Description GTP-U Out of state Drop

Type: number

Format: counter

gtp-u-rr-message-drop

Description GTP-U Message Dropped in RR Mode

Type: number

Format: counter

gtp-u-smp-check-failed

Description GTP U-SMP check Failed

Type: number

Format: counter

gtp-u-smp-sig-check-failed

Description GTP SMP signature check Failed

Type: number

Format: counter

gtp-u-stateless-forward

Description GTP-U Stateless Forward

Type: number

Format: counter

gtp-u-tunnel-frag-or-jumbo-pkt-processed

Description GTP-U Tunnel Fragmented or Jumbo packet processed

Type: number

Format: counter

gtp-u-tunnel-rate-limit-entry-create-failure

Description GTP-U Tunnel Level Rate Limit Entry Create Failure

Type: number

Format: counter

gtp-u-uplink-egress-bytes

Description GTP-U Uplink Egress Bytes

Type: number

Format: counter

gtp-u-uplink-egress-packets

Description GTP-U Uplink Egress Packets

Type: number

Format: counter

gtp-u-uplink-ingress-bytes

Description GTP-U Uplink Ingress Bytes

Type: number

Format: counter

gtp-u-uplink-ingress-packets

Description GTP-U Uplink Ingress Packets

Type: number

Format: counter

gtp-v0-c-downlink-egress-bytes

Description GTPv0-C Downlink Egress Bytes

Type: number

Format: counter

gtp-v0-c-downlink-egress-packets

Description GTPv0-C Downlink Egress Packets

Type: number

Format: counter

gtp-v0-c-downlink-ingress-bytes

Description GTPv0-C Downlink Ingress Bytes

Type: number

Format: counter

gtp-v0-c-downlink-ingress-packets

Description GTPv0-C Downlink Ingress Packets

Type: number

Format: counter

gtp-v0-c-uplink-egress-bytes

Description GTPv0-C Uplink Egress Bytes

Type: number

Format: counter

gtp-v0-c-uplink-egress-packets

Description GTPv0-C Uplink Egress Packets

Type: number

Format: counter

gtp-v0-c-uplink-ingress-bytes

Description GTPv0-C Uplink Ingress Bytes

Type: number

Format: counter

gtp-v0-c-uplink-ingress-packets

Description GTPv0-C Uplink Ingress Packets

Type: number

Format: counter

gtp-v0-c-ver-not-supp

Description GTPv0-C Version not supported indication

Type: number

Format: counter

gtp-v1-c-downlink-egress-bytes

Description GTPv1-C Downlink Egress Bytes

Type: number

Format: counter

gtp-v1-c-downlink-egress-packets

Description GTPv1-C Downlink Egress Packets

Type: number

Format: counter

gtp-v1-c-downlink-ingress-bytes

Description GTPv1-C Downlink Ingress Bytes

Type: number

Format: counter

gtp-v1-c-downlink-ingress-packets

Description GTPv1-C Downlink Ingress Packets

Type: number

Format: counter

gtp-v1-c-nsapi-not-found-in-delete-req

Description GTPv1-C NSAPI Not Found in GTP Request

Type: number

Format: counter

gtp-v1-c-uplink-egress-bytes

Description GTPv1-C Uplink Egress Bytes

Type: number

Format: counter

gtp-v1-c-uplink-egress-packets

Description GTPv1-C Uplink Egress Packets

Type: number

Format: counter

gtp-v1-c-uplink-ingress-bytes

Description GTPv1-C Uplink Ingress Bytes

Type: number

Format: counter

gtp-v1-c-uplink-ingress-packets

Description GTPv1-C Uplink Ingress Packets

Type: number

Format: counter

gtp-v1-c-ver-not-supp

Description GTPv1-C Version not supported indication

Type: number

Format: counter

gtp-v2-c-bearer-not-found-in-delete-req

Description GTPv2-C Bearer Not Found in GTP Request

Type: number

Format: counter

gtp-v2-c-bearer-not-found-in-delete-resp

Description GTPv2-C Bearer Not Found in GTP Response

Type: number

Format: counter

gtp-v2-c-downlink-egress-bytes

Description GTPv2-C Downlink Egress Bytes

Type: number

Format: counter

gtp-v2-c-downlink-egress-packets

Description GTPv2-C Downlink Egress Packets

Type: number

Format: counter

gtp-v2-c-downlink-ingress-bytes

Description GTPv2-C Downlink Ingress Bytes

Type: number

Format: counter

gtp-v2-c-downlink-ingress-packets

Description GTPv2-C Downlink Ingress Packets

Type: number

Format: counter

gtp-v2-c-uplink-egress-bytes

Description GTPv2-C Uplink Egress Bytes

Type: number

Format: counter

gtp-v2-c-uplink-egress-packets

Description GTPv2-C Uplink Egress Packets

Type: number

Format: counter

gtp-v2-c-uplink-ingress-bytes

Description GTPv2-C Uplink Ingress Bytes

Type: number

Format: counter

gtp-v2-c-uplink-ingress-packets

Description GTPv2-C Uplink Ingress Packets

Type: number

Format: counter

gtp-v2-c-ver-not-supp

Description GTPv2-C Version not supported indication

Type: number

Format: counter

no-fwd-route

Description No Forward Route

Type: number

Format: counter

no-rev-route

Description No Reverse Route

Type: number

Format: counter

out-of-session-memory

Description Out of Tunnel Memory

Type: number

Format: counter

network-element

Specification	Value
Type	*object*

stats

Description: stats is a **JSON Block**. Please see below for *network-element_stats*

Type: Object

network-element_stats

Specification	Value
Type	*object*

apn-imsi-flt-message-monitor

Description GTP-C Message forwarded via monitor mode at APN-IMSI filtering policy

Type: number

Format: counter

downlink-bytes

Description Downlink Bytes

Type: number

Format: counter

downlink-pkts

Description Downlink Packets

Type: number

Format: counter

drop-flt-apn-filtering

Description Filtering Drop: APN IMSI Filtering

Type: number

Format: counter

drop-flt-gtp-in-gtp

Description Filtering Drop: GTP in GTP Tunnel Present

Type: number

Format: counter

drop-flt-message-filtering

Description Filtering Drop: Message Type Not Permitted on Interface

Type: number

Format: counter

drop-flt-msisdn-filtering

Description Filtering Drop: MSISDN Filtering

Type: number

Format: counter

drop-flt-rat-type-filtering

Description Filtering Drop: RAT Type Filtering

Type: number

Format: counter

drop-rl-gtp-u-downlink-byte

Description Rate-limit Drop: GTP-U Downlink byte rate

Type: number

Format: counter

drop-rl-gtp-u-downlink-packet

Description Rate-limit Drop: GTP-U Downlink packet rate

Type: number

Format: counter

drop-rl-gtp-u-max-concurrent-tunnels

Description Rate-limit Drop: GTP-U Concurrent Tunnels

Type: number

Format: counter

drop-rl-gtp-u-total-byte

Description Rate-limit Drop: GTP-U Total byte rate

Type: number

Format: counter

drop-rl-gtp-u-total-packet

Description Rate-limit Drop: GTP-U Total packet rate

Type: number

Format: counter

drop-rl-gtp-u-tunnel-create

Description Rate-limit Drop: GTP-U Tunnel Creation rate

Type: number

Format: counter

drop-rl-gtp-u-uplink-byte

Description Rate-limit Drop: GTP-U Uplink byte rate

Type: number

Format: counter

drop-rl-gtp-u-uplink-packet

Description Rate-limit Drop: GTP-U Uplink packet rate

Type: number

Format: counter

drop-rl-gtp-v0-c-agg

Description Rate-limit Drop: Maximum GTPv0-C messages rate

Type: number

Format: counter

drop-rl-gtp-v1-c-agg

Description Rate-limit Drop: Maximum GTPv1-C messages rate

Type: number

Format: counter

drop-rl-gtp-v1-c-create-pdp-request

Description Rate-limit Drop: GTPv1-C Create PDP Req rate

Type: number

Format: counter

drop-rl-gtp-v1-c-update-pdp-request

Description Rate-limit Drop: GTPv1-C Update PDP Req rate

Type: number

Format: counter

drop-rl-gtp-v2-c-agg

Description Rate-limit Drop: Maximum GTPv2-C messages rate

Type: number

Format: counter

drop-rl-gtp-v2-c-create-session-request

Description Rate-limit Drop: GTPv2-C Create Session Req rate

Type: number

Format: counter

drop-rl-gtp-v2-c-modify-bearer-request

Description Rate-limit Drop: GTPv2-C Modify Bearer Req rate

Type: number

Format: counter

drop-vld-country-code-mismatch

Description Validation Drop: Country Code Mismatch in IMSI and MSISDN

Type: number

Format: counter

drop-vld-cross-layer-correlation

Description Validation Drop: Cross Layer IP Address Mismatch

Type: number

Format: counter

drop-vld-gtp-invalid-apn-len-drop

Description Validation Drop: GTP-C Invalid APN Length Drop

Type: number

Format: counter

drop-vld-gtp-invalid-imsi-len-drop

Description Validation Drop: GTP-C Invalid IMSI Length Drop

Type: number

Format: counter

drop-vld-gtp-u-spoofed-source-address

Description Validation Drop: GTP-U IP Address Spoofed

Type: number

Format: counter

drop-vld-gtp-v0-c-ie-len-exceed-msg-len

Description Validation Drop: GTPv0-C IE Length Exceeds Message Length

Type: number

Format: counter

drop-vld-gtp-v0-c-message-dropped-apn-filtering-no-apn

Description Validation Drop: GTPv0-C APN/IMSI Filtering dropped (No APN)

Type: number

Format: counter

drop-vld-gtp-v0-c-message-length-mismatch

Description Validation Drop: GTPv0-C Message Length Mismatch Across Layers

Type: number

Format: counter

drop-vld-gtp-v0-c-message-with-teid-zero-expected

Description Validation Drop: GTPv0-C PDU Notification Request with TEID

Type: number

Format: counter

drop-vld-gtp-v1-c-ie-len-exceed-msg-len

Description Validation Drop: GTPv1-C IE Length Exceeds Message Length

Type: number

Format: counter

drop-vld-gtp-v1-c-message-dropped-apn-filtering-no-apn

Description Validation Drop: GTPv1-C APN/IMSI Filtering dropped (No APN)

Type: number

Format: counter

drop-vld-gtp-v1-c-message-length-mismatch

Description Validation Drop: GTPv1-C Message Length Mismatch Across Layers

Type: number

Format: counter

drop-vld-gtp-v1-c-message-with-teid-zero-expected

Description Validation Drop: GTPv1-C PDU Notification Request with TEID

Type: number

Format: counter

drop-vld-gtp-v2-c-ie-len-exceed-msg-len

Description Validation Drop: GTPv2-C IE Length Exceeds Message Length

Type: number

Format: counter

drop-vld-gtp-v2-c-message-dropped-apn-filtering-no-apn

Description Validation Drop: GTPv2-C APN/IMSI Filtering dropped (No APN)

Type: number

Format: counter

drop-vld-gtp-v2-c-message-length-mismatch

Description Validation Drop: GTPv2-C Message Length Mismatch Across Layers

Type: number

Format: counter

drop-vld-gtp-v2-c-message-with-teid-zero-expected

Description Validation Drop: GTPv2-C Create Session Request with TEID

Type: number

Format: counter

drop-vld-gtp-v2-wrong-lbi-create-bearer-req

Description Validation Drop: GTPV2-C Wrong LBI in Create Bearer Request

Type: number

Format: counter

drop-vld-gtpv0-seqnum-buffer-full

Description Validation Drop: GTPV0-C conn Sequence number Buffer Full

Type: number

Format: counter

drop-vld-gtpv0-subscriber-attr-miss

Description Validation Drop: GTPV0-c Subscriber Attributes Missing

Type: number

Format: counter

drop-vld-gtpv1-seqnum-buffer-full

Description Validation Drop: GTPV1-C conn Sequence number Buffer Full

Type: number

Format: counter

drop-vld-gtpv1-subscriber-attr-miss

Description Validation Drop: GTPV1-c Subscriber Attributes Missing

Type: number

Format: counter

drop-vld-gtpv2-seqnum-buffer-full

Description Validation Drop: GTPV2-C conn Sequence number Buffer Full

Type: number

Format: counter

drop-vld-gtpv2-subscriber-attr-miss

Description Validation Drop: GTPV2-c Subscriber Attributes Missing

Type: number

Format: counter

drop-vld-invalid-flow-label-v0

Description Validation Drop: Invalid Flow Label in GTPv0-C Header

Type: number

Format: counter

drop-vld-invalid-pkt-len-piggyback

Description Validation Drop: Piggyback message invalid packet length

Type: number

Format: counter

drop-vld-invalid-teid

Description Validation Drop: Invalid TEID Value

Type: number

Format: counter

drop-vld-mandatory-information-element

Description Validation Drop: Mandatory IE Not Present

Type: number

Format: counter

drop-vld-message-length

Description Validation Drop: Message Length Exceeded

Type: number

Format: counter

drop-vld-out-of-order-ie

Description Validation Drop: GTPv1-C Message Out of Order IE

Type: number

Format: counter

drop-vld-out-of-state

Description Validation Drop: Out Of State GTP Message

Type: number

Format: counter

drop-vld-out-of-state-ie

Description Validation Drop: Unexpected IE Present in Message

Type: number

Format: counter

drop-vld-protocol-flag-unset

Description Validation Drop: Protocol flag in Header Field not Set

Type: number

Format: counter

drop-vld-reserved-field-set

Description Validation Drop: Reserved Header Field Set

Type: number

Format: counter

drop-vld-reserved-information-element

Description Validation Drop: Reserved IE Field Present

Type: number

Format: counter

drop-vld-sanity-failed-piggyback

Description Validation Drop: piggyback message anomaly failed

Type: number

Format: counter

drop-vld-sequence-num-correlation

Description Validation Drop: GTP-C Sequence number Mismatch

Type: number

Format: counter

drop-vld-tunnel-id-flag

Description Validation Drop: Tunnel Header Flag Not Set

Type: number

Format: counter

drop-vld-unsupported-message-type

Description Validation Drop: Message type not supported by GTP Version

Type: number

Format: counter

drop-vld-v0-reserved-message-drop

Description Validation Drop: GTPv0-C Reserved Message Drop

Type: number

Format: counter

drop-vld-v1-reserved-message-drop

Description Validation Drop: GTPv1-C Reserved Message Drop

Type: number

Format: counter

drop-vld-v2-reserved-message-drop

Description Validation Drop: GTPv2-C Reserved Message Drop

Type: number

Format: counter

drop-vld-version-not-supported

Description Validation Drop: Invalid GTP version

Type: number

Format: counter

drop_vld-gtp-bearer-count-exceed

Description Validation Drop: GTP Bearer count exceeded max (11)

Type: number

Format: counter

flt-message-monitor

Description GTP-C Message forwarded via monitor mode at message filtering policy

Type: number

Format: counter

gen-message-length-monitor

Description GTP Message forwarded via monitor mode at general policy

Type: number

Format: counter

gtp-c-handover-in-progress-with-conn

Description GTP-C matching a conn with Handover In Progress

Type: number

Format: counter

gtp-in-gtp-flt-message-monitor

Description GTP-C Message forwarded via monitor mode at GTP-IN_GTP filtering policy

Type: number

Format: counter

gtp-node-restart-gtp-c

Description GTP Node Restoration due to Recovery IE in GTP-C Message

Type: number

Format: counter

gtp-path-management-message

Description GTP Path Management Messages Received

Type: number

Format: counter

gtp-u-tunnel-created

Description GTP-U Tunnel Created

Type: number

Format: counter

gtp-u-tunnel-deleted

Description GTP-U Tunnel Deleted

Type: number

Format: counter

gtp-v0-c-create-pdp-resp-unsuccess

Description GTPv0-C Create PDP Context Response Unsuccessful

Type: number

Format: counter

gtp-v0-c-half-open-tunnel-closed

Description GTPv0-C Half open tunnel closed

Type: number

Format: counter

gtp-v0-c-message-skipped-apn-filtering-no-imsi

Description GTPv0-C APN/IMSI Filtering Skipped (No IMSI)

Type: number

Format: counter

gtp-v0-c-message-skipped-msisdn-filtering-no-msisdn

Description GTPv0-C MSISDN Filtering Skipped (No MSISDN)

Type: number

Format: counter

gtp-v0-c-packet-dummy-msisdn

Description GTPv0-C Packet With Dummy MSISDN Forwarded

Type: number

Format: counter

gtp-v0-c-pdu-notification-reject-request-forward

Description GTPv0-C PDU Notification Reject Request Forward

Type: number

Format: counter

gtp-v0-c-pdu-notification-request-forward

Description GTPv0-C PDU Notification Request Forward

Type: number

Format: counter

gtp-v0-c-reserved-message-allow

Description GTPv0-C Reserved Message Allow

Type: number

Format: counter

gtp-v0-c-tunnel-closed

Description GTPv0-C Tunnel Marked Deleted

Type: number

Format: counter

gtp-v0-c-tunnel-created

Description GTPv0-C Tunnel Created

Type: number

Format: counter

gtp-v0-c-tunnel-deleted

Description GTPv0-C Tunnel Deleted

Type: number

Format: counter

gtp-v0-c-tunnel-deleted-restart

Description GTPv0-C Tunnel Deleted with Restart/failure

Type: number

Format: counter

gtp-v0-c-tunnel-half-closed

Description GTPv0-C Tunnel Delete Request

Type: number

Format: counter

gtp-v0-c-tunnel-half-open

Description GTPv0-C Half open tunnel created

Type: number

Format: counter

gtp-v0-c-update-pdp-resp-unsuccess

Description GTPv0-C Update PDP Context Response Unsuccessful

Type: number

Format: counter

gtp-v1-c-create-pdp-resp-unsuccess

Description GTPv1-C Create PDP Context Response Unsuccessful

Type: number

Format: counter

gtp-v1-c-half-open-tunnel-closed

Description GTPv1-C Half open tunnel closed

Type: number

Format: counter

gtp-v1-c-message-skipped-apn-filtering-no-imsi

Description GTPv1-C APN/IMSI Filtering Skipped (No IMSI)

Type: number

Format: counter

gtp-v1-c-message-skipped-msisdn-filtering-no-msisdn

Description GTPv1-C MSISDN Filtering Skipped (No MSISDN)

Type: number

Format: counter

gtp-v1-c-packet-dummy-msisdn

Description GTPv0-C Packet With Dummy MSISDN Forwarded

Type: number

Format: counter

gtp-v1-c-pdu-notification-reject-request-forward

Description GTPv1-C PDU Notification Reject Request Forward

Type: number

Format: counter

gtp-v1-c-pdu-notification-request-forward

Description GTPv1-C PDU Notification Request Forward

Type: number

Format: counter

gtp-v1-c-reserved-message-allow

Description GTPv1-C Reserved Message Allow

Type: number

Format: counter

gtp-v1-c-tunnel-closed

Description GTPv1-C Tunnel Marked Deleted

Type: number

Format: counter

gtp-v1-c-tunnel-created

Description GTPv1-C Tunnel Created

Type: number

Format: counter

gtp-v1-c-tunnel-deleted

Description GTPv1-C Tunnel Deleted

Type: number

Format: counter

gtp-v1-c-tunnel-deleted-restart

Description GTPv1-C Tunnel Deleted with Restart/failure

Type: number

Format: counter

gtp-v1-c-tunnel-half-closed

Description GTPv1-C Tunnel Delete Request

Type: number

Format: counter

gtp-v1-c-tunnel-half-open

Description GTPv1-C Half open tunnel created

Type: number

Format: counter

gtp-v1-c-update-pdp-resp-unsuccess

Description GTPv1-C Update PDP Context Response Unsuccessful

Type: number

Format: counter

gtp-v2-c-create-sess-resp-unsuccess

Description GTPv2-C Create Session Response Unsuccessful

Type: number

Format: counter

gtp-v2-c-half-open-tunnel-closed

Description GTPv2-C Half open tunnel closed

Type: number

Format: counter

gtp-v2-c-message-skipped-apn-filtering-no-imsi

Description GTPv2-C APN/IMSI Filtering Skipped (No IMSI)

Type: number

Format: counter

gtp-v2-c-message-skipped-msisdn-filtering-no-msisdn

Description GTPv2-C MSISDN Filtering Skipped (No MSISDN)

Type: number

Format: counter

gtp-v2-c-mod_bearer-resp-unsuccess

Description GTPv2-C Modify Bearer Response Unsuccessful

Type: number

Format: counter

gtp-v2-c-packet-dummy-msisdn

Description GTPv0-C Packet With Dummy MSISDN Forwarded

Type: number

Format: counter

gtp-v2-c-piggyback-message

Description GTPv2-C Piggyback Messages

Type: number

Format: counter

gtp-v2-c-reserved-message-allow

Description GTPv2-C Reserved Message Allow

Type: number

Format: counter

gtp-v2-c-tunnel-closed

Description GTPv2-C Tunnel Marked Deleted

Type: number

Format: counter

gtp-v2-c-tunnel-created

Description GTPv2-C Tunnel Created

Type: number

Format: counter

gtp-v2-c-tunnel-deleted

Description GTPv2-C Tunnel Deleted

Type: number

Format: counter

gtp-v2-c-tunnel-deleted-restart

Description GTPv2-C Tunnel Deleted with Restart/failure

Type: number

Format: counter

gtp-v2-c-tunnel-half-closed

Description GTPv2-C Tunnel Delete Request

Type: number

Format: counter

gtp-v2-c-tunnel-half-open

Description GTPv2-C Half open tunnel created

Type: number

Format: counter

key-name

Description

2.53.38 fw hairpin

Configure firewall hairpin parameters

hairpin Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	hairpin
Element URI	/axapi/v3/fw/hairpin
Element Attributes	hairpin_attributes
Partition Visibility	shared
Schema	`hairpin schema`

Operations Allowed:

Get Object

GET

/axapi/v3/fw/hairpin

hairpin_attributes

hairpin attributes

next-hop-follow

Description: next-hop-follow is a **JSON Block**. Please see below for *next-hop-follow*

Type: Object

Reference Object: */axapi/v3/fw/hairpin/next-hop-follow*

next-hop-follow

Specification	Value
Type	*object*

disable-local-hairpin

Description Disable local hairpin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4

Description IPV4 network

Type: string

Format: ipv4-cidr

ipv6

Description IPV6 network

Type: string

Format: ipv6-address-plen

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.53.39 fw hairpin next-hop-follow

Configure IP/IPv6 address to lookup for next hop of firewall hairpin traffic

next-hop-follow Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	next-hop-follow
Element URI	/axapi/v3/fw/hairpin/next-hop-follow
Element Attributes	next-hop-follow_attributes
Partition Visibility	shared
Schema	`next-hop-follow schema`

Operations Allowed:

Create Object

POST

/axapi/v3/fw/hairpin/next-hop-follow

next-hop-follow attributes

```
POST /axapi/v3/fw/hairpin/next-hop-follow
Payload:
{
    "next-hop-follow": {
        "ipv4": "6.0.0.0/8"
    }
}
```

Get Object

GET

/axapi/v3/fw/hairpin/next-hop-follow

next-hop-follow attributes

```
GET /axapi/v3/fw/hairpin/next-hop-follow
Reponse:
{
    "next-hop-follow": {

        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

helper-sessions attributes

idle-timeout

Description helper-sessions idle-timeout time (Idle-timeout in minutes (default: 1 minute))

Type: number

Range: 1-255

Default: 1

limit

Description Limit number of helper-sessions (Limit helper-sessions number)

Type: number

mode

Description 'disable': Disable helper-sessions;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.53.41 fw hw-accelerate

Firewall HW accelerate counters

hw-accelerate Specification

Format: counter

log_type_gtp_seq_num_mismatch

Description Log Event GTP Response Sequence number Mismatch

Type: number

Format: counter

log_type_max_msg_length

Description Log Event GTP Message Length Exceeded Max

Type: number

Format: counter

log_type_message_not_supported

Description Log Event GTP Reserved Message Found

Type: number

Format: counter

log_type_out_of_state

Description Log Event GTP Out of State Message

Type: number

Format: counter

stats

Specification	Value
Type	*object*

http-logging-invalid-format

Description HTTP Logging Invalid Format Error

Type: number

Format: counter

http-request-logged

Description HTTP Request Logged

Type: number

Format: counter

icmp-session-created

Description ICMP Session Created

Type: number

Format: counter

icmp-session-deleted

Description ICMP Session Deleted

Type: number

Format: counter

icmpv6-session-created

Description ICMPV6 Session Created

Type: number

Format: counter

icmpv6-session-deleted

Description ICMPV6 Session Deleted

Type: number

Format: counter

iddos-blackhole-entry-create

Description iDDoS IP Entry Created

Type: number

Format: counter

iddos-blackhole-entry-delete

Description iDDoS IP Entry Deleted

Type: number

Format: counter

log-dropped

Description Log Packets Dropped

Type: number

Format: counter

log_message_sent

Description Log Packet Sent

Type: number

Format: counter

log_type_deny

Description Log Event Type Deny

Type: number

Format: counter

log_type_reset

Description Log Event Type Reset

Type: number

Format: counter

log_type_sctp_inner_proto_filter

Description Log Event Type SCTP Inner Proto Filter

Type: number

Format: counter

log_type_session_closed

Description Log Event Type Session Close

Type: number

Format: counter

log_type_session_opened

Description Log Event Type Session Open

Type: number

Format: counter

other-session-created

Description Other Session Created

Type: number

Format: counter

other-session-deleted

Description Other Session Deleted

Type: number

Format: counter

rule_not_logged

Description Firewall Rule Not Logged

Type: number

Format: counter

sctp-session-created

Description SCTP Session Created

Type: number

Format: counter

sctp-session-deleted

Description SCTP Session Deleted

Type: number

Format: counter

session-limit-exceeded

Description Session Limit Exceeded

Type: number

Format: counter

tcp-session-created

Description TCP Session Created

Type: number

Format: counter

tcp-session-deleted

Description TCP Session Deleted

Type: number

Format: counter

udp-session-created

Description UDP Session Created

Type: number

Format: counter

udp-session-deleted

Description UDP Session Deleted

Type: number

Format: counter

2.53.50 fw match

Display the Firewall Rule for a Flow

match Specification

Parameter	Value

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default);

Type: string

Supported Values: ignore, delete-entry

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI;

Type: string

Supported Values: msisdn, imei, imsi

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (Port number)

Type: number

Range: 1024-65535

remote

Description: remote is a **JSON Block**. Please see below for *server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'request-bad-secret-dropped': RADIUS Request Bad Secret Dropped; 'request-no-key-vap-dropped': RADIUS Request No Key Attribute Dropped; 'request-malformed-dropped': RADIUS Request Malformed Dropped; 'request-ignored': RADIUS Request Table Full Dropped; 'radius-table-full': RADIUS Request Dropped (Table Full); 'secret-not-configured-dropped': RADIUS Secret Not Configured Dropped; 'ha-standby-dropped': HA Standby Dropped; 'ipv6-prefix-length-mismatch': Framed IPV6 Prefix Length Mismatch; 'invalid-key': Radius Request has Invalid Key Field; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-created': RADIUS SMP Created; 'smp-in-rml': RADIUS SMP in RML; 'smp-deleted': RADIUS SMP Deleted; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received; 'acct-on-filters-full': RADIUS Acct On Request Ignored(Filters Full); 'acct-on-dup-request': Duplicate RADIUS Acct On Request; 'ip-mismatch-delete': Radius Entry IP Mismatch Delete; 'ip-add-race-drop': Radius Entry IP Add Race Drop; 'ha-sync-no-key-vap-dropped': HA Record Sync No key dropped; 'inter-card-msg-fail-drop': Inter-Card Message Fail Drop; 'radius-packets-redirected': RADIUS packets redirected (SO); 'radius-packets-redirect-fail-dropped': RADIUS packets dropped due to redirect failure (SO); 'radius-packets-process-local': RADIUS packets processed locally without redirection (SO); 'radius-packets-dropped-not-lo': RADIUS packets dropped dest not loopback (SO); 'radius-inter-card-dup-redir': RADIUS packet dropped as redirected by other blade (SO);

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-created, smp-in-rml, smp-deleted, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

server_attribute

Specification	Value
Type	*list*
Block object keys	

attribute-value

Description 'inside-ipv6-prefix': Framed IPv6 Prefix; 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

2.53.56 fw radius server

Configure system as a RADIUS server

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

/axapi/v3/fw/tcp/syn-cookie

syn-cookie attributes

syn-cookie attributes

sampling-enable

Type: List

syn-cookie-enable

Description Enable Firewall Syn-Cookie Protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie-on-threshold

Description on-threshold for Syn-cookie (Decimal number)

Type: number

Range: 1-1000000

syn-cookie-on-timeout

Description on-timeout for Syn-cookie (Timeout in seconds, default is 120 seconds (2 minutes))

Type: number

Range: 1-300000

Default: 120

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'syn_ack_sent': SYN cookie SYN ACK sent; 'verification_passed': SYN cookie verification passed; 'verification_failed': SYN cookie verification failed; 'conn_setup_failed': SYN cookie connection setup failed;

Type: string

Supported Values: all, syn_ack_sent, verification_passed, verification_failed, conn_setup_failed

2.53.91 fw tcp syn-cookie oper

Operational Status for the object syn-cookie

syn-cookie Specification

Parameter	Value

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

outside-window

Description packet dropped counter for outside of tcp window

Type: number

Format: counter

2.53.95 fw template

Define a FW template

template Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	template
Element URI	/axapi/v3/fw/template
Element Attributes	template_attributes
Partition Visibility	shared
Schema	`template schema`

Operations Allowed:

Get Object

GET

/axapi/v3/fw/template

template_attributes

template attributes

logging-list

Type: List

Reference Object: */axapi/v3/fw/template/logging/{name}*

logging-list

Specification	Value
Type	*list*
Block object keys	

custom

Description: custom is a **JSON Block**. Please see below for *logging-list_custom*

Type: Object

disable-log-by-destination

Description: disable-log-by-destination is a **JSON Block**. Please see below for *logging-list_disable-log-by-destination*

Type: Object

Reference Object: */axapi/v3/fw/template/logging/{name}/disable-log-by-destination*

enable-log-by-destination

Description: enable-log-by-destination is a **JSON Block**. Please see below for *logging-list_enable-log-by-destination*

Type: Object

Reference Object: */axapi/v3/fw/template/logging/{name}/enable-log-by-destination*

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'ascii': A10 Text logging format (ASCII); 'cef': Common Event Format for logging (default);

Type: string

Supported Values: ascii, cef, custom

Default: cef

include-dest-fqdn

Description Include destination FQDN string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http

Description: include-http is a **JSON Block**. Please see below for *logging-list_include-http*

Type: Object

include-radius-attribute

Description: include-radius-attribute is a **JSON Block**. Please see below for *logging-list_include-radius-attribute*

Type: Object

include-year

Description include the 4-digit year in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *logging-list_log*

Type: Object

merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resolution

Description 'seconds': Logging timestamp resolution in seconds (default); '10-milliseconds': Logging timestamp resolution in 10s of milli-seconds;

Type: string

Supported Values: seconds, 10-milliseconds

Default: seconds

rule

Description: rule is a **JSON Block**. Please see below for *logging-list_rule*

Type: Object

service-group

Description Bind a Service Group to the logging template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/fw/service-group*

session-periodic-log

Description: session-periodic-log is a **JSON Block**. Please see below for *logging-list_session-periodic-log*

Type: Object

Reference Object: */axapi/v3/fw/template/logging/{name}/session-periodic-log*

severity

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: informational

source-address

Description: source-address is a **JSON Block**. Please see below for *logging-list_source-address*

Type: Object

Reference Object: */axapi/v3/fw/template/logging/{name}/source-address*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_session-periodic-log

Specification	Value
Type	*object*

interval

Description Logging time interval (minutes) for long lived sessions

Type: number

Range: 1-60

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_source-address

Specification	Value
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_include-radius-attribute

Specification	Value
Type	*object*

attr-cfg

Type: List

framed-ipv6-prefix

Description Include radius attributes for the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-if-not-existing

Description Configure what string is to be inserted for custom RADIUS attributes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-quote

Description No quotation marks for RADIUS attributes in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

zero-in-custom-attr

Description Insert 0000 for standard and custom attributes in log string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_include-radius-attribute_attr-cfg

Specification	Value
Type	*list*
Block object keys	

attr

Description 'imei': Include IMEI; 'imsi': Include IMSI; 'msisdn': Include MSISDN; 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

attr-event

Description 'http-requests': Include in HTTP request logs; 'sessions': Include in session logs; 'limit-policy': Include in limit policy logs;

Type: string

Supported Values: http-requests, sessions, limit-policy

logging-list_rule

Specification	Value
Type	*object*

rule-http-requests

Description: rule-http-requests is a **JSON Block**. Please see below for *logging-list_rule_rule-http-requests*

Type: Object

logging-list_rule_rule-http-requests

Specification	Value
Type	*object*

dest-port

Type: List

disable-sequence-check

Description Disable http packet sequence check and don't drop out of order packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-all-headers

Description Include all configured headers despite of absence in HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-every-http-request

Description Log every HTTP request in an HTTP 1.1 session (Default: Log the first HTTP request in a session)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-url-len

Description Max length of URL log (Max URL length (Default: 128 char))

Type: number

Range: 100-1000

Default: 100

logging-list_rule_rule-http-requests_dest-port

Specification	Value
Type	*list*
Block object keys	

dest-port-number

Description

Type: number

Range: 1-65535

include-byte-count

Description Include the byte count of HTTP Request/Response in FW session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_disable-log-by-destination

Specification	Value
Type	*object*

icmp

Description Disable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Reference Object: */axapi/v3/fw/template/logging/{name}/disable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Reference Object: */axapi/v3/fw/template/logging/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_disable-log-by-destination_ip-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Disable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_disable-log-by-destination_ip-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_ip-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_ip6-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Disable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Disable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_disable-log-by-destination_ip6-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_ip6-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_include-http

Specification	Value
Type	*object*

file-extension

Description HTTP file extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-cfg

Type: List

l4-session-info

Description Log the L4 session information of the HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description Log the HTTP Request Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-number

Description HTTP Request Number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_include-http_header-cfg

Specification	Value
Type	*list*
Block object keys	

custom-header-name

Description Header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

custom-max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

http-header

Description 'cookie': Log HTTP Cookie Header; 'referer': Log HTTP Referer Header; 'user-agent': Log HTTP User-Agent Header; 'header1': Log HTTP Header 1; 'header2': Log HTTP Header 2; 'header3': Log HTTP Header 3;

Type: string

Supported Values: cookie, referer, user-agent, header1, header2, header3

max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

logging-list_enable-log-by-destination

Specification	Value
Type	*object*

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Reference Object: */axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip/{ipv4-addr}*

Type: List

Reference Object: */axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip6/{ipv6-addr}*

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_enable-log-by-destination_ip-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_enable-log-by-destination_ip-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_enable-log-by-destination_ip-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_enable-log-by-destination_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_enable-log-by-destination_ip6-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_enable-log-by-destination_ip6-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_enable-log-by-destination_ip6-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_enable-log-by-destination_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_custom

Specification	Value
Type	*object*

custom-message

Description: custom-message is a **JSON Block**. Please see below for *logging-list_custom_custom-message*

Type: Object

logging-list_custom_custom-message

Specification	Value
Type	*object*

custom-session-created

Description Session created (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-deleted

Description Session deleted (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

logging-list_log

Specification	Value
Type	*object*

http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

2.53.96 fw template logging

Logging Template

logging Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*logging-list*
Collection URI	/axapi/v3/fw/template/logging
Element Name	logging
Element URI	/axapi/v3/fw/template/logging/{name}
Element Attributes	logging_attributes
Partition Visibility	shared

    }
}
```

logging-list

logging-list is **JSON List** of *logging attributes*

logging-list : [

{ *logging attributes* },

{ *logging attributes* },

...

]

logging attributes

custom

Description: custom is a **JSON Block**. Please see below for *custom*

Type: Object

disable-log-by-destination

Description: disable-log-by-destination is a **JSON Block**. Please see below for *disable-log-by-destination*

Type: Object

Reference Object: */axapi/v3/fw/template/logging/{name}/disable-log-by-destination*

enable-log-by-destination

Description: enable-log-by-destination is a **JSON Block**. Please see below for *enable-log-by-destination*

Type: Object

Reference Object: */axapi/v3/fw/template/logging/{name}/enable-log-by-destination*

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'ascii': A10 Text logging format (ASCII); 'cef': Common Event Format for logging (default);

Type: string

Supported Values: ascii, cef, custom

Default: cef

include-dest-fqdn

Description Include destination FQDN string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http

Description: include-http is a **JSON Block**. Please see below for *include-http*

Type: Object

include-radius-attribute

Description: include-radius-attribute is a **JSON Block**. Please see below for *include-radius-attribute*

Type: Object

include-year

Description include the 4-digit year in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *log*

Type: Object

merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resolution

Description 'seconds': Logging timestamp resolution in seconds (default); '10-milliseconds': Logging timestamp resolution in 10s of milli-seconds;

Type: string

Supported Values: seconds, 10-milliseconds

Default: seconds

rule

Description: rule is a **JSON Block**. Please see below for *rule*

Type: Object

service-group

Description Bind a Service Group to the logging template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/fw/service-group*

session-periodic-log

Description: session-periodic-log is a **JSON Block**. Please see below for *session-periodic-log*

Type: Object

Reference Object: */axapi/v3/fw/template/logging/{name}/session-periodic-log*

severity

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: informational

source-address

Description: source-address is a **JSON Block**. Please see below for *source-address*

Type: Object

Reference Object: */axapi/v3/fw/template/logging/{name}/source-address*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

session-periodic-log

Specification	Value
Type	*object*

interval

Description Logging time interval (minutes) for long lived sessions

Type: number

Range: 1-60

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

source-address

Specification	Value
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

include-radius-attribute

Specification	Value
Type	*object*

attr-cfg

Type: List

framed-ipv6-prefix

Description Include radius attributes for the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-if-not-existing

Description Configure what string is to be inserted for custom RADIUS attributes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-quote

Description No quotation marks for RADIUS attributes in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

zero-in-custom-attr

Description Insert 0000 for standard and custom attributes in log string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-radius-attribute_attr-cfg

Specification	Value
Type	*list*
Block object keys	

attr

Description 'imei': Include IMEI; 'imsi': Include IMSI; 'msisdn': Include MSISDN; 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

attr-event

Description 'http-requests': Include in HTTP request logs; 'sessions': Include in session logs; 'limit-policy': Include in limit policy logs;

Type: string

Supported Values: http-requests, sessions, limit-policy

rule

Specification	Value
Type	*object*

rule-http-requests

Description: rule-http-requests is a **JSON Block**. Please see below for *rule_rule-http-requests*

Type: Object

rule_rule-http-requests

Specification	Value
Type	*object*

dest-port

Type: List

disable-sequence-check

Description Disable http packet sequence check and don't drop out of order packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-all-headers

Description Include all configured headers despite of absence in HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-every-http-request

Description Log every HTTP request in an HTTP 1.1 session (Default: Log the first HTTP request in a session)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-url-len

Description Max length of URL log (Max URL length (Default: 128 char))

Type: number

Range: 100-1000

Default: 100

rule_rule-http-requests_dest-port

Specification	Value
Type	*list*
Block object keys	

dest-port-number

Description

Type: number

Range: 1-65535

include-byte-count

Description Include the byte count of HTTP Request/Response in FW session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-log-by-destination

Specification	Value
Type	*object*

icmp

Description Disable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Reference Object: */axapi/v3/fw/template/logging/{name}/disable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Reference Object: */axapi/v3/fw/template/logging/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-log-by-destination_ip-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Disable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-log-by-destination_ip-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_ip-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_ip6-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Disable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Disable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-log-by-destination_ip6-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_ip6-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

include-http

Specification	Value
Type	*object*

file-extension

Description HTTP file extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-cfg

Type: List

l4-session-info

Description Log the L4 session information of the HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description Log the HTTP Request Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-number

Description HTTP Request Number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http_header-cfg

Specification	Value
Type	*list*
Block object keys	

custom-header-name

Description Header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

custom-max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

http-header

Description 'cookie': Log HTTP Cookie Header; 'referer': Log HTTP Referer Header; 'user-agent': Log HTTP User-Agent Header; 'header1': Log HTTP Header 1; 'header2': Log HTTP Header 2; 'header3': Log HTTP Header 3;

Type: string

Supported Values: cookie, referer, user-agent, header1, header2, header3

max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

enable-log-by-destination

Specification	Value
Type	*object*

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Reference Object: */axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Reference Object: */axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip6/{ipv6-addr}*

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable-log-by-destination_ip-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable-log-by-destination_ip-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

enable-log-by-destination_ip-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

enable-log-by-destination_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

enable-log-by-destination_ip6-list

Specification	Value
Type	*list*
Block object keys	

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable-log-by-destination_ip6-list_tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

enable-log-by-destination_ip6-list_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

enable-log-by-destination_udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

custom

Specification	Value
Type	*object*

custom-message

Description: custom-message is a **JSON Block**. Please see below for *custom_custom-message*

Type: Object

custom_custom-message

Specification	Value
Type	*object*

custom-session-created

Description Session created (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-deleted

Description Session deleted (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

log

Specification	Value
Type	*object*

http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

2.53.97 fw template logging disable-log-by-destination

Disable firewall logging by the destination IP address, protocol, and port

disable-log-by-destination Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	disable-log-by-destination
Element URI	/axapi/v3/fw/template/logging/{name}/disable-log-by-destination
Element Attributes	disable-log-by-destination_attributes
Partition Visibility	shared
Schema	`disable-log-by-destination schema`

Operations Allowed:

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

2.53.102 fw template logging enable-log-by-destination ip6

Configure a filter of IPv6 entry

ip6 Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*ipv6-addr*
Collection Name	*ip6-list*
Collection URI	/axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip6
Element Name	ip6
Element URI	/axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip6/{ipv6-addr}
Element Attributes	ip6_attributes
Partition Visibility	shared
Schema	`ip6 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip6

ip6 attributes

Create List

POST

/axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip6

ip6 attributes

Get Object

GET

/axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip6/{ipv6-addr}

ip6 attributes

Get List

GET

/axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip6

ip6-list

Modify Object

POST

/axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip6/{ipv6-addr}

ip6 attributes

Replace Object

PUT

/axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip6/{ipv6-addr}

ip6 attributes

Replace List

PUT

/axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip6

ip6-list

Delete Object

DELETE

/axapi/v3/fw/template/logging/{name}/enable-log-by-destination/ip6/{ipv6-addr}

ip6 attributes

ip6-list

ip6-list is **JSON List** of *ip6 attributes*

```
ip6-list : [
        { ip6 attributes },
        { ip6 attributes },
        ...
    ]
```

ip6 attributes

icmp

Description Enable logging for the ICMP traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Enable logging for the other layer-4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp-list

Specification	Value
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

udp-list

Specification	Value
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

2.53.103 fw template logging session-periodic-log

Periodic log for long lived sessions

session-periodic-log Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	session-periodic-log
Element URI	/axapi/v3/fw/template/logging/{name}/session-periodic-log
Element Attributes	session-periodic-log_attributes
Partition Visibility	shared
Schema	`session-periodic-log schema`

Operations Allowed:

Create Object

POST

/axapi/v3/fw/template/logging/{name}/session-periodic-log

session-periodic-log attributes

```
POST /axapi/v3/fw/template/logging/a/session-periodic-log
Payload:
{
    "session-periodic-log": {
        "interval": 1
    }
}
```

Get Object

GET

/axapi/v3/fw/template/logging/{name}/session-periodic-log

session-periodic-log attributes

```
GET /axapi/v3/fw/template/logging/a/session-periodic-log
Reponse:
{
    "session-periodic-log": {
        "interval": 1,
        "uuid": "e07b8e62-08ea-11f0-a952-c3be1c247dd7",

            "msg": "Backend Error"
        }
    }
}
```

session-periodic-log attributes

interval

Description Logging time interval (minutes) for long lived sessions

Type: number

Range: 1-60

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.53.104 fw template logging source-address

Specify source address of logging packet

source-address Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	source-address
Element URI	/axapi/v3/fw/template/logging/{name}/source-address
Element Attributes	source-address_attributes
Partition Visibility	shared
Schema	`source-address schema`

Operations Allowed:

Create Object

POST

/axapi/v3/fw/template/logging/{name}/source-address

source-address attributes

```
POST /axapi/v3/fw/template/logging/a/source-address
Payload:
{
    "source-address": {
        "ip": "3.3.3.3"
    }
}
```

Get Object

GET

/axapi/v3/fw/template/logging/{name}/source-address

source-address attributes

```
GET /axapi/v3/fw/template/logging/a/source-address
Reponse:
{
    "source-address": {
        "ip": "3.3.3.3",
        "uuid": "f953d778-08ea-11f0-a952-c3be1c247dd7",

glid-list

glid-list is **JSON List** of *glid attributes*

glid-list : [

{ *glid attributes* },

{ *glid attributes* },

...

]

glid attributes

bit-rate-limit

Description Kibit (kibibit / 1024-bit) rate limit per rate-interval

Type: number

Range: 1-16000000

conn-limit

Description Connection Limit for the GLID (PBSLB range 1-1048575)

Type: number

Range: 1-16000000

conn-rate-limit

Description Connection rate limit per rate-interval (TPS range 1-16000000)

Type: number

conn-rate-limit-interval

Description

Type: number

Range: 1-65535

description

Description Description for glid

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dns

Description: dns is a **JSON Block**. Please see below for *dns*

Type: Object

dns64

Description: dns64 is a **JSON Block**. Please see below for *dns64*

Type: Object

frag-pkt-rate-limit

Description Fragmented packet rate limit per rate-interval

Type: number

Range: 1-16000000

name

Description Global Limit ID Name (PBSLB allows number only)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

over-limit-cfg

Description: over-limit-cfg is a **JSON Block**. Please see below for *over-limit-cfg*

Type: Object

pkt-rate-limit

Description Packet rate limit per rate-interval

Type: number

Range: 1-16000000

rate-unit

Description '1sec': 1sec for internal glid rate unit; 'system-global-setting': use global rate interval;

Type: string

Supported Values: 1sec, system-global-setting

Default: system-global-setting

request-limit

Description Request limit

Type: number

Range: 1-1048575

request-rate-limit

Description Request rate limit

Type: number

Range: 1-4294967295

request-rate-limit-interval

Description Number of 100ms

Type: number

Range: 1-65535

syn-cookie-thr

Description Syn Cookie threshold for the GLID

Type: number

Range: 1-16

use-nat-pool

Description Use NAT pool specified to do reverse NAT for class list members bound to the lid

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

over-limit-cfg

Specification	Value
Type	*object*

action-type

Description 'drop': Silently Drop the new connection / new packet when it exceeds limit; 'blacklist-src': Black List source entry for X minutes (only applied to src and src-dst entries);

Type: string

Supported Values: drop, blacklist-src

action-value

Description 'drop': Silently Drop the new connection / new packet when it exceeds limit; 'dns-cache-disable': Disable dns cache when it exceeds limit; 'dns-cache-enable': Enable dns cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: drop, dns-cache-disable, dns-cache-enable, forward, reset

blacklist-src-min

Description Black List source entry for X minutes

Type: number

Range: 1-30

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action to take when limit(s) exceeds

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns64

Specification	Value
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

dns

Specification	Value
Type	*object*

action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

allocate-bandwidth

Description Enter the requested bandwidth in Mbps for Capacity Pool

Type: number

Range: 2-819600

appliance-name

Description Helpful identifier for this appliance

Type: string

Maximum Length: 60 characters

Maximum Length: 1 characters

burst

Description Enable Burst License

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

check-expiration

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

create-license-request

Description: create-license-request is a **JSON Block**. Please see below for *create-license-request*

Type: Object

Reference Object: */axapi/v3/glm/create-license-request*

enable-requests

Description Turn on periodic GLM license requests (default license retrieval interval is every 24 hours)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enterprise

Description Enter the ELM hostname, IP or [IPV6]

Type: string

Format: string-rlx

Maximum Length: 65 characters

Maximum Length: 4 characters

enterprise-ha-host-list

Type: List

Reference Object: */axapi/v3/glm/enterprise-ha-host/{host-entry}*

enterprise-request-type

Description 'fqdn': TLS verified with FQDN; 'self-signed': TLS verified with self signed certificate(Default); 'self-signed-pull-cert': Request and use self signed certificate;

Type: string

Supported Values: fqdn, self-signed, self-signed-pull-cert

host

Description

Type: string

Maximum Length: 60 characters

Maximum Length: 4 characters

interval

Description GLM license request interval (in hours)

Type: number

Range: 1-8760

new-license

Description: new-license is a **JSON Block**. Please see below for *new-license*

Reference Object: */axapi/v3/glm/new-license*

port

Description License request port (default 443)

Type: number

Range: 1-65535

proxy-server

Description: proxy-server is a **JSON Block**. Please see below for *proxy-server*

Type: Object

Reference Object: */axapi/v3/glm/proxy-server*

send

Description: send is a **JSON Block**. Please see below for *send*

Type: Object

Reference Object: */axapi/v3/glm/send*

thunder-capacity-license

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

token

Description License entitlement token

Type: string

Maximum Length: 60 characters

Maximum Length: 8 characters

use-mgmt-port

Description Use management port to connect to GLM

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

create-license-request

Specification	Value
Type	*object*

create-license-request

Description Create a GLM trial or license request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

new-license

Specification	Value
Type	*object*

account-name

Description Account Name

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

country

Description Country

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

existing-org

Description Use existing account with organization ID

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

existing-user

Description Use an existing account with email and password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

first-name

Description First Name

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

glm-email

Description GLM email

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

glm-password

Description GLM password

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

last-name

Description Last Name

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

name

Description License name (Configure license name)

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

new-email

Description GLM email

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

new-password

Description GLM password

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

new-user

Description Create a new account

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

org-id

Description GLM organization id

Type: number

Range: 1-899760

phone

Description Phone

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

type

Description 'webroot': webroot; 'webroot_trial': webroot_trial; 'webroot_ti': webroot_ti; 'webroot_ti_trial': webroot_ti_trial; 'qosmos': qosmos; 'qosmos_trial': qosmos_trial; 'ipsec_vpn': ipsec_vpn;

Type: string

Supported Values: webroot, webroot_trial, webroot_ti, webroot_ti_trial, qosmos, qosmos_trial, ipsec_vpn

send

Specification	Value
Type	*object*

ha-status

Description Send a ELM HA status request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

harmony

Description Harmony specific single GLM license request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

license-request

Description Immediately send a single GLM license request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enterprise-ha-host-list

Specification	Value
Type	*list*
Block object keys	

host-entry

Description Enter the ELM hostname, IP or [IPV6]

Type: string

Format: string-rlx

Maximum Length: 60 characters

Maximum Length: 4 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

proxy-server

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

host

Description Proxy server hostname or IP address

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

password

Description Password for proxy authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Proxy server port

Type: number

Range: 1-65535

secret-string

Description password value

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Username for proxy authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.55.2 glm create-license-request

Create a GLM trial or license request

create-license-request Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	create-license-request
Element URI	/axapi/v3/glm/create-license-request
Element Attributes	create-license-request_attributes
Partition Visibility	shared
Schema	`create-license-request schema`

Operations Allowed:

Create Object

POST

/axapi/v3/glm/create-license-request

create-license-request attributes

