type: number

Range: 1-65535

match-time-range

Description Enable rule in this time-range

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/forward-proxy/time-range*

match-web-category-list

Description Match web-category list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

match-web-reputation-scope

Description Match web-reputation scope

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/reputation-scope*

notify-page

Description Send notify-page to client

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/forward-proxy/notify-page*

priority

Description Rule priority (1000 is highest)

Type: number

Range: 1-1000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy_source-list_destination_adv-match-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests hit this rule;

Type: string

Supported Values: all, hits

template_policy-list_forward-policy_source-list_destination_web-reputation-scope-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dual-stack-action

Description Dual-stack action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-reputation-scope

Description Destination Web Reputation Scope Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/reputation-scope*

template_policy-list_forward-policy_source-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this source rule; 'destination-match-not-found': Number of requests without matching destination rule; 'no-host-info': Failed to parse ip or host information from request;

Type: string

Supported Values: all, hits, destination-match-not-found, no-host-info

template_policy-list_class-list

Specification	Value
Type	*object*

client-ip-l3-dest

Description Use destination IP as client IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l3-dest and client-ip-l7-header are mutually exclusive

client-ip-l7-header

Description Use extract client IP address from L7 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l7-header and client-ip-l3-dest are mutually exclusive

header-name

Description Specify L7 header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lid-list

Type: List

Reference Object: */axapi/v3/slb/template/policy/{name}/class-list/lid/{lidnum}*

name

Description Class list name or geo-location-class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

bw-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

bw-rate-limit

Description Specify bandwidth rate limit (Bandwidth rate limit in bytes)

Type: number

Range: 1-2147483647

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

direct-action

Description Set action when match the lid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

direct-action-value

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: direct-action-value and direct-service-group are mutually exclusive

direct-fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-pbslb-interval

Description Specify logging interval in minutes(default is 3)

Type: number

Range: 0-60

Default: 3

direct-pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: direct-service-group and direct-action-value are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

dns64

Description: dns64 is a **JSON Block**. Please see below for *template_policy-list_class-list_lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 1-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

response-code-rate-limit

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_class-list_lid-list_dns64

Specification	Value
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

template_policy-list_class-list_lid-list_response-code-rate-limit

Specification	Value
Type	*list*
Block object keys	

code-range-end

Description server response code range end

Type: number

Range: 100-600

code-range-start

Description server response code range start

Type: number

Range: 100-600

period

Description seconds

Type: number

Range: 1-127

threshold

Description the times of getting the response code

Type: number

Range: 1-15

template_policy-list_bw-list-id

Specification	Value
Type	*list*
Block object keys	

action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

bw-list-action

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: bw-list-action and service-group are mutually exclusive

fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

id

Description Specify id that maps to service group (The id number)

Type: number

Range: 0-1023

logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pbslb-interval

Description Specify logging interval in minutes

Type: number

Range: 0-60

Default: 3

pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group and bw-list-action are mutually exclusive

Reference Object: */axapi/v3/slb/service-group*

template_policy-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'fwd-policy-dns-unresolved': Forward-policy unresolved DNS queries; 'fwd-policy-dns-outstanding': Forward-policy current DNS outstanding requests; 'fwd-policy-snat-fail': Forward-policy source-nat translation failure; 'fwd-policy-hits': Number of forward-policy requests for this policy template; 'fwd-policy-forward-to-internet': Number of forward-policy requests forwarded to internet; 'fwd-policy-forward-to-service-group': Number of forward-policy requests forwarded to service group; 'fwd-policy-forward-to-proxy': Number of forward-policy requests forwarded to proxy; 'fwd-policy-policy-drop': Number of forward-policy requests dropped; 'fwd-policy-source-match-not-found': Forward-policy requests without matching source rule; 'exp-client-hello-not-found': Expected Client HELLO requests not found;

Type: string

Supported Values: all, fwd-policy-dns-unresolved, fwd-policy-dns-outstanding, fwd-policy-snat-fail, fwd-policy-hits, fwd-policy-forward-to-internet, fwd-policy-forward-to-service-group, fwd-policy-forward-to-proxy, fwd-policy-policy-drop, fwd-policy-source-match-not-found, exp-client-hello-not-found

template_server-list

Specification	Value
Type	*list*
Block object keys	

add

Description Slow start connection limit add by a number every interval (Add by this number every interval)

Type: number

Range: 1-4095

Mutual Exclusion: add and times are mutually exclusive

bw-rate-limit

Description Configure bandwidth rate limit on real server (Bandwidth rate limit in Kbps)

Type: number

Range: 1-16777216

bw-rate-limit-acct

Description 'to-server-only': Only account for traffic sent to server; 'from-server-only': Only account for traffic received from server; 'all': Account for all traffic sent to and received from server;

Type: string

Supported Values: to-server-only, from-server-only, all

Default: all

bw-rate-limit-duration

Description Duration in seconds the observed rate needs to honor

Type: number

Range: 1-250

bw-rate-limit-no-logging

Description Do not log bandwidth rate limit related state transitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Resume server selection after bandwidth drops below this threshold (in Kbps) (Bandwidth rate limit resume threshold (in Kbps))

Type: number

Range: 1-16777216

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-fail-interval

Description The interval to retry when DNS failed to query (DNS failure interval (in second, default is 30))

Type: number

Range: 0-1800

Default: 30

dns-query-interval

Description The interval to query DNS server for the hostname (DNS query interval (in minute, default is 10))

Type: number

Range: 1-1440

Default: 10

dynamic-server-prefix

Description Prefix of dynamic server (Prefix of dynamic server (default is "DRS"))

Type: string

Maximum Length: 3 characters

Maximum Length: 1 characters

Default: DRS

every

Description Slow start connection limit increment interval (default 10)

Type: number

Range: 1-60

Default: 10

extended-stats

Description Enable extended statistics on real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

initial-slow-start

Description Initial slow start connection limit (default 128)

Type: number

Range: 1-4095

Default: 128

log-selection-failure

Description Enable real-time logging for server selection failure event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-dynamic-server

Description Maximum dynamic server number (Maximum dynamic server number (default is 255))

Type: number

Range: 1-1023

Default: 255

min-ttl-ratio

Description Minimum TTL to DNS query interval ratio (Minimum TTL ratio (default is 2))

Type: number

Range: 1-15

Default: 2

name

Description Server template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

resume

Description Resume accepting new connection after connection number drops below threshold (Connection resume threshold)

Type: number

Range: 1-1048575

slow-start

Description Slowly ramp up the connection number after server is up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spoofing-cache

Description Servers under the template are spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server; 'stats-data-disable': Disable statistical data collection for real server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

till

Description Slow start ends when slow start connection limit reaches a number (default 4096) (Slow start ends when connection limit reaches this number)

Type: number

Range: 1-65535

Default: 4096

times

Description Slow start connection limit multiply by a number every interval (default 2) (Multiply by this number every interval)

Type: number

Range: 2-10

Default: 2

Mutual Exclusion: times and add are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight for the Real Servers (Connection Weight (default is 1))

Type: number

Range: 1-1000

Default: 1

template_monitor-list

Specification	Value
Type	*list*
Block object keys	

clear-cfg

Type: List

id

Description Monitor template ID Number

Type: number

Range: 1-16

link-disable-cfg

Type: List

link-down-cfg

Type: List

link-enable-cfg

Type: List

link-up-cfg

Type: List

monitor-relation

Description 'monitor-and': Configures the monitors in current template to work with AND logic; 'monitor-or': Configures the monitors in current template to work with OR logic;

Type: string

Supported Values: monitor-and, monitor-or

Default: monitor-and

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_monitor-list_clear-cfg

Specification	Value
Type	*list*
Block object keys	

clear-all-partition

Description Partition name to clear

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

clear-all-partition-all

Description Clear all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clear-all-sequence

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

clear-partition

Description Partition name to clear

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

clear-partition-all

Description Clear all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clear-sequence

Description Specify the port physical port number

Type: number

Range: 1-16

sessions

Description 'all': Clear all sessions; 'sequence': Sequence number;

Type: string

Supported Values: all, sequence

template_monitor-list_link-enable-cfg

Specification	Value
Type	*list*
Block object keys	

ena-sequence

Description Sequence number (Specify the physical port number)

Type: number

Range: 1-16

enaeth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

template_monitor-list_link-up-cfg

Specification	Value
Type	*list*
Block object keys	

link-up-sequence1

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-up-sequence2

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-up-sequence3

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

linkup-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

template_monitor-list_link-down-cfg

Specification	Value
Type	*list*
Block object keys	

link-down-sequence1

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-down-sequence2

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-down-sequence3

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

linkdown-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

template_monitor-list_link-disable-cfg

Specification	Value
Type	*list*
Block object keys	

dis-sequence

Description Sequence number (Specify the physical port number)

Type: number

Range: 1-16

diseth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

template_tcp-proxy-list

Specification	Value
Type	*list*
Block object keys	

ack-aggressiveness

Description 'low': Delayed ACK; 'medium': Delayed ACK, with ACK on each packet with PUSH flag; 'high': ACK on each packet;

Type: string

Supported Values: low, medium, high

Default: low

alive-if-active

Description keep connection alive if active traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

backend-wscale

Description The TCP window scale used for the server side, default is off (number)

Type: number

Range: 1-14

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description send reset to client when server is disabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and down are mutually exclusive

disable-abc

Description Appropriate Byte Counting RFC 3465 Disabled, default is enabled (Appropriate Byte Counting (ABC) is enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sack

Description disable Selective Ack Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-tcp-timestamps

Description disable TCP Timestamps Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-window-scale

Description disable TCP Window-Scale Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

down

Description send reset to client when server is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: down and disable are mutually exclusive

dynamic-buffer-allocation

Description Optimally adjust the transmit and receive buffer sizes of TCP proxy while keeping their sum constant

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

early-retransmit

Description Configure the Early-Retransmit Algorithm (RFC 5827) (Early-Retransmit is disabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin-timeout

Description FIN timeout (sec), default is disabled (number)

Type: number

Range: 1-60

force-delete-timeout

Description The maximum time that a session can stay in the system before being deleted, default is off (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being deleted, default is off (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default is off (cmd is deprecated, use fin-timeout instead) (number)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default is off (number)

Type: number

Range: 1-60

idle-timeout

Description Idle Timeout (Interval of 60 seconds), default is 600 (idle timeout in second, default 600)

Type: number

Range: 1-2097151

Default: 600

init-cwnd

Description The initial congestion control window size (packets), default is 10 (init-cwnd in packets, default 10)

Type: number

Range: 1-15

Default: 10

initial-window-size

Description Set the initial window size, default is off (number)

Type: number

Range: 1-65535

insert-client-ip

Description Insert client ip into TCP option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

invalid-rate-limit

Description Invalid Packet Response Rate Limit (ms), default is 500 (number default 500 challenges)

Type: number

Range: 0-60000000

Default: 500

keepalive-interval

Description Interval between keepalive probes (sec), default is off (number (seconds))

Type: number

Range: 60-12000

keepalive-probes

Description Number of keepalive probes sent, default is off

Type: number

Range: 2-10

limited-slowstart

Description RFC 3742 Limited Slow-Start for TCP with Large Congestion Windows (number)

Type: number

Range: 0-2147483647

Default: 0

maxburst

Description The max packet count sent per transmission event (number)

Type: number

Range: 1-100

Default: 25

min-rto

Description The minmum retransmission timeout, default is 200ms (number)

Type: number

Range: 100-1000

Default: 200

mss

Description Responding MSS to use if client MSS is large, default is off (number)

Type: number

Range: 128-9000

Default: 1460

nagle

Description Enable Nagle Algorithm

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

naked-ack-on-handshake

Description Send naked ack before data during 3-way handshake

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

proxy-header

Description: proxy-header is a **JSON Block**. Please see below for *template_tcp-proxy-list_proxy-header*

Type: Object

psh-flag-optimization

Description Enable Optimized PSH Flag Use

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

qos

Description QOS level (number)

Type: number

Range: 1-63

reassembly-limit

Description The reassembly queuing limit, default is 25 segments (number)

Type: number

Range: 1-500

Default: 25

reassembly-timeout

Description The reassembly timeout, default is 30sec (number)

Type: number

Range: 1-300

Default: 30

receive-buffer

Description TCP Receive Buffer (default 200k) (number default 200000 bytes)

Type: number

Range: 1-2147483647

Default: 200000

reno

Description Enable Reno Congestion Control Algorithm

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-fwd

Description send reset to server if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-rev

Description send reset to client if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-retries

Description Number of Retries for Retransmit, default is 5

Type: number

Range: 1-20

Default: 5

server-down-action

Description 'FIN': FIN Connection; 'RST': Reset Connection;

Type: string

Supported Values: FIN, RST

syn-retries

Description SYN Retry Numbers, default is 5

Type: number

Range: 1-20

Default: 5

tcp-do-newsack

Description 'enable': Enable fast sack loss recovery; 'disable': Disable fast sack loss recovery; 'auto-select': Auto select fast sack loss recovery (disable);

Type: string

Supported Values: enable, disable, auto-select

Default: auto-select

timewait

Description Timewait Threshold (sec), default 5 (number)

Type: number

Range: 1-60

Default: 5

transmit-buffer

Description TCP Transmit Buffer (default 200k) (number default 200000 bytes)

Type: number

Range: 1-2147483647

Default: 200000

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_tcp-proxy-list_proxy-header

Specification	Value
Type	*object*

proxy-header-action

Description 'insert': Insert proxy header;

Type: string

Supported Values: insert

version

Description 'v1': version 1; 'v2': version 2;

Type: string

Supported Values: v1, v2

template_ftp-list

Specification	Value
Type	*list*
Block object keys	

active-mode-port

Description Non-Standard FTP Active mode port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-mode-port-val

Description Non-Standard FTP Active mode port

Type: number

Range: 1-65534

Mutual Exclusion: active-mode-port-val and any are mutually exclusive

any

Description Allow any FTP Active mode port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and active-mode-port-val are mutually exclusive

name

Description FTP template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

to

Description End range of FTP Active mode port

Type: number

Range: 1-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_imap-pop3-list

Specification	Value
Type	*list*
Block object keys	

logindisabled

Description Disable Login before STARTTLS.Works only for imap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description IMAP-POP3 Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

starttls

Description 'disabled': Disable STARTTLS; 'optional': STARTTLS is optional requirement; 'enforced': Must issue STARTTLS command before imap transaction;

Type: string

Supported Values: disabled, optional, enforced

Default: disabled

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_server-ssl-list

Specification	Value
Type	*list*
Block object keys	

alert-type

Description 'fatal': Log fatal alerts;

Type: string

Supported Values: fatal

ca-certs

Type: List

certificate

Description: certificate is a **JSON Block**. Please see below for *template_server-ssl-list_certificate*

Type: Object

Reference Object: */axapi/v3/slb/template/server-ssl/{name}/certificate*

cipher-template

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: cipher-template, cipher-wo-prio, and shared-partition-cipher-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/cipher*

cipher-without-prio-list

Type: List

close-notify

Description Send close notification when terminate connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

crl-certs

Type: List

dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 30-34

Default: 31

dh-type

Description '1024': 1024; '1024-dsa': 1024-dsa; '2048': 2048;

Type: string

Supported Values: 1024, 1024-dsa, 2048

early-data

Description Enable TLS 1.3 early data (0-RTT)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Type: List

enable-ssli-ftp-alg

Description Enable SSLi FTP over TLS support at which port

Type: number

Range: 1-65535

enable-tls-alert-logging

Description Enable TLS alert logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-enable

Description Enable SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

handshake-logging-enable

Description Enable SSL handshake logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Server SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ocsp-stapling

Description Enable ocsp-stapling support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

renegotiation-disable

Description Disable SSL renegotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-certificate-error

Type: List

server-name

Description Specify Server Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

session-cache-size

Description Session Cache Size (Maximum cache size. Default value 0 (Session ID reuse disabled))

Type: number

Range: 0-128

Default: 0

session-cache-timeout

Description Session Cache Timeout (Timeout value, in seconds. Default no timeout.)

