trigger-stats-rate attributes

duration

Description Time in seconds to look for the anomaly, default is 60

Type: number

Range: 1-250

Default: 60

es_resp_300

Description Enable automatic packet-capture for Response status 300

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

es_resp_400

Description Enable automatic packet-capture for Response status 400

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

es_resp_500

Description Enable automatic packet-capture for Response status 500

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resp-3xx

Description Enable automatic packet-capture for Response status 3xx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resp-4xx

Description Enable automatic packet-capture for Response status 4xx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resp-5xx

Description Enable automatic packet-capture for Response status 5xx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold-exceeded-by

Description Set the threshold to the number of times greater than the previous duration to start the capture, default is 5

Type: number

Range: 0-100

Default: 5

uuid

Description uuid of the object

trigger-stats-inc

Specification	Value
Type	*object*

forward_req_data_fail

Description Enable automatic packet-capture for Forward REQ data failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward_req_fail

Description Enable automatic packet-capture for Forward request failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

get_all_headers_fail

Description Enable automatic packet-capture for Get all headers fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert_resonse_line_fail

Description Enable automatic packet-capture for Ins response line fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

line_extend_fail

Description Enable automatic packet-capture for Line extend fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

line_table_extend_fail

Description Enable automatic packet-capture for Table extend fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

line_too_long

Description Enable automatic packet-capture for Line too long

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no_proxy

Description Enable automatic packet-capture for No proxy error

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parse_req_fail

Description Enable automatic packet-capture for Parse request failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parse_request_line_fail

Description Enable automatic packet-capture for Parse request line fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parse_resonse_line_fail

Description Enable automatic packet-capture for Parse response line fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

read_request_line_fail

Description Enable automatic packet-capture for Read request line fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv_server_unknow_reply_code

Description Enable automatic packet-capture for Recv server unknown-code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove_resonse_line_fail

Description Enable automatic packet-capture for Del response line fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send_client_service_not_ready

Description Enable automatic packet-capture for Sent client serv-not-rdy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server_STARTTLS_fail

Description Enable automatic packet-capture for Server side STARTTLS fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server_select_fail

Description Enable automatic packet-capture for Server selection failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat_fail

Description Enable automatic packet-capture for Source NAT failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

too_many_headers

Description Enable automatic packet-capture for Too many headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trigger-stats-rate

Specification	Value
Type	*object*

duration

Description Time in seconds to look for the anomaly, default is 60

Type: number

Range: 1-250

Default: 60

forward_req_data_fail

Description Enable automatic packet-capture for Forward REQ data failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward_req_fail

Description Enable automatic packet-capture for Forward request failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

get_all_headers_fail

Description Enable automatic packet-capture for Get all headers fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert_resonse_line_fail

Description Enable automatic packet-capture for Ins response line fail

Type: boolean

```

trigger-stats-rate attributes

duration

Description Time in seconds to look for the anomaly, default is 60

Type: number

Range: 1-250

Default: 60

forward_req_data_fail

Description Enable automatic packet-capture for Forward REQ data failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward_req_fail

Description Enable automatic packet-capture for Forward request failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

get_all_headers_fail

Description Enable automatic packet-capture for Get all headers fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert_resonse_line_fail

Description Enable automatic packet-capture for Ins response line fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

line_extend_fail

Description Enable automatic packet-capture for Line extend fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

line_table_extend_fail

Description Enable automatic packet-capture for Table extend fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

line_too_long

Description Enable automatic packet-capture for Line too long

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no_proxy

Description Enable automatic packet-capture for No proxy error

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parse_req_fail

Description Enable automatic packet-capture for Parse request failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parse_request_line_fail

Description Enable automatic packet-capture for Parse request line fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parse_resonse_line_fail

Description Enable automatic packet-capture for Parse response line fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

read_request_line_fail

Description Enable automatic packet-capture for Read request line fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv_server_unknow_reply_code

Description Enable automatic packet-capture for Recv server unknown-code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove_resonse_line_fail

Description Enable automatic packet-capture for Del response line fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send_client_service_not_ready

Description Enable automatic packet-capture for Sent client serv-not-rdy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server_STARTTLS_fail

Description Enable automatic packet-capture for Server side STARTTLS fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server_select_fail

Description Enable automatic packet-capture for Server selection failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat_fail

Description Enable automatic packet-capture for Source NAT failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold-exceeded-by

Description Set the threshold to the number of times greater than the previous duration to start the capture, default is 5

Type: number

Range: 0-100

Default: 5

too_many_headers

Description Enable automatic packet-capture for Too many headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

drop-vld-country-code-mismatch

Description Enable automatic packet-capture for Validation Drop: Country Code Mismatch in IMSI and MSISDN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-cross-layer-correlation

Description Enable automatic packet-capture for Validation Drop: Cross Layer IP Address Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-bearer-count-exceed

Description Enable automatic packet-capture for Validation Drop: GTP Bearer count exceeded max (11)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-ie-repeat-count-exceed

Description Enable automatic packet-capture for Validation Drop: GTP repeated IE count exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-apn-len-drop

Description Enable automatic packet-capture for Validation Drop: GTP-C Invalid APN Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-imsi-len-drop

Description Enable automatic packet-capture for Validation Drop: GTP-C Invalid IMSI Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-u-spoofed-source-address

Description Enable automatic packet-capture for Validation Drop: GTP-U IP Address Spoofed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-v2-wrong-lbi-create-bearer

Description Enable automatic packet-capture for Validation Drop: GTPV2-C Wrong LBI in Create Bearer Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv0-seqnum-buffer-full

Description Enable automatic packet-capture for Validation Drop: GTPV0-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv1-seqnum-buffer-full

Description Enable automatic packet-capture for Validation Drop: GTPV1-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv2-seqnum-buffer-full

Description Enable automatic packet-capture for Validation Drop: GTPV2-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-flow-label-v0

Description Enable automatic packet-capture for Validation Drop: Invalid Flow Label in GTPv0-C Header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-pkt-len-piggyback

Description Enable automatic packet-capture for Validation Drop: Piggyback message invalid packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-teid

Description Enable automatic packet-capture for Validation Drop: Invalid TEID Value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-mandatory-ie-in-grouped-ie

Description Enable automatic packet-capture for Validation Drop: Mandatory IE in Grouped IE Not Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-mandatory-information-element

Description Enable automatic packet-capture for Validation Drop: Mandatory IE Not Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-message-length

Description Enable automatic packet-capture for Validation Drop: Message Length Exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-order-ie

Description Enable automatic packet-capture for Validation Drop: GTPv1-C Message Out of Order IE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state

Description Enable automatic packet-capture for Validation Drop: Out Of State GTP Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state-ie

Description Enable automatic packet-capture for Validation Drop: Unexpected IE Present in Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-protocol-flag-unset

Description Enable automatic packet-capture for Validation Drop: Protocol flag in Header Field not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-field-set

Description Enable automatic packet-capture for Validation Drop: Reserved Header Field Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-information-element

Description Enable automatic packet-capture for Validation Drop: Reserved IE Field Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sanity-failed-piggyback

Description Enable automatic packet-capture for Validation Drop: piggyback message anomaly failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sequence-num-correlation

Description Enable automatic packet-capture for Validation Drop: GTP-C Sequence number Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-tunnel-id-flag

Description Enable automatic packet-capture for Validation Drop: Tunnel Header Flag Not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-v0-reserved-message-drop

Description Enable automatic packet-capture for Validation Drop: GTPv0-C Reserved Message Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-v1-reserved-message-drop

Description Enable automatic packet-capture for Validation Drop: GTPv1-C Reserved Message Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-v2-reserved-message-drop

Description Enable automatic packet-capture for Validation Drop: GTPv2-C Reserved Message Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-version-not-supported

Description Enable automatic packet-capture for Validation Drop: Invalid GTP version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trigger-stats-rate

Specification	Value
Type	*object*

drop-vld-country-code-mismatch

Description Enable automatic packet-capture for Validation Drop: Country Code Mismatch in IMSI and MSISDN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-cross-layer-correlation

Description Enable automatic packet-capture for Validation Drop: Cross Layer IP Address Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-bearer-count-exceed

Description Enable automatic packet-capture for Validation Drop: GTP Bearer count exceeded max (11)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-ie-repeat-count-exceed

Description Enable automatic packet-capture for Validation Drop: GTP repeated IE count exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-apn-len-drop

Description Enable automatic packet-capture for Validation Drop: GTP-C Invalid APN Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-imsi-len-drop

Description Enable automatic packet-capture for Validation Drop: GTP-C Invalid IMSI Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-u-spoofed-source-address

Description Enable automatic packet-capture for Validation Drop: GTP-U IP Address Spoofed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-v2-wrong-lbi-create-bearer

Description Enable automatic packet-capture for Validation Drop: GTPV2-C Wrong LBI in Create Bearer Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv0-seqnum-buffer-full

Description Enable automatic packet-capture for Validation Drop: GTPV0-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv1-seqnum-buffer-full

Description Enable automatic packet-capture for Validation Drop: GTPV1-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv2-seqnum-buffer-full

Description Enable automatic packet-capture for Validation Drop: GTPV2-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-flow-label-v0

Description Enable automatic packet-capture for Validation Drop: Invalid Flow Label in GTPv0-C Header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-pkt-len-piggyback

Description Enable automatic packet-capture for Validation Drop: Piggyback message invalid packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-teid

Description Enable automatic packet-capture for Validation Drop: Invalid TEID Value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-mandatory-ie-in-grouped-ie

Description Enable automatic packet-capture for Validation Drop: Mandatory IE in Grouped IE Not Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-mandatory-information-element

Description Enable automatic packet-capture for Validation Drop: Mandatory IE Not Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-message-length

Description Enable automatic packet-capture for Validation Drop: Message Length Exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-order-ie

Description Enable automatic packet-capture for Validation Drop: GTPv1-C Message Out of Order IE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state

Description Enable automatic packet-capture for Validation Drop: Out Of State GTP Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state-ie

Description Enable automatic packet-capture for Validation Drop: Unexpected IE Present in Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-protocol-flag-unset

Description Enable automatic packet-capture for Validation Drop: Protocol flag in Header Field not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-field-set

Description Enable automatic packet-capture for Validation Drop: Reserved Header Field Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-information-element

Description Enable automatic packet-capture for Validation Drop: Reserved IE Field Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sanity-failed-piggyback

Description Enable automatic packet-capture for Validation Drop: piggyback message anomaly failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sequence-num-correlation

Description Enable automatic packet-capture for Validation Drop: GTP-C Sequence number Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-tunnel-id-flag

Description Enable automatic packet-capture for Validation Drop: Tunnel Header Flag Not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-v0-reserved-message-drop

Description Enable automatic packet-capture for Validation Drop: GTPv0-C Reserved Message Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-v1-reserved-message-drop

Description Enable automatic packet-capture for Validation Drop: GTPv1-C Reserved Message Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-v2-reserved-message-drop

Description Enable automatic packet-capture for Validation Drop: GTPv2-C Reserved Message Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-version-not-supported

Description Enable automatic packet-capture for Validation Drop: Invalid GTP version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

duration

Description Time in seconds to look for the anomaly, default is 60

Type: number

Range: 1-250

Default: 60

threshold-exceeded-by

Description Set the threshold to the number of times greater than the previous duration to start the capture, default is 5

Type: number

Range: 0-100

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

drop-vld-country-code-mismatch

Description Enable automatic packet-capture for Validation Drop: Country Code Mismatch in IMSI and MSISDN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-cross-layer-correlation

Description Enable automatic packet-capture for Validation Drop: Cross Layer IP Address Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-bearer-count-exceed

Description Enable automatic packet-capture for Validation Drop: GTP Bearer count exceeded max (11)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-ie-repeat-count-exceed

Description Enable automatic packet-capture for Validation Drop: GTP repeated IE count exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-apn-len-drop

Description Enable automatic packet-capture for Validation Drop: GTP-C Invalid APN Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-imsi-len-drop

Description Enable automatic packet-capture for Validation Drop: GTP-C Invalid IMSI Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-u-spoofed-source-address

Description Enable automatic packet-capture for Validation Drop: GTP-U IP Address Spoofed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-v2-wrong-lbi-create-bearer

Description Enable automatic packet-capture for Validation Drop: GTPV2-C Wrong LBI in Create Bearer Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv0-seqnum-buffer-full

Description Enable automatic packet-capture for Validation Drop: GTPV0-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv1-seqnum-buffer-full

Description Enable automatic packet-capture for Validation Drop: GTPV1-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv2-seqnum-buffer-full

Description Enable automatic packet-capture for Validation Drop: GTPV2-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-flow-label-v0

Description Enable automatic packet-capture for Validation Drop: Invalid Flow Label in GTPv0-C Header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-pkt-len-piggyback

Description Enable automatic packet-capture for Validation Drop: Piggyback message invalid packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-teid

Description Enable automatic packet-capture for Validation Drop: Invalid TEID Value

Type: boolean

Default: 0

drop-vld-out-of-state

Description Enable automatic packet-capture for Validation Drop: Out Of State GTP Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state-ie

Description Enable automatic packet-capture for Validation Drop: Unexpected IE Present in Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-protocol-flag-unset

Description Enable automatic packet-capture for Validation Drop: Protocol flag in Header Field not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-field-set

Description Enable automatic packet-capture for Validation Drop: Reserved Header Field Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-information-element

Description Enable automatic packet-capture for Validation Drop: Reserved IE Field Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sanity-failed-piggyback

Description Enable automatic packet-capture for Validation Drop: piggyback message anomaly failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sequence-num-correlation

Description Enable automatic packet-capture for Validation Drop: GTP-C Sequence number Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-tunnel-id-flag

Description Enable automatic packet-capture for Validation Drop: Tunnel Header Flag Not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-v0-reserved-message-drop

Description Enable automatic packet-capture for Validation Drop: GTPv0-C Reserved Message Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-v1-reserved-message-drop

Description Enable automatic packet-capture for Validation Drop: GTPv1-C Reserved Message Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-v2-reserved-message-drop

Description Enable automatic packet-capture for Validation Drop: GTPv2-C Reserved Message Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-version-not-supported

Description Enable automatic packet-capture for Validation Drop: Invalid GTP version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

duration

Description Time in seconds to look for the anomaly, default is 60

Type: number

Range: 1-250

Default: 60

threshold-exceeded-by

Description Set the threshold to the number of times greater than the previous duration to start the capture, default is 5

Type: number

Range: 0-100

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.150.455 visibility packet-capture object-templates templ-gtp-plcy-tmpl trigger-stats-severity

Configure triggers severity for system object stats

trigger-stats-severity Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	trigger-stats-severity
Element URI	/axapi/v3/visibility/packet-capture/object-templates/templ-gtp-plcy-tmpl/{name}/trigger-stats-severity
Element Attributes	trigger-stats-severity_attributes
Partition Visibility	shared
Schema	`trigger-stats-severity schema`

Operations Allowed:

Create Object

POST

/axapi/v3/visibility/packet-capture/object-templates/templ-gtp-plcy-tmpl/{name}/trigger-stats-severity

trigger-stats-severity attributes