```
POST /axapi/v3/glm/create-license-request
Payload:
{
    "create-license-request": {
        "create-license-request": 1
    }
}
```

Get Object

GET

/axapi/v3/glm/create-license-request

create-license-request attributes

```
GET /axapi/v3/glm/create-license-request
Reponse:
{
    "create-license-request": {
        "create-license-request": 1,
        "uuid": "94541608-b6c4-11ef-8f5a-ae71681635d0",
        "a10-url": "/axapi/v3/glm/create-license-request"
    }
}
```

Modify Object

POST

/axapi/v3/glm/create-license-request

create-license-request attributes

Replace Object

PUT

/axapi/v3/glm/create-license-request

create-license-request attributes

```
PUT /axapi/v3/glm/create-license-request
Payload:
{
    "create-license-request": {
        "create-license-request": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/glm/create-license-request

create-license-request attributes

```
DELETE /axapi/v3/glm/create-license-request
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

create-license-request attributes

create-license-request

Description Create a GLM trial or license request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.55.3 glm enterprise-ha-host

High Avalibility ELM host

enterprise-ha-host Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*host-entry*
Collection Name	*enterprise-ha-host-list*
Collection URI	/axapi/v3/glm/enterprise-ha-host
Element Name	enterprise-ha-host
Element URI	/axapi/v3/glm/enterprise-ha-host/{host-entry}
Element Attributes	enterprise-ha-host_attributes
Partition Visibility	shared
Schema	`enterprise-ha-host schema`

Operations Allowed:

Create Object

POST

/axapi/v3/glm/enterprise-ha-host

enterprise-ha-host attributes

```
POST /axapi/v3/glm/enterprise-ha-host/
Payload:
{
    "enterprise-ha-host": {
        "host-entry": "abcd"
    }
}
```

Create List

POST

/axapi/v3/glm/enterprise-ha-host

enterprise-ha-host attributes

Get Object

GET

/axapi/v3/glm/enterprise-ha-host/{host-entry}

enterprise-ha-host attributes

Get List

GET

/axapi/v3/glm/enterprise-ha-host

enterprise-ha-host-list

Modify Object

POST

/axapi/v3/glm/enterprise-ha-host/{host-entry}

enterprise-ha-host attributes

Replace Object

PUT

/axapi/v3/glm/enterprise-ha-host/{host-entry}

enterprise-ha-host attributes

Replace List

PUT

/axapi/v3/glm/enterprise-ha-host

enterprise-ha-host-list

Delete Object

DELETE

/axapi/v3/glm/enterprise-ha-host/{host-entry}

enterprise-ha-host attributes

enterprise-ha-host-list

enterprise-ha-host-list is **JSON List** of *enterprise-ha-host attributes*

```
enterprise-ha-host-list : [
        { enterprise-ha-host attributes },
        { enterprise-ha-host attributes },
        ...
    ]
```

enterprise-ha-host attributes

host-entry

Description Enter the ELM hostname, IP or [IPV6]

Type: string

Format: string-rlx

Maximum Length: 60 characters

Maximum Length: 4 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.55.4 glm proxy-server

Connect to GLM through proxy server

proxy-server Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	proxy-server
Element URI	/axapi/v3/glm/proxy-server
Element Attributes	proxy-server_attributes
Partition Visibility	shared
Schema	`proxy-server schema`

Operations Allowed:

Create Object

POST

/axapi/v3/glm/proxy-server

proxy-server attributes

```
POST /axapi/v3/glm/proxy-server
Payload:
{
    "proxy-server": {
        "host": "a"
    }
}
```

Get Object

GET

/axapi/v3/glm/proxy-server

proxy-server attributes

```
GET /axapi/v3/glm/proxy-server
Reponse:
{
    "proxy-server": {
        "host": "a",
        "password": 0,
        "uuid": "8fbe2c3c-b6c4-11ef-8f5a-ae71681635d0",
        "a10-url": "/axapi/v3/glm/proxy-server"
    }
}
```

Modify Object

POST

/axapi/v3/glm/proxy-server

proxy-server attributes

Replace Object

PUT

/axapi/v3/glm/proxy-server

proxy-server attributes

```
PUT /axapi/v3/glm/proxy-server
Payload:
{
    "proxy-server": {
        "host": "abcd"
    }
}
```

Delete Object

DELETE

/axapi/v3/glm/proxy-server

proxy-server attributes

```
DELETE /axapi/v3/glm/proxy-server
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

proxy-server attributes

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

host

Description Proxy server hostname or IP address

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

password

Description Password for proxy authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Proxy server port

Type: number

Range: 1-65535

secret-string

Description password value

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Username for proxy authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.56 gslb

Objects:

2.56.1 gslb

Global server load balance commands

gslb Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	gslb
Element URI	/axapi/v3/gslb
Element Attributes	gslb_attributes
Partition Visibility	shared
Schema	`gslb schema`

Operations Allowed:

Get Object

GET

/axapi/v3/gslb

gslb_attributes

gslb attributes

active-rdt

Description: active-rdt is a **JSON Block**. Please see below for *active-rdt*

Type: Object

Reference Object: */axapi/v3/gslb/active-rdt*

dns

Description: dns is a **JSON Block**. Please see below for *dns*

Type: Object

Reference Object: */axapi/v3/gslb/dns*

geo-location-list

Type: List

Reference Object: */axapi/v3/gslb/geo-location/{geo-locn-obj-name}*

geoloc

Description: geoloc is a **JSON Block**. Please see below for *geoloc*

Type: Object

Reference Object: */axapi/v3/gslb/geoloc*

geoloc-rdt

Description: geoloc-rdt is a **JSON Block**. Please see below for *geoloc-rdt*

geolocation-file

Description: geolocation-file is a **JSON Block**. Please see below for *geolocation-file*

Type: Object

Reference Object: */axapi/v3/gslb/geolocation-file*

group-info

Description: group-info is a **JSON Block**. Please see below for *group-info*

Type: Object

Reference Object: */axapi/v3/gslb/group-info*

group-list

Type: List

Reference Object: */axapi/v3/gslb/group/{name}*

ip-list-info

Description: ip-list-info is a **JSON Block**. Please see below for *ip-list-info*

Type: Object

Reference Object: */axapi/v3/gslb/ip-list-info*

ip-list-list

Type: List

Reference Object: */axapi/v3/gslb/ip-list/{gslb-ip-list-obj-name}*

policy-list

Type: List

Reference Object: */axapi/v3/gslb/policy/{name}*

protocol

Description: protocol is a **JSON Block**. Please see below for *protocol*

Type: Object

Reference Object: */axapi/v3/gslb/protocol*

secure-attributes

Description: secure-attributes is a **JSON Block**. Please see below for *secure-attributes*

Type: Object

Reference Object: */axapi/v3/gslb/secure-attributes*

service-group-list

Type: List

Reference Object: */axapi/v3/gslb/service-group/{service-group-name}*

service-ip-list

Type: List

Reference Object: */axapi/v3/gslb/service-ip/{node-name}*

service-matching-rules-list

Type: List

Reference Object: */axapi/v3/gslb/service-matching-rules/{zone}*

service-port

Description: service-port is a **JSON Block**. Please see below for *service-port*

Type: Object

Reference Object: */axapi/v3/gslb/service-port*

site-list

Type: List

Reference Object: */axapi/v3/gslb/site/{site-name}*

statistics

Description: statistics is a **JSON Block**. Please see below for *statistics*

Type: Object

Reference Object: */axapi/v3/gslb/statistics*

sync-objects

Description: sync-objects is a **JSON Block**. Please see below for *sync-objects*

Type: Object

Reference Object: */axapi/v3/gslb/sync-objects*

system

Description: system is a **JSON Block**. Please see below for *system*

Type: Object

Reference Object: */axapi/v3/gslb/system*

template

Description: template is a **JSON Block**. Please see below for *template*

Type: Object

Reference Object: */axapi/v3/gslb/template*

zone-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}*

protocol

Specification	Value
Type	*object*

auto-detect

Description Automatically detect SLB Config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-new-gslb-sync

Description Disable new gslb config sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-list

Type: List

Reference Object: */axapi/v3/gslb/protocol/enable/{type}*

limit

Description: limit is a **JSON Block**. Please see below for *protocol_limit*

Type: Object

Reference Object: */axapi/v3/gslb/protocol/limit*

msg-format-acos-2x

Description Run GSLB Protocol in compatible mode with a ACOS 2.x GSLB peer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ping-site

Description name of site or ip address to ping

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

secure

Description: secure is a **JSON Block**. Please see below for *protocol_secure*

Type: Object

Reference Object: */axapi/v3/gslb/protocol/secure*

status-interval

Description Specify GSLB Message Protocol update period (The GSLB Protocol update interval (seconds), default is 30)

Type: number

Range: 1-1800

use-mgmt-port

Description Use management port for connections in Shared Partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port and use-mgmt-port-for-all-partitions are mutually exclusive

use-mgmt-port-for-all-partitions

Description Use management port for connections in all L3v Partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port-for-all-partitions and use-mgmt-port are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

protocol_secure

Specification	Value
Type	*object*

action

Description 'enable': Enable Secure; 'disable': Disable Secure (default); 'enable-fallback': Fall back to non-secure if fail;

Type: string

Supported Values: enable, disable, enable-fallback

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

protocol_limit

Specification	Value
Type	*object*

ardt-query

Description Query Messages of Active RDT, default is 200 (Number)

Type: number

Range: 0-1000000

Default: 200

ardt-response

Description Response Messages of Active RDT, default is 1000 (Number)

Type: number

Range: 0-1000000

Default: 1000

ardt-session

Description Sessions of Active RDT, default is 32768 (Number)

Type: number

Range: 0-1000000

Default: 32768

conn-response

Description Response Messages of Connection Load, default is no limit (Number)

Type: number

Range: 0-1000000

Default: 0

message

Description Amount of Messages, default is 10000 (Number)

Type: number

Range: 0-1000000

Default: 10000

response

Description Amount of Response Messages, default is 3600 (Number)

Type: number

Range: 0-1000000

Default: 3600

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

protocol_enable-list

Specification	Value
Type	*list*
Block object keys	

type

Description 'controller': Enable/Disable GSLB protocol as GSLB controller; 'device': Enable/Disable GSLB protocol as site device;

Type: string

Supported Values: controller, device

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geolocation-file

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-port

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-list

Specification	Value
Type	*list*
Block object keys	

geo-locn-multiple-addresses

Type: List

geo-locn-obj-name

Description Specify geo-location name, section range is (1-15)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-list_geo-locn-multiple-addresses

Specification	Value
Type	*list*
Block object keys	

first-ip-address

Description Specify IP information (Specify IP address)

Type: string

Format: ipv4-address

first-ipv6-address

Description Specify IPv6 address

Type: string

Format: ipv6-address

geol-ipv4-mask

Description Specify IPv4 mask

Type: string

Format: ipv4-netmask

Mutual Exclusion: geol-ipv4-mask and ip-addr2 are mutually exclusive

geol-ipv6-mask

Description Specify IPv6 mask

Type: number

Range: 0-128

Mutual Exclusion: geol-ipv6-mask and ipv6-addr2 are mutually exclusive

ip-addr2

Description Specify IP address range

Type: string

Format: ipv4-address

Mutual Exclusion: ip-addr2 and geol-ipv4-mask are mutually exclusive

ipv6-addr2

Description Specify IPv6 address range

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr2 and geol-ipv6-mask are mutually exclusive

site-list

Specification	Value
Type	*list*
Block object keys	

active-rdt

Description: active-rdt is a **JSON Block**. Please see below for *site-list_active-rdt*

Type: Object

Reference Object: */axapi/v3/gslb/site/{site-name}/active-rdt*

auto-map

Description Enable DNS Auto Mapping

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

bw-cost

Description Specify cost of band-width

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

controller

Description Specify the local controller for the GSLB site (Specify the hostname of the local controller)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

disable

Description Disable all servers in the GSLB site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

easy-rdt

Description: easy-rdt is a **JSON Block**. Please see below for *site-list_easy-rdt*

Type: Object

Reference Object: */axapi/v3/gslb/site/{site-name}/easy-rdt*

ip-server-list

Type: List

Reference Object: */axapi/v3/gslb/site/{site-name}/ip-server/{ip-server-name}*

limit

Description Specify the limit for bandwidth, default is unlimited

Type: number

Range: 0-2147483647

multiple-geo-locations

Type: List

proto-aging-fast

Description Fast GSLB Protocol aging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proto-aging-time

Description Specify GSLB Protocol aging time

Type: number

Range: 0-65535

Default: 0

site-name

Description Specify GSLB site name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

slb-dev-list

Type: List

Reference Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}*

template

Description Specify template to collect site information (Specify GSLB SNMP template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/template/snmp*

threshold

Description Specify the threshold for limit

Type: number

Range: 0-100

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify a weight for the GSLB site (Weight, default is 1)

Type: number

Range: 1-100

Default: 1

site-list_ip-server-list

Specification	Value
Type	*list*
Block object keys	

ip-server-name

Description Specify the real server name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

site-list_slb-dev-list

Specification	Value
Type	*list*
Block object keys	

admin-preference

Description Specify administrative preference (Specify admin-preference value,default is 100)

Type: number

Range: 0-255

Default: 100

auto-detect

Description 'ip': Service IP only; 'port': Service Port only; 'ip-and-port': Both service IP and service port; 'disabled': disable auto-detect;

Type: string

Supported Values: ip, port, ip-and-port, disabled

Default: ip-and-port

auto-map

Description Enable DNS Auto Mapping

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

client-ip

Description Specify client IP address

Type: string

Format: ipv4-address

dev-resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN (Default Query type); 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

device-name

Description Specify SLB device name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

domain

Description Device hostname

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: domain, ip-address, and ipv6-address are mutually exclusive

gateway-ip-addr

Description IP address

Type: string

Format: ipv4-address

health-check-action

Description 'health-check': Enable health Check; 'health-check-disable': Disable health check;

Type: string

Supported Values: health-check, health-check-disable

Default: health-check

ip-address

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address and domain are mutually exclusive

ipv6-address

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address and domain are mutually exclusive

max-client

Description Specify maximum number of clients, default is 32768

Type: number

Range: 1-2147483647

Default: 32768

msg-format-acos-2x

Description Run GSLB Protocol in compatible mode with a ACOS 2.x GSLB peer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

probe-timer

Description

Type: number

Range: 1-255

proto-aging-fast

Description Fast GSLB Protocol aging

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

proto-aging-time

Description Specify GSLB Protocol aging time, default is 60

Type: number

Range: 1-65535

Default: 60

proto-compatible

Description Run GSLB Protocol in compatible mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rdt-type

Description 'rdt': rdt; 'site-rdt': site-rdt;

Type: string

Supported Values: rdt, site-rdt

rdt-value

Description Specify Round-delay-time

Type: number

Range: 1-65535

session-number

Description

Type: number

Range: 0-16777214

session-utilization

Description

Type: number

Range: 1-100

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-server

Description: vip-server is a **JSON Block**. Please see below for *site-list_slb-dev-list_vip-server*

Type: Object

Reference Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}/vip-server*

site-list_slb-dev-list_vip-server

Specification	Value
Type	*object*

vip-server-name-list

Type: List

Reference Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}/vip-server/vip-server-name/{vip-name}*

vip-server-v4-list

Type: List

Reference Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}/vip-server/vip-server-v4/{ipv4}*

vip-server-v6-list

Type: List

Reference Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}/vip-server/vip-server-v6/{ipv6}*

site-list_slb-dev-list_vip-server_vip-server-v4-list

Specification	Value
Type	*list*
Block object keys	

ipv4

Description Specify IP address

Type: string

Format: ipv4-address

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

site-list_slb-dev-list_vip-server_vip-server-v4-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'dev_vip_hits': Number of times the service-ip was selected;

Type: string

Supported Values: all, dev_vip_hits, dev_vip_recent

site-list_slb-dev-list_vip-server_vip-server-v6-list

Specification	Value
Type	*list*
Block object keys	

ipv6

Description Specify IP address (IPv6 address)

Type: string

Format: ipv6-address

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

site-list_slb-dev-list_vip-server_vip-server-v6-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'dev_vip_hits': Number of times the service-ip was selected;

Type: string

Supported Values: all, dev_vip_hits, dev_vip_recent

site-list_slb-dev-list_vip-server_vip-server-name-list

Specification	Value
Type	*list*
Block object keys	

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-name

Description Specify a VIP name for the SLB device

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/service-ip*

site-list_slb-dev-list_vip-server_vip-server-name-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'dev_vip_hits': Number of times the service-ip was selected;

Type: string

Supported Values: all, dev_vip_hits, dev_vip_recent

site-list_multiple-geo-locations

Specification	Value
Type	*list*
Block object keys	

geo-location

Description Specify the geographic location of the GSLB site (Specify geo-location for this site)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

site-list_easy-rdt

Specification	Value
Type	*object*

aging-time

Description Aging Time, Unit: min, default is 10

Type: number

Range: 1-15360

Default: 10

bind-geoloc

Description Bind RDT to geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-count

Description Ignore count if RDT is out of range, default is 5

Type: number

Range: 0-15

Default: 5

ipv6-mask

Description Client IPv6 subnet mask, default is 128

Type: number

Range: 1-128

Default: 128

limit

Description Limit of valid RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

mask

Description Client IP subnet mask, default is 32

Type: string

Format: ipv4-netmask-brief

Default: /32

overlap

Description Enable overlap for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-factor

Description Factor of RDT Range, default is 25 (Range Factor of Smooth RDT)

Type: number

Range: 0-1000

Default: 25

smooth-factor

Description Factor of Smooth RDT, default is 10

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

site-list_active-rdt

Specification	Value
Type	*object*

aging-time

Description Aging Time, Unit: min, default is 10

Type: number

Range: 1-15360

Default: 10

bind-geoloc

Description Bind RDT to geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-count

Description Ignore count if RDT is out of range, default is 5

Type: number

Range: 0-15

Default: 5

ipv6-mask

Description Client IPv6 subnet mask, default is 128

Type: number

Range: 1-128

Default: 128

limit

Description Limit of valid RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

mask

Description Client IP subnet mask, default is 32

Type: string

Format: ipv4-netmask-brief

Default: /32

overlap

Description Enable overlap for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-factor

Description Factor of RDT Range, default is 25 (Range Factor of Smooth RDT)

Type: number

Range: 0-1000

Default: 25

smooth-factor

Description Factor of Smooth RDT, default is 10

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

group-info

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

active-rdt

Specification	Value
Type	*object*

domain

Description Specify Query Domain (Specify Domain Name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

enable

Description Enable active rdt for system

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp

Description Using ICMP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Specify Query Interval, unit: second, default is 1

Type: number

Range: 1-16383

Default: 1

port

Description Specify local port to send probe packet, default is 0 (no port)

Type: number

Range: 0-65535

Default: 0

retry

Description Specify Retry Count, default is 3

Type: number

Range: 0-16

Default: 3

sleep

Description Specify Sleep Time when query fail, unit: second, default is 3

Type: number

Range: 1-300

Default: 3

timeout

Description Specify Query Timeout, unit: msec, default is 3000

Type: number

Range: 1-16383

Default: 3000

track

Description Specify Tracking Time, unit: second, default is 60

Type: number

Range: 3-16383

Default: 60

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template

Specification	Value
Type	*object*

csv-list

Type: List

Reference Object: */axapi/v3/gslb/template/csv/{csv-name}*

snmp-list

Type: List

Reference Object: */axapi/v3/gslb/template/snmp/{snmp-name}*

template_snmp-list

Specification	Value
Type	*list*
Block object keys	

auth-key

Description Specify authentication key (Specify key)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

auth-proto

Description 'sha': SHA; 'md5': MD5;

Type: string

Supported Values: sha, md5

Default: md5

community

Description Specify community for version 2c (Community name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

context-engine-id

Description Specify context engine ID

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

context-name

Description Specify context name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

host

Description Specify host (Host name or ip address)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

interface

Description Specify Interface ID

Type: number

Range: 0-2147483647

interval

Description Specify interval, default is 3 (Interval, unit: second, default is 3)

Type: number

Range: 1-999

Default: 3

oid

Description Specify OID

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

port

Description Specify port, default is 161 (Port Number, default is 161)

Type: number

Range: 1-65535

Default: 161

priv-key

Description Specify privacy key (Specify key)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

priv-proto

Description ‘aes’: AES; ‘des’: DES;

Type: string

Supported Values: aes, des

Default: des

security-engine-id

Description Specify security engine ID

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

security-level

Description 'no-auth': No authentication; 'auth-no-priv': Authentication, but no privacy; 'auth-priv': Authentication and privacy;

Type: string

Supported Values: no-auth, auth-no-priv, auth-priv

Default: no-auth

snmp-name

Description Specify name of snmp template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Specify username (User name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description 'v1': Version 1; 'v2c': Version 2c; 'v3': Version 3;

Type: string

Supported Values: v1, v2c, v3

Default: v3

template_csv-list

Specification	Value
Type	*list*
Block object keys	

csv-name

Description Specify name of csv template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

delim-char

Description enter a delimiter character, default ","

Type: string

Format: string-rlx

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: ,

Mutual Exclusion: delim-char and delim-num are mutually exclusive

delim-num

Description enter a delimiter number, default 44 (",")

Type: number

Range: 0-255

Default: 44

Mutual Exclusion: delim-num and delim-char are mutually exclusive

ipv6-enable

Description Support IPv6 IP ranges

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multiple-fields

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_csv-list_multiple-fields

Specification	Value
Type	*list*
Block object keys	

csv-type

Description 'ip-from': Beginning address of IP range or subnet; 'ip-to-mask': Ending address of IP range or Mask; 'continent': Continent; 'country': Country; 'state': State or province; 'city': City;

Type: string

Supported Values: ip-from, ip-to-mask, continent, country, state, city, ASN

field

Description Field index number (Index of Field)

Type: number

Range: 1-64

statistics

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

system

Specification	Value
Type	*object*

age-interval

Description Interval to age runtime statistics. 0: never age, default is 10 (Time, unit: sec, default is 10)

Type: number

Range: 0-120

Default: 10

geo-location-iana

Description Load built-in IANA table

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

gslb-group

Description GSLB Group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-load-file-list

Type: List

gslb-service-ip

Description GSLB Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-site

Description GSLB Site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hostname

Description System's Network Name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-ttl

Description TTL of IP packets, default is 0 (IP TTL value, default is 0)

Type: number

Range: 0-255

Default: 0

module

Description Specify Auto Map Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-device

Description SLB Device

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-server

Description SLB Server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-virtual-server

Description SLB Virtual Server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify Auto Map TTL (TTL, default is 300)

Type: number

Range: 1-65535

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wait

Description Disable GSLB until timeout if system is not ready (Time, unit: sec, default is 0)

Type: number

Range: 0-16384

Default: 0

system_gslb-load-file-list

Specification	Value
Type	*list*
Block object keys	

geo-location-load-filename

Description Specify file to be loaded

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template-name

Description CSV template to load this file

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/template/csv*

secure-attributes

Specification	Value
Type	*object*

action

Description 'enable': Enable Secure; 'disable': Disable Secure; 'enable-fallback': Fall back to non-secure if fail; 'use-global-behavior': Follow global configuration under gslb protocol (default);

Type: string

Supported Values: enable, disable, enable-fallback, use-global-behavior

Default: use-global-behavior

gslb-cert

Description Certificate for Secure GSLB (Certificate name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

gslb-key

Description Private Key for secure gslb signing (Key name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list-info

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-matching-rules-list

Specification	Value
Type	*list*
Block object keys	

disable

Description Disable rule matching on associated zone (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hitcount-enable

Description Enable hit count of rule matching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rule-list

Type: List

Reference Object: */axapi/v3/gslb/service-matching-rules/{zone}/rule/{seq-num}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone

Description GSLB zone name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/zone*

service-matching-rules-list_rule-list

Specification	Value
Type	*list*
Block object keys	

domain-match-string

Description Domain name string

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

domain-match-type

Description 'equals': Domain name equals to string; 'contains': Domain name contains string; 'starts-with': Domain name starts with string; 'ends-with': Domain name ends with string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

health-state

Type: List

seq-num

Description Sequence number of rule

Type: number

Range: 1-500

service

Description Name of zone service to be redirected

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

src-ipv4

Description Client source IPv4 subnet

Type: string

Format: ipv4-cidr

Mutual Exclusion: src-ipv4 and src-ipv6 are mutually exclusive

src-ipv6

Description Client source IPv6 subnet

Type: string

Format: ipv6-address-plen

Mutual Exclusion: src-ipv6 and src-ipv4 are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-matching-rules-list_rule-list_health-state

Specification	Value
Type	*list*
Block object keys	

gslb-service-ip

Description Health state of GSLB service-ip (GSLB service-ip name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/service-ip*

gslb-site

Description Health state of GSLB site (GSLB site name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/site*

service-ip-state

Description 'Up': Up; 'Down': Down;

Type: string

Supported Values: Up, Down

site-state

Description 'AllUp': AllUp; 'Down': Down; 'AllUp-or-PartUp': AllUp-or-PartUp; 'Down-or-PartUp': Down-or-PartUp;

Type: string

Supported Values: AllUp, Down, AllUp-or-PartUp, Down-or-PartUp

slb-server

Description Health state of SLB server (SLB server name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/server*

slb-svr-state

Description 'Up': Up; 'Down': Down;

Type: string

Supported Values: Up, Down

sync-objects

Specification	Value
Type	*object*

action

Description 'disable': Disable dynamic sync (default); 'enable': Enable dynamic sync;

Type: string

Supported Values: disable, enable

Default: disable

object-list

Description: object-list is a **JSON Block**. Please see below for *sync-objects_object-list*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sync-objects_object-list

Specification	Value
Type	*object*

lineage

Description Lineage of object e.g.: slb, slb.service-group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

dns

Specification	Value
Type	*object*

action

Description 'none': No action (default); 'drop': Drop query; 'reject': Send refuse response; 'ignore': Send empty response;

Type: string

Supported Values: none, drop, reject, ignore

Default: none

logging

Description 'none': No logging (default); 'query': DNS Query; 'response': DNS Response; 'both': Both DNS Query and Response;

Type: string

Supported Values: none, query, response, both

Default: none

sampling-enable

Type: List

template

Description Logging template (Logging Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total-query': Total number of DNS queries received; 'total-response': Total number of DNS replies sent to clients; 'bad-packet-query': Number of queries with incorrect data length; 'bad-packet-response': Number of replies with incorrect data length; 'bad-header-query': Number of queries with incorrect header; 'bad-header-response': Number of replies with incorrect header; 'bad-format-query': Number of queries with incorrect format; 'bad-format-response': Number of replies with incorrect format; 'bad-service-query': Number of queries with unknown service; 'bad-service-response': Number of replies with unknown service; 'bad-class-query': Number of queries with incorrect class; 'bad-class-response': Number of replies with incorrect class; 'bad-type-query': Number of queries with incorrect type; 'bad-type-response': Number of replies with incorrect type; 'no_answer': Number of replies with unknown server IP; 'metric_health_check': Metric Health Check Hit; 'metric_weighted_ip': Metric Weighted IP Hit; 'metric_weighted_site': Metric Weighted Site Hit; 'metric_capacity': Metric Capacity Hit; 'metric_active_server': Metric Active Server Hit; 'metric_easy_rdt': Metric Easy RDT Hit; 'metric_active_rdt': Metric Active RDT Hit; 'metric_geographic': Metric Geographic Hit; 'metric_connection_load': Metric Connection Load Hit; 'metric_number_of_sessions': Metric Number of Sessions Hit; 'metric_active_weight': Metric Active Weight Hit; 'metric_admin_preference': Metric Admin Preference Hit; 'metric_bandwidth_quality': Metric Bandwidth Quality Hit; 'metric_bandwidth_cost': Metric Bandwidth Cost Hit; 'metric_user': Metric User Hit; 'metric_least_reponse': Metric Least Reponse Hit; 'metric_admin_ip': Metric Admin IP Hit; 'metric_round_robin': Metric Round Robin Hit;

Type: string

Supported Values: all, total-query, total-response, bad-packet-query, bad-packet-response, bad-header-query, bad-header-response, bad-format-query, bad-format-response, bad-service-query, bad-service-response, bad-class-query, bad-class-response, bad-type-query, bad-type-response, no_answer, metric_health_check, metric_weighted_ip, metric_weighted_site, metric_capacity, metric_active_server, metric_easy_rdt, metric_active_rdt, metric_geographic, metric_connection_load, metric_number_of_sessions, metric_active_weight, metric_admin_preference, metric_bandwidth_quality, metric_bandwidth_cost, metric_user, metric_least_reponse, metric_admin_ip, metric_round_robin, metric_site_connection_count

geoloc-rdt

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geoloc

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-ip-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': Enable this GSLB server; 'disable': Disable this GSLB server;

Type: string

Supported Values: enable, disable

Default: enable

external-ip

Description External IP address for NAT

Type: string

Format: ipv4-address

health-check

Description Health Check Monitor (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable Health Check Monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-protocol-disable

Description Disable GSLB Protocol Health Monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-address

Description IP address

Type: string

Format: ipv4-address

ipv6

Description IPv6 address Mapping (Applicable only when service-ip has an IPv4 Address)

Type: string

Format: ipv6-address

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

node-name

Description Service-IP Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Type: List

Reference Object: */axapi/v3/gslb/service-ip/{node-name}/port/{port-num}+{port-proto}*

sampling-enable

Type: List

service-list

Type: List

Reference Object: */axapi/v3/gslb/service-ip/{node-name}/service/{port-num}+{port-proto}+{label}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-ip-list_port-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': Enable this GSLB server port; 'disable': Disable this GSLB server port;

Type: string

Supported Values: enable, disable

Default: enable

follow-port-protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

health-check

Description Health Check Monitor (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check, health-check-follow-port, and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable Health Check Monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable, health-check, and health-check-follow-port are mutually exclusive

health-check-follow-port

Description Specify which port to follow for health status (Port Number)

Type: number

Range: 1-65534

Mutual Exclusion: health-check-follow-port, health-check, and health-check-disable are mutually exclusive

health-check-protocol-disable

Description Disable GSLB Protocol Health Monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-num

Description Port Number

Type: number

Range: 0-65534

port-proto

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-ip-list_port-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'active': Active Servers; 'current': Current Connections;

Type: string

Supported Values: all, active, current

service-ip-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the service IP has been selected; 'recent': Recent hits;

Type: string

Supported Values: all, hits, recent

service-ip-list_service-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': Enable this GSLB server port; 'disable': Disable this GSLB server port;

Type: string

Supported Values: enable, disable

Default: enable

health-check

Description Health Check Monitor (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Reference Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable Health Check Monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-protocol-disable

Description Disable GSLB Protocol Health Monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

label

Description Service Label

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-num

Description Port Number

Type: number

Range: 0-65534

port-proto

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-ip-list_service-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'active': Active Servers; 'current': Current Connections;

Type: string

Supported Values: all, active, current

service-group-list

Specification	Value
Type	*list*
Block object keys	

dependency-site

Description Dependency on site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-site-list

Type: List

member

Type: List

persistent-aging-time

Description Specify aging-time, unit: min, default is 5 (Aging time)

Type: number

Range: 1-65535

Default: 5

persistent-ipv6-mask

Description Specify IPv6 mask length, default is 128

Type: number

Range: 1-128

Default: 128

persistent-mask

Description Specify IP mask, default is /32

Type: string

Format: ipv4-netmask-brief

Default: /32

persistent-site

Description Persistent based on site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-name

Description Specify Service Group name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_disable-site-list

Specification	Value
Type	*list*
Block object keys	

disable-site

Description Site name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/site*

service-group-list_member

Specification	Value
Type	*list*
Block object keys	

member-name

Description Service name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

policy-list

Specification	Value
Type	*list*
Block object keys	

active-rdt

Description: active-rdt is a **JSON Block**. Please see below for *policy-list_active-rdt*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/active-rdt*

active-servers-enable

Description Enable Select Service-IP with the highest number of active servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-servers-fail-break

Description Break when no active server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

admin-ip-enable

Description Enable admin ip

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

admin-ip-top-only

Description Return highest priority server only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: admin-ip-top-only and ordered-ip-top-only are mutually exclusive

admin-preference

Description Select Service-IP for the device having maximum admin preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

alias-admin-preference

Description Select alias name having maximum admin preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

amount-first

Description Select record based on the amount of available service-ip

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-map

Description: auto-map is a **JSON Block**. Please see below for *policy-list_auto-map*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/auto-map*

bw-cost-enable

Description Enable bw cost

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-cost-fail-break

Description Break when exceed limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

capacity

Description: capacity is a **JSON Block**. Please see below for *policy-list_capacity*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/capacity*

connection-count-by-site

Description: connection-count-by-site is a **JSON Block**. Please see below for *policy-list_connection-count-by-site*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/connection-count-by-site*

connection-load

Description: connection-load is a **JSON Block**. Please see below for *policy-list_connection-load*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/connection-load*

dns

Description: dns is a **JSON Block**. Please see below for *policy-list_dns*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/dns*

edns

Description: edns is a **JSON Block**. Please see below for *policy-list_edns*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/edns*

geo-location-list

Type: List

Reference Object: */axapi/v3/gslb/policy/{name}/geo-location/{name}*

geo-location-match

Description: geo-location-match is a **JSON Block**. Please see below for *policy-list_geo-location-match*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/geo-location-match*

geographic

Description Select Service-IP by geographic

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

health-check

Description Select Service-IP by health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

health-check-preference-enable

Description Check health preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-preference-top

Description Only keep top n

Type: number

Range: 1-128

ip-list

Description Specify IP List (IP List Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/ip-list*

least-response

Description Least response selection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-fail-break

Description Break if no valid Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-force-check

Description Always check Service-IP for all enabled metrics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-order

Description Specify order of metric

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-type

Description

Type: string

Format: enum-list

name

Description Specify policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default

num-session-enable

Description Enable Select Service-IP for device having maximum number of available sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

num-session-tolerance

Description The difference between the available sessions, default is 10 (Tolerance)

Type: number

Range: 0-100

Default: 10

ordered-ip-top-only

Description Return highest priority server only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ordered-ip-top-only and admin-ip-top-only are mutually exclusive

round-robin

Description Round robin selection, enabled by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weighted-alias

Description Select alias name by weighted preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-ip-enable

Description Enable Select Service-IP by weighted preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-ip-total-hits

Description Weighted by total hits

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-site-enable

Description Enable Select Service-IP by weighted site preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-site-total-hits

Description Weighted by total hits

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

policy-list_connection-count-by-site

Specification	Value
Type	*object*

connection-count-enable

Description Enable connection-count-by-site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_auto-map

Specification	Value
Type	*object*

all

Description All modules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and module-type are mutually exclusive

module-disable

Description Specify Disable Auto Map Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

module-type

Description

Type: string

Format: enum-list

Mutual Exclusion: module-type and all are mutually exclusive

ttl

Description Specify Auto Map TTL (TTL, default is 300)

Type: number

Range: 1-65535

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_edns

Specification	Value
Type	*object*

client-subnet-geographic

Description Use client subnet for geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_active-rdt

Specification	Value
Type	*object*

controller

Description Active round-delay-time by controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

difference

Description The difference between the round-delay-time, default is 0

Type: number

Range: 0-16383

Default: 0

enable

Description Enable the active rdt

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-break

Description Break when no valid RDT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-id

Description Ignore IP Address specified in IP List by ID

Type: number

Range: 0-31

keep-tracking

Description Keep tracking client even round-delay-time samples are ready

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit

Description Limit of allowed RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

prefer-dns-sticky

Description Use dns sticky if available

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proto-rdt-enable

Description Enable the round-delay-time to the controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

samples

Description Specify samples number for round-delay-time (Number of samples,default is 5)

Type: number

Range: 1-8

Default: 5

single-shot

Description Single Shot RDT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip

Description Skip query if round-delay-time samples are not ready (Specify maximum skip count,default is 3)

Type: number

Range: 1-31

Default: 3

sticky-difference

Description The difference between the round-delay-time of sticky entry

Type: number

Range: 1-16383

timeout

Description Specify timeout if round-delay-time samples are not ready (Specify timeout, unit:sec,default is 3)

Type: number

Range: 1-255

Default: 3

tolerance

Description The difference percentage between the round-delay-time, default is 10 (Tolerance)

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_capacity

Specification	Value
Type	*object*

capacity-enable

Description Enable capacity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

capacity-fail-break

Description Break when exceed threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold

Description Specify capacity threshold, default is 90

Type: number

Range: 0-100

Default: 90

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_geo-location-match

Specification	Value
Type	*object*

geo-type-overlap

Description 'global': Global Geo-location; 'policy': Policy Geo-location;

Type: string

Supported Values: global, policy

match-first

Description 'global': Global Geo-location; 'policy': Policy Geo-location;

Type: string

Supported Values: global, policy

Default: global

overlap

Description Enable overlap mode to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_dns

Specification	Value
Type	*object*

action

Description Apply DNS action for service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-type

Description 'drop': Drop query; 'reject': Send refuse response; 'ignore': Send empty response;

Type: string

Supported Values: drop, reject, ignore

active-only

Description Only keep active servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-only-fail-safe

Description Continue if no candidate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aging-time

Description Specify aging-time, default is TTL in DNS record, unit: second (Aging time, default 0 means using TTL in DNS record as aging time)

Type: number

Range: 0-1000000000

Default: 0

backup-alias

Description Return alias name when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

backup-server

Description Return fallback server when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

block-action

Description Specify Action

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

block-type

Description

Type: string

Format: enum-list

block-value

Type: List

cache

Description Cache DNS Server response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cname-detect

Description Apply GSLB for DNS Server response when service is Canonical Name (CNAME)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

delegation

Description Zone Delegation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-addition-mx

Description Append MX Records in Addition Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-auto-map

Description Automatically build DNS Infrastructure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic-preference

Description Make dynamically change the preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic-weight

Description dynamically change the weight

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-ip

Description Return DNS response with external IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

external-soa

Description Return DNS response with external SOA Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-action

Description Apply DNS action by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-alias

Description Return alias name by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-policy

Description Apply different policy by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hint

Description 'none': None; 'answer': Append Hint Records in DNS Answer Section; 'addition': Append Hint Records in DNS Addition Section;

Type: string

Supported Values: none, answer, addition

Default: addition

ip-replace

Description Replace DNS Server Response with GSLB Service-IPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6

Type: List

logging

Description 'none': None; 'query': DNS Query; 'response': DNS Response; 'both': Both DNS Query and Response;

Type: string

Supported Values: none, query, response, both

proxy-block-port-range-list

Type: List

selected-only

Description Only keep selected servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

selected-only-value

Description Answer Number

Type: number

Range: 1-128

server

Description Run GSLB as DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-addition-mx

Description Append MX Records in Addition Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-any

Description Provide All Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-any and server-any-with-metric are mutually exclusive

server-any-with-metric

Description Provide All Records with GSLB Metrics applied to A/AAAA Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-any-with-metric and server-any are mutually exclusive

server-authoritative

Description As authoritative server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-auto-ns

Description Provide A-Records for NS-Records automatically

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-auto-ptr

Description Provide PTR Records automatically

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-caa

Description Provide CAA Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-cname

Description Provide CNAME Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-custom

Description Provide Custom Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-full-list

Description Append All A Records in Authoritative Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-mode-only

Description Only run GSLB as DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-mode-only and zone-owner-mode are mutually exclusive

server-mx

Description Provide MX Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-naptr

Description Provide NAPTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ns

Description Provide NS Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ns-list

Description Append All NS Records in Authoritative Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ptr

Description Provide PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-sec

Description Provide DNSSEC support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-srv

Description Provide SRV Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-txt

Description Provide TXT Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sticky

Description Make DNS Record sticky for certain time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sticky-aging-time

Description Specify aging-time, unit: min, default is 5 (Aging time)

Type: number

Range: 1-65535

Default: 5

sticky-ipv6-mask

Description Specify IPv6 mask length, default is 128

Type: number

Range: 1-128

Default: 128

sticky-mask

Description Specify IP mask, default is /32

Type: string

Format: ipv4-netmask-brief

Default: /32

sticky-options

Description: sticky-options is a **JSON Block**. Please see below for *policy-list_dns_sticky-options*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/dns/sticky-options*

template

Description Logging template (Logging Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

ttl

Description Specify the TTL value contained in DNS record (TTL value, unit: second, default is 10)

Type: number

Range: 0-1000000000

Default: 10

Mutual Exclusion: ttl and use-server-ttl are mutually exclusive

use-server-ttl

Description Use DNS Server Response TTL value in GSLB Proxy mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-server-ttl and ttl are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-owner-mode

Description Only run GSLB as DNS server mode with zone ownership

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: zone-owner-mode and server-mode-only are mutually exclusive

policy-list_dns_block-value

Specification	Value
Type	*list*
Block object keys	

block-value

Description Specify Type Number

Type: number

Range: 1-255

policy-list_dns_ipv6

Specification	Value
Type	*list*
Block object keys	

dns-ipv6-mapping-type

Description 'addition': Append Mapped Record in DNS Addition Section; 'answer': Append Mapped Record in DNS Answer Section; 'exclusive': Only return AAAA Record; 'replace': Replace Record with Mapped Record;

Type: string

Supported Values: addition, answer, exclusive, replace

dns-ipv6-option

Description 'mix': Return both AAAA Record and A Record; 'smart': Return AAAA Record by DNS Query Type; 'mapping': Map A Record to AAAA Record;

Type: string

Supported Values: mix, smart, mapping

policy-list_dns_sticky-options

Specification	Value
Type	*object*

edns-client-subnet

Description Use ECS for sticky creation and lookup

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

only-ecs

Description Only use ECS for session creation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_dns_proxy-block-port-range-list

Specification	Value
Type	*list*
Block object keys	

proxy-block-range-from

Description Specify Type Range (From)

Type: number

proxy-block-range-to

Description To

Type: number

policy-list_geo-location-list

Specification	Value
Type	*list*
Block object keys	

ip-multiple-fields

Type: List

ipv6-multiple-fields

Type: List

name

Description Specify geo-location name, section range is (1-15)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_geo-location-list_ip-multiple-fields

Specification	Value
Type	*list*
Block object keys	

ip-addr2-sub

Description Specify IP address range

Type: string

Format: ipv4-address

ip-mask-sub

Description Specify IP/mask format (Specify IP address mask)

Type: string

Format: ipv4-netmask-brief

ip-sub

Description Specify IP information

Type: string

Format: ipv4-address

policy-list_geo-location-list_ipv6-multiple-fields

Specification	Value
Type	*list*
Block object keys	

ipv6-addr2-sub

Description Specify IPv6 address range

Type: string

Format: ipv6-address

ipv6-mask-sub

Description Specify IPv6/mask format (Specify IP address mask)

Type: number

Range: 0-128

ipv6-sub

Description Specify IPv6 information

Type: string

Format: ipv6-address

policy-list_connection-load

Specification	Value
Type	*object*

connection-load-enable

Description Enable connection-load

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-load-fail-break

Description Break when exceed limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-load-interval

Description Interval between two samples, Unit: second (Interval value,default is 5)

Type: number

Range: 1-60

Default: 5

connection-load-limit

Description The value of the connection-load limit, default is unlimited

Type: number

Range: 1-999999999

connection-load-samples

Description Specify samples for connection-load (Number of samples used to calculate the connection load, default is 5)

Type: number

Range: 1-8

Default: 5

limit

Description Limit of maxinum connection load, default is unlimited

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list-list

Specification	Value
Type	*list*
Block object keys	

gslb-ip-list-addr-list

Type: List

gslb-ip-list-filename

Description Load IP List file (IP List filename)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

gslb-ip-list-obj-name

Description Specify IP List name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list-list_gslb-ip-list-addr-list

Specification	Value
Type	*list*
Block object keys	

id

Description ID Number

Type: number

Range: 0-31

ip

Description Specify IP address

Type: string

Format: ipv4-address

ip-mask

Description IP mask

Type: string

Format: ipv4-netmask

zone-list

Specification	Value
Type	*list*
Block object keys	

disable

Description Disable all services in the GSLB zone

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-caa-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/dns-caa-record/{critical-flag}+{property-tag}+{rdata}*

dns-mx-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/dns-mx-record/{mx-name}*

dns-ns-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/dns-ns-record/{ns-name}*

dns-soa-record

Description: dns-soa-record is a **JSON Block**. Please see below for *zone-list_dns-soa-record*

Type: Object

name

Description Specify the name for the DNS zone

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

policy

Description Specify the policy for this zone (Specify policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default

sampling-enable

Type: List

service-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}*

template

Description: template is a **JSON Block**. Please see below for *zone-list_template*

Type: Object

ttl

Description Specify the zone ttl value (TTL value, unit: second, default is 10)

Type: number

Range: 0-1000000000

Default: 10

Mutual Exclusion: ttl and use-server-ttl are mutually exclusive

use-server-ttl

Description Use DNS Server Response TTL value in GSLB Proxy mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-server-ttl and ttl are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_dns-ns-record-list

Specification	Value
Type	*list*
Block object keys	

ns-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_dns-ns-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_dns-caa-record-list

Specification	Value
Type	*list*
Block object keys	

critical-flag

Description Issuer Critical Flag

Type: number

Range: 0-255

property-tag

Description Specify other property tags, only allowed lowercase alphanumeric

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rdata

Description Specify the Issuer Domain Name or a URL

Type: string

Format: string-rlx

Maximum Length: 1000 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_dns-caa-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_dns-mx-record-list

Specification	Value
Type	*list*
Block object keys	

mx-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_dns-mx-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'received-query': Total Number of DNS queries received for the zone; 'sent-response': Total Number of DNS replies sent to clients for the zone; 'proxy-mode-response': Total Number of DNS replies sent to clients by the ACOS device as a DNS proxy for the zone; 'cache-mode-response': Total Number of cached DNS replies sent to clients by the ACOS device for the zone. (This statistic applies only if the DNS cac; 'server-mode-response': Total Number of DNS replies sent to clients by the ACOS device as a DNS server for the zone. (This statistic applies only if th; 'sticky-mode-response': Total Number of DNS replies sent to clients by the ACOS device to keep the clients on the same site. (This statistic applies on; 'backup-mode-response': Total Number of DNS replies sent to clients by the ACOS device in backup mode;