Type: number

Range: 1-7200

session-key-logging-enable

Description Enable SSL session key logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-ticket-enable

Description Enable server side session ticket support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-cipher-template

Description Reference a cipher template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cipher-template, cipher-wo-prio, and cipher-template are mutually exclusive

ssli-logging

Description SSLi logging level, default is error logging only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sslilogging

Description 'disable': Disable all logging; 'all': enable all logging(error, info);

Type: string

Supported Values: disable, all

template-cipher-shared

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/cipher*

use-client-sni

Description use client SNI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description TLS/SSL version, default is the highest number supported (TLS/SSL version: 30-SSLv3.0, 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 30-34

Default: 33

template_server-ssl-list_crl-certs

Specification	Value
Type	*list*
Block object keys	

crl

Description Certificate Revocation Lists (Certificate Revocation Lists file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

crl-partition-shared

Description Certificate Revocation Lists Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_server-ssl-list_certificate

Specification	Value
Type	*object*

cert

Description Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key

Description Client private-key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description Client Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_server-ssl-list_ec-list

Specification	Value
Type	*list*
Block object keys	

ec

Description 'secp256r1': X9_62_prime256v1; 'secp384r1': secp384r1;

Type: string

Supported Values: secp256r1, secp384r1, secp521r1, x25519

template_server-ssl-list_server-certificate-error

Specification	Value
Type	*list*
Block object keys	

error-type

Description 'email': Notify the error via email; 'ignore': Ignore the error, which mean the connection can continue; 'logging': Log the error; 'trap': Notify the error by SNMP trap;

Type: string

Supported Values: email, ignore, logging, trap

template_server-ssl-list_ca-certs

Specification	Value
Type	*list*
Block object keys	

ca-cert

Description Specify CA certificate

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-cert-partition-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ocsp-sg

Description Specify service-group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/service-group*

server-ocsp-srvr

Description Specify authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/server/ocsp*

template_server-ssl-list_cipher-without-prio-list

Specification	Value
Type	*list*
Block object keys	

cipher-wo-prio

Description 'SSL3_RSA_DES_192_CBC3_SHA': TLS_RSA_WITH_3DES_EDE_CBC_SHA (0x000A); 'SSL3_RSA_RC4_128_MD5': TLS_RSA_WITH_RC4_128_MD5 (0x0004); 'SSL3_RSA_RC4_128_SHA': TLS_RSA_WITH_RC4_128_SHA (0x0005); 'TLS1_RSA_AES_128_SHA': TLS_RSA_WITH_AES_128_CBC_SHA (0x002F); 'TLS1_RSA_AES_256_SHA': TLS_RSA_WITH_AES_256_CBC_SHA (0x0035); 'TLS1_RSA_AES_128_SHA256': TLS_RSA_WITH_AES_128_CBC_SHA256 (0x003C); 'TLS1_RSA_AES_256_SHA256': TLS_RSA_WITH_AES_256_CBC_SHA256 (0x003D); 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS_DHE_RSA_WITH_AES_128_GCM_SHA256 (0x009E); 'TLS1_DHE_RSA_AES_128_SHA': TLS_DHE_RSA_WITH_AES_128_CBC_SHA (0x0033); 'TLS1_DHE_RSA_AES_128_SHA256': TLS_DHE_RSA_WITH_AES_128_CBC_SHA256 (0x0067); 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS_DHE_RSA_WITH_AES_256_GCM_SHA384 (0x009F); 'TLS1_DHE_RSA_AES_256_SHA': TLS_DHE_RSA_WITH_AES_256_CBC_SHA (0x0039); 'TLS1_DHE_RSA_AES_256_SHA256': TLS_DHE_RSA_WITH_AES_256_CBC_SHA256 (0x006B); 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256 (0xC02B); 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA (0xC009); 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256 (0xC023); 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384 (0xC02C); 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA (0xC00A); 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256 (0xC02F); 'TLS1_ECDHE_RSA_AES_128_SHA': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA

(0xC013); 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256 (0xC027); 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 (0xC030); 'TLS1_ECDHE_RSA_AES_256_SHA': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA (0xC014); 'TLS1_RSA_AES_128_GCM_SHA256': TLS_RSA_WITH_AES_128_GCM_SHA256 (0x009C); 'TLS1_RSA_AES_256_GCM_SHA384': TLS_RSA_WITH_AES_256_GCM_SHA384 (0x009D); 'TLS1_ECDHE_RSA_AES_256_SHA384': TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384 (0xC028); 'TLS1_ECDHE_ECDSA_AES_256_SHA384': TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384 (0xC024); 'TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA8); 'TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256': TLS_ECDHE_ECDSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCA9); 'TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256': TLS_DHE_RSA_WITH_CHACHA20_POLY1305_SHA256 (0xCCAA);

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256

Mutual Exclusion: cipher-wo-prio, cipher-template, and shared-partition-cipher-template are mutually exclusive

dns-persistent-cache

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-persistent-cache_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_entry': Total persistent cache entry; 'entry_saved': Total saved cache entry; 'entry_deleted': Total deleted cache entry; 'database_busy': Database busy; 'database_error': Database error;

Type: string

Supported Values: all, total_entry, entry_saved, entry_deleted, database_busy, database_error

link-probe

Specification	Value
Type	*object*

entry

Description: entry is a **JSON Block**. Please see below for *link-probe_entry*

Type: Object

Reference Object: */axapi/v3/slb/link-probe/entry*

link-probe_entry

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-probe_entry_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_entries': Current Entry Count; 'total_created': Total Entry Created; 'total_inserted': Total Entry Inserted; 'total_ready_to_free': Total Entry Ready To Free; 'total_freed': Total Entry Freed; 'err_entry_create_failed': Entry Creation Failure; 'err_entry_create_oom': Entry Creation Out of Memory; 'err_entry_insert_failed': Entry Insert Failed; 'err_tmpl_probe_create_failed': Probe Template Creation Failure; 'err_tmpl_probe_create_oom': Probe Template Creation Out of Memory; 'total_http_probes_sent': Total HTTP Probes Sent out; 'total_http_response_received': Total HTTP responses received; 'total_http_response_good': Total HTTP responses matching probe template config; 'total_http_response_bad': Total HTTP responses not matching probe template config; 'total_tcp_err': Total TCP errors in probes sent out; 'err_smart_nat_alloc': Error creating Smart NAT Instance; 'err_smart_nat_port_alloc': Error obtaining Smart NAT source port; 'err_l4_sess_alloc': Error allocating L4 session for probe; 'err_probe_tcp_conn_send': Error in initiating TCP connection for probe; 'probe_tcp_conn_sent': TCP connection sent for probe;

Type: string

Supported Values: all, curr_entries, total_created, total_inserted, total_ready_to_free, total_freed, err_entry_create_failed, err_entry_create_oom, err_entry_insert_failed, err_tmpl_probe_create_failed, err_tmpl_probe_create_oom, total_http_probes_sent, total_http_response_received, total_http_response_good, total_http_response_bad, total_tcp_err, err_smart_nat_alloc, err_smart_nat_port_alloc, err_l4_sess_alloc, err_probe_tcp_conn_send, probe_tcp_conn_sent

ssl-cert-expire-check

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns64

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns64_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'query': Query; 'query-bad-pkt': Query Bad Packet; 'query-chg': Query Changed; 'query-parallel': Query Parallel; 'query-passive': Query Passive; 'resp': Response; 'resp-bad-pkt': Response Bad Packet; 'resp-bad-qr': Response Bad Query; 'resp-chg': Response Changed; 'resp-err': Response Error; 'resp-empty': Response Empty; 'resp-local': Response Local; 'adjust': Translated; 'cache': Cache; 'drop': Dropped;

Type: string

Supported Values: all, query, query-bad-pkt, query-chg, query-parallel, query-passive, resp, resp-bad-pkt, resp-bad-qr, resp-chg, resp-err, resp-empty, resp-local, adjust, cache, drop

fast-http-proxy

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fast-http-proxy_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num': Num; 'curr_proxy': Curr Proxy Conns; 'total_proxy': Total Proxy Conns; 'req': HTTP requests; 'req_succ': HTTP requests(succ); 'noproxy': No proxy error; 'client_rst': Client RST; 'server_rst': Server RST; 'notuple': No tuple error; 'parsereq_fail': Parse req fail; 'svrsel_fail': Server selection fail; 'fwdreq_fail': Fwd req fail; 'fwdreq_fail_buff': Fwd req fail - buff; 'fwdreq_fail_rport': Fwd req fail - rport; 'fwdreq_fail_route': Fwd req fail - route; 'fwdreq_fail_persist': Fwd req fail - persist; 'fwdreq_fail_server': Fwd req fail - server; 'fwdreq_fail_tuple': Fwd req fail - tuple; 'fwdreqdata_fail': Fwd req data fail; 'req_retran': Packets retrans; 'req_ofo': Packets ofo; 'server_resel': Server reselection; 'svr_prem_close': Server premature close; 'new_svrconn': Server conn made; 'snat_fail': Source NAT failure; 'tcpoutrst': Out RSTs; 'full_proxy': Full proxy tot; 'full_proxy_post': Full proxy POST; 'full_proxy_pipeline': Full proxy pipeline; 'full_proxy_fpga_err': Full proxy fpga err; 'req_over_limit': Request over limit; 'req_rate_over_limit': Request rate over limit; 'l4_switching': L4 switching; 'cookie_switching': Cookie switching; 'aflex_switching': aFleX switching; 'http_policy_switching': HTTP Policy switching; 'url_switching': URL switching; 'host_switching': Host switching; 'lb_switching': Normal LB switching; 'l4_switching_ok': L4 switching (succ); 'cookie_switching_ok': Cookie switching (succ); 'aflex_switching_ok': aFleX switching (succ); 'http_policy_switching_ok': HTTP Policy switching (succ); 'url_switching_ok': URL switching (succ); 'host_switching_ok': Host switching (succ); 'lb_switching_ok': Normal LB switch. (succ); 'l4_switching_enqueue': L4 switching (enQ); 'cookie_switching_enqueue': Cookie switching (enQ); 'aflex_switching_enqueue': aFleX switching (enQ); 'http_policy_switching_enqueue': HTTP Policy switching (enQ); 'url_switching_enqueue': URL switching (enQ); 'host_switching_enqueue': Host switching (enQ); 'lb_switching_enqueue': Normal LB switch. counters1

Description 'all': all; 'set_bw_error': Total RPZ Set Class-list Error; 'parse_error': Total RPZ Parse Error;

Type: string

Supported Values: all, set_bw_error, parse_error

forward-proxy

Specification	Value
Type	*object*

notify-page-list

Type: List

Reference Object: */axapi/v3/slb/forward-proxy/notify-page/{name}*

time-range-list

Type: List

Reference Object: */axapi/v3/slb/forward-proxy/time-range/{name}*

forward-proxy_time-range-list

Specification	Value
Type	*list*
Block object keys	

daily-begin

Description Daily enables after this time (HH:MM, 24-hour notation)

Type: string

Maximum Length: 5 characters

Maximum Length: 4 characters

daily-end

Description Daily enables until thie time (HH:MM, 24-hour notation, inclusive)

Type: string

Maximum Length: 5 characters

Maximum Length: 4 characters

days-of-month-begin

Description Recurring enables after this day per month

Type: number

Range: 1-31

days-of-month-end

Description Recurring enables until this day per month (inclusive)

Type: number

Range: 1-31

months-of-year-begin

Description Recurring enables after this month per year

Type: number

Range: 1-12

months-of-year-end

Description Recurring enables until this month per year (inclusive)

Type: number

Range: 1-12

name

Description Name of this object

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

use-utc-time

Description Use UTC+0 time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weekday-fr

Description Recurring enables on Friday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-mo

Description Recurring enables on Monday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-sa

Description Recurring enables on Saturday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-su

Description Recurring enables on Sunday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-th

Description Recurring enables on Thursday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-tu

Description Recurring enables on Tuesday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-we

Description Recurring enables on Wednesday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy_notify-page-list

Specification	Value
Type	*list*
Block object keys	

message

Description Message in notify page

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

name

Description Name of this object

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tsig

Specification	Value
Type	*object*

check

Description Check TSIG file

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-acme-cert-status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

perf

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

perf_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total-throughput-bits-per-sec': Total Throughput in bits/sec; 'l4-conns-per-sec': L4 Connections/sec; 'l7-conns-per-sec': L7 Connections/sec; 'l7-trans-per-sec': L7 Transactions/sec; 'ssl-conns-per-sec': SSL Connections/sec; 'ip-nat-conns-per-sec': IP NAT Connections/sec; 'total-new-conns-per-sec': Total New Connections Established/sec; 'total-curr-conns': Total Current Established Connections; 'l4-bandwidth': L4 Bandwidth in bits/sec; 'l7-bandwidth': L7 Bandwidth in bits/sec; 'serv-ssl-conns-per-sec': Server SSL Connections/sec; 'fw-conns-per-sec': FW Connections/sec; 'gifw-conns-per-sec': GiFW Connections/sec; 'l7-proxy-conns-per-sec': L7 Proxy Connections/sec; 'l7-proxy-trans-per-sec': L7 Proxy Transactions/sec;

Type: string

Supported Values: all, total-throughput-bits-per-sec, l4-conns-per-sec, l7-conns-per-sec, l7-trans-per-sec, ssl-conns-per-sec, ip-nat-conns-per-sec, total-new-conns-per-sec, total-curr-conns, l4-bandwidth, l7-bandwidth, serv-ssl-conns-per-sec, fw-conns-per-sec, gifw-conns-per-sec, l7-proxy-conns-per-sec, l7-proxy-trans-per-sec

dns

Specification	Value
Type	*object*

sampling-enable

Type: List

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'slb_req': No. of requests; 'slb_resp': No. of responses; 'slb_no_resp': No. of requests with no response; 'slb_req_rexmit': No. of requests retransmit; 'slb_resp_no_match': No. of requests and responses with no match; 'slb_no_resource': No. of resource failures; 'nat_req': (NAT) No. of requests; 'nat_resp': (NAT) No. of responses; 'nat_no_resp': (NAT) No. of resource failures; 'nat_req_rexmit': (NAT) No. of request retransmits; 'nat_resp_no_match': (NAT) No. of requests with no response; 'nat_no_resource': (NAT) No. of resource failures; 'nat_xid_reused': (NAT) No. of requests reusing a transaction id; 'filter_type_drop': Total Query Type Drop; 'filter_class_drop': Total Query Class Drop; 'filter_type_any_drop': Total Query ANY Type Drop; 'slb_dns_client_ssl_succ': No. of client ssl success; 'slb_dns_server_ssl_succ': No. of server ssl success; 'slb_dns_udp_conn': No. of backend udp connections; 'slb_dns_udp_conn_succ': No. of backend udp conn established; 'slb_dns_padding_to_server_removed': some help string; 'slb_dns_padding_to_client_added': some help string; 'slb_dns_edns_subnet_to_server_removed': some help string; 'slb_dns_udp_retransmit': some help string; 'slb_dns_udp_retransmit_fail': some help string; 'rpz_action_drop': RPZ Action Drop; 'rpz_action_pass_thru': RPZ Action Pass Through; 'rpz_action_tcp_only': RPZ Action TCP Only; 'rpz_action_nxdomain': RPZ Action NXDOMAIN; 'rpz_action_nodata': RPZ Action NODATA; 'rpz_action_local_data': RPZ Action Local Data; 'slb_drop': DNS requests drop; 'nat_slb_drop': (NAT)DNS requests drop; 'invalid_q_len_to_udp': invalid query length to conver to UDP; 'slb_dns_edns_ecs_received': Number of ecs from client received; 'slb_dns_edns_ecs_inserted': Number of ecs inserted;

Type: string

Supported Values: all, slb_req, slb_resp, slb_no_resp, slb_req_rexmit, slb_resp_no_match, slb_no_resource, nat_req, nat_resp, nat_no_resp, nat_req_rexmit, nat_resp_no_match, nat_no_resource, nat_xid_reused, filter_type_drop, filter_class_drop, filter_type_any_drop, slb_dns_client_ssl_succ, slb_dns_server_ssl_succ, slb_dns_udp_conn, slb_dns_udp_conn_succ, slb_dns_padding_to_server_removed, slb_dns_padding_to_client_added, slb_dns_edns_subnet_to_server_removed, slb_dns_udp_retransmit, slb_dns_udp_retransmit_fail, rpz_action_drop, rpz_action_pass_thru, rpz_action_tcp_only, rpz_action_nxdomain, rpz_action_nodata, rpz_action_local_data, slb_drop, nat_slb_drop, invalid_q_len_to_udp, slb_dns_edns_ecs_received, slb_dns_edns_ecs_inserted

virtual-server-list

Specification	Value
Type	*list*
Block object keys	

acl-id

Description acl id

Type: number

Range: 1-199

Mutual Exclusion: acl-id,acl-name, p-acl, and shared-partition-acl are mutually exclusive

acl-id-shared

Description acl id

Type: number

Range: 1-199

Mutual Exclusion: acl-id-shared and acl-name-shared are mutually exclusive

acl-name

Description Access List name (IPv4 Access List Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name,acl-id, p-acl, and shared-partition-acl are mutually exclusive

Reference Object: */axapi/v3/ip/access-list*

acl-name-shared

Description Access List name (IPv4 Access List Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-shared and acl-id-shared are mutually exclusive

Reference Object: */axapi/v3/ip/access-list*

arp-disable

Description Disable Respond to Virtual Server ARP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Create a description for VIP

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

disable-vip-adv

Description Disable virtual server GARP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-disable-action

Description 'enable': Enable Virtual Server (default); 'disable': Disable Virtual Server; 'disable-when-all-ports-down': Disable Virtual Server when all member ports are down; 'disable-when-any-port-down': Disable Virtual Server when any member port is down;

Type: string

Supported Values: enable, disable, disable-when-all-ports-down, disable-when-any-port-down

Default: enable

ethernet

Description Ethernet interface

Type: number

Format: interface

extended-stats

Description Enable extended statistics on virtual server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gaming-protocol-compliance

Description Enable Gaming Protocol Compliance Check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-dynamic

Description Dynamic failover based on vip status

Type: number

Range: 1-255

ip-address

Description IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address, ipv6-address, and use-if-ip are mutually exclusive

ipv6-acl

Description ipv6 acl name

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv6-acl, p-ipv6-acl, and shared-partition-ipv6-acl are mutually exclusive

Reference Object: */axapi/v3/ipv6/access-list*

ipv6-acl-shared

Description ipv6 acl name

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address, ip-address, and use-if-ip are mutually exclusive

migrate-vip

Description: migrate-vip is a **JSON Block**. Please see below for *virtual-server-list_migrate-vip*

Type: Object

Reference Object: */axapi/v3/slb/virtual-server/{name}/migrate-vip*

name

Description SLB Virtual Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask-brief

port-list

Type: List

Reference Object: */axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}*

redistribute-route-map

Description Route map reference (Name of route-map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribution-flagged

Description Flag VIP for special redistribution handling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-vs-template

Description Reference a virtual-server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-vs-template and template-virtual-server are mutually exclusive

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for virtual server; 'stats-data-disable': Disable statistical data collection for virtual server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

suppress-internal-loopback

Description Suppress VIP internal loopback programming

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-logging

Description NAT Logging template (NAT Logging template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/template/logging*

template-policy

Description Policy template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/policy*

template-scaleout

Description Scaleout template (Scaleout template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template-virtual-server

Description Virtual server template (Virtual server template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-virtual-server and shared-partition-vs-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/virtual-server*

template-virtual-server-shared

Description Virtual-Server Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/virtual-server*

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip, ipv6-address, and ip-address are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vport-disable-action

Description 'drop-packet': Drop packet for disabled virtual-port;

Type: string

Supported Values: drop-packet

vrid

Description Join a vrrp group (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

virtual-server-list_port-list

Specification	Value
Type	*list*
Block object keys	

acl-list

Type: List

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

aflex-scripts

Type: List

aflex-table-entry-syn-disable

Description Disable aFlex entry sync for this port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: aflex-table-entry-syn-disable and aflex-table-entry-syn-enable are mutually exclusive

aflex-table-entry-syn-enable

Description Enable aFlex entry sync for this port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: aflex-table-entry-syn-enable and aflex-table-entry-syn-disable are mutually exclusive

alt-protocol1

Description 'http': HTTP Port;

Type: string

Supported Values: http

alt-protocol2

Description 'tcp': TCP LB service;

Type: string

Supported Values: tcp

alternate-port

Description Alternate Virtual Port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: alternate-port and range are mutually exclusive

alternate-port-number

Description Virtual Port

Type: number

Range: 0-65534

attack-detection

Description Enable analytics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *virtual-server-list_port-list_auth-cfg*

Type: Object

auto

Description Configure auto NAT for the vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clientip-sticky-nat