```
POST /axapi/v3/visibility/packet-capture/object-templates/templ-gtp-plcy-tmpl/a/trigger-
↪stats-severity
Payload:
{
    "trigger-stats-severity": {
        "error": 1
    }
}
```

Get Object

GET

Concurrent-capture-by-ctr-anomaly-freed

Description Dynamic Capture(ctr anomaly based) freed

Type: number

Format: counter

Concurrent-capture-by-ctr-increment-freed

Description Dynamic Capture(ctr increment based) freed

Type: number

Format: counter

Concurrent-capture-by-ctr-other-feature-freed

Description Dynamic Capture(Other feature based) freed

Type: number

Format: counter

Concurrent-capture-create-failed-by-ctr-anomaly

Description Error, Dynamic Capture(ctr anomaly based) create failed

Type: number

Format: counter

Concurrent-capture-create-failed-by-ctr-increment

Description Error, Dynamic Capture(ctr increment based) create failed

Type: number

Format: counter

Concurrent-capture-create-failed-by-other-feature

Description Error, Dynamic Capture(Other feature based) create failed

Type: number

Format: counter

Concurrent-capture-create-failed-oom

Description Error, Dynamic Capture create failed, OOM

Type: number

Format: counter

Concurrent-capture-created-by-ctr-anomaly

Description Dynamic 3 tuple based capture created (ctr anomaly based)

Type: number

Format: counter

Concurrent-capture-created-by-ctr-increment

Description Dynamic 3 tuple based capture created (ctr increment based)

Type: number

Format: counter

Concurrent-capture-created-by-other-feature

Description Dynamic 3 tuple based capture created (Other feature based)

Type: number

Format: counter

Concurrent-capture-finished

Description Number of Dynamic captures(3 tuple based) finished capturing

Type: number

Format: counter

Concurrent-capture-limit-reached

Description Dynamic Capture configured concurrent limit reached

Type: number

Format: counter

Global-capture-finished

Description Number of times global capture finished capturing

Type: number

Format: counter

auto-pcap-file-merged

Description Auto pcapng files merged

Type: number

Format: counter

auto-pcap-file-merged-failed

Description Auto pcapng files merged failed

Type: number

Format: counter

conn-ext-failed

Description Error, Conn extension creation fail

Type: number

Format: counter

failed-as-return-completed-set

Description Skip capturing, capture-config marked completed

Type: number

Format: counter

failed-disk-full

Description Error, Capture fail, Disk limit reached

Type: number

Format: counter

non-pkt-path

Description Skip capturing, not packet processing path

Type: number

Format: counter

num-capture-config-created

Description Number of capture-config created

Type: number

Format: counter

num-capture-config-delete-q

Description Number of capture-config set for deletion

Type: number

Format: counter

num-capture-config-deleted

Description Number of capture-config deleted

Type: number

Format: counter

num-capture-config-linked

Description Number of times capture-config linked to template

Type: number

Format: counter

num-capture-config-unlinked

Description Number of times capture-config unlinked from template

Type: number

Format: counter

num-conns-tagged-anomaly

Description Conn tag success (based on ctr anomaly, dynamic)

Type: number

Format: counter

num-conns-tagged-anomaly-fail

Description Conn tag fail (based on ctr anomaly, dynamic)

Type: number

Format: counter

num-conns-tagged-anomaly-maxed

Description Conn tag fail, reached limit (based on ctr anomaly, dynamic)

Type: number

Format: counter

num-conns-tagged-global-anomaly

Description Conn tag success (based on ctr anomaly, Global)

Type: number

Format: counter

num-conns-tagged-global-anomaly-fail

Description Conn tag fail (based on ctr anomaly, Global)

Type: number

Format: counter

num-conns-tagged-global-anomaly-maxed

Description Conn tag fail, reached limit (based on ctr anomaly, Global)

Type: number

Format: counter

num-conns-tagged-global-increment

Description Conn tag success (based on ctr increment, Global)

Type: number

Format: counter

num-conns-tagged-global-increment-fail

Description Conn tag fail (based on ctr increment, Global)

Type: number

Format: counter

num-conns-tagged-global-increment-maxed

Description Conn tag fail, reached limit (based on ctr increment, Global)

Type: number

Format: counter

num-conns-tagged-global-other-feature

Description Conn tag success (based on Other feature, Global)

Type: number

Format: counter

num-conns-tagged-global-other-feature-fail

Description Conn tag fail (based on Other feature, Global)

Type: number

Format: counter

num-conns-tagged-global-other-feature-maxed

Description Conn tag fail, reached limit (based on Other feature, Global)

Type: number

Format: counter

num-conns-tagged-increment

Description Conn tag success (based on ctr increment, dynamic)

Type: number

Format: counter

num-conns-tagged-increment-fail

Description Conn tag fail (based on ctr increment, dynamic)

Type: number

Format: counter

num-conns-tagged-increment-maxed

Description Conn tag fail, reached limit (based on ctr increment, dynamic)

Type: number

Format: counter

num-conns-tagged-other-feature

Description Conn tag success (based on Other feature, dynamic)

Type: number

Format: counter

num-conns-tagged-other-feature-fail

Description Conn tag fail (based on Other feature, dynamic)

Type: number

Format: counter

num-conns-tagged-other-feature-maxed

Description Conn tag fail, reached limit (based on Other feature, dynamic)

Type: number

Format: counter

num-conns-untagged

Description Number of conns untagged (done with conn limit or capture)

Type: number

Format: counter

num-dynamic-capture-config-created

Description Number of dynamic capture-config created

Type: number

Format: counter

num-dynamic-capture-config-delete-q

Description Number of dynamic capture-config set for deletion

Type: number

Format: counter

num-dynamic-capture-config-deleted

Description Number of dynamic capture-config deleted

Type: number

Format: counter

num-dynamic-capture-config-linked

Description Number of times dynamic capture-config linked to template

Type: number

Format: counter

num-dynamic-capture-config-unlinked

Description Number of times dynamic capture-config unlinked from template

Type: number

Format: counter

num-global-counters-deregistered

Description Number of global objects deregistered

Type: number

Format: counter

num-global-counters-registered

Description Number of global objects registered

Type: number

Format: counter

num-global-tmpl-created

Description Number of global templates created

Type: number

Format: counter

num-global-tmpl-deleted

Description Number of global templates deleted

Type: number

Format: counter

num-object-tmpl-created

Description Number of object templates created

Type: number

Format: counter

num-object-tmpl-deleted

Description Number of object templates deleted

Type: number

Format: counter

num-of-anomalies-cleared

Description Number of times ctr Anomaly cleared

Type: number

Format: counter

num-of-anomalies-detected

Description Number of times ctr Anomaly detected

Type: number

Format: counter

num-pcaps-create-failed

Description Error, Number of pcapng files creation failed

Type: number

Format: counter

num-pcaps-created

Description Number of pcapng files created

Type: number

Format: counter

num-per-object-counters-deregistered

Description Number of per instance objects deregistered

Type: number

Format: counter

num-per-object-counters-registered

Description Number of per instance objects registered

Type: number

Format: counter

num-tmp-pcaps-created

Description Number of temporary pcapng files created

Type: number

Format: counter

pkt-already-captured

Description Skip capturing, packet already captured

Type: number

Format: counter

pktcap-oom

Description Error, Automated Packet capture infra OOM

Type: number

Format: counter

pktcapture-failure-file-size-rchd

Description Capture fail, file size reached

Type: number

Format: counter

pktcapture-failure-wait-for-block

Description Capture fail, waiting to get free buffer

Type: number

Format: counter

pktcapture-triggered-by-anomaly

Description Capture triggered by counter anomaly

Type: number

Format: counter

pktcapture-triggered-by-increment

Description Capture triggered by counter increment

Type: number

Format: counter

pktcapture-triggered-by-other-feature

Description Capture triggered by Other feature

Type: number

Format: counter

pktcapture-with-conn-but-not-tagged-failure

Description Capture fail, Packets with untagged conn

Type: number

Format: counter

pktcapture-with-conn-but-not-tagged-success

Description Capture success, Packets with untagged conn

Type: number

Format: counter

pktcapture-with-conn-failure

Description Capture fail, Packets with tagged conn (dynamic capture)

Type: number

Format: counter

pktcapture-with-conn-failure-global

Description Capture fail, Packets with tagged conn (global capture)

Type: number

Format: counter

pktcapture-with-conn-success

Description Capture success, Packets with tagged conn (dynamic capture)

Type: number

Format: counter

pktcapture-with-conn-success-global

Description Capture success, Packets with tagged conn (global capture)

Type: number

Format: counter

pktcapture-with-no-conn-failure

Description Capture fail, Packets without conn

Type: number

Format: counter

pktcapture-with-no-conn-success

Description Capture success, Packets without conn

Type: number

Format: counter

skip-as-conn-already-recapture

Description Skip creating capture, conn was already captured

Type: number

Format: counter

skip-capture-as-conn-created-before-smp

Description Skip capturing, conn was created before the capture started

Type: number

Format: counter

wrong-ctr-incremented

Description Counter increment issue

Type: number

Format: counter

capture-config-list

Specification	Value
Type	*list*
Block object keys	

name

Type: Object

Reference Object: */axapi/v3/visibility/reporting/template/notification/template-name/{name}/authentication*

debug-mode

Description Enable debug mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

host-name

Description Configure the host name(e.g www.a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: host-name, ipv4-address, and ipv6-address are mutually exclusive

http-port

Description Configure the http port to use(default 80) (http port(default 80))

Type: number

Range: 1-65535

Default: 80

https-port

Description Configure the https port to use(default 443) (http port(default 443))

Type: number

Range: 1-65535

Default: 443

ipv4-address

Description Configure the host IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address, ipv6-address, and host-name are mutually exclusive

ipv6-address

Description Configure the host IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address, ipv4-address, and host-name are mutually exclusive

name

Description Notification template name

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

protocol

Description 'http': Use http protocol; 'https': Use https protocol(default); (http protocol)

Type: string

Supported Values: http, https

Default: https

relative-uri

Description Configure the relative uri(e.g /example , default /)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: /

sampling-enable

Type: List

test-connectivity

Description Test connectivity to notification receiver

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port for notifications

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_notification_template-name-list_authentication

Specification	Value
Type	*object*

api-key

Description Configure api-key as a mode of authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

api-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

api-key-string

Description Configure api-key as a mode of authentication

Type: string

Format: password

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-password

Description Configure the authentication user password (Authentication password)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-password-string

Description Configure the authentication user password (Authentication password)

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-username

Description Configure the authentication user name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

relative-login-uri

Description Configure the authentication login uri

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

relative-logoff-uri

Description Configure the authentication logoff uri

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_notification_template-name-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'sent_successful': Sent successful; 'send_fail': Send failures; 'response_fail': Response failures;

Type: string

Supported Values: all, sent_successful, send_fail, response_fail

telemetry-export-interval

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Monitored entity telemetry data export interval in mins (Default 5 mins)

Type: number

Range: 1-5

Default: 5

2.150.463 visibility reporting stats

stats

Description: stats is a **JSON Block**. Please see below for *stats*

Type: Object

stats

Specification	Value
Type	*object*

buffer-alloc-failure

Description Total reporting buffer allocation failures

Type: number

Format: counter

dequeued

Description Total jobs dequeued

Type: number

Format: counter

enqueue-fail

Description Total enqueue jobs failed

Type: number

Format: counter

enqueue-pass

Description Total enqueue jobs passed

Type: number

Format: counter

log-transmit-failure

Description Total log transmit failures

Type: number

Format: counter

notif-jobs-in-queue

Description Total notification jobs in queue

Type: number

Format: counter

2.150.464 visibility reporting telemetry-export-interval

Configure monitor entity telemetry data export interval

telemetry-export-interval Specification

Parameter	Value

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-name-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

authentication

Description: authentication is a **JSON Block**. Please see below for *template-name-list_authentication*

Type: Object

Reference Object: */axapi/v3/visibility/reporting/template/notification/template-name/{name}/authentication*

debug-mode

Description Enable debug mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

host-name

Description Configure the host name(e.g www.a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: host-name, ipv4-address, and ipv6-address are mutually exclusive

http-port

Description Configure the http port to use(default 80) (http port(default 80))

Type: number

Range: 1-65535

Default: 80

https-port

Description Configure the https port to use(default 443) (http port(default 443))

Type: number

Range: 1-65535

Default: 443

ipv4-address

Description Configure the host IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address, ipv6-address, and host-name are mutually exclusive

ipv6-address

Description Configure the host IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address, ipv4-address, and host-name are mutually exclusive

name

Description Notification template name

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

protocol

Description 'http': Use http protocol; 'https': Use https protocol(default); (http protocol)

Type: string

Supported Values: http, https

Default: https

relative-uri

Description Configure the relative uri(e.g /example , default /)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: /

sampling-enable

Type: List

test-connectivity

Description Test connectivity to notification receiver

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port for notifications

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-name-list_authentication

Specification	Value
Type	*object*

api-key

Description Configure api-key as a mode of authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

api-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

api-key-string

Description Configure api-key as a mode of authentication

Type: string

Format: password

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-password

Description Configure the authentication user password (Authentication password)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-password-string

Description Configure the authentication user password (Authentication password)

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-username

Description Configure the authentication user name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

relative-login-uri

Description Configure the authentication login uri

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

relative-logoff-uri

Description Configure the authentication logoff uri

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-name-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'sent_successful': Sent successful; 'send_fail': Send failures; 'response_fail': Response failures;

Type: string

Supported Values: all, sent_successful, send_fail, response_fail

template-name attributes

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

Reference Object: */axapi/v3/visibility/reporting/template/notification/template-name/{name}/authentication*

debug-mode

Description Enable debug mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

host-name

Description Configure the host name(e.g www.a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: host-name, ipv4-address, and ipv6-address are mutually exclusive

http-port

Description Configure the http port to use(default 80) (http port(default 80))

Type: number

Range: 1-65535

Default: 80

https-port

Description Configure the https port to use(default 443) (http port(default 443))

Type: number

Range: 1-65535

Default: 443

ipv4-address

Description Configure the host IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address, ipv6-address, and host-name are mutually exclusive

ipv6-address

Description Configure the host IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address, ipv4-address, and host-name are mutually exclusive

name

Description Notification template name

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

protocol

Description 'http': Use http protocol; 'https': Use https protocol(default); (http protocol)

Type: string

Supported Values: http, https

Default: https

relative-uri

Description Configure the relative uri(e.g /example , default /)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: /

sampling-enable

Type: List

test-connectivity

Description Test connectivity to notification receiver

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port for notifications

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication

Specification	Value
Type	*object*

api-key

Description Configure api-key as a mode of authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

api-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

api-key-string

Description Configure api-key as a mode of authentication

Type: string

Format: password

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-password

Description Configure the authentication user password (Authentication password)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-password-string

Description Configure the authentication user password (Authentication password)

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-username

Description Configure the authentication user name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

relative-login-uri

Description Configure the authentication login uri

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

relative-logoff-uri

Description Configure the authentication logoff uri

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'sent_successful': Sent successful; 'send_fail': Send failures; 'response_fail': Response failures;

Type: string

Supported Values: all, sent_successful, send_fail, response_fail

Concurrent-capture-by-ctr-anomaly-freed

Description Dynamic Capture(ctr anomaly based) freed

Type: number

Format: counter

Concurrent-capture-by-ctr-increment-freed

Description Dynamic Capture(ctr increment based) freed

Type: number

Format: counter

Concurrent-capture-by-ctr-other-feature-freed

Description Dynamic Capture(Other feature based) freed

Type: number

Format: counter

Concurrent-capture-create-failed-by-ctr-anomaly

Description Error, Dynamic Capture(ctr anomaly based) create failed

Type: number

Format: counter

Concurrent-capture-create-failed-by-ctr-increment

Description Error, Dynamic Capture(ctr increment based) create failed

Type: number

Format: counter

Concurrent-capture-create-failed-by-other-feature

Description Error, Dynamic Capture(Other feature based) create failed

Type: number

Format: counter

Concurrent-capture-create-failed-oom

Description Error, Dynamic Capture create failed, OOM

Type: number

Format: counter

Concurrent-capture-created-by-ctr-anomaly

Description Dynamic 3 tuple based capture created (ctr anomaly based)

Type: number

Format: counter

Concurrent-capture-created-by-ctr-increment

Description Dynamic 3 tuple based capture created (ctr increment based)

Type: number

Format: counter

Concurrent-capture-created-by-other-feature

Description Dynamic 3 tuple based capture created (Other feature based)

Type: number

Format: counter

Concurrent-capture-finished

Description Number of Dynamic captures(3 tuple based) finished capturing

Type: number

Format: counter

Concurrent-capture-limit-reached

Description Dynamic Capture configured concurrent limit reached

Type: number

Format: counter

Global-capture-finished

Description Number of times global capture finished capturing

Type: number

Format: counter

auto-pcap-file-merged

Description Auto pcapng files merged

Type: number

Format: counter

auto-pcap-file-merged-failed

Description Auto pcapng files merged failed

Type: number

Format: counter

conn-ext-failed

Description Error, Conn extension creation fail

Type: number

Format: counter

failed-as-return-completed-set

Description Skip capturing, capture-config marked completed

Type: number

Format: counter

failed-disk-full

Description Error, Capture fail, Disk limit reached

Type: number

Format: counter

non-pkt-path

Description Skip capturing, not packet processing path

Type: number

Format: counter

num-capture-config-created

Description Number of capture-config created

Type: number

Format: counter

num-capture-config-delete-q

Description Number of capture-config set for deletion

Type: number

Format: counter

num-capture-config-deleted

Description Number of capture-config deleted

Type: number

Format: counter

num-capture-config-linked

Description Number of times capture-config linked to template

Type: number

Format: counter

num-capture-config-unlinked

Description Number of times capture-config unlinked from template

Type: number

Format: counter

num-conns-tagged-anomaly

Description Conn tag success (based on ctr anomaly, dynamic)

Type: number

Format: counter

num-conns-tagged-anomaly-fail

Description Conn tag fail (based on ctr anomaly, dynamic)

Type: number

Format: counter

num-conns-tagged-anomaly-maxed

Description Conn tag fail, reached limit (based on ctr anomaly, dynamic)

Type: number

Format: counter

num-conns-tagged-global-anomaly

Description Conn tag success (based on ctr anomaly, Global)

Type: number

Format: counter

num-conns-tagged-global-anomaly-fail

Description Conn tag fail (based on ctr anomaly, Global)

Type: number

Format: counter

num-conns-tagged-global-anomaly-maxed

Description Conn tag fail, reached limit (based on ctr anomaly, Global)

Type: number

Format: counter

num-conns-tagged-global-increment

Description Conn tag success (based on ctr increment, Global)

Type: number

Format: counter

num-conns-tagged-global-increment-fail

Description Conn tag fail (based on ctr increment, Global)

Type: number

Format: counter

num-conns-tagged-global-increment-maxed

Description Conn tag fail, reached limit (based on ctr increment, Global)

Type: number

Format: counter

num-conns-tagged-global-other-feature

Description Conn tag success (based on Other feature, Global)

Type: number

Format: counter

num-conns-tagged-global-other-feature-fail

Description Conn tag fail (based on Other feature, Global)

Type: number

Format: counter

num-conns-tagged-global-other-feature-maxed

Description Conn tag fail, reached limit (based on Other feature, Global)

Type: number

Format: counter

num-conns-tagged-increment

Description Conn tag success (based on ctr increment, dynamic)

Type: number

Format: counter

num-conns-tagged-increment-fail

Description Conn tag fail (based on ctr increment, dynamic)

Type: number

Format: counter

num-conns-tagged-increment-maxed

Description Conn tag fail, reached limit (based on ctr increment, dynamic)

Type: number

Format: counter

num-conns-tagged-other-feature

Description Conn tag success (based on Other feature, dynamic)

Type: number

Format: counter

num-conns-tagged-other-feature-fail

Description Conn tag fail (based on Other feature, dynamic)

Type: number

Format: counter

num-conns-tagged-other-feature-maxed

Description Conn tag fail, reached limit (based on Other feature, dynamic)

Type: number

Format: counter

num-conns-untagged

Description Number of conns untagged (done with conn limit or capture)

Type: number

Format: counter

num-dynamic-capture-config-created

Description Number of dynamic capture-config created

Type: number

Format: counter

num-dynamic-capture-config-delete-q

Description Number of dynamic capture-config set for deletion

Type: number

Format: counter

num-dynamic-capture-config-deleted

Description Number of dynamic capture-config deleted

Type: number

Format: counter

num-dynamic-capture-config-linked

Description Number of times dynamic capture-config linked to template

Type: number

Format: counter

num-dynamic-capture-config-unlinked

Description Number of times dynamic capture-config unlinked from template

Type: number

Format: counter

num-global-counters-deregistered

Description Number of global objects deregistered

Type: number

Format: counter

num-global-counters-registered

Description Number of global objects registered

Type: number

Format: counter

num-global-tmpl-created

Description Number of global templates created

Type: number

Format: counter

num-global-tmpl-deleted

Description Number of global templates deleted

Type: number

Format: counter

num-object-tmpl-created

Description Number of object templates created

Type: number

Format: counter

num-object-tmpl-deleted

Description Number of object templates deleted

Type: number

Format: counter

num-of-anomalies-cleared

Description Number of times ctr Anomaly cleared

Type: number

Format: counter

num-of-anomalies-detected

Description Number of times ctr Anomaly detected

Type: number

Format: counter

num-pcaps-create-failed

Description Error, Number of pcapng files creation failed

Type: number

Format: counter

num-pcaps-created

Description Number of pcapng files created

Type: number

Format: counter

num-per-object-counters-deregistered

Description Number of per instance objects deregistered

Type: number

Format: counter

num-per-object-counters-registered

Description Number of per instance objects registered

Type: number

Format: counter

num-tmp-pcaps-created

Description Number of temporary pcapng files created

Type: number

Format: counter

pkt-already-captured

Description Skip capturing, packet already captured

Type: number

Format: counter

pktcap-oom

Description Error, Automated Packet capture infra OOM

Type: number

Format: counter

pktcapture-failure-file-size-rchd

Description Capture fail, file size reached

Type: number

Format: counter

pktcapture-failure-wait-for-block

Description Capture fail, waiting to get free buffer

Type: number

Format: counter

pktcapture-triggered-by-anomaly

Description Capture triggered by counter anomaly

Type: number

Format: counter

pktcapture-triggered-by-increment

Description Capture triggered by counter increment

Type: number

Format: counter

pktcapture-triggered-by-other-feature

Description Capture triggered by Other feature

Type: number

Format: counter

pktcapture-with-conn-but-not-tagged-failure

Description Capture fail, Packets with untagged conn

Type: number

Format: counter

pktcapture-with-conn-but-not-tagged-success

Description Capture success, Packets with untagged conn

Type: number

Format: counter

pktcapture-with-conn-failure

Description Capture fail, Packets with tagged conn (dynamic capture)

Type: number

Format: counter

pktcapture-with-conn-failure-global

Description Capture fail, Packets with tagged conn (global capture)

Type: number

Format: counter

pktcapture-with-conn-success

Description Capture success, Packets with tagged conn (dynamic capture)

Type: number

Format: counter

pktcapture-with-conn-success-global

Description Capture success, Packets with tagged conn (global capture)

Type: number

Format: counter

pktcapture-with-no-conn-failure

Description Capture fail, Packets without conn

Type: number

Format: counter

pktcapture-with-no-conn-success

Description Capture success, Packets without conn

Type: number

Format: counter

skip-as-conn-already-recapture

Description Skip creating capture, conn was already captured

Type: number

Format: counter

skip-capture-as-conn-created-before-smp

Description Skip capturing, conn was created before the capture started

Type: number

Format: counter

wrong-ctr-incremented

Description Counter increment issue

Type: number

Format: counter

packet-capture_capture-config-list

Specification	Value
Type	*list*
Block object keys	

name

Description Specify the name of the capture-config

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

stats

Description: stats is a **JSON Block**. Please see below for *packet-capture_capture-config-list_stats*

Type: Object

packet-capture_capture-config-list_stats

Type	*object*

Concurrent-capture-by-ctr-anomaly-freed

Description Dynamic Capture(ctr anomaly based) freed

Type: number

Format: counter

Concurrent-capture-by-ctr-increment-freed

Description Dynamic Capture(ctr increment based) freed

Type: number

Format: counter

Concurrent-capture-by-ctr-other-feature-freed

Description Dynamic Capture(Other feature based) freed

Type: number

Format: counter

Concurrent-capture-create-failed-by-ctr-anomaly

Description Error, Dynamic Capture(ctr anomaly based) create failed

Type: number

Format: counter

Concurrent-capture-create-failed-by-ctr-increment

Description Error, Dynamic Capture(ctr increment based) create failed

Type: number

Format: counter

Concurrent-capture-create-failed-by-other-feature

Description Error, Dynamic Capture(Other feature based) create failed

Type: number

Format: counter

Concurrent-capture-create-failed-oom

Description Error, Dynamic Capture create failed, OOM

Type: number

Format: counter

Concurrent-capture-created-by-ctr-anomaly

Description Dynamic 3 tuple based capture created (ctr anomaly based)

Type: number

Format: counter

Concurrent-capture-created-by-ctr-increment

Description Dynamic 3 tuple based capture created (ctr increment based)

Type: number

Format: counter

Concurrent-capture-finished

Description Number of Dynamic captures(3 tuple based) finished capturing

Type: number

Format: counter

Concurrent-capture-limit-reached

Description Dynamic Capture configured concurrent limit reached

Type: number

Format: counter

Global-capture-finished

Description Number of times global capture finished capturing

Type: number

Format: counter

auto-pcap-file-merged

Description Auto pcapng files merged

Type: number

Format: counter

auto-pcap-file-merged-failed

Description Auto pcapng files merged failed

Type: number

Format: counter

conn-ext-failed

Description Error, Conn extension creation fail

Type: number

Format: counter

failed-as-return-completed-set

Description Skip capturing, capture-config marked completed

Type: number

Format: counter

failed-disk-full

Description Error, Capture fail, Disk limit reached

Type: number

Format: counter

non-pkt-path

Description Skip capturing, not packet processing path

Type: number

Format: counter

num-conns-tagged-anomaly

Description Conn tag success (based on ctr anomaly, dynamic)

Type: number

Format: counter

num-conns-tagged-anomaly-fail

Description Conn tag fail (based on ctr anomaly, dynamic)

Type: number

Format: counter

num-conns-tagged-anomaly-maxed

Description Conn tag fail, reached limit (based on ctr anomaly, dynamic)

Type: number

Format: counter

num-conns-tagged-global-anomaly

Description Conn tag success (based on ctr anomaly, Global)

Type: number

Format: counter

num-conns-tagged-global-anomaly-fail

Description Conn tag fail (based on ctr anomaly, Global)

Type: number

Format: counter

num-conns-tagged-global-anomaly-maxed

Description Conn tag fail, reached limit (based on ctr anomaly, Global)

Type: number

Format: counter

num-conns-tagged-global-increment

Description Conn tag success (based on ctr increment, Global)

Type: number

Format: counter

num-conns-tagged-global-increment-fail

Description Conn tag fail (based on ctr increment, Global)

Type: number

Format: counter

num-conns-tagged-global-increment-maxed

Description Conn tag fail, reached limit (based on ctr increment, Global)

Type: number

Format: counter

num-conns-tagged-global-other-feature

Description Conn tag success (based on Other feature, Global)

Type: number

Format: counter

num-conns-tagged-global-other-feature-fail

Description Conn tag fail (based on Other feature, Global)

Type: number

Format: counter

num-conns-tagged-global-other-feature-maxed

Description Conn tag fail, reached limit (based on Other feature, Global)

Type: number

Format: counter

num-conns-tagged-increment

Description Conn tag success (based on ctr increment, dynamic)

Type: number

Format: counter

num-conns-tagged-increment-fail

Description Conn tag fail (based on ctr increment, dynamic)

Type: number

Format: counter

num-conns-tagged-increment-maxed

Description Conn tag fail, reached limit (based on ctr increment, dynamic)

Type: number

Format: counter

num-conns-tagged-other-feature

Description Conn tag success (based on Other feature, dynamic)

Type: number

Format: counter

num-conns-tagged-other-feature-fail

Description Conn tag fail (based on Other feature, dynamic)

Type: number

Format: counter

num-conns-tagged-other-feature-maxed

Description Conn tag fail, reached limit (based on Other feature, dynamic)

Type: number

Format: counter

num-conns-untagged

Description Number of conns untagged (done with conn limit or capture)

Type: number

Format: counter

num-dynamic-capture-config-created

Description Number of dynamic capture-config created

Type: number

Format: counter

num-dynamic-capture-config-delete-q

Description

Type: number

Format: counter

num-dynamic-capture-config-deleted

Description Number of dynamic capture-config deleted

Type: number

Format: counter

num-global-counters-deregistered

Description Number of global objects deregistered

Type: number

Format: counter

num-global-counters-registered

Description Number of global objects registered

Type: number

Format: counter

num-of-anomalies-cleared

Description Number of times ctr Anomaly cleared

Type: number

Format: counter

num-of-anomalies-detected

Description Number of times ctr Anomaly detected

Type: number

Format: counter

num-pcaps-create-failed

Description Error, Number of pcapng files creation failed

Type: number

Format: counter

num-pcaps-created

Description Number of pcapng files created

Type: number

Format: counter

num-per-object-counters-deregistered

Description Number of per instance objects deregistered

Type: number

Format: counter

num-per-object-counters-registered

Description Number of per instance objects registered

Type: number

Format: counter

num-tmp-pcaps-created

Description Number of temporary pcapng files created

Type: number

Format: counter

pkt-already-captured

Description Skip capturing, packet already captured

Type: number

Format: counter

pktcap-oom

Description Error, Automated Packet capture infra OOM

Type: number

Format: counter

pktcapture-failure-file-size-rchd

Description Capture fail, file size reached

Type: number

Format: counter

pktcapture-failure-wait-for-block

Description Capture fail, waiting to get free buffer

Type: number

Format: counter

pktcapture-triggered-by-anomaly

Description Capture triggered by counter anomaly

Type: number

Format: counter

pktcapture-triggered-by-increment

Description Capture triggered by counter increment

Type: number

Format: counter

pktcapture-triggered-by-other-feature

Description Capture triggered by Other feature

Type: number

Format: counter

pktcapture-with-conn-but-not-tagged-failure

Description Capture fail, Packets with untagged conn

Type: number

Format: counter

pktcapture-with-conn-but-not-tagged-success

Description Capture success, Packets with untagged conn

Type: number

Format: counter

pktcapture-with-conn-failure

Description Capture fail, Packets with tagged conn (dynamic capture)

Type: number

Format: counter

pktcapture-with-conn-failure-global

Description Capture fail, Packets with tagged conn (global capture)

Type: number

Format: counter

pktcapture-with-conn-success

Description Capture success, Packets with tagged conn (dynamic capture)

Type: number

Format: counter

pktcapture-with-conn-success-global

Description Capture success, Packets with tagged conn (global capture)

Type: number

Format: counter

pktcapture-with-no-conn-failure

Description Capture fail, Packets without conn

Type: number

Format: counter

pktcapture-with-no-conn-success

Description Capture success, Packets without conn

Type: number

Format: counter

skip-as-conn-already-recapture

Description Skip creating capture, conn was already captured

Type: number

Format: counter

skip-capture-as-conn-created-before-smp

Description Skip capturing, conn was created before the capture started

Type: number

Format: counter

wrong-ctr-incremented

Description Counter increment issue

Type: number

Format: counter

2.150.473 visibility topn

Configure topn

topn Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	topn
Element URI	/axapi/v3/visibility/topn
Element Attributes	topn_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/visibility/topn/stats
Operational Data URI	/axapi/v3/visibility/topn/oper
Schema	`topn schema`

Operations Allowed:

Create Object

POST

/axapi/v3/visibility/topn

topn attributes