Type: string

Supported Values: all, received-query, sent-response, proxy-mode-response, cache-mode-response, server-mode-response, sticky-mode-response, backup-mode-response, smrule-redir-from-svc-hit, smrule-redir-from-svc-miss

zone-list_template

Specification	Value
Type	*object*

dnssec

Description Specify DNSSEC template (Specify template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

zone-list_dns-soa-record

Specification	Value
Type	*object*

ex-expire

Description Specify Expire Time Interval, default is 1209600

Type: number

Range: 0-2147483647

Default: 1209600

ex-mail

Description Mailbox

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ex-refresh

Description Specify Refresh Time Interval, default is 3600

Type: number

Range: 0-2147483647

Default: 3600

ex-retry

Description Specify Retry Time Interval, default is 900

Type: number

Range: 0-2147483647

Default: 900

ex-serial

Description Specify Serial Number, default is Current Time (Time Interval)

Type: number

Range: 0-2147483647

ex-soa-ttl

Description Specify Negative caching TTL, default is Zone TTL

Type: number

Range: 0-2147483647

expire

Description Specify Expire Time Interval, default is 1209600

Type: number

Range: 0-2147483647

Default: 1209600

external

Description Specify External SOA Record (DNS Server Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

mail

Description Mailbox

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

refresh

Description Specify Refresh Time Interval, default is 3600

Type: number

Range: 0-2147483647

Default: 3600

retry

Description Specify Retry Time Interval, default is 900

Type: number

Range: 0-2147483647

Default: 900

serial

Description Specify Serial Number, default is Current Time (Time Interval)

Type: number

Range: 0-2147483647

soa-name

Description DNS Server Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

soa-ttl

Description Specify Negative caching TTL, default is Zone TTL

Type: number

Range: 0-2147483647

zone-list_service-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'drop': Drop query; 'forward': Forward packet; 'ignore': Send empty response; 'reject': Send refuse response;

Type: string

Supported Values: drop, forward, ignore, reject

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record

Description: dns-a-record is a **JSON Block**. Please see below for *zone-list_service-list_dns-a-record*

Type: Object

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record*

dns-caa-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-caa-record/{critical-flag}+{property-tag}+{rdata}*

dns-cname-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-cname-record/{alias-name}*

dns-mx-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-mx-record/{mx-name}*

dns-naptr-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-naptr-record/{naptr-target}+{service-proto}+{flag}*

dns-ns-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-ns-record/{ns-name}*

dns-ptr-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-ptr-record/{ptr-name}*

dns-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-record/{type}*

dns-srv-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record/{srv-name}+{port}*

dns-txt-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-txt-record/{record-name}*

forward-type

Description 'both': Forward both query and response; 'query': Forward query; 'response': Forward response;

Type: string

Supported Values: both, query, response

geo-location-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/geo-location/{geo-name}*

health-check-gateway

Description 'enable': Enable Gateway Status Check; 'disable': Disable Gateway Status Check;

Type: string

Supported Values: enable, disable

Default: enable

health-check-port

Type: List

policy

Description Specify policy for this service (Specify policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

service-name

Description Specify the service name for the zone, * for wildcard

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default:

service-port

Description Port number of the service

Type: number

Range: 0-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-ptr-record-list

Specification	Value
Type	*list*
Block object keys	

ptr-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-ptr-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_service-list_geo-location-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action for this geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: action and policy are mutually exclusive

action-type

Description 'allow': Allow query from this geo-location; 'drop': Drop query from this geo-location; 'forward': Forward packet for this geo-location; 'ignore': Send empty response to this geo-location; 'reject': Send refuse response to this geo-location;

Type: string

Supported Values: allow, drop, forward, ignore, reject

alias

Type: List

forward-type

Description 'both': Forward both query and response; 'query': Forward query from this geo-location; 'response': Forward response to this geo-location;

Type: string

Supported Values: both, query, response

geo-name

Description Specify the geo-location

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

policy

Description Policy for this geo-location (Specify the policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: policy and action are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_geo-location-list_alias

Specification	Value
Type	*list*
Block object keys	

alias

Description Send CNAME response for this geo-location (Specify a CNAME record)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

zone-list_service-list_dns-cname-record-list

Specification	Value
Type	*list*
Block object keys	

admin-preference

Description Specify Administrative Preference, default is 100

Type: number

Range: 0-255

Default: 100

alias-name

Description Specify the alias name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 1

Type: number

Range: 1-100

Default: 1

zone-list_service-list_dns-cname-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'cname-hits': Number of times the CNAME has been used;

Type: string

Supported Values: all, cname-hits

zone-list_service-list_dns-txt-record-list

Specification	Value
Type	*list*
Block object keys	

record-name

Description Specify the Object Name for TXT Data

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

txt-data

Description Specify TXT Data

Type: string

Format: string-rlx

Maximum Length: 1000 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-txt-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_service-list_dns-naptr-record-list

Specification	Value
Type	*list*
Block object keys	

flag

Description Specify the flag (e.g., a, s). Default is empty flag

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default:

naptr-target

Description Specify the replacement or regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

order

Description Specify Order

Type: number

Range: 0-65535

preference

Description Specify Preference

Type: number

Range: 0-65535

regexp

Description Return the regular expression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

service-proto

Description Specify Service and Protocol

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-naptr-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'naptr-hits': Number of times the NAPTR has been used;

Type: string

Supported Values: all, naptr-hits

zone-list_service-list_health-check-port

Specification	Value
Type	*list*
Block object keys	

health-check-port

Description Check Related Port Status (Port Number)

Type: number

Range: 0-65534

zone-list_service-list_dns-record-list

Specification	Value
Type	*list*
Block object keys	

data

Description Specify DNS Data

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

type

Description Specify DNS Type

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-a-record

Specification	Value
Type	*object*

dns-a-record-ipv4-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-ipv4/{dns-a-record-ip}*

dns-a-record-ipv6-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-ipv6/{dns-a-record-ipv6}*

dns-a-record-srv-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-srv/{svrname}*

zone-list_service-list_dns-a-record_dns-a-record-ipv6-list

Specification	Value
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ipv6

Description IPV6 address

Type: string

Format: ipv6-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

zone-list_service-list_dns-a-record_dns-a-record-ipv4-list

Specification	Value
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ip

Description Specify IP address

Type: string

Format: ipv4-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

zone-list_service-list_dns-a-record_dns-a-record-srv-list

Specification	Value
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-name

Description Specify port service name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

svrname

Description Specify name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

zone-list_service-list_dns-ns-record-list

Specification	Value
Type	*list*
Block object keys	

ns-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-ns-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_service-list_dns-caa-record-list

Specification	Value
Type	*list*
Block object keys	

critical-flag

Description Issuer Critical Flag

Type: number

Range: 0-255

property-tag

Description Specify other property tags, only allowed lowercase alphanumeric

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rdata

Description Specify the Issuer Domain Name or a URL

Type: string

Format: string-rlx

Maximum Length: 1000 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-caa-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the CAA has been used;

Type: string

Supported Values: all, hits

zone-list_service-list_dns-mx-record-list

Specification	Value
Type	*list*
Block object keys	

mx-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-mx-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_service-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'received-query': Number of DNS queries received for the service; 'sent-response': Number of DNS replies sent to clients for the service; 'proxy-mode-response': Number of DNS replies sent to clients by the ACOS device as a DNS proxy for the service; 'cache-mode-response': Number of cached DNS replies sent to clients by the ACOS device for the service. (This statistic applies only if the DNS cache; 'server-mode-response': Number of DNS replies sent to clients by the ACOS device as a DNS server for the service. (This statistic applies only if the D; 'sticky-mode-response': Number of DNS replies sent to clients by the ACOS device to keep the clients on the same site. (This statistic applies only if; 'backup-mode-response': help Number of DNS replies sent to clients by the ACOS device in backup mode;

Type: string

Supported Values: all, received-query, sent-response, proxy-mode-response, cache-mode-response, server-mode-response, sticky-mode-response, backup-mode-response, smrule-redir-from-svc-hit, smrule-redir-from-svc-miss

zone-list_service-list_dns-srv-record-list

Specification	Value
Type	*list*
Block object keys	

port

Description Specify Port (Port Number)

Type: number

Range: 0-65534

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

srv-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 10

Type: number

Range: 0-65535

Default: 10

zone-list_service-list_dns-srv-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

group-list

Specification	Value
Type	*list*
Block object keys	

auto-map-learn

Description IP Address learned from other controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

auto-map-primary

Description Primary Controller's IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

auto-map-smart

Description Choose Best IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

config-anywhere

Description Every member can do config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

config-merge

Description Merge old master's config when new one take over

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

config-save

Description Accept config-save message from master

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

data-interface

Description Data Interface IP Address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

delay-start

Description Specify time for gslb group to delay start formation if VCS is enabled (Specify delay start for VCS, unit:minute,default is 0)

Type: number

Range: 0-60

Default: 0

dns-discover

Description Discover member via DNS Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

enable

Description Join GSLB Group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force-full-sync

Description Force GSLB to full sync config and files to members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

learn

Description Learn neighbour information from other controllers

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

mgmt-interface

Description Management Interface IP Address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

name

Description Specify Group domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default

primary-ipv6-list

Type: List

primary-list

Type: List

priority

Description Specify Local Priority, default is 100

Type: number

Range: 1-255

Default: 100

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN (Default Query type); 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

standalone

Description Run GSLB Group in standalone mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

suffix

Description Set DNS Suffix (Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sync-timeout

Description Specify timeout for gslb config sync (Specify timeout, unit:minute,default is 1)

Type: number

Range: 1-60

Default: 1

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

group-list_primary-ipv6-list

Specification	Value
Type	*list*
Block object keys	

primary-ipv6

Description Specify Primary controller's IP address

Type: string

Format: ipv6-address

group-list_primary-list

Specification	Value
Type	*list*
Block object keys	

primary

Description Specify Primary controller's IP address

Type: string

Format: ipv4-address

2.56.2 gslb active-rdt

Active RDT Options

active-rdt Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	active-rdt

        "status": "OK",
        "msg": "Success"
    }
}
```

active-rdt attributes

domain

Description Specify Query Domain (Specify Domain Name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

enable

Description Enable active rdt for system

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp

Description Using ICMP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Specify Query Interval, unit: second, default is 1

Type: number

Range: 1-16383

Default: 1

port

Description Specify local port to send probe packet, default is 0 (no port)

Type: number

Range: 0-65535

Default: 0

retry

Description Specify Retry Count, default is 3

Type: number

Range: 0-16

Default: 3

sleep

Description Specify Sleep Time when query fail, unit: second, default is 3

Type: number

Range: 1-300

Default: 3

timeout

Description Specify Query Timeout, unit: msec, default is 3000

Type: number

Range: 1-16383

Default: 3000

track

Description Specify Tracking Time, unit: second, default is 60

Type: number

Range: 3-16383

Default: 60

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

metric_active_rdt

Description Metric Active RDT Hit

Type: number

Format: counter

metric_active_server

Description Metric Active Server Hit

Type: number

Format: counter

metric_active_weight

Description Metric Active Weight Hit

Type: number

Format: counter

metric_admin_ip

Description Metric Admin IP Hit

Type: number

Format: counter

metric_admin_preference

Description Metric Admin Preference Hit

Type: number

Format: counter

metric_bandwidth_cost

Description Metric Bandwidth Cost Hit

Type: number

Format: counter

metric_bandwidth_quality

Description Metric Bandwidth Quality Hit

Type: number

Format: counter

metric_capacity

Description Metric Capacity Hit

Type: number

Format: counter

metric_connection_load

Description Metric Connection Load Hit

Type: number

Format: counter

metric_easy_rdt

Description Metric Easy RDT Hit

Type: number

Format: counter

metric_geographic

Description Metric Geographic Hit

Type: number

Format: counter

metric_health_check

Description Metric Health Check Hit

Type: number

Format: counter

metric_least_reponse

Description Metric Least Reponse Hit

Type: number

Format: counter

metric_number_of_sessions

Description Metric Number of Sessions Hit

Type: number

Format: counter

metric_round_robin

Description Metric Round Robin Hit

Type: number

Format: counter

metric_site_connection_count

Description Metric Connection Count by Site Hit

Type: number

Format: counter

metric_user

Description Metric User Hit

Type: number

Format: counter

metric_weighted_ip

Description Metric Weighted IP Hit

Type: number

Format: counter

metric_weighted_site

Description Metric Weighted Site Hit

Type: number

Format: counter

no_answer

Description Number of replies with unknown server IP

Type: number

Format: counter

total-query

Description Total number of DNS queries received

Type: number

Format: counter

total-response

Description Total number of DNS replies sent to clients

Type: number

Format: counter

2.56.5 gslb geo-location

Configure a GSLB global geo-location object

geo-location Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*geo-locn-obj-name*
Collection Name	*geo-location-list*
Collection URI	/axapi/v3/gslb/geo-location
Element Name	geo-location
Element URI	/axapi/v3/gslb/geo-location/{geo-locn-obj-name}
Element Attributes	geo-location_attributes
Partition Visibility	shared
Schema	`geo-location schema`

Operations Allowed:

Create Object

POST

/axapi/v3/gslb/geo-location

geo-location attributes

```
POST /axapi/v3/gslb/geo-location/
Payload:
{
    "geo-location": {
        "geo-locn-obj-name": "a",
        "user-tag": "a"
    }
}

group attributes

auto-map-learn

Description IP Address learned from other controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

auto-map-primary

Description Primary Controller's IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

auto-map-smart

Description Choose Best IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

config-anywhere

Description Every member can do config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

config-merge

Description Merge old master's config when new one take over

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

config-save

Description Accept config-save message from master

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

data-interface

Description Data Interface IP Address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

delay-start

Description Specify time for gslb group to delay start formation if VCS is enabled (Specify delay start for VCS, unit:minute,default is 0)

Type: number

Range: 0-60

Default: 0

dns-discover

Description Discover member via DNS Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

enable

Description Join GSLB Group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force-full-sync

Description Force GSLB to full sync config and files to members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

learn

Description Learn neighbour information from other controllers

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

mgmt-interface

Description Management Interface IP Address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

name

Description Specify Group domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default

primary-ipv6-list

Type: List

primary-list

Type: List

priority

Description Specify Local Priority, default is 100

Type: number

Range: 1-255

Default: 100

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN (Default Query type); 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

standalone

Description Run GSLB Group in standalone mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

suffix

Description Set DNS Suffix (Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sync-timeout

Description Specify timeout for gslb config sync (Specify timeout, unit:minute,default is 1)

Type: number

Range: 1-60

Default: 1

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

primary-ipv6-list

Specification	Value
Type	*list*
Block object keys	

primary-ipv6

Description Specify Primary controller's IP address

policy attributes

active-rdt

Description: active-rdt is a **JSON Block**. Please see below for *active-rdt*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/active-rdt*

active-servers-enable

Description Enable Select Service-IP with the highest number of active servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-servers-fail-break

Description Break when no active server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

admin-ip-enable

Description Enable admin ip

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

admin-ip-top-only

Description Return highest priority server only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: admin-ip-top-only and ordered-ip-top-only are mutually exclusive

admin-preference

Description Select Service-IP for the device having maximum admin preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

alias-admin-preference

Description Select alias name having maximum admin preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

amount-first

Description Select record based on the amount of available service-ip

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-map

Description: auto-map is a **JSON Block**. Please see below for *auto-map*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/auto-map*

bw-cost-enable

Description Enable bw cost

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-cost-fail-break

Description Break when exceed limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

capacity

Description: capacity is a **JSON Block**. Please see below for *capacity*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/capacity*

connection-count-by-site

Description: connection-count-by-site is a **JSON Block**. Please see below for *connection-count-by-site*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/connection-count-by-site*

connection-load

Description: connection-load is a **JSON Block**. Please see below for *connection-load*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/connection-load*

dns

Description: dns is a **JSON Block**. Please see below for *dns*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/dns*

edns

Description: edns is a **JSON Block**. Please see below for *edns*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/edns*

geo-location-list

Type: List

Reference Object: */axapi/v3/gslb/policy/{name}/geo-location/{name}*

geo-location-match

Description: geo-location-match is a **JSON Block**. Please see below for *geo-location-match*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/geo-location-match*

geographic

Description Select Service-IP by geographic

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

health-check

Description Select Service-IP by health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

health-check-preference-enable

Description Check health preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-preference-top

Description Only keep top n

Type: number

Range: 1-128

ip-list

Description Specify IP List (IP List Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/ip-list*

least-response

Description Least response selection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-fail-break

Description Break if no valid Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-force-check

Description Always check Service-IP for all enabled metrics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-order

Description Specify order of metric

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-type

Description

Type: string

Format: enum-list

name

Description Specify policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default

num-session-enable

Description Enable Select Service-IP for device having maximum number of available sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

num-session-tolerance

Description The difference between the available sessions, default is 10 (Tolerance)

Type: number

Range: 0-100

Default: 10

ordered-ip-top-only

Description Return highest priority server only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ordered-ip-top-only and admin-ip-top-only are mutually exclusive

round-robin

Description Round robin selection, enabled by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weighted-alias

Description Select alias name by weighted preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-ip-enable

Description Enable Select Service-IP by weighted preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-ip-total-hits

Description Weighted by total hits

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-site-enable

Description Enable Select Service-IP by weighted site preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-site-total-hits

Description Weighted by total hits

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-count-by-site

Specification	Value
Type	*object*

connection-count-enable

Description Enable connection-count-by-site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auto-map

Specification	Value
Type	*object*

all

Description All modules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and module-type are mutually exclusive

module-disable

Description Specify Disable Auto Map Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

module-type

Description

Type: string

Format: enum-list

Mutual Exclusion: module-type and all are mutually exclusive

ttl

Description Specify Auto Map TTL (TTL, default is 300)

Type: number

Range: 1-65535

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

edns

Specification	Value
Type	*object*

client-subnet-geographic

Description Use client subnet for geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

active-rdt

Specification	Value
Type	*object*

controller

Description Active round-delay-time by controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

difference

Description The difference between the round-delay-time, default is 0

Type: number

Range: 0-16383

Default: 0

enable

Description Enable the active rdt

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-break

Description Break when no valid RDT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-id

Description Ignore IP Address specified in IP List by ID

Type: number

Range: 0-31

keep-tracking

Description Keep tracking client even round-delay-time samples are ready

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit

Description Limit of allowed RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

prefer-dns-sticky

Description Use dns sticky if available

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proto-rdt-enable

Description Enable the round-delay-time to the controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

samples

Description Specify samples number for round-delay-time (Number of samples,default is 5)

Type: number

Range: 1-8

Default: 5

single-shot

Description Single Shot RDT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip

Description Skip query if round-delay-time samples are not ready (Specify maximum skip count,default is 3)

Type: number

Range: 1-31

Default: 3

sticky-difference

Description The difference between the round-delay-time of sticky entry

Type: number

Range: 1-16383

timeout

Description Specify timeout if round-delay-time samples are not ready (Specify timeout, unit:sec,default is 3)

Type: number

Range: 1-255

Default: 3

tolerance

Description The difference percentage between the round-delay-time, default is 10 (Tolerance)

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

capacity

Specification	Value
Type	*object*

capacity-enable

Description Enable capacity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

capacity-fail-break

Description Break when exceed threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold

Description Specify capacity threshold, default is 90

Type: number

Range: 0-100

Default: 90

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-match

Specification	Value
Type	*object*

geo-type-overlap

Description 'global': Global Geo-location; 'policy': Policy Geo-location;

Type: string

Supported Values: global, policy

match-first

Description 'global': Global Geo-location; 'policy': Policy Geo-location;

Type: string

Supported Values: global, policy

Default: global

overlap

Description Enable overlap mode to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns

Specification	Value
Type	*object*

action

Description Apply DNS action for service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-type

Description 'drop': Drop query; 'reject': Send refuse response; 'ignore': Send empty response;

Type: string

Supported Values: drop, reject, ignore

active-only

Description Only keep active servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-only-fail-safe

Description Continue if no candidate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aging-time

Description Specify aging-time, default is TTL in DNS record, unit: second (Aging time, default 0 means using TTL in DNS record as aging time)

Type: number

Range: 0-1000000000

Default: 0

backup-alias

Description Return alias name when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

backup-server

Description Return fallback server when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

block-action

Description Specify Action

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

block-type

Description

Type: string

Format: enum-list

block-value

Type: List

cache

Description Cache DNS Server response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cname-detect

Description Apply GSLB for DNS Server response when service is Canonical Name (CNAME)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

delegation

Description Zone Delegation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-addition-mx

Description Append MX Records in Addition Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-auto-map

Description Automatically build DNS Infrastructure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic-preference

Description Make dynamically change the preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic-weight

Description dynamically change the weight

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-ip

Description Return DNS response with external IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

external-soa

Description Return DNS response with external SOA Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-action

Description Apply DNS action by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-alias

Description Return alias name by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-policy

Description Apply different policy by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hint

Description 'none': None; 'answer': Append Hint Records in DNS Answer Section; 'addition': Append Hint Records in DNS Addition Section;

Type: string

Supported Values: none, answer, addition

Default: addition

ip-replace

Description Replace DNS Server Response with GSLB Service-IPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6

Type: List

logging

Description 'none': None; 'query': DNS Query; 'response': DNS Response; 'both': Both DNS Query and Response;

Type: string

Supported Values: none, query, response, both

proxy-block-port-range-list

Type: List

selected-only

Description Only keep selected servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

selected-only-value

Description Answer Number

Type: number

Range: 1-128

server

Description Run GSLB as DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-addition-mx

Description Append MX Records in Addition Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-any

Description Provide All Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-any and server-any-with-metric are mutually exclusive

server-any-with-metric

Description Provide All Records with GSLB Metrics applied to A/AAAA Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-any-with-metric and server-any are mutually exclusive

server-authoritative

Description As authoritative server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-auto-ns

Description Provide A-Records for NS-Records automatically

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-auto-ptr

Description Provide PTR Records automatically

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-caa

Description Provide CAA Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-cname

Description Provide CNAME Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-custom

Description Provide Custom Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-full-list

Description Append All A Records in Authoritative Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-mode-only

Description Only run GSLB as DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-mode-only and zone-owner-mode are mutually exclusive

server-mx

Description Provide MX Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-naptr

Description Provide NAPTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ns

Description Provide NS Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ns-list

Description Append All NS Records in Authoritative Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ptr

Description Provide PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-sec

Description Provide DNSSEC support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-srv

Description Provide SRV Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-txt

Description Provide TXT Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sticky

Description Make DNS Record sticky for certain time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sticky-aging-time

Description Specify aging-time, unit: min, default is 5 (Aging time)

Type: number

Range: 1-65535

Default: 5

sticky-ipv6-mask

Description Specify IPv6 mask length, default is 128

Type: number

Range: 1-128

Default: 128

sticky-mask

Description Specify IP mask, default is /32

Type: string

Format: ipv4-netmask-brief

Default: /32

sticky-options

Description: sticky-options is a **JSON Block**. Please see below for *dns_sticky-options*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/dns/sticky-options*

template

Description Logging template (Logging Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

ttl

Description Specify the TTL value contained in DNS record (TTL value, unit: second, default is 10)

Type: number

Range: 0-1000000000

Default: 10

Mutual Exclusion: ttl and use-server-ttl are mutually exclusive

use-server-ttl

Description Use DNS Server Response TTL value in GSLB Proxy mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-server-ttl and ttl are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-owner-mode

Description Only run GSLB as DNS server mode with zone ownership

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: zone-owner-mode and server-mode-only are mutually exclusive

dns_block-value

Specification	Value
Type	*list*
Block object keys	

block-value

Description Specify Type Number

Type: number

Range: 1-255

dns_ipv6

Specification	Value
Type	*list*
Block object keys	

dns-ipv6-mapping-type

Description 'addition': Append Mapped Record in DNS Addition Section; 'answer': Append Mapped Record in DNS Answer Section; 'exclusive': Only return AAAA Record; 'replace': Replace Record with Mapped Record;

Type: string

Supported Values: addition, answer, exclusive, replace

dns-ipv6-option

Description 'mix': Return both AAAA Record and A Record; 'smart': Return AAAA Record by DNS Query Type; 'mapping': Map A Record to AAAA Record;

Type: string

Supported Values: mix, smart, mapping

dns_sticky-options

Specification	Value
Type	*object*

edns-client-subnet

Description Use ECS for sticky creation and lookup

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

only-ecs

Description Only use ECS for session creation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_proxy-block-port-range-list

Specification	Value
Type	*list*
Block object keys	

proxy-block-range-from

Description Specify Type Range (From)

Type: number

proxy-block-range-to

Description To

Type: number

geo-location-list

Specification	Value
Type	*list*
Block object keys	

ip-multiple-fields

Type: List

ipv6-multiple-fields

Type: List

name

Description Specify geo-location name, section range is (1-15)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-list_ip-multiple-fields

Specification	Value
Type	*list*
Block object keys	

ip-addr2-sub

Description Specify IP address range

Type: string

Format: ipv4-address

ip-mask-sub

Description Specify IP/mask format (Specify IP address mask)

Type: string

Format: ipv4-netmask-brief

ip-sub

Description Specify IP information

Type: string

Format: ipv4-address

geo-location-list_ipv6-multiple-fields

Specification	Value
Type	*list*
Block object keys	

ipv6-addr2-sub

Description Specify IPv6 address range

Type: string

Format: ipv6-address

ipv6-mask-sub

Description Specify IPv6/mask format (Specify IP address mask)

Type: number

Range: 0-128

ipv6-sub

Description Specify IPv6 information

Type: string

Format: ipv6-address

connection-load

Specification	Value
Type	*object*

connection-load-enable

Description Enable connection-load

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-load-fail-break

Description Break when exceed limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-load-interval

Description Interval between two samples, Unit: second (Interval value,default is 5)

Type: number

Range: 1-60

Default: 5

connection-load-limit

Description The value of the connection-load limit, default is unlimited

Type: number

Range: 1-999999999

connection-load-samples

Description Specify samples for connection-load (Number of samples used to calculate the connection load, default is 5)

Type: number

Range: 1-8

Default: 5

limit

Description Limit of maxinum connection load, default is unlimited

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.56.14 gslb policy active-rdt

Select SLB device with the shortest round delay time to local DNS

active-rdt Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	active-rdt
Element URI	/axapi/v3/gslb/policy/{name}/active-rdt
Element Attributes	active-rdt_attributes
Partition Visibility	shared
Schema	`active-rdt schema`

Operations Allowed:

Create Object

POST

/axapi/v3/gslb/policy/{name}/active-rdt

active-rdt attributes

```
POST /axapi/v3/gslb/policy/a/active-rdt
Payload:
{
    "active-rdt": {
        "enable": 1
```

(continues on next page)

(continued from previous page)

```
    }
}
```

Get Object

GET

/axapi/v3/gslb/policy/{name}/active-rdt

active-rdt attributes

```
GET /axapi/v3/gslb/policy/a/active-rdt
Reponse:
{
    "active-rdt": {
        "enable": 1,
        "single-shot": 0,
        "prefer-dns-sticky": 0,
        "timeout": 3,
        "skip": 3,
        "keep-tracking": 0,
        "samples": 5,
        "tolerance": 10,
        "difference": 0,
        "limit": 16383,
        "fail-break": 0,
        "controller": 0,
        "proto-rdt-enable": 0,
        "uuid": "7d0af518-090b-11f0-9794-815a0f7f8297",
        "a10-url": "/axapi/v3/gslb/policy/a/active-rdt"
    }
}
```

Modify Object

POST

/axapi/v3/gslb/policy/{name}/active-rdt

active-rdt attributes

Replace Object

PUT

/axapi/v3/gslb/policy/{name}/active-rdt

active-rdt attributes

```
PUT /axapi/v3/gslb/policy/a/active-rdt
Payload:
{
    "active-rdt": {
        "enable": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/gslb/policy/{name}/active-rdt

active-rdt attributes

```
DELETE /axapi/v3/gslb/policy/a/active-rdt
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

active-rdt attributes

controller

Description Active round-delay-time by controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

difference

Description The difference between the round-delay-time, default is 0

Type: number

Range: 0-16383

Default: 0

enable

Description Enable the active rdt

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-break

Description Break when no valid RDT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-id

Description Ignore IP Address specified in IP List by ID

Type: number

Range: 0-31

keep-tracking

Description Keep tracking client even round-delay-time samples are ready

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit

Description Limit of allowed RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

prefer-dns-sticky

Description Use dns sticky if available

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proto-rdt-enable

Description Enable the round-delay-time to the controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

samples

Description Specify samples number for round-delay-time (Number of samples,default is 5)

Type: number

Range: 1-8

Default: 5

single-shot

Description Single Shot RDT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip

Description Skip query if round-delay-time samples are not ready (Specify maximum skip count,default is 3)

Type: number

Range: 1-31

Default: 3

sticky-difference

Description The difference between the round-delay-time of sticky entry

Type: number

Range: 1-16383

timeout

Description Specify timeout if round-delay-time samples are not ready (Specify timeout, unit:sec,default is 3)

Type: number

Range: 1-255

Default: 3

tolerance

Description The difference percentage between the round-delay-time, default is 10 (Tolerance)

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.56.15 gslb policy auto-map

Auto Mapping Options

auto-map Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	auto-map
Element URI	/axapi/v3/gslb/policy/{name}/auto-map
Element Attributes	auto-map_attributes
Partition Visibility	shared
Schema	`auto-map schema`

Operations Allowed:

Create Object

POST

/axapi/v3/gslb/policy/{name}/auto-map

auto-map attributes

```
POST /axapi/v3/gslb/policy/a/auto-map
Payload:
{
    "auto-map": {
        "ttl": 1
    }
}
```

Get Object

GET

/axapi/v3/gslb/policy/{name}/auto-map

auto-map attributes

```
GET /axapi/v3/gslb/policy/a/auto-map
Reponse:
{
    "auto-map": {
        "ttl": 1,
        "module-disable": 0,
        "uuid": "fbbb14ba-090b-11f0-9794-815a0f7f8297",
        "a10-url": "/axapi/v3/gslb/policy/a/auto-map"
    }
}
```

Modify Object

POST

/axapi/v3/gslb/policy/{name}/auto-map

auto-map attributes

Replace Object

PUT

/axapi/v3/gslb/policy/{name}/auto-map

auto-map attributes

Delete Object

DELETE

/axapi/v3/gslb/policy/{name}/auto-map

auto-map attributes

```
DELETE /axapi/v3/gslb/policy/a/auto-map
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

auto-map attributes

all

Description All modules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and module-type are mutually exclusive

module-disable

Description Specify Disable Auto Map Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

module-type

Description

Type: string

Format: enum-list

Mutual Exclusion: module-type and all are mutually exclusive

ttl

Description Specify Auto Map TTL (TTL, default is 300)

Type: number

Range: 1-65535

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.56.16 gslb policy capacity

Select Service-IP for the device having highest available connection capacity

capacity Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	capacity
Element URI	/axapi/v3/gslb/policy/{name}/capacity
Element Attributes	capacity_attributes
Partition Visibility	shared
Schema	`capacity schema`

Operations Allowed:

Create Object

POST

/axapi/v3/gslb/policy/{name}/capacity

capacity attributes

```
POST /axapi/v3/gslb/policy/a/capacity
Payload:
{
    "capacity": {
        "capacity-enable": 1
    }
}
```

Get Object

GET

/axapi/v3/gslb/policy/{name}/capacity

capacity attributes

```
GET /axapi/v3/gslb/policy/a/capacity
Reponse:
{
    "capacity": {
        "capacity-enable": 1,
        "threshold": 90,
        "capacity-fail-break": 0,
        "uuid": "0e846286-090c-11f0-9794-815a0f7f8297",

        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

capacity attributes

capacity-enable

Description Enable capacity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

capacity-fail-break

Description Break when exceed threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold

Description Specify capacity threshold, default is 90

Type: number

Range: 0-100

Default: 90

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.56.17 gslb policy connection-count-by-site

Select Site Service-IPs with the lowest aggregated connection-count

connection-count-by-site Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	connection-count-by-site
Element URI	/axapi/v3/gslb/policy/{name}/connection-count-by-site
Element Attributes	connection-count-by-site_attributes
Partition Visibility	shared
Schema	`connection-count-by-site schema`

Operations Allowed:

Create Object

POST

/axapi/v3/gslb/policy/{name}/connection-count-by-site

connection-count-by-site attributes

Get Object

GET

/axapi/v3/gslb/policy/{name}/connection-count-by-site

connection-count-by-site attributes

Modify Object

POST

/axapi/v3/gslb/policy/{name}/connection-count-by-site

connection-count-by-site attributes

Replace Object

PUT

connection-count-by-site attributes

Delete Object

DELETE

/axapi/v3/gslb/policy/{name}/connection-count-by-site

connection-count-by-site attributes

connection-count-by-site attributes

connection-count-enable

Description Enable connection-count-by-site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.56.18 gslb policy connection-load

Select Service-IP with the lowest connection-load

connection-load Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	connection-load
Element URI	/axapi/v3/gslb/policy/{name}/connection-load
Element Attributes	connection-load_attributes
Partition Visibility	shared
Schema	`connection-load schema`

Operations Allowed:

Create Object

POST

/axapi/v3/gslb/policy/{name}/connection-load

connection-load attributes

```
POST /axapi/v3/gslb/policy/a/connection-load
Payload:
{
    "connection-load": {
        "connection-load-enable": 1
    }
}
```

Get Object

GET

/axapi/v3/gslb/policy/{name}/connection-load

connection-load attributes

```
GET /axapi/v3/gslb/policy/a/connection-load
Reponse:
{
    "connection-load": {
        "connection-load-enable": 1,
        "connection-load-fail-break": 0,
        "connection-load-samples": 5,
        "connection-load-interval": 5,
        "limit": 0,
        "uuid": "32f66ad8-090c-11f0-9794-815a0f7f8297",
        "a10-url": "/axapi/v3/gslb/policy/a/connection-load"
    }
}
```

Modify Object

POST

/axapi/v3/gslb/policy/{name}/connection-load

connection-load attributes

Replace Object

PUT

/axapi/v3/gslb/policy/{name}/connection-load

connection-load attributes

```
PUT /axapi/v3/gslb/policy/a/connection-load
Payload:
{
    "connection-load": {
        "connection-load-enable": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/gslb/policy/{name}/connection-load

connection-load attributes

```
DELETE /axapi/v3/gslb/policy/a/connection-load
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

connection-load attributes

connection-load-enable

Description Enable connection-load

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-load-fail-break

Description Break when exceed limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-load-interval

Description Interval between two samples, Unit: second (Interval value,default is 5)

Type: number

Range: 1-60

Default: 5

connection-load-limit

Description The value of the connection-load limit, default is unlimited

Type: number

Range: 1-999999999

connection-load-samples

Description Specify samples for connection-load (Number of samples used to calculate the connection load, default is 5)

Type: number

Range: 1-8

Default: 5

limit

Description Limit of maxinum connection load, default is unlimited

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

    }
}
```

dns attributes

action

Description Apply DNS action for service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-type

Description 'drop': Drop query; 'reject': Send refuse response; 'ignore': Send empty response;

Type: string

Supported Values: drop, reject, ignore

active-only

Description Only keep active servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-only-fail-safe

Description Continue if no candidate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aging-time

Description Specify aging-time, default is TTL in DNS record, unit: second (Aging time, default 0 means using TTL in DNS record as aging time)

Type: number

Range: 0-1000000000

Default: 0

backup-alias

Description Return alias name when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

backup-server

Description Return fallback server when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

block-action

Description Specify Action

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

block-type

Description

Type: string

Format: enum-list

block-value

Type: List

cache

Description Cache DNS Server response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cname-detect

Description Apply GSLB for DNS Server response when service is Canonical Name (CNAME)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

delegation

Description Zone Delegation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-addition-mx

Description Append MX Records in Addition Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-auto-map

Description Automatically build DNS Infrastructure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic-preference

Description Make dynamically change the preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic-weight

Description dynamically change the weight

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-ip

Description Return DNS response with external IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

external-soa

Description Return DNS response with external SOA Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-action

Description Apply DNS action by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-alias

Description Return alias name by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-policy

Description Apply different policy by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hint

Description 'none': None; 'answer': Append Hint Records in DNS Answer Section; 'addition': Append Hint Records in DNS Addition Section;

Type: string

Supported Values: none, answer, addition

Default: addition

ip-replace

Description Replace DNS Server Response with GSLB Service-IPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6

Type: List

logging

Description 'none': None; 'query': DNS Query; 'response': DNS Response; 'both': Both DNS Query and Response;

Type: string

Supported Values: none, query, response, both

proxy-block-port-range-list

Type: List

selected-only

Description Only keep selected servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

selected-only-value

Description Answer Number

Type: number

Range: 1-128

server

Description Run GSLB as DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-addition-mx

Description Append MX Records in Addition Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-any

Description Provide All Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-any and server-any-with-metric are mutually exclusive

server-any-with-metric

Description Provide All Records with GSLB Metrics applied to A/AAAA Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-any-with-metric and server-any are mutually exclusive

server-authoritative

Description As authoritative server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-auto-ns

Description Provide A-Records for NS-Records automatically

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-auto-ptr

Description Provide PTR Records automatically

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-caa

Description Provide CAA Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-cname

Description Provide CNAME Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-custom

Description Provide Custom Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-full-list

Description Append All A Records in Authoritative Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-mode-only

Description Only run GSLB as DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-mode-only and zone-owner-mode are mutually exclusive

server-mx

Description Provide MX Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-naptr

Description Provide NAPTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ns

Description Provide NS Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ns-list

Description Append All NS Records in Authoritative Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ptr

Description Provide PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-sec

Description Provide DNSSEC support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-srv

Description Provide SRV Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-txt

Description Provide TXT Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sticky

Description Make DNS Record sticky for certain time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sticky-aging-time

Description Specify aging-time, unit: min, default is 5 (Aging time)

Type: number

Range: 1-65535

Default: 5

sticky-ipv6-mask

Description Specify IPv6 mask length, default is 128

Type: number

Range: 1-128

Default: 128

sticky-mask

Description Specify IP mask, default is /32

Type: string

Format: ipv4-netmask-brief

Default: /32

sticky-options

Description: sticky-options is a **JSON Block**. Please see below for *sticky-options*

Type: Object

Reference Object: */axapi/v3/gslb/policy/{name}/dns/sticky-options*

template

Description Logging template (Logging Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/logging*

ttl

Description Specify the TTL value contained in DNS record (TTL value, unit: second, default is 10)

Type: number

Range: 0-1000000000

Default: 10

Mutual Exclusion: ttl and use-server-ttl are mutually exclusive

use-server-ttl

Description Use DNS Server Response TTL value in GSLB Proxy mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-server-ttl and ttl are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-owner-mode

Description Only run GSLB as DNS server mode with zone ownership

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: zone-owner-mode and server-mode-only are mutually exclusive

block-value

Specification	Value
Type	*list*
Block object keys	

block-value

Description Specify Type Number

Type: number

Range: 1-255

ipv6

Specification	Value
Type	*list*
Block object keys	

dns-ipv6-mapping-type

Description 'addition': Append Mapped Record in DNS Addition Section; 'answer': Append Mapped Record in DNS Answer Section; 'exclusive': Only return AAAA Record; 'replace': Replace Record with Mapped Record;

Type: string

Supported Values: addition, answer, exclusive, replace

dns-ipv6-option

Description 'mix': Return both AAAA Record and A Record; 'smart': Return AAAA Record by DNS Query Type; 'mapping': Map A Record to AAAA Record;

Type: string

Supported Values: mix, smart, mapping

sticky-options

Specification	Value
Type	*object*

edns-client-subnet

Description Use ECS for sticky creation and lookup

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

only-ecs

Description Only use ECS for session creation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

proxy-block-port-range-list

Specification	Value
Type	*list*
Block object keys	

proxy-block-range-from

Description Specify Type Range (From)

Type: number

proxy-block-range-to

Description To

Type: number

2.56.20 gslb policy dns sticky-options

Specify sticky session options

sticky-options Specification

Parameter	Value
Type	*Configuration Resource*

geo-location-list

geo-location-list is **JSON List** of *geo-location attributes*

```
geo-location-list : [
        { geo-location attributes },
        { geo-location attributes },
        ...
    ]
```

geo-location attributes

ip-multiple-fields

Type: List

ipv6-multiple-fields

Type: List

name

Description Specify geo-location name, section range is (1-15)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-multiple-fields

Specification	Value
Type	*list*
Block object keys	

ip-addr2-sub

Description Specify IP address range

Type: string

Format: ipv4-address

ip-mask-sub

Description Specify IP/mask format (Specify IP address mask)

Type: string

Format: ipv4-netmask-brief

ip-sub

Description Specify IP information

Type: string

Format: ipv4-address

ipv6-multiple-fields

Specification	Value
Type	*list*
Block object keys	

ipv6-addr2-sub

Description Specify IPv6 address range

Type: string

Format: ipv6-address

ipv6-mask-sub

Description Specify IPv6/mask format (Specify IP address mask)

Type: number

Range: 0-128

ipv6-sub

Description Specify IPv6 information

Type: string

Format: ipv6-address

2.56.23 gslb policy geo-location-match

Specify match order of geographic

geo-location-match Specification

Parameter	Value
Type	*Configuration Resource*

```

protocol attributes

auto-detect

Description Automatically detect SLB Config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-new-gslb-sync

Description Disable new gslb config sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-list

Type: List

Reference Object: */axapi/v3/gslb/protocol/enable/{type}*

limit

Description: limit is a **JSON Block**. Please see below for *limit*

Type: Object

Reference Object: */axapi/v3/gslb/protocol/limit*

msg-format-acos-2x

Description Run GSLB Protocol in compatible mode with a ACOS 2.x GSLB peer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ping-site

Description name of site or ip address to ping

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

secure

Description: secure is a **JSON Block**. Please see below for *secure*

Type: Object

Reference Object: */axapi/v3/gslb/protocol/secure*

status-interval

Description Specify GSLB Message Protocol update period (The GSLB Protocol update interval (seconds), default is 30)

Type: number

Range: 1-1800

use-mgmt-port

Description Use management port for connections in Shared Partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port and use-mgmt-port-for-all-partitions are mutually exclusive

use-mgmt-port-for-all-partitions

Description Use management port for connections in all L3v Partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port-for-all-partitions and use-mgmt-port are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

secure

Specification	Value
Type	*object*

action

Description 'enable': Enable Secure; 'disable': Disable Secure (default); 'enable-fallback': Fall back to non-secure if fail;

Type: string

Supported Values: enable, disable, enable-fallback

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

limit

Specification	Value
Type	*object*

ardt-query

Description Query Messages of Active RDT, default is 200 (Number)

Type: number

Range: 0-1000000

Default: 200

ardt-response

Description Response Messages of Active RDT, default is 1000 (Number)

Type: number

Range: 0-1000000

Default: 1000

ardt-session

Description Sessions of Active RDT, default is 32768 (Number)

Type: number

Range: 0-1000000

Default: 32768

conn-response

Description Response Messages of Connection Load, default is no limit (Number)

Type: number

Range: 0-1000000

Default: 0

message

Description Amount of Messages, default is 10000 (Number)

Type: number

Range: 0-1000000

Default: 10000

response

Description Amount of Response Messages, default is 3600 (Number)

Type: number

Range: 0-1000000

Default: 3600

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable-list

Specification	Value
Type	*list*
Block object keys	

type

Description 'controller': Enable/Disable GSLB protocol as GSLB controller; 'device': Enable/Disable GSLB protocol as site device;

Type: string

Supported Values: controller, device

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.56.26 gslb protocol enable

Enable/Disable GSLB Message Protocol

enable Specification

Parameter	Value
Type	*Collection*

Description Disable all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-site-list

Type: List

member

Type: List

persistent-aging-time

Description Specify aging-time, unit: min, default is 5 (Aging time)

Type: number

Range: 1-65535

Default: 5

persistent-ipv6-mask

Description Specify IPv6 mask length, default is 128

Type: number

Range: 1-128

Default: 128

persistent-mask

Description Specify IP mask, default is /32

Type: string

Format: ipv4-netmask-brief

Default: /32

persistent-site

Description Persistent based on site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-name

Description Specify Service Group name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-site-list

Specification	Value
Type	*list*
Block object keys	

disable-site

Description Site name

ip-server-name

Description Specify the real server name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/service-ip*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

slb-dev-list

Specification	Value
Type	*list*
Block object keys	

admin-preference

Description Specify administrative preference (Specify admin-preference value,default is 100)

Type: number

Range: 0-255

Default: 100

auto-detect

Description 'ip': Service IP only; 'port': Service Port only; 'ip-and-port': Both service IP and service port; 'disabled': disable auto-detect;

Type: string

Supported Values: ip, port, ip-and-port, disabled

Default: ip-and-port

auto-map

Description Enable DNS Auto Mapping

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

client-ip

Description Specify client IP address

Type: string

Format: ipv4-address

dev-resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN (Default Query type); 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

device-name

Description Specify SLB device name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

domain

Description Device hostname

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: domain, ip-address, and ipv6-address are mutually exclusive

gateway-ip-addr

Description IP address

Type: string

Format: ipv4-address

health-check-action

Description 'health-check': Enable health Check; 'health-check-disable': Disable health check;

Type: string

Supported Values: health-check, health-check-disable

Default: health-check

ip-address

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address and domain are mutually exclusive

ipv6-address

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address and domain are mutually exclusive

max-client

Description Specify maximum number of clients, default is 32768

Type: number

Range: 1-2147483647

Default: 32768

msg-format-acos-2x

Description Run GSLB Protocol in compatible mode with a ACOS 2.x GSLB peer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

probe-timer

Description

Type: number

Range: 1-255

proto-aging-fast

Description Fast GSLB Protocol aging

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

proto-aging-time

Description Specify GSLB Protocol aging time, default is 60

Type: number

Range: 1-65535

Default: 60

proto-compatible

Description Run GSLB Protocol in compatible mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rdt-type

Description 'rdt': rdt; 'site-rdt': site-rdt;

Type: string

Supported Values: rdt, site-rdt

rdt-value

Description Specify Round-delay-time

Type: number

Range: 1-65535

session-number

Description

Type: number

Range: 0-16777214

session-utilization

Description

Type: number

Range: 1-100

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-server

Description: vip-server is a **JSON Block**. Please see below for *slb-dev-list_vip-server*

Type: Object

Reference Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}/vip-server*

slb-dev-list_vip-server

Specification	Value
Type	*object*

vip-server-name-list

Type: List

Reference Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}/vip-server/vip-server-name/{vip-name}*

vip-server-v4-list

Reference Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}/vip-server/vip-server-v6/{ipv6}*

slb-dev-list_vip-server_vip-server-v4-list

Specification	Value
Type	*list*
Block object keys	

ipv4

Description Specify IP address

Type: string

Format: ipv4-address

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

slb-dev-list_vip-server_vip-server-v4-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'dev_vip_hits': Number of times the service-ip was selected;

Type: string

Supported Values: all, dev_vip_hits, dev_vip_recent

slb-dev-list_vip-server_vip-server-v6-list

Specification	Value
Type	*list*
Block object keys	

ipv6

Description Specify IP address (IPv6 address)

Type: string

Format: ipv6-address

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

slb-dev-list_vip-server_vip-server-v6-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'dev_vip_hits': Number of times the service-ip was selected;

Type: string

Supported Values: all, dev_vip_hits, dev_vip_recent

slb-dev-list_vip-server_vip-server-name-list

Specification	Value
Type	*list*
Block object keys	

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-name

Description Specify a VIP name for the SLB device

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/service-ip*

slb-dev-list_vip-server_vip-server-name-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'dev_vip_hits': Number of times the service-ip was selected;

Type: string

Supported Values: all, dev_vip_hits, dev_vip_recent

multiple-geo-locations

Specification	Value
Type	*list*
Block object keys	

geo-location

Description Specify the geographic location of the GSLB site (Specify geo-location for this site)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

easy-rdt

Specification	Value
Type	*object*

aging-time

Description Aging Time, Unit: min, default is 10

Type: number

Range: 1-15360

Default: 10

bind-geoloc

Description Bind RDT to geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-count

Description Ignore count if RDT is out of range, default is 5

Type: number

Range: 0-15

Default: 5

ipv6-mask

Description Client IPv6 subnet mask, default is 128

Type: number

Range: 1-128

Default: 128

limit

Description Limit of valid RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

mask

Description Client IP subnet mask, default is 32

Type: string

Format: ipv4-netmask-brief

Default: /32

overlap

Description Enable overlap for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-factor

Description Factor of RDT Range, default is 25 (Range Factor of Smooth RDT)