Description Prefer to use same source NAT address for a client

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

cpu-compute

Description enable cpu compute on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

def-selection-if-pref-failed

Description 'def-selection-if-pref-failed': Use default server selection method if prefer method failed; 'def-selection-if-pref-failed-disable': Stop using default server selection method if prefer method failed;

Type: string

Supported Values: def-selection-if-pref-failed, def-selection-if-pref-failed-disable

Default: def-selection-if-pref-failed

enable-playerid-check

Description Enable playerid checks on UDP packets once the AX is in active mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-scaleout

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eth-fwd

Description Ethernet interface number

Type: number

Format: interface

Mutual Exclusion: eth-fwd and trunk-fwd are mutually exclusive

eth-rev

Description Ethernet interface number

Type: number

Format: interface

Mutual Exclusion: eth-rev and trunk-rev are mutually exclusive

expand

Description expand syn-cookie with timestamp and wscale

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

extended-stats

Description Enable extended statistics on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-dns-cache

Description 'force-enable': Always enable; 'force-disable': Always disable; 'depends-on-config': Depends on configurations;

Type: string

Supported Values: force-enable, force-disable, depends-on-config

fast-path

Description 'force': Force fast path in SLB processing; 'disable': Disable fast path in SLB processing;

Type: string

Supported Values: force, disable

force-routing-mode

Description Force routing mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-enable

Description Enable Global Server Load Balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-session-lb

Description Enable GTP Session Load Balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-conn-mirror

Description Enable for HA Conn sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-global

Description Ignore global substitute-source-mac

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-map-list

Description Enter name of IP Map List to be bound (IP Map List Name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip-only-lb

Description Enable IP-Only LB mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-smart-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipinip

Description Enable IP in IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l7-hardware-assist

Description FPGA assist L7 packet parsing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l7-service-chain

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

memory-compute

Description enable dynamic memory compute on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-switching

Description Message switching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SLB Virtual Service Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ng-waf

Description Next-gen WAF

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-auto-up-on-aflex

Description Don't automatically mark vport up when aFleX is bound

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-dest-nat

Description Disable destination NAT, this option only supports in wildcard VIP or when a connection is operated in SSLi + EP mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

on-syn

Description Enable for HA Conn sync for l4 tcp sessions on SYN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-server-conn

Description Support server that allow only one connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

optimization-level

Description '0': No optimization; '1': Optimization level 1 (Experimental);

Type: string

Supported Values: 0, 1

Default: 0

p-template-sip-shared

Description SIP Template Name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: p-template-sip-shared and template-sip are mutually exclusive

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/slb-vport-tmpl*

persist-type

Description 'src-dst-ip-swap-persist': Create persist session after source IP and destination IP swap; 'use-src-ip-for-dst-persist': Use the source IP to create a destination persist session; 'use-dst-ip-for-src-persist': Use the destination IP to create source IP persist session;

Type: string

Supported Values: src-dst-ip-swap-persist, use-src-ip-for-dst-persist, use-dst-ip-for-src-persist

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: pool and shared-partition-pool are mutually exclusive

pool-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-number

Description Port

Type: number

Range: 0-65534

port-translation

Description Enable port translation under no-dest-nat

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

precedence

Description Set auto NAT pool as higher precedence for source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': TCP LB service; 'udp': UDP Port; 'others': for no tcp/udp protocol, do IP load balancing; 'diameter': diameter port; 'dns-tcp': DNS service over TCP; 'dns-udp': DNS service over UDP; 'fast-http': Fast HTTP Port; 'fix': FIX Port; 'ftp': File Transfer Protocol Port; 'ftp-proxy': ftp proxy port; 'http': HTTP Port; 'https': HTTPS port; 'imap': imap proxy port; 'mlb': Message based load balancing; 'mms': Microsoft Multimedia Service Port; 'mysql': mssql port; 'mssql': mssql; 'pop3': pop3 proxy port; 'radius': RADIUS Port; 'rtsp': Real Time Streaming Protocol Port; 'sip': Session initiation protocol over UDP; 'sip-tcp': Session initiation protocol over TCP; 'sips': Session initiation protocol over TLS; 'smpp-tcp': SMPP service over TCP; 'spdy': spdy port; 'spdys': spdys port; 'smtp': SMTP Port; 'mqtt': MQTT Port; 'mqtts': MQTTS Port; 'ssl-proxy': Generic SSL proxy; 'ssli': SSL insight; 'ssh':

SSH Port; 'tcp-proxy': Generic TCP proxy; 'tftp': TFTP Port; 'fast-fix': Fast FIX port; 'http-over-quic': HTTP3-over-quic port;

Type: string

Supported Values: tcp, udp, others, diameter, dns-tcp, dns-udp, fast-http, fix, ftp, ftp-proxy, http, https, imap, mlb, mms, mysql, mssql, pop3, radius, rtsp, sip, sip-tcp, sips, smpp-tcp, spdy, spdys, smtp, mqtt, mqtts, ssl-proxy, ssli, ssh, tcp-proxy, tftp, fast-fix, http-over-quic

proxy-layer

Description 'v1': Force using old proxy; 'v2': Force using new proxy;

Type: string

Supported Values: v1, v2

range

Description Virtual Port range (Virtual Port range value)

Type: number

Range: 0-254

Default: 0

Mutual Exclusion: range and alternate-port are mutually exclusive

rate

Description Specify the log message rate

Type: number

Range: 0-2147483647

redirect-to-https

Description Redirect HTTP to HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reply-acme-challenge

Description Reply ACME http-01 challenge. This option only takes effect in HTTP port 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-fail

Description Use alternate virtual port when L7 request fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reselection

Description 'disable': disable;

Type: string

Supported Values: disable

reset

Description Send client reset when connection number over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-on-server-selection-fail

Description Send client reset when server selection fails

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: reset-on-server-selection-fail and when-server-selection-failed are mutually exclusive

resolve-web-cat-list

Description Web Category List name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/web-category/category-list*

rtp-sip-call-id-match

Description rtp traffic try to match the real server of sip smp call-id session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

secs

Description Specify the interval in seconds

Type: number

Range: 1-100

serv-sel-fail

Description Use alternate virtual port when server selection failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-group

Description Bind a use-rcv-hop-for-resp Server Group to this Virtual Server (Server Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/server-group*

service-group

Description Bind a Service Group to this Virtual Server (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/service-group*

shared-partition-cache-template

Description Reference a Cache template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cache-template and template-cache are mutually exclusive

shared-partition-client-ssl-template

Description Reference a Client SSL template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-client-ssl-template and template-client-ssl are mutually exclusive

shared-partition-connection-reuse-template

Description Reference a connection reuse template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-connection-reuse-template and template-connection-reuse are mutually exclusive

shared-partition-dblb-template

Description Reference a dblb template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dblb-template and template-dblb are mutually exclusive

shared-partition-diameter-template

Description Reference a Diameter template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-diameter-template and template-diameter are mutually exclusive

shared-partition-dns-template

Description Reference a dns template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dns-template and template-dns are mutually exclusive

shared-partition-doh-template

Description Reference a DNS over HTTP(s) template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-doh-template and template-doh are mutually exclusive

shared-partition-dynamic-service-template

Description Reference a dynamic service template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dynamic-service-template and template-dynamic-service are mutually exclusive

shared-partition-external-service-template

Description Reference a external service template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-external-service-template and template-external-service are mutually exclusive

shared-partition-fix-template

Description Reference a FIX template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-fix-template and template-fix are mutually exclusive

shared-partition-http-policy-template

Description Reference a http policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-http-policy-template and template-http-policy are mutually exclusive

shared-partition-http-template

Description Reference a HTTP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-http-template and template-http are mutually exclusive

shared-partition-imap-pop3-template

Description Reference a IMAP/POP3 template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-imap-pop3-template and template-imap-pop3 are mutually exclusive

shared-partition-persist-cookie-template

Description Reference a persist cookie template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-cookie-template and template-persist-cookie are mutually exclusive

shared-partition-persist-destination-ip-template

Description Reference a persist destination ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-destination-ip-template and template-persist-destination-ip are mutually exclusive

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and template-persist-source-ip are mutually exclusive

shared-partition-persist-ssl-sid-template

Description Reference a persist SSL SID template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-ssl-sid-template and template-persist-ssl-sid are mutually exclusive

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-pool

Description Specify NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and pool are mutually exclusive

shared-partition-quic-template

Description Reference a QUIC template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-quic-template and template-quic are mutually exclusive

shared-partition-server-ssl-template

Description Reference a SSL Server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-server-ssl-template and template-server-ssl are mutually exclusive

shared-partition-smpp-template

Description Reference a smpp template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-smpp-template and template-smpp are mutually exclusive

shared-partition-smtp-template

Description Reference a SMTP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-smtp-template and template-smtp are mutually exclusive

shared-partition-tcp

Description Reference a tcp template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp and template-tcp are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and template-tcp-proxy are mutually exclusive

shared-partition-udp

Description Reference a UDP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-udp and template-udp are mutually exclusive

shared-partition-virtual-port-template

Description Reference a Virtual Port template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-virtual-port-template and template-virtual-port are mutually exclusive

showtech-print-extended-stats

Description Enable print extended stats in showtech for dns vports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip-rev-hash

Description Skip rev tuple hash insertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-on-vip

Description Enable source NAT traffic against VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for virtual port; 'stats-data-disable': Disable statistical data collection for virtual port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

substitute-source-mac

Description Substitute Source MAC Address to that of the outgoing interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

support-http2

Description Support HTTP2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie

Description Enable syn-cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-cache

Description RAM caching template (Cache Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-cache and shared-partition-cache-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/cache*

template-cache-shared

Description Cache Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/cache*

template-client-ssh

Description Client SSH Template (Client SSH Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssh*

template-client-ssl

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-client-ssl and shared-partition-client-ssl-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/client-ssl*

template-client-ssl-shared

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/client-ssl*

template-connection-reuse

Description Connection Reuse Template (Connection Reuse Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-connection-reuse and shared-partition-connection-reuse-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/connection-reuse*

template-connection-reuse-shared

Description Connection Reuse Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/connection-reuse*

template-dblb

Description DBLB Template (DBLB template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dblb and shared-partition-dblb-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/dblb*

template-dblb-shared

Description DBLB Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dblb*

template-diameter

Description Diameter Template (diameter template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-diameter and shared-partition-diameter-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/diameter*

template-diameter-shared

Description Diameter Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/diameter*

template-dns

Description DNS template (DNS template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dns and shared-partition-dns-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/dns*

template-dns-shared

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dns*

template-doh

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-doh and shared-partition-doh-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/doh*

template-doh-shared

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/doh*

template-dynamic-service

Description Dynamic Service Template (dynamic-service template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dynamic-service and shared-partition-dynamic-service-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/dynamic-service*

template-dynamic-service-shared

Description Dynamic Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/dynamic-service*

template-external-service

Description External service template (external-service template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-external-service and shared-partition-external-service-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/external-service*

template-external-service-shared

Description External Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/external-service*

template-fix

Description FIX template (FIX Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-fix and shared-partition-fix-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/fix*

template-fix-shared

Description FIX Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/fix*

template-ftp

Description FTP port template (Ftp template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/ftp*

template-http

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-http and shared-partition-http-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/http*

template-http-policy

Description http-policy template (http-policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-http-policy and shared-partition-http-policy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/http-policy*

template-http-policy-shared

Description Http Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/http-policy*

template-http-shared

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/http*

template-imap-pop3

Description IMAP/POP3 Template (IMAP/POP3 Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-imap-pop3 and shared-partition-imap-pop3-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/imap-pop3*

template-imap-pop3-shared

Description IMAP/POP3 Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/imap-pop3*

template-mqtt

Description MQTT Template (MQTT Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/mqtt*

template-persist-cookie

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-cookie and shared-partition-persist-cookie-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/cookie*

template-persist-cookie-shared

Description Cookie Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/cookie*

template-persist-destination-ip

Description Destination IP persistence (Destination IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-destination-ip and shared-partition-persist-destination-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/destination-ip*

template-persist-destination-ip-shared

Description Destination IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/destination-ip*

template-persist-source-ip

Description Source IP persistence (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/source-ip*

template-persist-ssl-sid

Description SSL SID persistence (SSL SID persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-ssl-sid and shared-partition-persist-ssl-sid-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/persist/ssl-sid*

template-persist-ssl-sid-shared

Description SSL SID Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/persist/ssl-sid*

template-policy

Description Policy Template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/policy*

template-quic

Description QUIC Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-quic and shared-partition-quic-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/quic*

template-quic-client

Description QUIC Config Client (QUIC Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/quic*

template-quic-server

Description QUIC Config Server (QUIC Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/quic*

template-quic-shared

Description QUIC Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/quic*

template-ram-cache

Description RAM caching template (Cache Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/cache*

template-reqmod-icap

Description ICAP reqmod template (reqmod-icap template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/reqmod-icap*

template-respmod-icap

Description ICAP respmod service template (respmod-icap template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/respmod-icap*

template-scaleout

Description Scaleout template (Scaleout template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

template-server-ssh

Description Server SSH Template (Server SSH Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssh*

template-server-ssl

Description Server Side SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-server-ssl and shared-partition-server-ssl-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/server-ssl*

template-server-ssl-shared

Description Server SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

template-sip

Description SIP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-sip and p-template-sip-shared are mutually exclusive

Reference Object: */axapi/v3/slb/template/sip*

template-sip-shared

Description SIP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/sip*

template-smpp

Description SMPP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-smpp and shared-partition-smpp-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/smpp*

template-smpp-shared

Description SMPP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/smpp*

template-smtp

Description SMTP Template (SMTP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-smtp and shared-partition-smtp-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/smtp*

template-smtp-shared

Description SMTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/smtp*

template-ssli

Description SSLi template (SSLi Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/ssli*

template-tcp

Description TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-tcp and shared-partition-tcp are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp*

template-tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-client

Description TCP Proxy Config Client (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-server

Description TCP Proxy Config Server (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-shared

Description TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Reference Object: */axapi/v3/slb/template/tcp*

template-udp

Description L4 UDP Template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-udp and shared-partition-udp are mutually exclusive

Reference Object: */axapi/v3/slb/template/udp*

template-udp-shared

Description UDP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Reference Object: */axapi/v3/slb/template/udp*

template-virtual-port

Description Virtual port template (Virtual port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-virtual-port and shared-partition-virtual-port-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/virtual-port*

template-virtual-port-shared

Description Virtual Port Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/virtual-port*

trunk-fwd

Description Trunk interface number

Type: number

Format: interface

Mutual Exclusion: trunk-fwd and eth-fwd are mutually exclusive

trunk-rev

Description Trunk interface number

Type: number

Format: interface

Mutual Exclusion: trunk-rev and eth-rev are mutually exclusive

use-alternate-port

Description Use alternate virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-cgnv6

Description Follow CGNv6 source NAT configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-default-if-no-server

Description Use default forwarding if server selection failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-rcv-hop-for-resp

Description Use receive hop for response to client(For packets on default-vlan, also config "vlan-global enable-def-vlan-l2-forwarding".)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-rcv-hop-group

Description Set use-rcv-hop group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

view

Description Specify a GSLB View (ID)

Type: number

Range: 1-31

when-down

Description Use alternate virtual port when down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

when-down-protocol2

Description Use alternate virtual port when down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

when-server-selection-failed

Description 'send-504': Stay functional up and response with HTTP 504;

Type: string

Supported Values: send-504

Mutual Exclusion: when-server-selection-failed and reset-on-server-selection-fail are mutually exclusive

virtual-server-list_port-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current established connections; 'total_l4_conn': Total L4 connections established; 'total_l7_conn': Total L7 connections established; 'total_tcp_conn': Total TCP connections established; 'total_conn': Total connections established; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_dns_pkts': Total DNS packets processed; 'total_mf_dns_pkts': Total MF DNS packets; 'es_total_failure_actions': Total failure actions; 'compression_bytes_before': Data into gzip compression engine; 'compression_bytes_after': Data out of gzip compression engine; 'compression_hit': Number of requests compressed; 'compression_miss': Number of requests NOT compressed; 'compression_miss_no_client': Compression miss no client; 'compression_miss_template_exclusion': Compression miss template exclusion; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total successful requests; 'peak_conn': Peak connections; 'curr_conn_rate': Current connection rate; 'last_rsp_time': Last response time; 'fastest_rsp_time': Fastest

response time; 'slowest_rsp_time': Slowest response time; 'loc_permit': Geo-location Permit count; 'loc_deny': Geo-location Deny count; 'loc_conn': Geo-location Connection count; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'backend-time-to-first-byte': Backend Time from Request to Response First Byte; 'backend-time-to-last-byte': Backend Time from Request to Response Last Byte; 'in-latency': Request Latency at Thunder; 'out-latency': Response Latency at Thunder; 'total_fwd_bytes_out': Bytes processed in forward direction (outbound); 'total_fwd_pkts_out': Packets processed in forward direction (outbound); 'total_rev_bytes_out': Bytes processed in reverse direction (outbound); 'total_rev_pkts_out': Packets processed in reverse direction (outbound); 'curr_req_rate': Current request rate; 'curr_resp': Current response; 'total_resp': Total response; 'total_resp_succ': Total successful responses; 'curr_resp_rate': Current response rate; 'dnsrrl_total_allowed': DNS Response-Rate-Limiting Total Responses Allowed; 'dnsrrl_total_dropped': DNS Response-Rate-Limiting Total Responses Dropped; 'dnsrrl_total_slipped': DNS Response-Rate-Limiting Total Responses Slipped; 'dnsrrl_bad_fqdn': DNS Response-Rate-Limiting Bad FQDN; 'throughput-bits-per-sec': Throughput in bits/sec; 'dynamic-memory-alloc': dynamic memory (bytes) allocated by the vport; 'dynamic-memory-free': dynamic memory (bytes) allocated by the vport; 'dynamic-memory': dynamic memory (bytes) used by the vport(alloc-free); 'ip_only_lb_fwd_bytes': IP-Only-LB Bytes processed in forward direction; 'ip_only_lb_rev_bytes': IP-Only-LB Bytes processed in reverse direction; 'ip_only_lb_fwd_pkts': IP-Only-LB Packets processed in forward direction; 'ip_only_lb_rev_pkts': IP-Only-LB Packets processed in reverse direction; 'total_dns_filter_type_drop': Total DNS Filter Type Drop; 'total_dns_filter_class_drop': Total DNS Filter Class Drop; 'dns_filter_type_a_drop': DNS Filter Type A Drop; 'dns_filter_type_aaaa_drop': DNS Filter Type AAAA Drop; 'dns_filter_type_cname_drop': DNS Filter Type CNAME Drop; 'dns_filter_type_mx_drop': DNS Filter Type MX Drop; 'dns_filter_type_ns_drop': DNS Filter Type NS Drop; 'dns_filter_type_srv_drop': DNS Filter Type SRV Drop; 'dns_filter_type_ptr_drop': DNS Filter Type PTR Drop; 'dns_filter_type_soa_drop': DNS Filter Type SOA Drop; 'dns_filter_type_txt_drop': DNS Filter Type TXT Drop; 'dns_filter_type_any_drop': DNS Filter Type Any Drop; 'dns_filter_type_others_drop': DNS Filter Type OTHERS Drop; 'dns_filter_class_internet_drop': DNS Filter Class INTERNET Drop; 'dns_filter_class_chaos_drop': DNS Filter Class CHAOS Drop; 'dns_filter_class_hesiod_drop': DNS Filter Class HESIOD Drop; 'dns_filter_class_none_drop': DNS Filter Class NONE Drop; 'dns_filter_class_any_drop': DNS Filter Class ANY Drop; 'dns_filter_class_others_drop': DNS Filter Class OTHERS Drop; 'dns_rpz_action_drop': DNS RPZ Action Drop; 'dns_rpz_action_pass_thru': DNS RPZ Action Pass Through; 'dns_rpz_action_tcp_only': DNS RPZ Action TCP Only; 'dns_rpz_action_nxdomain': DNS RPZ Action NXDOMAIN; 'dns_rpz_action_nodata': DNS RPZ Action NODATA; 'dns_rpz_action_local_data': DNS RPZ Action Local Data; 'dns_rpz_trigger_client_ip': DNS RPZ Trigger Client IP; 'dns_rpz_trigger_resp_ip': DNS RPZ Trigger Response IP; 'dns_rpz_trigger_ns_ip': DNS RPZ Trigger NS IP; 'dns_rpz_trigger_qname': DNS RPZ Trigger Qname IP; 'dns_rpz_trigger_ns_name': DNS RPZ Trigger NS Name; 'compression_bytes_before_br': Data into brotli compression engine; 'compression_bytes_after_br': Data out of brotli compression engine; 'compression_bytes_before_total': Data into compression engine; 'compression_bytes_after_total': Data out of compression engine; 'compression_hit_br': Number of requests compressed with brotli; 'compression_miss_br': Number of requests NOT compressed with brotli; 'compression_hit_total': Number of requests compressed; 'compression_miss_total': Number of requests NOT compressed; 'dnsrrl_total_tc': DNS Response-Rate-Limiting Total Responses Replied With Truncated; 'http1_client_idle_timeout': HTTP1 Client Idle Timeout; 'http2_client_idle_timeout': HTTP2 Client Idle Timeout;