```
POST /axapi/v3/visibility/topn
Payload:
{
    "topn": {
        "sampling-enable": [
            {
                "counters1": "all"
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/visibility/topn

topn attributes

```
GET /axapi/v3/visibility/topn
Reponse:
{
    "topn": {
        "uuid": "d5e96aa2-3eb4-11da-8943-276c130d2c27",
        "sampling-enable": [
            {
                "counters1": "all"
            }
        ],
        "a10-url": "/axapi/v3/visibility/topn"
    }
}
```

Modify Object

POST

/axapi/v3/visibility/topn

topn attributes

Replace Object

PUT

/axapi/v3/visibility/topn

topn attributes

```
PUT /axapi/v3/visibility/topn
Payload:
{
    "topn": {
        "sampling-enable": [
            {
                "counters1": "heap-alloc-success"
            }
        ]
    }
}
```

Delete Object

DELETE

/axapi/v3/visibility/topn

topn attributes

```
DELETE /axapi/v3/visibility/topn
Reponse:
{
    "response": {
        "http-status": 200,
        "status": "OK",
        "msg": "Success"
    }
}
```

Description 'all': all; 'heap-alloc-success': Total heap node allocated; 'heap-alloc-failed': Total heap node alloc failed; 'heap-alloc-oom': Total heap node alloc failed Out of Memory; 'obj-reg-success': Total object node allocated; 'obj-reg-failed': Total object node alloc failed; 'obj-reg-oom': Total object node alloc failed Out of Memory; 'heap-deleted': Total Heap node deleted; 'obj-deleted': Total Object node deleted; 'heap-metric-alloc-success': Total heap metric node allocated; 'heap-metric-alloc-oom': Total heap metric node alloc failed Out of Memory; 'heap-move-to-delq': Total heap node moved to delq; 'heap-metric-deleted': Total Heap metric node deleted; 'obj-metric-reg-success': Total object Metric node allocated; 'obj-metric-reg-oom': Total object Metric node alloc failed Out of Memory; 'obj-move-to-delq': Total object node moved to delq; 'obj-metric-deleted': Total Object metric node deleted; 'hc-obj-alloc-failed': Send failed to HC, Out of Memory;

Type: string

Supported Values: all, heap-alloc-success, heap-alloc-failed, heap-alloc-oom, obj-reg-success, obj-reg-failed, obj-reg-oom, heap-deleted, obj-deleted, heap-metric-alloc-success, heap-metric-alloc-oom, heap-move-to-delq, heap-metric-deleted, obj-metric-reg-success, obj-metric-reg-oom, obj-move-to-delq, obj-metric-deleted, hc-obj-alloc-failed

cgnv6-nat-pool-topn-tmpl-list

Specification	Value
Type	*list*
Block object keys	

interval

Description '5': 5 minutes; '15': 15 minutes; '30': 30 minutes; '60': 60 minutes; 'all-time': Since template is activated;

Type: string

Supported Values: 5, 15, 30, 60, all-time

metrics

Description: metrics is a **JSON Block**. Please see below for *cgnv6-nat-pool-topn-tmpl-list_metrics*

Type: Object

Reference Object: */axapi/v3/visibility/topn/cgnv6-nat-pool-topn-tmpl/{name}/metrics*

name

Description Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

topn-size

Description Congure value of N for topn

Type: number

Range: 10-200

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cgnv6-nat-pool-topn-tmpl-list_metrics

Specification	Value
Type	*object*

tcp-total

Description Track Top-N entities for TCP total

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp-total

Description Track Top-N entities for UDP Total

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

gtp-network-element-topn-node

Specification	Value
Type	*object*

activate

Description Name of the templated to be activated

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/visibility/topn/gtp-network-element-topn-tmpl*

uuid

Description uuid of the object

gtp-apn-prefix-topn-tmpl-list_metrics

Specification	Value
Type	*object*

downlink-bytes

Description Track Top-N entities for Downlink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

downlink-pkts

Description Track Top-N entities for Downlink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-apn-filtering

Description Track Top-N entities for Filtering Drop: APN IMSI Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-gtp-in-gtp

Description Track Top-N entities for Filtering Drop: GTP in GTP Tunnel Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-message-filtering

Description Track Top-N entities for Filtering Drop: Message Type Not Permitted on Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-msisdn-filtering

Description Track Top-N entities for Filtering Drop: MSISDN Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-rat-type-filtering

Description Track Top-N entities for Filtering Drop: RAT Type Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-downlink-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Downlink byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-downlink-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Downlink packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-max-concurrent-tunnels

Description Track Top-N entities for Rate-limit Drop: GTP-U Concurrent Tunnels

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-total-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Total byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-total-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Total packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-tunnel-create

Description Track Top-N entities for Rate-limit Drop: GTP-U Tunnel Creation rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-uplink-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Uplink byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-uplink-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Uplink packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v0-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv0-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv1-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-create-pdp-request

Description Track Top-N entities for Rate-limit Drop: GTPv1-C Create PDP Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-update-pdp-request

Description Track Top-N entities for Rate-limit Drop: GTPv1-C Update PDP Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv2-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-create-session-request

Description Track Top-N entities for Rate-limit Drop: GTPv2-C Create Session Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-modify-bearer-request

Description Track Top-N entities for Rate-limit Drop: GTPv2-C Modify Bearer Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-country-code-mismatch

Description Track Top-N entities for Validation Drop: Country Code Mismatch in IMSI and MSISDN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-cross-layer-correlation

Description Track Top-N entities for Validation Drop: Cross Layer IP Address Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-bearer-count-exceed

Description Track Top-N entities for Validation Drop: GTP Bearer count exceeded max (11)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-apn-len-drop

Description Track Top-N entities for Validation Drop: GTP-C Invalid APN Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-imsi-len-drop

Description Track Top-N entities for Validation Drop: GTP-C Invalid IMSI Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-u-spoofed-source-address

Description Track Top-N entities for Validation Drop: GTP-U IP Address Spoofed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-v2-wrong-lbi-create-bearer

Description Track Top-N entities for Validation Drop: GTPV2-C Wrong LBI in Create Bearer Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv0-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV0-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv1-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV1-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv2-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV2-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-flow-label-v0

Description Track Top-N entities for Validation Drop: Invalid Flow Label in GTPv0-C Header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-pkt-len-piggyback

Description Track Top-N entities for Validation Drop: Piggyback message invalid packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-teid

Description Track Top-N entities for Validation Drop: Invalid TEID Value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-mandatory-information-element

Description Track Top-N entities for Validation Drop: Mandatory IE Not Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-message-length

Description Track Top-N entities for Validation Drop: Message Length Exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-order-ie

Description Track Top-N entities for Validation Drop: GTPv1-C Message Out of Order IE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state

Description Track Top-N entities for Validation Drop: Out Of State GTP Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state-ie

Description Track Top-N entities for Validation Drop: Unexpected IE Present in Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-protocol-flag-unset

Description Track Top-N entities for Validation Drop: Protocol flag in Header Field not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-field-set

Description Track Top-N entities for Validation Drop: Reserved Header Field Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-information-element

Description Track Top-N entities for Validation Drop: Reserved IE Field Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sanity-failed-piggyback

Description Track Top-N entities for Validation Drop: piggyback message anomaly failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sequence-num-correlation

Description Track Top-N entities for Validation Drop: GTP-C Sequence number Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-tunnel-id-flag

Description Track Top-N entities for Validation Drop: Tunnel Header Flag Not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-unsupported-message-type

Description Track Top-N entities for Validation Drop: Message type not supported by GTP Version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-version-not-supported

Description Track Top-N entities for Validation Drop: Invalid GTP version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-c-handover-in-progress-with-conn

Description Track Top-N entities for GTP-C matching a conn with Handover In Progress

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-path-management-message

Description Track Top-N entities for GTP Path Management Messages Received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-u-tunnel-created

Description Track Top-N entities for GTP-U Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-u-tunnel-deleted

Description Track Top-N entities for GTP-U Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-create-pdp-resp-unsuccess

Description Track Top-N entities for GTPV0-C Create PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv0-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-closed

Description Track Top-N entities for GTPv0-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-created

Description Track Top-N entities for GTPv0-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-deleted

Description Track Top-N entities for GTPv0-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv0-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-half-closed

Description Track Top-N entities for GTPv0-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-half-open

Description Track Top-N entities for GTPv0-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-update-pdp-resp-unsuccess

Description Track Top-N entities for GTPV0-C Update PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-create-pdp-resp-unsuccess

Description Track Top-N entities for GTPV1-C Create PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv1-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-closed

Description Track Top-N entities for GTPv1-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-created

Description Track Top-N entities for GTPv1-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-deleted

Description Track Top-N entities for GTPv1-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv1-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-half-closed

Description Track Top-N entities for GTPv1-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-half-open

Description Track Top-N entities for GTPv1-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-update-pdp-resp-unsuccess

Description Track Top-N entities for GTPV1-C Update PDP Context response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-create-sess-resp-unsuccess

Description Track Top-N entities for GTPV2-C Create Session Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv2-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-mod_bearer-resp-unsuccess

Description Track Top-N entities for GTPV2-C Modify Bearer Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-piggyback-message

Description Track Top-N entities for GTPv2-C Piggyback Messages seen

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-closed

Description Track Top-N entities for GTPv2-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-created

Description Track Top-N entities for GTPv2-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-deleted

Description Track Top-N entities for GTPv2-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv2-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-half-closed

Description Track Top-N entities for GTPv2-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-half-open

Description Track Top-N entities for GTPv2-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rl-message-monitor

Description Track Top-N entities for GTP Message forwarded via monitor mode at rate-limit policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-downlink-bytes

Description Track Top-N entities for Downlink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-downlink-pkts

Description Track Top-N entities for GTP-U Downlink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-uplink-bytes

Description Track Top-N entities for Uplink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-uplink-pkts

Description Track Top-N entities for Uplink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-bytes

Description Track Top-N entities for Uplink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-pkts

Description Track Top-N entities for Uplink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

gtp-network-element-topn-tmpl-list

Specification	Value

downlink-bytes

Description Track Top-N entities for Downlink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

downlink-pkts

Description Track Top-N entities for Downlink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-apn-filtering

Description Track Top-N entities for Filtering Drop: APN IMSI Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-gtp-in-gtp

Description Track Top-N entities for Filtering Drop: GTP in GTP Tunnel Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-message-filtering

Description Track Top-N entities for Filtering Drop: Message Type Not Permitted on Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-msisdn-filtering

Description Track Top-N entities for Filtering Drop: MSISDN Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-rat-type-filtering

Description Track Top-N entities for Filtering Drop: RAT Type Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-downlink-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Downlink byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-downlink-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Downlink packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-max-concurrent-tunnels

Description Track Top-N entities for Rate-limit Drop: GTP-U Concurrent Tunnels

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-total-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Total byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-total-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Total packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-tunnel-create

Description Track Top-N entities for Rate-limit Drop: GTP-U Tunnel Creation rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-uplink-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Uplink byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-uplink-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Uplink packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v0-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv0-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv1-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-create-pdp-request

Description Track Top-N entities for Rate-limit Drop: GTPv1-C Create PDP Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-update-pdp-request

Description Track Top-N entities for Rate-limit Drop: GTPv1-C Update PDP Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv2-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-create-session-request

Description Track Top-N entities for Rate-limit Drop: GTPv2-C Create Session Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-modify-bearer-request

Description Track Top-N entities for Rate-limit Drop: GTPv2-C Modify Bearer Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-country-code-mismatch

Description Track Top-N entities for Validation Drop: Country Code Mismatch in IMSI and MSISDN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-cross-layer-correlation

Description Track Top-N entities for Validation Drop: Cross Layer IP Address Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-apn-len-drop

Description Track Top-N entities for Validation Drop: GTP-C Invalid APN Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-imsi-len-drop

Description Track Top-N entities for Validation Drop: GTP-C Invalid IMSI Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-u-spoofed-source-address

Description Track Top-N entities for Validation Drop: GTP-U IP Address Spoofed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-v2-wrong-lbi-create-bearer

Description Track Top-N entities for Validation Drop: GTPV2-C Wrong LBI in Create Bearer Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv0-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV0-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv1-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV1-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv2-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV2-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-flow-label-v0

Description Track Top-N entities for Validation Drop: Invalid Flow Label in GTPv0-C Header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-pkt-len-piggyback

Description Track Top-N entities for Validation Drop: Piggyback message invalid packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-teid

Description Track Top-N entities for Validation Drop: Invalid TEID Value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-mandatory-information-element

Description Track Top-N entities for Validation Drop: Mandatory IE Not Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-message-length

Description Track Top-N entities for Validation Drop: Message Length Exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-order-ie

Description Track Top-N entities for Validation Drop: GTPv1-C Message Out of Order IE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state

Description Track Top-N entities for Validation Drop: Out Of State GTP Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state-ie

Description Track Top-N entities for Validation Drop: Unexpected IE Present in Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-protocol-flag-unset

Description Track Top-N entities for Validation Drop: Protocol flag in Header Field not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-field-set

Description Track Top-N entities for Validation Drop: Reserved Header Field Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-information-element

Description Track Top-N entities for Validation Drop: Reserved IE Field Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sanity-failed-piggyback

Description Track Top-N entities for Validation Drop: piggyback message anomaly failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sequence-num-correlation

Description Track Top-N entities for Validation Drop: GTP-C Sequence number Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-tunnel-id-flag

Description Track Top-N entities for Validation Drop: Tunnel Header Flag Not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-unsupported-message-type

Description Track Top-N entities for Validation Drop: Message type not supported by GTP Version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-version-not-supported

Description Track Top-N entities for Validation Drop: Invalid GTP version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop_vld-gtp-bearer-count-exceed

Description Track Top-N entities for Validation Drop: GTP Bearer count exceeded max (11)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-c-handover-in-progress-with-conn

Description Track Top-N entities for GTP-C matching a conn with Handover In Progress

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-path-management-message

Description Track Top-N entities for GTP Path Management Messages Received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-u-tunnel-created

Description Track Top-N entities for GTP-U Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-u-tunnel-deleted

Description Track Top-N entities for GTP-U Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-create-pdp-resp-unsuccess

Description Track Top-N entities for GTPv0-C Create PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv0-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-reserved-message-allow

Description Track Top-N entities for GTPv0-C Reserved Message Allow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-closed

Description Track Top-N entities for GTPv0-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-created

Description Track Top-N entities for GTPv0-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-deleted

Description Track Top-N entities for GTPv0-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv0-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-half-closed

Description Track Top-N entities for GTPv0-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-half-open

Description Track Top-N entities for GTPv0-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-update-pdp-resp-unsuccess

Description Track Top-N entities for GTPv0-C Update PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-create-pdp-resp-unsuccess

Description Track Top-N entities for GTPv1-C Create PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv1-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-reserved-message-allow

Description Track Top-N entities for GTPv1-C Reserved Message Allow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-closed

Description Track Top-N entities for GTPv1-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-created

Description Track Top-N entities for GTPv1-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-deleted

Description Track Top-N entities for GTPv1-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv1-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-half-closed

Description Track Top-N entities for GTPv1-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-half-open

Description Track Top-N entities for GTPv1-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-update-pdp-resp-unsuccess

Description Track Top-N entities for GTPv1-C Update PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-create-sess-resp-unsuccess

Description Track Top-N entities for GTPv2-C Create Session Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv2-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-mod_bearer-resp-unsuccess

Description Track Top-N entities for GTPv2-C Modify Bearer Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-piggyback-message

Description Track Top-N entities for GTPv2-C Piggyback Messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-reserved-message-allow

Description Track Top-N entities for GTPv2-C Reserved Message Allow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-closed

Description Track Top-N entities for GTPv2-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-created

Description Track Top-N entities for GTPv2-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-deleted

Description Track Top-N entities for GTPv2-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv2-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-half-closed

Description Track Top-N entities for GTPv2-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-half-open

Description Track Top-N entities for GTPv2-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rl-message-monitor

Description Track Top-N entities for GTP Message forwarded via monitor mode at rate-limit policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-downlink-bytes

Description Track Top-N entities for Downlink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-downlink-pkts

Description Track Top-N entities for GTP-U Downlink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-uplink-bytes

Description Track Top-N entities for Uplink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-uplink-pkts

Description Track Top-N entities for Uplink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-bytes

Description Track Top-N entities for Uplink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-pkts

Description Track Top-N entities for Uplink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

...