Type: number

Range: 0-1000

Default: 25

smooth-factor

Description Factor of Smooth RDT, default is 10

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

active-rdt

Specification	Value
Type	*object*

aging-time

Description Aging Time, Unit: min, default is 10

Type: number

Range: 1-15360

Default: 10

bind-geoloc

Description Bind RDT to geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-count

Description Ignore count if RDT is out of range, default is 5

Type: number

Range: 0-15

Default: 5

ipv6-mask

Description Client IPv6 subnet mask, default is 128

Type: number

Range: 1-128

Default: 128

limit

Description Limit of valid RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

mask

Description Client IP subnet mask, default is 32

Type: string

Format: ipv4-netmask-brief

Default: /32

overlap

Description Enable overlap for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-factor

Description Factor of RDT Range, default is 25 (Range Factor of Smooth RDT)

Type: number

Range: 0-1000

Default: 25

smooth-factor

Description Factor of Smooth RDT, default is 10

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

slb-dev attributes

admin-preference

Description Specify administrative preference (Specify admin-preference value,default is 100)

Type: number

Range: 0-255

Default: 100

auto-detect

Description 'ip': Service IP only; 'port': Service Port only; 'ip-and-port': Both service IP and service port; 'disabled': disable auto-detect;

Type: string

Supported Values: ip, port, ip-and-port, disabled

Default: ip-and-port

auto-map

Description Enable DNS Auto Mapping

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

client-ip

Description Specify client IP address

Type: string

Format: ipv4-address

dev-resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN (Default Query type); 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

device-name

Description Specify SLB device name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

domain

Description Device hostname

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: domain, ip-address, and ipv6-address are mutually exclusive

gateway-ip-addr

Description IP address

Type: string

Format: ipv4-address

health-check-action

Description 'health-check': Enable health Check; 'health-check-disable': Disable health check;

Type: string

Supported Values: health-check, health-check-disable

Default: health-check

ip-address

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address and domain are mutually exclusive

ipv6-address

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address and domain are mutually exclusive

max-client

Description Specify maximum number of clients, default is 32768

Type: number

Range: 1-2147483647

Default: 32768

msg-format-acos-2x

Description Run GSLB Protocol in compatible mode with a ACOS 2.x GSLB peer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

probe-timer

Description

Type: number

Range: 1-255

proto-aging-fast

Description Fast GSLB Protocol aging

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

proto-aging-time

Description Specify GSLB Protocol aging time, default is 60

Type: number

Range: 1-65535

Default: 60

proto-compatible

Description Run GSLB Protocol in compatible mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rdt-type

Description 'rdt': rdt; 'site-rdt': site-rdt;

Type: string

Supported Values: rdt, site-rdt

rdt-value

Description Specify Round-delay-time

Type: number

Range: 1-65535

session-number

Description

Type: number

Range: 0-16777214

session-utilization

Description

Type: number

Range: 1-100

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

        "status": "OK",
        "msg": "Success"
    }
}
```

system attributes

age-interval

Description Interval to age runtime statistics. 0: never age, default is 10 (Time, unit: sec, default is 10)

Type: number

Range: 0-120

Default: 10

geo-location-iana

Description Load built-in IANA table

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

gslb-group

Description GSLB Group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-load-file-list

Type: List

gslb-service-ip

Description GSLB Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-site

Description GSLB Site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hostname

Description System's Network Name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-ttl

Description TTL of IP packets, default is 0 (IP TTL value, default is 0)

Type: number

Range: 0-255

Default: 0

module

Description Specify Auto Map Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-device

Description SLB Device

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-server

Description SLB Server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-virtual-server

Description SLB Virtual Server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify Auto Map TTL (TTL, default is 300)

Type: number

Range: 1-65535

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wait

Description Disable GSLB until timeout if system is not ready (Time, unit: sec, default is 0)

Type: number

Range: 0-16384

Default: 0

gslb-load-file-list

Specification	Value
Type	*list*
Block object keys	

geo-location-load-filename

Description Specify file to be loaded

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template-name

Description CSV template to load this file

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/template/csv*

2.56.69 gslb template

Specify a GSLB template

template Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	template
Element URI	/axapi/v3/gslb/template
Element Attributes	template_attributes
Partition Visibility	shared
Schema	`template schema`

Operations Allowed:

Get Object

GET

/axapi/v3/gslb/template

template_attributes

template attributes

csv-list

Type: List

Reference Object: */axapi/v3/gslb/template/csv/{csv-name}*

snmp-list

Type: List

Reference Object: */axapi/v3/gslb/template/snmp/{snmp-name}*

snmp-list

Specification	Value
Type	*list*
Block object keys	

auth-key

Description Specify authentication key (Specify key)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

auth-proto

Description 'sha': SHA; 'md5': MD5;

Type: string

Supported Values: sha, md5

Default: md5

community

Description Specify community for version 2c (Community name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

context-engine-id

Description Specify context engine ID

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

context-name

Description Specify context name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

host

Description Specify host (Host name or ip address)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

interface

Description Specify Interface ID

Type: number

Range: 0-2147483647

interval

Description Specify interval, default is 3 (Interval, unit: second, default is 3)

Type: number

Range: 1-999

Default: 3

oid

Description Specify OID

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

port

Description Specify port, default is 161 (Port Number, default is 161)

Type: number

Range: 1-65535

Default: 161

priv-key

Description Specify privacy key (Specify key)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

priv-proto

Description 'aes': AES; 'des': DES;

Type: string

Supported Values: aes, des

Default: des

security-engine-id

Description Specify security engine ID

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

security-level

Description 'no-auth': No authentication; 'auth-no-priv': Authentication, but no privacy; 'auth-priv': Authentication and privacy;

Type: string

Supported Values: no-auth, auth-no-priv, auth-priv

Default: no-auth

snmp-name

Description Specify name of snmp template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Specify username (User name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description 'v1': Version 1; 'v2c': Version 2c; 'v3': Version 3;

Type: string

Supported Values: v1, v2c, v3

Default: v3

csv-list

Specification	Value
Type	*list*
Block object keys	

csv-name

Description Specify name of csv template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

delim-char

Description enter a delimiter character, default ","

Type: string

Format: string-rlx

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: ,

Mutual Exclusion: delim-char and delim-num are mutually exclusive

delim-num

Description enter a delimiter number, default 44 (",")

Type: number

Range: 0-255

Default: 44

Mutual Exclusion: delim-num and delim-char are mutually exclusive

ipv6-enable

Description Support IPv6 IP ranges

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multiple-fields

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

csv-list_multiple-fields

Specification	Value
Type	*list*
Block object keys	

csv-type

Description 'ip-from': Beginning address of IP range or subnet; 'ip-to-mask': Ending address of IP range or Mask; 'continent': Continent; 'country': Country; 'state': State or province; 'city': City;

Type: string

Supported Values: ip-from, ip-to-mask, continent, country, state, city, ASN

field

Description Field index number (Index of Field)

Type: number

Range: 1-64

csv-list

csv-list is **JSON List** of *csv attributes*

csv-list : [

{ *csv attributes* },

{ *csv attributes* },

...

]

csv attributes

csv-name

Description Specify name of csv template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

delim-char

Description enter a delimiter character, default ","

Type: string

Format: string-rlx

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: ,

Mutual Exclusion: delim-char and delim-num are mutually exclusive

delim-num

Description enter a delimiter number, default 44 (",")

Type: number

Range: 0-255

Default: 44

Mutual Exclusion: delim-num and delim-char are mutually exclusive

ipv6-enable

Description Support IPv6 IP ranges

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multiple-fields

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

multiple-fields

Specification	Value
Type	*list*
Block object keys	

csv-type

Description 'ip-from': Beginning address of IP range or subnet; 'ip-to-mask': Ending address of IP range or Mask; 'continent': Continent; 'country': Country; 'state': State or province; 'city': City;

Type: string

Supported Values: ip-from, ip-to-mask, continent, country, state, city, ASN

field

Description Field index number (Index of Field)

Type: number

Range: 1-64

2.56.71 gslb template snmp

Specify SNMP template

snmp Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*snmp-name*
Collection Name	*snmp-list*
Collection URI	/axapi/v3/gslb/template/snmp
Element Name	snmp
Element URI	/axapi/v3/gslb/template/snmp/{snmp-name}
Element Attributes	snmp_attributes
Partition Visibility	shared
Schema	`snmp schema`

Operations Allowed:

Create Object

POST

/axapi/v3/gslb/template/snmp

snmp attributes

```
POST /axapi/v3/gslb/template/snmp/
Payload:
{
    "snmp": {
        "snmp-name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/gslb/template/snmp

snmp attributes

Get Object

{ *snmp attributes* },

...

]

snmp attributes

auth-key

Description Specify authentication key (Specify key)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

auth-proto

Description 'sha': SHA; 'md5': MD5;

Type: string

Supported Values: sha, md5

Default: md5

community

Description Specify community for version 2c (Community name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

context-engine-id

Description Specify context engine ID

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

context-name

Description Specify context name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

host

Description Specify host (Host name or ip address)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

interface

Description Specify Interface ID

Type: number

Range: 0-2147483647

interval

Description Specify interval, default is 3 (Interval, unit: second, default is 3)

Type: number

Range: 1-999

Default: 3

oid

Description Specify OID

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

port

Description Specify port, default is 161 (Port Number, default is 161)

Type: number

Range: 1-65535

Default: 161

priv-key

Description Specify privacy key (Specify key)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

priv-proto

Description 'aes': AES; 'des': DES;

Type: string

Supported Values: aes, des

Default: des

security-engine-id

Description Specify security engine ID

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

security-level

Description 'no-auth': No authentication; 'auth-no-priv': Authentication, but no privacy; 'auth-priv': Authentication and privacy;

Type: string

Supported Values: no-auth, auth-no-priv, auth-priv

Default: no-auth

snmp-name

Description Specify name of snmp template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Specify username (User name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description 'v1': Version 1; 'v2c': Version 2c; 'v3': Version 3;

Type: string

Supported Values: v1, v2c, v3

Default: v3

2.56.72 gslb zone

Specify the DNS zone name for which global SLB is provided

zone Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*zone-list*
Collection URI	/axapi/v3/gslb/zone
Element Name	zone
Element URI	/axapi/v3/gslb/zone/{name}
Element Attributes	zone_attributes

    }
}
```

zone-list

zone-list is **JSON List** of *zone attributes*

zone-list : [

{ *zone attributes* },

{ *zone attributes* },

...

]

zone attributes

disable

Description Disable all services in the GSLB zone

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-caa-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/dns-caa-record/{critical-flag}+{property-tag}+{rdata}*

dns-mx-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/dns-mx-record/{mx-name}*

dns-ns-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/dns-ns-record/{ns-name}*

dns-soa-record

Description: dns-soa-record is a **JSON Block**. Please see below for *dns-soa-record*

Type: Object

name

Description Specify the name for the DNS zone

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

policy

Description Specify the policy for this zone (Specify policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default

sampling-enable

Type: List

service-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}*

template

Description: template is a **JSON Block**. Please see below for *template*

Type: Object

ttl

Description Specify the zone ttl value (TTL value, unit: second, default is 10)

Type: number

Range: 0-1000000000

Default: 10

Mutual Exclusion: ttl and use-server-ttl are mutually exclusive

use-server-ttl

Description Use DNS Server Response TTL value in GSLB Proxy mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-server-ttl and ttl are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-ns-record-list

Specification	Value
Type	*list*
Block object keys	

ns-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-ns-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

dns-caa-record-list

Specification	Value
Type	*list*
Block object keys	

critical-flag

Description Issuer Critical Flag

Type: number

Range: 0-255

property-tag

Description Specify other property tags, only allowed lowercase alphanumeric

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rdata

Description Specify the Issuer Domain Name or a URL

Type: string

Format: string-rlx

Maximum Length: 1000 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-caa-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

dns-mx-record-list

Specification	Value
Type	*list*
Block object keys	

mx-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-mx-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'received-query': Total Number of DNS queries received for the zone; 'sent-response': Total Number of DNS replies sent to clients for the zone; 'proxy-mode-response': Total Number of DNS replies sent to clients by the ACOS device as a DNS proxy for the zone; 'cache-mode-response': Total Number of cached DNS replies sent to clients by the ACOS device for the zone. (This statistic applies only if the DNS cac; 'server-mode-response': Total Number of DNS replies sent to clients by the ACOS device as a DNS server for the zone. (This statistic applies only if th; 'sticky-mode-response': Total Number of DNS replies sent to clients by the ACOS device to keep the clients on the same site. (This statistic applies on; 'backup-mode-response': Total Number of DNS replies sent to clients by the ACOS device in backup mode;

Type: string

Supported Values: all, received-query, sent-response, proxy-mode-response, cache-mode-response, server-mode-response, sticky-mode-response, backup-mode-response, smrule-redir-from-svc-hit, smrule-redir-from-svc-miss

template

Specification	Value
Type	*object*

dnssec

Description Specify DNSSEC template (Specify template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dns-soa-record

Specification	Value
Type	*object*

ex-expire

Description Specify Expire Time Interval, default is 1209600

Type: number

Range: 0-2147483647

Default: 1209600

ex-mail

Description Mailbox

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ex-refresh

Description Specify Refresh Time Interval, default is 3600

Type: number

Range: 0-2147483647

Default: 3600

ex-retry

Description Specify Retry Time Interval, default is 900

Type: number

Range: 0-2147483647

Default: 900

ex-serial

Description Specify Serial Number, default is Current Time (Time Interval)

Type: number

Range: 0-2147483647

ex-soa-ttl

Description Specify Negative caching TTL, default is Zone TTL

Type: number

Range: 0-2147483647

expire

Description Specify Expire Time Interval, default is 1209600

Type: number

Range: 0-2147483647

Default: 1209600

external

Description Specify External SOA Record (DNS Server Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

mail

Description Mailbox

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

refresh

Description Specify Refresh Time Interval, default is 3600

Type: number

Range: 0-2147483647

Default: 3600

retry

Description Specify Retry Time Interval, default is 900

Type: number

Range: 0-2147483647

Default: 900

serial

Description Specify Serial Number, default is Current Time (Time Interval)

Type: number

Range: 0-2147483647

soa-name

Description DNS Server Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

soa-ttl

Description Specify Negative caching TTL, default is Zone TTL

Type: number

Range: 0-2147483647

service-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'drop': Drop query; 'forward': Forward packet; 'ignore': Send empty response; 'reject': Send refuse response;

Type: string

Supported Values: drop, forward, ignore, reject

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record

Description: dns-a-record is a **JSON Block**. Please see below for *service-list_dns-a-record*

Type: Object

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record*

dns-caa-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-caa-record/{critical-flag}+{property-tag}+{rdata}*

dns-srv-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record/{srv-name}+{port}*

dns-txt-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-txt-record/{record-name}*

forward-type

Description 'both': Forward both query and response; 'query': Forward query; 'response': Forward response;

Type: string

Supported Values: both, query, response

geo-location-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/geo-location/{geo-name}*

health-check-gateway

Description 'enable': Enable Gateway Status Check; 'disable': Disable Gateway Status Check;

Type: string

Supported Values: enable, disable

Default: enable

health-check-port

Type: List

policy

Description Specify policy for this service (Specify policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

service-name

Description Specify the service name for the zone, * for wildcard

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default:

service-port

Description Port number of the service

Type: number

Range: 0-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-ptr-record-list

Specification	Value
Type	*list*
Block object keys	

ptr-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-ptr-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

service-list_geo-location-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action for this geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: action and policy are mutually exclusive

action-type

Description 'allow': Allow query from this geo-location; 'drop': Drop query from this geo-location; 'forward': Forward packet for this geo-location; 'ignore': Send empty response to this geo-location; 'reject': Send refuse response to this geo-location;

Type: string

Supported Values: allow, drop, forward, ignore, reject

alias

Type: List

forward-type

Description 'both': Forward both query and response; 'query': Forward query from this geo-location; 'response': Forward response to this geo-location;

Type: string

Supported Values: both, query, response

geo-name

Description Specify the geo-location

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

policy

Description Policy for this geo-location (Specify the policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: policy and action are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_geo-location-list_alias

Specification	Value
Type	*list*
Block object keys	

alias

Description Send CNAME response for this geo-location (Specify a CNAME record)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

service-list_dns-cname-record-list

Specification	Value
Type	*list*
Block object keys	

admin-preference

Description Specify Administrative Preference, default is 100

Type: number

Range: 0-255

Default: 100

alias-name

Description Specify the alias name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 1

Type: number

Range: 1-100

Default: 1

service-list_dns-cname-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'cname-hits': Number of times the CNAME has been used;

Type: string

Supported Values: all, cname-hits

service-list_dns-txt-record-list

Specification	Value
Type	*list*
Block object keys	

record-name

Description Specify the Object Name for TXT Data

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

txt-data

Description Specify TXT Data

Type: string

Format: string-rlx

Maximum Length: 1000 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-txt-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

service-list_dns-naptr-record-list

Specification	Value
Type	*list*
Block object keys	

flag

Description Specify the flag (e.g., a, s). Default is empty flag

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default:

naptr-target

Description Specify the replacement or regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

order

Description Specify Order

Type: number

Range: 0-65535

preference

Description Specify Preference

Type: number

Range: 0-65535

regexp

Description Return the regular expression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

service-proto

Description Specify Service and Protocol

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-naptr-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'naptr-hits': Number of times the NAPTR has been used;

Type: string

Supported Values: all, naptr-hits

service-list_health-check-port

Specification	Value
Type	*list*
Block object keys	

health-check-port

Description Check Related Port Status (Port Number)

Type: number

Range: 0-65534

service-list_dns-record-list

Specification	Value
Type	*list*
Block object keys	

data

Description Specify DNS Data

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

type

Description Specify DNS Type

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-a-record

Specification	Value
Type	*object*

dns-a-record-ipv4-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-ipv4/{dns-a-record-ip}*

dns-a-record-ipv6-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-ipv6/{dns-a-record-ipv6}*

dns-a-record-srv-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-srv/{svrname}*

service-list_dns-a-record_dns-a-record-ipv6-list

Specification	Value
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ipv6

Description IPV6 address

Type: string

Format: ipv6-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

service-list_dns-a-record_dns-a-record-ipv4-list

Specification	Value
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ip

Description Specify IP address

Type: string

Format: ipv4-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

service-list_dns-a-record_dns-a-record-srv-list

Specification	Value
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-name

Description Specify port service name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

svrname

Description Specify name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/service-ip*

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

service-list_dns-ns-record-list

Specification	Value
Type	*list*
Block object keys	

ns-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-ns-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

service-list_dns-caa-record-list

Specification	Value
Type	*list*
Block object keys	

critical-flag

Description Issuer Critical Flag

Type: number

Range: 0-255

property-tag

Description Specify other property tags, only allowed lowercase alphanumeric

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rdata

Description Specify the Issuer Domain Name or a URL

Type: string

Format: string-rlx

Maximum Length: 1000 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-caa-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the CAA has been used;

Type: string

Supported Values: all, hits

service-list_dns-mx-record-list

Specification	Value
Type	*list*
Block object keys	

mx-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-mx-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

service-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'received-query': Number of DNS queries received for the service; 'sent-response': Number of DNS replies sent to clients for the service; 'proxy-mode-response': Number of DNS replies sent to clients by the ACOS device as a DNS proxy for the service; 'cache-mode-response': Number of cached DNS replies sent to clients by the ACOS device for the service. (This statistic applies only if the DNS cache; 'server-mode-response': Number of DNS replies sent to clients by the ACOS device as a DNS server for the service. (This statistic applies only if the D; 'sticky-mode-response': Number of DNS replies sent to clients by the ACOS device to keep the clients on the same site. (This statistic applies only if; 'backup-mode-response': help Number of DNS replies sent to clients by the ACOS device in backup mode;

Type: string

Supported Values: all, received-query, sent-response, proxy-mode-response, cache-mode-response, server-mode-response, sticky-mode-response, backup-mode-response, smrule-redir-from-svc-hit, smrule-redir-from-svc-miss

service-list_dns-srv-record-list

Specification	Value
Type	*list*
Block object keys	

port

Description Specify Port (Port Number)

Type: number

Range: 0-65534

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

srv-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 10

Type: number

Range: 0-65535

Default: 10

service-list_dns-srv-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

dns-txt-record-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-txt-record/{record-name}*

forward-type

Description 'both': Forward both query and response; 'query': Forward query; 'response': Forward response;

Type: string

Supported Values: both, query, response

geo-location-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/geo-location/{geo-name}*

health-check-gateway

Description 'enable': Enable Gateway Status Check; 'disable': Disable Gateway Status Check;

Type: string

Supported Values: enable, disable

Default: enable

health-check-port

Type: List

policy

Description Specify policy for this service (Specify policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

service-name

Description Specify the service name for the zone, * for wildcard

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default:

service-port

Description Port number of the service

Type: number

Range: 0-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-ptr-record-list

Specification	Value
Type	*list*
Block object keys	

ptr-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-ptr-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

geo-location-list

Specification	Value
Type	*list*
Block object keys	

action

Description Action for this geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: action and policy are mutually exclusive

action-type

Description 'allow': Allow query from this geo-location; 'drop': Drop query from this geo-location; 'forward': Forward packet for this geo-location; 'ignore': Send empty response to this geo-location; 'reject': Send refuse response to this geo-location;

Type: string

Supported Values: allow, drop, forward, ignore, reject

alias

Type: List

forward-type

Description 'both': Forward both query and response; 'query': Forward query from this geo-location; 'response': Forward response to this geo-location;

Type: string

Supported Values: both, query, response

geo-name

Description Specify the geo-location

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

policy

Description Policy for this geo-location (Specify the policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: policy and action are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-list_alias

Specification	Value
Type	*list*
Block object keys	

alias

Description Send CNAME response for this geo-location (Specify a CNAME record)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

dns-cname-record-list

Specification	Value
Type	*list*
Block object keys	

admin-preference

Description Specify Administrative Preference, default is 100

Type: number

Range: 0-255

Default: 100

alias-name

Description Specify the alias name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 1

Type: number

Range: 1-100

Default: 1

dns-cname-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'cname-hits': Number of times the CNAME has been used;

Type: string

Supported Values: all, cname-hits

dns-txt-record-list

Specification	Value
Type	*list*
Block object keys	

record-name

Description Specify the Object Name for TXT Data

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

txt-data

Description Specify TXT Data

Type: string

Format: string-rlx

Maximum Length: 1000 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-txt-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

dns-naptr-record-list

Specification	Value
Type	*list*
Block object keys	

flag

Description Specify the flag (e.g., a, s). Default is empty flag

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default:

naptr-target

Description Specify the replacement or regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

order

Description Specify Order

Type: number

Range: 0-65535

preference

Description Specify Preference

Type: number

Range: 0-65535

regexp

Description Return the regular expression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

service-proto

Description Specify Service and Protocol

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-naptr-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'naptr-hits': Number of times the NAPTR has been used;

Type: string

Supported Values: all, naptr-hits

health-check-port

Specification	Value
Type	*list*
Block object keys	

health-check-port

Description Check Related Port Status (Port Number)

Type: number

Range: 0-65534

dns-record-list

Specification	Value
Type	*list*
Block object keys	

data

Description Specify DNS Data

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

type

Description Specify DNS Type

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-a-record

Specification	Value
Type	*object*

dns-a-record-ipv4-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-ipv4/{dns-a-record-ip}*

dns-a-record-ipv6-list

Type: List

dns-a-record-srv-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-srv/{svrname}*

dns-a-record_dns-a-record-ipv6-list

Specification	Value
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ipv6

Description IPV6 address

Type: string

Format: ipv6-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

dns-a-record_dns-a-record-ipv4-list

Specification	Value
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ip

Description Specify IP address

Type: string

Format: ipv4-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

dns-a-record_dns-a-record-srv-list

Specification	Value
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-name

Description Specify port service name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

svrname

Description Specify name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/service-ip*

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

dns-ns-record-list

Specification	Value
Type	*list*
Block object keys	

ns-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-ns-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

dns-caa-record-list

Specification	Value
Type	*list*
Block object keys	

critical-flag

Description Issuer Critical Flag

Type: number

Range: 0-255

property-tag

Description Specify other property tags, only allowed lowercase alphanumeric

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rdata

Description Specify the Issuer Domain Name or a URL

Type: string

Format: string-rlx

Maximum Length: 1000 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-caa-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the CAA has been used;

Type: string

Supported Values: all, hits

dns-mx-record-list

Specification	Value
Type	*list*
Block object keys	

mx-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-mx-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'received-query': Number of DNS queries received for the service; 'sent-response': Number of DNS replies sent to clients for the service; 'proxy-mode-response': Number of DNS replies sent to clients by the ACOS device as a DNS proxy for the service; 'cache-mode-response': Number of cached DNS replies sent to clients by the ACOS device for the service. (This statistic applies only if the DNS cache; 'server-mode-response': Number of DNS replies sent to clients by the ACOS device as a DNS server for the service. (This statistic applies only if the D; 'sticky-mode-response': Number of DNS replies sent to clients by the ACOS device to keep the clients on the same site. (This statistic applies only if; 'backup-mode-response': help Number of DNS replies sent to clients by the ACOS device in backup mode;

Type: string

Supported Values: all, received-query, sent-response, proxy-mode-response, cache-mode-response, server-mode-response, sticky-mode-response, backup-mode-response, smrule-redir-from-svc-hit, smrule-redir-from-svc-miss

dns-srv-record-list

Specification	Value
Type	*list*
Block object keys	

port

Description Specify Port (Port Number)

Type: number

Range: 0-65534

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

srv-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 10

Type: number

Range: 0-65535

Default: 10

dns-srv-record-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

2.56.84 gslb zone service dns-a-record

Specify DNS Address Record

dns-a-record Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	dns-a-record
Element URI	/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record
Element Attributes	dns-a-record_attributes
Partition Visibility	shared
Schema	`dns-a-record schema`

Operations Allowed:

Get Object

GET

/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record

dns-a-record_attributes

dns-a-record attributes

dns-a-record-ipv4-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-ipv4/{dns-a-record-ip}*

dns-a-record-ipv6-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-ipv6/{dns-a-record-ipv6}*

dns-a-record-srv-list

Type: List

Reference Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-srv/{svrname}*

dns-a-record-ipv6-list

Specification	Value
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ipv6

Description IPV6 address

Type: string

Format: ipv6-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

dns-a-record-ipv4-list

Specification	Value
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ip

Description Specify IP address

Type: string

Format: ipv4-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

dns-a-record-srv-list

Specification	Value
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-name

Description Specify port service name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

svrname

Description Specify name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/service-ip*

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

2.56.85 gslb zone service dns-a-record dns-a-record-ipv4

Specify DNS Address Record

dns-a-record-ipv4 Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*dns-a-record-ip*

dns-a-record-srv attributes

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-name

Description Specify service label

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

svrname

Description Specify name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/gslb/service-ip*

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

2.56.106 gslb zone service dns-srv-record

Specify DNS SRV Record

dns-srv-record Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*srv-name, port*
Collection Name	*dns-srv-record-list*
Collection URI	/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record
Element Name	dns-srv-record
Element URI	/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record/{srv-name}+{port}
Element Attributes	dns-srv-record_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record/{srv-name}+{port}/stats
Schema	`dns-srv-record schema`

Operations Allowed:

Create Object

POST

/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record

dns-srv-record attributes

Create List

POST

/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record

dns-srv-record attributes

Get Object

GET

/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record/{srv-name}+{port}

dns-srv-record attributes

Get List

GET

/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record

dns-srv-record-list

Modify Object

POST

/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record/{srv-name}+{port}

dns-srv-record attributes

Replace Object

PUT

/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record/{srv-name}+{port}

dns-srv-record attributes

Replace List

PUT

/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record

dns-srv-record-list

Delete Object

DELETE

/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record/{srv-name}+{port}

dns-srv-record attributes

dns-srv-record-list

dns-srv-record-list is **JSON List** of *dns-srv-record attributes*

```
dns-srv-record-list : [
        { dns-srv-record attributes },
        { dns-srv-record attributes },
        ...
    ]
```

dns-srv-record attributes

port

Description Specify Port (Port Number)

Type: number

Range: 0-65534

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

srv-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 10

Type: number

Range: 0-65535

Default: 10

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

2.56.107 gslb zone service dns-srv-record stats

Statistics for the object dns-srv-record

dns-srv-record Specification

Parameter	Value
Type	*Collection*
Collection Name	*dns-srv-record-list*
Collection URI	/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record/{srv-name}+{port}
Element Name	dns-srv-record

geo-location attributes

geo-location-list

geo-location-list is **JSON List** of *geo-location attributes*

```
geo-location-list : [
        { geo-location attributes },
        { geo-location attributes },
        ...
    ]
```

geo-location attributes

action

Description Action for this geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: action and policy are mutually exclusive

action-type

Description 'allow': Allow query from this geo-location; 'drop': Drop query from this geo-location; 'forward': Forward packet for this geo-location; 'ignore': Send empty response to this geo-location; 'reject': Send refuse response to this geo-location;

Type: string

Supported Values: allow, drop, forward, ignore, reject

alias

Type: List

forward-type

Description 'both': Forward both query and response; 'query': Forward query from this geo-location; 'response': Forward response to this geo-location;

Type: string

Supported Values: both, query, response

geo-name

Description Specify the geo-location

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

policy

Description Policy for this geo-location (Specify the policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: policy and action are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alias

Specification	Value
Type	*list*
Block object keys	

alias

Description Send CNAME response for this geo-location (Specify a CNAME record)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

2.56.111 gslb zone service oper

profile

Specification	Value
Type	*object*

action

Description 'register': Register the device to the controller; 'deregister': Deregister the device from controller;

Type: string

Supported Values: register, deregister

analytics

Description 'all': Export all the analytics information.; 'system': Export only system level policy for device management.; 'disable': Disable all the exports from the device. This is the default value.;

Type: string

Supported Values: all, system, disable

Default: all

auto-restart-action

Description 'enable': enable auto analytics bus restart, default behavior is enable; 'disable': disable auto analytics bus restart;

Type: string

Supported Values: enable, disable

Default: enable

availability-zone

Description availablity zone of the thunder-device

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

cluster-id

Description id for the cluster in harmony controller, typically an uuid

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

cluster-name

Description name of cluster in harmony controller that this device is a member of

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

force

Description: force is a **JSON Block**. Please see below for *profile_force*

Type: Object

Reference Object: */axapi/v3/harmony-controller/profile/force*

host

Description Set harmony controller host address

Type: string

Format: host

Mutual Exclusion: host and host-ipv6 are mutually exclusive

host-ipv6

Description IPV6 address or FQDN for the host

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: host-ipv6 and host are mutually exclusive

interval

Description auto analytics bus restart time interval in mins, default is 3 mins

Type: number

Range: 1-15

Default: 3

password-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port

Description Set port for remote Harmony Controller

Type: number

Range: 1-32767

provider

Description provider for the harmony-controller

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

re-sync

Description: re-sync is a **JSON Block**. Please see below for *profile_re-sync*

Type: Object

Reference Object: */axapi/v3/harmony-controller/profile/re-sync*

region

Description region of the thunder-device

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

secret-value

Description Specify the password for the user

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

thunder-mgmt-ip

Description: thunder-mgmt-ip is a **JSON Block**. Please see below for *profile_thunder-mgmt-ip*

Type: Object

Reference Object: */axapi/v3/harmony-controller/profile/thunder-mgmt-ip*

tunnel

Description: tunnel is a **JSON Block**. Please see below for *profile_tunnel*

Type: Object

Reference Object: */axapi/v3/harmony-controller/profile/tunnel*

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-name

Description user-name for the tenant

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

profile_re-sync

Specification	Value
Type	*object*

analytics-bus

Description re-sync analtyics bus connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

schema-registry

Description re-sync the schema registry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

profile_tunnel

Specification	Value
Type	*object*

action

Description 'enable': Tunnel Enable; 'disable': Tunnel Disable;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

profile_thunder-mgmt-ip

Specification	Value
Type	*object*

ip-address

Description IP address (IPv4 address)

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address and ipv6-addr are mutually exclusive

ipv6-addr

Description IPV6 address for the host

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr and ip-address are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

profile_force

Specification	Value
Type	*object*

deregister

Description forcefully deregister thunder from harmony controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel-stats

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

config-replace

Specification	Value
Type	*object*

status

Description 'enable': enable config replace mode; 'disable': disable config replace mode;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

telemetry

Specification	Value
Type	*object*

log-rate

Description Max number of session logs sent by the partition per second

Type: number

Range: 0-10000

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

partition-tenant-info

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.2 harmony-controller config-replace

action

Description 'register': Register the device to the controller; 'deregister': Deregister the device from controller;

Type: string

Supported Values: register, deregister

analytics

Description 'all': Export all the analytics information.; 'system': Export only system level policy for device management.; 'disable': Disable all the exports from the device. This is the default value.;

Type: string

Supported Values: all, system, disable

Default: all

auto-restart-action

Description 'enable': enable auto analytics bus restart, default behavior is enable; 'disable': disable auto analytics bus restart;

Type: string

Supported Values: enable, disable

Default: enable

availability-zone

Description availablity zone of the thunder-device

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

cluster-id

Description id for the cluster in harmony controller, typically an uuid

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

cluster-name

Description name of cluster in harmony controller that this device is a member of

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

force

Description: force is a **JSON Block**. Please see below for *force*

Type: Object

Reference Object: */axapi/v3/harmony-controller/profile/force*

host

Description Set harmony controller host address

Type: string

Format: host

Mutual Exclusion: host and host-ipv6 are mutually exclusive

host-ipv6

Description IPV6 address or FQDN for the host

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: host-ipv6 and host are mutually exclusive

interval

Description auto analytics bus restart time interval in mins, default is 3 mins

Type: number

Range: 1-15

Default: 3

password-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port

Description Set port for remote Harmony Controller

Type: number

Range: 1-32767

provider

Description provider for the harmony-controller

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

re-sync

Description: re-sync is a **JSON Block**. Please see below for *re-sync*

Type: Object

Reference Object: */axapi/v3/harmony-controller/profile/re-sync*

region

Description region of the thunder-device

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

secret-value

Description Specify the password for the user

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

thunder-mgmt-ip

Description: thunder-mgmt-ip is a **JSON Block**. Please see below for *thunder-mgmt-ip*

Type: Object

Reference Object: */axapi/v3/harmony-controller/profile/thunder-mgmt-ip*

tunnel

Description: tunnel is a **JSON Block**. Please see below for *tunnel*

Type: Object

Reference Object: */axapi/v3/harmony-controller/profile/tunnel*

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-name

Description user-name for the tenant

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

re-sync

Specification	Value
Type	*object*

analytics-bus

Description re-sync analtyics bus connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

schema-registry

Description re-sync the schema registry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel

Specification	Value
Type	*object*

action

Description ‘enable’: Tunnel Enable; ‘disable’: Tunnel Disable;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

thunder-mgmt-ip

Specification	Value
Type	*object*

ip-address

Description IP address (IPv4 address)

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address and ipv6-addr are mutually exclusive

ipv6-addr

Description IPV6 address for the host

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr and ip-address are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

force

Specification	Value
Type	*object*

deregister

Description forcefully deregister thunder from harmony controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not found on standby; 'dcmsg_err': DCMSG error; 'no_slb_object': SLB object not found; 'smart_nat_init_port_err': Smart NAT port initialization error; 'smart_nat_init_inst_err': Smart NAT instance initialization error; 'smart_nat_rserver_route_err': Smart NAT rserver route update error; 'smart_nat_rserver_ip_err': Smart NAT rserver ip update error; 'nat_resource_err': NAT resource error; 'frag_err': Fragmentation error;

Type: string

Supported Values: all, act_recv_from_sby, act_send_to_sby, sby_recv_from_act, sby_send_to_act, sby_recv_from_act_err, recv_from_kernel, send_to_kernel, send_to_kernel_err, sby_no_peer, dcmsg_err, no_slb_object, smart_nat_init_port_err, smart_nat_init_inst_err, smart_nat_rserver_route_err, smart_nat_rserver_ip_err, nat_resource_err, frag_err

global

Specification	Value
Type	*object*

check-rate

Description Health Check Rate per 500ms (default 1000)

Type: number

Range: 1-50000

Default: 1000

disable-auto-adjust

Description Disable the Health Check Rate Auto Adjustment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-rate

Description Define the External Health Check Rate (Number of External Script Programs (default 2))

Type: number

Range: 1-999

Default: 2

interval

Description Specify the Healthcheck Interval (Interval Value, in seconds (default 5))

Type: number

Range: 1-180

Default: 5

multi-process

Description Start Health Monitoring in Multi-Process Mode (Specify the number of multiple processes (default 1))

Type: number

Range: 1-20

Default: 1

per

Description Specify the Unit Time for the rate (Specify the Unit Time, multiple of 100ms)

Type: number

Range: 1-20

Default: 2

retry

Description Specify the Healthcheck Retries (Retry Count (default 3))

Type: number

Range: 1-10

Default: 3

timeout

Description Specify the Healthcheck Timeout (Timeout Value, in seconds (default 5), Timeout should be less than or equal to interval)

Type: number

Range: 1-180

Default: 5

up-retry

Description Specify the Healthcheck Retries before declaring target up (Up-retry count (default 1))

Type: number

Range: 1-10

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

external

Specification	Value
Type	*object*

copy

Description: copy is a **JSON Block**. Please see below for *external_copy*

Type: Object

Reference Object: */axapi/v3/health/external/copy*

create

Description: create is a **JSON Block**. Please see below for *external_create*

Type: Object

Reference Object: */axapi/v3/health/external/create*

delete

Description: delete is a **JSON Block**. Please see below for *external_delete*

Type: Object

Reference Object: */axapi/v3/health/external/delete*

edit

Description: edit is a **JSON Block**. Please see below for *external_edit*

Type: Object

Reference Object: */axapi/v3/health/external/edit*

rename

Description: rename is a **JSON Block**. Please see below for *external_rename*

Type: Object

Reference Object: */axapi/v3/health/external/rename*

external_edit

Specification	Value
Type	*object*

description

Description Describe health external monitor script briefly

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external_rename

Specification	Value
Type	*object*

dst-file

Description Destination external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

src-file

Description Source external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external_create

Specification	Value
Type	*object*

description

Description Describe health external monitor script briefly

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external_copy

Specification	Value
Type	*object*

dst-file

Description Destination external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

src-file

Description Source external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external_delete

Specification	Value
Type	*object*

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

monitor-list

Specification	Value
Type	*list*
Block object keys	

default-state-up

Description Initial health state will default to UP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-after-down

Description Disable the target if health check failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dplane

Description 'enable': Enable health-check on dplane; 'disable': Disable health-check on dplane; 'auto(default)': Auto select;

Type: string

Supported Values: enable, disable, auto

Default: auto

dsr-l2-strict

Description Enable strict L2dsr health-check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-insert

Description: header-insert is a **JSON Block**. Please see below for *monitor-list_header-insert*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/header-insert*

interval

Description Specify the Healthcheck Interval (Interval Value, in seconds (default 5))

Type: number

Range: 1-180

method

Description: method is a **JSON Block**. Please see below for *monitor-list_method*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method*

name

Description Monitor Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: ping

override-ipv4

Description Override implicitly inherited IPv4 address from target

Type: string

Format: ipv4-address

override-ipv6

Description Override implicitly inherited IPv6 address from target

Type: string

Format: ipv6-address

override-port

Description Override implicitly inherited port from target (Port number (1-65534))

Type: number

Range: 1-65534

passive

Description Specify passive mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passive-interval

Description Interval to do manual health checking while in passive mode (Specify value in seconds (Default is 10 s))

Type: number

Range: 1-180

Default: 10

proxy-header

Description: proxy-header is a **JSON Block**. Please see below for *monitor-list_proxy-header*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/proxy-header*

retry

Description Specify the Healthcheck Retries (Retry Count (default 3))

Type: number

Range: 1-10

sample-threshold

Description Number of samples in one epoch above which passive HC is enabled. If below or equal to the threshold, passive HC is disabled (Specify number of samples in one second (Default is 50). If the number of samples is 0, no action is taken)

Type: number

Range: 1-10000

Default: 50

ssl-ciphers

Description Specify OpenSSL Cipher Suite name(s) for Health check (OpenSSL Cipher Suite(s) (Eg: AES128-SHA256), if the cipher is invalid, would give information at HM down reason)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: DEFAULT

ssl-dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 31-34

Default: 31

ssl-ticket

Description Enable SSL-Ticket Session Resumption

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-ticket-lifetime

Description SSL-Ticket lifetime (seconds)

Type: number

Range: 1-604800

ssl-version

Description TLS/SSL version (TLS/SSL version: 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 31-34

Default: 34

status-code

Description 'status-code-2xx': Enable passive mode with 2xx http status code; 'status-code-non-5xx': Enable passive mode with non-5xx http status code;

Type: string

Supported Values: status-code-2xx, status-code-non-5xx

strict-retry-on-server-err-resp

Description Require strictly retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-server-ssl

Description Server side SSL template for health monitor (Server side SSL Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

threshold

Description Threshold percentage above which passive mode is enabled (Specify percentage (Default is 75%))

Type: number

Range: 0-100

Default: 75

timeout

Description Specify the Healthcheck Timeout (Timeout Value, in seconds(default 5), Timeout should be less than or equal to interval)

Type: number

Range: 1-180

up-retry

Description Specify the Healthcheck Retries before declaring target up (Up-retry count (default 1))

Type: number

Range: 1-63

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_header-insert

Specification	Value
Type	*object*

insert-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_header-insert_insert-list

Specification	Value
Type	*list*
Block object keys	

insert-content

Description Header Content (Format: "[name]:[value]")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

monitor-list_method

Specification	Value
Type	*object*

compound

Description: compound is a **JSON Block**. Please see below for *monitor-list_method_compound*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/compound*

database

Description: database is a **JSON Block**. Please see below for *monitor-list_method_database*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/database*

dns

Description: dns is a **JSON Block**. Please see below for *monitor-list_method_dns*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/dns*

external

Description: external is a **JSON Block**. Please see below for *monitor-list_method_external*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/external*

ftp

Description: ftp is a **JSON Block**. Please see below for *monitor-list_method_ftp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/ftp*

http

Description: http is a **JSON Block**. Please see below for *monitor-list_method_http*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/http*

https

Description: https is a **JSON Block**. Please see below for *monitor-list_method_https*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/https*

icmp

Description: icmp is a **JSON Block**. Please see below for *monitor-list_method_icmp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/icmp*

imap

Description: imap is a **JSON Block**. Please see below for *monitor-list_method_imap*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/imap*

kerberos-kdc

Description: kerberos-kdc is a **JSON Block**. Please see below for *monitor-list_method_kerberos-kdc*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/kerberos-kdc*

ldap

Description: ldap is a **JSON Block**. Please see below for *monitor-list_method_ldap*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/ldap*

ntp

Description: ntp is a **JSON Block**. Please see below for *monitor-list_method_ntp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/ntp*

pop3

Description: pop3 is a **JSON Block**. Please see below for *monitor-list_method_pop3*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/pop3*

quic

Description: quic is a **JSON Block**. Please see below for *monitor-list_method_quic*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/quic*

radius

Description: radius is a **JSON Block**. Please see below for *monitor-list_method_radius*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/radius*

rtsp

Description: rtsp is a **JSON Block**. Please see below for *monitor-list_method_rtsp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/rtsp*

sip

Description: sip is a **JSON Block**. Please see below for *monitor-list_method_sip*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/sip*

smtp

Description: smtp is a **JSON Block**. Please see below for *monitor-list_method_smtp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/smtp*

snmp

Description: snmp is a **JSON Block**. Please see below for *monitor-list_method_snmp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/snmp*

tacplus

Description: tacplus is a **JSON Block**. Please see below for *monitor-list_method_tacplus*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/tacplus*

tcp

Description: tcp is a **JSON Block**. Please see below for *monitor-list_method_tcp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *monitor-list_method_udp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/udp*

monitor-list_method_rtsp

Specification	Value
Type	*object*

rtsp

Description RTSP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rtsp-port

Description Specify RTSP port, default is 554 (Port Number (default 554))

Type: number

Range: 1-65534

Default: 554

rtspurl

Description Specify URL string (Specify the path on the server)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_smtp

Specification	Value
Type	*object*

mail-from

Description Specify SMTP Sender

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rcpt-to

Description Specify SMTP Receiver

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

smtp

Description SMTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smtp-domain

Description Specify domain name of 'helo' command

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

smtp-port

Description Specify SMTP port, default is 25 (Port Number (default 25))

Type: number

Range: 1-65534

Default: 25

smtp-starttls

Description Check the STARTTLS support at helo response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_tcp

Specification	Value
Type	*object*

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method-tcp

Description TCP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-halfopen

Description Set TCP SYN check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-halfopen and port-send are mutually exclusive

port-resp

Description: port-resp is a **JSON Block**. Please see below for *monitor-list_method_tcp_port-resp*

Type: Object

port-send

Description Send a string to server (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

Mutual Exclusion: port-send and port-halfopen are mutually exclusive

tcp-port

Description Specify TCP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_tcp_port-resp

Specification	Value
Type	*object*

port-contains

Description Mark server up if response string contains string (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

monitor-list_method_radius

Specification	Value
Type	*object*

radius

Description RADIUS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

radius-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-message-authenticator

Description message-authenticator type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-port

Description Specify the RADIUS port, default is 1812 (Port number (default 1812))

Type: number

Range: 1-65534

Default: 1812

radius-response-code

Description Specify response code range (e.g. 2,4-7) (Format is xx,xx-xx (xx between [1, 13]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-secret

Description Configure shared secret of RADIUS server

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-secret-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

radius-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_https

Specification	Value
Type	*object*

cert

Description Specify client certificate (Certificate name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

cert-key-shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv2hello

Description Disable SSLv2Hello for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-version

Description 'http-version2': HTTP version 2 for HTTPs; 'http-version3': HTTP version 3 for HTTPs;

Type: string

Supported Values: http-version2, http-version3

https

Description HTTPS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-kerberos-auth

Description Https Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-kerberos-kdc

Description: https-kerberos-kdc is a **JSON Block**. Please see below for *monitor-list_method_https_https-kerberos-kdc*

Type: Object

https-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

https-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

https-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-response-code and https-text are mutually exclusive

https-server-cert-name

Description Expect Server Cert commonName

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: https-text, https-response-code, and text-regex are mutually exclusive

https-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

key

Description Specify client private key (Key name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

key-pass-phrase

Description Client private key password phrase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-phrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sni

Description Server Name Indication for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and https-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-port

Description Specify HTTPS port (Port Number (default 443))

Type: number

Range: 1-65534

Default: 443

monitor-list_method_https_https-kerberos-kdc

Specification	Value
Type	*object*

https-kerberos-hostip

Description Kdc's hostname(length:1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-kerberos-hostip and https-kerberos-hostipv6 are mutually exclusive

https-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: https-kerberos-hostipv6 and https-kerberos-hostip are mutually exclusive

https-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

https-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

monitor-list_method_ftp

Specification	Value
Type	*object*

ftp

Description FTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ftp-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-password-string

Description Specify the user password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ftp-port

Description Specify FTP port (Specify port number, default is 21)

Type: number

Range: 1-65534

Default: 21

ftp-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_sip

Specification	Value
Type	*object*

expect-response-code

Description Specify accepted response codes (e.g. 200, 400-430, any) (Format is xxx,xxx-xxx,any (xxx between [100,899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

register

Description Send SIP REGISTER message, default is to send OPTION message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip

Description SIP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip-hostname

Description Specify the SIP hostname that used in request

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

sip-port

Description Specify the SIP port, default is 5060 (Port Number)

Type: number

Range: 1-65534

Default: 5060

sip-tcp

Description Use TCP for transmission, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_snmp

Specification	Value
Type	*object*

community

Description Specify SNMP community, default is "public" (Community String)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: public

oid

Description: oid is a **JSON Block**. Please see below for *monitor-list_method_snmp_oid*

Type: Object

operation

Description: operation is a **JSON Block**. Please see below for *monitor-list_method_snmp_operation*

Type: Object

snmp

Description SNMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp-port

Description Specify SNMP port, default is 161 (Port Number)

Type: number

Range: 1-65534

Default: 161

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_snmp_oid

Specification	Value
Type	*object*

asn

Description Specify the format in ASN.1 style

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: asn and mib are mutually exclusive

mib

Description 'sysDescr': The MIB-2 OID of system description, 1.1.0; 'sysUpTime': The MIB-2 OID of system up time, 1.3.0; 'sysName': The MIB-2 OID of system nume, 1.5.0;

Type: string

Supported Values: sysDescr, sysUpTime, sysName

Mutual Exclusion: mib and asn are mutually exclusive

monitor-list_method_snmp_operation

Specification	Value
Type	*object*

oper-type

Description 'getnext': Get-Next-Request command; 'get': Get-Request command;

Type: string

Supported Values: getnext, get

monitor-list_method_dns

Specification	Value
Type	*object*

dns

Description DNS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain

Description Specify fully qualified domain name of the host

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain and dns-ip-key are mutually exclusive

dns-domain-expect

Description: dns-domain-expect is a **JSON Block**. Please see below for *monitor-list_method_dns_dns-domain-expect*

Type: Object

dns-domain-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-domain-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-domain-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain-type

Description 'A': Used for storing Ipv4 address (default); 'CNAME': Canonical name for a DNS alias; 'SOA': Start of authority; 'PTR': Domain name pointer; 'MX': Mail exchanger; 'TXT': Text string; 'AAAA': Used for storing Ipv6 128-bits address;

Type: string

Supported Values: A, CNAME, SOA, PTR, MX, TXT, AAAA

Default: A

dns-ip-key

Description Reverse DNS lookup (Specify IPv4 or IPv6 address)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dns-ip-key and dns-domain are mutually exclusive

dns-ipv4-addr

Description Specify IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-ipv4-addr and dns-ipv6-addr are mutually exclusive

dns-ipv4-expect

Description: dns-ipv4-expect is a **JSON Block**. Please see below for *monitor-list_method_dns_dns-ipv4-expect*

Type: Object

dns-ipv4-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv4-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv4-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-ipv6-addr

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-ipv6-addr and dns-ipv4-addr are mutually exclusive

dns-ipv6-expect

Description: dns-ipv6-expect is a **JSON Block**. Please see below for *monitor-list_method_dns_dns-ipv6-expect*

Type: Object

dns-ipv6-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv6-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv6-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_dns_dns-domain-expect

Specification	Value
Type	*object*

dns-domain-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-fqdn,dns-domain-response, dns-domain-ipv4, and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv4

Description Specify expected resolved IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-domain-ipv4,dns-domain-response, dns-domain-fqdn, and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv6

Description Specify expected resolved IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-domain-ipv6,dns-domain-response, dns-domain-fqdn, and dns-domain-ipv4 are mutually exclusive

dns-domain-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-response,dns-domain-fqdn, dns-domain-ipv4, and dns-domain-ipv6 are mutually exclusive

monitor-list_method_dns_dns-ipv6-expect

Specification	Value
Type	*object*

dns-ipv6-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-fqdn and dns-ipv6-response are mutually exclusive

dns-ipv6-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-response and dns-ipv6-fqdn are mutually exclusive

monitor-list_method_dns_dns-ipv4-expect

Specification	Value
Type	*object*

dns-ipv4-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-fqdn and dns-ipv4-response are mutually exclusive

dns-ipv4-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-response and dns-ipv4-fqdn are mutually exclusive

monitor-list_method_ldap

Specification	Value
Type	*object*

AcceptNotFound

Description Mark server up on receiving a not-found response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

AcceptResRef

Description Mark server up on receiving a search result reference response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

BaseDN

Description Specify LDAP DN distinguished name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap

Description LDAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-binddn

Description Specify the distinguished name for bindRequest (LDAP DN distinguished name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ldap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ldap-port

Description Specify the LDAP port (Speciry port number, default is 389, or 636 if LDAP over SSL)

Type: number

Range: 1-65534

Default: 389

ldap-query

Description LDAP query to be excuted

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ldap-run-search

Description Specify a query to be executed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-security

Description 'overssl': Set LDAP over SSL; 'StartTLS': LDAP switch to TLS;

Type: string

Supported Values: overssl, StartTLS

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_kerberos-kdc

Specification	Value
Type	*object*

kerberos-cfg

Description: kerberos-cfg is a **JSON Block**. Please see below for *monitor-list_method_kerberos-kdc_kerberos-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_kerberos-kdc_kerberos-cfg

Specification	Value
Type	*object*

kadmin

Description Kerberos admin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kadmin, kinit, and kpasswd are mutually exclusive

kadmin-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kadmin-kdc

Description Specify the kdc server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kadmin-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kadmin-realm

Description Specify the realm

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-server

Description Specify the admin server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit

Description Kerberos KDC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kinit, kadmin, and kpasswd are mutually exclusive

kinit-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kinit-kdc

Description Specify the kdc server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kinit-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd

Description Kerberos change passwd

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kpasswd, kinit, and kadmin are mutually exclusive

kpasswd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kpasswd-kdc

Description Specify the kdc server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kpasswd-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kpasswd-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd-server

Description Specify the Kerberos password server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp-only

Description Specify the kerberos tcp only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

monitor-list_method_udp

Specification	Value
Type	*object*

force-up-with-single-healthcheck

Description Force Up with no response at the first time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description UDP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp-port

Description Specify UDP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_http

Specification	Value
Type	*object*

http

Description HTTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

http-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-kerberos-auth

Description Http Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-kerberos-kdc

Description: http-kerberos-kdc is a **JSON Block**. Please see below for *monitor-list_method_http_http-kerberos-kdc*

Type: Object

http-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-password-string

Description Specify password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

http-port

Description Specify HTTP Port (Specify port number (default 80))

Type: number

Range: 1-65534

Default: 80

http-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-response-code and http-text are mutually exclusive

http-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: http-text, http-response-code, and text-regex are mutually exclusive

http-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and http-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version2

Description Specify HTTP version2 (Specify http version 2)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

monitor-list_method_http_http-kerberos-kdc

Specification	Value
Type	*object*

http-kerberos-hostip

Description Kdc's hostname(length:1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-kerberos-hostip and http-kerberos-hostipv6 are mutually exclusive

http-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: http-kerberos-hostipv6 and http-kerberos-hostip are mutually exclusive

http-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

http-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

monitor-list_method_quic

Specification	Value
Type	*object*

quic

Description QUIC type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

quic-port

Description Specify QUIC port (Port Number (default 443))

Type: number

Range: 1-65534

Default: 443

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_ntp

Specification	Value
Type	*object*

ntp

Description NTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ntp-port

Description Specify the NTP port, default is 123 (Port Number (default 123))

Type: number

Range: 1-65534

Default: 123

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_pop3

Specification	Value
Type	*object*

pop3

Description POP3 type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

pop3-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-password-string

Description Specify the user password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

pop3-port

Description Specify the POP3 port, default is 110 (Port Number (default 110))

Type: number

Range: 1-65534

Default: 110

pop3-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_external

Specification	Value
Type	*object*

ext-arguments

Description Specify external application's arguments (Application arguments)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ext-port

Description Specify the server port (Port Number)

Type: number

Range: 1-65534

ext-preference

Description Get server's perference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ext-program

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

ext-program-shared

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external

Description EXTERNAL type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-program

Description external application from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_compound

Specification	Value
Type	*object*

compound

Description Compound type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpn-string

Description Enter Reverse Polish Notation, example: sub hm1 sub hm2 and

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_icmp

Specification	Value
Type	*object*

icmp

Description ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

ip

Description Specify IPv4 address of destination behind monitored node

Type: string

Format: ipv4-address

Mutual Exclusion: ip and ipv6 are mutually exclusive

ipv6

Description Specify IPv6 address of destination behind monitored node

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 and ip are mutually exclusive

transparent

Description Apply transparent mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_imap

Specification	Value
Type	*object*

imap

Description IMAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-cram-md5

Description Challenge-response authentication mechanism

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

imap-login

Description Simple login

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

imap-plain

Description Plain text

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-port

Description Specify the IMAP port, default is 143 (Port Number (default 143))

Type: number

Range: 1-65534

Default: 143

imap-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

pwd-auth

Description Specify the Authentication method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_database

Specification	Value
Type	*object*

database

Description DATABASE type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

database-name

Description 'mssql': Specify MSSQL database; 'mysql': Specify MySQL database; 'oracle': Specify Oracle database; 'postgresql': Specify PostgreSQL database;

Type: string

Supported Values: mssql, mysql, oracle, postgresql

db-column

Description Specify the column number for receiving

Type: number

Range: 1-10

db-column-integer

Description Specify the column number for receiving

Type: number

Range: 1-10

db-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

db-name

Description Specify the database name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

db-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

db-password-str

Description Configure password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

db-receive

Description Specify the response string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: db-receive and db-receive-integer are mutually exclusive

db-receive-integer

Description Specify the response integer

Type: number

Range: 0-2147483647

Mutual Exclusion: db-receive-integer and db-receive are mutually exclusive

db-row

Description Specify the row number for receiving

Type: number

Range: 1-10

db-row-integer

Description Specify the row number for receiving

Type: number

Range: 1-10

db-send

Description Specify the SQL query

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

db-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_tacplus

Specification	Value
Type	*object*

secret-encrypted

Description

tacplus

Description TACACS+ type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

tacplus-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-port

Description Specify the TACACS+ port, default 49 (Port number (default 49))

Type: number

Range: 1-65534

Default: 49

tacplus-secret

Description Specify the shared secret of TACACS+ server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-secret-string

Description Shared Crypto Key

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-type

Description 'inbound-ascii-login': Specify Inbound ASCII Login type;

Type: string

Supported Values: inbound-ascii-login

Default: inbound-ascii-login

tacplus-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_proxy-header

Specification	Value
Type	*object*

proxy-header-ver

Description 'v1': version 1; 'v2': version 2; (version number)

Type: string

Supported Values: v1, v2

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.2 health external

Address the External Script Program

external Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	external
Element URI	/axapi/v3/health/external
Element Attributes	external_attributes
Partition Visibility	shared
Schema	`external schema`

Operations Allowed:

Get Object

GET

/axapi/v3/health/external

external_attributes

external attributes

copy

Description: copy is a **JSON Block**. Please see below for *copy*

Type: Object

Reference Object: */axapi/v3/health/external/copy*

create

Description: create is a **JSON Block**. Please see below for *create*

Type: Object

Reference Object: */axapi/v3/health/external/create*

delete

Description: delete is a **JSON Block**. Please see below for *delete*

Type: Object

Reference Object: */axapi/v3/health/external/delete*

edit

Description: edit is a **JSON Block**. Please see below for *edit*

Type: Object

Reference Object: */axapi/v3/health/external/edit*

rename

Description: rename is a **JSON Block**. Please see below for *rename*

Type: Object

Reference Object: */axapi/v3/health/external/rename*

edit

Specification	Value
Type	*object*

description

Description Describe health external monitor script briefly

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

rename

Specification	Value
Type	*object*

dst-file

Description Destination external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

src-file

Description Source external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

create

Specification	Value
Type	*object*

description

Description Describe health external monitor script briefly

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

copy

Specification	Value
Type	*object*

dst-file

Description Destination external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

src-file

Description Source external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

delete

Specification	Value
Type	*object*

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

2.59.3 health global

Define the Health Monitor global default

global Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	global
Element URI	/axapi/v3/health/global
Element Attributes	global_attributes
Partition Visibility	shared
Schema	`global schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/global

global attributes