Type: string

Supported Values: all, curr_conn, total_l4_conn, total_l7_conn, total_tcp_conn, to-

tal_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_dns_pkts, total_mf_dns_pkts, es_total_failure_actions, compression_bytes_before, compression_bytes_after, compression_hit, compression_miss, compression_miss_no_client, compression_miss_template_exclusion, curr_req, total_req, total_req_succ, peak_conn, curr_conn_rate, last_rsp_time, fastest_rsp_time, slowest_rsp_time, loc_permit, loc_deny, loc_conn, curr_ssl_conn, total_ssl_conn, backend-time-to-first-byte, backend-time-to-last-byte, in-latency, out-latency, total_fwd_bytes_out, total_fwd_pkts_out, total_rev_bytes_out, total_rev_pkts_out, curr_req_rate, curr_resp, total_resp, total_resp_succ, curr_resp_rate, dnsrrl_total_allowed, dnsrrl_total_dropped, dnsrrl_total_slipped, dnsrrl_bad_fqdn, throughput-bits-per-sec, dynamic-memory-alloc, dynamic-memory-free, dynamic-memory, ip_only_lb_fwd_bytes, ip_only_lb_rev_bytes, ip_only_lb_fwd_pkts, ip_only_lb_rev_pkts, total_dns_filter_type_drop, total_dns_filter_class_drop, dns_filter_type_a_drop, dns_filter_type_aaaa_drop, dns_filter_type_cname_drop, dns_filter_type_mx_drop, dns_filter_type_ns_drop, dns_filter_type_srv_drop, dns_filter_type_ptr_drop, dns_filter_type_soa_drop, dns_filter_type_txt_drop, dns_filter_type_any_drop, dns_filter_type_others_drop, dns_filter_class_internet_drop, dns_filter_class_chaos_drop, dns_filter_class_hesiod_drop, dns_filter_class_none_drop, dns_filter_class_any_drop, dns_filter_class_others_drop, dns_rpz_action_drop, dns_rpz_action_pass_thru, dns_rpz_action_tcp_only, dns_rpz_action_nxdomain, dns_rpz_action_nodata, dns_rpz_action_local_data, dns_rpz_trigger_client_ip, dns_rpz_trigger_resp_ip, dns_rpz_trigger_ns_ip, dns_rpz_trigger_qname, dns_rpz_trigger_ns_name, compression_bytes_before_br, compression_bytes_after_br, compression_bytes_before_total, compression_bytes_after_total, compression_hit_br, compression_miss_br, compression_hit_total, compression_miss_total, dnsrrl_total_tc, http1_client_idle_timeout, http2_client_idle_timeout, dnsrrl_nx_exceed

virtual-server-list_port-list_acl-list

Specification	Value
Type	*list*
Block object keys	

acl-id

Description ACL id VPORT

Type: number

Range: 1-199

Mutual Exclusion: acl-id, p-acl, and shared-partition-acl are mutually exclusive

acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-shared

Description acl id

Type: number

Range: 1-199

acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-id-src-nat-pool and shared-partition-pool-id are mutually exclusive

acl-id-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

acl-name

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-shared

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-src-nat-pool, shared-partition-pool-name, and v-shared-partition-pool-name are mutually exclusive

acl-name-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared-partition-pool-id

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool-id and acl-id-src-nat-pool are mutually exclusive

shared-partition-pool-name

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool-name and acl-name-src-nat-pool are mutually exclusive

v-acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-id-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: v-acl-id-src-nat-pool and v-shared-partition-pool-id are mutually exclusive

v-acl-id-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

v-acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-name-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

v-acl-name-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

v-shared-partition-pool-id

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v-shared-partition-pool-id and v-acl-id-src-nat-pool are mutually exclusive

v-shared-partition-pool-name

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v-shared-partition-pool-name and acl-name-src-nat-pool are mutually exclusive

virtual-server-list_port-list_aflex-scripts

Specification	Value
Type	*list*
Block object keys	

aflex

Description aFleX Script Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

aflex-shared

Description aFleX Script Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

virtual-server-list_port-list_auth-cfg

Specification	Value
Type	*object*

aaa-policy

Description Specify AAA policy name to bind to the virtual port

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/aaa-policy*

virtual-server-list_migrate-vip

Specification	Value
Type	*object*

cancel-migration

Description Cancel migration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cancel-migration and finish-migration are mutually exclusive

finish-migration

Description Complete the migration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: finish-migration and cancel-migration are mutually exclusive

target-data-cpu

Description Number of CPUs on the target platform

Type: number

Range: 1-75

target-floating-ipv4

Description Specify IP address

Type: string

Format: ipv4-address

Mutual Exclusion: target-floating-ipv4 and target-floating-ipv6 are mutually exclusive

target-floating-ipv6

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: target-floating-ipv6 and target-floating-ipv4 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ftp-proxy

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ftp-proxy_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num': Num; 'curr': Current proxy conns; 'total': Total proxy conns; 'svrsel_fail': Server selection failure; 'no_route': no route failure; 'snat_fail': source nat failure; 'feat': feat packet; 'cc': clear ctrl port packet; 'data_ssl': data ssl force; 'line_too_long': line too long; 'line_mem_freed': request line freed; 'invalid_start_line': invalid start line; 'auth_tls': auth tls cmd; 'prot': prot cmd; 'pbsz': pbsz cmd; 'pasv': pasv cmd; 'port': port cmd; 'request_dont_care': other cmd; 'client_auth_tls': client auth tls; 'cant_find_pasv': cant find pasv; 'pasv_addr_ne_server': psv addr not equal to svr; 'smp_create_fail': smp create fail; 'data_server_conn_fail': data svr conn fail; 'data_send_fail': data send fail; 'epsv': epsv command; 'cant_find_epsv': cant find epsv; 'data_curr': Current Data Proxy; 'data_total': Total Data Proxy; 'auth_unsupported': Unsupported auth; 'adat': adat cmd; 'unsupported_pbsz_value': Unsupported PBSZ; 'unsupported_prot_value': Unsupported PROT; 'unsupported_command': Unsupported cmd; 'control_to_clear': Control chn clear txt; 'control_to_ssl': Control chn ssl; 'bad_sequence': Bad Sequence; 'rsv_persist_conn_fail': Serv Sel Persist fail; 'smp_v6_fail': Serv Sel SMPv6 fail; 'smp_v4_fail': Serv Sel SMPv4 fail; 'insert_tuple_fail': Serv Sel insert tuple fail; 'cl_est_err': Client EST state erro; 'ser_connecting_err': Serv CTNG state error; 'server_response_err': Serv RESP state error; 'cl_request_err': Client RQ state error; 'data_conn_start_err': Data Start state error; 'data_serv_connecting_err': Data Serv CTNG error; 'data_serv_connected_err': Data Serv CTED error; 'request': Total FTP Request; 'auth_req': Auth Request; 'auth_succ': Auth Success; 'auth_fail': Auth Failure; 'fwd_to_internet': Forward to Internet; 'fwd_to_sg': Total

Forward to Service-group; 'drop': Total FTP Drop; 'ds_succ': Host Domain Name is resolved; 'ds_fail': Host Domain Name isn't resolved; 'open': open cmd; 'site': site cmd; 'user': user cmd; 'pass': pass cmd; 'quit': quit cmd; 'eprt': eprt cmd; 'cant_find_port': cant find port; 'cant_find_eprt': cant find eprt;

Type: string

Supported Values: all, num, curr, total, svrsel_fail, no_route, snat_fail, feat, cc, data_ssl, line_too_long, line_mem_freed, invalid_start_line, auth_tls, prot, pbsz, pasv, port, request_dont_care, client_auth_tls, cant_find_pasv, pasv_addr_ne_server, smp_create_fail, data_server_conn_fail, data_send_fail, epsv, cant_find_epsv, data_curr, data_total, auth_unsupported, adat, unsupported_pbsz_value, unsupported_prot_value, unsupported_command, control_to_clear, control_to_ssl, bad_sequence, rsv_persist_conn_fail, smp_v6_fail, smp_v4_fail, insert_tuple_fail, cl_est_err, ser_connecting_err, server_response_err, cl_request_err, data_conn_start_err, data_serv_connecting_err, data_serv_connected_err, request, auth_req, auth_succ, auth_fail, fwd_to_internet, fwd_to_sg, drop, ds_succ, ds_fail, open, site, user, pass, quit, eprt, cant_find_port, cant_find_eprt

ssl-expire-check

Specification	Value
Type	*object*

before

Description The number of days in advance notice before expiration, default is 5

Type: number

Range: 1-60

Default: 5

exception

Description: exception is a **JSON Block**. Please see below for *ssl-expire-check_exception*

Type: Object

Reference Object: */axapi/v3/slb/ssl-expire-check/exception*

expire-address1

Description Email address for certificate expiration check

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

interval-days

Description The interval of days notice after expiration, default is 2

Type: number

Range: 1-5

Default: 2

ssl-expire-email-address

Description Config Email address for certificate expiration check

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-expire-check_exception

Specification	Value
Type	*object*

action

Description 'add': Add an exception; 'delete': Delete an exception; 'clean': Delete all exception;

Type: string

Supported Values: add, delete, clean

certificate-name

Description The certificate name

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

rate-limit-log

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rate-limit-log_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_log_times': Total log times; 'total_log_msg': Total log messages; 'local_log_msg': Local log messages; 'remote_log_msg': Remote log messages; 'local_log_rate': Local rate (per sec); 'remote_log_rate': Remote rate (per sec); 'msg_too_big': Log message too big; 'buff_alloc_fail': Buffer alloc fail; 'no_route': No route; 'buff_send_fail': Buffer send fail; 'alloc_conn': Log-session alloc; 'free_conn': Log-session free; 'conn_alloc_fail': Log-session alloc fail; 'no_repeat_msg': No repeat message; 'local_log_dropped': Local log dropped due to rate-limit;

Type: string

Supported Values: all, total_log_times, total_log_msg, local_log_msg, remote_log_msg, local_log_rate, remote_log_rate, msg_too_big, buff_alloc_fail, no_route, buff_send_fail, alloc_conn, free_conn, conn_alloc_fail, no_repeat_msg, local_log_dropped

counters1

Description 'all': all; 'total_q': Total query; 'total_r': Total server response; 'hit': Total cache hit; 'bad_q': Query not passed; 'encode_q': Query encoded; 'multiple_q': Query with multiple questions; 'oversize_q': Query exceed cache size; 'bad_r': Response not passed; 'oversize_r': Response exceed cache size; 'encode_r': Response encoded; 'multiple_r': Response with multiple questions; 'answer_r': Response with multiple answers; 'ttl_r': Response with short TTL; 'ageout': Total aged out; 'bad_answer': Bad Answer; 'ageout_weight': Total aged for lower weight; 'total_log': Total stats log sent; 'total_alloc': Total allocated; 'total_freed': Total freed; 'current_allocate': Current allocate; 'current_data_allocate': Current data allocate; 'resolver_queue_full': Resolver task queue full; 'truncated_r': Response with Truncation bit set;

Type: string

Supported Values: all, total_q, total_r, hit, bad_q, encode_q, multiple_q, oversize_q, bad_r, oversize_r, encode_r, multiple_r, answer_r, ttl_r, ageout, bad_answer, ageout_weight, total_log, total_alloc, total_freed, current_allocate, current_data_allocate, resolver_queue_full, truncated_r, qps, hit_rate_per_sec

ipv6-class-list-list

Specification	Value
Type	*list*
Block object keys	

ipv6-list

Type: List

name

Description Specify name of the class list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: test

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ipv6-class-list-list_ipv6-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'add': Add the entry; 'delete': Delete the entry;

Type: string

Supported Values: add, delete

glid

Description Use global Limit ID (Specify global LID index)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: glid,lid, lsn-lid, and lsn-radius-profile are mutually exclusive

ipv6-addr

Description Specify IPv6 host or subnet

Type: string

Format: ipv6-address-plen

lid

Description Use Limit ID defined in template (Specify LID index)

Type: number

Range: 1-1023

Mutual Exclusion: lid,glid, lsn-lid, and lsn-radius-profile are mutually exclusive

lsn-lid

Description LSN Limit ID (LID index)

Type: number

Range: 1-1023

Mutual Exclusion: lsn-lid,lid, glid, and lsn-radius-profile are mutually exclusive

lsn-radius-profile

Description LSN RADIUS Profile Index

Type: number

Range: 1-16

Mutual Exclusion: lsn-radius-profile,lid, glid, and lsn-lid are mutually exclusive

ssl-crl

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-dns-cache

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

hw-compress_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request_count': Total request count; 'submit_count': Total submit count; 'response_count': Total response count; 'failure_count': Total failure count; 'failure_code': Last failure code; 'ring_full_count': Compression queue full; 'max_outstanding_request_count': Max queued request count; 'max_outstanding_submit_count': Max queued submit count;

Type: string

Supported Values: all, request_count, submit_count, response_count, failure_count, failure_code, ring_full_count, max_outstanding_request_count, max_outstanding_submit_count

transparent-acl-template

Specification	Value
Type	*object*

name

Description Specify template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Reference Object: */axapi/v3/slb/template/tcp*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

player-id-global

Specification	Value
Type	*object*

abs-max-expiration

Description Absolute max record expiration value (default 10 minutes) (Absolute max record expiration time in minutes, default 10)

Type: number

Range: 1-32767

Default: 10

enable-64bit-player-id

Description Enable 64 bit player id check. Default is 32 bit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforcement-timer

Description Time to playerid enforcement after bootup (default 480 seconds) (Time to playerid enforcement in seconds, default 480)

Type: number

Range: 1-32767

Default: 480

force-passive

Description Forces the device to be in passive mode (Only stats and no packet drops)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

min-expiration

Description Minimum record expiration value (default 1 min) (Min record expiration time in minutes, default 1)

Type: number

Range: 1-32767

Default: 1

pkt-activity-expiration

Description Packet activity record expiration value (default 5 minutes) (Packet activity record expiration time in minutes, default 5)

Type: number

Range: 1-32767

Default: 5

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

player-id-global_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_playerids_created': Playerid records created; 'total_playerids_deleted': Playerid records deleted; 'total_abs_max_age_outs': Playerid records max time aged out; 'total_pkt_activity_age_outs': Playerid records idle timeout; 'total_invalid_playerid_pkts': Invalid playerid packets; 'total_invalid_playerid_drops': Invalid playerid packet drops; 'total_valid_playerid_pkts': Valid playerid packets;

Type: string

Supported Values: all, total_playerids_created, total_playerids_deleted, total_abs_max_age_outs, total_pkt_activity_age_outs, total_invalid_playerid_pkts, total_invalid_playerid_drops, total_valid_playerid_pkts

service-group-list

Specification	Value
Type	*list*
Block object keys	

backup-server-event-log

Description Send log info on back up server events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate

Description Dynamically enable stateless method by conn-rate (Rate to trigger stateless method(conn/sec))

Type: number

Range: 1-16000000

Mutual Exclusion: conn-rate and l4-session-usage are mutually exclusive

conn-rate-duration

Description Period that trigger condition consistently happens(seconds)

Type: number

Range: 1-600

conn-rate-grace-period

Description Define the grace period during transition (Define the grace period during transition(seconds))

Type: number

Range: 1-600

conn-rate-log

Description Send log if transition happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-revert-duration

Description Period that revert condition consistently happens(seconds)

Type: number

Range: 1-600

conn-revert-rate

Description Rate to revert to statelful method (conn/sec)

Type: number

Range: 1-16000000

extended-stats

Description Enable extended statistics on service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check, shared-partition-svcgrp-health-check, and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable,health-check, shared-partition-svcgrp-health-check, and svcgrp-health-check-shared are mutually exclusive

l4-session-revert-duration

Description Period that revert condition consistently happens(seconds)