]

gtp-apn-prefix-topn-tmpl attributes

interval

Description '5': 5 minutes; '15': 15 minutes; '30': 30 minutes; '60': 60 minutes; 'all-time': Since template is activated;

Type: string

Supported Values: 5, 15, 30, 60, all-time

metrics

Description: metrics is a **JSON Block**. Please see below for *metrics*

Type: Object

Reference Object: */axapi/v3/visibility/topn/gtp-apn-prefix-topn-tmpl/{name}/metrics*

name

Description Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

topn-size

Description Congure value of N for topn

Type: number

Range: 10-200

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

metrics

Specification	Value
Type	*object*

downlink-bytes

Description Track Top-N entities for Downlink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

downlink-pkts

Description Track Top-N entities for Downlink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-apn-filtering

Description Track Top-N entities for Filtering Drop: APN IMSI Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-gtp-in-gtp

Description Track Top-N entities for Filtering Drop: GTP in GTP Tunnel Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-message-filtering

Description Track Top-N entities for Filtering Drop: Message Type Not Permitted on Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-msisdn-filtering

Description Track Top-N entities for Filtering Drop: MSISDN Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-rat-type-filtering

Description Track Top-N entities for Filtering Drop: RAT Type Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-downlink-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Downlink byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-downlink-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Downlink packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-max-concurrent-tunnels

Description Track Top-N entities for Rate-limit Drop: GTP-U Concurrent Tunnels

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-total-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Total byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-total-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Total packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-tunnel-create

Description Track Top-N entities for Rate-limit Drop: GTP-U Tunnel Creation rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-uplink-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Uplink byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-uplink-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Uplink packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v0-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv0-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv1-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-create-pdp-request

Description Track Top-N entities for Rate-limit Drop: GTPv1-C Create PDP Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-update-pdp-request

Description Track Top-N entities for Rate-limit Drop: GTPv1-C Update PDP Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv2-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-create-session-request

Description Track Top-N entities for Rate-limit Drop: GTPv2-C Create Session Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-modify-bearer-request

Description Track Top-N entities for Rate-limit Drop: GTPv2-C Modify Bearer Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-country-code-mismatch

Description Track Top-N entities for Validation Drop: Country Code Mismatch in IMSI and MSISDN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-cross-layer-correlation

Description Track Top-N entities for Validation Drop: Cross Layer IP Address Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-bearer-count-exceed

Description Track Top-N entities for Validation Drop: GTP Bearer count exceeded max (11)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-apn-len-drop

Description Track Top-N entities for Validation Drop: GTP-C Invalid APN Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-imsi-len-drop

Description Track Top-N entities for Validation Drop: GTP-C Invalid IMSI Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-u-spoofed-source-address

Description Track Top-N entities for Validation Drop: GTP-U IP Address Spoofed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-v2-wrong-lbi-create-bearer

Description Track Top-N entities for Validation Drop: GTPV2-C Wrong LBI in Create Bearer Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv0-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV0-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv1-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV1-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv2-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV2-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-flow-label-v0

Description Track Top-N entities for Validation Drop: Invalid Flow Label in GTPv0-C Header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-pkt-len-piggyback

Description Track Top-N entities for Validation Drop: Piggyback message invalid packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-teid

Description Track Top-N entities for Validation Drop: Invalid TEID Value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-mandatory-information-element

Description Track Top-N entities for Validation Drop: Mandatory IE Not Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-message-length

Description Track Top-N entities for Validation Drop: Message Length Exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-order-ie

Description Track Top-N entities for Validation Drop: GTPv1-C Message Out of Order IE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state

Description Track Top-N entities for Validation Drop: Out Of State GTP Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state-ie

Description Track Top-N entities for Validation Drop: Unexpected IE Present in Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-protocol-flag-unset

Description Track Top-N entities for Validation Drop: Protocol flag in Header Field not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-field-set

Description Track Top-N entities for Validation Drop: Reserved Header Field Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-information-element

Description Track Top-N entities for Validation Drop: Reserved IE Field Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sanity-failed-piggyback

Description Track Top-N entities for Validation Drop: piggyback message anomaly failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sequence-num-correlation

Description Track Top-N entities for Validation Drop: GTP-C Sequence number Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-tunnel-id-flag

Description Track Top-N entities for Validation Drop: Tunnel Header Flag Not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-unsupported-message-type

Description Track Top-N entities for Validation Drop: Message type not supported by GTP Version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-version-not-supported

Description Track Top-N entities for Validation Drop: Invalid GTP version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-c-handover-in-progress-with-conn

Description Track Top-N entities for GTP-C matching a conn with Handover In Progress

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-path-management-message

Description Track Top-N entities for GTP Path Management Messages Received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-u-tunnel-created

Description Track Top-N entities for GTP-U Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-u-tunnel-deleted

Description Track Top-N entities for GTP-U Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-create-pdp-resp-unsuccess

Description Track Top-N entities for GTPV0-C Create PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv0-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-closed

Description Track Top-N entities for GTPv0-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-created

Description Track Top-N entities for GTPv0-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-deleted

Description Track Top-N entities for GTPv0-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv0-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-half-closed

Description Track Top-N entities for GTPv0-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-half-open

Description Track Top-N entities for GTPv0-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-update-pdp-resp-unsuccess

Description Track Top-N entities for GTPV0-C Update PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-create-pdp-resp-unsuccess

Description Track Top-N entities for GTPV1-C Create PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv1-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-closed

Description Track Top-N entities for GTPv1-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-created

Description Track Top-N entities for GTPv1-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-deleted

Description Track Top-N entities for GTPv1-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv1-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-half-closed

Description Track Top-N entities for GTPv1-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-half-open

Description Track Top-N entities for GTPv1-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-update-pdp-resp-unsuccess

Description Track Top-N entities for GTPV1-C Update PDP Context response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-create-sess-resp-unsuccess

Description Track Top-N entities for GTPV2-C Create Session Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv2-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-mod_bearer-resp-unsuccess

Description Track Top-N entities for GTPV2-C Modify Bearer Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-piggyback-message

Description Track Top-N entities for GTPv2-C Piggyback Messages seen

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-closed

Description Track Top-N entities for GTPv2-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-created

Description Track Top-N entities for GTPv2-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-deleted

Description Track Top-N entities for GTPv2-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv2-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-half-closed

Description Track Top-N entities for GTPv2-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-half-open

Description Track Top-N entities for GTPv2-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rl-message-monitor

Description Track Top-N entities for GTP Message forwarded via monitor mode at rate-limit policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-downlink-bytes

Description Track Top-N entities for Downlink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-downlink-pkts

Description Track Top-N entities for GTP-U Downlink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-uplink-bytes

Description Track Top-N entities for Uplink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-uplink-pkts

Description Track Top-N entities for Uplink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-bytes

Description Track Top-N entities for Uplink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-pkts

Description Track Top-N entities for Uplink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

downlink-bytes

Description Track Top-N entities for Downlink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

downlink-pkts

Description Track Top-N entities for Downlink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-apn-filtering

Description Track Top-N entities for Filtering Drop: APN IMSI Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-gtp-in-gtp

Description Track Top-N entities for Filtering Drop: GTP in GTP Tunnel Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-message-filtering

Description Track Top-N entities for Filtering Drop: Message Type Not Permitted on Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-msisdn-filtering

Description Track Top-N entities for Filtering Drop: MSISDN Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-rat-type-filtering

Description Track Top-N entities for Filtering Drop: RAT Type Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-downlink-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Downlink byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-downlink-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Downlink packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-max-concurrent-tunnels

Description Track Top-N entities for Rate-limit Drop: GTP-U Concurrent Tunnels

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-total-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Total byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-total-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Total packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-tunnel-create

Description Track Top-N entities for Rate-limit Drop: GTP-U Tunnel Creation rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-uplink-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Uplink byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-uplink-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Uplink packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v0-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv0-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv1-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-create-pdp-request

Description Track Top-N entities for Rate-limit Drop: GTPv1-C Create PDP Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-update-pdp-request

Description Track Top-N entities for Rate-limit Drop: GTPv1-C Update PDP Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv2-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-create-session-request

Description Track Top-N entities for Rate-limit Drop: GTPv2-C Create Session Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-modify-bearer-request

Description Track Top-N entities for Rate-limit Drop: GTPv2-C Modify Bearer Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-country-code-mismatch

Description Track Top-N entities for Validation Drop: Country Code Mismatch in IMSI and MSISDN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-cross-layer-correlation

Description Track Top-N entities for Validation Drop: Cross Layer IP Address Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-bearer-count-exceed

Description Track Top-N entities for Validation Drop: GTP Bearer count exceeded max (11)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-apn-len-drop

Description Track Top-N entities for Validation Drop: GTP-C Invalid APN Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-imsi-len-drop

Description Track Top-N entities for Validation Drop: GTP-C Invalid IMSI Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-u-spoofed-source-address

Description Track Top-N entities for Validation Drop: GTP-U IP Address Spoofed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-v2-wrong-lbi-create-bearer

Description Track Top-N entities for Validation Drop: GTPV2-C Wrong LBI in Create Bearer Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv0-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV0-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv1-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV1-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv2-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV2-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-flow-label-v0

Description Track Top-N entities for Validation Drop: Invalid Flow Label in GTPv0-C Header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-pkt-len-piggyback

Description Track Top-N entities for Validation Drop: Piggyback message invalid packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-teid

Description Track Top-N entities for Validation Drop: Invalid TEID Value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-mandatory-information-element

Description Track Top-N entities for Validation Drop: Mandatory IE Not Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-message-length

Description Track Top-N entities for Validation Drop: Message Length Exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-order-ie

Description Track Top-N entities for Validation Drop: GTPv1-C Message Out of Order IE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state

Description Track Top-N entities for Validation Drop: Out Of State GTP Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state-ie

Description Track Top-N entities for Validation Drop: Unexpected IE Present in Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-protocol-flag-unset

Description Track Top-N entities for Validation Drop: Protocol flag in Header Field not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-field-set

Description Track Top-N entities for Validation Drop: Reserved Header Field Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-information-element

Description Track Top-N entities for Validation Drop: Reserved IE Field Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sanity-failed-piggyback

Description Track Top-N entities for Validation Drop: piggyback message anomaly failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sequence-num-correlation

Description Track Top-N entities for Validation Drop: GTP-C Sequence number Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-tunnel-id-flag

Description Track Top-N entities for Validation Drop: Tunnel Header Flag Not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-unsupported-message-type

Description Track Top-N entities for Validation Drop: Message type not supported by GTP Version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-version-not-supported

Description Track Top-N entities for Validation Drop: Invalid GTP version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-c-handover-in-progress-with-conn

Description Track Top-N entities for GTP-C matching a conn with Handover In Progress

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-path-management-message

Description Track Top-N entities for GTP Path Management Messages Received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-u-tunnel-created

Description Track Top-N entities for GTP-U Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-u-tunnel-deleted

Description Track Top-N entities for GTP-U Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-create-pdp-resp-unsuccess

Description Track Top-N entities for GTPV0-C Create PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv0-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-closed

Description Track Top-N entities for GTPv0-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-created

Description Track Top-N entities for GTPv0-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-deleted

Description Track Top-N entities for GTPv0-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv0-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-half-closed

Description Track Top-N entities for GTPv0-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-half-open

Description Track Top-N entities for GTPv0-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-update-pdp-resp-unsuccess

Description Track Top-N entities for GTPV0-C Update PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-create-pdp-resp-unsuccess

Description Track Top-N entities for GTPV1-C Create PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv1-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-closed

Description Track Top-N entities for GTPv1-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-created

Description Track Top-N entities for GTPv1-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-deleted

Description Track Top-N entities for GTPv1-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv1-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-half-closed

Description Track Top-N entities for GTPv1-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-half-open

Description Track Top-N entities for GTPv1-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-update-pdp-resp-unsuccess

Description Track Top-N entities for GTPV1-C Update PDP Context response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-create-sess-resp-unsuccess

Description Track Top-N entities for GTPV2-C Create Session Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv2-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-mod_bearer-resp-unsuccess

Description Track Top-N entities for GTPV2-C Modify Bearer Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-piggyback-message

Description Track Top-N entities for GTPv2-C Piggyback Messages seen

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-closed

Description Track Top-N entities for GTPv2-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-created

Description Track Top-N entities for GTPv2-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-deleted

Description Track Top-N entities for GTPv2-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv2-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-half-closed

Description Track Top-N entities for GTPv2-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-half-open

Description Track Top-N entities for GTPv2-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rl-message-monitor

Description Track Top-N entities for GTP Message forwarded via monitor mode at rate-limit policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-downlink-bytes

Description Track Top-N entities for Downlink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-downlink-pkts

Description Track Top-N entities for GTP-U Downlink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-uplink-bytes

Description Track Top-N entities for Uplink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-uplink-pkts

Description Track Top-N entities for Uplink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-bytes

Description Track Top-N entities for Uplink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-pkts

Description Track Top-N entities for Uplink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.150.480 visibility topn gtp-network-element-topn-node

Activate gtp-network-element-topn template for fw.gtp.network-element

Default: 0

drop-rl-gtp-u-downlink-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Downlink packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-max-concurrent-tunnels

Description Track Top-N entities for Rate-limit Drop: GTP-U Concurrent Tunnels

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-total-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Total byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-total-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Total packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-tunnel-create

Description Track Top-N entities for Rate-limit Drop: GTP-U Tunnel Creation rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-uplink-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Uplink byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-uplink-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Uplink packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v0-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv0-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv1-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-create-pdp-request

Description Track Top-N entities for Rate-limit Drop: GTPv1-C Create PDP Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-update-pdp-request

Description Track Top-N entities for Rate-limit Drop: GTPv1-C Update PDP Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv2-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-create-session-request

Description Track Top-N entities for Rate-limit Drop: GTPv2-C Create Session Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-modify-bearer-request

Description Track Top-N entities for Rate-limit Drop: GTPv2-C Modify Bearer Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-country-code-mismatch

Description Track Top-N entities for Validation Drop: Country Code Mismatch in IMSI and MSISDN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-cross-layer-correlation

Description Track Top-N entities for Validation Drop: Cross Layer IP Address Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-apn-len-drop

Description Track Top-N entities for Validation Drop: GTP-C Invalid APN Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-imsi-len-drop

Description Track Top-N entities for Validation Drop: GTP-C Invalid IMSI Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-u-spoofed-source-address

Description Track Top-N entities for Validation Drop: GTP-U IP Address Spoofed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-v2-wrong-lbi-create-bearer

Description Track Top-N entities for Validation Drop: GTPV2-C Wrong LBI in Create Bearer Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv0-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV0-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv1-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV1-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv2-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV2-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-flow-label-v0

Description Track Top-N entities for Validation Drop: Invalid Flow Label in GTPv0-C Header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-pkt-len-piggyback

Description Track Top-N entities for Validation Drop: Piggyback message invalid packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-teid

Description Track Top-N entities for Validation Drop: Invalid TEID Value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-mandatory-information-element

Description Track Top-N entities for Validation Drop: Mandatory IE Not Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-message-length

Description Track Top-N entities for Validation Drop: Message Length Exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-order-ie

Description Track Top-N entities for Validation Drop: GTPv1-C Message Out of Order IE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state

Description Track Top-N entities for Validation Drop: Out Of State GTP Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state-ie

Description Track Top-N entities for Validation Drop: Unexpected IE Present in Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-protocol-flag-unset

Description Track Top-N entities for Validation Drop: Protocol flag in Header Field not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-field-set

Description Track Top-N entities for Validation Drop: Reserved Header Field Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-information-element

Description Track Top-N entities for Validation Drop: Reserved IE Field Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sanity-failed-piggyback

Description Track Top-N entities for Validation Drop: piggyback message anomaly failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sequence-num-correlation

Description Track Top-N entities for Validation Drop: GTP-C Sequence number Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-tunnel-id-flag

Description Track Top-N entities for Validation Drop: Tunnel Header Flag Not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-unsupported-message-type

Description Track Top-N entities for Validation Drop: Message type not supported by GTP Version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-version-not-supported

Description Track Top-N entities for Validation Drop: Invalid GTP version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop_vld-gtp-bearer-count-exceed

Description Track Top-N entities for Validation Drop: GTP Bearer count exceeded max (11)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-c-handover-in-progress-with-conn

Description Track Top-N entities for GTP-C matching a conn with Handover In Progress

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-path-management-message

Description Track Top-N entities for GTP Path Management Messages Received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-u-tunnel-created

Description Track Top-N entities for GTP-U Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-u-tunnel-deleted

Description Track Top-N entities for GTP-U Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-create-pdp-resp-unsuccess

Description Track Top-N entities for GTPv0-C Create PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv0-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-reserved-message-allow

Description Track Top-N entities for GTPv0-C Reserved Message Allow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-closed

Description Track Top-N entities for GTPv0-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-created

Description Track Top-N entities for GTPv0-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-deleted

Description Track Top-N entities for GTPv0-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv0-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-half-closed

Description Track Top-N entities for GTPv0-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-half-open

Description Track Top-N entities for GTPv0-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-update-pdp-resp-unsuccess

Description Track Top-N entities for GTPv0-C Update PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-create-pdp-resp-unsuccess

Description Track Top-N entities for GTPv1-C Create PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv1-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-reserved-message-allow

Description Track Top-N entities for GTPv1-C Reserved Message Allow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-closed

Description Track Top-N entities for GTPv1-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-created

Description Track Top-N entities for GTPv1-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-deleted