```
POST /axapi/v3/health/global
Payload:
{
    "global": {
        "multi-process": 1
    }
}
```

Get Object

GET

/axapi/v3/health/global

global attributes

```
GET /axapi/v3/health/global
Reponse:
{
    "global": {
        "multi-process": 1,
        "disable-auto-adjust": 0,
        "check-rate": 1000,
        "external-rate": 2,
        "per": 2,
        "retry": 3,
        "up-retry": 1,
        "interval": 5,
        "timeout": 5,
        "uuid": "7e126f38-091d-11f0-82b5-7dd5c2404b7e",
        "a10-url": "/axapi/v3/health/global"
    }
}
```

Modify Object

POST

/axapi/v3/health/global

global attributes

Replace Object

PUT

/axapi/v3/health/global

global attributes

```
PUT /axapi/v3/health/global
Payload:
{
    "global": {
        "multi-process": 2
    }
}
```

Delete Object

DELETE

/axapi/v3/health/global

global attributes

```
DELETE /axapi/v3/health/global
Reponse:
{
    "response": {
```

(continues on next page)

(continued from previous page)

```
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

global attributes

check-rate

Description Health Check Rate per 500ms (default 1000)

Type: number

Range: 1-50000

Default: 1000

disable-auto-adjust

Description Disable the Health Check Rate Auto Adjustment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-rate

Description Define the External Health Check Rate (Number of External Script Programs (default 2))

Type: number

Range: 1-999

Default: 2

interval

Description Specify the Healthcheck Interval (Interval Value, in seconds (default 5))

Type: number

Range: 1-180

Default: 5

multi-process

Description Start Health Monitoring in Multi-Process Mode (Specify the number of multiple processes (default 1))

Type: number

Range: 1-20

Default: 1

per

Description Specify the Unit Time for the rate (Specify the Unit Time, multiple of 100ms)

Type: number

Range: 1-20

Default: 2

retry

Description Specify the Healthcheck Retries (Retry Count (default 3))

Type: number

Range: 1-10

Default: 3

timeout

Description Specify the Healthcheck Timeout (Timeout Value, in seconds (default 5), Timeout should be less than or equal to interval)

Type: number

Range: 1-180

Default: 5

up-retry

Description Specify the Healthcheck Retries before declaring target up (Up-retry count (default 1))

Type: number

Range: 1-10

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.4 health monitor

Define the Health Monitor object

monitor Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*name*
Collection Name	*monitor-list*
Collection URI	/axapi/v3/health/monitor
Element Name	monitor
Element URI	/axapi/v3/health/monitor/{name}
Element Attributes	monitor_attributes
Partition Visibility	shared
Schema	`monitor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/monitor

monitor attributes

```
POST /axapi/v3/health/monitor/
Payload:
{
    "monitor": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/health/monitor

monitor attributes

Get Object

GET

/axapi/v3/health/monitor/{name}

monitor attributes

```
GET /axapi/v3/health/monitor/a
Reponse:
{
    "monitor": {
        "name": "a",
        "dsr-l2-strict": 0,
        "retry": 3,
        "up-retry": 1,
```

(continues on next page)

(continued from previous page)

```
        "passive": 0,
        "strict-retry-on-server-err-resp": 0,
        "disable-after-down": 0,
        "interval": 5,
        "timeout": 5,
        "ssl-ciphers": "DEFAULT",
        "ssl-ticket": 0,
        "ssl-version": 34,
        "ssl-dgversion": 31,
        "default-state-up": 0,
        "uuid": "be974362-091d-11f0-82b5-7dd5c2404b7e",
        "user-tag": "a",
        "method": {
            "icmp": {
                "icmp": 1,
                "transparent": 0,
                "uuid": "be9765ea-091d-11f0-82b5-7dd5c2404b7e",
                "a10-url": "/axapi/v3/health/monitor/a/method/icmp"
            },
            "a10-url": "/axapi/v3/health/monitor/a/method"
        },
        "a10-url": "/axapi/v3/health/monitor/a"
    }
}
```

Get List

GET

/axapi/v3/health/monitor

monitor-list

Modify Object

POST

/axapi/v3/health/monitor/{name}

monitor attributes

Replace Object

PUT

/axapi/v3/health/monitor/{name}

monitor attributes

```
PUT /axapi/v3/health/monitor/a
Payload:
{
    "monitor": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/health/monitor

monitor-list

Delete Object

DELETE

/axapi/v3/health/monitor/{name}

monitor attributes

```
DELETE /axapi/v3/health/monitor/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

monitor-list

monitor-list is **JSON List** of *monitor attributes*

monitor-list : [

{ *monitor attributes* },

{ *monitor attributes* },

...

]

monitor attributes

default-state-up

Description Initial health state will default to UP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-after-down

Description Disable the target if health check failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dplane

Description 'enable': Enable health-check on dplane; 'disable': Disable health-check on dplane; 'auto(default)': Auto select;

Type: string

Supported Values: enable, disable, auto

Default: auto

dsr-l2-strict

Description Enable strict L2dsr health-check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-insert

Description: header-insert is a **JSON Block**. Please see below for *header-insert*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/header-insert*

interval

Description Specify the Healthcheck Interval (Interval Value, in seconds (default 5))

Type: number

Range: 1-180

method

Description: method is a **JSON Block**. Please see below for *method*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method*

name

Description Monitor Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: ping

override-ipv4

Description Override implicitly inherited IPv4 address from target

Type: string

Format: ipv4-address

override-ipv6

Description Override implicitly inherited IPv6 address from target

Type: string

Format: ipv6-address

override-port

Description Override implicitly inherited port from target (Port number (1-65534))

Type: number

Range: 1-65534

passive

Description Specify passive mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passive-interval

Description Interval to do manual health checking while in passive mode (Specify value in seconds (Default is 10 s))

Type: number

Range: 1-180

Default: 10

proxy-header

Description: proxy-header is a **JSON Block**. Please see below for *proxy-header*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/proxy-header*

retry

Description Specify the Healthcheck Retries (Retry Count (default 3))

Type: number

Range: 1-10

sample-threshold

Description Number of samples in one epoch above which passive HC is enabled. If below or equal to the threshold, passive HC is disabled (Specify number of samples in one second (Default is 50). If the number of samples is 0, no action is taken)

Type: number

Range: 1-10000

Default: 50

ssl-ciphers

Description Specify OpenSSL Cipher Suite name(s) for Health check (OpenSSL Cipher Suite(s) (Eg: AES128-SHA256), if the cipher is invalid, would give information at HM down reason)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: DEFAULT

ssl-dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 31-34

Default: 31

ssl-ticket

Description Enable SSL-Ticket Session Resumption

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-ticket-lifetime

Description SSL-Ticket lifetime (seconds)

Type: number

Range: 1-604800

ssl-version

Description TLS/SSL version (TLS/SSL version: 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 31-34

Default: 34

status-code

Description 'status-code-2xx': Enable passive mode with 2xx http status code; 'status-code-non-5xx': Enable passive mode with non-5xx http status code;

Type: string

Supported Values: status-code-2xx, status-code-non-5xx

strict-retry-on-server-err-resp

Description Require strictly retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-server-ssl

Description Server side SSL template for health monitor (Server side SSL Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/slb/template/server-ssl*

threshold

Description Threshold percentage above which passive mode is enabled (Specify percentage (Default is 75%))

Type: number

Range: 0-100

Default: 75

timeout

Description Specify the Healthcheck Timeout (Timeout Value, in seconds(default 5), Timeout should be less than or equal to interval)

Type: number

Range: 1-180

up-retry

Description Specify the Healthcheck Retries before declaring target up (Up-retry count (default 1))

Type: number

Range: 1-63

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

header-insert

Specification	Value
Type	*object*

insert-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

header-insert_insert-list

Specification	Value
Type	*list*
Block object keys	

insert-content

Description Header Content (Format: "[name]:[value]")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method

Specification	Value
Type	*object*

compound

Description: compound is a **JSON Block**. Please see below for *method_compound*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/compound*

database

Description: database is a **JSON Block**. Please see below for *method_database*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/database*

dns

Description: dns is a **JSON Block**. Please see below for *method_dns*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/dns*

external

Description: external is a **JSON Block**. Please see below for *method_external*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/external*

ftp

Description: ftp is a **JSON Block**. Please see below for *method_ftp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/ftp*

http

Description: http is a **JSON Block**. Please see below for *method_http*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/http*

https

Description: https is a **JSON Block**. Please see below for *method_https*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/https*

icmp

Description: icmp is a **JSON Block**. Please see below for *method_icmp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/icmp*

imap

Description: imap is a **JSON Block**. Please see below for *method_imap*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/imap*

kerberos-kdc

Description: kerberos-kdc is a **JSON Block**. Please see below for *method_kerberos-kdc*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/kerberos-kdc*

ldap

Description: ldap is a **JSON Block**. Please see below for *method_ldap*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/ldap*

ntp

Description: ntp is a **JSON Block**. Please see below for *method_ntp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/ntp*

pop3

Description: pop3 is a **JSON Block**. Please see below for *method_pop3*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/pop3*

quic

Description: quic is a **JSON Block**. Please see below for *method_quic*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/quic*

radius

Description: radius is a **JSON Block**. Please see below for *method_radius*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/radius*

rtsp

Description: rtsp is a **JSON Block**. Please see below for *method_rtsp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/rtsp*

sip

Description: sip is a **JSON Block**. Please see below for *method_sip*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/sip*

smtp

Description: smtp is a **JSON Block**. Please see below for *method_smtp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/smtp*

snmp

Description: snmp is a **JSON Block**. Please see below for *method_snmp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/snmp*

tacplus

Description: tacplus is a **JSON Block**. Please see below for *method_tacplus*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/tacplus*

tcp

Description: tcp is a **JSON Block**. Please see below for *method_tcp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *method_udp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/udp*

method_rtsp

Specification	Value
Type	*object*

rtsp

Description RTSP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rtsp-port

Description Specify RTSP port, default is 554 (Port Number (default 554))

Type: number

Range: 1-65534

Default: 554

rtspurl

Description Specify URL string (Specify the path on the server)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_smtp

Specification	Value
Type	*object*

mail-from

Description Specify SMTP Sender

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rcpt-to

Description Specify SMTP Receiver

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

smtp

Description SMTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smtp-domain

Description Specify domain name of 'helo' command

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

smtp-port

Description Specify SMTP port, default is 25 (Port Number (default 25))

Type: number

Range: 1-65534

Default: 25

smtp-starttls

Description Check the STARTTLS support at helo response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_tcp

Specification	Value
Type	*object*

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method-tcp

Description TCP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-halfopen

Description Set TCP SYN check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-halfopen and port-send are mutually exclusive

port-resp

Description: port-resp is a **JSON Block**. Please see below for *method_tcp_port-resp*

Type: Object

port-send

Description Send a string to server (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

Mutual Exclusion: port-send and port-halfopen are mutually exclusive

tcp-port

Description Specify TCP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_tcp_port-resp

Specification	Value
Type	*object*

port-contains

Description Mark server up if response string contains string (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method_radius

Specification	Value
Type	*object*

radius

Description RADIUS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

radius-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-message-authenticator

Description message-authenticator type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-port

Description Specify the RADIUS port, default is 1812 (Port number (default 1812))

Type: number

Range: 1-65534

Default: 1812

radius-response-code

Description Specify response code range (e.g. 2,4-7) (Format is xx,xx-xx (xx between [1, 13]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-secret

Description Configure shared secret of RADIUS server

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-secret-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

radius-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_https

Specification	Value
Type	*object*

cert

Description Specify client certificate (Certificate name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

cert-key-shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv2hello

Description Disable SSLv2Hello for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-version

Description 'http-version2': HTTP version 2 for HTTPs; 'http-version3': HTTP version 3 for HTTPs;

Type: string

Supported Values: http-version2, http-version3

https

Description HTTPS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-kerberos-auth

Description Https Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-kerberos-kdc

Description: https-kerberos-kdc is a **JSON Block**. Please see below for *method_https_https-kerberos-kdc*

Type: Object

https-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

https-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

https-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-response-code and https-text are mutually exclusive

https-server-cert-name

Description Expect Server Cert commonName

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: https-text, https-response-code, and text-regex are mutually exclusive

https-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

key

Description Specify client private key (Key name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

key-pass-phrase

Description Client private key password phrase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-phrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sni

Description Server Name Indication for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and https-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-port

Description Specify HTTPS port (Port Number (default 443))

Type: number

Range: 1-65534

Default: 443

method_https_https-kerberos-kdc

Specification	Value
Type	*object*

https-kerberos-hostip

Description Kdc's hostname(length:1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-kerberos-hostip and https-kerberos-hostipv6 are mutually exclusive

https-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: https-kerberos-hostipv6 and https-kerberos-hostip are mutually exclusive

https-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

https-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

method_ftp

Specification	Value
Type	*object*

ftp

Description FTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ftp-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-password-string

Description Specify the user password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ftp-port

Description Specify FTP port (Specify port number, default is 21)

Type: number

Range: 1-65534

Default: 21

ftp-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_sip

Specification	Value
Type	*object*

expect-response-code

Description Specify accepted response codes (e.g. 200, 400-430, any) (Format is xxx,xxx-xxx,any (xxx between [100,899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

register

Description Send SIP REGISTER message, default is to send OPTION message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip

Description SIP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip-hostname

Description Specify the SIP hostname that used in request

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

sip-port

Description Specify the SIP port, default is 5060 (Port Number)

Type: number

Range: 1-65534

Default: 5060

sip-tcp

Description Use TCP for transmission, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_snmp

Specification	Value
Type	*object*

community

Description Specify SNMP community, default is "public" (Community String)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: public

oid

Description: oid is a **JSON Block**. Please see below for *method_snmp_oid*

Type: Object

operation

Description: operation is a **JSON Block**. Please see below for *method_snmp_operation*

Type: Object

snmp

Description SNMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp-port

Description Specify SNMP port, default is 161 (Port Number)

Type: number

Range: 1-65534

Default: 161

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_snmp_oid

Specification	Value
Type	*object*

asn

Description Specify the format in ASN.1 style

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: asn and mib are mutually exclusive

mib

Description 'sysDescr': The MIB-2 OID of system description, 1.1.0; 'sysUpTime': The MIB-2 OID of system up time, 1.3.0; 'sysName': The MIB-2 OID of system nume, 1.5.0;

Type: string

Supported Values: sysDescr, sysUpTime, sysName

Mutual Exclusion: mib and asn are mutually exclusive

method_snmp_operation

Specification	Value
Type	*object*

oper-type

Description 'getnext': Get-Next-Request command; 'get': Get-Request command;

Type: string

Supported Values: getnext, get

method_dns

Specification	Value
Type	*object*

dns

Description DNS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain

Description Specify fully qualified domain name of the host

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain and dns-ip-key are mutually exclusive

dns-domain-expect

Description: dns-domain-expect is a **JSON Block**. Please see below for *method_dns_dns-domain-expect*

Type: Object

dns-domain-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-domain-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-domain-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain-type

Description 'A': Used for storing Ipv4 address (default); 'CNAME': Canonical name for a DNS alias; 'SOA': Start of authority; 'PTR': Domain name pointer; 'MX': Mail exchanger; 'TXT': Text string; 'AAAA': Used for storing Ipv6 128-bits address;

Type: string

Supported Values: A, CNAME, SOA, PTR, MX, TXT, AAAA

Default: A

dns-ip-key

Description Reverse DNS lookup (Specify IPv4 or IPv6 address)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dns-ip-key and dns-domain are mutually exclusive

dns-ipv4-addr

Description Specify IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-ipv4-addr and dns-ipv6-addr are mutually exclusive

dns-ipv4-expect

Description: dns-ipv4-expect is a **JSON Block**. Please see below for *method_dns_dns-ipv4-expect*

Type: Object

dns-ipv4-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv4-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv4-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-ipv6-addr

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-ipv6-addr and dns-ipv4-addr are mutually exclusive

dns-ipv6-expect

Description: dns-ipv6-expect is a **JSON Block**. Please see below for *method_dns_dns-ipv6-expect*

Type: Object

dns-ipv6-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv6-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv6-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_dns_dns-domain-expect

Specification	Value
Type	*object*

dns-domain-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-fqdn,dns-domain-response, dns-domain-ipv4, and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv4

Description Specify expected resolved IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-domain-ipv4,dns-domain-response, dns-domain-fqdn, and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv6

Description Specify expected resolved IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-domain-ipv6,dns-domain-response, dns-domain-fqdn, and dns-domain-ipv4 are mutually exclusive

dns-domain-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-response,dns-domain-fqdn, dns-domain-ipv4, and dns-domain-ipv6 are mutually exclusive

method_dns_dns-ipv6-expect

Specification	Value
Type	*object*

dns-ipv6-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-fqdn and dns-ipv6-response are mutually exclusive

dns-ipv6-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-response and dns-ipv6-fqdn are mutually exclusive

method_dns_dns-ipv4-expect

Specification	Value
Type	*object*

dns-ipv4-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-fqdn and dns-ipv4-response are mutually exclusive

dns-ipv4-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-response and dns-ipv4-fqdn are mutually exclusive

method_ldap

Specification	Value
Type	*object*

AcceptNotFound

Description Mark server up on receiving a not-found response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

AcceptResRef

Description Mark server up on receiving a search result reference response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

BaseDN

Description Specify LDAP DN distinguished name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap

Description LDAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-binddn

Description Specify the distinguished name for bindRequest (LDAP DN distinguished name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ldap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ldap-port

Description Specify the LDAP port (Speciry port number, default is 389, or 636 if LDAP over SSL)

Type: number

Range: 1-65534

Default: 389

ldap-query

Description LDAP query to be excuted

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ldap-run-search

Description Specify a query to be executed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-security

Description 'overssl': Set LDAP over SSL; 'StartTLS': LDAP switch to TLS;

Type: string

Supported Values: overssl, StartTLS

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_kerberos-kdc

Specification	Value
Type	*object*

kerberos-cfg

Description: kerberos-cfg is a **JSON Block**. Please see below for *method_kerberos-kdc_kerberos-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_kerberos-kdc_kerberos-cfg

Specification	Value
Type	*object*

kadmin

Description Kerberos admin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kadmin, kinit, and kpasswd are mutually exclusive

kadmin-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kadmin-kdc

Description Specify the kdc server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kadmin-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kadmin-realm

Description Specify the realm

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-server

Description Specify the admin server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit

Description Kerberos KDC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kinit, kadmin, and kpasswd are mutually exclusive

kinit-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kinit-kdc

Description Specify the kdc server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kinit-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd

Description Kerberos change passwd

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kpasswd, kinit, and kadmin are mutually exclusive

kpasswd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kpasswd-kdc

Description Specify the kdc server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kpasswd-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kpasswd-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd-server

Description Specify the Kerberos password server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp-only

Description Specify the kerberos tcp only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method_udp

Specification	Value
Type	*object*

force-up-with-single-healthcheck

Description Force Up with no response at the first time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description UDP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp-port

Description Specify UDP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_http

Specification	Value
Type	*object*

http

Description HTTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

http-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-kerberos-auth

Description Http Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-kerberos-kdc

Description: http-kerberos-kdc is a **JSON Block**. Please see below for *method_http_http-kerberos-kdc*

Type: Object

http-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-password-string

Description Specify password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

http-port

Description Specify HTTP Port (Specify port number (default 80))

Type: number

Range: 1-65534

Default: 80

http-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-response-code and http-text are mutually exclusive

http-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: http-text, http-response-code, and text-regex are mutually exclusive

http-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and http-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version2

Description Specify HTTP version2 (Specify http version 2)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method_http_http-kerberos-kdc

Specification	Value
Type	*object*

http-kerberos-hostip

Description Kdc's hostname(length:1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-kerberos-hostip and http-kerberos-hostipv6 are mutually exclusive

http-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: http-kerberos-hostipv6 and http-kerberos-hostip are mutually exclusive

http-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

http-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

method_quic

Specification	Value
Type	*object*

quic

Description QUIC type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

quic-port

Description Specify QUIC port (Port Number (default 443))

Type: number

Range: 1-65534

Default: 443

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_ntp

Specification	Value
Type	*object*

ntp

Description NTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ntp-port

Description Specify the NTP port, default is 123 (Port Number (default 123))

Type: number

Range: 1-65534

Default: 123

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_pop3

Specification	Value
Type	*object*

pop3

Description POP3 type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

pop3-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-password-string

Description Specify the user password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

pop3-port

Description Specify the POP3 port, default is 110 (Port Number (default 110))

Type: number

Range: 1-65534

Default: 110

pop3-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_external

Specification	Value
Type	*object*

ext-arguments

Description Specify external application's arguments (Application arguments)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ext-port

Description Specify the server port (Port Number)

Type: number

Range: 1-65534

ext-preference

Description Get server's perference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ext-program

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

ext-program-shared

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external

Description EXTERNAL type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-program

Description external application from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_compound

Specification	Value
Type	*object*

compound

Description Compound type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpn-string

Description Enter Reverse Polish Notation, example: sub hm1 sub hm2 and

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_icmp

Specification	Value
Type	*object*

icmp

Description ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

ip

Description Specify IPv4 address of destination behind monitored node

Type: string

Format: ipv4-address

Mutual Exclusion: ip and ipv6 are mutually exclusive

ipv6

Description Specify IPv6 address of destination behind monitored node

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 and ip are mutually exclusive

transparent

Description Apply transparent mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_imap

Specification	Value
Type	*object*

imap

Description IMAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-cram-md5

Description Challenge-response authentication mechanism

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

imap-login

Description Simple login

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

imap-plain

Description Plain text

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-port

Description Specify the IMAP port, default is 143 (Port Number (default 143))

Type: number

Range: 1-65534

Default: 143

imap-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

pwd-auth

Description Specify the Authentication method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_database

Specification	Value
Type	*object*

database

Description DATABASE type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

database-name

Description 'mssql': Specify MSSQL database; 'mysql': Specify MySQL database; 'oracle': Specify Oracle database; 'postgresql': Specify PostgreSQL database;

Type: string

Supported Values: mssql, mysql, oracle, postgresql

db-column

Description Specify the column number for receiving

Type: number

Range: 1-10

db-column-integer

Description Specify the column number for receiving

Type: number

Range: 1-10

db-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

db-name

Description Specify the database name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

db-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

db-password-str

Description Configure password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

db-receive

Description Specify the response string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: db-receive and db-receive-integer are mutually exclusive

db-receive-integer

Description Specify the response integer

Type: number

Range: 0-2147483647

Mutual Exclusion: db-receive-integer and db-receive are mutually exclusive

db-row

Description Specify the row number for receiving

Type: number

Range: 1-10

db-row-integer

Description Specify the row number for receiving

Type: number

Range: 1-10

db-send

Description Specify the SQL query

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

db-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_tacplus

Specification	Value
Type	*object*

secret-encrypted

Description

tacplus

Description TACACS+ type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

tacplus-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-port

Description Specify the TACACS+ port, default 49 (Port number (default 49))

Type: number

Range: 1-65534

Default: 49

tacplus-secret

Description Specify the shared secret of TACACS+ server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-secret-string

Description Shared Crypto Key

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-type

Description 'inbound-ascii-login': Specify Inbound ASCII Login type;

Type: string

Supported Values: inbound-ascii-login

Default: inbound-ascii-login

tacplus-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

proxy-header

Specification	Value
Type	*object*

proxy-header-ver

Description 'v1': version 1; 'v2': version 2; (version number)

Type: string

Supported Values: v1, v2

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.5 health monitor header-insert

Insert a header into request

header-insert Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	header-insert
Element URI	/axapi/v3/health/monitor/{name}/header-insert
Element Attributes	header-insert_attributes
Partition Visibility	shared
Schema	`header-insert schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/monitor/{name}/header-insert

header-insert attributes

```
POST /axapi/v3/health/monitor/a/header-insert
Payload:
{
    "header-insert": {
        "insert-list": [
            {
                "insert-content": "a"
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/health/monitor/{name}/header-insert

header-insert attributes

Modify Object

POST

/axapi/v3/health/monitor/{name}/header-insert

header-insert attributes

Replace Object

PUT

/axapi/v3/health/monitor/{name}/header-insert

header-insert attributes

Delete Object

DELETE

/axapi/v3/health/monitor/{name}/header-insert

header-insert attributes

header-insert attributes

insert-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

insert-list

Specification	Value
Type	*list*
Block object keys	

insert-content

Description Header Content (Format: "[name]:[value]")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

2.59.6 health monitor method

Define the health method object, default is ICMP

method Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	method
Element URI	/axapi/v3/health/monitor/{name}/method
Element Attributes	method_attributes
Partition Visibility	shared
Schema	`method schema`

Operations Allowed:

Get Object

GET

/axapi/v3/health/monitor/{name}/method

method_attributes

method attributes

compound

Description: compound is a **JSON Block**. Please see below for *compound*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/compound*

database

Description: database is a **JSON Block**. Please see below for *database*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/database*

dns

Description: dns is a **JSON Block**. Please see below for *dns*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/dns*

external

Description: external is a **JSON Block**. Please see below for *external*

snmp

Description: snmp is a **JSON Block**. Please see below for *snmp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/snmp*

tacplus

Description: tacplus is a **JSON Block**. Please see below for *tacplus*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/tacplus*

tcp

Description: tcp is a **JSON Block**. Please see below for *tcp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *udp*

Type: Object

Reference Object: */axapi/v3/health/monitor/{name}/method/udp*

rtsp

Specification	Value
Type	*object*

rtsp

Description RTSP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rtsp-port

Description Specify RTSP port, default is 554 (Port Number (default 554))

Type: number

Range: 1-65534

Default: 554

rtspurl

Description Specify URL string (Specify the path on the server)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

smtp

Specification	Value
Type	*object*

mail-from

Description Specify SMTP Sender

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rcpt-to

Description Specify SMTP Receiver

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

smtp

Description SMTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smtp-domain

Description Specify domain name of 'helo' command

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

smtp-port

Description Specify SMTP port, default is 25 (Port Number (default 25))

Type: number

Range: 1-65534

Default: 25

smtp-starttls

Description Check the STARTTLS support at helo response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Specification	Value
Type	*object*

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method-tcp

Description TCP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-halfopen

Description Set TCP SYN check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-halfopen and port-send are mutually exclusive

port-resp

Description: port-resp is a **JSON Block**. Please see below for *tcp_port-resp*

Type: Object

port-send

Description Send a string to server (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

Mutual Exclusion: port-send and port-halfopen are mutually exclusive

tcp-port

Description Specify TCP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_port-resp

Specification	Value
Type	*object*

port-contains

Description Mark server up if response string contains string (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

radius

Specification	Value
Type	*object*

radius

Description RADIUS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

radius-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-message-authenticator

Description message-authenticator type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-port

Description Specify the RADIUS port, default is 1812 (Port number (default 1812))

Type: number

Range: 1-65534

Default: 1812

radius-response-code

Description Specify response code range (e.g. 2,4-7) (Format is xx,xx-xx (xx between [1, 13]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-secret

Description Configure shared secret of RADIUS server

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-secret-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

radius-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

https

Specification	Value
Type	*object*

cert

Description Specify client certificate (Certificate name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

cert-key-shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv2hello

Description Disable SSLv2Hello for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-version

Description 'http-version2': HTTP version 2 for HTTPs; 'http-version3': HTTP version 3 for HTTPs;

Type: string

Supported Values: http-version2, http-version3

https

Description HTTPS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-kerberos-auth

Description Https Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-kerberos-kdc

Description: https-kerberos-kdc is a **JSON Block**. Please see below for *https_https-kerberos-kdc*

Type: Object

https-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

https-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

https-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-response-code and https-text are mutually exclusive

https-server-cert-name

Description Expect Server Cert commonName

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: https-text, https-response-code, and text-regex are mutually exclusive

https-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

key

Description Specify client private key (Key name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

key-pass-phrase

Description Client private key password phrase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-phrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sni

Description Server Name Indication for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and https-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-port

Description Specify HTTPS port (Port Number (default 443))

Type: number

Range: 1-65534

Default: 443

https_https-kerberos-kdc

Specification	Value
Type	*object*

https-kerberos-hostip

Description Kdc's hostname(length:1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-kerberos-hostip and https-kerberos-hostipv6 are mutually exclusive

https-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: https-kerberos-hostipv6 and https-kerberos-hostip are mutually exclusive

https-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

https-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

ftp

Specification	Value
Type	*object*

ftp

Description FTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ftp-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-password-string

Description Specify the user password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ftp-port

Description Specify FTP port (Specify port number, default is 21)

Type: number

Range: 1-65534

Default: 21

ftp-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sip

Specification	Value
Type	*object*

expect-response-code

Description Specify accepted response codes (e.g. 200, 400-430, any) (Format is xxx,xxx-xxx,any (xxx between [100,899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

register

Description Send SIP REGISTER message, default is to send OPTION message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip

Description SIP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip-hostname

Description Specify the SIP hostname that used in request

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

sip-port

Description Specify the SIP port, default is 5060 (Port Number)

Type: number

Range: 1-65534

Default: 5060

sip-tcp

Description Use TCP for transmission, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

snmp

Specification	Value
Type	*object*

community

Description Specify SNMP community, default is "public" (Community String)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: public

oid

Description: oid is a **JSON Block**. Please see below for *snmp_oid*

Type: Object

operation

Description: operation is a **JSON Block**. Please see below for *snmp_operation*

Type: Object

snmp

Description SNMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp-port

Description Specify SNMP port, default is 161 (Port Number)

Type: number

Range: 1-65534

Default: 161

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

snmp_oid

Specification	Value
Type	*object*

asn

Description Specify the format in ASN.1 style

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: asn and mib are mutually exclusive

mib

Description 'sysDescr': The MIB-2 OID of system description, 1.1.0; 'sysUpTime': The MIB-2 OID of system up time, 1.3.0; 'sysName': The MIB-2 OID of system nume, 1.5.0;

Type: string

Supported Values: sysDescr, sysUpTime, sysName

Mutual Exclusion: mib and asn are mutually exclusive

snmp_operation

Specification	Value
Type	*object*

oper-type

Description 'getnext': Get-Next-Request command; 'get': Get-Request command;

Type: string

Supported Values: getnext, get

dns

Specification	Value
Type	*object*

dns

Description DNS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain

Description Specify fully qualified domain name of the host

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain and dns-ip-key are mutually exclusive

dns-domain-expect

Description: dns-domain-expect is a **JSON Block**. Please see below for *dns_dns-domain-expect*

Type: Object

dns-domain-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-domain-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-domain-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain-type

Description 'A': Used for storing Ipv4 address (default); 'CNAME': Canonical name for a DNS alias; 'SOA': Start of authority; 'PTR': Domain name pointer; 'MX': Mail exchanger; 'TXT': Text string; 'AAAA': Used for storing Ipv6 128-bits address;

Type: string

Supported Values: A, CNAME, SOA, PTR, MX, TXT, AAAA

Default: A

dns-ip-key

Description Reverse DNS lookup (Specify IPv4 or IPv6 address)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dns-ip-key and dns-domain are mutually exclusive

dns-ipv4-addr

Description Specify IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-ipv4-addr and dns-ipv6-addr are mutually exclusive

dns-ipv4-expect

Description: dns-ipv4-expect is a **JSON Block**. Please see below for *dns_dns-ipv4-expect*

Type: Object

dns-ipv4-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv4-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv4-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-ipv6-addr

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-ipv6-addr and dns-ipv4-addr are mutually exclusive

dns-ipv6-expect

Description: dns-ipv6-expect is a **JSON Block**. Please see below for *dns_dns-ipv6-expect*

Type: Object

dns-ipv6-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv6-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv6-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_dns-domain-expect

Specification	Value
Type	*object*

dns-domain-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-fqdn,dns-domain-response, dns-domain-ipv4, and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv4

Description Specify expected resolved IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-domain-ipv4,dns-domain-response, dns-domain-fqdn, and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv6

Description Specify expected resolved IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-domain-ipv6,dns-domain-response, dns-domain-fqdn, and dns-domain-ipv4 are mutually exclusive

dns-domain-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-response,dns-domain-fqdn, dns-domain-ipv4, and dns-domain-ipv6 are mutually exclusive

dns_dns-ipv6-expect

Specification	Value
Type	*object*

dns-ipv6-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-fqdn and dns-ipv6-response are mutually exclusive

dns-ipv6-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-response and dns-ipv6-fqdn are mutually exclusive

dns_dns-ipv4-expect

Specification	Value
Type	*object*

dns-ipv4-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-fqdn and dns-ipv4-response are mutually exclusive

dns-ipv4-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-response and dns-ipv4-fqdn are mutually exclusive

ldap

Specification	Value
Type	*object*

AcceptNotFound

Description Mark server up on receiving a not-found response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

AcceptResRef

Description Mark server up on receiving a search result reference response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

BaseDN

Description Specify LDAP DN distinguished name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap

Description LDAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-binddn

Description Specify the distinguished name for bindRequest (LDAP DN distinguished name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ldap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ldap-port

Description Specify the LDAP port (Speciry port number, default is 389, or 636 if LDAP over SSL)

Type: number

Range: 1-65534

Default: 389

ldap-query

Description LDAP query to be excuted

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ldap-run-search

Description Specify a query to be executed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-security

Description 'overssl': Set LDAP over SSL; 'StartTLS': LDAP switch to TLS;

Type: string

Supported Values: overssl, StartTLS

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

kerberos-kdc

Specification	Value
Type	*object*

kerberos-cfg

Description: kerberos-cfg is a **JSON Block**. Please see below for *kerberos-kdc_kerberos-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

kerberos-kdc_kerberos-cfg

Specification	Value
Type	*object*

kadmin

Description Kerberos admin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kadmin, kinit, and kpasswd are mutually exclusive

kadmin-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kadmin-kdc

Description Specify the kdc server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kadmin-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kadmin-realm

Description Specify the realm

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-server

Description Specify the admin server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit

Description Kerberos KDC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kinit, kadmin, and kpasswd are mutually exclusive

kinit-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kinit-kdc

Description Specify the kdc server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kinit-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd

Description Kerberos change passwd

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kpasswd, kinit, and kadmin are mutually exclusive

kpasswd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kpasswd-kdc

Description Specify the kdc server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kpasswd-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kpasswd-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd-server

Description Specify the Kerberos password server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp-only

Description Specify the kerberos tcp only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Specification	Value
Type	*object*

force-up-with-single-healthcheck

Description Force Up with no response at the first time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description UDP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp-port

Description Specify UDP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http

Specification	Value
Type	*object*

http

Description HTTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

http-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-kerberos-auth

Description Http Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-kerberos-kdc

Description: http-kerberos-kdc is a **JSON Block**. Please see below for *http_http-kerberos-kdc*

Type: Object

http-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-password-string

Description Specify password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

http-port

Description Specify HTTP Port (Specify port number (default 80))

Type: number

Range: 1-65534

Default: 80

http-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-response-code and http-text are mutually exclusive

http-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: http-text, http-response-code, and text-regex are mutually exclusive

http-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and http-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version2

Description Specify HTTP version2 (Specify http version 2)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http_http-kerberos-kdc

Specification	Value
Type	*object*

http-kerberos-hostip

Description Kdc's hostname(length:1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-kerberos-hostip and http-kerberos-hostipv6 are mutually exclusive

http-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: http-kerberos-hostipv6 and http-kerberos-hostip are mutually exclusive

http-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

http-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

quic

Specification	Value
Type	*object*

quic

Description QUIC type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

quic-port

Description Specify QUIC port (Port Number (default 443))

Type: number

Range: 1-65534

Default: 443

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ntp

Specification	Value
Type	*object*

ntp

Description NTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ntp-port

Description Specify the NTP port, default is 123 (Port Number (default 123))

Type: number

Range: 1-65534

Default: 123

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pop3

Specification	Value
Type	*object*

pop3

Description POP3 type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

pop3-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-password-string

Description Specify the user password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

pop3-port

Description Specify the POP3 port, default is 110 (Port Number (default 110))

Type: number

Range: 1-65534

Default: 110

pop3-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

external

Specification	Value
Type	*object*

ext-arguments

Description Specify external application's arguments (Application arguments)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ext-port

Description Specify the server port (Port Number)

Type: number

Range: 1-65534

ext-preference

Description Get server's perference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ext-program

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

ext-program-shared

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external

Description EXTERNAL type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-program

Description external application from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

compound

Specification	Value
Type	*object*

compound

Description Compound type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpn-string

Description Enter Reverse Polish Notation, example: sub hm1 sub hm2 and

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp

Specification	Value
Type	*object*

icmp

Description ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

ip

Description Specify IPv4 address of destination behind monitored node

Type: string

Format: ipv4-address

Mutual Exclusion: ip and ipv6 are mutually exclusive

ipv6

Description Specify IPv6 address of destination behind monitored node

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 and ip are mutually exclusive

transparent

Description Apply transparent mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

imap

Specification	Value
Type	*object*

imap

Description IMAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-cram-md5

Description Challenge-response authentication mechanism

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

imap-login

Description Simple login

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

imap-plain

Description Plain text

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-port

Description Specify the IMAP port, default is 143 (Port Number (default 143))

Type: number

Range: 1-65534

Default: 143

imap-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

pwd-auth

Description Specify the Authentication method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

database

Specification	Value
Type	*object*

database

Description DATABASE type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

database-name

Description 'mssql': Specify MSSQL database; 'mysql': Specify MySQL database; 'oracle': Specify Oracle database; 'postgresql': Specify PostgreSQL database;

Type: string

Supported Values: mssql, mysql, oracle, postgresql

db-column

Description Specify the column number for receiving

Type: number

Range: 1-10

db-column-integer

Description Specify the column number for receiving

Type: number

Range: 1-10

db-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

db-name

Description Specify the database name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

db-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

db-password-str

Description Configure password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

db-receive

Description Specify the response string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: db-receive and db-receive-integer are mutually exclusive

db-receive-integer

Description Specify the response integer

Type: number

Range: 0-2147483647

Mutual Exclusion: db-receive-integer and db-receive are mutually exclusive

db-row

Description Specify the row number for receiving

Type: number

Range: 1-10

db-row-integer

Description Specify the row number for receiving

Type: number

Range: 1-10

db-send

Description Specify the SQL query

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

db-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tacplus

Specification	Value
Type	*object*

secret-encrypted

Description

tacplus

Description TACACS+ type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

tacplus-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-port

Description Specify the TACACS+ port, default 49 (Port number (default 49))