Type: number

Range: 1-600

l4-session-usage

Description Dynamically enable stateless method by session usage (Usage to trigger stateless method)

Type: number

Range: 1-100

Mutual Exclusion: l4-session-usage and conn-rate are mutually exclusive

l4-session-usage-duration

Description Period that trigger condition consistently happens(seconds)

Type: number

Range: 1-600

l4-session-usage-grace-period

Description Define the grace period during transition (Define the grace period during transition(seconds))

Type: number

Range: 1-600

l4-session-usage-log

Description Send log if transition happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4-session-usage-revert-rate

Description Usage to revert to statelful method

Type: number

Range: 1-100

lb-method

Description 'dst-ip-hash': Load-balancing based on only Dst IP and Port hash; 'dst-ip-only-hash': Load-balancing based on only Dst IP hash; 'fastest-response': Fastest response time on service port level; 'least-request': Least request on service port level; 'src-ip-hash': Load-balancing based on only Src IP and Port hash; 'src-ip-only-hash': Load-balancing based on only Src IP hash; 'weighted-rr': Weighted round robin on server level; 'service-weighted-rr': Weighted round robin on service port level; 'round-robin': Round robin on server level; 'round-robin-strict': Strict mode round robin on server level; 'odd-even-hash': odd/even hash based of client src-ip;

Type: string

Supported Values: dst-ip-hash, dst-ip-only-hash, fastest-response, least-request, weighted-least-request, service-weighted-least-request, src-ip-hash, src-ip-only-hash, weighted-rr, service-weighted-rr, round-robin, round-robin-strict, odd-even-hash

Default: round-robin

Mutual Exclusion: lb-method,lrprr-method, lc-method, stateless-lb-method, llb-method, and lclb-method are mutually exclusive

lc-method

Description 'least-connection': Least connection on server level; 'service-least-connection': Least connection on service port level; 'weighted-least-connection': Weighted least connection on server level; 'service-weighted-least-connection': Weighted least connection on service port level;

Type: string

Supported Values: least-connection, service-least-connection, weighted-least-connection, service-weighted-least-connection

Mutual Exclusion: lc-method,lb-method, lrprr-method, stateless-lb-method, llb-method, and lclb-method are mutually exclusive

lclb-method

Description 'link-cost-load-balance': Link cost load balance;

Type: string

Supported Values: link-cost-load-balance

Mutual Exclusion: lclb-method,lb-method, lrprr-method, lc-method, stateless-lb-method, and llb-method are mutually exclusive

link-probe-template

Description Link Probe template (Link Probe template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/link-probe*

llb-method

Description 'next-hop-link': Server selection w/ link probe template on service port level;

Type: string

Supported Values: next-hop-link

Mutual Exclusion: llb-method,lb-method, lrprr-method, lc-method, stateless-lb-method, and lclb-method are mutually exclusive

lrprr-method

Description 'service-least-request-pseudo-round-robin': Least request on service port level and select the oldest node for sub-select;

Type: string

Supported Values: service-least-request-pseudo-round-robin

Mutual Exclusion: lrprr-method,lb-method, lc-method, stateless-lb-method, llb-method, and lclb-method are mutually exclusive

member-list

Type: List

Reference Object: */axapi/v3/slb/service-group/{name}/member/{name}+{port}*

min-active-member

Description Minimum Active Member Per Priority (Minimum Active Member before Action)

Type: number

Range: 1-1024

min-active-member-action

Description 'dynamic-priority': dynamic change member priority to met the min-active-member requirement; 'skip-pri-set': Skip Current Priority Set If Min not met;

Type: string

Supported Values: dynamic-priority, skip-pri-set

name

Description SLB Service Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

persist-scoring

Description 'global': Use Global Configuration; 'enable': Enable persist-scoring; 'disable': Disable persist-scoring;

Type: string

Supported Values: global, enable, disable

Default: global

priorities

Type: List

priority-affinity

Description Priority affinity. Persist to the same priority if possible.

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': TCP LB service; 'udp': UDP LB service;

Type: string

Supported Values: tcp, udp

pseudo-round-robin

Description PRR, select the oldest node for sub-select

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

report-delay

Description Reporting frequency (in minutes)

Type: number

Range: 1-7200

reset

Description: reset is a **JSON Block**. Please see below for *service-group-list_reset*

Type: Object

Reference Object: */axapi/v3/slb/service-group/{name}/reset*

reset-on-server-selection-fail

Description Send reset to client if server selection fails

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-priority-affinity

Description Reset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpt-ext-server

Description Report top 10 fastest/slowest servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sample-rsp-time

Description sample server response time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-svcgrp-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-svcgrp-health-check, health-check, and health-check-disable are mutually exclusive

stateless-auto-switch

Description Enable auto stateless method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateless-lb-method

Description 'stateless-dst-ip-hash': Stateless load-balancing based on Dst IP and Dst port hash; 'stateless-per-pkt-round-robin': Stateless load-balancing using per-packet round-robin; 'stateless-src-dst-ip-hash': Stateless load-balancing based on IP and port hash for both Src and Dst; 'stateless-src-dst-ip-only-hash': Stateless load-balancing based on only IP hash for both Src and Dst; 'stateless-src-ip-hash': Stateless load-balancing based on Src IP and Src port hash; 'stateless-src-ip-only-hash': Stateless load-balancing based on only Src IP hash; 'stateless-per-pkt-weighted-rr': Stateless load-balancing using per-packet weighted round robin on server level; 'stateless-per-pkt-service-weighted-rr': Stateless load-balancing using per-packet weighted round robin on service port level;

Type: string

Supported Values: stateless-dst-ip-hash, stateless-per-pkt-round-robin, stateless-src-dst-ip-hash, stateless-src-dst-ip-only-hash, stateless-src-ip-hash, stateless-src-ip-only-hash, stateless-per-pkt-weighted-rr, stateless-per-pkt-service-weighted-rr

Mutual Exclusion: stateless-lb-method,lb-method, lrprr-method, lc-method, llb-method, and lclb-method are mutually exclusive

stateless-lb-method2

Description 'stateless-dst-ip-hash': Stateless load-balancing based on Dst IP and Dst port hash; 'stateless-per-pkt-round-robin': Stateless load-balancing using per-packet round-robin; 'stateless-src-dst-ip-hash': Stateless load-balancing based on IP and port hash for both Src and Dst; 'stateless-src-dst-ip-only-hash': Stateless load-balancing based on only IP hash for both Src and Dst; 'stateless-src-ip-hash': Stateless load-balancing based on Src IP and Src port hash; 'stateless-src-ip-only-hash': Stateless load-balancing based on only Src IP hash; 'stateless-per-pkt-weighted-rr': Stateless load-balancing using per-packet weighted round robin on server level; 'stateless-per-pkt-service-weighted-rr': Stateless load-balancing using per-packet weighted round robin on service port level;

Type: string

Supported Values: stateless-dst-ip-hash, stateless-per-pkt-round-robin, stateless-src-dst-ip-hash, stateless-src-dst-ip-only-hash, stateless-src-ip-hash, stateless-src-ip-only-hash, stateless-per-pkt-weighted-rr, stateless-per-pkt-service-weighted-rr

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for service group; 'stats-data-disable': Disable statistical data collection for service group;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

strict-select

Description strict selection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

svcgrp-health-check-shared

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: svcgrp-health-check-shared and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

template-policy

Description Policy template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/policy*

template-port

Description Port template (Port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/port*

top-fastest

Description Report top 10 fastest servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

top-slowest

Description Report top 10 slowest servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-replication-mirror

Description Mirror Bi-directional Packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror,traffic-replication-mirror-da-repl, traffic-replication-mirror-ip-repl, traffic-replication-mirror-sa-da-repl, and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-da-repl

Description Replace Destination MAC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-da-repl,traffic-replication-mirror, traffic-replication-mirror-ip-repl, traffic-replication-mirror-sa-da-repl, and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-ip-repl

Description Replaces IP with server-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-ip-repl,traffic-replication-mirror, traffic-replication-mirror-da-repl, traffic-replication-mirror-sa-da-repl, and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-sa-da-repl

Description Replace Source MAC and Destination MAC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-sa-da-repl,traffic-replication-mirror, traffic-replication-mirror-da-repl, traffic-replication-mirror-ip-repl, and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-sa-repl

Description Replace Source MAC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-sa-repl,traffic-replication-mirror, traffic-replication-mirror-da-repl, traffic-replication-mirror-ip-repl, and traffic-replication-mirror-sa-da-repl are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_member-list

Specification	Value
Type	*list*
Block object keys	

fqdn-name

Description Server hostname - Not applicable if real server is already defined

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

host

Description IP Address - Not applicable if real server is already defined

Type: string

Format: ipv4-address

member-priority

Description Priority of Port in the Group (Priority of Port in the Group, default is 1)

Type: number

Range: 1-16

Default: 1

member-state

Description 'enable': Enable member service port; 'disable': Disable member service port; 'disable-with-health-check': disable member service port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

member-stats-data-disable

Description Disable statistical data collection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

member-template

Description Real server port template (Real server port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/port*

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/server*

port

Description Port number

Type: number

Range: 0-65534

Default: 65534

Reference Object: */axapi/v3/slb/server/port*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 Address - Not applicable if real server is already defined

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_member-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_conn': Total established connections; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_status_code_2xx': Total reverse packets inspected status code 2xx; 'total_rev_pkts_inspected_status_code_non_5xx': Total reverse packets inspected status code non 5xx; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total requests successful; 'peak_conn': Peak connections; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'curr_conn_overflow': Current connection counter overflow count; 'state_flaps': State flaps count;

Type: string

Supported Values: all, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, total_rev_pkts_inspected, total_rev_pkts_inspected_status_code_2xx, total_rev_pkts_inspected_status_code_non_5xx, curr_req, total_req, total_req_succ, peak_conn, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, curr_conn_overflow, state_flaps

service-group-list_reset

Specification	Value
Type	*object*

auto-switch

Description Reset auto stateless state

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-list_priorities

Specification	Value
Type	*list*
Block object keys	

priority

Description Priority option. Define different action for each priority node. (Priority in the Group)

Type: number

Range: 1-16

priority-action

Description 'drop': Drop request when all priority nodes fail; 'drop-if-exceed-limit': Drop request when connection over limit; 'proceed': Proceed to next priority when all priority nodes fail(default); 'reset': Send client reset when all priority nodes fail; 'reset-if-exceed-limit': Send client reset when connection over limit;

Type: string

Supported Values: drop, drop-if-exceed-limit, proceed, reset, reset-if-exceed-limit

Default: proceed

service-group-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'server_selection_fail_drop': Drops due to Service selection failure; 'server_selection_fail_reset': Resets sent out for Service selection failure; 'service_peak_conn': Peak connection count for the Service Group; 'service_healthy_host': Service Group healthy host count; 'service_unhealthy_host': Service Group unhealthy host count; 'service_req_count': Service Group request count; 'service_resp_count': Service Group response count; 'service_resp_2xx': Service Group response 2xx count; 'service_resp_3xx': Service Group response 3xx count; 'service_resp_4xx': Service Group response 4xx count; 'service_resp_5xx': Service Group response 5xx count; 'service_curr_conn_overflow': Current connection counter overflow count;

Type: string

Supported Values: all, server_selection_fail_drop, server_selection_fail_reset, service_peak_conn, service_healthy_host, service_unhealthy_host, service_req_count, service_resp_count, service_resp_2xx, service_resp_3xx, service_resp_4xx, service_resp_5xx, service_curr_conn_overflow

ssl-error

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icap_http

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icap_http_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'status_200': Status code 200; 'status_201': Status code 201; 'status_202': Status code 202; 'status_203': Status code 203; 'status_204': Status code 204; 'status_205': Status code 205; 'status_206': Status code 206; 'status_207': Status code 207; 'status_100': Status code 100; 'status_101': Status code 101; 'status_102': Status code 102; 'status_300': Status code 300; 'status_301': Status code 301; 'status_302': Status code 302; 'status_303': Status code 303; 'status_304': Status code 304; 'status_305': Status code 305; 'status_306': Status code 306; 'status_307': Status code 307; 'status_400': Status code 400; 'status_401': Status code 401; 'status_402': Status code 402; 'status_403': Status code 403; 'status_404': Status code 404; 'status_405': Status code 405; 'status_406': Status code 406; 'status_407': Status code 407; 'status_408': Status code 408; 'status_409': Status code 409; 'status_410': Status code 410; 'status_411': Status code 411; 'status_412': Status code 412; 'status_413': Status code 413; 'status_414': Status code 414; 'status_415': Status code 415;

'status_416': Status code 416; 'status_417': Status code 417; 'status_418': Status code 418; 'status_422': Status code 422; 'status_423': Status code 423; 'status_424': Status code 424; 'status_425': Status code 425; 'status_426': Status code 426; 'status_449': Status code 449; 'status_450': Status code 450; 'status_500': Status code 500; 'status_501': Status code 501; 'status_502': Status code 502; 'status_503': Status code 503; 'status_504': Status code 504; 'status_505': Status code 505; 'status_506': Status code 506; 'status_507': Status code 507; 'status_508': Status code 508; 'status_509': Status code 509; 'status_510': Status code 510; 'status_1xx': status code 1XX; 'status_2xx': status code 2XX; 'status_3xx': status code 3XX; 'status_4xx': status code 4XX; 'status_5xx': status code 5XX; 'status_6xx': status code 6XX; 'status_unknown': Status code unknown;

Type: string

Supported Values: all, status_200, status_201, status_202, status_203, status_204, status_205, status_206, status_207, status_100, status_101, status_102, status_300, status_301, status_302, status_303, status_304, status_305, status_306, status_307, status_400, status_401, status_402, status_403, status_404, status_405, status_406, status_407, status_408, status_409, status_410, status_411, status_412, status_413, status_414, status_415, status_416, status_417, status_418, status_422, status_423, status_424, status_425, status_426, status_449, status_450, status_500, status_501, status_502, status_503, status_504, status_505, status_506, status_507, status_508, status_509, status_510, status_1xx, status_2xx, status_3xx, status_4xx, status_5xx, status_6xx, status_unknown

server-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': Enable this Real Server; 'disable': Disable this Real Server; 'disable-with-health-check': disable real server, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

alternate-server

Type: List

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

conn-resume

Description Connection Resume (Connection Resume (min active conn before resume taking new conn))

Type: number

Range: 1-1000000

ethernet

Description ethernet interface

Type: number

Format: interface

Reference Object: */axapi/v3/interface/ethernet*

extended-stats

Description Enable extended statistics on real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-ip

Description External IP address for NAT of GSLB

Type: string

Format: ipv4-address

fqdn-name

Description Server hostname

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fqdn-name, server-ipv6-addr, and host are mutually exclusive

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check, shared-partition-health-check, and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable,health-check, shared-partition-health-check, and health-check-shared are mutually exclusive

health-check-shared

Description Health Check Monitor (Health monitor name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check-shared and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

host

Description IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: host, server-ipv6-addr, and fqdn-name are mutually exclusive

ipv6

Description IPv6 address Mapping of GSLB

Type: string

Format: ipv6-address

l2-health-check-path

Description L2 health check path

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/system/path*

name

Description Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-list

Type: List

Reference Object: */axapi/v3/slb/server/{name}/port/{port-number}+{protocol}*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: server-ipv6-addr, host, and fqdn-name are mutually exclusive

service-list

Type: List

Reference Object: */axapi/v3/slb/server/{name}/service/{port-number}+{protocol}+{label}*

shared-partition-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-health-check, health-check, and health-check-disable are mutually exclusive

shared-partition-server-template

Description Reference a server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-server-template and template-server are mutually exclusive

slow-start

Description Slowly ramp up the connection number after server is up (start from 128, then double every 10 sec till 4096)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spoofing-cache

Description This server is a spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server; 'stats-data-disable': Disable statistical data collection for real server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

template-link-cost

Description Link-Cost template (Link-Cost template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/link-cost*

template-server

Description Server template (Server template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-server and shared-partition-server-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/server*

template-server-shared

Description Server Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server*

trunk

Description trunk interface

Type: number

Range: 1-4096

Reference Object: */axapi/v3/interface/trunk*

use-aam-server

Description Using aam server. For health check, please configure it in aam server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight for this Real Server (Connection Weight)

Type: number

Range: 1-1000

Default: 1

server-list_port-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': enable; 'disable': disable; 'disable-with-health-check': disable port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

alternate-port

Type: List

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *server-list_port-list_auth-cfg*

Type: Object

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

conn-resume

Description Connection Resume

Type: number

Range: 1-1000000

extended-stats

Description Enable extended statistics on real server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

follow-port-protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

health-check

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check,shared-rport-health-check, health-check-follow-port, and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable,health-check, shared-rport-health-check, rport-health-check-shared, and health-check-follow-port are mutually exclusive

health-check-follow-port

Description Specify which port to follow for health status (Port Number)

Type: number

Range: 1-65534

Mutual Exclusion: health-check-follow-port, health-check, and health-check-disable are mutually exclusive

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-ssl

Description No SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

only

Description Force using HTTP/2 with Prior Knowledge all the time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/slb-port-tmpl*

port-number

Description Port Number

Type: number

Range: 0-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

range

Description Port range (Port range value - used for vip-to-rport-mapping and vport-rport range mapping)

Type: number

Range: 0-254

Default: 0

rport-health-check-shared

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: rport-health-check-shared and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

sampling-enable

Type: List

shared-partition-port-template

Description Reference a port template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-port-template and template-port are mutually exclusive

shared-rport-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-rport-health-check, health-check, and health-check-disable are mutually exclusive

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server port; 'stats-data-disable': Disable statistical data collection for real server port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

support-http2

Description Starting HTTP/2 with Prior Knowledge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-port

Description Port template (Port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-port and shared-partition-port-template are mutually exclusive

Reference Object: */axapi/v3/slb/template/port*

template-port-shared

Description Port Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/port*

template-server-ssl

Description Server side SSL template (Server side SSL Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Port Weight (Connection Weight)

Type: number

Range: 1-1000

Default: 1

server-list_port-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_req': Current requests; 'total_req': Total Requests; 'total_req_succ': Total requests succ; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_conn': Total connections; 'last_total_conn': Last total connections; 'peak_conn': Peak connections; 'es_resp_200': Response status 200; 'es_resp_300': Response status 300; 'es_resp_400': Response status 400; 'es_resp_500': Response status 500; 'es_resp_other': Response status other; 'es_req_count': Total proxy requests; 'es_resp_count': Total proxy response; 'es_resp_invalid_http': Total non-http response; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_good_status_code': Total reverse packets with good status code inspected; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'resp-count': Total Response Count; 'resp-1xx': Response status 1xx; 'resp-2xx': Response status 2xx; 'resp-3xx': Response status 3xx; 'resp-4xx': Response status 4xx; 'resp-5xx': Response status 5xx; 'resp-other': Response status Other; 'resp-latency': Time to First Response Byte; 'curr_pconn': Current persistent connections;