Description Track Top-N entities for GTPv1-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv1-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-half-closed

Description Track Top-N entities for GTPv1-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-half-open

Description Track Top-N entities for GTPv1-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-update-pdp-resp-unsuccess

Description Track Top-N entities for GTPv1-C Update PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-create-sess-resp-unsuccess

Description Track Top-N entities for GTPv2-C Create Session Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv2-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-mod_bearer-resp-unsuccess

Description Track Top-N entities for GTPv2-C Modify Bearer Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-piggyback-message

Description Track Top-N entities for GTPv2-C Piggyback Messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-reserved-message-allow

Description Track Top-N entities for GTPv2-C Reserved Message Allow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-closed

Description Track Top-N entities for GTPv2-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-created

Description Track Top-N entities for GTPv2-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-deleted

Description Track Top-N entities for GTPv2-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv2-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-half-closed

Description Track Top-N entities for GTPv2-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-half-open

Description Track Top-N entities for GTPv2-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rl-message-monitor

Description Track Top-N entities for GTP Message forwarded via monitor mode at rate-limit policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-downlink-bytes

Description Track Top-N entities for Downlink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-downlink-pkts

Description Track Top-N entities for GTP-U Downlink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-uplink-bytes

Description Track Top-N entities for Uplink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-uplink-pkts

Description Track Top-N entities for Uplink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-bytes

Description Track Top-N entities for Uplink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-pkts

Description Track Top-N entities for Uplink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.150.482 visibility topn gtp-network-element-topn-tmpl metrics

Configure topn metrics for fw.gtp.network-element

metrics Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	metrics
Element URI	/axapi/v3/visibility/topn/gtp-network-element-topn-tmpl/{name}/metrics
Element Attributes	metrics_attributes
Partition Visibility	shared
Schema	`metrics schema`

Operations Allowed:

Create Object

POST

/axapi/v3/visibility/topn/gtp-network-element-topn-tmpl/{name}/metrics

metrics attributes

```
POST /axapi/v3/visibility/topn/gtp-network-element-topn-tmpl/a/metrics
Payload:
{
    "metrics": {
        "uplink-bytes": 1
    }
}
```

Get Object

GET

/axapi/v3/visibility/topn/gtp-network-element-topn-tmpl/{name}/metrics

metrics attributes

```
GET /axapi/v3/visibility/topn/gtp-network-element-topn-tmpl/a/metrics

metrics attributes

downlink-bytes

Description Track Top-N entities for Downlink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

downlink-pkts

Description Track Top-N entities for Downlink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-apn-filtering

Description Track Top-N entities for Filtering Drop: APN IMSI Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-gtp-in-gtp

Description Track Top-N entities for Filtering Drop: GTP in GTP Tunnel Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-message-filtering

Description Track Top-N entities for Filtering Drop: Message Type Not Permitted on Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-msisdn-filtering

Description Track Top-N entities for Filtering Drop: MSISDN Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-flt-rat-type-filtering

Description Track Top-N entities for Filtering Drop: RAT Type Filtering

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-downlink-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Downlink byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-downlink-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Downlink packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-max-concurrent-tunnels

Description Track Top-N entities for Rate-limit Drop: GTP-U Concurrent Tunnels

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-total-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Total byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-total-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Total packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-tunnel-create

Description Track Top-N entities for Rate-limit Drop: GTP-U Tunnel Creation rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-uplink-byte

Description Track Top-N entities for Rate-limit Drop: GTP-U Uplink byte rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-u-uplink-packet

Description Track Top-N entities for Rate-limit Drop: GTP-U Uplink packet rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v0-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv0-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv1-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-create-pdp-request

Description Track Top-N entities for Rate-limit Drop: GTPv1-C Create PDP Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v1-c-update-pdp-request

Description Track Top-N entities for Rate-limit Drop: GTPv1-C Update PDP Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-agg

Description Track Top-N entities for Rate-limit Drop: Maximum GTPv2-C messages rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-create-session-request

Description Track Top-N entities for Rate-limit Drop: GTPv2-C Create Session Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-rl-gtp-v2-c-modify-bearer-request

Description Track Top-N entities for Rate-limit Drop: GTPv2-C Modify Bearer Req rate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-country-code-mismatch

Description Track Top-N entities for Validation Drop: Country Code Mismatch in IMSI and MSISDN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-cross-layer-correlation

Description Track Top-N entities for Validation Drop: Cross Layer IP Address Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-apn-len-drop

Description Track Top-N entities for Validation Drop: GTP-C Invalid APN Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-invalid-imsi-len-drop

Description Track Top-N entities for Validation Drop: GTP-C Invalid IMSI Length Drop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-u-spoofed-source-address

Description Track Top-N entities for Validation Drop: GTP-U IP Address Spoofed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtp-v2-wrong-lbi-create-bearer

Description Track Top-N entities for Validation Drop: GTPV2-C Wrong LBI in Create Bearer Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv0-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV0-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv1-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV1-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-gtpv2-seqnum-buffer-full

Description Track Top-N entities for Validation Drop: GTPV2-C conn Sequence number Buffer Full

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-flow-label-v0

Description Track Top-N entities for Validation Drop: Invalid Flow Label in GTPv0-C Header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-pkt-len-piggyback

Description Track Top-N entities for Validation Drop: Piggyback message invalid packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-invalid-teid

Description Track Top-N entities for Validation Drop: Invalid TEID Value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-mandatory-information-element

Description Track Top-N entities for Validation Drop: Mandatory IE Not Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-message-length

Description Track Top-N entities for Validation Drop: Message Length Exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-order-ie

Description Track Top-N entities for Validation Drop: GTPv1-C Message Out of Order IE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state

Description Track Top-N entities for Validation Drop: Out Of State GTP Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-out-of-state-ie

Description Track Top-N entities for Validation Drop: Unexpected IE Present in Message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-protocol-flag-unset

Description Track Top-N entities for Validation Drop: Protocol flag in Header Field not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-field-set

Description Track Top-N entities for Validation Drop: Reserved Header Field Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-reserved-information-element

Description Track Top-N entities for Validation Drop: Reserved IE Field Present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sanity-failed-piggyback

Description Track Top-N entities for Validation Drop: piggyback message anomaly failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-sequence-num-correlation

Description Track Top-N entities for Validation Drop: GTP-C Sequence number Mismatch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-tunnel-id-flag

Description Track Top-N entities for Validation Drop: Tunnel Header Flag Not Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-unsupported-message-type

Description Track Top-N entities for Validation Drop: Message type not supported by GTP Version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-vld-version-not-supported

Description Track Top-N entities for Validation Drop: Invalid GTP version

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop_vld-gtp-bearer-count-exceed

Description Track Top-N entities for Validation Drop: GTP Bearer count exceeded max (11)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-c-handover-in-progress-with-conn

Description Track Top-N entities for GTP-C matching a conn with Handover In Progress

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-path-management-message

Description Track Top-N entities for GTP Path Management Messages Received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-u-tunnel-created

Description Track Top-N entities for GTP-U Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-u-tunnel-deleted

Description Track Top-N entities for GTP-U Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-create-pdp-resp-unsuccess

Description Track Top-N entities for GTPv0-C Create PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv0-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-reserved-message-allow

Description Track Top-N entities for GTPv0-C Reserved Message Allow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-closed

Description Track Top-N entities for GTPv0-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-created

Description Track Top-N entities for GTPv0-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-deleted

Description Track Top-N entities for GTPv0-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv0-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-half-closed

Description Track Top-N entities for GTPv0-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-tunnel-half-open

Description Track Top-N entities for GTPv0-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v0-c-update-pdp-resp-unsuccess

Description Track Top-N entities for GTPv0-C Update PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-create-pdp-resp-unsuccess

Description Track Top-N entities for GTPv1-C Create PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv1-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-reserved-message-allow

Description Track Top-N entities for GTPv1-C Reserved Message Allow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-closed

Description Track Top-N entities for GTPv1-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-created

Description Track Top-N entities for GTPv1-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-deleted

Description Track Top-N entities for GTPv1-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv1-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-half-closed

Description Track Top-N entities for GTPv1-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-tunnel-half-open

Description Track Top-N entities for GTPv1-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v1-c-update-pdp-resp-unsuccess

Description Track Top-N entities for GTPv1-C Update PDP Context Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-create-sess-resp-unsuccess

Description Track Top-N entities for GTPv2-C Create Session Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-half-open-tunnel-closed

Description Track Top-N entities for GTPv2-C Half open tunnel closed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-mod_bearer-resp-unsuccess

Description Track Top-N entities for GTPv2-C Modify Bearer Response Unsuccessful

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-piggyback-message

Description Track Top-N entities for GTPv2-C Piggyback Messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-reserved-message-allow

Description Track Top-N entities for GTPv2-C Reserved Message Allow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-closed

Description Track Top-N entities for GTPv2-C Tunnel Marked Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-created

Description Track Top-N entities for GTPv2-C Tunnel Created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-deleted

Description Track Top-N entities for GTPv2-C Tunnel Deleted

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-deleted-restart

Description Track Top-N entities for GTPv2-C Tunnel Deleted with Restart/failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-half-closed

Description Track Top-N entities for GTPv2-C Tunnel Delete Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-v2-c-tunnel-half-open

Description Track Top-N entities for GTPv2-C Half open tunnel created

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rl-message-monitor

Description Track Top-N entities for GTP Message forwarded via monitor mode at rate-limit policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-downlink-bytes

Description Track Top-N entities for Downlink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-downlink-pkts

Description Track Top-N entities for GTP-U Downlink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-uplink-bytes

Description Track Top-N entities for Uplink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

u-uplink-pkts

Description Track Top-N entities for Uplink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-bytes

Description Track Top-N entities for Uplink Bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uplink-pkts

Description Track Top-N entities for Uplink Packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Reference Object: */axapi/v3/vpn/ipsec/{name}*

ipsec-mgmt-default-policy-drop

Description Drop MGMT traffic that is not match ipsec tunnel, share partition only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipsec-sa

Description: ipsec-sa is a **JSON Block**. Please see below for *ipsec-sa*

Type: Object

Reference Object: */axapi/v3/vpn/ipsec-sa*

ipsec-sa-by-gw

Description: ipsec-sa-by-gw is a **JSON Block**. Please see below for *ipsec-sa-by-gw*

Type: Object

Reference Object: */axapi/v3/vpn/ipsec-sa-by-gw*

ipsec-sa-clients

Description: ipsec-sa-clients is a **JSON Block**. Please see below for *ipsec-sa-clients*

Type: Object

Reference Object: */axapi/v3/vpn/ipsec-sa-clients*

ipsec-sa-stats-list

Type: List

Reference Object: */axapi/v3/vpn/ipsec-sa-stats/{sampling-enable}*

jumbo-fragment

Description Support IKE jumbo fragment packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: jumbo-fragment and fragment-after-encap are mutually exclusive

log

Description: log is a **JSON Block**. Please see below for *log*

Type: Object

Reference Object: */axapi/v3/vpn/log*

nat-traversal-flow-affinity

Description Choose IPsec UDP source port based on port of inner flow (only for A10 to A10)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocsp

Description: ocsp is a **JSON Block**. Please see below for *ocsp*

Type: Object

Reference Object: */axapi/v3/vpn/ocsp*

revocation-list

Type: List

Reference Object: */axapi/v3/vpn/revocation/{name}*

sampling-enable

Type: List

signature-authentication

Description Enable use of different hash algorithms for signature authentication in IKEv2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-mode

Description VPN module will work in stateful mode and create sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-mss-adjust-disable

Description Disable TCP MSS adjustment in SYN packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipsec-sa-stats-list

Specification	Value
Type	*list*
Block object keys	

auth-method

Description 'preshare-key': Authenticate the remote gateway using a pre-shared key (Default); 'rsa-signature': Authenticate the remote gateway using an RSA certificate; 'ecdsa-signature': Authenticate the remote gateway using an ECDSA certificate; 'eap-radius': Authenticate the remote gateway using an EAP Radius server; 'eap-tls': Authenticate the remote gateway using EAP TLS;

Type: string

Supported Values: preshare-key, rsa-signature, ecdsa-signature, eap-radius, eap-tls

Default: preshare-key

configuration-payload

Description 'dhcp': Enable DHCP configuration-payload; 'radius': Enable RADIUS configuration-payload;

Type: string

Supported Values: dhcp, radius

dh-group

Description '1': Diffie-Hellman group 1 - 768-bit(Default); '2': Diffie-Hellman group 2 - 1024-bit; '5': Diffie-Hellman group 5 - 1536-bit; '14': Diffie-Hellman group 14 - 2048-bit; '15': Diffie-Hellman group 15 - 3072-bit; '16': Diffie-Hellman group 16 - 4096-bit; '18': Diffie-Hellman group 18 - 8192-bit; '19': Diffie-Hellman group 19 - 256-bit Elliptic Curve; '20': Diffie-Hellman group 20 - 384-bit Elliptic Curve;

Type: string

Supported Values: 1, 2, 5, 14, 15, 16, 18, 19, 20

Default: 1

dhcp-server

Description: dhcp-server is a **JSON Block**. Please see below for *ike-gateway-list_dhcp-server*

Type: Object

disable-rekey

Description Disable initiating rekey

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dpd

Description: dpd is a **JSON Block**. Please see below for *ike-gateway-list_dpd*

Type: Object

enc-cfg

Type: List

fragment-size

Description Enable IKE message fragment and set fragment size

Type: number

Range: 576-1280

hash

Description 'sha256': Secure Hash Algorithm 256; 'sha384': Secure Hash Algorithm 384; 'sha512': Secure Hash Algorithm 512;

Type: string

Supported Values: sha256, sha384, sha512

ike-version

Description 'v1': IKEv1 key exchange; 'v2': IKEv2 key exchange;

Type: string

Supported Values: v1, v2

Default: v2

interface-management

Description only handle traffic on management interface, share partition only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key

Description Private Key

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

key-passphrase

Description Private Key Pass Phrase

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

key-passphrase-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED key string)

lifetime

Description IKE SA age in seconds

Type: number

Range: 300-86400

Default: 86400

local-address

Description: local-address is a **JSON Block**. Please see below for *ike-gateway-list_local-address*

Type: Object

local-cert

Description: local-cert is a **JSON Block**. Please see below for *ike-gateway-list_local-cert*

Type: Object

local-id

Description Local Gateway Identity

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

mode

Description 'main': Negotiate Main mode (Default); 'aggressive': Negotiate Aggressive mode;

Type: string

Supported Values: main, aggressive

Default: main

name

Description IKE-gateway name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

nat-traversal

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preshare-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED pre-shared key string)

preshare-key-value

Description pre-shared key

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

radius-server

Description: radius-server is a **JSON Block**. Please see below for *ike-gateway-list_radius-server*

Type: Object

remote-address

Description: remote-address is a **JSON Block**. Please see below for *ike-gateway-list_remote-address*

Type: Object

remote-ca-cert

Description: remote-ca-cert is a **JSON Block**. Please see below for *ike-gateway-list_remote-ca-cert*

Type: Object

remote-id

Description Remote Gateway Identity

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description: vrid is a **JSON Block**. Please see below for *ike-gateway-list_vrid*

Type: Object

ike-gateway-list_local-cert

Specification	Value
Type	*object*

local-cert-name

Description Certificate File Name

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

ike-gateway-list_dhcp-server

Specification	Value
Type	*object*

pri

Description: pri is a **JSON Block**. Please see below for *ike-gateway-list_dhcp-server_pri*

Type: Object

sec

Description: sec is a **JSON Block**. Please see below for *ike-gateway-list_dhcp-server_sec*

Type: Object

ike-gateway-list_dhcp-server_sec

Specification	Value
Type	*object*

dhcp-sec-ipv4

Description Secondary DHCP Server IP Address

Type: string

Format: ipv4-address

ike-gateway-list_dhcp-server_pri

Specification	Value
Type	*object*

dhcp-pri-ipv4

Description Primary DHCP Server IP Address

Type: string

Format: ipv4-address

ike-gateway-list_enc-cfg

Specification	Value
Type	*list*
Block object keys	

encryption

Description 'des': Data Encryption Standard algorithm; '3des': Triple Data Encryption Standard algorithm; 'aes-128': Advanced Encryption Standard algorithm CBC Mode(key size: 128 bits); 'aes-192': Advanced Encryption Standard algorithm CBC Mode(key size: 192 bits); 'aes-256': Advanced Encryption Standard algorithm CBC Mode(key size: 256 bits); 'aes-gcm-128': Advanced Encryption Standard algorithm Galois/Counter Mode(key size: 128 bits, ICV size: 16 bytes), only for IKEv2; 'aes-gcm-192': Advanced Encryption Standard algorithm Galois/Counter Mode(key size: 192 bits, ICV size: 16 bytes), only for IKEv2; 'aes-gcm-256': Advanced Encryption Standard algorithm Galois/Counter Mode(key size: 256 bits, ICV size: 16 bytes), only for IKEv2; 'null': No encryption algorithm, only for IKEv2;

Type: string

Supported Values: des, 3des, aes-128, aes-192, aes-256, aes-gcm-128, aes-gcm-192, aes-gcm-256, null

gcm_priority

Description Prioritizes (1-10) security protocol, least value has highest priority

Type: number

Range: 1-10

Default: 5

hash

Description 'md5': MD5 Dessage-Digest Algorithm; 'sha1': Secure Hash Algorithm 1; 'sha256': Secure Hash Algorithm 256; 'sha384': Secure Hash Algorithm 384; 'sha512': Secure Hash Algorithm 512;

Type: string

Supported Values: md5, sha1, sha256, sha384, sha512

prf

Description 'md5': MD5 Dessage-Digest Algorithm; 'sha1': Secure Hash Algorithm 1; 'sha256': Secure Hash Algorithm 256; 'sha384': Secure Hash Algorithm 384; 'sha512': Secure Hash Algorithm 512;

Type: string

Supported Values: md5, sha1, sha256, sha384, sha512

priority

Description Prioritizes (1-10) security protocol, least value has highest priority

Type: number

Range: 1-10

Default: 5

ike-gateway-list_vrid

Specification	Value
Type	*object*

default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default and vrid-num are mutually exclusive

vrid-num

Description Specify ha VRRP-A vrid

Type: number

Range: 0-31

Mutual Exclusion: vrid-num and default are mutually exclusive

ike-gateway-list_radius-server

Specification	Value
Type	*object*

radius-pri

Description Primary RADIUS Authentication Server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/server/radius/instance*

radius-sec

Description Secondary RADIUS Authentication Server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/server/radius/instance*

ike-gateway-list_local-address

Specification	Value
Type	*object*

local-ip

Description Ipv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: local-ip and local-ipv6 are mutually exclusive

local-ipv6

Description Ipv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: local-ipv6 and local-ip are mutually exclusive

ike-gateway-list_remote-address

Specification	Value
Type	*object*

dns

Description Remote IP based on Domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: dns, remote-ip, and remote-ipv6 are mutually exclusive

remote-ip

Description Ipv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: remote-ip, dns, and remote-ipv6 are mutually exclusive

remote-ipv6

Description Ipv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: remote-ipv6, remote-ip, and dns are mutually exclusive

ike-gateway-list_remote-ca-cert

Specification	Value
Type	*object*

remote-cert-name

Description Remote CA certificate DN (C=, ST=, L=, O=, CN=) without emailAddress

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ike-gateway-list_sampling-enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'passthrough': some help string; 'ha-standby-drop': some help string;

Type: string

Supported Values: all, passthrough, ha-standby-drop

errordump

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

error

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

group-list

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipsec-list

Specification	Value
Type	*list*
Block object keys	

anti-replay-window

Description '0': Disable Anti-Replay Window Check; '32': Window size of 32; '64': Window size of 64; '128': Window size of 128; '256': Window size of 256; '512': Window size of 512; '1024': Window size of 1024; '2048': Window size of 2048; '3072': Window size of 3072; '4096': Window size of 4096; '8192': Window size of 8192;

Type: string

Supported Values: 0, 32, 64, 128, 256, 512, 1024, 2048, 3072, 4096, 8192

Default: 0

bind-tunnel

Description: bind-tunnel is a **JSON Block**. Please see below for *ipsec-list_bind-tunnel*

Type: Object

Reference Object: */axapi/v3/vpn/ipsec/{name}/bind-tunnel*

dh-group

Description '0': Diffie-Hellman group 0 (Default); '1': Diffie-Hellman group 1 - 768-bits; '2': Diffie-Hellman group 2 - 1024-bits; '5': Diffie-Hellman group 5 - 1536-bits; '14': Diffie-Hellman group 14 - 2048-bits; '15': Diffie-Hellman group 15 - 3072-bits; '16': Diffie-Hellman group 16 - 4096-bits; '18': Diffie-Hellman group 18 - 8192-bits; '19': Diffie-Hellman group 19 - 256-bit Elliptic Curve; '20': Diffie-Hellman group 20 - 384-bit Elliptic Curve;

Type: string

Supported Values: 0, 1, 2, 5, 14, 15, 16, 18, 19, 20

Default: 0

dscp

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

enc-cfg

Type: List

enforce-traffic-selector

Description Enforce Traffic Selector

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipsec-gateway

Description: ipsec-gateway is a **JSON Block**. Please see below for *ipsec-list_ipsec-gateway*

Type: Object

Reference Object: */axapi/v3/vpn/ipsec/{name}/ipsec-gateway*

lifebytes

Description IPsec SA age in megabytes (0 indicates unlimited bytes)

Type: number

Range: 0-8000000

Default: 0

lifetime

Description IPsec SA age in seconds

Type: number

Range: 300-28800

Default: 28800

mode

Description 'tunnel': Encapsulating the packet in IPsec tunnel mode (Default);

Type: string

Supported Values: tunnel

Default: tunnel

name

Description IPsec name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

proto

Description 'esp': Encapsulating security protocol (Default);

Type: string

Supported Values: esp

Default: esp

sampling-enable

Type: List

sequence-number-disable

Description Do not use incremental sequence number in the ESP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-selector

Description: traffic-selector is a **JSON Block**. Please see below for *ipsec-list_traffic-selector*

Type: Object

up

Description Initiates SA negotiation to bring the IPsec connection up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipsec-list_traffic-selector

Specification	Value
Type	*object*

ipv4

Description: ipv4 is a **JSON Block**. Please see below for *ipsec-list_traffic-selector_ipv4*

Type: Object

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipsec-list_traffic-selector_ipv6*

Type: Object

ipsec-list_traffic-selector_ipv4

Specification	Value
Type	*object*

local

Description Local Traffic Selector

Type: string

Format: ipv4-address

Mutual Exclusion: local and localv6 are mutually exclusive

local_netmask

Description IPv4 Address Network Mask

Type: string

Format: ipv4-netmask

local_port

Description Port Number

Type: number

Range: 0-65535

protocol

Description IP Protocol Number (0-255)

Type: number

Range: 0-255

remote-ip

Description IPv4 Address

Type: string

Format: ipv4-address

Mutual Exclusion: remote-ip and remote-ipv4-assigned are mutually exclusive

remote-ipv4-assigned

Description Remote IP address assigned

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: remote-ipv4-assigned and remote-ip are mutually exclusive

remote_netmask

Description IPv4 Address Network Mask

Type: string

Format: ipv4-netmask

remote_port

Description Port Number

Type: number

Range: 0-65535

ipsec-list_traffic-selector_ipv6

Specification	Value
Type	*object*

local_portv6

Description Port Number

Type: number

Range: 0-65535

localv6

Description Local Traffic Selector

Type: string

Format: ipv6-address-plen

Mutual Exclusion: localv6 and local are mutually exclusive

protocolv6

Description IP Protocol Number (0-255)

Type: number

Range: 0-255

remote-ipv6

Description IPv6 Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: remote-ipv6 and remote-ipv6-assigned are mutually exclusive

remote-ipv6-assigned

Description Remote IPv6 address assigned

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: remote-ipv6-assigned and remote-ipv6 are mutually exclusive

remote_portv6

Description Port Number

Type: number

Range: 0-65535

ipsec-list_bind-tunnel

Specification	Value
Type	*object*

next-hop

Description IPsec Next Hop IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: next-hop and next-hop-v6 are mutually exclusive

next-hop-v6

Description IPsec Next Hop IPv6 Address

Type: string

Format: ipv6-address

Mutual Exclusion: next-hop-v6 and next-hop are mutually exclusive

tunnel

Description Tunnel interface index

Type: number

Range: 1-128

Reference Object: */axapi/v3/interface/tunnel*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipsec-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets-encrypted': Encrypted Packets; 'packets-decrypted': Decrypted Packets; 'anti-replay-num': Anti-Replay Failure; 'rekey-num': Rekey Times; 'packets-err-inactive': Inactive Error; 'packets-err-encryption': Encryption Error; 'packets-err-pad-check': Pad Check Error; 'packets-err-pkt-sanity': Packets Sanity Error; 'packets-err-icv-check': ICV Check Error; 'packets-err-lifetime-lifebytes': Lifetime Lifebytes Error; 'bytes-encrypted': Encrypted Bytes; 'bytes-decrypted': Decrypted Bytes; 'prefrag-success': Pre-frag Success; 'prefrag-error': Pre-frag Error; 'cavium-bytes-encrypted': CAVIUM Encrypted Bytes; 'cavium-bytes-decrypted': CAVIUM Decrypted Bytes; 'cavium-packets-encrypted': CAVIUM Encrypted Packets; 'cavium-packets-decrypted': CAVIUM Decrypted Packets; 'qat-bytes-encrypted': QAT Encrypted Bytes; 'qat-bytes-decrypted': QAT Decrypted Bytes; 'qat-packets-encrypted': QAT Encrypted Packets; 'qat-packets-decrypted': QAT Decrypted Packets; 'tunnel-intf-down': Packet dropped: Tunnel Interface Down; 'pkt-fail-prep-to-send': Packet dropped: Failed in prepare to send; 'no-next-hop': Packet dropped: No next hop; 'invalid-tunnel-id': Packet dropped: Invalid tunnel ID; 'no-tunnel-found': Packet dropped: No tunnel found; 'pkt-fail-to-send': Packet dropped: Failed to send; 'frag-after-encap-frag-packets': Frag-after-encap Fragment Generated; 'frag-received': Fragment Received; 'sequence-num': Sequence Number; 'sequence-num-rollover': Sequence Number Rollover; 'packets-err-nh-check': Next Header Check Error;

Type: string

Supported Values: all, packets-encrypted, packets-decrypted, anti-replay-num, rekey-num, packets-err-inactive, packets-err-encryption, packets-err-pad-check, packets-err-pkt-sanity, packets-err-icv-check, packets-err-lifetime-lifebytes, bytes-encrypted, bytes-decrypted, prefrag-success, prefrag-error, cavium-bytes-encrypted, cavium-bytes-decrypted, cavium-packets-encrypted, cavium-packets-decrypted, qat-bytes-encrypted, qat-bytes-decrypted, qat-packets-encrypted, qat-packets-decrypted, tunnel-intf-down, pkt-fail-prep-to-send, no-next-hop, invalid-tunnel-id, no-tunnel-found, pkt-fail-to-send, frag-after-encap-frag-packets, frag-received, sequence-num, sequence-num-rollover, packets-err-nh-check

ipsec-list_ipsec-gateway

Specification	Value
Type	*object*

ike-gateway

Description Gateway to use for IPsec SA

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ike-gateway*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipsec-list_enc-cfg

Specification	Value
Type	*list*
Block object keys	

encryption

Description 'des': Data Encryption Standard algorithm; '3des': Triple Data Encryption Standard algorithm; 'aes-128': Advanced Encryption Standard algorithm CBC Mode(key size: 128 bits); 'aes-192': Advanced Encryption Standard algorithm CBC Mode(key size: 192 bits); 'aes-256': Advanced Encryption Standard algorithm CBC Mode(key size: 256 bits); 'aes-gcm-128': Advanced Encryption Standard algorithm Galois/Counter Mode(key size: 128 bits, ICV size: 16 bytes); 'aes-gcm-192': Advanced Encryption Standard algorithm Galois/Counter Mode(key size: 192 bits, ICV size: 16 bytes); 'aes-gcm-256': Advanced Encryption Standard algorithm Galois/Counter Mode(key size: 256 bits, ICV size: 16 bytes); 'null': No encryption algorithm;

Type: string

Supported Values: des, 3des, aes-128, aes-192, aes-256, aes-gcm-128, aes-gcm-192, aes-gcm-256, null

gcm_priority

Description Prioritizes (1-10) security protocol, least value has highest priority

Type: number

Range: 1-10

Default: 5

hash

Description 'md5': MD5 Dessage-Digest Algorithm; 'sha1': Secure Hash Algorithm 1; 'sha256': Secure Hash Algorithm 256; 'sha384': Secure Hash Algorithm 384; 'sha512': Secure Hash Algorithm 512; 'null': No hash algorithm;

Type: string

Supported Values: md5, sha1, sha256, sha384, sha512, null

priority

Description Prioritizes (1-10) security protocol, least value has highest priority

Type: number

Range: 1-10

Default: 5

Description

Type: string

2.151.7 vpn group-list

IPsec tunnel Groupings

group-list Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	group-list
Element URI	/axapi/v3/vpn/group-list
Element Attributes	group-list_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vpn/group-list/oper
Schema	`group-list schema`

Operations Allowed:

Create Object

POST

/axapi/v3/vpn/group-list

group-list attributes

Get Object

GET

/axapi/v3/vpn/group-list

group-list attributes

Modify Object

POST

/axapi/v3/vpn/group-list