Type: number

Range: 1-65534

Default: 49

tacplus-secret

Description Specify the shared secret of TACACS+ server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-secret-string

Description Shared Crypto Key

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-type

Description 'inbound-ascii-login': Specify Inbound ASCII Login type;

Type: string

Supported Values: inbound-ascii-login

Default: inbound-ascii-login

tacplus-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.7 health monitor method compound

Compound type

compound Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	compound
Element URI	/axapi/v3/health/monitor/{name}/method/compound
Element Attributes	compound_attributes
Partition Visibility	shared
Schema	`compound schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/monitor/{name}/method/compound

compound attributes

```
POST /axapi/v3/health/monitor/a/method/compound
Payload:
{
    "compound": {
        "rpn-string": "sub a1 sub a2 and",
        "compound": 1
    }
}
```

Get Object

GET

/axapi/v3/health/monitor/{name}/method/compound

compound attributes

```
GET /axapi/v3/health/monitor/a/method/compound
Reponse:
{
    "compound": {
        "compound": 1,
        "rpn-string": "sub a1 sub a2 and",
        "uuid": "648d4190-091e-11f0-82b5-7dd5c2404b7e",
        "a10-url": "/axapi/v3/health/monitor/a/method/compound"
    }
}
```

Modify Object

POST

/axapi/v3/health/monitor/{name}/method/compound

compound attributes

Replace Object

PUT

/axapi/v3/health/monitor/{name}/method/compound

compound attributes

```
PUT /axapi/v3/health/monitor/a/method/compound
Payload:
{
    "compound": {
        "rpn-string": "sub a1 sub a3 or",
        "compound": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/health/monitor/{name}/method/compound

compound attributes

```
DELETE /axapi/v3/health/monitor/a/method/compound
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

compound attributes

compound

Description Compound type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpn-string

Description Enter Reverse Polish Notation, example: sub hm1 sub hm2 and

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.8 health monitor method database

DATABASE type

        "status": "OK",
        "msg": "Success"
    }
}
```

database attributes

database

Description DATABASE type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

database-name

Description 'mssql': Specify MSSQL database; 'mysql': Specify MySQL database; 'oracle': Specify Oracle database; 'postgresql': Specify PostgreSQL database;

Type: string

Supported Values: mssql, mysql, oracle, postgresql

db-column

Description Specify the column number for receiving

Type: number

Range: 1-10

db-column-integer

Description Specify the column number for receiving

Type: number

Range: 1-10

db-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

db-name

Description Specify the database name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

db-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

db-password-str

Description Configure password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

db-receive

Description Specify the response string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: db-receive and db-receive-integer are mutually exclusive

db-receive-integer

Description Specify the response integer

Type: number

Range: 0-2147483647

Mutual Exclusion: db-receive-integer and db-receive are mutually exclusive

db-row

Description Specify the row number for receiving

Type: number

Range: 1-10

db-row-integer

Description Specify the row number for receiving

Type: number

Range: 1-10

db-send

Description Specify the SQL query

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

db-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.9 health monitor method dns

DNS type

dns Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	dns
Element URI	/axapi/v3/health/monitor/{name}/method/dns

    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

dns attributes

dns

Description DNS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain

Description Specify fully qualified domain name of the host

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain and dns-ip-key are mutually exclusive

dns-domain-expect

Description: dns-domain-expect is a **JSON Block**. Please see below for *dns-domain-expect*

Type: Object

dns-domain-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-domain-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-domain-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain-type

Description 'A': Used for storing Ipv4 address (default); 'CNAME': Canonical name for a DNS alias; 'SOA': Start of authority; 'PTR': Domain name pointer; 'MX': Mail exchanger; 'TXT': Text string; 'AAAA': Used for storing Ipv6 128-bits address;

Type: string

Supported Values: A, CNAME, SOA, PTR, MX, TXT, AAAA

Default: A

dns-ip-key

Description Reverse DNS lookup (Specify IPv4 or IPv6 address)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dns-ip-key and dns-domain are mutually exclusive

dns-ipv4-addr

Description Specify IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-ipv4-addr and dns-ipv6-addr are mutually exclusive

dns-ipv4-expect

Description: dns-ipv4-expect is a **JSON Block**. Please see below for *dns-ipv4-expect*

Type: Object

dns-ipv4-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv4-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv4-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-ipv6-addr

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-ipv6-addr and dns-ipv4-addr are mutually exclusive

dns-ipv6-expect

Description: dns-ipv6-expect is a **JSON Block**. Please see below for *dns-ipv6-expect*

Type: Object

dns-ipv6-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv6-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv6-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-domain-expect

Specification	Value
Type	*object*

dns-domain-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-fqdn,dns-domain-response, dns-domain-ipv4, and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv4

Description Specify expected resolved IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-domain-ipv4,dns-domain-response, dns-domain-fqdn, and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv6

Description Specify expected resolved IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-domain-ipv6,dns-domain-response, dns-domain-fqdn, and dns-domain-ipv4 are mutually exclusive

dns-domain-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-response,dns-domain-fqdn, dns-domain-ipv4, and dns-domain-ipv6 are mutually exclusive

dns-ipv6-expect

Specification	Value
Type	*object*

dns-ipv6-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-fqdn and dns-ipv6-response are mutually exclusive

dns-ipv6-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-response and dns-ipv6-fqdn are mutually exclusive

dns-ipv4-expect

Specification	Value
Type	*object*

dns-ipv4-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-fqdn and dns-ipv4-response are mutually exclusive

dns-ipv4-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-response and dns-ipv4-fqdn are mutually exclusive

2.59.10 health monitor method external

EXTERNAL type

external Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	external
Element URI	/axapi/v3/health/monitor/{name}/method/external
Element Attributes	external_attributes
Partition Visibility	shared
Schema	`external schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/monitor/{name}/method/external

external attributes

```
POST /axapi/v3/health/monitor/a/method/external
Payload:
{
    "external": {
        "external": 1,
        "ext-program": "a",
        "ext-port": 1
    }
}
```

PUT

/axapi/v3/health/monitor/{name}/method/external

external attributes

Delete Object

DELETE

/axapi/v3/health/monitor/{name}/method/external

external attributes

external attributes

ext-arguments

Description Specify external application's arguments (Application arguments)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ext-port

Description Specify the server port (Port Number)

Type: number

Range: 1-65534

ext-preference

Description Get server's perference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ext-program

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

ext-program-shared

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external

Description EXTERNAL type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-program

Description external application from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.11 health monitor method ftp

FTP type

ftp Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ftp

        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

ftp attributes

ftp

Description FTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ftp-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-password-string

Description Specify the user password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ftp-port

Description Specify FTP port (Specify port number, default is 21)

Type: number

Range: 1-65534

Default: 21

ftp-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

        "status": "OK",
        "msg": "Success"
    }
}
```

http attributes

http

Description HTTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

http-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-kerberos-auth

Description Http Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-kerberos-kdc

Description: http-kerberos-kdc is a **JSON Block**. Please see below for *http-kerberos-kdc*

Type: Object

http-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-password-string

Description Specify password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

http-port

Description Specify HTTP Port (Specify port number (default 80))

Type: number

Range: 1-65534

Default: 80

http-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-response-code and http-text are mutually exclusive

http-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: http-text, http-response-code, and text-regex are mutually exclusive

http-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and http-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version2

Description Specify HTTP version2 (Specify http version 2)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-kerberos-kdc

Specification	Value
Type	*object*

http-kerberos-hostip

Description Kdc's hostname(length:1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-kerberos-hostip and http-kerberos-hostipv6 are mutually exclusive

http-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: http-kerberos-hostipv6 and http-kerberos-hostip are mutually exclusive

http-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

http-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

2.59.13 health monitor method https

HTTPS type

https Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	https
Element URI	/axapi/v3/health/monitor/{name}/method/https
Element Attributes	https_attributes
Partition Visibility	shared
Schema	`https schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/monitor/{name}/method/https

https attributes

```
POST /axapi/v3/health/monitor/a/method/https
Payload:
{
    "https": {
        "https": 1,
        "web-port": 1
    }
}
```

Get Object

GET

/axapi/v3/health/monitor/{name}/method/https

https attributes

```
GET /axapi/v3/health/monitor/a/method/https
Reponse:
{
    "https": {
        "https": 1,
        "web-port": 1,
        "disable-sslv2hello": 0,
        "sni": 0,
        "https-expect": 0,
        "https-url": 0,
        "maintenance": 0,
        "https-kerberos-auth": 0,
```

(continues on next page)

(continued from previous page)

```
        "uuid": "4b54593c-0920-11f0-82b5-7dd5c2404b7e",
        "a10-url": "/axapi/v3/health/monitor/a/method/https"
    }
}
```

Modify Object

POST

/axapi/v3/health/monitor/{name}/method/https

https attributes

Replace Object

PUT

/axapi/v3/health/monitor/{name}/method/https

https attributes

```
PUT /axapi/v3/health/monitor/a/method/https
Payload:
{
    "https": {
        "https": 1,
        "web-port": 2
    }
}
```

Delete Object

DELETE

/axapi/v3/health/monitor/{name}/method/https

https attributes

```
DELETE /axapi/v3/health/monitor/a/method/https
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

https attributes

cert

Description Specify client certificate (Certificate name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

cert-key-shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv2hello

Description Disable SSLv2Hello for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-version

Description 'http-version2': HTTP version 2 for HTTPs; 'http-version3': HTTP version 3 for HTTPs;

Type: string

Supported Values: http-version2, http-version3

https

Description HTTPS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-kerberos-auth

Description Https Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-kerberos-kdc

Description: https-kerberos-kdc is a **JSON Block**. Please see below for *https-kerberos-kdc*

Type: Object

https-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

https-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

https-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-response-code and https-text are mutually exclusive

https-server-cert-name

Description Expect Server Cert commonName

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: https-text, https-response-code, and text-regex are mutually exclusive

https-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

key

Description Specify client private key (Key name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

key-pass-phrase

Description Client private key password phrase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-phrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sni

Description Server Name Indication for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and https-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-port

Description Specify HTTPS port (Port Number (default 443))

Type: number

Range: 1-65534

Default: 443

https-kerberos-kdc

Specification	Value
Type	*object*

https-kerberos-hostip

Description Kdc's hostname(length:1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-kerberos-hostip and https-kerberos-hostipv6 are mutually exclusive

https-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: https-kerberos-hostipv6 and https-kerberos-hostip are mutually exclusive

https-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

https-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

2.59.14 health monitor method icmp

ICMP type

icmp Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	icmp
Element URI	/axapi/v3/health/monitor/{name}/method/icmp
Element Attributes	icmp_attributes
Partition Visibility	shared
Schema	`icmp schema`

Operations Allowed:

Create Object

    "icmp": {
        "icmp": 1,
        "transparent": 1,
        "ipv6": "2003::2"
    }
}
```

Delete Object

DELETE

/axapi/v3/health/monitor/{name}/method/icmp

icmp attributes

```
DELETE /axapi/v3/health/monitor/a/method/icmp
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

icmp attributes

icmp

Description ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

ip

Description Specify IPv4 address of destination behind monitored node

Type: string

Format: ipv4-address

Mutual Exclusion: ip and ipv6 are mutually exclusive

ipv6

Description Specify IPv6 address of destination behind monitored node

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 and ip are mutually exclusive

transparent

Description Apply transparent mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.15 health monitor method imap

IMAP type

imap Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	imap
Element URI	/axapi/v3/health/monitor/{name}/method/imap
Element Attributes	imap_attributes
Partition Visibility	shared
Schema	`imap schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/monitor/{name}/method/imap

imap attributes

```
POST /axapi/v3/health/monitor/a/method/imap
Payload:
{
    "imap": {
        "imap-password": 1,
        "imap": 1,
        "imap-port": 1,
        "imap-username": "a",
        "imap-password-string": "a",
        "pwd-auth": 1,
        "imap-plain": 1,

    }
}
```

Modify Object

POST

/axapi/v3/health/monitor/{name}/method/imap

imap attributes

Replace Object

PUT

/axapi/v3/health/monitor/{name}/method/imap

imap attributes

Delete Object

DELETE

/axapi/v3/health/monitor/{name}/method/imap

imap attributes

```
DELETE /axapi/v3/health/monitor/a/method/imap
Reponse:
```

```
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

imap attributes

imap

Description IMAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-cram-md5

Description Challenge-response authentication mechanism

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

imap-login

Description Simple login

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

imap-plain

Description Plain text

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-port

Description Specify the IMAP port, default is 143 (Port Number (default 143))

Type: number

Range: 1-65534

Default: 143

imap-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

pwd-auth

Description Specify the Authentication method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.16 health monitor method kerberos-kdc

Kerberos KDC type

kerberos-kdc Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	kerberos-kdc
Element URI	/axapi/v3/health/monitor/{name}/method/kerberos-kdc
Element Attributes	kerberos-kdc_attributes
Partition Visibility	shared

kerberos-kdc attributes

Replace Object

PUT

/axapi/v3/health/monitor/{name}/method/kerberos-kdc

kerberos-kdc attributes

Delete Object

DELETE

/axapi/v3/health/monitor/{name}/method/kerberos-kdc

kerberos-kdc attributes

```
DELETE /axapi/v3/health/monitor/a/method/kerberos-kdc
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

kerberos-kdc attributes

kerberos-cfg

Description: kerberos-cfg is a **JSON Block**. Please see below for *kerberos-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

kerberos-cfg

Specification	Value
Type	*object*

kadmin

Description Kerberos admin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kadmin, kinit, and kpasswd are mutually exclusive

kadmin-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kadmin-kdc

Description Specify the kdc server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kadmin-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kadmin-realm

Description Specify the realm

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-server

Description Specify the admin server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit

Description Kerberos KDC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kinit, kadmin, and kpasswd are mutually exclusive

kinit-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kinit-kdc

Description Specify the kdc server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kinit-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd

Description Kerberos change passwd

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kpasswd, kinit, and kadmin are mutually exclusive

kpasswd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kpasswd-kdc

Description Specify the kdc server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kpasswd-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kpasswd-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd-server

Description Specify the Kerberos password server, host|ip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp-only

Description Specify the kerberos tcp only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

ldap attributes

AcceptNotFound

Description Mark server up on receiving a not-found response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

AcceptResRef

Description Mark server up on receiving a search result reference response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

BaseDN

Description Specify LDAP DN distinguished name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap

Description LDAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-binddn

Description Specify the distinguished name for bindRequest (LDAP DN distinguished name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ldap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ldap-port

Description Specify the LDAP port (Speciry port number, default is 389, or 636 if LDAP over SSL)

Type: number

Range: 1-65534

Default: 389

ldap-query

Description LDAP query to be excuted

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ldap-run-search

Description Specify a query to be executed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-security

Description 'overssl': Set LDAP over SSL; 'StartTLS': LDAP switch to TLS;

Type: string

Supported Values: overssl, StartTLS

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.18 health monitor method ntp

NTP type

ntp Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ntp
Element URI	/axapi/v3/health/monitor/{name}/method/ntp
Element Attributes	ntp_attributes
Partition Visibility	shared
Schema	`ntp schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/monitor/{name}/method/ntp

ntp attributes

```
POST /axapi/v3/health/monitor/a/method/ntp
Payload:
{
    "ntp": {
        "ntp": 1
    }
}
```

Get Object

GET

/axapi/v3/health/monitor/{name}/method/ntp

ntp attributes

```
GET /axapi/v3/health/monitor/a/method/ntp
Reponse:

        "status": "OK",
        "msg": "Success"
    }
}
```

pop3 attributes

pop3

Description POP3 type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

pop3-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-password-string

Description Specify the user password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

pop3-port

Description Specify the POP3 port, default is 110 (Port Number (default 110))

Type: number

Range: 1-65534

Default: 110

pop3-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.20 health monitor method quic

QUIC type

quic Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	quic

}
```

radius attributes

radius

Description RADIUS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

radius-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-message-authenticator

Description message-authenticator type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-port

Description Specify the RADIUS port, default is 1812 (Port number (default 1812))

Type: number

Range: 1-65534

Default: 1812

radius-response-code

Description Specify response code range (e.g. 2,4-7) (Format is xx,xx-xx (xx between [1, 13]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-secret

Description Configure shared secret of RADIUS server

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-secret-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

radius-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.22 health monitor method rtsp

        "msg": "Success"
    }
}
```

rtsp attributes

rtsp

Description RTSP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rtsp-port

Description Specify RTSP port, default is 554 (Port Number (default 554))

Type: number

Range: 1-65534

Default: 554

rtspurl

Description Specify URL string (Specify the path on the server)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.23 health monitor method sip

SIP type

        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

sip attributes

expect-response-code

Description Specify accepted response codes (e.g. 200, 400-430, any) (Format is xxx,xxx-xxx,any (xxx between [100,899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

register

Description Send SIP REGISTER message, default is to send OPTION message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip

Description SIP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip-hostname

Description Specify the SIP hostname that used in request

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

sip-port

Description Specify the SIP port, default is 5060 (Port Number)

Type: number

Range: 1-65534

Default: 5060

sip-tcp

Description Use TCP for transmission, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.24 health monitor method smtp

SMTP type

```

smtp attributes

mail-from

Description Specify SMTP Sender

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rcpt-to

Description Specify SMTP Receiver

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

smtp

Description SMTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smtp-domain

Description Specify domain name of ‘helo’ command

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

smtp-port

Description Specify SMTP port, default is 25 (Port Number (default 25))

Type: number

Range: 1-65534

Default: 25

smtp-starttls

Description Check the STARTTLS support at helo response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.25 health monitor method snmp

        "status": "OK",
        "msg": "Success"
    }
}
```

snmp attributes

community

Description Specify SNMP community, default is "public" (Community String)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: public

oid

Description: oid is a **JSON Block**. Please see below for *oid*

Type: Object

operation

Description: operation is a **JSON Block**. Please see below for *operation*

Type: Object

snmp

Description SNMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp-port

Description Specify SNMP port, default is 161 (Port Number)

Type: number

Range: 1-65534

Default: 161

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oid

Specification	Value
Type	*object*

asn

Description Specify the format in ASN.1 style

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: asn and mib are mutually exclusive

mib

Description 'sysDescr': The MIB-2 OID of system description, 1.1.0; 'sysUpTime': The MIB-2 OID of system up time, 1.3.0; 'sysName': The MIB-2 OID of system nume, 1.5.0;

Type: string

Supported Values: sysDescr, sysUpTime, sysName

Mutual Exclusion: mib and asn are mutually exclusive

operation

Specification	Value
Type	*object*

oper-type

Description 'getnext': Get-Next-Request command; 'get': Get-Request command;

Type: string

Supported Values: getnext, get

2.59.26 health monitor method tacplus

TACACS+ type

tacplus Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	tacplus
Element URI	/axapi/v3/health/monitor/{name}/method/tacplus
Element Attributes	tacplus_attributes
Partition Visibility	shared
Schema	`tacplus schema`

}
```

tacplus attributes

secret-encrypted

Description

tacplus

Description TACACS+ type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

tacplus-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-port

Description Specify the TACACS+ port, default 49 (Port number (default 49))

Type: number

Range: 1-65534

Default: 49

tacplus-secret

Description Specify the shared secret of TACACS+ server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-secret-string

Description Shared Crypto Key

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-type

Description 'inbound-ascii-login': Specify Inbound ASCII Login type;

Type: string

Supported Values: inbound-ascii-login

Default: inbound-ascii-login

tacplus-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.27 health monitor method tcp

TCP type

tcp Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	tcp
Element URI	/axapi/v3/health/monitor/{name}/method/tcp
Element Attributes	tcp_attributes
Partition Visibility	shared
Schema	`tcp schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/monitor/{name}/method/tcp

tcp attributes

```
POST /axapi/v3/health/monitor/a/method/tcp
Payload:
{
    "tcp": {

        "msg": "Success"
    }
}
```

tcp attributes

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method-tcp

Description TCP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-halfopen

Description Set TCP SYN check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-halfopen and port-send are mutually exclusive

port-resp

Description: port-resp is a **JSON Block**. Please see below for *port-resp*

Type: Object

port-send

Description Send a string to server (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

Mutual Exclusion: port-send and port-halfopen are mutually exclusive

tcp-port

Description Specify TCP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-resp

Specification	Value
Type	*object*

port-contains

Description Mark server up if response string contains string (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

2.59.28 health monitor method udp

UDP type

udp Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	udp
Element URI	/axapi/v3/health/monitor/{name}/method/udp
Element Attributes	udp_attributes
Partition Visibility	shared
Schema	`udp schema`

Operations Allowed:

    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

udp attributes

force-up-with-single-healthcheck

Description Force Up with no response at the first time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description UDP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp-port

Description Specify UDP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.29 health monitor proxy-header

Proxy header command

proxy-header Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	proxy-header
Element URI	/axapi/v3/health/monitor/{name}/proxy-header
Element Attributes	proxy-header_attributes
Partition Visibility	shared
Schema	`proxy-header schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/monitor/{name}/proxy-header

proxy-header attributes

```
POST /axapi/v3/health/monitor/a/proxy-header
Payload:
{
    "proxy-header": {
        "proxy-header-ver": "v1"
    }
}
```

Get Object

GET

/axapi/v3/health/monitor/{name}/proxy-header

proxy-header attributes

```
GET /axapi/v3/health/monitor/a/proxy-header
Reponse:
{
    "proxy-header": {

/axapi/v3/health/monitor/{name}/proxy-header

proxy-header attributes

Replace Object

PUT

/axapi/v3/health/monitor/{name}/proxy-header

proxy-header attributes

```
PUT /axapi/v3/health/monitor/a/proxy-header
Payload:
{
    "proxy-header": {
        "proxy-header-ver": "v1"
    }
}
```

Delete Object

DELETE

/axapi/v3/health/monitor/{name}/proxy-header

proxy-header attributes

```
DELETE /axapi/v3/health/monitor/a/proxy-header
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

proxy-header attributes

proxy-header-ver

Description 'v1': version 1; 'v2': version 2; (version number)

Type: string

Supported Values: v1, v2

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59.30 health source-nat

Define Source NAT for health monitor

source-nat Specification

Parameter	Value
Type	*Configuration Resource*

        "status": "OK",
        "msg": "Success"
    }
}
```

source-nat attributes

enable-vrrp-a-mode

Description Forward health check by active device only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface number

Type: number

Format: interface

interface

Description 'ethernet': ethernet; 'trunk': trunk; 've': ve;

Type: string

Supported Values: ethernet, trunk, ve

sampling-enable

Type: List

smart-nat-precedence

Description Use smart nat when resourece is presented in virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smart-nat-vrid

Description Smart nat VRID

Type: number

Range: 1-31

source-nat-pool

Description Use source nat for all health check (nat pool)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/nat/pool*

source-nat-pool-v6

Description Use ipv6 source nat for all health check (nat pool)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/nat/pool*

trunk

Description Trunk interface number

Type: number

Range: 1-4096

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Range: 2-4094

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'act_recv_from_sby': Packets received from standby; 'act_send_to_sby': Packets sent to standby; 'sby_recv_from_act': Packets received from active; 'sby_send_to_act': Packets sent to active; 'sby_recv_from_act_err': Packets received from active error; 'recv_from_kernel': Packets received from kernel; 'send_to_kernel': Packets sent to kernel; 'send_to_kernel_err': Packets sent to kernel error; 'sby_no_peer': Peer not found on standby; 'dcmsg_err': DCMSG error; 'no_slb_object': SLB object not found; 'smart_nat_init_port_err': Smart NAT port initialization error; 'smart_nat_init_inst_err': Smart NAT instance initialization error; 'smart_nat_rserver_route_err': Smart NAT rserver route update error; 'smart_nat_rserver_ip_err': Smart NAT rserver ip update error; 'nat_resource_err': NAT resource error;

Type: string

Supported Values: all, act_recv_from_sby, act_send_to_sby, sby_recv_from_act, sby_send_to_act, sby_recv_from_act_err, recv_from_kernel, send_to_kernel, send_to_kernel_err, sby_no_peer, dcmsg_err, no_slb_object, smart_nat_init_port_err, smart_nat_init_inst_err, smart_nat_rserver_route_err, smart_nat_rserver_ip_err, nat_resource_err, frag_err

2.59.31 health source-nat stats

Statistics for the object source-nat

source-nat Specification

Parameter	Value
Type	*Configuration Resource*

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

act_recv_from_sby

Description Packets received from standby

Type: number

Format: counter

act_send_to_sby

Description Packets sent to standby

Type: number

Format: counter

dcmsg_err

Description DCMSG error

Type: number

Format: counter

frag_err

Description Fragmentation error

Type: number

Format: counter

nat_resource_err

Description NAT resource error

Type: number

Format: counter

no_slb_object

Description SLB object not found

Type: number

Format: counter

recv_from_kernel

Description Packets received from kernel

Type: number

Format: counter

sby_no_peer

Description Peer not found on standby

Type: number

Format: counter

sby_recv_from_act

Description Packets received from active

Type: number

Format: counter

sby_recv_from_act_err

Description Packets received from active error

Type: number

Format: counter

sby_send_to_act

Description Packets sent to active

Type: number

Format: counter

send_to_kernel

Description Packets sent to kernel

Type: number

Format: counter

send_to_kernel_err

Description Packets sent to kernel error

Type: number

Format: counter

smart_nat_init_inst_err

Description Smart NAT instance initialization error

Type: number

Format: counter

smart_nat_init_port_err

Description Smart NAT port initialization error

Type: number

Format: counter

smart_nat_rserver_ip_err

Description Smart NAT rserver ip update error

Type: number

Format: counter

smart_nat_rserver_route_err

Description Smart NAT rserver route update error

Type: number

Format: counter

2.60 hostname

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually (This is an A10 reserved keyword) (The ENCRYPTED password string)

enroll-timeout

Description Specify Enroll Timeout

Type: number

Range: 10-1024

health-check-interval

Description Specify Thales HSM Health Check Interval

Type: number

Range: 3-60

hsm-dev

Type: List

password

Description Specify HSM Passphrase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-string

Description Password (minimum 4 characters)

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 4 characters

protection

Description Specify Protection Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protection-module

Description Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: protection-module, protection-ocs, and softcard are mutually exclusive

protection-ocs

Description Operator Card Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: protection-ocs, protection-module, and softcard are mutually exclusive

protection-softcard-hash

Description Hash

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

rfs-ip

Description Specify Thales Remote File System

Type: string

Format: ipv4-address

rfs-port

Description Specify Port

Type: number

Range: 1-65535

sec-world

Description Security World Name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

softcard

Description Softcard

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: softcard, protection-module, and protection-ocs are mutually exclusive

softhsm-enum

Description 'softHSM': software implementation of a cryptographic store; 'thalesHSM': Thales HSM;

Type: string

Supported Values: softHSM, thalesHSM

template-name

Description Specify Template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

worker

Description Specify number of workers for each data CPU

Type: number

Range: 1-31

template-list_hsm-dev

Specification	Value
Type	*list*
Block object keys	

hsm-ip

Description Specify HSM Device IP Address

Type: string

Format: ipv4-address

hsm-port

Description Specify Port

Type: number

Range: 1-65535

hsm-priority

Description Specify Priority

Type: number

Range: 1-100

2.61.2 hsm rfs-sync

Sync with RFS server

rfs-sync Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	rfs-sync
Element URI	/axapi/v3/hsm/rfs-sync
Element Attributes	rfs-sync_attributes
Partition Visibility	None
Schema	`rfs-sync schema`

Operations Allowed:

Create Object

POST

/axapi/v3/hsm/rfs-sync

rfs-sync attributes

Get Object

GET

/axapi/v3/hsm/rfs-sync

rfs-sync attributes

Modify Object

POST

/axapi/v3/hsm/rfs-sync

rfs-sync attributes

rfs-sync attributes

2.61.3 hsm template

HSM Template

template Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*template-name*
Collection Name	*template-list*
Collection URI	/axapi/v3/hsm/template
Element Name	template
Element URI	/axapi/v3/hsm/template/{template-name}
Element Attributes	template_attributes
Partition Visibility	shared
Schema	`template schema`

Operations Allowed:

Create Object

POST

/axapi/v3/hsm/template

template attributes

```
POST /axapi/v3/hsm/template/
Payload:
{
    "template": {
        "softhsm-enum": "thalesHSM",
        "template-name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/hsm/template

template attributes

Get Object

GET

/axapi/v3/hsm/template/{template-name}

template attributes

```
GET /axapi/v3/hsm/template/a
Reponse:
{
    "template": {
        "template-name": "a",
        "softhsm-enum": "thalesHSM",
        "protection": 0,
        "password": 0,
        "uuid": "dfede9e0-b6c9-11ef-8f5a-ae71681635d0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/hsm/template/a"
    }
}
```

Get List

GET

/axapi/v3/hsm/template

template-list

Modify Object

POST

/axapi/v3/hsm/template/{template-name}

template attributes

Replace Object

PUT

/axapi/v3/hsm/template/{template-name}

template attributes

```
PUT /axapi/v3/hsm/template/a
Payload:
{
    "template": {
        "softhsm-enum": "thalesHSM",
        "template-name": "a",
        "hsm-dev": [
            {
                "hsm-ip": "3.3.3.4"
            }
        ]
    }
}
```

Replace List

PUT

/axapi/v3/hsm/template

template-list

Delete Object

DELETE

/axapi/v3/hsm/template/{template-name}

template attributes

```
DELETE /axapi/v3/hsm/template/a
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

template-list

template-list is **JSON List** of *template attributes*

template-list : [

{ *template attributes* },

{ *template attributes* },

...

]

template attributes

encrypted

Description Do NOT use this option manually (This is an A10 reserved keyword) (The ENCRYPTED password string)

enroll-timeout

Description Specify Enroll Timeout

Type: number

Range: 10-1024

health-check-interval

Description Specify Thales HSM Health Check Interval

Type: number

Range: 3-60

hsm-dev

Type: List

password

Description Specify HSM Passphrase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-string

Description Password (minimum 4 characters)

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 4 characters

protection

Description Specify Protection Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protection-module

Description Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: protection-module, protection-ocs, and softcard are mutually exclusive

protection-ocs

Description Operator Card Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: protection-ocs, protection-module, and softcard are mutually exclusive

protection-softcard-hash

Description Hash

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

rfs-ip

Description Specify Thales Remote File System

Type: string

Format: ipv4-address

rfs-port

Description Specify Port

Type: number

Range: 1-65535

sec-world

Description Security World Name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

softcard

Description Softcard

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: softcard, protection-module, and protection-ocs are mutually exclusive

softhsm-enum

Description 'softHSM': software implementation of a cryptographic store; 'thalesHSM': Thales HSM;

Type: string

Supported Values: softHSM, thalesHSM

template-name

Description Specify Template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

worker

Description Specify number of workers for each data CPU

Type: number

Range: 1-31

hsm-dev

Specification	Value
Type	*list*
Block object keys	

hsm-ip

Description Specify HSM Device IP Address

Type: string

Format: ipv4-address

hsm-port

Description Specify Port

Type: number

Range: 1-65535

hsm-priority

Description Specify Priority

Type: number

Range: 1-100

2.62 import-periodic

Objects:

2.62.1 import-periodic

Get files from remote site periodically

import-periodic Specification

Parameter	Value
Type	*Intermediate Resource*

domain-list-list

Specification	Value
Type	*list*
Block object keys	

domain-list

Description Domain List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-cert-list

Specification	Value
Type	*list*
Block object keys	

certificate-type

Description 'pem': pem; 'der': der; 'pfx': pfx; 'p7b': p7b;

Type: string

Supported Values: pem, der, pfx, p7b

encrypted

Description The password for certificate file (pfx type only)

period

Description Specify the period in second

Type: number

Range: 60-31536000

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

remote-file

Description profile name for remote url

Type: string

Format: url

ssl-cert

Description SSL Cert File(enter bulk when import an archive file)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-list

Specification	Value
Type	*list*
Block object keys	

geo-location

Description Geo-location CSV File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wsdl-list

Specification	Value
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wsdl

Description Web Services Definition Language File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rpz-list

Specification	Value
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

remote-file-zone-transfer

Description profile name for remote url

Type: string

Format: url

rpz

Description Response Policy Zone File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-transfer

Description 'zone-transfer': zone-transfer;

Type: string

Supported Values: zone-transfer

class-list-convert-list

Specification	Value
Type	*list*
Block object keys	

class-list-convert

Description Class List File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

class-list-type

Description 'ac': ac; 'ipv4': ipv4; 'ipv6': ipv6; 'string': string; 'string-case-insensitive': string-case-insensitive;

Type: string

Supported Values: ac, ipv4, ipv6, string, string-case-insensitive

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

xml-schema-list

Specification	Value
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

xml-schema

Description XML-Schema File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

aflex-list

Specification	Value
Type	*list*
Block object keys	

aflex

Description aFleX Script Source File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dnssec-dnskey-list

Specification	Value
Type	*list*
Block object keys	

dnssec-dnskey

Description DNSSEC DNSKEY(KSK) file for child zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-cert-key-list

Specification	Value
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

secured

Description Mark keys as non-exportable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-key

Description 'bulk': import an archive file;

Type: string

Supported Values: bulk

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

thales-kmdata-list

Specification	Value
Type	*list*
Block object keys	

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

thales-kmdata

Description import Thales Kmdata files - in .tgz format that has all files needed by AX

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-key-list

Specification	Value
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

secured

Description Mark as non-exportable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-key

Description SSL Key File(enter bulk when import an archive file)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-uri-file-list

Specification	Value
Type	*list*
Block object keys	

local-uri-file

Description Local URI files for http response

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list-list

Specification	Value
Type	*list*
Block object keys	

background

Description background mode for importing class-list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

class-list

Description Class List File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bw-list-list

Specification	Value
Type	*list*
Block object keys	

bw-list

Description Black white List File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-crl-list

Specification	Value
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

ssl-crl

Description SSL Crl File

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-jwks-list

Specification	Value
Type	*list*
Block object keys	

auth-jwks

Description JSON web key

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tsig-list

Specification	Value
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

tsig

Description Transaction SIGnatures Key File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-portal-list

Specification	Value
Type	*list*
Block object keys	

auth-portal

Description Portal file for http authentication

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list

Specification	Value
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

policy

Description WAF policy File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

thales-secworld-list

Specification	Value
Type	*list*
Block object keys	

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

thales-secworld

Description import Thales security world files - in .tgz format that has all files needed by AX

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dnssec-ds-list

Specification	Value
Type	*list*
Block object keys	

dnssec-ds

Description DNSSEC DS file for child zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ca-cert-list

Specification	Value
Type	*list*
Block object keys	

ca-cert

Description SSL CA Cert File(enter bulk when import an archive file)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

certificate-type

Description ‘pem’: pem; ‘der’: der; ‘pfx’: pfx; ‘p7b’: p7b;

Type: string

Supported Values: pem, der, pfx, p7b

encrypted

Description The password for certificate file (pfx type only)

period

Description Specify the period in second

Type: number

Range: 60-31536000

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.62.2 import-periodic aflex

aFleX Script Source File

aflex Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*aflex*
Collection Name	*aflex-list*
Collection URI	/axapi/v3/import-periodic/aflex
Element Name	aflex
Element URI	/axapi/v3/import-periodic/aflex/{aflex}
Element Attributes	aflex_attributes
Partition Visibility	shared
Schema	`aflex schema`

Operations Allowed:

Create Object

POST

/axapi/v3/import-periodic/aflex

aflex attributes

```
POST /axapi/v3/import-periodic/aflex/
Payload:
{
    "aflex": {
        "aflex": "a",
        "period": 60,

tunnel-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

ifnum

Description Tunnel interface number

Type: number

Range: 1-128

ip

Description: ip is a **JSON Block**. Please see below for *tunnel-list_ip*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *tunnel-list_ipv6*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6*

load-interval

Description Configure Load Interval (Seconds (5-300, Multiple of 5), default 300)

Type: number

Range: 5-300

Default: 300

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *tunnel-list_lw-4o6*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/lw-4o6*

map

Description: map is a **JSON Block**. Please see below for *tunnel-list_map*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/map*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/interface-tunnel-tmpl*

sampling-enable

Type: List

speed

Description Speed in Gbit/Sec (Default 10 Gbps)

Type: number

Range: 1-200

Default: 10

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_map

Specification	Value
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ip

Specification	Value
Type	*object*

address

Description: address is a **JSON Block**. Please see below for *tunnel-list_ip_address*

Type: Object

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query-val

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Max Response Time (Default is 100)

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *tunnel-list_ip_ospf*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *tunnel-list_ip_rip*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/rip*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ip_rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *tunnel-list_ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *tunnel-list_ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *tunnel-list_ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *tunnel-list_ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ip_rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

tunnel-list_ip_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

tunnel-list_ip_rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *tunnel-list_ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *tunnel-list_ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *tunnel-list_ip_rip_authentication_str*

Type: Object

tunnel-list_ip_rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

tunnel-list_ip_rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

tunnel-list_ip_rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

tunnel-list_ip_rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

tunnel-list_ip_address

Specification	Value
Type	*object*

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-cfg

Type: List

tunnel-list_ip_address_ip-cfg

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

tunnel-list_ip_ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *tunnel-list_ip_ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

tunnel-list_ip_ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

tunnel-list_ip_ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

tunnel-list_ip_ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *tunnel-list_ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *tunnel-list_ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *tunnel-list_ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *tunnel-list_ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ip_ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

tunnel-list_ip_ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

tunnel-list_ip_ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel-list_ip_ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel-list_ip_ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *tunnel-list_ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

tunnel-list_ip_ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

tunnel-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num-rx-pkts': received packets; 'num-total-rx-bytes': received bytes; 'num-tx-pkts': sent packets; 'num-total-tx-bytes': sent bytes; 'num-rx-err-pkts': received error packets; 'num-tx-err-pkts': sent error packets; 'rate_pkt_sent': Packet sent rate packets/sec; 'rate_byte_sent': Byte sent rate bits/sec; 'rate_pkt_rcvd': Packet received rate packets/sec; 'rate_byte_rcvd': Byte received rate bits/sec;

Type: string

Supported Values: all, num-rx-pkts, num-total-rx-bytes, num-tx-pkts, num-total-tx-bytes, num-rx-err-pkts, num-tx-err-pkts, rate_pkt_sent, rate_byte_sent, rate_pkt_rcvd, rate_byte_rcvd

tunnel-list_lw-4o6

Specification	Value
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ipv6

Specification	Value
Type	*object*

address-cfg

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *tunnel-list_ipv6_ospf*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description: router is a **JSON Block**. Please see below for *tunnel-list_ipv6_router*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ipv6_address-cfg

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

tunnel-list_ipv6_router

Specification	Value
Type	*object*

ospf

Description: ospf is a **JSON Block**. Please see below for *tunnel-list_ipv6_router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *tunnel-list_ipv6_router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ripng*

tunnel-list_ipv6_router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ipv6_router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ipv6_router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tunnel-list_ipv6_ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ipv6_ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

tunnel-list_ipv6_ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

tunnel-list_ipv6_ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

tunnel-list_ipv6_ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel-list_ipv6_ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

tunnel-list_ipv6_ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel-list_ipv6_ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

tunnel-list_ipv6_ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

tunnel-list_ipv6_ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

management2

Specification	Value
Type	*object*

access-list

Description: access-list is a **JSON Block**. Please see below for *management2_access-list*

Type: Object

action

Description 'enable': Enable Management Port; 'disable': Disable Management Port;

Type: string

Supported Values: enable, disable

Default: enable

broadcast-rate-limit

Description: broadcast-rate-limit is a **JSON Block**. Please see below for *management2_broadcast-rate-limit*

Type: Object

duplexity

Description 'Full': Full; 'Half': Half; 'auto': Auto;

Type: string

Supported Values: Full, Half, auto

Default: auto

flow-control

Description Enable 802.3x flow control on full duplex port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description: ip is a **JSON Block**. Please see below for *management2_ip*

Type: Object

ipv6

Type: List

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

sampling-enable

Type: List

speed

Description '10': 10 Mbs/sec; '100': 100 Mbs/sec; '1000': 1 Gb/sec; 'auto': Auto Negotiate Speed; (Interface Speed)

Type: string

Supported Values: 10, 100, 1000, auto

Default: auto

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

management2_broadcast-rate-limit

Specification	Value
Type	*object*

bcast-rate-limit-enable

Description Rate limit the l2 broadcast packet on mgmt port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rate

Description packets per second. Default is 500. (packets per second. Please specify an even number. Default is 500)

Type: number

Range: 50-5000

Default: 500

management2_ipv6

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: link-local

default-ipv6-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv6-address

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

management2_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets_input': Input packets; 'bytes_input': Input bytes; 'received_broadcasts': Received broadcasts; 'received_multicasts': Received multicasts; 'received_unicasts': Received unicasts; 'input_errors': Input errors; 'crc': CRC; 'frame': Frames; 'input_err_short': Runts; 'input_err_long': Giants; 'packets_output': Output packets; 'bytes_output': Output bytes; 'transmitted_broadcasts': Transmitted broadcasts; 'transmitted_multicasts': Transmitted multicasts; 'transmitted_unicasts': Transmitted unicasts; 'output_errors': Output errors; 'collisions': Collisions;

Type: string

Supported Values: all, packets_input, bytes_input, received_broadcasts, received_multicasts, received_unicasts, input_errors, crc, frame, input_err_short, input_err_long, packets_output, bytes_output, transmitted_broadcasts, transmitted_multicasts, transmitted_unicasts, output_errors, collisions

management2_ip

Specification	Value
Type	*object*

control-apps-use-mgmt-port

Description Control applications use management port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv4-address

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

management2_access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

management

Specification	Value
Type	*object*

access-list

Description: access-list is a **JSON Block**. Please see below for *management_access-list*

Type: Object

action

Description 'enable': Enable Management Port; 'disable': Disable Management Port;

Type: string

Supported Values: enable, disable

Default: enable

broadcast-rate-limit

Description: broadcast-rate-limit is a **JSON Block**. Please see below for *management_broadcast-rate-limit*

Type: Object

duplexity

Description 'Full': Full; 'Half': Half; 'auto': Auto;

Type: string

Supported Values: Full, Half, auto

Default: auto

flow-control

Description Enable 802.3x flow control on full duplex port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description: ip is a **JSON Block**. Please see below for *management_ip*

Type: Object

ipv6

Type: List

lldp

Description: lldp is a **JSON Block**. Please see below for *management_lldp*

Type: Object

Reference Object: */axapi/v3/interface/management/lldp*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

sampling-enable

Type: List

secondary-ip

Description: secondary-ip is a **JSON Block**. Please see below for *management_secondary-ip*

Type: Object

speed

Description '10': 10 Mbs/sec; '100': 100 Mbs/sec; '1000': 1 Gb/sec; 'auto': Auto Negotiate Speed; (Interface Speed)

Type: string

Supported Values: 10, 100, 1000, auto

Default: auto

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

management_lldp

Specification	Value
Type	*object*

enable-cfg

Description: enable-cfg is a **JSON Block**. Please see below for *management_lldp_enable-cfg*

Type: Object

notification-cfg

Description: notification-cfg is a **JSON Block**. Please see below for *management_lldp_notification-cfg*

Type: Object

tx-dot1-cfg

Description: tx-dot1-cfg is a **JSON Block**. Please see below for *management_lldp_tx-dot1-cfg*

Type: Object

tx-tlvs-cfg

Description: tx-tlvs-cfg is a **JSON Block**. Please see below for *management_lldp_tx-tlvs-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

management_lldp_tx-dot1-cfg

Specification	Value
Type	*object*

link-aggregation

Description Interface link aggregation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-dot1-tlvs

Description Interface lldp tx IEEE 802.1 Organizationally specific TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan

Description Interface vlan information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management_lldp_notification-cfg

Specification	Value
Type	*object*

notif-enable

Description Interface lldp notification enable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification

Description Interface lldp notification configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management_lldp_tx-tlvs-cfg

Specification	Value
Type	*object*

exclude

Description Configure which TLVs excluded. All basic TLVs will be included by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management-address

Description Interface lldp management address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-description

Description Interface lldp port description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-capabilities

Description Interface lldp system capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-description

Description Interface lldp system description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-name

Description Interface lldp system name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs

Description Interface lldp tx TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management_lldp_enable-cfg

Specification	Value
Type	*object*

rt-enable

Description Interface lldp enable/disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management_broadcast-rate-limit

Specification	Value
Type	*object*

bcast-rate-limit-enable

Description Rate limit the l2 broadcast packet on mgmt port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rate

Description packets per second. Default is 500. (packets per second. Please specify an even number. Default is 500)

Type: number

Range: 50-5000

Default: 500

management_ipv6

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: link-local

default-ipv6-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv6-address

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

management_secondary-ip

Specification	Value
Type	*object*

control-apps-use-mgmt-port

Description Control applications use management port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv4-address

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dhcp and ipv4-address are mutually exclusive

ipv4-address

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address and dhcp are mutually exclusive

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

secondary-ip

Description Global IP configuration subcommands

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets_input': Input packets; 'bytes_input': Input bytes; 'received_broadcasts': Received broadcasts; 'received_multicasts': Received multicasts; 'received_unicasts': Received unicasts; 'input_errors': Input errors; 'crc': CRC; 'frame': Frames; 'input_err_short': Runts; 'input_err_long': Giants; 'packets_output': Output packets; 'bytes_output': Output bytes; 'transmitted_broadcasts': Transmitted broadcasts; 'transmitted_multicasts': Transmitted multicasts; 'transmitted_unicasts': Transmitted unicasts; 'output_errors': Output errors; 'collisions': Collisions;

Type: string

Supported Values: all, packets_input, bytes_input, received_broadcasts, received_multicasts, received_unicasts, input_errors, crc, frame, input_err_short, input_err_long, packets_output, bytes_output, transmitted_broadcasts, transmitted_multicasts, transmitted_unicasts, output_errors, collisions

management_ip

Specification	Value
Type	*object*

control-apps-use-mgmt-port

Description Control applications use management port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv4-address

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dhcp and ipv4-address are mutually exclusive

ipv4-address

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address and dhcp are mutually exclusive

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

management_access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

packet-size-bucket

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list

Specification	Value
Type	*list*
Block object keys	

access-list

Description: access-list is a **JSON Block**. Please see below for *trunk-list_access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

bfd

Description: bfd is a **JSON Block**. Please see below for *trunk-list_bfd*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/bfd*

ddos

Description: ddos is a **JSON Block**. Please see below for *trunk-list_ddos*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ddos*

do-auto-recovery

Description (Only for LACP trunks) Attempt auto-recovery after ports-treshold is triggered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gaming-protocol-compliance

Description Enable Gaming Protocol Compliance Check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp-rate-limit

Description: icmp-rate-limit is a **JSON Block**. Please see below for *trunk-list_icmp-rate-limit*

Type: Object

icmpv6-rate-limit

Description: icmpv6-rate-limit is a **JSON Block**. Please see below for *trunk-list_icmpv6-rate-limit*

Type: Object

ifnum

Description Trunk interface number

Type: number

Range: 1-4096

ip

Description: ip is a **JSON Block**. Please see below for *trunk-list_ip*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *trunk-list_ipv6*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *trunk-list_isis*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/isis*

l3-vlan-fwd-disable

Description Disable L3 forwarding between VLANs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *trunk-list_lw-4o6*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/lw-4o6*

mac-learning

Description 'enable': Enable MAC learning; 'disable': Disable MAC learning; 'dmac-only': Enable destination MAC learning only;

Type: string

Supported Values: enable, disable, dmac-only

map

Description: map is a **JSON Block**. Please see below for *trunk-list_map*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/map*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nptv6

Description: nptv6 is a **JSON Block**. Please see below for *trunk-list_nptv6*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/nptv6*

ports-threshold

Description Threshold for the minimum number of ports that need to be UP for the trunk to remain UP

Type: number

sampling-enable

Type: List

spanning-tree

Description: spanning-tree is a **JSON Block**. Please see below for *trunk-list_spanning-tree*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/spanning-tree*

sync-modify-disable

Description Disable SYNC bit modify for ports-threshold do-auto-recovery

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timer

Description Timer to re-check the threshold under certain conditions (Time in seconds (Default: 10))

Type: number

Range: 1-300

Default: 10

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

update-l2-info

Description Update and use received L2 information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-hw-hash

Description Enable HW based load balacing decision rule

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire

Description Mark trunk as a virtual wire interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan-learning

Description ‘enable’: Enable VLAN learning; ‘disable’: Disable VLAN learning;

Type: string

Supported Values: enable, disable

trunk-list_map

Specification	Value
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ip

Specification	Value
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dmz

Description DMZ network facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

nat

Description: nat is a **JSON Block**. Please see below for *trunk-list_ip_nat*

Type: Object

ospf

Description: ospf is a **JSON Block**. Please see below for *trunk-list_ip_ospf*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf*