Type: string

Supported Values: all, curr_req, total_req, total_req_succ, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, last_total_conn, peak_conn, es_resp_200, es_resp_300, es_resp_400, es_resp_500, es_resp_other, es_req_count, es_resp_count, es_resp_invalid_http, total_rev_pkts_inspected, total_rev_pkts_inspected_good_status_code, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, resp-count, resp-1xx, resp-2xx, resp-3xx, resp-4xx, resp-5xx, resp-other, resp-latency, curr_pconn

server-list_port-list_alternate-port

Specification	Value
Type	*list*
Block object keys	

alternate

Description Alternate Server Number

Type: number

Range: 1-16

alternate-name

Description Alternate Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

alternate-server-port

Description Port (Alternate Server Port Value)

Type: number

Range: 1-65535

server-list_port-list_auth-cfg

Specification	Value
Type	*object*

service-principal-name

Description Service Principal Name (Kerberos principal name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-list_alternate-server

Specification	Value
Type	*list*
Block object keys	

alternate

Description Alternate Server (Alternate Server Number)

Type: number

Range: 1-16

alternate-name

Description Alternate Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total-conn': Total established connections; 'fwd-pkt': Forward Packets Processed; 'rev-pkt': Reverse Packets Processed; 'peak-conn': Peak number of established connections; 'total_req': Total Requests processed; 'total_req_succ': Total Requests succeeded; 'curr_ssl_conn': Current SSL connections established; 'total_ssl_conn': Total SSL connections established; 'total_fwd_bytes': Bytes processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_pkts': Packets processed in reverse direction; 'ip_only_lb_fwd_bytes': IP-Only-LB Bytes processed in forward direction; 'ip_only_lb_rev_bytes': IP-Only-LB Bytes processed in reverse direction; 'ip_only_lb_fwd_pkts': IP-Only-LB Packets processed in forward direction; 'ip_only_lb_rev_pkts': IP-Only-LB Packets processed in reverse direction;

Type: string

Supported Values: all, total-conn, fwd-pkt, rev-pkt, peak-conn, total_req, total_req_succ, curr_ssl_conn, total_ssl_conn, total_fwd_bytes, total_rev_bytes, total_fwd_pkts, total_rev_pkts, ip_only_lb_fwd_bytes, ip_only_lb_rev_bytes, ip_only_lb_fwd_pkts, ip_only_lb_rev_pkts

server-list_service-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': enable; 'disable': disable; 'disable-with-health-check': disable port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

health-check

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

label

Description Service Label

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/slb-service-tmpl*

port-number

Description Port Number

Type: number

Range: 0-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-list_service-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_req': Current requests; 'total_req': Total Requests; 'total_req_succ': Total requests succ; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_conn': Total connections; 'last_total_conn': Last total connections; 'peak_conn': Peak connections; 'es_resp_200': Response status 200; 'es_resp_300': Response status 300; 'es_resp_400': Response status 400; 'es_resp_500': Response status 500; 'es_resp_other': Response status other; 'es_req_count': Total proxy requests; 'es_resp_count': Total proxy response; 'es_resp_invalid_http': Total non-http response; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_good_status_code': Total reverse packets with

good status code inspected; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'resp-count': Total Response Count; 'resp-1xx': Response status 1xx; 'resp-2xx': Response status 2xx; 'resp-3xx': Response status 3xx; 'resp-4xx': Response status 4xx; 'resp-5xx': Response status 5xx; 'resp-other': Response status Other; 'resp-latency': Time to First Response Byte; 'curr_pconn': Current persistent connections;

Type: string

Supported Values: all, curr_req, total_req, total_req_succ, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, last_total_conn, peak_conn, es_resp_200, es_resp_300, es_resp_400, es_resp_500, es_resp_other, es_req_count, es_resp_count, es_resp_invalid_http, total_rev_pkts_inspected, total_rev_pkts_inspected_good_status_code, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, resp-count, resp-1xx, resp-2xx, resp-3xx, resp-4xx, resp-5xx, resp-other, resp-latency, curr_pconn

switch

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

common attributes

N5-new

Description HW assisted N5 SSL module with TLS 1.3 and TLS 1.2 support using OpenSSL 1.1.1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: N5-new,software, software-tls13, QAT, QAT4, N5-old, and software-tls13-offload are mutually exclusive

N5-old

Description HW assisted N5 SSL module with TLS 1.2 support using OpenSSL 0.9.7

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: N5-old,software, software-tls13, QAT, QAT4, N5-new, and software-tls13-offload are mutually exclusive

QAT

Description HW assisted QAT SSL module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: QAT,software, software-tls13, QAT4, N5-new, N5-old, and software-tls13-offload are mutually exclusive

QAT4

Description HW assisted QAT Gen4 SSL module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: QAT4,software, software-tls13, QAT, QAT4, N5-new, N5-old, and software-tls13-offload are mutually exclusive

aflex-persist-uie-chassis-sync-enable

Description Enable aflex persist uie cross PU sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aflex-table-entry-aging-interval

Description aFleX table entry aging interval in second

Type: number

Range: 1-3600

Default: 1

aflex-table-entry-sync

Description: aflex-table-entry-sync is a **JSON Block**. Please see below for *aflex-table-entry-sync*

Type: Object

Reference Object: */axapi/v3/slb/common/aflex-table-entry-sync*

after-disable

Description Graceful shutdown after disable server/port and/or virtual server/port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-in-gateway-mode

Description Use source NAT gateway for L3 traffic for gateway mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

attack-resp-code

Description Custom response code

Type: number

Range: 400-599

Default: 410

auto-nat-no-ip-refresh

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

auto-translate-port

Description Auto Translate Port range

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

buff-thresh

Description Set buffer threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

buff-thresh-hw-buff

Description Set hardware buffer threshold

Type: number

Range: 1-2147483647

buff-thresh-relieve-thresh

Description Relieve threshold

Type: number

Range: 0-2147483647

buff-thresh-sys-buff-high

Description Set high water mark of system buffer

Type: number

Range: 0-2147483647

buff-thresh-sys-buff-low

Description Set low water mark of system buffer

Type: number

Range: 0-2147483647

cache-expire-time

Description Cache expiration time, default is 1 minute

Type: number

Range: 1-480

Default: 1

cancel-stream-loop-limit

Description Set global cancel stream loop limit (cancel stream loop limit, default is 5)

Type: number

Range: 0-50

Default: 5

cert-pinning

Description: cert-pinning is a **JSON Block**. Please see below for *cert-pinning*

Type: Object

Reference Object: */axapi/v3/slb/common/cert-pinning*

clientside-ip

Description Clientside IP address

Type: string

Format: ipv4-address

clientside-ipv6

Description Clientside IPv6 address

Type: string

Format: ipv6-address

compress-block-size

Description Set compression block size (Compression block size in bytes)

Type: number

Range: 6000-131008

conn-rate-limit

Description: conn-rate-limit is a **JSON Block**. Please see below for *conn-rate-limit*

Type: Object

Reference Object: */axapi/v3/slb/common/conn-rate-limit*

custom-message

Description Block message

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-message and custom-page are mutually exclusive

custom-page

Description Specify the custom webpage name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-page and custom-message are mutually exclusive

custom-signal-clist

Description Provide custom signal names

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/class-list*

ddos-pkt-count-thresh

Description Set packet count threshold for DDOS, default is 100

Type: number

Range: 1-256

Default: 100

ddos-pkt-size-thresh

Description Set data packet size threshold for DDOS, default is 64 bytes

Type: number

Range: 1-256

Default: 64

ddos-protection

Description: ddos-protection is a **JSON Block**. Please see below for *ddos-protection*

Type: Object

disable-adaptive-resource-check

Description Disable adaptive resource check based on buffer usage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-persist-scoring

Description Disable Persist Scoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-port-masking

Description Disable masking of ports for CPU hashing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-server-auto-reselect

Description Disable auto reselection of server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache-age

Description Set DNS cache entry age, default is 300 seconds (1-1000000 seconds, default is 300 seconds)

Type: number

Range: 1-1000000

Default: 300

dns-cache-age-min-threshold

Description Set DNS cache entry age minimum threshold, default is 0 seconds (1-1000000 seconds, default is 0 seconds)

Type: number

Range: 0-1000000

Default: 0

dns-cache-aging-weight

Description Set DNS cache entry weight, default is 1

Type: number

Range: 1-7

Default: 1

dns-cache-enable

Description Enable DNS cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache-entry-size

Description Set DNS cache entry size, default is 256 bytes (1-4096 bytes, default is 256 bytes)

Type: number

Range: 1-4096

Default: 256

dns-cache-hitcount-enable

Description Enable DNS cache entry hit count

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache-sync

Description Enable DNS cache HA sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache-sync-entry-size

Description Only sync DNS cache with smaller size (1-4096 bytes, default is 256 bytes)

Type: number

Range: 1-4096

Default: 256

dns-cache-sync-ttl-threshold

Description Only sync DNS cache with longer TTL (0-10000000 seconds, default is 0 second)

Type: number

Range: 0-10000000

Default: 0

dns-cache-ttl-adjustment-enable

Description Enable DNS cache response ttl adjustment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cookie-cache-policy

Description 'served-by-cache': Answer from cache for requests with cookie; 'served-by-backend': Answer from server for requests with cookie;

Type: string

Supported Values: served-by-cache, served-by-backend

dns-negative-cache-bypass-threshold

Description Query bypass threshold of negative cache entry, default is 100

Type: number

Range: 1-65535

Default: 100

dns-negative-cache-caching-non-valid

Description Enable caching non-valid negative response, otherwise will only cache valid negative response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-negative-cache-enable

Description Enable DNS negative cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-persistent-cache-enable

Description Enable persistent DNS cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-persistent-cache-hit-threshold

Description Only save DNS cache with larger hit count (0-10000000, default is 0)

Type: number

Range: 0-10000000

Default: 0

dns-persistent-cache-ttl-threshold

Description Only save DNS cache with longer TTL (0-10000000 seconds, default is 0 second)

Type: number

Range: 0-10000000

Default: 0

dns-response-rate-limiting

Description: dns-response-rate-limiting is a **JSON Block**. Please see below for *dns-response-rate-limiting*

Type: Object

Reference Object: */axapi/v3/slb/common/dns-response-rate-limiting*

dns-vip-stateless

Description Enable DNS VIP stateless mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-icmp-to-vip-when-vip-down

Description Drop ICMP to VIP when VIP down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dsr-health-check-enable

Description Enable dsr-health-check (direct server return health check)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ecmp-hash

Description 'system-default': Use system default ecmp hashing algorithm; 'connection-based': Use connection information for hashing;

Type: string

Supported Values: system-default, connection-based

Default: system-default

enable-ddos

Description Enable DDoS protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-fast-path-rerouting

Description Enable Fast-Path Rerouting

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-l7-req-acct

Description Enable L7 request accounting

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

entity

Description 'server': Graceful shutdown server/port only; 'virtual-server': Graceful shutdown virtual server/port only;

Type: string

Supported Values: server, virtual-server

exclude-destination

Description 'local': Maximum local rate; 'remote': Maximum remote rate; (Maximum rates)

Type: string

Supported Values: local, remote

extended-stats

Description Enable global slb extended statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-path-disable

Description Disable fast path in SLB processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-health-check

Description Enable gateway health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

global-dns-cache

Description: global-dns-cache is a **JSON Block**. Please see below for *global-dns-cache*

Type: Object

Reference Object: */axapi/v3/slb/common/global-dns-cache*

graceful-shutdown

Description 1-65535, in unit of seconds

Type: number

Range: 1-65535

graceful-shutdown-enable

Description Enable graceful shutdown

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check-to-all-vip

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

honor-server-response-ttl

Description Honor the server reponse TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-fast-enable

Description Enable Http Fast in SLB processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hw-compression

Description Use hardware compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hw-syn-rr

Description Configure hardware SYN round robin (range 1-500000)

Type: number

Range: 1-500000

interval

Description Specify the healthcheck interval, default is 5 seconds (Interval Value, in seconds (default 5))

Type: number

Range: 1-180

Default: 5

ipv4-offset

Description IPv4 Octet Offset for Hash

Type: number

Range: 0-3

Default: 0

ipv6-subnet

Description IPv6 Octet Valid Subnet Length for Hash

Type: number

Range: 0-15

Default: 0

l2l3-trunk-lb-disable

Description Disable L2/L3 trunk LB

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-for-reset-unknown-conn

Description Log when rate exceed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

low-latency

Description Enable low latency mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-buff-queued-per-conn

Description Set per connection buffer threshold (Buffer value range 128-4096)

Type: number

Range: 128-4096

Default: 1000

max-http-header-count

Description Set maximum number of HTTP headers allowed

Type: number

Range: 90-255

Default: 90

max-local-rate

Description Set maximum local rate

Type: number

Range: 1-500

Default: 64

max-persistent-cache

Description Define maximum persistent cache (Maximum persistent cache entry)

Type: number

max-remote-rate

Description Set maximum remote rate

Type: number

Range: 1-1000000

Default: 15000

monitor-mode-enable

Description Enable NG-WAF monitor mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msl-time

Description Configure maximum session life, default is 2 seconds (1-39 seconds, default is 2 seconds)

Type: number

Range: 1-39

Default: 2

mss-table

Description Set MSS table (128-750, default is 536)

Type: number

Range: 128-750

Default: 536

ngwaf-proxy-ipv4

Description IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: ngwaf-proxy-ipv4 and ngwaf-proxy-ipv6 are mutually exclusive

ngwaf-proxy-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ngwaf-proxy-ipv6 and ngwaf-proxy-ipv4 are mutually exclusive

ngwaf-proxy-port

Description Port

Type: number

Range: 1-65534

no-auto-up-on-aflex

Description Don't automatically mark vport up when aFleX is bound

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

odd-even-nat-enable

Description Enable odd even nat pool allocation in dual blade systems

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

odd-even-nat-one-arm

Description Enable odd even nat pool allocation in one-arm deployment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-server-conn-hm-rate

Description One Server Conn Health Check Rate

Type: number

Range: 1-60

override-port

Description Enable override port in DSR health check mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pbslb-entry-age

Description Set global pbslb entry age (minute)

Type: number

Range: 1-127

Default: 6

pbslb-overflow-glid

Description Apply global limit id to overflow pbslb entry

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/glid*

per-thr-percent

Description Percentage of default session count to use for per thread session table size

Type: number

Range: 1-100

ping-sweep-detection

Description 'enable': Enable ping sweep detection; 'disable': Disable ping sweep detection(default);

Type: string

Supported Values: enable, disable

Default: disable

pkt-rate-for-reset-unknown-conn

Description

Type: number

Range: 1-1048575

player-id-check-enable

Description Enable the Player id check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Serverside port number for SNI transmission

Type: number

Range: 1-65535

port-scan-detection

Description 'enable': Enable port scan detection; 'disable': Disable port scan detection(default);

Type: string

Supported Values: enable, disable

Default: disable

pre-process-enable

Description Enable NG-WAF pre-processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

quic

Description: quic is a **JSON Block**. Please see below for *quic*

Type: Object

Reference Object: */axapi/v3/slb/common/quic*

range

Description auto translate port range

Type: number

Range: 1-3

range-end

Description port range end

Type: number

Range: 0-65535

range-start

Description port range start

Type: number

Range: 0-65535

rate-limit-logging

Description Configure rate limit logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recursive-ns-cache

Description 'honor-packet-ttl': Honor the lowest TTL among NS records in the server response; 'honor-age-config': Honor the ttl/age settings based on acos dns cache configuration;

Type: string

Supported Values: honor-packet-ttl, honor-age-config

Default: honor-packet-ttl

redirect-dummy-ethernet

Description Ethernet interface (Ethernet interface number)

Type: number

Format: interface

redirect-dummy-vlan

Description VLAN Id

Type: number

Range: 2-4094

Reference Object: */axapi/v3/network/vlan*

reset-stale-session

Description Send reset if session in delete queue receives a SYN packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resolve-port-conflict

Description Enable client port service port conflicts

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-type

Description 'single-answer': Only cache DNS response with single answer; 'round-robin': Round robin;

Type: string

Supported Values: single-answer, round-robin

scale-out

Description Enable SLB scale out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

scale-out-traffic-map

Description Set SLB scaleout traffic-map

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

serverside-ip

Description Serverside IP address

Type: string

Format: ipv4-address

serverside-ipv6

Description Serverside IPv6 address

Type: string

Format: ipv6-address

service-group-on-no-dest-nat-vports

Description 'allow-same': Allow the binding service-group on no-dest-nat virtual ports; 'enforce-different': Enforce that the same service-group can not be bound on different no-dest-nat virtual ports;

Type: string

Supported Values: allow-same, enforce-different

Default: enforce-different

show-slb-server-legacy-cmd

Description Enable show slb server legacy command

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show-slb-service-group-legacy-cmd

Description Enable show slb service-group legacy command

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show-slb-virtual-server-legacy-cmd

Description Enable show slb virtual-server legacy command

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-gwy-for-l3

Description Use source NAT gateway for L3 traffic for transparent mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-on-vip

Description Enable source NAT traffic against VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-preserve

Description: snat-preserve is a **JSON Block**. Please see below for *snat-preserve*

Type: Object

software

Description Software

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: software,software-tls13, QAT, QAT4, N5-new, N5-old, and software-tls13-offload are mutually exclusive

software-tls13

Description Software TLS1.3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: software-tls13,software, QAT, QAT4, N5-new, N5-old, and software-tls13-offload are mutually exclusive

software-tls13-offload

Description Software TLS1.3 with CPU Offload Support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: software-tls13-offload,software, software-tls13, QAT, QAT4, N5-new, and N5-old are mutually exclusive

sort-res

Description Enable SLB sorting of resource names

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-module-usage-enable

Description Enable SSL module usage calculations for QAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-n5-delay-tx-enable

Description Enable delay transmission for N5-new

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-ratelimit-cfg

Description: ssl-ratelimit-cfg is a **JSON Block**. Please see below for *ssl-ratelimit-cfg*