```

ike-gateway-list

ike-gateway-list is **JSON List** of *ike-gateway attributes*

ike-gateway-list : [

{ *ike-gateway attributes* },

{ *ike-gateway attributes* },

...

]

ike-gateway attributes

auth-method

Description 'preshare-key': Authenticate the remote gateway using a pre-shared key (Default); 'rsa-signature': Authenticate the remote gateway using an RSA certificate; 'ecdsa-signature': Authenticate the remote gateway using an ECDSA certificate; 'eap-radius': Authenticate the remote gateway using an EAP Radius server; 'eap-tls': Authenticate the remote gateway using EAP TLS;

Type: string

Supported Values: preshare-key, rsa-signature, ecdsa-signature, eap-radius, eap-tls

Default: preshare-key

configuration-payload

Description 'dhcp': Enable DHCP configuration-payload; 'radius': Enable RADIUS configuration-payload;

Type: string

Supported Values: dhcp, radius

dh-group

Description '1': Diffie-Hellman group 1 - 768-bit(Default); '2': Diffie-Hellman group 2 - 1024-bit; '5': Diffie-Hellman group 5 - 1536-bit; '14': Diffie-Hellman group 14 - 2048-bit; '15': Diffie-Hellman group 15 - 3072-bit; '16': Diffie-Hellman group 16 - 4096-bit; '18': Diffie-Hellman group 18 - 8192-bit; '19': Diffie-Hellman group 19 - 256-bit Elliptic Curve; '20': Diffie-Hellman group 20 - 384-bit Elliptic Curve;

Type: string

Supported Values: 1, 2, 5, 14, 15, 16, 18, 19, 20

Default: 1

dhcp-server

Description: dhcp-server is a **JSON Block**. Please see below for *dhcp-server*

Type: Object

disable-rekey

Description Disable initiating rekey

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dpd

Description: dpd is a **JSON Block**. Please see below for *dpd*

Type: Object

enc-cfg

Type: List

fragment-size

Description Enable IKE message fragment and set fragment size

Type: number

Range: 576-1280

hash

Description 'sha256': Secure Hash Algorithm 256; 'sha384': Secure Hash Algorithm 384; 'sha512': Secure Hash Algorithm 512;

Type: string

Supported Values: sha256, sha384, sha512

ike-version

Description 'v1': IKEv1 key exchange; 'v2': IKEv2 key exchange;

Type: string

Supported Values: v1, v2

Default: v2

interface-management

Description only handle traffic on management interface, share partition only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key

Description Private Key

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

key-passphrase

Description Private Key Pass Phrase

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

key-passphrase-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED key string)

lifetime

Description IKE SA age in seconds

Type: number

Range: 300-86400

Default: 86400

local-address

Description: local-address is a **JSON Block**. Please see below for *local-address*

Type: Object

local-cert

Description: local-cert is a **JSON Block**. Please see below for *local-cert*

Type: Object

local-id

Description Local Gateway Identity

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

mode

Description 'main': Negotiate Main mode (Default); 'aggressive': Negotiate Aggressive mode;

Type: string

Supported Values: main, aggressive

Default: main

name

Description IKE-gateway name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

nat-traversal

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preshare-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED pre-shared key string)

preshare-key-value

Description pre-shared key

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

radius-server

Description: radius-server is a **JSON Block**. Please see below for *radius-server*

Type: Object

remote-address

Description: remote-address is a **JSON Block**. Please see below for *remote-address*

Type: Object

remote-ca-cert

Description: remote-ca-cert is a **JSON Block**. Please see below for *remote-ca-cert*

Type: Object

remote-id

Description Remote Gateway Identity

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description: vrid is a **JSON Block**. Please see below for *vrid*

Type: Object

local-cert

Specification	Value
Type	*object*

local-cert-name

Description Certificate File Name

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

dhcp-server

Specification	Value
Type	*object*

pri

Description: pri is a **JSON Block**. Please see below for *dhcp-server_pri*

Type: Object

sec

Description: sec is a **JSON Block**. Please see below for *dhcp-server_sec*

Type: Object

dhcp-server_sec

Specification	Value
Type	*object*

dhcp-sec-ipv4

Description Secondary DHCP Server IP Address

Type: string

Format: ipv4-address

dhcp-server_pri

Specification	Value
Type	*object*

dhcp-pri-ipv4

Description Primary DHCP Server IP Address

Type: string

Format: ipv4-address

enc-cfg

Specification	Value
Type	*list*
Block object keys	

encryption

Description 'des': Data Encryption Standard algorithm; '3des': Triple Data Encryption Standard algorithm; 'aes-128': Advanced Encryption Standard algorithm CBC Mode(key size: 128 bits); 'aes-192': Advanced Encryption Standard algorithm CBC Mode(key size: 192 bits); 'aes-256': Advanced Encryption Standard algorithm CBC Mode(key size: 256 bits); 'aes-gcm-128': Advanced Encryption Standard algorithm Galois/Counter Mode(key size: 128 bits, ICV size: 16 bytes), only for IKEv2; 'aes-gcm-192': Advanced Encryption Standard algorithm Galois/Counter Mode(key size: 192 bits, ICV size: 16 bytes), only for IKEv2; 'aes-gcm-256': Advanced Encryption Standard algorithm Galois/Counter Mode(key size: 256 bits, ICV size: 16 bytes), only for IKEv2; 'null': No encryption algorithm, only for IKEv2;

Type: string

Supported Values: des, 3des, aes-128, aes-192, aes-256, aes-gcm-128, aes-gcm-192, aes-gcm-256, null

gcm_priority

Description Prioritizes (1-10) security protocol, least value has highest priority

Type: number

Range: 1-10

Default: 5

hash

Description 'md5': MD5 Dessage-Digest Algorithm; 'sha1': Secure Hash Algorithm 1; 'sha256': Secure Hash Algorithm 256; 'sha384': Secure Hash Algorithm 384; 'sha512': Secure Hash Algorithm 512;

Type: string

Supported Values: md5, sha1, sha256, sha384, sha512

prf

Description 'md5': MD5 Dessage-Digest Algorithm; 'sha1': Secure Hash Algorithm 1; 'sha256': Secure Hash Algorithm 256; 'sha384': Secure Hash Algorithm 384; 'sha512': Secure Hash Algorithm 512;

Type: string

Supported Values: md5, sha1, sha256, sha384, sha512

priority

Description Prioritizes (1-10) security protocol, least value has highest priority

Type: number

Range: 1-10

Default: 5

vrid

Specification	Value
Type	*object*

default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default and vrid-num are mutually exclusive

vrid-num

Description Specify ha VRRP-A vrid

Type: number

Range: 0-31

Mutual Exclusion: vrid-num and default are mutually exclusive

radius-server

Specification	Value
Type	*object*

radius-pri

Description Primary RADIUS Authentication Server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/server/radius/instance*

radius-sec

Description Secondary RADIUS Authentication Server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/aam/authentication/server/radius/instance*

local-address

Specification	Value
Type	*object*

local-ip

Description Ipv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: local-ip and local-ipv6 are mutually exclusive

local-ipv6

Description Ipv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: local-ipv6 and local-ip are mutually exclusive

remote-address

Specification	Value
Type	*object*

dns

Description Remote IP based on Domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: dns, remote-ip, and remote-ipv6 are mutually exclusive

remote-ip

Description Ipv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: remote-ip, dns, and remote-ipv6 are mutually exclusive

remote-ipv6

Description Ipv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: remote-ipv6, remote-ip, and dns are mutually exclusive

remote-ca-cert

Specification	Value
Type	*object*

remote-cert-name

Description Remote CA certificate DN (C=, ST=, L=, O=, CN=) without emailAddress

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'v2-init-rekey': Initiate Rekey; 'v2-rsp-rekey': Respond Rekey; 'v2-child-sa-rekey': Child SA Rekey; 'v2-in-invalid': Incoming Invalid; 'v2-in-invalid-spi': Incoming Invalid SPI; 'v2-in-init-req': Incoming Init Request; 'v2-in-init-rsp': Incoming Init Response; 'v2-out-init-req': Outgoing Init Request; 'v2-out-init-rsp': Outgoing Init Response; 'v2-in-auth-req': Incoming Auth Request; 'v2-in-auth-rsp': Incoming Auth Response; 'v2-out-auth-req': Outgoing Auth Request; 'v2-out-auth-rsp': Outgoing Auth Response; 'v2-in-create-child-req': Incoming Create Child Request; 'v2-in-create-child-rsp': Incoming Create Child Response; 'v2-out-create-child-req': Outgoing Create Child Request; 'v2-out-create-child-rsp': Outgoing Create Child Response; 'v2-in-info-req': Incoming Info Request; 'v2-in-info-rsp': Incoming Info Response; 'v2-out-info-req': Outgoing Info Request; 'v2-out-info-rsp': Outgoing Info Response; 'v1-in-id-prot-req': Incoming ID Protection Request; 'v1-in-id-prot-rsp': Incoming ID Protection Response; 'v1-out-id-prot-req': Outgoing ID Protection Request; 'v1-out-id-prot-rsp': Outgoing ID Protection Response; 'v1-in-auth-only-req': Incoming Auth Only Request; 'v1-in-auth-only-rsp': Incoming Auth Only Response; 'v1-out-auth-only-req': Outgoing Auth Only Request; 'v1-out-auth-only-rsp': Outgoing Auth Only Response; 'v1-in-aggressive-req': Incoming Aggressive Request; 'v1-in-aggressive-rsp': Incoming Aggressive Response; 'v1-out-aggressive-req': Outgoing Aggressive Request; 'v1-out-aggressive-rsp':

Outgoing Aggressive Response; 'v1-in-info-v1-req': Incoming Info Request; 'v1-in-info-v1-rsp': Incoming Info Response; 'v1-out-info-v1-req': Outgoing Info Request; 'v1-out-info-v1-rsp': Outgoing Info Response; 'v1-in-transaction-req': Incoming Transaction Request; 'v1-in-transaction-rsp': Incoming Transaction Response; 'v1-out-transaction-req': Outgoing Transaction Request; 'v1-out-transaction-rsp': Outgoing Transaction Response; 'v1-in-quick-mode-req': Incoming Quick Mode Request; 'v1-in-quick-mode-rsp': Incoming Quick Mode Response; 'v1-out-quick-mode-req': Outgoing Quick Mode Request; 'v1-out-quick-mode-rsp': Outgoing Quick Mode Response; 'v1-in-new-group-mode-req': Incoming New Group Mode Request; 'v1-in-new-group-mode-rsp': Incoming New Group Mode Response; 'v1-out-new-group-mode-req': Outgoing New Group Mode Request; 'v1-out-new-group-mode-rsp': Outgoing New Group Mode Response; 'v1-child-sa-invalid-spi': Invalid SPI for Child SAs; 'v2-child-sa-invalid-spi': Invalid SPI for Child SAs; 'ike-current-version': IKE version;

Type: string

Supported Values: all, v2-init-rekey, v2-rsp-rekey, v2-child-sa-rekey, v2-in-invalid, v2-in-invalid-spi, v2-in-init-req, v2-in-init-rsp, v2-out-init-req, v2-out-init-rsp, v2-in-auth-req, v2-in-auth-rsp, v2-out-auth-req, v2-out-auth-rsp, v2-in-create-child-req, v2-in-create-child-rsp, v2-out-create-child-req, v2-out-create-child-rsp, v2-in-info-req, v2-in-info-rsp, v2-out-info-req, v2-out-info-rsp, v1-in-id-prot-req, v1-in-id-prot-rsp, v1-out-id-prot-req, v1-out-id-prot-rsp, v1-in-auth-only-req, v1-in-auth-only-rsp, v1-out-auth-only-req, v1-out-auth-only-rsp, v1-in-aggressive-req, v1-in-aggressive-rsp, v1-out-aggressive-req, v1-out-aggressive-rsp, v1-in-info-v1-req, v1-in-info-v1-rsp, v1-out-info-v1-req, v1-out-info-v1-rsp, v1-in-transaction-req, v1-in-transaction-rsp, v1-out-transaction-req, v1-out-transaction-rsp, v1-in-quick-mode-req, v1-in-quick-mode-rsp, v1-out-quick-mode-req, v1-out-quick-mode-rsp, v1-in-new-group-mode-req, v1-in-new-group-mode-rsp, v1-out-new-group-mode-req, v1-out-new-group-mode-rsp, v1-child-sa-invalid-spi, v2-child-sa-invalid-spi, ike-current-version

ipsec-list

ipsec-list is **JSON List** of *ipsec attributes*

ipsec-list : [

{ *ipsec attributes* },

{ *ipsec attributes* },

...