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *trunk-list_ip_rip*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *trunk-list_ip_router*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *trunk-list_ip_stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unnumbered

Description Set the interface as unnumbered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ip_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *trunk-list_ip_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/router/isis*

trunk-list_ip_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ip_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

trunk-list_ip_helper-address-list

Specification	Value
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

trunk-list_ip_stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ip_rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *trunk-list_ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *trunk-list_ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *trunk-list_ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *trunk-list_ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ip_rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

trunk-list_ip_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

trunk-list_ip_rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *trunk-list_ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *trunk-list_ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *trunk-list_ip_rip_authentication_str*

Type: Object

trunk-list_ip_rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

trunk-list_ip_rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

trunk-list_ip_rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

trunk-list_ip_rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

trunk-list_ip_nat

Specification	Value
Type	*object*

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ip_ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *trunk-list_ip_ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

trunk-list_ip_ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

trunk-list_ip_ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

trunk-list_ip_ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *trunk-list_ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *trunk-list_ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *trunk-list_ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *trunk-list_ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ip_ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

trunk-list_ip_ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

trunk-list_ip_ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ip_ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ip_ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *trunk-list_ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

trunk-list_ip_ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

trunk-list_ddos

Specification	Value
Type	*object*

inside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

trunk-list_bfd

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *trunk-list_bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *trunk-list_bfd_interval-cfg*

Type: Object

per-member-port

Description: per-member-port is a **JSON Block**. Please see below for *trunk-list_bfd_per-member-port*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/bfd/per-member-port*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_bfd_per-member-port

Specification	Value
Type	*object*

ipv6-local

Description IPv6 local-address

Type: string

Format: ipv6-address

ipv6-nbr

Description IPv6 neighbor-address

Type: string

Format: ipv6-address

local-address

Description IPv4 local-address

Type: string

Format: ipv4-address

neighbor-address

Description IPv4 neighbor address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_bfd_interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

trunk-list_bfd_authentication

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

trunk-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_pkts': some help string; 'num_total_bytes': some help string; 'num_unicast_pkts': some help string; 'num_broadcast_pkts': some help string; 'num_multicast_pkts': some help string; 'num_tx_pkts': some help string; 'num_total_tx_bytes': some help string; 'num_unicast_tx_pkts': some help string; 'num_broadcast_tx_pkts': some help string; 'num_multicast_tx_pkts': some help string; 'dropped_dis_rx_pkts': some help string; 'dropped_rx_pkts': some help string; 'dropped_dis_tx_pkts': some help string; 'dropped_tx_pkts': some help string;

Type: string

Supported Values: all, num_pkts, num_total_bytes, num_unicast_pkts, num_broadcast_pkts, num_multicast_pkts, num_tx_pkts, num_total_tx_bytes, num_unicast_tx_pkts, num_broadcast_tx_pkts, num_multicast_tx_pkts, dropped_dis_rx_pkts, dropped_rx_pkts, dropped_dis_tx_pkts, dropped_tx_pkts

trunk-list_ipv6

Specification	Value
Type	*object*

access-list-cfg

Description: access-list-cfg is a **JSON Block**. Please see below for *trunk-list_ipv6_access-list-cfg*

Type: Object

address-list

Type: List

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat

Description: nat is a **JSON Block**. Please see below for *trunk-list_ipv6_nat*

Type: Object

ospf

Description: ospf is a **JSON Block**. Please see below for *trunk-list_ipv6_ospf*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *trunk-list_ipv6_rip*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *trunk-list_ipv6_router*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *trunk-list_ipv6_router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *trunk-list_ipv6_stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_address-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

trunk-list_ipv6_router-adver

Specification	Value
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

hop-limit

Description Set Router Advertisement Hop Limit (default: 255) (Max Router Advertisement Interval (seconds))

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Min Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Max Number of Router Solicitations to process per second)

Type: number

Range: 3-1350

Default: 200

mtu

Description: mtu is a **JSON Block**. Please see below for *trunk-list_ipv6_router-adver_mtu*

Type: Object

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

vrid

Description: vrid is a **JSON Block**. Please see below for *trunk-list_ipv6_router-adver_vrid*

Type: Object

trunk-list_ipv6_router-adver_vrid

Specification	Value
Type	*object*

adver-vrid

Description Specify ha VRRP-A vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ipv6_router-adver_prefix-list

Specification	Value
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

trunk-list_ipv6_router-adver_mtu

Specification	Value
Type	*object*

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

trunk-list_ipv6_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *trunk-list_ipv6_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *trunk-list_ipv6_router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *trunk-list_ipv6_router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ripng*

trunk-list_ipv6_router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk-list_ipv6_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_rip

Specification	Value
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *trunk-list_ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

trunk-list_ipv6_stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_nat

Specification	Value
Type	*object*

inside

Description Configure interface as NAT inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure interface as NAT outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ipv6_access-list-cfg

Specification	Value
Type	*object*

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

trunk-list_ipv6_ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

trunk-list_ipv6_ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

trunk-list_ipv6_ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

trunk-list_ipv6_ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ipv6_ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

trunk-list_ipv6_ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ipv6_ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

trunk-list_ipv6_ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

trunk-list_ipv6_ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

trunk-list_spanning-tree

Specification	Value
Type	*object*

admin-edge

Description Enable admin-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-edge

Description Enable auto-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

instance-list

Type: List

path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_spanning-tree_instance-list

Specification	Value
Type	*list*
Block object keys	

instance-start

Description Instance ID

Type: number

Range: 0-4094

mstp-path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

trunk-list_nptv6

Specification	Value
Type	*object*

domain-list

Type: List

Reference Object: */axapi/v3/interface/trunk/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

trunk-list_nptv6_domain-list

Specification	Value
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_isis

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *trunk-list_isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *trunk-list_isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *trunk-list_isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

trunk-list_isis_priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

trunk-list_isis_hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

trunk-list_isis_mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

trunk-list_isis_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_isis_password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

trunk-list_isis_authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

trunk-list_isis_authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

trunk-list_isis_authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

trunk-list_isis_authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_isis_wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

trunk-list_isis_hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

trunk-list_isis_hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

trunk-list_isis_metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

trunk-list_isis_csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

trunk-list_icmpv6-rate-limit

Specification	Value
Type	*object*

lockup-period-v6

Description Lockup period (second)

Type: number

Range: 1-16383

lockup-v6

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

normal-v6

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

trunk-list_lw-4o6

Specification	Value
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_icmp-rate-limit

Specification	Value
Type	*object*

lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

normal

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

available-eth-list

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list

Specification	Value
Type	*list*
Block object keys	

access-list

Description: access-list is a **JSON Block**. Please see below for *ve-list_access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

bfd

Description: bfd is a **JSON Block**. Please see below for *ve-list_bfd*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/bfd*

ddos

Description: ddos is a **JSON Block**. Please see below for *ve-list_ddos*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ddos*

gaming-protocol-compliance

Description Enable Gaming Protocol Compliance Check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp-rate-limit

Description: icmp-rate-limit is a **JSON Block**. Please see below for *ve-list_icmp-rate-limit*

Type: Object

icmpv6-rate-limit

Description: icmpv6-rate-limit is a **JSON Block**. Please see below for *ve-list_icmpv6-rate-limit*

Type: Object

ifnum

Description Virtual ethernet interface number

Type: number

Range: 2-4094

Reference Object: */axapi/v3/network/vlan*

ip

Description: ip is a **JSON Block**. Please see below for *ve-list_ip*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ve-list_ipv6*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *ve-list_isis*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/isis*

l3-vlan-fwd-disable

Description Disable L3 forwarding between VLANs for incoming packets on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *ve-list_lw-4o6*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/lw-4o6*

map

Description: map is a **JSON Block**. Please see below for *ve-list_map*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/map*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nptv6

Description: nptv6 is a **JSON Block**. Please see below for *ve-list_nptv6*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/nptv6*

ping-sweep-detection

Description 'enable': Enable ping sweep detection; 'disable': Disable ping sweep detection(default);

Type: string

Supported Values: enable, disable

Default: disable

port-scan-detection

Description 'enable': Enable port scan detection; 'disable': Disable port scan detection(default);

Type: string

Supported Values: enable, disable

Default: disable

sampling-enable

Type: List

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ip

Specification	Value
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dmz

Description DMZ network facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ve-list_ip_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *ve-list_ip_rip*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ve-list_ip_router*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ve-list_ip_stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unnumbered

Description Set the interface as unnumbered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ip_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ve-list_ip_helper-address-list

Specification	Value
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

ve-list_ip_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ve-list_ip_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/router/isis*

ve-list_ip_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ip_stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ip_rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ve-list_ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ve-list_ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ve-list_ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ve-list_ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ip_rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ve-list_ip_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ve-list_ip_rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ve-list_ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ve-list_ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ve-list_ip_rip_authentication_str*

Type: Object

ve-list_ip_rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ve-list_ip_rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ve-list_ip_rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ve-list_ip_rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ve-list_ip_ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ve-list_ip_ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ve-list_ip_ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ve-list_ip_ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ve-list_ip_ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ve-list_ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ve-list_ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ve-list_ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ve-list_ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ip_ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ve-list_ip_ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ve-list_ip_ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_ip_ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_ip_ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ve-list_ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ve-list_ip_ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ve-list_ddos

Specification	Value
Type	*object*

inside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

acl-name

Description Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

ve-list_bfd

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ve-list_bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *ve-list_bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_bfd_authentication

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ve-list_bfd_interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

ve-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_pkts': Input packets; 'num_total_bytes': Input bytes; 'num_unicast_pkts': Received unicasts; 'num_broadcast_pkts': Received broadcasts; 'num_multicast_pkts': Received multicasts; 'num_tx_pkts': Transmitted packets; 'num_total_tx_bytes': Transmitted bytes; 'num_unicast_tx_pkts': Transmitted unicasts; 'num_broadcast_tx_pkts': Transmitted broadcasts; 'num_multicast_tx_pkts': Transmitted multicasts; 'rate_pkt_sent': Packet sent rate packets/sec; 'rate_byte_sent': Byte sent rate bits/sec; 'rate_pkt_rcvd': Packet received rate packets/sec; 'rate_byte_rcvd': Byte received rate bits/sec; 'load_interval': Load Interval;

Type: string

Supported Values: all, num_pkts, num_total_bytes, num_unicast_pkts, num_broadcast_pkts, num_multicast_pkts, num_tx_pkts, num_total_tx_bytes, num_unicast_tx_pkts, num_broadcast_tx_pkts, num_multicast_tx_pkts, rate_pkt_sent, rate_byte_sent, rate_pkt_rcvd, rate_byte_rcvd, load_interval

ve-list_ipv6

Specification	Value
Type	*object*

address-list

Type: List

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inside

Description Configure interface as NAT inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ve-list_ipv6_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/ospf*

outside

Description Configure interface as NAT outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *ve-list_ipv6_rip*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *ve-list_ipv6_router*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *ve-list_ipv6_router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ve-list_ipv6_stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

ve-list_ipv6_address-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ve-list_ipv6_rip

Specification	Value
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ve-list_ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ipv6_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ve-list_ipv6_stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ipv6_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ve-list_ipv6_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ve-list_ipv6_router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ve-list_ipv6_router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/ripng*

ve-list_ipv6_router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ipv6_router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ipv6_router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ve-list_ipv6_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ipv6_ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ipv6_ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ve-list_ipv6_ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ve-list_ipv6_ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ve-list_ipv6_ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_ipv6_ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ve-list_ipv6_ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_ipv6_ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ve-list_ipv6_ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ve-list_ipv6_ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ve-list_ipv6_router-adver

Specification	Value
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

adver-vrid

Description Vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

hop-limit

Description Set Router Advertisement Hop Limit (default: 255)

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Max Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Min Router Advertisement Interval (seconds))

Type: number

Range: 3-1350

Default: 200

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_ipv6_router-adver_prefix-list

Specification	Value
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

ve-list_map

Specification	Value
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_nptv6

Specification	Value
Type	*object*

domain-list

Type: List

Reference Object: */axapi/v3/interface/ve/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

ve-list_nptv6_domain-list

Specification	Value
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_isis

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ve-list_isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ve-list_isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *ve-list_isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

ve-list_isis_priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

ve-list_isis_hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

ve-list_isis_mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

ve-list_isis_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_isis_password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

ve-list_isis_authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

ve-list_isis_authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

ve-list_isis_authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

ve-list_isis_authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_isis_wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

ve-list_isis_hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

ve-list_isis_hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

ve-list_isis_metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

ve-list_isis_csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

ve-list_icmpv6-rate-limit

Specification	Value
Type	*object*

lockup-period-v6

Description Lockup period (second)

Type: number

Range: 1-16383

lockup-v6

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

normal-v6

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

ve-list_lw-4o6

Specification	Value
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_icmp-rate-limit

Specification	Value
Type	*object*

lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

normal

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

brief

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list

Specification	Value
Type	*list*
Block object keys	

access-list

Description: access-list is a **JSON Block**. Please see below for *ethernet-list_access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: disable

auto-neg-enable

Description enable auto-negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd

Description: bfd is a **JSON Block**. Please see below for *ethernet-list_bfd*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/bfd*

cpu-process

Description All Packets to this port are processed by CPU

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cpu-process-dir

Description 'primary': Primary board; 'blade': blade board; 'hash-dip': Hash based on the Destination IP; 'hash-sip': Hash based on the Source IP; 'hash-dmac': Hash based on the Destination MAC; 'hash-smac': Hash based on the Source MAC;

Type: string

Supported Values: primary, blade, hash-dip, hash-sip, hash-dmac, hash-smac

dac-link-training-enable

Description turn on the DAC-IEEE-LINK-TRAINING

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ddos

Description: ddos is a **JSON Block**. Please see below for *ethernet-list_ddos*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ddos*

duplexity

Description 'Full': Full; 'Half': Half; 'auto': auto;

Type: string

Supported Values: Full, Half, auto

Default: auto

fec-forced-off

Description turn off the FEC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fec-forced-off and fec-forced-on are mutually exclusive

fec-forced-on

Description turn on the FEC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fec-forced-on and fec-forced-off are mutually exclusive

flow-control

Description Enable 802.3x flow control on full duplex port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gaming-protocol-compliance

Description Enable Gaming Protocol Compliance Check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp-rate-limit

Description: icmp-rate-limit is a **JSON Block**. Please see below for *ethernet-list_icmp-rate-limit*

Type: Object

icmpv6-rate-limit

Description: icmpv6-rate-limit is a **JSON Block**. Please see below for *ethernet-list_icmpv6-rate-limit*

Type: Object

ifnum

Description Ethernet interface number

Type: number

Format: interface

ip

Description: ip is a **JSON Block**. Please see below for *ethernet-list_ip*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip*

ipg-bit-time

Description Set Inter-packet-gap interval in bit timing, default is 96

Type: number

Range: 64-120

Default: 96

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ethernet-list_ipv6*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *ethernet-list_isis*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/isis*

l3-vlan-fwd-disable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp

Description: lldp is a **JSON Block**. Please see below for *ethernet-list_lldp*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/lldp*

load-interval

Description Configure Load Interval (Seconds (5-300, Multiple of 5), default 300)

Type: number

Range: 5-300

Default: 300

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *ethernet-list_lw-4o6*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/lw-4o6*

mac-learning

Description 'enable': Enable MAC learning; 'disable': Disable MAC learning; 'dmac-only': Enable destination MAC learning only;

Type: string

Supported Values: enable, disable, dmac-only

map

Description: map is a **JSON Block**. Please see below for *ethernet-list_map*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/map*

media-type-copper

Description Set the media type to copper

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

monitor-list

Type: List

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nptv6

Description: nptv6 is a **JSON Block**. Please see below for *ethernet-list_nptv6*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/nptv6*

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/interface-ethernet-tmpl*

ping-sweep-detection

Description 'enable': Enabl ping sweep detection; 'disable': Disable ping sweep detection(default);

Type: string

Supported Values: enable, disable

Default: disable

port-breakout

Description '4x10G': Breakout 100G/40G ports into 4x10G ports; '4x25G': Breakout 100G ports into 4x25G ports; '2x50G': Breakout 100G ports into 2x50G ports;

Type: string

Supported Values: 4x10G, 4x25G, 2x50G

port-scan-detection

Description 'enable': Enable port scan detection; 'disable': Disable port scan detection(default);

Type: string

Supported Values: enable, disable

Default: disable

remove-vlan-tag

Description Remove the vlan tag for egressing packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

spanning-tree

Description: spanning-tree is a **JSON Block**. Please see below for *ethernet-list_spanning-tree*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/spanning-tree*

speed

Description '10': 10; '100': 100; '1000': 1000; 'auto': auto;

Type: string

Supported Values: 10, 100, 1000, auto

Default: auto

speed-forced-10g

Description force the speed to be 10G on 25G link

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: speed-forced-10g and speed-forced-1g are mutually exclusive

speed-forced-1g

Description force the speed to be 1G on 25G link

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: speed-forced-1g and speed-forced-10g are mutually exclusive

speed-forced-40g

Description force the speed to be 40G on 100G link

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-distribution-mode

Description 'sip': sip; 'dip': dip; 'primary': primary; 'blade': blade; 'l4-src-port': l4-src-port; 'l4-dst-port': l4-dst-port;

Type: string

Supported Values: sip, dip, l3-lookup, primary, blade, l4-src-port, l4-dst-port

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-group-list

Type: List

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/trunk-group/{trunk-number}*

update-l2-info

Description Update and use received L2 information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire

Description Mark ethernet as a virtual wire interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan-learning

Description 'enable': Enable VLAN learning; 'disable': Disable VLAN learning;

Type: string

Supported Values: enable, disable

ethernet-list_map

Specification	Value
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ip

Specification	Value
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dmz

Description DMZ network facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ethernet-list_ip_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *ethernet-list_ip_rip*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ethernet-list_ip_router*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ethernet-list_ip_stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Configure Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet before sending out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unnumbered

Description Set the interface as unnumbered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ip_stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ip_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ethernet-list_ip_helper-address-list

Specification	Value
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

ethernet-list_ip_rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ethernet-list_ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ethernet-list_ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ethernet-list_ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ethernet-list_ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ip_rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ethernet-list_ip_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ethernet-list_ip_rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ethernet-list_ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ethernet-list_ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ethernet-list_ip_rip_authentication_str*

Type: Object

ethernet-list_ip_rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ethernet-list_ip_rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ethernet-list_ip_rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ethernet-list_ip_rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ethernet-list_ip_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ethernet-list_ip_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/router/isis*

ethernet-list_ip_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ip_ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ethernet-list_ip_ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ethernet-list_ip_ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ethernet-list_ip_ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ethernet-list_ip_ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ethernet-list_ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ethernet-list_ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ethernet-list_ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ethernet-list_ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ip_ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ethernet-list_ip_ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ethernet-list_ip_ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_ip_ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_ip_ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ethernet-list_ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ethernet-list_ip_ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ethernet-list_ddos

Specification	Value
Type	*object*

inside

Description DDoS inside (trusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

ethernet-list_bfd

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ethernet-list_bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *ethernet-list_bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_bfd_authentication

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ethernet-list_bfd_interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

ethernet-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets_input': Input packets; 'bytes_input': Input bytes; 'received_broadcasts': Received broadcasts; 'received_multicasts': Received multicasts; 'received_unicasts': Received unicasts; 'input_errors': Input errors; 'crc': CRC; 'frame': Frames; 'runts': Runts; 'giants': Giants; 'packets_output': Output packets; 'bytes_output': Output bytes; 'transmitted_broadcasts': Transmitted broadcasts; 'transmitted_multicasts': Transmitted multicasts; 'transmitted_unicasts': Transmitted unicasts; 'output_errors': Output errors; 'collisions': Collisions; 'giants_output': Output Giants; 'rate_pkt_sent': Packet sent rate packets/sec; 'rate_byte_sent': Byte sent rate bits/sec; 'rate_pkt_rcvd': Packet received rate packets/sec; 'rate_byte_rcvd': Byte received rate bits/sec; 'load_interval': Load Interval; 'drops': Drops;

Type: string

Supported Values: all, packets_input, bytes_input, received_broadcasts, received_multicasts, received_unicasts, input_errors, crc, frame, runts, giants, packets_output, bytes_output, transmitted_broadcasts, transmitted_multicasts, transmitted_unicasts, output_errors, collisions, giants_output, rate_pkt_sent, rate_byte_sent, rate_pkt_rcvd, rate_byte_rcvd, load_interval, transmit_drops, receive_drops, input_utilization, output_utilization

ethernet-list_monitor-list

Specification	Value
Type	*list*
Block object keys	

mirror-index

Description Mirror index

Type: number

Range: 1-4

Reference Object: */axapi/v3/mirror-port*

monitor

Description 'input': Incoming packets; 'output': Outgoing packets; 'both': Both incoming and outgoing packets;

Type: string

Supported Values: input, output, both

monitor-vlan

Description VLAN number

Type: number

Range: 2-4094

ethernet-list_spanning-tree

Specification	Value
Type	*object*

admin-edge

Description Enable admin-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-edge

Description Enable auto-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

instance-list

Type: List

path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_spanning-tree_instance-list

Specification	Value
Type	*list*
Block object keys	

instance-start

Description Instance ID

Type: number

Range: 0-4094

mstp-path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

ethernet-list_lldp

Specification	Value
Type	*object*

enable-cfg

Description: enable-cfg is a **JSON Block**. Please see below for *ethernet-list_lldp_enable-cfg*

Type: Object

notification-cfg

Description: notification-cfg is a **JSON Block**. Please see below for *ethernet-list_lldp_notification-cfg*

Type: Object

tx-dot1-cfg

Description: tx-dot1-cfg is a **JSON Block**. Please see below for *ethernet-list_lldp_tx-dot1-cfg*

Type: Object

tx-tlvs-cfg

Description: tx-tlvs-cfg is a **JSON Block**. Please see below for *ethernet-list_lldp_tx-tlvs-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_lldp_tx-dot1-cfg

Specification	Value
Type	*object*

link-aggregation

Description Interface link aggregation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-dot1-tlvs

Description Interface lldp tx IEEE 802.1 Organizationally specific TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan

Description Interface vlan information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_lldp_notification-cfg

Specification	Value
Type	*object*

notif-enable

Description Interface lldp notification enable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification

Description Interface lldp notification configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_lldp_tx-tlvs-cfg

Specification	Value
Type	*object*

exclude

Description Configure which TLVs excluded. All basic TLVs will be included by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management-address

Description Interface lldp management address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-description

Description Interface lldp port description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-capabilities

Description Interface lldp system capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-description

Description Interface lldp system description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-name

Description Interface lldp system name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs

Description Interface lldp tx TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_lldp_enable-cfg

Specification	Value
Type	*object*

rt-enable

Description Interface lldp enable/disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_trunk-group-list

Specification	Value
Type	*list*
Block object keys	

admin-key

Description LACP admin key (Admin key value)

Type: number

Range: 10000-65535

mode

Description 'active': enable initiation of LACP negotiation on a port(default); 'passive': disable initiation of LACP negotiation on a port;

Type: string

Supported Values: active, passive

Default: active

port-priority

Description Set LACP priority for a port (LACP port priority)

Type: number

Range: 1-65535

timeout

Description 'long': Set LACP long timeout (default); 'short': Set LACP short timeout;

Type: string

Supported Values: long, short

Default: long

trunk-number

Description Trunk Number

Type: number

Range: 1-4096

type

Description 'static': Static (default); 'lacp': lacp; 'lacp-udld': lacp-udld;

Type: string

Supported Values: static, lacp, lacp-udld

Default: static

udld-timeout-cfg

Description: udld-timeout-cfg is a **JSON Block**. Please see below for *ethernet-list_trunk-group-list_udld-timeout-cfg*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_trunk-group-list_udld-timeout-cfg

Specification	Value
Type	*object*

fast

Description fast timeout in unit of milli-seconds(default 1000)

Type: number

Range: 100-1000

Default: 1000

Mutual Exclusion: fast and slow are mutually exclusive

slow

Description slow timeout in unit of seconds

Type: number

Range: 1-60

Mutual Exclusion: slow and fast are mutually exclusive

ethernet-list_nptv6

Specification	Value
Type	*object*

domain-list

Type: List

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

ethernet-list_nptv6_domain-list

Specification	Value
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_icmp-rate-limit

Specification	Value
Type	*object*

lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

normal

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

ethernet-list_isis

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ethernet-list_isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ethernet-list_isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *ethernet-list_isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

ethernet-list_isis_priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

ethernet-list_isis_hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

ethernet-list_isis_mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

ethernet-list_isis_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_isis_password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

ethernet-list_isis_authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

ethernet-list_isis_authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

ethernet-list_isis_authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

ethernet-list_isis_authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_isis_wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

ethernet-list_isis_hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

ethernet-list_isis_hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

ethernet-list_isis_metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

ethernet-list_isis_csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

ethernet-list_icmpv6-rate-limit

Specification	Value
Type	*object*

lockup-period-v6

Description Lockup period (second)

Type: number

Range: 1-16383

lockup-v6

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

normal-v6

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

ethernet-list_ipv6

Specification	Value
Type	*object*

access-list-cfg

Description: access-list-cfg is a **JSON Block**. Please see below for *ethernet-list_ipv6_access-list-cfg*

Type: Object

address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ethernet-list_ipv6_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *ethernet-list_ipv6_rip*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *ethernet-list_ipv6_router*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *ethernet-list_ipv6_router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ethernet-list_ipv6_stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet before sending out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_address-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ethernet-list_ipv6_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ethernet-list_ipv6_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ethernet-list_ipv6_router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ethernet-list_ipv6_router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/ripng*

ethernet-list_ipv6_router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ethernet-list_ipv6_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_rip

Specification	Value
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ethernet-list_ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ethernet-list_ipv6_stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_access-list-cfg

Specification	Value
Type	*object*

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

ethernet-list_ipv6_ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ethernet-list_ipv6_ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ethernet-list_ipv6_ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ethernet-list_ipv6_ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_ipv6_ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ethernet-list_ipv6_ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_ipv6_ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ethernet-list_ipv6_ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ethernet-list_ipv6_ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ethernet-list_ipv6_router-adver

Specification	Value
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

adver-vrid

Description Specify ha VRRP-A vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

hop-limit

Description Set Router Advertisement Hop Limit (default: 255)

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Max Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Min Router Advertisement Interval (seconds))

Type: number

Range: 3-1350

Default: 200

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_ipv6_router-adver_prefix-list

Specification	Value
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

ethernet-list_lw-4o6

Specification	Value
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

switch-drop-reason

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list

Specification	Value
Type	*list*
Block object keys	

access-list

Description: access-list is a **JSON Block**. Please see below for *lif-list_access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

bfd

Description: bfd is a **JSON Block**. Please see below for *lif-list_bfd*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/bfd*

encapsulation

Description: encapsulation is a **JSON Block**. Please see below for *lif-list_encapsulation*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/encapsulation*

ifname

Description Lif interface name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

ip

Description: ip is a **JSON Block**. Please see below for *lif-list_ip*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *lif-list_ipv6*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *lif-list_isis*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/isis*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_isis

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *lif-list_isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *lif-list_isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *lif-list_isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

lif-list_isis_priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

lif-list_isis_hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

lif-list_isis_mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

lif-list_isis_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_isis_password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

lif-list_isis_authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

lif-list_isis_authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

lif-list_isis_authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

lif-list_isis_authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_isis_wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

lif-list_isis_hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

lif-list_isis_hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

lif-list_isis_metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

lif-list_isis_csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

lif-list_bfd

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *lif-list_bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *lif-list_bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_bfd_authentication

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

lif-list_bfd_interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

lif-list_ip

Specification	Value
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dmz

Description DMZ network facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *lif-list_ip_ospf*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *lif-list_ip_rip*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *lif-list_ip_router*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unnumbered

Description Set the interface as unnumbered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ip_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *lif-list_ip_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/router/isis*

lif-list_ip_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ip_rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *lif-list_ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *lif-list_ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *lif-list_ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *lif-list_ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ip_rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

lif-list_ip_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

lif-list_ip_rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *lif-list_ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *lif-list_ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *lif-list_ip_rip_authentication_str*

Type: Object

lif-list_ip_rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

lif-list_ip_rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

lif-list_ip_rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

lif-list_ip_rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

lif-list_ip_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

lif-list_ip_ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *lif-list_ip_ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip/{ip-addr}*

lif-list_ip_ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

lif-list_ip_ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

lif-list_ip_ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *lif-list_ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *lif-list_ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *lif-list_ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *lif-list_ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ip_ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

lif-list_ip_ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

lif-list_ip_ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_ip_ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_ip_ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *lif-list_ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

lif-list_ip_ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

lif-list_access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

lif-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_pkts': some help string; 'num_total_bytes': some help string; 'num_unicast_pkts': some help string; 'num_broadcast_pkts': some help string; 'num_multicast_pkts': some help string; 'num_tx_pkts': some help string; 'num_total_tx_bytes': some help string; 'num_unicast_tx_pkts': some help string; 'num_broadcast_tx_pkts': some help string; 'num_multicast_tx_pkts': some help string; 'dropped_dis_rx_pkts': some help string; 'dropped_rx_pkts': some help string; 'dropped_dis_tx_pkts': some help string; 'dropped_tx_pkts': some help string; 'dropped_rx_pkts_gre_key': some help string;

Type: string

Supported Values: all, num_pkts, num_total_bytes, num_unicast_pkts, num_broadcast_pkts, num_multicast_pkts, num_tx_pkts, num_total_tx_bytes, num_unicast_tx_pkts, num_broadcast_tx_pkts, num_multicast_tx_pkts, dropped_dis_rx_pkts, dropped_rx_pkts, dropped_dis_tx_pkts, dropped_tx_pkts, dropped_rx_pkts_gre_key

lif-list_ipv6

Specification	Value
Type	*object*

address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *lif-list_ipv6_ospf*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description: router is a **JSON Block**. Please see below for *lif-list_ipv6_router*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ipv6_address-list

Specification	Value
Type	*list*
Block object keys	

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_ipv6_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *lif-list_ipv6_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *lif-list_ipv6_router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *lif-list_ipv6_router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/ripng*

lif-list_ipv6_router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ipv6_router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ipv6_router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

lif-list_ipv6_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ipv6_ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ipv6_ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

lif-list_ipv6_ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

lif-list_ipv6_ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

lif-list_ipv6_ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_ipv6_ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

lif-list_ipv6_ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_ipv6_ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

lif-list_ipv6_ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

lif-list_ipv6_ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

lif-list_encapsulation

Specification	Value
Type	*object*

dot1q

Description: dot1q is a **JSON Block**. Please see below for *lif-list_encapsulation_dot1q*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/encapsulation/dot1q*

lif-list_encapsulation_dot1q

Specification	Value
Type	*object*

ethernet

Description Ethernet Interface (Ethernet port number)

Type: number

Format: interface

Mutual Exclusion: ethernet and trunk are mutually exclusive

tag

Description Tag ID

Type: number

Range: 2-4094

trunk

Description Trunk Interface (Trunk number)

Type: number

Range: 1-4096

Mutual Exclusion: trunk and ethernet are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

driver-statistic

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list

Specification	Value
Type	*list*
Block object keys	

ifnum

Description Loopback interface number

Type: number

Format: interface

ip

Description: ip is a **JSON Block**. Please see below for *loopback-list_ip*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *loopback-list_ipv6*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *loopback-list_isis*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/isis*

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

snmp-server

Description: snmp-server is a **JSON Block**. Please see below for *loopback-list_snmp-server*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_isis

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *loopback-list_isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *loopback-list_isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *loopback-list_isis_mesh-group*

Type: Object

metric-list

Type: List

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

loopback-list_isis_priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

loopback-list_isis_hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

loopback-list_isis_mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

loopback-list_isis_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_isis_password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

loopback-list_isis_authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

loopback-list_isis_authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

loopback-list_isis_authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

loopback-list_isis_authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_isis_wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

loopback-list_isis_hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

loopback-list_isis_hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

loopback-list_isis_metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

loopback-list_isis_csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

loopback-list_snmp-server

Specification	Value
Type	*object*

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_ip

Specification	Value
Type	*object*

address-list

Type: List

ospf

Description: ospf is a **JSON Block**. Please see below for *loopback-list_ip_ospf*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *loopback-list_ip_rip*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *loopback-list_ip_router*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ip_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

loopback-list_ip_ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *loopback-list_ip_ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

loopback-list_ip_ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

loopback-list_ip_ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

loopback-list_ip_ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *loopback-list_ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *loopback-list_ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *loopback-list_ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ip_ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

loopback-list_ip_ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_ip_ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_ip_ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *loopback-list_ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

loopback-list_ip_ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

loopback-list_ip_rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *loopback-list_ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *loopback-list_ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *loopback-list_ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *loopback-list_ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ip_rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

loopback-list_ip_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

loopback-list_ip_rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *loopback-list_ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *loopback-list_ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *loopback-list_ip_rip_authentication_str*

Type: Object

loopback-list_ip_rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

loopback-list_ip_rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

loopback-list_ip_rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

loopback-list_ip_rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

loopback-list_ip_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *loopback-list_ip_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/router/isis*

loopback-list_ip_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6

Specification	Value
Type	*object*

address-list

Type: List

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *loopback-list_ipv6_ospf*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *loopback-list_ipv6_rip*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *loopback-list_ipv6_router*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6_address-list

Specification	Value
Type	*list*
Block object keys	

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_ipv6_rip

Specification	Value
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *loopback-list_ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

loopback-list_ipv6_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *loopback-list_ipv6_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *loopback-list_ipv6_router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *loopback-list_ipv6_router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/ripng*

loopback-list_ipv6_router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6_router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6_router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

loopback-list_ipv6_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6_ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6_ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

loopback-list_ipv6_ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

loopback-list_ipv6_ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

loopback-list_ipv6_ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_ipv6_ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

loopback-list_ipv6_ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

loopback-list_ipv6_ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

2.63.2 interface available-eth-list

List of ethernet interfaces available in a partition

available-eth-list Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	available-eth-list
Element URI	/axapi/v3/interface/available-eth-list
Element Attributes	available-eth-list_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/interface/available-eth-list/oper
Schema	`available-eth-list schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/available-eth-list

available-eth-list attributes

Get Object

GET

/axapi/v3/interface/available-eth-list

}
```

ethernet-list

ethernet-list is **JSON List** of *ethernet attributes*

ethernet-list : [

{ *ethernet attributes* },

{ *ethernet attributes* },

...

]

ethernet attributes

access-list

Description: access-list is a **JSON Block**. Please see below for *access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: disable

auto-neg-enable

Description enable auto-negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd

Description: bfd is a **JSON Block**. Please see below for *bfd*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/bfd*

cpu-process

Description All Packets to this port are processed by CPU

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cpu-process-dir

Description 'primary': Primary board; 'blade': blade board; 'hash-dip': Hash based on the Destination IP; 'hash-sip': Hash based on the Source IP; 'hash-dmac': Hash based on the Destination MAC; 'hash-smac': Hash based on the Source MAC;

Type: string

Supported Values: primary, blade, hash-dip, hash-sip, hash-dmac, hash-smac

dac-link-training-enable

Description turn on the DAC-IEEE-LINK-TRAINING

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ddos

Description: ddos is a **JSON Block**. Please see below for *ddos*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ddos*

duplexity

Description 'Full': Full; 'Half': Half; 'auto': auto;

Type: string

Supported Values: Full, Half, auto

Default: auto

fec-forced-off

Description turn off the FEC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fec-forced-off and fec-forced-on are mutually exclusive

fec-forced-on

Description turn on the FEC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fec-forced-on and fec-forced-off are mutually exclusive

flow-control

Description Enable 802.3x flow control on full duplex port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gaming-protocol-compliance

Description Enable Gaming Protocol Compliance Check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp-rate-limit

Description: icmp-rate-limit is a **JSON Block**. Please see below for *icmp-rate-limit*

Type: Object

icmpv6-rate-limit

Description: icmpv6-rate-limit is a **JSON Block**. Please see below for *icmpv6-rate-limit*

Type: Object

ifnum

Description Ethernet interface number

Type: number

Format: interface

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip*

ipg-bit-time

Description Set Inter-packet-gap interval in bit timing, default is 96

Type: number

Range: 64-120

Default: 96

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *isis*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/isis*

l3-vlan-fwd-disable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp

Description: lldp is a **JSON Block**. Please see below for *lldp*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/lldp*

load-interval

Description Configure Load Interval (Seconds (5-300, Multiple of 5), default 300)

Type: number

Range: 5-300

Default: 300

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *lw-4o6*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/lw-4o6*

mac-learning

Description 'enable': Enable MAC learning; 'disable': Disable MAC learning; 'dmac-only': Enable destination MAC learning only;

Type: string

Supported Values: enable, disable, dmac-only

map

Description: map is a **JSON Block**. Please see below for *map*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/map*

media-type-copper

Description Set the media type to copper

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

monitor-list

Type: List

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nptv6

Description: nptv6 is a **JSON Block**. Please see below for *nptv6*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/nptv6*

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/interface-ethernet-tmpl*

ping-sweep-detection

Description 'enable': Enabl ping sweep detection; 'disable': Disable ping sweep detection(default);

Type: string

Supported Values: enable, disable

Default: disable

port-breakout

Description '4x10G': Breakout 100G/40G ports into 4x10G ports; '4x25G': Breakout 100G ports into 4x25G ports; '2x50G': Breakout 100G ports into 2x50G ports;

Type: string

Supported Values: 4x10G, 4x25G, 2x50G

port-scan-detection

Description 'enable': Enable port scan detection; 'disable': Disable port scan detection(default);

Type: string

Supported Values: enable, disable

Default: disable

remove-vlan-tag

Description Remove the vlan tag for egressing packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

spanning-tree

Description: spanning-tree is a **JSON Block**. Please see below for *spanning-tree*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/spanning-tree*

speed

Description '10': 10; '100': 100; '1000': 1000; 'auto': auto;

Type: string

Supported Values: 10, 100, 1000, auto

Default: auto

speed-forced-10g

Description force the speed to be 10G on 25G link

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: speed-forced-10g and speed-forced-1g are mutually exclusive

speed-forced-1g

Description force the speed to be 1G on 25G link

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: speed-forced-1g and speed-forced-10g are mutually exclusive

speed-forced-40g

Description force the speed to be 40G on 100G link

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-distribution-mode

Description 'sip': sip; 'dip': dip; 'primary': primary; 'blade': blade; 'l4-src-port': l4-src-port; 'l4-dst-port': l4-dst-port;

Type: string

Supported Values: sip, dip, l3-lookup, primary, blade, l4-src-port, l4-dst-port

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-group-list

Type: List

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/trunk-group/{trunk-number}*

update-l2-info

Description Update and use received L2 information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire

Description Mark ethernet as a virtual wire interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan-learning

Description 'enable': Enable VLAN learning; 'disable': Disable VLAN learning;

Type: string

Supported Values: enable, disable

map

Specification	Value
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip

Specification	Value
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dmz

Description DMZ network facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ip_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *ip_rip*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ip_router*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ip_stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Configure Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet before sending out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unnumbered

Description Set the interface as unnumbered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ip_helper-address-list

Specification	Value
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

ip_rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ip_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ip_rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ip_rip_authentication_str*

Type: Object

ip_rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ip_rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ip_rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ip_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ip_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/router/isis*

ip_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ip_ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ip_ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ip_ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ddos

Specification	Value
Type	*object*

inside

Description DDoS inside (trusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Reference Object: */axapi/v3/access-list/standard*

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

bfd

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_authentication

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

bfd_interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets_input': Input packets; 'bytes_input': Input bytes; 'received_broadcasts': Received broadcasts; 'received_multicasts': Received multicasts; 'received_unicasts': Received unicasts; 'input_errors': Input errors; 'crc': CRC; 'frame': Frames; 'runts': Runts; 'giants': Giants; 'packets_output': Output packets; 'bytes_output': Output bytes; 'transmitted_broadcasts': Transmitted broadcasts; 'transmitted_multicasts': Transmitted multicasts; 'transmitted_unicasts': Transmitted unicasts; 'output_errors': Output errors; 'collisions': Collisions; 'giants_output': Output Giants; 'rate_pkt_sent': Packet sent rate packets/sec; 'rate_byte_sent': Byte sent rate bits/sec; 'rate_pkt_rcvd': Packet received rate packets/sec; 'rate_byte_rcvd': Byte received rate bits/sec; 'load_interval': Load Interval; 'drops': Drops;

Type: string

Supported Values: all, packets_input, bytes_input, received_broadcasts, received_multicasts, received_unicasts, input_errors, crc, frame, runts, giants, packets_output, bytes_output, transmitted_broadcasts, transmitted_multicasts, transmitted_unicasts, output_errors, collisions, giants_output, rate_pkt_sent, rate_byte_sent, rate_pkt_rcvd, rate_byte_rcvd, load_interval, transmit_drops, receive_drops, input_utilization, output_utilization

monitor-list

Specification	Value
Type	*list*
Block object keys	

mirror-index

Description Mirror index

Type: number

Range: 1-4

Reference Object: */axapi/v3/mirror-port*

monitor

Description 'input': Incoming packets; 'output': Outgoing packets; 'both': Both incoming and outgoing packets;

Type: string

Supported Values: input, output, both

monitor-vlan

Description VLAN number

Type: number

Range: 2-4094

spanning-tree

Specification	Value
Type	*object*

admin-edge

Description Enable admin-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-edge

Description Enable auto-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

instance-list

Type: List

path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

spanning-tree_instance-list

Specification	Value
Type	*list*
Block object keys	

instance-start

Description Instance ID

Type: number

Range: 0-4094

mstp-path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

lldp

Specification	Value
Type	*object*

enable-cfg

Description: enable-cfg is a **JSON Block**. Please see below for *lldp_enable-cfg*

Type: Object

notification-cfg

Description: notification-cfg is a **JSON Block**. Please see below for *lldp_notification-cfg*

Type: Object

tx-dot1-cfg

Description: tx-dot1-cfg is a **JSON Block**. Please see below for *lldp_tx-dot1-cfg*

Type: Object

tx-tlvs-cfg

Description: tx-tlvs-cfg is a **JSON Block**. Please see below for *lldp_tx-tlvs-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp_tx-dot1-cfg

Specification	Value
Type	*object*

link-aggregation

Description Interface link aggregation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-dot1-tlvs

Description Interface lldp tx IEEE 802.1 Organizationally specific TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan

Description Interface vlan information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_notification-cfg

Specification	Value
Type	*object*

notif-enable

Description Interface lldp notification enable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification

Description Interface lldp notification configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_tx-tlvs-cfg

Specification	Value
Type	*object*

exclude

Description Configure which TLVs excluded. All basic TLVs will be included by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management-address

Description Interface lldp management address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-description

Description Interface lldp port description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-capabilities

Description Interface lldp system capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-description

Description Interface lldp system description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-name

Description Interface lldp system name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs

Description Interface lldp tx TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_enable-cfg

Specification	Value
Type	*object*

rt-enable

Description Interface lldp enable/disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-group-list

Specification	Value
Type	*list*
Block object keys	

admin-key

Description LACP admin key (Admin key value)

Type: number

Range: 10000-65535

mode

Description 'active': enable initiation of LACP negotiation on a port(default); 'passive': disable initiation of LACP negotiation on a port;

Type: string

Supported Values: active, passive

Default: active

port-priority

Description Set LACP priority for a port (LACP port priority)

Type: number

Range: 1-65535

timeout

Description 'long': Set LACP long timeout (default); 'short': Set LACP short timeout;

Type: string

Supported Values: long, short

Default: long

trunk-number

Description Trunk Number

Type: number

Range: 1-4096

type

Description 'static': Static (default); 'lacp': lacp; 'lacp-udld': lacp-udld;

Type: string

Supported Values: static, lacp, lacp-udld

Default: static

udld-timeout-cfg

Description: udld-timeout-cfg is a **JSON Block**. Please see below for *trunk-group-list_udld-timeout-cfg*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-group-list_udld-timeout-cfg

Specification	Value
Type	*object*

fast

Description fast timeout in unit of milli-seconds(default 1000)

Type: number

Range: 100-1000

Default: 1000

Mutual Exclusion: fast and slow are mutually exclusive

slow

Description slow timeout in unit of seconds

Type: number

Range: 1-60

Mutual Exclusion: slow and fast are mutually exclusive

nptv6

Specification	Value
Type	*object*

domain-list

Type: List

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

nptv6_domain-list

Specification	Value
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp-rate-limit

Specification	Value
Type	*object*

lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

normal

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

isis

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

isis_priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

isis_hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

isis_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis_authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

isis_authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

isis_authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

isis_authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

isis_hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

isis_csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

icmpv6-rate-limit

Specification	Value
Type	*object*

lockup-period-v6

Description Lockup period (second)

Type: number

Range: 1-16383

lockup-v6

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

normal-v6

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

ipv6

Specification	Value
Type	*object*

access-list-cfg

Description: access-list-cfg is a **JSON Block**. Please see below for *ipv6_access-list-cfg*

Type: Object

address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *ipv6_rip*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *ipv6_router*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *ipv6_router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ipv6_stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet before sending out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_address-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ipv6_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ipv6_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ipv6_router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/ripng*

ipv6_router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip

Specification	Value
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ipv6_stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_access-list-cfg

Specification	Value
Type	*object*

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

ipv6_ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ipv6_ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ipv6_ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ipv6_ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ipv6_ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_router-adver

Specification	Value
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

adver-vrid

Description Specify ha VRRP-A vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

hop-limit

Description Set Router Advertisement Hop Limit (default: 255)

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Max Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Min Router Advertisement Interval (seconds))

Type: number

Range: 3-1350

Default: 200

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_router-adver_prefix-list

Specification	Value
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

lw-4o6

Specification	Value
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.10 interface ethernet bfd

Configure BFD (Bidirectional Forwarding Detection)

bfd Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	bfd
Element URI	/axapi/v3/interface/ethernet/{ifnum}/bfd
Element Attributes	bfd_attributes
Partition Visibility	shared
Schema	`bfd schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ethernet/{ifnum}/bfd

bfd attributes

```
POST /axapi/v3/interface/ethernet/1/bfd
Payload:
{
    "bfd": {
        "authentication": {
            "method": "md5",
            "key-id": 0,
            "password": "a"
        }
    }
}
```

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}/bfd

bfd attributes

```
GET /axapi/v3/interface/ethernet/1/bfd
Reponse:
{
    "bfd": {
        "authentication": {
            "key-id": 0,

    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

bfd attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

inside

Description DDoS inside (trusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.12 interface ethernet ip

Global IP configuration subcommands

ip Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ip
Element URI	/axapi/v3/interface/ethernet/{ifnum}/ip
Element Attributes	ip_attributes
Partition Visibility	shared
Schema	`ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ethernet/{ifnum}/ip

ip attributes

```
POST /axapi/v3/interface/ethernet/1/ip
Payload:
```

(continues on next page)

(continued from previous page)

```
{
    "ip": {
        "stateful-firewall": {
            "inside": 1
        },
        "dhcp": 1
    }
}
```

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}/ip

ip attributes

```
GET /axapi/v3/interface/ethernet/1/ip
Reponse:
{
    "ip": {
        "dhcp": 1,
        "allow-promiscuous-vip": 0,
        "cache-spoofing-port": 0,
        "inside": 0,
        "outside": 0,
        "ttl-ignore": 0,
        "syn-cookie": 0,
        "slb-partition-redirect": 0,
        "generate-membership-query": 0,
        "client": 0,
        "server": 0,
        "dmz": 0,
        "unnumbered": 0,
        "uuid": "e584cbac-b59e-11ef-bcb4-ae71681635d0",
        "stateful-firewall": {
            "inside": 1,
            "outside": 0,
            "uuid": "e584e808-b59e-11ef-bcb4-ae71681635d0",
            "a10-url": "/axapi/v3/interface/ethernet/1/ip/stateful-firewall"
        },
        "a10-url": "/axapi/v3/interface/ethernet/1/ip"
    }
}
```

Modify Object

POST

/axapi/v3/interface/ethernet/{ifnum}/ip

ip attributes

Replace Object

PUT

/axapi/v3/interface/ethernet/{ifnum}/ip

ip attributes

```
PUT /axapi/v3/interface/ethernet/1/ip
Payload:
{
    "ip": {
        "stateful-firewall": {
            "inside": 1,
            "class-list": "abcd"
        },
        "dhcp": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/ethernet/{ifnum}/ip

ip attributes

```
DELETE /axapi/v3/interface/ethernet/1/ip
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

ip attributes

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dmz

Description DMZ network facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Configure Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet before sending out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unnumbered

Description Set the interface as unnumbered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

helper-address-list

Specification	Value
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *rip_authentication_str*

Type: Object

rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/router/isis*

router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.63.13 interface ethernet ip ospf

Open Shortest Path First for IPv4 (OSPF)

ospf Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	ospf
Element URI	/axapi/v3/interface/ethernet/{ifnum}/ip/ospf
Element Attributes	ospf_attributes

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.63.14 interface ethernet ip ospf ospf-global