Type: Object

ssli-cert-not-ready-inspect-limit

Description SSLI asynchronized connection max number, default is 2000 (set to 0 for unlimited size)

Type: number

Range: 0-2147483647

Default: 2000

ssli-cert-not-ready-inspect-timeout

Description SSLI asynchronized connection timeout, default is 10 seconds (seconds, set to 0 for never timeout)

Type: number

Range: 0-2147483647

Default: 10

ssli-silent-termination-enable

Description Terminate the SSLi sessions silently without sending RST/FIN packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssli-sni-hash-enable

Description Enable SSLi SNI hash table

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateless-sg-multi-binding

Description Enable stateless service groups to be assigned to multiple L2/L3 DSR VIPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-disable

Description Disable global slb data statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

substitute-source-mac

Description Substitute Source MAC Address to that of the outgoing interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the healthcheck timeout value, default is 15 seconds (Timeout Value, in seconds (default 15))

Type: number

Range: 1-360

Default: 15

traffic-map-type

Description 'vport': traffic-map per vport; 'global': global traffic-map;

Type: string

Supported Values: vport, global

Default: vport

ttl-threshold

Description Only cache DNS response with longer TTL

Type: number

Range: 1-10000000

use-default-sess-count

Description Use default session count

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-https-proxy

Description NG-WAF connects to Cloud through proxy server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port to connect

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mss-tab

Description Use MSS based on internal table for SLB processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vport-global

Description Configure periodic showtech vport paging global limit

Type: number

Range: 0-512

vport-l3v

Description Configure periodic showtech vport paging l3v limit

Type: number

Range: 0-128

aflex-table-entry-sync

Specification	Value
Type	*object*

aflex-table-entry-sync-enable

Description Enable aflex table sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aflex-table-entry-sync-max-key-len

Description aflex table entry max key length to sync

Type: number

Range: 0-1000

Default: 1000

aflex-table-entry-sync-max-value-len

Description aflex table entry max value length to sync

Type: number

Range: 0-1000

Default: 1000

aflex-table-entry-sync-min-lifetime

Description aflex table entry minimum lifetime to sync

Type: number

Range: 0-65535

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cert-pinning

Specification	Value
Type	*object*

candidate-list-feedback-opt-in

Description: candidate-list-feedback-opt-in is a **JSON Block**. Please see below for *cert-pinning_candidate-list-feedback-opt-in*

Type: Object

Reference Object: */axapi/v3/slb/common/cert-pinning/candidate-list-feedback-opt-in*

ttl

Description The ttl of local cert pinning candidate list, multiple of 10 minutes, default is 144 (1440 minutes)

Type: number

Range: 1-1008

Default: 144

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cert-pinning_candidate-list-feedback-opt-in

Specification	Value
Type	*object*

daily

Description Every day

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: daily and weekly are mutually exclusive

day-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

enable

Description Enable the feedback function

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

schedule

Description schedule the uploading time, default is daily 00:00

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port to connect

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

week-day

Description 'Monday': Monday; 'Tuesday': Tuesday; 'Wednesday': Wednesday; 'Thursday': Thursday; 'Friday': Friday; 'Saturday': Saturday; 'Sunday': Sunday;

Type: string

Supported Values: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday

week-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

weekly

Description Every week

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: weekly and daily are mutually exclusive

dns-response-rate-limiting

Specification	Value
Type	*object*

max-table-entries

Description Maximum number of entries allowed

Type: number

Range: 1000-4194304

source-entry-age

Description Source entry age in minutes (default 2)

Type: number

Range: 1-60

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-ratelimit-cfg

Specification	Value
Type	*object*

disable-rate

Description Disable HW SSL Rate limit for N5-new

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-rate, tls12-rate, and tls13-rate are mutually exclusive

tls12-rate

Description Enabling Rateliming for TLS1.2 HW requests per chip in 1K - default 120

Type: number

Range: 1-1000

Default: 120

Mutual Exclusion: tls12-rate and disable-rate are mutually exclusive

tls13-rate

Description Enabling Rateliming for TLS1.3 HW requests per chip in 1K - default 72

Type: number

Range: 1-200

Default: 72

Mutual Exclusion: tls13-rate and disable-rate are mutually exclusive

quic

Specification	Value
Type	*object*

cid-len

Description Length of CID

Type: number

Range: 4-20

Default: 4

cpu-offset

Description Offset for Encoded CPU

Type: number

Range: 0-15

Default: 12

enable-hash

Description Enable CID Hashing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-signature

Description Enable CID Signature Validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

quic-lb-offset

Description Offset for QUIC-LB

Type: number

Range: 0-15

Default: 8

signature

Description Set CID Signature

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

signature-len

Description Offset for CID Signature

Type: number

Range: 1-4

Default: 3

signature-offset

Description Offset for CID Signature

Type: number

Range: 0-15

Default: 4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global-dns-cache

Specification	Value
Type	*object*

class-list

Description: class-list is a **JSON Block**. Please see below for *global-dns-cache_class-list*

Type: Object

Reference Object: */axapi/v3/slb/common/global-dns-cache/class-list*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global-dns-cache_class-list

Specification	Value
Type	*object*

lid-list

Type: List

Reference Object: */axapi/v3/slb/common/global-dns-cache/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global-dns-cache_class-list_lid-list

Specification	Value
Type	*list*
Block object keys	

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *global-dns-cache_class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description 'ignore': Ignore the limit and proceed; 'drop': Drop the query when it exceeds limit;

Type: string

Supported Values: ignore, drop

Default: drop

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global-dns-cache_class-list_lid-list_dns

Specification	Value
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-enable

honor-server-response-ttl

Description Honor the server response TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

Default: 300

weight

Description Weight for cache entry

Type: number

Range: 1-7

Default: 1

conn-rate-limit

Specification	Value
Type	*object*

src-ip-list

Type: List

Reference Object: */axapi/v3/slb/common/conn-rate-limit/src-ip/{disable-ipv6-support}+{protocol}*

conn-rate-limit_src-ip-list

Specification	Value
Type	*list*
Block object keys	

disable-ipv6-support

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exceed-action

Description Set action if threshold exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit

Description Set max connections per period

Type: number

Range: 1-1000000

limit-period

Description '100': 100 ms; '1000': 1000 ms;

Type: string

Supported Values: 100, 1000

lock-out

Description Set lockout period in seconds if threshold exceeded

Type: number

Range: 1-3600

log

Description Send log if threshold exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': Set TCP connection rate limit; 'udp': Set UDP packet rate limit;

Type: string

Supported Values: tcp, udp

shared

Description Set threshold shared amongst all virtual ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ddos-protection

Specification	Value
Type	*object*

ipd-enable-toggle

Description 'enable': Enable SLB DDoS protection; 'disable': Disable SLB DDoS protection (default);

Type: string

Supported Values: enable, disable

Default: disable

logging

Description: logging is a **JSON Block**. Please see below for *ddos-protection_logging*

Type: Object

packets-per-second

Description: packets-per-second is a **JSON Block**. Please see below for *ddos-protection_packets-per-second*

Type: Object

ddos-protection_packets-per-second

Specification	Value
Type	*object*

ipd-tcp

Description Configure packets-per-second threshold per TCP port (default: 200)

Type: number

Range: 0-65535

Default: 200

ipd-udp

Description Configure packets-per-second threshold per UDP port (default: 200)

Type: number

Range: 0-65535

Default: 200

ddos-protection_logging

Specification	Value
Type	*object*

ipd-logging-toggle

Description 'enable': Enable SLB DDoS protection logging (default); 'disable': Disable SLB DDoS protection logging;

Type: string

Supported Values: enable, disable

Default: enable

snat-preserve

Specification	Value
Type	*object*

range

Type: List

snat-preserve_range

Specification	Value
Type	*list*
Block object keys	

port1

Description start port

Type: number

Range: 1025-65535

Default: 1025

port2

Description end port which is greater than start

Type: number

Range: 1025-65535

Default: 1025

2.120.9 slb common aflex-table-entry-sync

aflex table entry sync commands

aflex-table-entry-sync Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	aflex-table-entry-sync
Element URI	/axapi/v3/slb/common/aflex-table-entry-sync
Element Attributes	aflex-table-entry-sync_attributes
Partition Visibility	shared
Schema	`aflex-table-entry-sync schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/common/aflex-table-entry-sync

aflex-table-entry-sync attributes

Get Object

GET

/axapi/v3/slb/common/aflex-table-entry-sync

aflex-table-entry-sync attributes

Modify Object

POST

/axapi/v3/slb/common/aflex-table-entry-sync

aflex-table-entry-sync attributes

Replace Object

PUT

/axapi/v3/slb/common/aflex-table-entry-sync

aflex-table-entry-sync attributes

Delete Object

DELETE

/axapi/v3/slb/common/aflex-table-entry-sync

aflex-table-entry-sync attributes

aflex-table-entry-sync attributes

aflex-table-entry-sync-enable

Description Enable aflex table sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aflex-table-entry-sync-max-key-len

Description aflex table entry max key length to sync

Type: number

Range: 0-1000

Default: 1000

aflex-table-entry-sync-max-value-len

Description aflex table entry max value length to sync

Type: number

Range: 0-1000

Default: 1000

aflex-table-entry-sync-min-lifetime

Description aflex table entry minimum lifetime to sync

Type: number

Range: 0-65535

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.10 slb common cert-pinning

Configure the cert-pinning related settings

cert-pinning Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	cert-pinning
Element URI	/axapi/v3/slb/common/cert-pinning
Element Attributes	cert-pinning_attributes
Partition Visibility	shared
Schema	`cert-pinning schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/common/cert-pinning

cert-pinning attributes

```
POST /axapi/v3/slb/common/cert-pinning
Payload:
{
    "cert-pinning": {
        "ttl": 1
    }
}
```

Get Object

GET

/axapi/v3/slb/common/cert-pinning

cert-pinning attributes

```
GET /axapi/v3/slb/common/cert-pinning
Reponse:
{

        "uuid": "d57e64a2-b648-11ef-816c-ae71681635d0",
        "a10-url": "/axapi/v3/slb/common/cert-pinning"
    }
}
```

Modify Object

POST

/axapi/v3/slb/common/cert-pinning

cert-pinning attributes

Replace Object

PUT

/axapi/v3/slb/common/cert-pinning

cert-pinning attributes

```
PUT /axapi/v3/slb/common/cert-pinning
Payload:
{
    "cert-pinning": {
        "ttl": 2
    }
}
```

Delete Object

DELETE

/axapi/v3/slb/common/cert-pinning

cert-pinning attributes

```
DELETE /axapi/v3/slb/common/cert-pinning
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

cert-pinning attributes

candidate-list-feedback-opt-in

Description: candidate-list-feedback-opt-in is a **JSON Block**. Please see below for *candidate-list-feedback-opt-in*

Type: Object

Reference Object: */axapi/v3/slb/common/cert-pinning/candidate-list-feedback-opt-in*

ttl

Description The ttl of local cert pinning candidate list, multiple of 10 minutes, default is 144 (1440 minutes)

Type: number

Range: 1-1008

Default: 144

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

candidate-list-feedback-opt-in

Specification	Value
Type	*object*

daily

Description Every day

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: daily and weekly are mutually exclusive

day-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

enable

Description Enable the feedback function

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

schedule

Description schedule the uploading time, default is daily 00:00

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port to connect

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

week-day

Description 'Monday': Monday; 'Tuesday': Tuesday; 'Wednesday': Wednesday; 'Thursday': Thursday; 'Friday': Friday; 'Saturday': Saturday; 'Sunday': Sunday;

Type: string

Supported Values: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday

week-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

weekly

Description Every week

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: weekly and daily are mutually exclusive

2.120.11 slb common cert-pinning candidate-list-feedback-opt-in

Opt-in to improve A10's certificate-pinning sites list

candidate-list-feedback-opt-in Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	candidate-list-feedback-opt-in
Element URI	/axapi/v3/slb/common/cert-pinning/candidate-list-feedback-opt-in
Element Attributes	candidate-list-feedback-opt-in_attributes
Partition Visibility	shared
Schema	`candidate-list-feedback-opt-in schema`

daily

Description Every day

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: daily and weekly are mutually exclusive

day-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

enable

Description Enable the feedback function

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

schedule

Description schedule the uploading time, default is daily 00:00

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port to connect

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

week-day

Description 'Monday': Monday; 'Tuesday': Tuesday; 'Wednesday': Wednesday; 'Thursday': Thursday; 'Friday': Friday; 'Saturday': Saturday; 'Sunday': Sunday;

Type: string

Supported Values: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday

week-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

weekly

Description Every week

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: weekly and daily are mutually exclusive

2.120.12 slb common conn-rate-limit

Set rate limiting on virtual ports

conn-rate-limit Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	conn-rate-limit
Element URI	/axapi/v3/slb/common/conn-rate-limit
Element Attributes	conn-rate-limit_attributes
Partition Visibility	shared
Schema	`conn-rate-limit schema`

Operations Allowed:

Get Object

GET

/axapi/v3/slb/common/conn-rate-limit

Specification	Value
Type	*list*
Block object keys	

disable-ipv6-support

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exceed-action

Description Set action if threshold exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit

Description Set max connections per period

Type: number

Range: 1-1000000

limit-period

Description '100': 100 ms; '1000': 1000 ms;

Type: string

Supported Values: 100, 1000

lock-out

Description Set lockout period in seconds if threshold exceeded

Type: number

Range: 1-3600

log

Description Send log if threshold exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': Set TCP connection rate limit; 'udp': Set UDP packet rate limit;

Type: string

Supported Values: tcp, udp

shared

Description Set threshold shared amongst all virtual ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.13 slb common conn-rate-limit src-ip

Set connection limit based on source IP address

src-ip Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*disable-ipv6-support, protocol*
Collection Name	*src-ip-list*
Collection URI	/axapi/v3/slb/common/conn-rate-limit/src-ip

dns

Description: dns is a **JSON Block**. Please see below for *class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description 'ignore': Ignore the limit and proceed; 'drop': Drop the query when it exceeds limit;

Type: string

Supported Values: ignore, drop

Default: drop

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list_dns

Specification	Value
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-enable

honor-server-response-ttl

Description Honor the server response TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

Default: 300

weight

Description Weight for cache entry

Type: number

Range: 1-7

Default: 1

Element Attributes	forward-proxy_attributes
Partition Visibility	shared
Schema	`forward-proxy schema`

Operations Allowed:

Get Object

GET

/axapi/v3/slb/forward-proxy

forward-proxy_attributes

forward-proxy attributes

notify-page-list

Type: List

Reference Object: */axapi/v3/slb/forward-proxy/notify-page/{name}*

time-range-list

Type: List

Reference Object: */axapi/v3/slb/forward-proxy/time-range/{name}*

time-range-list

Specification	Value
Type	*list*
Block object keys	

daily-begin

Description Daily enables after this time (HH:MM, 24-hour notation)

Type: string

Maximum Length: 5 characters

Maximum Length: 4 characters

daily-end

Description Daily enables until thie time (HH:MM, 24-hour notation, inclusive)

Type: string

Maximum Length: 5 characters

Maximum Length: 4 characters

days-of-month-begin

Description Recurring enables after this day per month

Type: number

Range: 1-31

days-of-month-end

Description Recurring enables until this day per month (inclusive)

Type: number

Range: 1-31

months-of-year-begin

Description Recurring enables after this month per year

Type: number

Range: 1-12

months-of-year-end

Description Recurring enables until this month per year (inclusive)

Type: number

Range: 1-12

name

Description Name of this object

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

use-utc-time

Description Use UTC+0 time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weekday-fr

Description Recurring enables on Friday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-mo

Description Recurring enables on Monday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-sa

Description Recurring enables on Saturday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-su

Description Recurring enables on Sunday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-th

Description Recurring enables on Thursday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-tu

Description Recurring enables on Tuesday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-we

Description Recurring enables on Wednesday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notify-page-list

Specification	Value
Type	*list*
Block object keys	

message

Description Message in notify page

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

name

Description Name of this object

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.120.52 slb forward-proxy notify-page

reply a notify page for forward-proxy

notify-page Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*notify-page-list*
Collection URI	/axapi/v3/slb/forward-proxy/notify-page
Element Name	notify-page
Element URI	/axapi/v3/slb/forward-proxy/notify-page/{name}
Element Attributes	notify-page_attributes
Partition Visibility	shared
Schema	`notify-page schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/forward-proxy/notify-page

notify-page attributes

Create List

POST

/axapi/v3/slb/forward-proxy/notify-page

notify-page attributes

Delete Object

DELETE

/axapi/v3/slb/forward-proxy/time-range/{name}

time-range attributes

time-range-list

time-range-list is **JSON List** of *time-range attributes*