]

ipsec attributes

anti-replay-window

Description '0': Disable Anti-Replay Window Check; '32': Window size of 32; '64': Window size of 64; '128': Window size of 128; '256': Window size of 256; '512': Window size of 512; '1024': Window size of 1024; '2048': Window size of 2048; '3072': Window size of 3072; '4096': Window size of 4096; '8192': Window size of 8192;

Type: string

Supported Values: 0, 32, 64, 128, 256, 512, 1024, 2048, 3072, 4096, 8192

Default: 0

bind-tunnel

Description: bind-tunnel is a **JSON Block**. Please see below for *bind-tunnel*

Type: Object

Reference Object: */axapi/v3/vpn/ipsec/{name}/bind-tunnel*

dh-group

Description '0': Diffie-Hellman group 0 (Default); '1': Diffie-Hellman group 1 - 768-bits; '2': Diffie-Hellman group 2 - 1024-bits; '5': Diffie-Hellman group 5 - 1536-bits; '14': Diffie-Hellman group 14 - 2048-bits; '15': Diffie-Hellman group 15 - 3072-bits; '16': Diffie-Hellman group 16 - 4096-bits; '18': Diffie-Hellman group 18 - 8192-bits; '19': Diffie-Hellman group 19 - 256-bit Elliptic Curve; '20': Diffie-Hellman group 20 - 384-bit Elliptic Curve;

Type: string

Supported Values: 0, 1, 2, 5, 14, 15, 16, 18, 19, 20

Default: 0

dscp

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

enc-cfg

Type: List

enforce-traffic-selector

Description Enforce Traffic Selector

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipsec-gateway

Description: ipsec-gateway is a **JSON Block**. Please see below for *ipsec-gateway*

Type: Object

Reference Object: */axapi/v3/vpn/ipsec/{name}/ipsec-gateway*

lifebytes

Description IPsec SA age in megabytes (0 indicates unlimited bytes)

Type: number

Range: 0-8000000

Default: 0

lifetime

Description IPsec SA age in seconds

Type: number

Range: 300-28800

Default: 28800

mode

Description 'tunnel': Encapsulating the packet in IPsec tunnel mode (Default);

Type: string

Supported Values: tunnel

Default: tunnel

name

Description IPsec name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

proto

Description 'esp': Encapsulating security protocol (Default);

Type: string

Supported Values: esp

Default: esp

sampling-enable

Type: List

sequence-number-disable

Description Do not use incremental sequence number in the ESP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-selector

Description: traffic-selector is a **JSON Block**. Please see below for *traffic-selector*

Type: Object

up

Description Initiates SA negotiation to bring the IPsec connection up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traffic-selector

Specification	Value
Type	*object*

ipv4

Description: ipv4 is a **JSON Block**. Please see below for *traffic-selector_ipv4*

Type: Object

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *traffic-selector_ipv6*

Type: Object

traffic-selector_ipv4

Specification	Value
Type	*object*

local

Description Local Traffic Selector

Type: string

Format: ipv4-address

Mutual Exclusion: local and localv6 are mutually exclusive

local_netmask

Description IPv4 Address Network Mask

Type: string

Format: ipv4-netmask

local_port

Description Port Number

Type: number

Range: 0-65535

protocol

Description IP Protocol Number (0-255)

Type: number

Range: 0-255

remote-ip

Description IPv4 Address

Type: string

Format: ipv4-address

Mutual Exclusion: remote-ip and remote-ipv4-assigned are mutually exclusive

remote-ipv4-assigned

Description Remote IP address assigned

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: remote-ipv4-assigned and remote-ip are mutually exclusive

remote_netmask

Description IPv4 Address Network Mask

Type: string

Format: ipv4-netmask

remote_port

Description Port Number

Type: number

Range: 0-65535

traffic-selector_ipv6

Specification	Value
Type	*object*

local_portv6

Description Port Number

Type: number

Range: 0-65535

localv6

Description Local Traffic Selector

Type: string

Format: ipv6-address-plen

Mutual Exclusion: localv6 and local are mutually exclusive

protocolv6

Description IP Protocol Number (0-255)

Type: number

Range: 0-255

remote-ipv6

Description IPv6 Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: remote-ipv6 and remote-ipv6-assigned are mutually exclusive

remote-ipv6-assigned

Description Remote IPv6 address assigned

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: remote-ipv6-assigned and remote-ipv6 are mutually exclusive

remote_portv6

Description Port Number

Type: number

Range: 0-65535

bind-tunnel

Specification	Value
Type	*object*

next-hop

Description IPsec Next Hop IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: next-hop and next-hop-v6 are mutually exclusive

next-hop-v6

Description IPsec Next Hop IPv6 Address

Type: string

Format: ipv6-address

Mutual Exclusion: next-hop-v6 and next-hop are mutually exclusive

tunnel

Description Tunnel interface index

Type: number

Range: 1-128

Reference Object: */axapi/v3/interface/tunnel*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets-encrypted': Encrypted Packets; 'packets-decrypted': Decrypted Packets; 'anti-replay-num': Anti-Replay Failure; 'rekey-num': Rekey Times; 'packets-err-inactive': Inactive Error; 'packets-err-encryption': Encryption Error; 'packets-err-pad-check': Pad Check Error; 'packets-err-pkt-sanity': Packets Sanity Error; 'packets-err-icv-check': ICV Check Error; 'packets-err-lifetime-lifebytes': Lifetime Lifebytes Error; 'bytes-encrypted': Encrypted Bytes; 'bytes-decrypted': Decrypted Bytes; 'prefrag-success': Pre-frag Success; 'prefrag-error': Pre-frag Error; 'cavium-bytes-encrypted': CAVIUM Encrypted Bytes; 'cavium-bytes-decrypted': CAVIUM Decrypted Bytes; 'cavium-packets-encrypted': CAVIUM Encrypted Packets; 'cavium-packets-decrypted': CAVIUM Decrypted Packets; 'qat-bytes-encrypted': QAT Encrypted Bytes; 'qat-bytes-decrypted': QAT Decrypted Bytes; 'qat-packets-encrypted': QAT Encrypted Packets; 'qat-packets-decrypted': QAT Decrypted Packets; 'tunnel-intf-down': Packet dropped: Tunnel Interface Down; 'pkt-fail-prep-to-send': Packet dropped: Failed in prepare to send; 'no-next-hop': Packet dropped: No next hop; 'invalid-tunnel-id': Packet dropped: Invalid tunnel ID; 'no-tunnel-found': Packet dropped: No tunnel found; 'pkt-fail-to-send': Packet dropped: Failed to send; 'frag-after-encap-frag-packets': Frag-after-encap Fragment Generated; 'frag-received': Fragment Received; 'sequence-num': Sequence Number; 'sequence-num-rollover': Sequence Number Rollover; 'packets-err-nh-check': Next Header Check Error;

Type: string

Supported Values: all, packets-encrypted, packets-decrypted, anti-replay-num, rekey-num, packets-err-inactive, packets-err-encryption, packets-err-pad-check, packets-err-pkt-sanity, packets-err-icv-check, packets-err-lifetime-lifebytes, bytes-encrypted, bytes-decrypted, prefrag-success, prefrag-error, cavium-bytes-encrypted, cavium-bytes-decrypted, cavium-packets-encrypted, cavium-packets-decrypted, qat-bytes-encrypted, qat-bytes-decrypted, qat-packets-encrypted, qat-packets-decrypted, tunnel-intf-down, pkt-fail-prep-to-send, no-next-hop, invalid-tunnel-id, no-tunnel-found, pkt-fail-to-send, frag-after-encap-frag-packets, frag-received, sequence-num, sequence-num-rollover, packets-err-nh-check

ipsec-gateway

Specification	Value
Type	*object*

ike-gateway

Description Gateway to use for IPsec SA

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ike-gateway*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enc-cfg

Specification	Value
Type	*list*
Block object keys	

encryption

Description 'des': Data Encryption Standard algorithm; '3des': Triple Data Encryption Standard algorithm; 'aes-128': Advanced Encryption Standard algorithm CBC Mode(key size: 128 bits); 'aes-192': Advanced Encryption Standard algorithm CBC Mode(key size: 192 bits); 'aes-256': Advanced Encryption Standard algorithm CBC Mode(key size: 256 bits); 'aes-gcm-128': Advanced Encryption Standard algorithm Galois/Counter Mode(key size: 128 bits, ICV size: 16 bytes); 'aes-gcm-192': Advanced Encryption Standard algorithm Galois/Counter Mode(key size: 192 bits, ICV size: 16 bytes); 'aes-gcm-256': Advanced Encryption Standard algorithm Galois/Counter Mode(key size: 256 bits, ICV size: 16 bytes); 'null': No encryption algorithm;

Type: string

Supported Values: des, 3des, aes-128, aes-192, aes-256, aes-gcm-128, aes-gcm-192, aes-gcm-256, null

gcm_priority

Description Prioritizes (1-10) security protocol, least value has highest priority

Type: number

Range: 1-10

Default: 5

hash

Description 'md5': MD5 Dessage-Digest Algorithm; 'sha1': Secure Hash Algorithm 1; 'sha256': Secure Hash Algorithm 256; 'sha384': Secure Hash Algorithm 384; 'sha512': Secure Hash Algorithm 512; 'null': No hash algorithm;

Type: string

Supported Values: md5, sha1, sha256, sha384, sha512, null

priority

Description Prioritizes (1-10) security protocol, least value has highest priority

Type: number

Range: 1-10

Default: 5

2.151.20 vpn ipsec bind-tunnel

Binds tunnel interface to the IPsec connection

bind-tunnel Specification

Parameter	Value
Type	*Configuration Resource*
Element Name	bind-tunnel
Element URI	/axapi/v3/vpn/ipsec/{name}/bind-tunnel
Element Attributes	bind-tunnel_attributes
Partition Visibility	shared
Schema	`bind-tunnel schema`

Operations Allowed:

Create Object

POST

/axapi/v3/vpn/ipsec/{name}/bind-tunnel

bind-tunnel attributes

```
POST /axapi/v3/vpn/ipsec/a/bind-tunnel
Payload:
{

force-self-standby

Specification	Value
Type	*object*

action

Description 'enable': enable vrrp-a force-self-standby; 'disable': disable vrrp-a force-self-standby;

Type: string

Supported Values: enable, disable

all-partitions

Description force all partitions in standby state

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip-check

Description skip single device check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description Specify one VRRP-A vrid to force into standby state

Type: number

Range: 0-31

restart-port-list

Specification	Value
Type	*object*

ethernet-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid-list

Type: List

Reference Object: */axapi/v3/vrrp-a/restart-port-list/vrid/{vrid-val}*

restart-port-list_vrid-list

Specification	Value
Type	*list*
Block object keys	

ethernet-cfg

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid-val

Description Specify ha VRRP-A vrid

Type: number

Range: 0-31

Default: 0

restart-port-list_vrid-list_ethernet-cfg

Specification	Value
Type	*list*
Block object keys	

flap-ethernet-end

Description Ethernet Port

Type: number

Format: interface

flap-ethernet-start

Description Ethernet Port

Type: number

Format: interface

restart-port-list_ethernet-cfg

Specification	Value
Type	*list*
Block object keys	

flap-ethernet-end

Description Ethernet Port

Type: number

Format: interface

flap-ethernet-start

Description Ethernet Port

Type: number

Format: interface

force-self-standby-persistent-list

Specification	Value
Type	*list*
Block object keys	

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify one VRRP-A vrid to force into standby state

Type: number

Range: 0-31

l3-inline-mode-flag

Specification	Value
Type	*object*

l3-inline-mode

Description Enable Layer 3 Inline Hot Standby Mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

peer-group

Specification	Value
Type	*object*

peer

Description: peer is a **JSON Block**. Please see below for *peer-group_peer*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

peer-group_peer

ipv6-peer-address

Description IPV6 address

Type: string

Format: ipv6-address

detail

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fail-over-policy-template-list

Specification	Value
Type	*list*
Block object keys	

bgp

Description: bgp is a **JSON Block**. Please see below for *fail-over-policy-template-list_bgp*

Type: Object

gateway

Description: gateway is a **JSON Block**. Please see below for *fail-over-policy-template-list_gateway*

Type: Object

interface

Type: List

name

Description VRRP-A fail over policy template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

route

Description: route is a **JSON Block**. Please see below for *fail-over-policy-template-list_route*

Type: Object

trunk-cfg

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-cfg

Type: List

fail-over-policy-template-list_vlan-cfg

Specification	Value
Type	*list*
Block object keys	

timeout

Description

Type: number

Range: 2-600

vlan

Description VLAN tracking (VLAN id)

Type: number

Range: 1-4094

weight

Description The failover event weight

Type: number

Range: 1-255

fail-over-policy-template-list_route

Specification	Value
Type	*object*

ip-destination-cfg

Type: List

ipv6-destination-cfg

Type: List

fail-over-policy-template-list_route_ipv6-destination-cfg

Specification	Value
Type	*list*
Block object keys	

distance

Description Route's administrative distance (default: match any)

Type: number

Range: 1-255

gatewayv6

Description Match the route's gateway (next-hop) (default: match any)

Type: string

Format: ipv6-address

ipv6-destination

Description IPv6 Destination Prefix

Type: string

Format: ipv6-address-plen

protocol

Description 'any': Match any routing protocol (default); 'static': Match only static routes (added by user); 'dynamic': Match routes added by dynamic routing protocols (e.g. OSPF);

Type: string

Supported Values: any, static, dynamic

Default: any

weight

Description The amount the priority will decrease if the route is missing (The amount the priority will decrease if the route is not present)

Type: number

Range: 1-255

fail-over-policy-template-list_route_ip-destination-cfg

Specification	Value
Type	*list*
Block object keys	

distance

Description Route's administrative distance(default: match any)

Type: number

Range: 1-255

gateway

Description

Type: string

Format: ipv4-address

ip-destination

Description Destination prefix

Type: string

Format: ipv4-address

mask

Description Destination prefix mask

Type: string

Format: ipv4-netmask

protocol

Description 'any': Match any routing protocol (default); 'static': Match only static routes (added by user); 'dynamic': Match routes added by dynamic routing protocols (e.g. OSPF);

Type: string

Supported Values: any, static, dynamic

Default: any

weight

Description The amount the priority will decrease if the route is missing (The amount the priority will decrease if the route is not present)

Type: number

Range: 1-255

Type: Object

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid-val

Description Specify ha VRRP-A vrid

Type: number

Range: 0-31

Default: 0

vrid-list_pair-follow

Specification	Value
Type	*object*

pair-follow

Description Follow other VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid-lead

Description Define a VRRP-A VRID leader

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vrid-list_blade-parameters

Specification	Value
Type	*object*

fail-over-policy-template

Description Apply a fail over policy template (VRRP-A fail over policy template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vrrp-a/fail-over-policy-template*

priority

Description VRRP-A priorty (Priority, default is 150)

Type: number

Range: 1-255

Default: 150

tracking-options

Description: tracking-options is a **JSON Block**. Please see below for *vrid-list_blade-parameters_tracking-options*

Type: Object

Reference Object: */axapi/v3/vrrp-a/vrid/{vrid-val}/blade-parameters/tracking-options*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid-list_blade-parameters_tracking-options

Specification	Value
Type	*object*

bgp

Description: bgp is a **JSON Block**. Please see below for *vrid-list_blade-parameters_tracking-options_bgp*

Type: Object

gateway

Description: gateway is a **JSON Block**. Please see below for *vrid-list_blade-parameters_tracking-options_gateway*

Type: Object

Reference Object: */axapi/v3/vrrp-a/vrid/{vrid-val}/blade-parameters/tracking-options/gateway*

interface

Type: List

route

Description: route is a **JSON Block**. Please see below for *vrid-list_blade-parameters_tracking-options_route*

Type: Object

trunk-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-cfg

Type: List

vrid-list_blade-parameters_tracking-options_vlan-cfg

Specification	Value
Type	*list*
Block object keys	

priority-cost

Description The amount the priority will decrease

Type: number

Range: 1-255

timeout

Description

Type: number

Range: 2-600

vlan

Description VLAN tracking (VLAN id)

Type: number

Range: 1-4094

vrid-list_blade-parameters_tracking-options_route

Specification	Value
Type	*object*

ip-destination-cfg

Type: List

ipv6-destination-cfg

Type: List

vrid-list_blade-parameters_tracking-options_route_ipv6-destination-cfg

Specification	Value
Type	*list*
Block object keys	

distance

Description Route's administrative distance (default: match any)

Type: number

Range: 1-255

gatewayv6

Description Match the route's gateway (next-hop) (default: match any)

Type: string

Format: ipv6-address

ipv6-destination

Description IPv6 Destination Prefix

Type: string

Format: ipv6-address-plen

priority-cost

Description The amount the priority will decrease if the route is missing (The amount the priority will decrease if the route is not present)

Type: number

Range: 1-255

protocol

Description 'any': Match any routing protocol (default); 'static': Match only static routes (added by user); 'dynamic': Match routes added by dynamic routing protocols (e.g. OSPF);

Type: string

Supported Values: any, static, dynamic

Default: any

vrid-list_blade-parameters_tracking-options_route_ip-destination-cfg

Specification	Value
Type	*list*
Block object keys	

distance

Description Route's administrative distance (default: match any)

Type: number

Range: 1-255

gateway

Description Match the route's gateway (next-hop) (default: match any)

Type: string

Format: ipv4-address

ip-destination

Description Destination prefix

Type: string

Format: ipv4-address

mask

Description Destination prefix mask

Type: string

Format: ipv4-netmask

priority-cost

Description The amount the priority will decrease if the route is missing (The amount the priority will decrease if the route is not present)

Type: number

Range: 1-255

protocol

Description 'any': Match any routing protocol (default); 'static': Match only static routes (added by user); 'dynamic': Match routes added by dynamic routing protocols (e.g. OSPF);

Type: string

Supported Values: any, static, dynamic

Default: any

vrid-list_sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'associated_vip_count': Number of vips associated to vrid; 'associated_vport_count': Number of vports associated to vrid; 'associated_natpool_count': Number of nat pools associated to vrid;

Type: string

Supported Values: all, associated_vip_count, associated_vport_count, associated_natpool_count

vrid-list_preempt-mode

Specification	Value
Type	*object*

disable

Description disable preemption

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold

Description preemption threshold (preemption threshhold (0-255), default 0)

Type: number

Range: 0-255

Default: 0

vrid-list_follow

Specification	Value
Type	*object*

vrid-lead

Description Define a VRRP-A VRID leader

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vrid-lead-list

Specification	Value
Type	*list*
Block object keys	

partition

Description: partition is a **JSON Block**. Please see below for *vrid-lead-list_partition*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid-lead-str

Description VRRP-A VRID leader name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default-vrid-lead

vrid-lead-list_partition

Specification	Value
Type	*object*

name-cfg

Description: name-cfg is a **JSON Block**. Please see below for *vrid-lead-list_partition_name-cfg*

Type: Object

partition

Description Partition name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-cfg

Description: shared-cfg is a **JSON Block**. Please see below for *vrid-lead-list_partition_shared-cfg*

Type: Object

vrid-lead-list_partition_shared-cfg

Specification	Value
Type	*object*

shared

Description Shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared and name are mutually exclusive

vrid

Description VRRP-A id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid-value

Description Specify ha VRRP-A vrid

Type: number

Range: 0-31

vrid-lead-list_partition_name-cfg

Specification	Value
Type	*object*

name

Description Partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: name and shared are mutually exclusive

Reference Object: */axapi/v3/partition*

vrid

Description VRRP-A id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid-value

Description Specify ha VRRP-A vrid

Type: number

Range: 0-7

mac

Specification	Value
Type	*list*
Block object keys	

both

Description both a router and server interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: both, router-interface, and server-interface are mutually exclusive

no-heartbeat

Description do not send out heartbeat packet from this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: no-heartbeat and vlan are mutually exclusive

router-interface

Description interface to upstream router

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: router-interface, server-interface, and both are mutually exclusive

server-interface

Description interface to real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-interface, router-interface, and both are mutually exclusive

trunk-val

Description Ethernet Interface

Type: number

Range: 1-4096

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Mutual Exclusion: vlan and no-heartbeat are mutually exclusive

interface_ethernet-list

Specification	Value
Type	*list*
Block object keys	

both

Description both a router and server interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: both, router-interface, and server-interface are mutually exclusive

ethernet-val

Description Ethernet Interface

Type: number

Format: interface

no-heartbeat

Description do not send out heartbeat packet from this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: no-heartbeat and vlan are mutually exclusive

router-interface

Description interface to upstream router

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: router-interface, server-interface, and both are mutually exclusive

server-interface

Description interface to real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-interface, router-interface, and both are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-cfg

Type: List

interface_ethernet-list_vlan-cfg

Specification	Value
Type	*list*
Block object keys	

vlan

Description VLAN ID

Type: number

Range: 2-4094

Mutual Exclusion: vlan and no-heartbeat are mutually exclusive

session-sync

Specification	Value
Type	*object*

action

Description 'enable': enable vrrp-a session sync (default); 'disable': disable vrrp-a session sync;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

hostid

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-inline-list

Specification	Value
Type	*list*
Block object keys	

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description Do not filter OSPF packet on specific vlan (Vlan number)

Type: number

Range: 1-4094

common

Specification	Value
Type	*object*

action

Description ‘enable’: enable vrrp-a; ‘disable’: disable vrrp-a;

Type: string

Supported Values: enable, disable

Default: disable

arp-retry

Description Number of additional gratuitous ARPs sent out after HA failover (1-255, default is 4)

Type: number

Range: 1-255

Default: 4

dead-timer

Description VRRP-A dead timer in terms of how many hello messages missed, default is 5 (2-255, default is 5)

Type: number

Range: 2-255

Default: 5

device-id

Description Unique ID for each VRRP-A box (Device-id number)

Type: number

disable-default-vrid

Description Disable default vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-l4-packet-on-standby

Description Enables Layer 2/3 forwarding of Layer 4 traffic on the Standby ACOS device

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

get-ready-time

Description set get ready time after ax starting up (60-1200, in unit of 100millisec, default is 60)

Type: number

Range: 60-1200

Default: 60

hello-interval

Description VRRP-A Hello Interval (1-255, in unit of 100millisec, default is 2)

Type: number

Range: 1-255

Default: 2

hop-limit

Description VRRP-A packet IPv6 header hop-limit (hop-limit, default is 64)

Type: number

Range: 1-128

Default: 64

hostid-append-to-vrid

Description: hostid-append-to-vrid is a **JSON Block**. Please see below for *common_hostid-append-to-vrid*

Type: Object

inline-mode-cfg

Description: inline-mode-cfg is a **JSON Block**. Please see below for *common_inline-mode-cfg*

Type: Object

preemption-delay

Description Delay before changing state from Active to Standby (1-255, in unit of 100millisec, default is 60)

Type: number

Range: 1-255

Default: 60

restart-time

Description Time between restarting ports on standby system after transition

Type: number

Range: 1-100

Default: 20

set-id

Description Set-ID for HA configuration (Set id from 1 to 15)

Type: number

Range: 1-15

track-event-delay

Description Delay before changing state after up/down event (Units of 100 milliseconds (default 30))

Type: number

Range: 1-100

Default: 30

ttl

Description VRRP-A packet IPv4 header TTL (TTL, default is 128)

Type: number

Range: 1-128

Default: 128

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_hostid-append-to-vrid

Specification	Value
Type	*object*

hostid-append-to-vrid-default

Description hostid append to vrid default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: hostid-append-to-vrid-default and hostid-append-to-vrid-value are mutually exclusive

hostid-append-to-vrid-value

Description hostid append to vrid num

Type: number

Range: 1-31

Mutual Exclusion: hostid-append-to-vrid-value and hostid-append-to-vrid-default are mutually exclusive

common_inline-mode-cfg

Specification	Value
Type	*object*

inline-mode

Description Enable Layer 2 Inline Hot Standby Mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-port

Description Preferred ethernet Port

Type: number

Format: interface

Mutual Exclusion: preferred-port and preferred-trunk are mutually exclusive

preferred-trunk

Description Preferred trunk Port

Type: number

Range: 1-4096

Mutual Exclusion: preferred-trunk and preferred-port are mutually exclusive

state-cpu

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

l2-inline-peer-ip-list

Specification	Value
Type	*list*
Block object keys	

ip-address

Description IP address (IPv4 address)

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

partition-vrid-status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

preferred-session-sync-port

Specification	Value
Type	*object*

ethernet-list

Type: List

Reference Object: */axapi/v3/vrrp-a/preferred-session-sync-port/ethernet/{pre-eth}*

trunk-list

Type: List

Reference Object: */axapi/v3/vrrp-a/preferred-session-sync-port/trunk/{pre-trunk}*

preferred-session-sync-port_trunk-list

Specification	Value
Type	*list*
Block object keys	

pre-trunk

Description Trunk Interface number

Type: number

Range: 1-4096

pre-vlan

Description Interface VLAN (VLAN ID)

Type: number

Range: 2-4094

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

preferred-session-sync-port_ethernet-list

Specification	Value
Type	*list*
Block object keys	

pre-eth

Description Ethernet interface number

Type: number

Format: interface

pre-vlan

Description Interface VLAN (VLAN ID)

Type: number

Range: 2-4094

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

}
```