Global setting for Open Shortest Path First for IPv4 (OSPF)

ospf-global Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ospf-global
Element URI	/axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-global
Element Attributes	ospf-global_attributes
Partition Visibility	shared
Schema	`ospf-global schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-global

ospf-global attributes

```
POST /axapi/v3/interface/ethernet/1/ip/ospf/ospf-global
Payload:
{
    "ospf-global": {
        "authentication-cfg": {
            "authentication": 1
        }
    }
}
```

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-global

ospf-global attributes

```
GET /axapi/v3/interface/ethernet/1/ip/ospf/ospf-global
Reponse:
{
    "ospf-global": {
        "authentication-cfg": {
            "authentication": 1
        },
        "bfd-cfg": {
            "bfd": 0
        },
        "dead-interval": 40,
        "hello-interval": 10,
        "mtu-ignore": 0,

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.63.15 interface ethernet ip ospf ospf-ip

IP address configuration for Open Shortest Path First for IPv4 (OSPF)

ospf-ip Specification

Parameter	Value

ipv6 attributes

access-list-cfg

Description: access-list-cfg is a **JSON Block**. Please see below for *access-list-cfg*

Type: Object

address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet before sending out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/ripng*

router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	Value
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list-cfg

Specification	Value
Type	*object*

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

router-adver

Specification	Value
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

adver-vrid

Description Specify ha VRRP-A vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

hop-limit

Description Set Router Advertisement Hop Limit (default: 255)

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Max Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Min Router Advertisement Interval (seconds))

Type: number

Range: 3-1350

Default: 200

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router-adver_prefix-list

Specification	Value
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

2.63.21 interface ethernet ipv6 ospf

Open Shortest Path First for IPv6 (OSPFv3)

ospf attributes

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

2.63.23 interface ethernet ipv6 router

Router

router Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	router
Element URI	/axapi/v3/interface/ethernet/{ifnum}/ipv6/router
Element Attributes	router_attributes
Partition Visibility	shared
Schema	`router schema`

Operations Allowed:

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}/ipv6/router

router_attributes

```
GET /axapi/v3/interface/ethernet/1/ipv6/router
Reponse:

ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tx-dot1-cfg

Specification	Value
Type	*object*

link-aggregation

Description Interface link aggregation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-dot1-tlvs

Description Interface lldp tx IEEE 802.1 Organizationally specific TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan

Description Interface vlan information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification-cfg

Specification	Value
Type	*object*

notif-enable

Description Interface lldp notification enable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification

Description Interface lldp notification configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs-cfg

Specification	Value
Type	*object*

exclude

Description Configure which TLVs excluded. All basic TLVs will be included by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management-address

Description Interface lldp management address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-description

Description Interface lldp port description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-capabilities

Description Interface lldp system capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-description

Description Interface lldp system description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-name

Description Interface lldp system name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs

Description Interface lldp tx TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-cfg

Specification	Value
Type	*object*

rt-enable

Description Interface lldp enable/disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.63.30 interface ethernet lw-4o6

Configure LW-4over6 interface

lw-4o6 Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	lw-4o6
Element URI	/axapi/v3/interface/ethernet/{ifnum}/lw-4o6
Element Attributes	lw-4o6_attributes
Partition Visibility	shared

    }
}
```

Delete Object

DELETE

/axapi/v3/interface/ethernet/{ifnum}/map

map attributes

map attributes

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.32 interface ethernet nptv6

Configure NPTv6 on this interface

nptv6 Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	nptv6
Element URI	/axapi/v3/interface/ethernet/{ifnum}/nptv6
Element Attributes	nptv6_attributes
Partition Visibility	shared
Schema	`nptv6 schema`

Operations Allowed:

GET

/axapi/v3/interface/ethernet/{ifnum}/nptv6

nptv6_attributes

nptv6 attributes

domain-list

Type: List

Reference Object: */axapi/v3/interface/ethernet/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

domain-list

Specification	Value
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.33 interface ethernet nptv6 domain

Apply NPTv6 translation domain on interface

domain Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*domain-name, bind-type*
Collection Name	*domain-list*
Collection URI	/axapi/v3/interface/ethernet/{ifnum}/nptv6/domain
Element Name	domain
Element URI	/axapi/v3/interface/ethernet/{ifnum}/nptv6/domain/{domain-name}+{bind-type}
Element Attributes	domain_attributes
Partition Visibility	shared
Schema	`domain schema`

Operations Allowed:

trunk-group-list : [
        { trunk-group attributes },
        { trunk-group attributes },
        ...
    ]
```

trunk-group attributes

admin-key

Description LACP admin key (Admin key value)

Type: number

Range: 10000-65535

mode

Description 'active': enable initiation of LACP negotiation on a port(default); 'passive': disable initiation of LACP negotiation on a port;

Type: string

Supported Values: active, passive

Default: active

port-priority

Description Set LACP priority for a port (LACP port priority)

Type: number

Range: 1-65535

timeout

Description 'long': Set LACP long timeout (default); 'short': Set LACP short timeout;

Type: string

Supported Values: long, short

Default: long

trunk-number

Description Trunk Number

Type: number

Range: 1-4096

type

Description 'static': Static (default); 'lacp': lacp; 'lacp-udld': lacp-udld;

Type: string

Supported Values: static, lacp, lacp-udld

Default: static

udld-timeout-cfg

Description: udld-timeout-cfg is a **JSON Block**. Please see below for *udld-timeout-cfg*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udld-timeout-cfg

Specification	Value
Type	*object*

fast

Description fast timeout in unit of milli-seconds(default 1000)

Type: number

Range: 100-1000

Default: 1000

Mutual Exclusion: fast and slow are mutually exclusive

slow

Description slow timeout in unit of seconds

Type: number

Range: 1-60

Mutual Exclusion: slow and fast are mutually exclusive

2.63.38 interface lif

Logical interface

lif Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*ifname*
Collection Name	*lif-list*
Collection URI	/axapi/v3/interface/lif
Element Name	lif
Element URI	/axapi/v3/interface/lif/{ifname}
Element Attributes	lif_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/interface/lif/{ifname}/stats
Operational Data URI	/axapi/v3/interface/lif/{ifname}/oper
Schema	`lif schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/lif

lif attributes

```
POST /axapi/v3/interface/lif/
Payload:
{
    "lif": {
        "ifname": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/interface/lif

lif attributes

Get Object

GET

/axapi/v3/interface/lif/{ifname}

lif attributes

```
GET /axapi/v3/interface/lif/a
Reponse:
{
    "lif": {
        "ifname": "a",
        "mtu": 1500,
```

(continues on next page)

(continued from previous page)

```
        "action": "enable",
        "uuid": "c23d02b4-b5a2-11ef-bcb4-ae71681635d0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/interface/lif/a"
    }
}
```

Get List

GET

/axapi/v3/interface/lif

lif-list

Modify Object

POST

/axapi/v3/interface/lif/{ifname}

lif attributes

Replace Object

PUT

/axapi/v3/interface/lif/{ifname}

lif attributes

```
PUT /axapi/v3/interface/lif/a
Payload:
{
    "lif": {
        "ifname": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/interface/lif

lif-list

Delete Object

DELETE

/axapi/v3/interface/lif/{ifname}

lif attributes

```
DELETE /axapi/v3/interface/lif/a
Reponse:
{
```

(continues on next page)

(continued from previous page)

```
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

lif-list

lif-list is **JSON List** of *lif attributes*

lif-list : [

{ *lif attributes* },

{ *lif attributes* },

...

]

lif attributes

access-list

Description: access-list is a **JSON Block**. Please see below for *access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

bfd

Description: bfd is a **JSON Block**. Please see below for *bfd*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/bfd*

encapsulation

Description: encapsulation is a **JSON Block**. Please see below for *encapsulation*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/encapsulation*

ifname

Description Lif interface name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *isis*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/isis*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

isis_priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

isis_hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

isis_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis_authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

isis_authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

isis_authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

isis_authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

isis_hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

isis_csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

bfd

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_authentication

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

bfd_interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

ip

Specification	Value
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dmz

Description DMZ network facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ip_ospf*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *ip_rip*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ip_router*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unnumbered

Description Set the interface as unnumbered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ip_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/router/isis*

ip_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ip_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ip_rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ip_rip_authentication_str*

Type: Object

ip_rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ip_rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ip_rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ip_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ip_ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ip_ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip/{ip-addr}*

ip_ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ip_ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Reference Object: */axapi/v3/access-list/standard*

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_pkts': some help string; 'num_total_bytes': some help string; 'num_unicast_pkts': some help string; 'num_broadcast_pkts': some help string; 'num_multicast_pkts': some help string; 'num_tx_pkts': some help string; 'num_total_tx_bytes': some help string; 'num_unicast_tx_pkts': some help string; 'num_broadcast_tx_pkts': some help string; 'num_multicast_tx_pkts': some help string; 'dropped_dis_rx_pkts': some help string; 'dropped_rx_pkts': some help string; 'dropped_dis_tx_pkts': some help string; 'dropped_tx_pkts': some help string; 'dropped_rx_pkts_gre_key': some help string;

Type: string

Supported Values: all, num_pkts, num_total_bytes, num_unicast_pkts, num_broadcast_pkts, num_multicast_pkts, num_tx_pkts, num_total_tx_bytes, num_unicast_tx_pkts, num_broadcast_tx_pkts, num_multicast_tx_pkts, dropped_dis_rx_pkts, dropped_rx_pkts, dropped_dis_tx_pkts, dropped_tx_pkts, dropped_rx_pkts_gre_key

ipv6

Specification	Value
Type	*object*

address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description: router is a **JSON Block**. Please see below for *ipv6_router*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_address-list

Specification	Value
Type	*list*
Block object keys	

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ipv6_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ipv6_router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/ripng*

ipv6_router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ipv6_ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ipv6_ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ipv6_ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ipv6_ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

encapsulation

Specification	Value
Type	*object*

dot1q

Description: dot1q is a **JSON Block**. Please see below for *encapsulation_dot1q*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/encapsulation/dot1q*

encapsulation_dot1q

Specification	Value
Type	*object*

ethernet

Description Ethernet Interface (Ethernet port number)

Type: number

Format: interface

Mutual Exclusion: ethernet and trunk are mutually exclusive

tag

Description Tag ID

Type: number

Range: 2-4094

trunk

Description Trunk Interface (Trunk number)

Type: number

Range: 1-4096

Mutual Exclusion: trunk and ethernet are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.39 interface lif bfd

Configure BFD (Bidirectional Forwarding Detection)

bfd Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	bfd
Element URI	/axapi/v3/interface/lif/{ifname}/bfd
Element Attributes	bfd_attributes
Partition Visibility	shared
Schema	`bfd schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/lif/{ifname}/bfd

bfd attributes

```
POST /axapi/v3/interface/lif/1/bfd
Payload:
{
    "bfd": {
        "authentication": {
            "method": "md5",
            "key-id": 0,
            "password": "a"
        }
    }
}
```

Get Object

GET

/axapi/v3/interface/lif/{ifname}/bfd

bfd attributes

```
GET /axapi/v3/interface/lif/1/bfd
Reponse:
{
    "bfd": {
        "authentication": {
            "key-id": 0,
            "method": "md5",
            "encrypted": "fsK+NupqdFRcyhg0vY3OnyfcOtVgP5XAuvNQ4P+PNnuko7D64/
↪4GyrEekPer8eHd"
        },
        "echo": 0,
        "uuid": "4d31b2a2-b5a3-11ef-bcb4-ae71681635d0",
        "a10-url": "/axapi/v3/interface/lif/1/bfd"
    }
}
```

Modify Object

POST

/axapi/v3/interface/lif/{ifname}/bfd

bfd attributes

Replace Object

PUT

/axapi/v3/interface/lif/{ifname}/bfd

bfd attributes

```
PUT /axapi/v3/interface/lif/1/bfd
Payload:
{
    "bfd": {
        "authentication": {
            "method": "meticulous-md5",
            "key-id": 1,
            "password": "abcd"
        }
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/lif/{ifname}/bfd

bfd attributes

```
DELETE /axapi/v3/interface/lif/1/bfd
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

bfd attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

2.63.40 interface lif encapsulation

Encapsulation type

encapsulation Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	encapsulation
Element URI	/axapi/v3/interface/lif/{ifname}/encapsulation
Element Attributes	encapsulation_attributes
Partition Visibility	shared
Schema	`encapsulation schema`

Operations Allowed:

Get Object

}
```

ip attributes

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dmz

Description DMZ network facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unnumbered

Description Set the interface as unnumbered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router

Specification	Value
Type	*object*

Description: authentication is a **JSON Block**. Please see below for *rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *rip_authentication_str*

Type: Object

rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip/{ip-addr}*

ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.63.43 interface lif ip ospf

Open Shortest Path First for IPv4 (OSPF)

ospf Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	ospf
Element URI	/axapi/v3/interface/lif/{ifname}/ip/ospf
Element Attributes	ospf_attributes
Partition Visibility	shared
Schema	`ospf schema`

Operations Allowed:

Get Object

GET

/axapi/v3/interface/lif/{ifname}/ip/ospf

ospf_attributes

```
GET /axapi/v3/interface/lif/1/ip/ospf
Reponse:
{
    "ospf": {

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest-cfg

Specification	Value

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.63.45 interface lif ip ospf ospf-ip

IP address configuration for Open Shortest Path First for IPv4 (OSPF)

ospf-ip Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*ip-addr*
Collection Name	*ospf-ip-list*
Collection URI	/axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip
Element Name	ospf-ip
Element URI	/axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip/{ip-addr}
Element Attributes	ospf-ip_attributes
Partition Visibility	shared
Schema	`ospf-ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip

ospf-ip attributes

Create List

POST

/axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip

ospf-ip attributes

Get Object

GET

/axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip/{ip-addr}

ospf-ip attributes

Get List

GET

/axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip

ospf-ip-list

Modify Object

POST

/axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip/{ip-addr}

ospf-ip attributes

Replace Object

PUT

/axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip/{ip-addr}

ospf-ip attributes

Replace List

PUT

/axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip

ospf-ip-list

Delete Object

DELETE

/axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip/{ip-addr}

ospf-ip attributes

ospf-ip-list

ospf-ip-list is **JSON List** of *ospf-ip attributes*

ospf-ip-list : [

{ *ospf-ip attributes* },

{ *ospf-ip attributes* },

...

]

ospf-ip attributes

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

2.63.46 interface lif ip rip

RIP

rip Specification

Parameter	Value
Type	*Configuration Resource*

    }
}
```

rip attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *authentication_str*

Type: Object

authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

2.63.47 interface lif ip router

Router

router Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	router
Element URI	/axapi/v3/interface/lif/{ifname}/ip/router
Element Attributes	router_attributes
Partition Visibility	shared
Schema	`router schema`

Operations Allowed:

Get Object

ipv6 attributes

address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	Value
Type	*list*
Block object keys	

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/isis*

Reference Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/ripng*

router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf attributes

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

2.63.56 interface lif oper

Operational Status for the object lif

lif Specification

Parameter	Value
Type	*Collection*
Collection Name	*lif-list*
Collection URI	/axapi/v3/interface/lif/{ifname}
Element Name	lif
Element URI	/axapi/v3/interface/lif/{ifname}/oper
Element Attributes	lif_attributes
Partition Visibility	None
Schema	`lif schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/lif/{ifname}

lif attributes

Create List

POST

2.63.58 interface loopback

Loopback interface

loopback Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*ifnum*
Collection Name	*loopback-list*
Collection URI	/axapi/v3/interface/loopback
Element Name	loopback
Element URI	/axapi/v3/interface/loopback/{ifnum}
Element Attributes	loopback_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/interface/loopback/{ifnum}/oper
Schema	`loopback schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/loopback

loopback attributes

```
POST /axapi/v3/interface/loopback/
Payload:
{
    "loopback": {
        "ifnum": 1,
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/interface/loopback

loopback attributes

Get Object

GET

/axapi/v3/interface/loopback/{ifnum}

loopback attributes

```
GET /axapi/v3/interface/loopback/1
Reponse:
{
    "loopback": {
        "ifnum": 1,
        "snmp-server": {
            "trap-source": 0
        },
        "uuid": "cac19630-b5a6-11ef-bcb4-ae71681635d0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/interface/loopback/1"
    }
}
```

Get List

GET

/axapi/v3/interface/loopback

loopback-list

Modify Object

POST

/axapi/v3/interface/loopback/{ifnum}

loopback attributes

Replace Object

PUT

/axapi/v3/interface/loopback/{ifnum}

loopback attributes

```
PUT /axapi/v3/interface/loopback/1
Payload:
{
    "loopback": {
        "ifnum": 1,
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/interface/loopback

loopback-list

Delete Object

DELETE

/axapi/v3/interface/loopback/{ifnum}

loopback attributes

```
DELETE /axapi/v3/interface/loopback/1/ip/ospf/ospf-ip/3.3.3.3
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

loopback-list

loopback-list is **JSON List** of *loopback attributes*

loopback-list : [

{ *loopback attributes* },

{ *loopback attributes* },

...

]

loopback attributes

ifnum

Description Loopback interface number

Type: number

Format: interface

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *isis*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/isis*

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

snmp-server

Description: snmp-server is a **JSON Block**. Please see below for *snmp-server*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *isis_mesh-group*

Type: Object

metric-list

Type: List

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

isis_priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

isis_hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

isis_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis_authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

isis_authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

isis_authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

isis_authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

isis_hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

isis_csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

snmp-server

Specification	Value
Type	*object*

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Specification	Value
Type	*object*

address-list

Type: List

ospf

Description: ospf is a **JSON Block**. Please see below for *ip_ospf*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *ip_rip*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ip_router*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ip_ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ip_ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ip_ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ip_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ip_rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ip_rip_authentication_str*

Type: Object

ip_rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ip_rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ip_rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ip_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ip_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/router/isis*

ip_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6

Specification	Value
Type	*object*

address-list

Type: List

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *ipv6_rip*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *ipv6_router*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_address-list

Specification	Value
Type	*list*
Block object keys	

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_rip

Specification	Value
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ipv6_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ipv6_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ipv6_router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/ripng*

ipv6_router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ipv6_ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ipv6_ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ipv6_ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

2.63.59 interface loopback ip

Global IP configuration subcommands

ip Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ip
Element URI	/axapi/v3/interface/loopback/{ifnum}/ip
Element Attributes	ip_attributes
Partition Visibility	shared
Schema	`ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/loopback/{ifnum}/ip

ip attributes

```
POST /axapi/v3/interface/loopback/1/ip
Payload:
{
    "ip": {
        "address-list": [
```

(continues on next page)

(continued from previous page)

```
            {
                "ipv4-address": "3.3.3.3",
                "ipv4-netmask": "255.255.0.0"
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/interface/loopback/{ifnum}/ip

ip attributes

```
GET /axapi/v3/interface/loopback/1/ip
Reponse:
{
    "ip": {
        "address-list": [
            {
                "ipv4-address": "3.3.3.3",
                "ipv4-netmask": "255.255.0.0"
            }
        ],
        "uuid": "080938e0-b5a7-11ef-bcb4-ae71681635d0",
        "a10-url": "/axapi/v3/interface/loopback/1/ip"
    }
}
```

Modify Object

POST

/axapi/v3/interface/loopback/{ifnum}/ip

ip attributes

Replace Object

PUT

/axapi/v3/interface/loopback/{ifnum}/ip

ip attributes

```
PUT /axapi/v3/interface/loopback/1/ip
Payload:
{
    "ip": {
        "address-list": [
            {
                "ipv4-address": "3.3.3.4",
                "ipv4-netmask": "255.255.255.0"
```

(continues on next page)

(continued from previous page)

```
            }
        ]
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/loopback/{ifnum}/ip

ip attributes

```
DELETE /axapi/v3/interface/loopback/1/ip
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

ip attributes

address-list

Type: List

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *rip_authentication_str*

Type: Object

rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ip/router/isis*

router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.60 interface loopback ip ospf

Open Shortest Path First for IPv4 (OSPF)

ospf Specification

Parameter	Value

ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.63.61 interface loopback ip ospf ospf-global

Global setting for Open Shortest Path First for IPv4 (OSPF)

ospf-global Specification

Parameter	Value
Type	*Configuration Resource*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Reference Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	Value
Type	*list*
Block object keys	

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Specification	Value
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

2.63.72 interface loopback ipv6 router ripng

ripng

ripng Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ripng
Element URI	/axapi/v3/interface/loopback/{ifnum}/ipv6/router/ripng
Element Attributes	ripng_attributes
Partition Visibility	shared
Schema	`ripng schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/loopback/{ifnum}/ipv6/router/ripng

ripng attributes

```
POST /axapi/v3/interface/loopback/1/ipv6/router/ripng
Payload:
{
    "ripng": {
        "rip": 1
    }
}
```

Get Object

GET

/axapi/v3/interface/loopback/{ifnum}/ipv6/router/ripng

ripng attributes

```
GET /axapi/v3/interface/loopback/1/ipv6/router/ripng
Reponse:
{
    "ripng": {
        "rip": 1,
        "uuid": "6f21ebb0-b5a9-11ef-bcb4-ae71681635d0",
        "a10-url": "/axapi/v3/interface/loopback/1/ipv6/router/ripng"
    }
}
```

Modify Object

POST

/axapi/v3/interface/loopback/{ifnum}/ipv6/router/ripng

ripng attributes

Replace Object

PUT

/axapi/v3/interface/loopback/{ifnum}/ipv6/router/ripng

ripng attributes

```
PUT /axapi/v3/interface/loopback/1/ipv6/router/ripng
Payload:
{
    "ripng": {
        "rip": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/loopback/{ifnum}/ipv6/router/ripng

ripng attributes

```
DELETE /axapi/v3/interface/loopback/1/ipv6/router/ripng
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

ripng attributes

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.73 interface loopback isis

ISIS

}
```

isis attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *mesh-group*

Type: Object

metric-list

Type: List

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

2.63.74 interface loopback oper

Operational Status for the object loopback

loopback Specification

Parameter	Value
Type	*Collection*
Collection Name	*loopback-list*
Collection URI	/axapi/v3/interface/loopback/{ifnum}
Element Name	loopback
Element URI	/axapi/v3/interface/loopback/{ifnum}/oper
Element Attributes	loopback_attributes
Partition Visibility	None
Schema	`loopback schema`

Operations Allowed:

Create Object

management attributes

access-list

Description: access-list is a **JSON Block**. Please see below for *access-list*

Type: Object

action

Description 'enable': Enable Management Port; 'disable': Disable Management Port;

Type: string

Supported Values: enable, disable

Default: enable

broadcast-rate-limit

Description: broadcast-rate-limit is a **JSON Block**. Please see below for *broadcast-rate-limit*

Type: Object

duplexity

Description 'Full': Full; 'Half': Half; 'auto': Auto;

Type: string

Supported Values: Full, Half, auto

Default: auto

flow-control

Description Enable 802.3x flow control on full duplex port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

ipv6

Type: List

lldp

Description: lldp is a **JSON Block**. Please see below for *lldp*

Type: Object

Reference Object: */axapi/v3/interface/management/lldp*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

sampling-enable

Type: List

secondary-ip

Description: secondary-ip is a **JSON Block**. Please see below for *secondary-ip*

Type: Object

speed

Description '10': 10 Mbs/sec; '100': 100 Mbs/sec; '1000': 1 Gb/sec; 'auto': Auto Negotiate Speed; (Interface Speed)

Type: string

Supported Values: 10, 100, 1000, auto

Default: auto

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp

Specification	Value
Type	*object*

enable-cfg

Description: enable-cfg is a **JSON Block**. Please see below for *lldp_enable-cfg*

Type: Object

notification-cfg

Description: notification-cfg is a **JSON Block**. Please see below for *lldp_notification-cfg*

Type: Object

tx-dot1-cfg

Description: tx-dot1-cfg is a **JSON Block**. Please see below for *lldp_tx-dot1-cfg*

Type: Object

tx-tlvs-cfg

Description: tx-tlvs-cfg is a **JSON Block**. Please see below for *lldp_tx-tlvs-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp_tx-dot1-cfg

Specification	Value
Type	*object*

link-aggregation

Description Interface link aggregation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-dot1-tlvs

Description Interface lldp tx IEEE 802.1 Organizationally specific TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan

Description Interface vlan information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_notification-cfg

Specification	Value
Type	*object*

notif-enable

Description Interface lldp notification enable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification

Description Interface lldp notification configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_tx-tlvs-cfg

Specification	Value
Type	*object*

exclude

Description Configure which TLVs excluded. All basic TLVs will be included by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management-address

Description Interface lldp management address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-description

Description Interface lldp port description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-capabilities

Description Interface lldp system capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-description

Description Interface lldp system description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-name

Description Interface lldp system name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs

Description Interface lldp tx TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_enable-cfg

Specification	Value
Type	*object*

rt-enable

Description Interface lldp enable/disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

broadcast-rate-limit

Specification	Value
Type	*object*

bcast-rate-limit-enable

Description Rate limit the l2 broadcast packet on mgmt port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rate

Description packets per second. Default is 500. (packets per second. Please specify an even number. Default is 500)

Type: number

Range: 50-5000

Default: 500

ipv6

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: link-local

default-ipv6-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv6-address

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

secondary-ip

Specification	Value
Type	*object*

control-apps-use-mgmt-port

Description Control applications use management port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv4-address

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dhcp and ipv4-address are mutually exclusive

ipv4-address

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address and dhcp are mutually exclusive

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

secondary-ip

Description Global IP configuration subcommands

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets_input': Input packets; 'bytes_input': Input bytes; 'received_broadcasts': Received broadcasts; 'received_multicasts': Received multicasts; 'received_unicasts': Received unicasts; 'input_errors': Input errors; 'crc': CRC; 'frame': Frames; 'input_err_short': Runts; 'input_err_long': Giants; 'packets_output': Output packets; 'bytes_output': Output bytes; 'transmitted_broadcasts': Transmitted broadcasts; 'transmitted_multicasts': Transmitted multicasts; 'transmitted_unicasts': Transmitted unicasts; 'output_errors': Output errors; 'collisions': Collisions;

Type: string

Supported Values: all, packets_input, bytes_input, received_broadcasts, received_multicasts, received_unicasts, input_errors, crc, frame, input_err_short, input_err_long, packets_output, bytes_output, transmitted_broadcasts, transmitted_multicasts, transmitted_unicasts, output_errors, collisions

ip

Specification	Value
Type	*object*

control-apps-use-mgmt-port

Description Control applications use management port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv4-address

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dhcp and ipv4-address are mutually exclusive

ipv4-address

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address and dhcp are mutually exclusive

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Reference Object: */axapi/v3/access-list/standard*

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

Description Enable 802.3x flow control on full duplex port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

ipv6

Type: List

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

sampling-enable

Type: List

speed

Description '10': 10 Mbs/sec; '100': 100 Mbs/sec; '1000': 1 Gb/sec; 'auto': Auto Negotiate Speed; (Interface Speed)

Type: string

Supported Values: 10, 100, 1000, auto

Default: auto

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

broadcast-rate-limit

Specification	Value
Type	*object*

bcast-rate-limit-enable

Description Rate limit the l2 broadcast packet on mgmt port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rate

Description packets per second. Default is 500. (packets per second. Please specify an even number. Default is 500)

Type: number

Range: 50-5000

Default: 500

ipv6

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: link-local

default-ipv6-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv6-address

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets_input': Input packets; 'bytes_input': Input bytes; 'received_broadcasts': Received broadcasts; 'received_multicasts': Received multicasts; 'received_unicasts': Received unicasts; 'input_errors': Input errors; 'crc': CRC; 'frame': Frames; 'input_err_short': Runts; 'input_err_long': Giants; 'packets_output': Output packets; 'bytes_output': Output bytes; 'transmitted_broadcasts': Transmitted broadcasts; 'transmitted_multicasts': Transmitted multicasts; 'transmitted_unicasts': Transmitted unicasts; 'output_errors': Output errors; 'collisions': Collisions;

Type: string

Supported Values: all, packets_input, bytes_input, received_broadcasts, received_multicasts, received_unicasts, input_errors, crc, frame, input_err_short, input_err_long, packets_output, bytes_output, transmitted_broadcasts, transmitted_multicasts, transmitted_unicasts, output_errors, collisions

ip

Specification	Value
Type	*object*

control-apps-use-mgmt-port

Description Control applications use management port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv4-address

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Reference Object: */axapi/v3/access-list/standard*

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

Maximum Length: 64 characters

Maximum Length: 1 characters

tx-dot1-cfg

Specification	Value
Type	*object*

link-aggregation

Description Interface link aggregation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-dot1-tlvs

Description Interface lldp tx IEEE 802.1 Organizationally specific TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan

Description Interface vlan information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification-cfg

Specification	Value
Type	*object*

notif-enable

Description Interface lldp notification enable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification

Description Interface lldp notification configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs-cfg

Specification	Value
Type	*object*

exclude

Description Configure which TLVs excluded. All basic TLVs will be included by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management-address

Description Interface lldp management address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-description

Description Interface lldp port description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-capabilities

Description Interface lldp system capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-description

Description Interface lldp system description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-name

Description Interface lldp system name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs

Description Interface lldp tx TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-cfg

Specification	Value
Type	*object*

rt-enable

Description Interface lldp enable/disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Description: lw-4o6 is a **JSON Block**. Please see below for *lw-4o6*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/lw-4o6*

mac-learning

Description 'enable': Enable MAC learning; 'disable': Disable MAC learning; 'dmac-only': Enable destination MAC learning only;

Type: string

Supported Values: enable, disable, dmac-only

map

Description: map is a **JSON Block**. Please see below for *map*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/map*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nptv6

Description: nptv6 is a **JSON Block**. Please see below for *nptv6*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/nptv6*

ports-threshold

Description Threshold for the minimum number of ports that need to be UP for the trunk to remain UP

Type: number

sampling-enable

Type: List

spanning-tree

Description: spanning-tree is a **JSON Block**. Please see below for *spanning-tree*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/spanning-tree*

sync-modify-disable

Description Disable SYNC bit modify for ports-threshold do-auto-recovery

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timer

Description Timer to re-check the threshold under certain conditions (Time in seconds (Default: 10))

Type: number

Range: 1-300

Default: 10

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

update-l2-info

Description Update and use received L2 information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-hw-hash

Description Enable HW based load balacing decision rule

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire

Description Mark trunk as a virtual wire interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan-learning

Description 'enable': Enable VLAN learning; 'disable': Disable VLAN learning;

Type: string

Supported Values: enable, disable

map

Specification	Value
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip

Specification	Value
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dmz

Description DMZ network facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

nat

Description: nat is a **JSON Block**. Please see below for *ip_nat*

Type: Object

ospf

Description: ospf is a **JSON Block**. Please see below for *ip_ospf*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf*

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *ip_rip*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ip_router*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ip_stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unnumbered

Description Set the interface as unnumbered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ip_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/router/isis*

ip_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ip_helper-address-list

Specification	Value
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

ip_stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ip_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ip_rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ip_rip_authentication_str*

Type: Object

ip_rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ip_rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ip_rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ip_nat

Specification	Value
Type	*object*

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ip_ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ip_ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ip_ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ddos

Specification	Value
Type	*object*

inside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list

Specification	Value
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Reference Object: */axapi/v3/access-list/standard*

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ip/access-list*

bfd

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *bfd_interval-cfg*

Type: Object

per-member-port

Description: per-member-port is a **JSON Block**. Please see below for *bfd_per-member-port*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/bfd/per-member-port*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_per-member-port

Specification	Value
Type	*object*

ipv6-local

Description IPv6 local-address

Type: string

Format: ipv6-address

ipv6-nbr

Description IPv6 neighbor-address

Type: string

Format: ipv6-address

local-address

Description IPv4 local-address

Type: string

Format: ipv4-address

neighbor-address

Description IPv4 neighbor address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_interval-cfg

Specification	Value
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

bfd_authentication

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_pkts': some help string; 'num_total_bytes': some help string; 'num_unicast_pkts': some help string; 'num_broadcast_pkts': some help string; 'num_multicast_pkts': some help string; 'num_tx_pkts': some help string; 'num_total_tx_bytes': some help string; 'num_unicast_tx_pkts': some help string; 'num_broadcast_tx_pkts': some help string; 'num_multicast_tx_pkts': some help string; 'dropped_dis_rx_pkts': some help string; 'dropped_rx_pkts': some help string; 'dropped_dis_tx_pkts': some help string; 'dropped_tx_pkts': some help string;

Type: string

Supported Values: all, num_pkts, num_total_bytes, num_unicast_pkts, num_broadcast_pkts, num_multicast_pkts, num_tx_pkts, num_total_tx_bytes, num_unicast_tx_pkts, num_broadcast_tx_pkts, num_multicast_tx_pkts, dropped_dis_rx_pkts, dropped_rx_pkts, dropped_dis_tx_pkts, dropped_tx_pkts

ipv6

Specification	Value
Type	*object*

access-list-cfg

Description: access-list-cfg is a **JSON Block**. Please see below for *ipv6_access-list-cfg*

Type: Object

address-list

Type: List

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat

Description: nat is a **JSON Block**. Please see below for *ipv6_nat*

Type: Object

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *ipv6_rip*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *ipv6_router*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *ipv6_router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ipv6_stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_address-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ipv6_router-adver

Specification	Value
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

hop-limit

Description Set Router Advertisement Hop Limit (default: 255) (Max Router Advertisement Interval (seconds))

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Min Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Max Number of Router Solicitations to process per second)

Type: number

Range: 3-1350

Default: 200

mtu

Description: mtu is a **JSON Block**. Please see below for *ipv6_router-adver_mtu*

Type: Object

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

vrid

Description: vrid is a **JSON Block**. Please see below for *ipv6_router-adver_vrid*

Type: Object

ipv6_router-adver_vrid

Specification	Value
Type	*object*

adver-vrid

Description Specify ha VRRP-A vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_router-adver_prefix-list

Specification	Value
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

ipv6_router-adver_mtu

Specification	Value
Type	*object*

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

ipv6_router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ipv6_router_isis*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ipv6_router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ripng*

ipv6_router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip

Specification	Value
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ipv6_stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_nat

Specification	Value
Type	*object*

inside

Description Configure interface as NAT inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure interface as NAT outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_access-list-cfg

Specification	Value
Type	*object*

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

ipv6_ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ipv6_ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ipv6_ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ipv6_ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ipv6_ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

spanning-tree

Specification	Value
Type	*object*

admin-edge

Description Enable admin-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-edge

Description Enable auto-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

instance-list

Type: List

path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

spanning-tree_instance-list

Specification	Value
Type	*list*
Block object keys	

instance-start

Description Instance ID

Type: number

Range: 0-4094

mstp-path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

nptv6

Specification	Value
Type	*object*

domain-list

Type: List

Reference Object: */axapi/v3/interface/trunk/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

nptv6_domain-list

Specification	Value
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

isis_priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

isis_hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

isis_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis_authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

isis_authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

isis_authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

isis_authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

isis_hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

isis_csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

icmpv6-rate-limit

Specification	Value
Type	*object*

lockup-period-v6

Description Lockup period (second)

Type: number

Range: 1-16383

lockup-v6

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

normal-v6

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

lw-4o6

Specification	Value
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp-rate-limit

Specification	Value
Type	*object*

lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

normal

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

2.63.85 interface trunk bfd

Configure BFD (Bidirectional Forwarding Detection)

Description IPv6 local-address

Type: string

Format: ipv6-address

ipv6-nbr

Description IPv6 neighbor-address

Type: string

Format: ipv6-address

local-address

Description IPv4 local-address

Type: string

Format: ipv4-address

neighbor-address

Description IPv4 neighbor address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.87 interface trunk ddos

Configure DDoS interface direction

ddos Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ddos
Element URI	/axapi/v3/interface/trunk/{ifnum}/ddos
Element Attributes	ddos_attributes
Partition Visibility	shared
Schema	`ddos schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/ddos

ddos attributes

```
POST /axapi/v3/interface/trunk/1/ddos
Payload:
{
    "ddos": {
        "outside": 1
    }
}
```

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/ddos

ddos attributes

Modify Object

POST

/axapi/v3/interface/trunk/{ifnum}/ddos

ddos attributes

Replace Object

PUT

/axapi/v3/interface/trunk/{ifnum}/ddos

ddos attributes

Delete Object

DELETE

/axapi/v3/interface/trunk/{ifnum}/ddos

ddos attributes

ddos attributes

inside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.88 interface trunk ip

Global IP configuration subcommands

ip Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ip
Element URI	/axapi/v3/interface/trunk/{ifnum}/ip
Element Attributes	ip_attributes
Partition Visibility	shared
Schema	`ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/ip

ip attributes

```
POST /axapi/v3/interface/trunk/1/ip
Payload:
{
    "ip": {
        "stateful-firewall": {
            "inside": 1
        },
        "dhcp": 1
    }
}
```

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/ip

ip attributes

```
GET /axapi/v3/interface/trunk/1/ip
Reponse:
{
    "ip": {
        "dhcp": 1,
        "allow-promiscuous-vip": 0,
        "client": 0,
        "server": 0,

        "status": "OK",
        "msg": "Success"
    }
}
```

ip attributes

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dmz

Description DMZ network facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

nat

Description: nat is a **JSON Block**. Please see below for *nat*

Type: Object

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf*

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unnumbered

Description Set the interface as unnumbered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/router/isis*

router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

helper-address-list

Specification	Value
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

rip_authentication

Specification	Value
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *rip_authentication_str*

Type: Object

rip_authentication_key-chain

Specification	Value
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

rip_authentication_mode

Specification	Value
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

rip_authentication_str

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

nat

Specification	Value
Type	*object*

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Specification	Value
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf_ospf-global*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ospf_ospf-ip-list

Specification	Value
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-ip-list_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global

Specification	Value
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ospf_ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.63.89 interface trunk ip ospf

Open Shortest Path First for IPv4 (OSPF)

ospf Specification

Parameter	Value

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-global_network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

ospf-global_authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-global_database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global_message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.63.90 interface trunk ip ospf ospf-global

Global setting for Open Shortest Path First for IPv4 (OSPF)

ospf-global Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ospf-global
Element URI	/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-global
Element Attributes	ospf-global_attributes
Partition Visibility	shared
Schema	`ospf-global schema`

Operations Allowed:

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network

Specification	Value
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcast,non-broadcast, point-to-point, and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcast,broadcast, point-to-point, and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipoint,broadcast, non-broadcast, and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-point,broadcast, non-broadcast, and point-to-multipoint are mutually exclusive

authentication-cfg

Specification	Value
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

database-filter-cfg

Specification	Value
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest-cfg

Specification	Value
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

message-digest-cfg_md5

Specification	Value
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ipv6 attributes

access-list-cfg

Description: access-list-cfg is a **JSON Block**. Please see below for *access-list-cfg*

Type: Object

address-list

Type: List

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat

Description: nat is a **JSON Block**. Please see below for *nat*

Type: Object

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *stateful-firewall*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	Value
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

router-adver

Specification	Value
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

hop-limit

Description Set Router Advertisement Hop Limit (default: 255) (Max Router Advertisement Interval (seconds))

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Min Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Max Number of Router Solicitations to process per second)

Type: number

Range: 3-1350

Default: 200

mtu

Description: mtu is a **JSON Block**. Please see below for *router-adver_mtu*

Type: Object

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

vrid

Description: vrid is a **JSON Block**. Please see below for *router-adver_vrid*

Type: Object

router-adver_vrid

Specification	Value
Type	*object*

adver-vrid

Description Specify ha VRRP-A vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router-adver_prefix-list

Specification	Value
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

router-adver_mtu

Specification	Value
Type	*object*

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

router

Specification	Value
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *router_ospf*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *router_ripng*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ripng*

router_ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

router_isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	Value
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

stateful-firewall

Specification	Value
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat

Specification	Value
Type	*object*

inside

Description Configure interface as NAT inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure interface as NAT outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

access-list-cfg

Specification	Value
Type	*object*

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/ipv6/access-list*

ospf

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ospf_mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ospf_network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ospf_neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf_dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

2.63.97 interface trunk ipv6 ospf

Open Shortest Path First for IPv6 (OSPFv3)

ospf Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	ospf
Element URI	/axapi/v3/interface/trunk/{ifnum}/ipv6/ospf
Element Attributes	ospf_attributes
Partition Visibility	shared
Schema	`ospf schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/ipv6/ospf

    }
}
```

ospf attributes

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cost-cfg

Specification	Value
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

hello-interval-cfg

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

mtu-ignore-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-interval-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

network-list

Specification	Value
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transmit-delay-cfg

Specification	Value
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

neighbor-cfg

Specification	Value
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

dead-interval-cfg

Specification	Value
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

2.63.98 interface trunk ipv6 rip

RIP

rip Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	rip
Element URI	/axapi/v3/interface/trunk/{ifnum}/ipv6/rip
Element Attributes	rip_attributes
Partition Visibility	shared
Schema	`rip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/ipv6/rip

rip attributes

```
POST /axapi/v3/interface/trunk/1/ipv6/rip
Payload:
{
    "rip": {
        "split-horizon-cfg": {
            "state": "poisoned"
        }
    }
}
```

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/ipv6/rip

rip attributes

```
GET /axapi/v3/interface/trunk/1/ipv6/rip
Reponse:
{
    "rip": {
        "split-horizon-cfg": {
            "state": "poisoned"
        },
        "uuid": "2f5e839e-b5ae-11ef-bcb4-ae71681635d0",
        "a10-url": "/axapi/v3/interface/trunk/1/ipv6/rip"
    }
}
```

Modify Object

POST

/axapi/v3/interface/trunk/{ifnum}/ipv6/rip

rip attributes

Replace Object

PUT

/axapi/v3/interface/trunk/{ifnum}/ipv6/rip

rip attributes

```
PUT /axapi/v3/interface/trunk/1/ipv6/rip
Payload:
{
    "rip": {
        "split-horizon-cfg": {
            "state": "disable"
        }
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/trunk/{ifnum}/ipv6/rip

rip attributes

```
DELETE /axapi/v3/interface/trunk/1/ipv6/rip
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

rip attributes

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

2.63.99 interface trunk ipv6 router

Router

router Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	router
Element URI	/axapi/v3/interface/trunk/{ifnum}/ipv6/router
Element Attributes	router_attributes
Partition Visibility	shared
Schema	`router schema`

Operations Allowed:

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/ipv6/router

router_attributes

```
GET /axapi/v3/interface/trunk/1/ipv6/router
Reponse:
{
    "router": {
        "ripng": {
            "rip": 1,
            "uuid": "51c71c98-b5ae-11ef-bcb4-ae71681635d0",
            "a10-url": "/axapi/v3/interface/trunk/1/ipv6/router/ripng"
        },
        "a10-url": "/axapi/v3/interface/trunk/1/ipv6/router"
    }
}
```

router attributes

isis

Description: isis is a **JSON Block**. Please see below for *isis*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

ripng

Description: ripng is a **JSON Block**. Please see below for *ripng*

Type: Object

Reference Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ripng*

ripng

Specification	Value
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf

Specification	Value
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_area-list

Specification	Value
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

isis

Specification	Value
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.100 interface trunk ipv6 router isis

IS-IS Routing for IP

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

priority-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

hello-interval-minimal-list

Specification	Value
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

mesh-group

Specification	Value
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

bfd-cfg

Specification	Value
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

authentication

Specification	Value
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

authentication_key-chain-list

Specification	Value
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

authentication_mode-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

authentication_send-only-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wide-metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

hello-interval-list

Specification	Value
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

hello-multiplier-list

Specification	Value
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

metric-list

Specification	Value
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

csnp-interval-list

Specification	Value
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

2.63.105 interface trunk lw-4o6

Configure LW-4over6 interface

lw-4o6 Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	lw-4o6
Element URI	/axapi/v3/interface/trunk/{ifnum}/lw-4o6
Element Attributes	lw-4o6_attributes
Partition Visibility	shared
Schema	`lw-4o6 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/lw-4o6

lw-4o6 attributes

```
POST /axapi/v3/interface/trunk/1/lw-4o6
Payload:
{
    "lw-4o6": {
        "outside": 1
```

(continues on next page)

(continued from previous page)

```
    }
}
```

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/lw-4o6

lw-4o6 attributes

```
GET /axapi/v3/interface/trunk/1/lw-4o6
Reponse:
{
    "lw-4o6": {
        "outside": 1,
        "inside": 0,
        "uuid": "26b116e8-b5af-11ef-bcb4-ae71681635d0",
        "a10-url": "/axapi/v3/interface/trunk/1/lw-4o6"
    }
}
```

Modify Object

POST

/axapi/v3/interface/trunk/{ifnum}/lw-4o6

lw-4o6 attributes

Replace Object

PUT

/axapi/v3/interface/trunk/{ifnum}/lw-4o6

lw-4o6 attributes

```
PUT /axapi/v3/interface/trunk/1/lw-4o6
Payload:
{
    "lw-4o6": {
        "outside": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/trunk/{ifnum}/lw-4o6

lw-4o6 attributes

lw-4o6 attributes

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.106 interface trunk map

Configure MAP on this interface

map Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	map
Element URI	/axapi/v3/interface/trunk/{ifnum}/map
Element Attributes	map_attributes
Partition Visibility	shared
Schema	`map schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/map

map attributes

```
POST /axapi/v3/interface/trunk/1/map
Payload:
```

(continues on next page)

(continued from previous page)

```
{
    "map": {
        "inside": 1
    }
}
```

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/map

map attributes

```
GET /axapi/v3/interface/trunk/1/map
Reponse:
{
    "map": {
        "inside": 1,
        "outside": 0,
        "map-t-inside": 0,
        "map-t-outside": 0,
        "uuid": "45401514-b5af-11ef-bcb4-ae71681635d0",
        "a10-url": "/axapi/v3/interface/trunk/1/map"
    }
}
```

Modify Object

POST

/axapi/v3/interface/trunk/{ifnum}/map

map attributes

Replace Object

PUT

/axapi/v3/interface/trunk/{ifnum}/map

map attributes

```
PUT /axapi/v3/interface/trunk/1/map
Payload:
{
    "map": {
        "inside": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/trunk/{ifnum}/map

map attributes

map attributes

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.107 interface trunk nptv6

Configure NPTv6 on this interface

nptv6 Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	nptv6
Element URI	/axapi/v3/interface/trunk/{ifnum}/nptv6
Element Attributes	nptv6_attributes
Partition Visibility	shared
Schema	`nptv6 schema`

Operations Allowed:

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/nptv6

nptv6_attributes

nptv6 attributes

domain-list

Type: List

Reference Object: */axapi/v3/interface/trunk/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

domain-list

Specification	Value
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.63.108 interface trunk nptv6 domain

Apply NPTv6 translation domain on interface

domain Specification

Parameter	Value
Type	*Collection*
Object Key(s)	*domain-name, bind-type*
Collection Name	*domain-list*
Collection URI	/axapi/v3/interface/trunk/{ifnum}/nptv6/domain
Element Name	domain
Element URI	/axapi/v3/interface/trunk/{ifnum}/nptv6/domain/{domain-name}+{bind-type}
Element Attributes	domain_attributes
Partition Visibility	shared
Schema	`domain schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/nptv6/domain

domain attributes

Create List

POST

/axapi/v3/interface/trunk/{ifnum}/nptv6/domain

domain attributes

Get Object

GET

}
```

tunnel-list

tunnel-list is **JSON List** of *tunnel attributes*

tunnel-list : [

{ *tunnel attributes* },

{ *tunnel attributes* },

...

]

tunnel attributes

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

ifnum

Description Tunnel interface number

Type: number

Range: 1-128

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6*

load-interval

Description Configure Load Interval (Seconds (5-300, Multiple of 5), default 300)

Type: number

Range: 5-300

Default: 300

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *lw-4o6*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/lw-4o6*

map

Description: map is a **JSON Block**. Please see below for *map*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/map*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/packet-capture/object-templates/interface-tunnel-tmpl*

sampling-enable

Type: List

speed

Description Speed in Gbit/Sec (Default 10 Gbps)

Type: number

Range: 1-200

Default: 10

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

map

Specification	Value
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip

Specification	Value
Type	*object*

address

Description: address is a **JSON Block**. Please see below for *ip_address*

Type: Object

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query-val

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Max Response Time (Default is 100)

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ip_ospf*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *ip_rip*

Type: Object

Reference Object: */axapi/v3/interface/tunnel/{ifnum}/ip/rip*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip

Specification	Value
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip_receive-cfg

Specification	Value
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

ip_rip_split-horizon-cfg

Specification	Value
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Specification	Value
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip_send-cfg

Specification	Value
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

ip_address

Specification	Value
Type	*object*

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-cfg

Type: List

ip_address_ip-cfg

Specification	Value
Type	*list*
Block object keys	

ipv4-address