```
time-range-list : [
        { time-range attributes },
        { time-range attributes },
        ...
    ]
```

time-range attributes

daily-begin

Description Daily enables after this time (HH:MM, 24-hour notation)

Type: string

Maximum Length: 5 characters

Maximum Length: 4 characters

daily-end

Description Daily enables until thie time (HH:MM, 24-hour notation, inclusive)

Type: string

Maximum Length: 5 characters

Maximum Length: 4 characters

days-of-month-begin

Description Recurring enables after this day per month

Type: number

Range: 1-31

days-of-month-end

Description Recurring enables until this day per month (inclusive)

Type: number

Range: 1-31

months-of-year-begin

Description Recurring enables after this month per year

Type: number

Range: 1-12

months-of-year-end

Description Recurring enables until this month per year (inclusive)

Type: number

Range: 1-12

name

Description Name of this object

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

use-utc-time

Description Use UTC+0 time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weekday-fr

Description Recurring enables on Friday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-mo

Description Recurring enables on Monday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-sa

Description Recurring enables on Saturday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-su

Description Recurring enables on Sunday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-th

Description Recurring enables on Thursday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-tu

Description Recurring enables on Tuesday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weekday-we

Description Recurring enables on Wednesday

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.120.54 slb ftp-ctl

Description HTTP2 Rejected

Type: number

Format: counter

http_1_1_required

Description HTTP1.1 Required

Type: number

Format: counter

idle_state_unexpected_frame

Description Unxpected frame received in idle state

Type: number

Format: counter

inadequate_security

Description inadequate security

Type: number

Format: counter

inflate_alloc_fail

Description inflate alloc fail

Type: number

Format: counter

inflate_header_fail

Description Inflate Header Fail

Type: number

Format: counter

internal_error

Description Internal Error

Type: number

Format: counter

invalid_frame_during_headers

Description frame before headers were complete

Type: number

Format: counter

invalid_frame_size

Description Invalid Frame Size Rcvd

Type: number

Format: counter

invalid_push_promise

Description unexpected PUSH_PROMISE frame

Type: number

Format: counter

invalid_setting_value

Description invalid setting-frame value

Type: number

Format: counter

invalid_stream_id

Description received invalid stream ID

Type: number

Format: counter

invalid_window_update

Description window-update value out of range

Type: number

Format: counter

peak_proxy

Description Peak Proxy Conns

Type: number

Format: counter

ping_frame

Description PING Frame Rcvd

Description SETTINGS Frame Rcvd

Type: number

Format: counter

settings_frame_sent

Description SETTINGS Frame Sent

Type: number

Format: counter

settings_timeout

Description Settings Timeout

Type: number

Format: counter

split_buff_fail

Description Splitting Buffer Failed

Type: number

Format: counter

stream_cancel_flood_detected

Description stream cancel flood detected

Type: number

Format: counter

stream_closed

Description stream closed

Type: number

Format: counter

stream_create

Description Stream Create

Type: number

Format: counter

stream_free

Description Stream Free

Type: number

Format: counter

streams_gt_max_concur_streams

Description Streams greater than max allowed concurrent streams

Type: number

Format: counter

total_bytes_received

Description HTTP/2 total bytes received

Type: number

Format: counter

total_bytes_sent

Description HTTP/2 total bytes sent

Type: number

Format: counter

total_proxy

Description Total Proxy Conns

Type: number

Format: counter

trailers_no_end_stream

Description trailers not marked as end-of-stream

Type: number

Format: counter

transaction_limited

Description transaction_limited

Type: number

Format: counter

unknown_frame

Description Unknown Frame Recvd

Type: number

Format: counter

window_update_frame

Description WINDOW_UPDATE Frame Rcvd

Type: number

Format: counter

window_update_frame_sent

Description WINDOW_UPDATE Frame Sent

Type: number

Format: counter

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

alloc_fail_total

Description Memory Allocation Failures

Type: number

Format: counter

client_conn_curr

Description Current HTTP/3 Client Connections

Type: number

Format: counter

client_conn_peak

Description Peak HTTP/3 Client Connections

Type: number

Format: counter

client_conn_total

Description Total HTTP/3 Client Connections

Type: number

Format: counter

client_data_bytes_rcvd

Description Bytes received in DATA frames on client side

Type: number

Format: counter

client_data_bytes_sent

Description Bytes sent in DATA frames on client side

Type: number

Format: counter

client_data_frames_to_app

Description DATA Frames passed to HTTP layer on client side

Type: number

Format: counter

client_frame_type_cancel_push_rcvd

Description CANCEL PUSH Frame received on client side

Type: number

Format: counter

client_frame_type_cancel_push_sent

Description CANCEL PUSH Frame sent on client side

Type: number

Format: counter

client_frame_type_data_rcvd

Description DATA Frame received on client side

Type: number

Format: counter

client_frame_type_data_sent

Description DATA Frame sent on client side

Type: number

Format: counter

client_frame_type_goaway_rcvd

Description GOAWAY Frame received on client side

Type: number

Format: counter

client_frame_type_goaway_sent

Description GOAWAY Frame sent on client side

Type: number

Format: counter

client_frame_type_headers_rcvd

Description HEADERS Frame received on client side

Type: number

Format: counter

client_frame_type_headers_sent

Description HEADERS Frame sent on client side

Type: number

Format: counter

client_frame_type_max_push_id_rcvd

Description MAX PUSH ID Frame received on client side

Type: number

Format: counter

client_frame_type_max_push_id_sent

Description MAX PUSH ID Frame sent on client side

Type: number

Format: counter

client_frame_type_push_promise_rcvd

Description PUSH PROMISE Frame received on client side

Type: number

Format: counter

client_frame_type_push_promise_sent

Description PUSH PROMISE Frame sent on client side

Type: number

Format: counter

client_frame_type_settings_rcvd

Description SETTINGS Frame received on client side

Type: number

Format: counter

client_frame_type_settings_sent

Description SETTINGS Frame sent on client side

Type: number

Format: counter

client_frame_type_unknown_rcvd

Description Unknown Frame received on client side

Type: number

Format: counter

client_header_bytes_rcvd

Description Bytes received in HEADER frames on client side

Type: number

Format: counter

client_header_bytes_sent

Description Bytes sent in HEADER frames on client side

Type: number

Format: counter

client_header_frames_to_app

Description HEADER Frames passed to HTTP layer on client side

Type: number

Format: counter

client_heading_bytes_rcvd

Description Bytes received in HEADERS/DATA frame/stream heading on client side

Type: number

Format: counter

client_heading_bytes_sent

Description Bytes sent in HEADERS/DATA frame/stream heading on client side

Type: number

Format: counter

client_other_frame_bytes_rcvd

Description Bytes received in other frames (SETTINGS, GOAWAY, PUSH_PROMISE etc) on client side

Type: number

Format: counter

client_other_frame_bytes_sent

Description Bytes sent in other frames (SETTINGS, GOAWAY, PUSH_PROMISE etc) on client side

Type: number

Format: counter

client_request_other_curr

Description Current Other Streams on client side (control, decoder, encoder)

Type: number

Format: counter

client_request_other_total

Description Total Other Streams on client side (control, decoder, encoder)

Type: number

Format: counter

client_request_push_curr

Description Current Push Streams on client side

Type: number

Format: counter

client_request_push_total

Description Total Push Streams on client side

Type: number

Format: counter

client_request_streams_curr

Description Current Request Streams on client side

Type: number

Format: counter

client_request_streams_total

Description Total Request Streams on client side

Type: number

Format: counter

client_total_bytes_rcvd

Description Total Bytes received on client side

Type: number

Format: counter

client_total_bytes_sent

Description Total Bytes sent on client side

Type: number

Format: counter

conn_alloc_error

Description HTTP/3 Connection Allocation Error

Type: number

Format: counter

fatal

Description Fatal Error

Type: number

Format: counter

h3_closed_critical_stream

Description H3 Closed Critical Stream

Type: number

Format: counter

h3_frame_error

Description H3 Frame Error

Type: number

Format: counter

h3_frame_unexpected

Description H3 Frame Unexpected

Type: number

Format: counter

h3_general_protocol_error

Description H3 General Protocol Error

Type: number

Format: counter

h3_id_error

Description H3 Id Error

Type: number

Format: counter

h3_internal_error

Description H3 Internal Error

Type: number

Format: counter

h3_missing_settings

Description H3 Missing Settings

Type: number

Format: counter

h3_settings_error

Description H3 Settings Error

Type: number

Format: counter

h3_stream_creation_error

Description H3 Stream Creation Error

Type: number

Format: counter

http3_rejected

Description HTTP3 Rejected

Type: number

Format: counter

ignore_push_promise

Description Ignore Push Promise

Type: number

Format: counter

ignore_stream

Description Ignore Stream

Type: number

Format: counter

invalid_argument

Description Invalid Argument

Type: number

Format: counter

invalid_state

Description Invalid State

Type: number

Format: counter

malformed_http_header

Description Malformed Http Header

Type: number

Format: counter

malformed_http_messaging

Description Malformed Http Messaging

Type: number

Format: counter

push_id_blocked

Description Push Id Blocked

Type: number

Format: counter

qpack_decoder_stream_error

Description Qpack Decoder Stream Error

Type: number

Format: counter

qpack_decompression_failed

Description Qpack Decompression Failed

Type: number

Format: counter

qpack_encoder_stream_error

Description Qpack Encoder Stream Error

Type: number

Format: counter

qpack_fatal

Description Qpack Fatal

Type: number

Format: counter

qpack_header_too_large

Description Qpack Header Too Large

Type: number

Format: counter

remove_http_header

Description Remove Http Header

Type: number

Format: counter

server_conn_curr

Description Current HTTP/3 Server Connections

Type: number

Format: counter

server_conn_peak

Description Peak HTTP/3 Server Connections

Type: number

Format: counter

server_conn_total

Description Total HTTP/3 Server Connections

Type: number

Format: counter

server_data_bytes_rcvd

Description Bytes received in DATA frames on server side

Type: number

Format: counter

server_data_bytes_sent

Description Bytes sent in DATA frames on server side

Type: number

Format: counter

server_data_frames_to_app

Description DATA Frames passed to HTTP layer on server side

Type: number

Format: counter

server_frame_type_cancel_push_rcvd

Description CANCEL PUSH Frame received on server side

Type: number

Format: counter

server_frame_type_cancel_push_sent

Description CANCEL PUSH Frame sent on server side

Type: number

Format: counter

server_frame_type_data_rcvd

Description DATA Frame received on server side

Type: number

Format: counter

server_frame_type_data_sent

Description DATA Frame sent on server side

Type: number

Format: counter

server_frame_type_goaway_rcvd

Description GOAWAY Frame received on server side

Type: number

Format: counter

server_frame_type_goaway_sent

Description GOAWAY Frame sent on server side

Type: number

Format: counter

server_frame_type_headers_rcvd

Description HEADERS Frame received on server side

Type: number

Format: counter

server_frame_type_headers_sent

Description HEADERS Frame sent on server side

Type: number

Format: counter

server_frame_type_max_push_id_rcvd

Description MAX PUSH ID Frame received on server side

Type: number

Format: counter

server_frame_type_max_push_id_sent

Description MAX PUSH ID Frame sent on server side

Type: number

Format: counter

server_frame_type_push_promise_rcvd

Description PUSH PROMISE Frame received on server side

Type: number

Format: counter

server_frame_type_push_promise_sent

Description PUSH PROMISE Frame sent on server side

Type: number

Format: counter

server_frame_type_settings_rcvd

Description SETTINGS Frame received on server side

Type: number

Format: counter

server_frame_type_settings_sent

Description SETTINGS Frame sent on server side

Type: number

Format: counter

server_frame_type_unknown_rcvd

Description Unknown Frame received on server side

Type: number

Format: counter

server_header_bytes_rcvd

Description Bytes received in HEADER frames on server side

Type: number

Format: counter

server_header_bytes_sent

Description Bytes sent in HEADER frames on server side

Type: number

Format: counter

server_header_frames_to_app

Description HEADER Frames passed to HTTP layer on server side

Type: number

Format: counter

server_heading_bytes_rcvd

Description Bytes received in HEADERS/DATA frame/stream heading on server side

Type: number

Format: counter

server_heading_bytes_sent

Description Bytes sent in HEADERS/DATA frame/stream heading on server side

Type: number

Format: counter

server_other_frame_bytes_rcvd

Description Bytes received in other frames (SETTINGS, GOAWAY, PUSH_PROMISE etc) on server side

Type: number

Format: counter

server_other_frame_bytes_sent

Description Bytes sent in other frames (SETTINGS, GOAWAY, PUSH_PROMISE etc) on server side

Type: number

Format: counter

server_request_other_curr

Description urrent Other Streams on server side (control, decoder, encoder)

Type: number

Format: counter

server_request_other_total

Description Total Other Streams on server side (control, decoder, encoder)

Type: number

Format: counter

server_request_push_curr

Description Current Push Streams on server side

Type: number

Format: counter

server_request_push_total

Description Total Push Streams on server side

Type: number

Format: counter

server_request_streams_curr

Description Current Request Streams on server side

Type: number

Format: counter

server_request_streams_total

Description Total Request Streams on server side

Type: number

Format: counter

server_total_bytes_rcvd

Description Total Bytes received on server side

Type: number

Format: counter

server_total_bytes_sent

Description Total Bytes sent on server side

Type: number

Format: counter

stream_in_use

Description Stream In Use

Type: number

Format: counter

stream_not_found

Description Stream Not Found

Type: number

Format: counter

too_late

Description Too Late

Type: number

Format: counter

wouldblock

Description Wouldblock

Type: number

Format: counter

Format: counter

ssl_cps_exceed

Description SSL CPS exceed drop

Type: number

Format: counter

ssl_tpt_exceed

Description SSL TPT exceed drop

Type: number

Format: counter

ssl_watermark_drop

Description SSL TPT-Watermark drop

Type: number

Format: counter

stateless_conn_timeout

Description L4 stateless Conn TO

Type: number

Format: counter

svr_syn_handshake_fail

Description L4 server handshake fail

Type: number

Format: counter

svrselfail

Description Server sel failure

Type: number

Format: counter

syn_rate

Description TCP SYN rate per sec

Type: number

Format: counter

syn_stale_sess

Description SYN stale sess drop

Type: number

Format: counter

synattack

Description L4 SYN attack

Type: number

Format: counter

syncookie_buff_drop

Description TCP SYN cookie buff drop

Type: number

Format: counter

syncookie_buff_queue

Description TCP SYN cookie buff queue

Type: number

Format: counter

syncookiescheckfailed

Description TCP SYN cookie failed

Type: number

Format: counter

syncookiessent

Description TCP SYN cookie snt

Type: number

Format: counter

syncookiessent_ts

Description TCP SYN cookie snt ts

Type: number

Format: counter

syncookiessentfailed

Description TCP SYN cookie snt fail

Type: number

Format: counter

synreceived

Description TCP SYN received

Type: number

Format: counter

synreceived_hw

Description TCP SYN (HW SYN cookie)

Type: number

Format: counter

tcp_ax_rexmit_syn

Description L4 AX re-xmit SYN

Type: number

Format: counter

tcp_connections_closed

Description TCP Connections Closed

Type: number

Format: counter

tcp_est

Description L4 TCP Established

Type: number

Format: counter

tcp_fwd_ackfin

Description L4 rcv fwd FIN|ACK

Type: number

Format: counter

tcp_fwd_fin

Description L4 rcv fwd FIN

Type: number

Format: counter

tcp_fwd_fin_dup

Description L4 rcv fwd FIN dup

Type: number

Format: counter

tcp_fwd_last_ack

Description L4 rcv fwd last ACK

Type: number

Format: counter

tcp_fwd_rst

Description L4 rcv fwd RST

Type: number

Format: counter

tcp_invalid_drop

Description TCP invalid drop

Type: number

Format: counter

tcp_no_slb

Description TCP no SLB

Type: number

Format: counter

tcp_rev_ackfin

Description L4 rcv rev FIN|ACK

Type: number

Format: counter

tcp_rev_fin

Description L4 rcv rev FIN

Type: number

Format: counter

tcp_rev_fin_dup

Description L4 rcv rev FIN dup

Type: number

Format: counter

tcp_rev_last_ack

Description L4 rcv rev last ACK

Type: number

Format: counter

tcp_rev_rst

Description L4 rcv rev RST

Type: number

Format: counter

tcp_rexmit_syn

Description L4 rcv rexmit SYN

Type: number

Format: counter

tcp_rexmit_syn_delq

Description L4 rcv rexmit SYN (delq)

Type: number

Format: counter

tcp_rexmit_synack

Description L4 rcv rexmit SYN|ACK

Type: number

Format: counter

tcp_rexmit_synack_delq

Description L4 rcv rexmit SYN|ACK DQ

Type: number

Format: counter

tcp_sess_aged_out

Description TCP Session aged out

Type: number

Format: counter

tcp_sess_noest_aged_out

Description TCP no-Est Sess aged out

Type: number

Format: counter

tcp_sess_noest_csyn_rcv_aged_out

Description no-Est CSYN rcv aged out

Type: number

Format: counter

tcp_sess_noest_ssyn_xmit_aged_out

Description no-Est SSYN snt aged out

Type: number

Format: counter

tcp_syn_rcv_ack

Description L4 rcv ACK on SYN

Type: number

Format: counter

tcp_syn_rcv_rst

Description L4 rcv RST on SYN

Type: number

Format: counter

tcpotherflags_drop

Description TCP SYN Other Flags Drop

Type: number

Format: counter

tcpsyndata_drop

Description TCP SYN With Data Drop

Type: number

Format: counter

throttle_syn

Description SYN Throttle

Type: number

Format: counter

udp_no_slb

Description UDP no SLB

Type: number

Format: counter

udp_req_more_resp

Description L4 UDP req greater than rsps

Type: number

Format: counter

udp_req_one_oneplus_resp

Description L4 UDP req rsps

Type: number

Format: counter

udp_req_oneplus

Description L4 UDP reqs

Type: number

Format: counter

udp_req_oneplus_no_resp

Description L4 UDP reqs no rsp

Type: number

Format: counter

udp_req_resp_notmatch

Description L4 UDP req/rsp not match

Type: number

Format: counter

udp_resp_more_req

Description L4 UDP rsps greater than reqs

Type: number

Format: counter

udp_resp_oneplus

Description L4 UDP rsps

Type: number

Format: counter

udp_sess_aged_out

Description UDP Session aged out

Type: number

Format: counter

2.120.107 slb l7session

Configure l7session

l7session Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	l7session
Element URI	/axapi/v3/slb/l7session
Element Attributes	l7session_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/slb/l7session/stats
Schema	`l7session schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/l7session

l7session attributes

```
POST /axapi/v3/slb/l7session
Payload:
{
    "l7session": {
        "sampling-enable": [
            {
                "counters1": "all"
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/slb/l7session

l7session attributes

```
GET /axapi/v3/slb/l7session
Reponse:
{
    "l7session": {
        "uuid": "5172ab04-b62b-11ef-9219-ae71681635d0",
        "sampling-enable": [
            {
                "counters1": "all"
            }
        ],
        "a10-url": "/axapi/v3/slb/l7session"
    }
}
```

Modify Object

POST

/axapi/v3/slb/l7session

l7session attributes

Replace Object

PUT

/axapi/v3/slb/l7session

l7session attributes

```
PUT /axapi/v3/slb/l7session
Payload:
{
    "l7session": {
        "sampling-enable": [
```

(continues on next page)

(continued from previous page)

```
            {
                "counters1": "start_server_conn_succ"
            }
        ]
    }
}
```

Delete Object

DELETE

/axapi/v3/slb/l7session

l7session attributes

```
DELETE /axapi/v3/slb/l7session
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

l7session attributes

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'start_server_conn_succ': Start Server Conn Success; 'conn_not_exist': Conn does not exist; 'data_event': Data event from TCP; 'client_fin': FIN from client; 'server_fin': FIN from server; 'wbuf_event': Wbuf event from TCP; 'wbuf_cb_failed': Wbuf event callback failed; 'err_event': Err event from TCP; 'err_cb_failed': Err event callback failed; 'server_conn_failed': Server connection failed; 'client_rst': RST