common attributes

action

Description 'enable': enable vrrp-a; 'disable': disable vrrp-a;

Type: string

Supported Values: enable, disable

Default: disable

arp-retry

Description Number of additional gratuitous ARPs sent out after HA failover (1-255, default is 4)

Type: number

Range: 1-255

Default: 4

dead-timer

Description VRRP-A dead timer in terms of how many hello messages missed, default is 5 (2-255, default is 5)

Type: number

Range: 2-255

Default: 5

device-id

Description Unique ID for each VRRP-A box (Device-id number)

Type: number

disable-default-vrid

Description Disable default vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-l4-packet-on-standby

Description Enables Layer 2/3 forwarding of Layer 4 traffic on the Standby ACOS device

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

get-ready-time

Description set get ready time after ax starting up (60-1200, in unit of 100millisec, default is 60)

Type: number

Range: 60-1200

Default: 60

hello-interval

Description VRRP-A Hello Interval (1-255, in unit of 100millisec, default is 2)

Type: number

Range: 1-255

Default: 2

hop-limit

Description VRRP-A packet IPv6 header hop-limit (hop-limit, default is 64)

Type: number

Range: 1-128

Default: 64

hostid-append-to-vrid

Description: hostid-append-to-vrid is a **JSON Block**. Please see below for *hostid-append-to-vrid*

Type: Object

inline-mode-cfg

Description: inline-mode-cfg is a **JSON Block**. Please see below for *inline-mode-cfg*

Type: Object

preemption-delay

Description Delay before changing state from Active to Standby (1-255, in unit of 100millisec, default is 60)

Type: number

Range: 1-255

Default: 60

restart-time

Description Time between restarting ports on standby system after transition

Type: number

Range: 1-100

Default: 20

set-id

Description Set-ID for HA configuration (Set id from 1 to 15)

Type: number

Range: 1-15

track-event-delay

Description Delay before changing state after up/down event (Units of 100 milliseconds (default 30))

Type: number

Range: 1-100

Default: 30

ttl

Description VRRP-A packet IPv4 header TTL (TTL, default is 128)

Type: number

Range: 1-128

Default: 128

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

hostid-append-to-vrid

Specification	Value
Type	*object*

hostid-append-to-vrid-default

Description hostid append to vrid default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: hostid-append-to-vrid-default and hostid-append-to-vrid-value are mutually exclusive

hostid-append-to-vrid-value

Description hostid append to vrid num

Type: number

Range: 1-31

Mutual Exclusion: hostid-append-to-vrid-value and hostid-append-to-vrid-default are mutually exclusive

inline-mode-cfg

Specification	Value
Type	*object*

inline-mode

Description Enable Layer 2 Inline Hot Standby Mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-port

Description Preferred ethernet Port

Type: number

Format: interface

Mutual Exclusion: preferred-port and preferred-trunk are mutually exclusive

preferred-trunk

Description Preferred trunk Port

Type: number

Range: 1-4096

Mutual Exclusion: preferred-trunk and preferred-port are mutually exclusive

Specification	Value
Type	*list*
Block object keys	

both

Description both a router and server interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: both, router-interface, and server-interface are mutually exclusive

no-heartbeat

Description do not send out heartbeat packet from this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: no-heartbeat and vlan are mutually exclusive

router-interface

Description interface to upstream router

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: router-interface, server-interface, and both are mutually exclusive

server-interface

Description interface to real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-interface, router-interface, and both are mutually exclusive

trunk-val

Description Ethernet Interface

Type: number

Range: 1-4096

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sync_persist_rx_vporttype_not_supported

Description Persist Conn Sync Virt Port Type Invalid

Type: number

Format: counter

sync_pkt_empty_buff_counter

Description Conn Sync drop sending packet for empty buffer

Type: number

Format: counter

sync_pkt_failed_buff_copy_counter

Description Conn Sync drop sending packet for failure in sending buffer copy

Type: number

Format: counter

sync_pkt_invalid_idx_counter

Description Conn Sync Invalid Interface

Type: number

Format: counter

sync_pkt_no_receiving_vgrp_counter

Description Conn Sync drop sending packet for invalid receiving virtual group

Type: number

Format: counter

sync_pkt_no_sending_vgrp_counter

Description Conn Sync drop sending packet for invalid sending virtual group

Type: number

Format: counter

sync_pkt_rcv_counter

Description Conn Sync Received counter

Type: number

Format: counter

sync_pkt_rcv_dc_msg_dir

Description Sync pkt recv with DCMSG dir

Type: number

Format: counter

sync_pkt_tx_counter

Description Conn Sync Sent counter

Type: number

Format: counter

sync_query_dcmsg_counter

Description Conn Sync query forward CPU

Type: number

Format: counter

sync_rx_aflex_create_counter

Description Conn Sync receive packet with aflex create

Type: number

Format: counter

sync_rx_aflex_del_counter

Description Conn Sync receive packet with aflex delete

Type: number

Format: counter

sync_rx_aflex_frag_counter

Description Conn Sync receive packet with aflex fragment

Type: number

Format: counter

sync_rx_aflex_table_entry_add_counter

Description Sync receive packet with aflex table entry add

Type: number

Format: counter

sync_rx_aflex_table_entry_append_counter

Description Sync receive packet with aflex table entry append

Type: number

Format: counter

sync_rx_aflex_table_entry_delete_counter

Description Sync receive packet with aflex table entry delete

Type: number

Format: counter

sync_rx_aflex_table_entry_fastsync_counter

Description Sync receive packet with aflex table entry fast sync

Type: number

Format: counter

sync_rx_aflex_table_entry_incr_counter

Description Sync receive packet with aflex table entry incr

Type: number

Format: counter

sync_rx_aflex_table_entry_lifetime_counter

Description Sync receive packet with aflex table entry lifetime

Type: number

Format: counter

sync_rx_aflex_table_entry_lookup_counter

Description Sync receive packet with aflex table entry lookup

Type: number

Format: counter

sync_rx_aflex_table_entry_replace_counter

Description Sync receive packet with aflex table entry replace

Type: number

Format: counter

sync_rx_aflex_table_entry_set_counter

Description Sync receive packet with aflex table entry set

Type: number

Format: counter

sync_rx_aflex_table_entry_timeout_counter

Description Sync receive packet with aflex table entry timeout

Type: number

Format: counter

sync_rx_aflex_update_counter

Description Conn Sync receive packet with aflex update

Type: number

Format: counter

sync_rx_apptype_not_supported

Description Conn Sync App Type Invalid

Type: number

Format: counter

sync_rx_bad_protocol_counter

Description Conn Sync receive packet with bad protocol

Type: number

Format: counter

sync_rx_by_inactive_peer_counter

Description Conn Sync receive packet by inactive peer

Type: number

Format: counter

sync_rx_cannot_process_mandatory

Description Conn Sync Process Mandatory Invalid

Type: number

Format: counter

sync_rx_conn_exists

Description Conn Sync Create Conn Exists

Type: number

Format: counter

sync_rx_conn_get_failed

Description Conn Sync Get Conn Failure

Type: number

Format: counter

sync_rx_create_counter

Description Conn Sync Create Session Received counter

Type: number

Format: counter

sync_rx_create_ext_bit_counter

Description Conn Sync Create with Ext Received counter

Type: number

Format: counter

sync_rx_create_static_sby

Description Conn Sync Create Static Standby

Type: number

Format: counter

sync_rx_dcmsg_counter

Description Conn Sync forward CPU

Type: number

Format: counter

sync_rx_dcmsg_counter_inter_pu

Description Conn Sync forward CPU with inter-pu comm

Type: number

Format: counter

sync_rx_ddos_drop_counter

Description Conn Sync receive ddos protect packet

Type: number

Format: counter

sync_rx_del_counter

Description Conn Sync Del Session Received counter

Type: number

Format: counter

sync_rx_del_no_such_session

Description Conn Sync Del Conn not Found

Type: number

Format: counter

sync_rx_drop_sync_packets

Description Conn Sync drop all packets

Type: number

Format: counter

sync_rx_estab_counter

Description Conn Sync rcv established state

Type: number

Format: counter

sync_rx_ext_bit_process_error

Description Conn Sync Proc Ext Bit Failure

Type: number

Format: counter

sync_rx_ext_dcfw_log

Description Conn Sync FIREWALL session logging information Failure

Type: number

Format: counter

sync_rx_ext_dcfw_rule_id

Description Conn Sync FIREWALL session rule ID information Failure

Type: number

Format: counter

sync_rx_ext_dcfw_rule_idle_timeout

Description Conn Sync FIREWALL session rule idle timeout information Failure

Type: number

Format: counter

sync_rx_ext_fw_apps

Description Conn Sync FIREWALL application information Failure

Type: number

Format: counter

sync_rx_ext_fw_gtp_echo_ext_info

Description FW GTP Echo Ext Info Received

Type: number

Format: counter

sync_rx_ext_fw_gtp_ext_info

Description FW GTP Ext Info Received

Type: number

Format: counter

sync_rx_ext_fw_gtp_info

Description FW GTP Info Received

Type: number

Format: counter

sync_rx_ext_fw_gtp_log_ext_info

Description FW GTP Ext Log Info Received

Type: number

Format: counter

sync_rx_ext_fw_gtp_log_info

Description FW GTP Log Info Received

Type: number

Format: counter

sync_rx_ext_fw_gtp_u_info

Description FW GTP U Info Received

Type: number

Format: counter

sync_rx_ext_fw_http_logging

Description FW HTTP Logging Sync Failures

Type: number

Format: counter

sync_rx_ext_fw_limit_entry

Description Sync FW Limit Entry Info Failure

Type: number

Format: counter

sync_rx_ext_fw_so_shadow_ext_info

Description FW Scaleout Shadow Ext Info Received

Type: number

Format: counter

sync_rx_ext_h323_alg

Description Conn Sync H323 TCP ALG Failure

Type: number

Format: counter

sync_rx_ext_lsn_ac_idle_timeout

Description Conn Sync LSN ACL Idle Timeout Failure

Type: number

Format: counter

sync_rx_ext_lsn_acl

Description Conn Sync LSN ACL Failure

Type: number

Format: counter

sync_rx_ext_nat_alg_tcp_info

Description Conn Sync NAT ALG TCP Information

Type: number

Format: counter

sync_rx_ext_nat_mac

Description Conn Sync NAT MAC Failure

Type: number

Format: counter

sync_rx_ext_pptp

Description Conn Sync Ext PPTP

Type: number

Format: counter

sync_rx_ext_rtsp

Description Conn Sync Ext RTSP

Type: number

Format: counter

sync_rx_ext_sip_alg

Description Conn Sync SIP TCP ALG Failure

Type: number

Format: counter

sync_rx_ftp_control

Description Conn Sync FTP Control Failure

Type: number

Format: counter

sync_rx_fw_set_dscp_counter

Description Conn Sync receive fw set dscp counter

Type: number

Format: counter

sync_rx_insert_tuple

Description Conn Sync Insert Tuple

Type: number

Format: counter

sync_rx_invalid_sync_packet_counter

Description Conn Sync receive invalid packet

Type: number

Format: counter

sync_rx_len_invalid

Description Conn Sync Length Invalid

Type: number

Format: counter

sync_rx_lsn_create_sby

Description Conn Sync LSN Create Standby

Type: number

Format: counter

sync_rx_lsn_fullcone

Description Conn Sync Update LSN Fullcone Received counter

Type: number

Format: counter

sync_rx_mon_entity

Description Acos monitoring Entities Sync Messages Received

Type: number

Format: counter

sync_rx_nat_alloc_sby

Description Conn Sync NAT Alloc Standby

Type: number

Format: counter

sync_rx_nat_create_sby

Description Conn Sync NAT Create Standby

Type: number

Format: counter

sync_rx_no_dst_for_vport_inline

Description Conn Sync 'dst' not found for vport inline

Type: number

Format: counter

sync_rx_no_such_nat_pool

Description Conn Sync NAT Pool Error

Type: number

Format: counter

sync_rx_no_such_rport

Description Conn Sync Real Port Not Found

Type: number

Format: counter

sync_rx_no_such_sg_node

Description Conn Sync no SG node found

Type: number

Format: counter

sync_rx_no_such_vport

Description Conn Sync Virt Port Not Found

Type: number

Format: counter

sync_rx_no_vgrp_counter

Description Conn Sync receive packet with no virtual group

Type: number

Format: counter

sync_rx_not_expect_sync_pkt

Description unexpected session sync packets

Type: number

Format: counter

sync_rx_out_of_order_pkt_counter

Description total number of out of order packets received

Type: number

Format: counter

sync_rx_persist_create_counter

Description Conn Sync Create Persist Session Pkts Received counter

Type: number

Format: counter

sync_rx_persist_del_counter

Description Conn Sync Delete Persist Session Pkts Received counter

Type: number

Format: counter

sync_rx_persist_update_age_counter

Description Conn Sync Update Persist Age Pkts Received counter

Type: number

Format: counter

sync_rx_proto_not_supported

Description Conn Sync Protocol Invalid

Type: number

Format: counter

sync_rx_reserve_ha

Description Conn Sync Reserve HA Conn

Type: number

Format: counter

sync_rx_seq_deltas

Description Conn Sync Seq Deltas Failure

Type: number

Format: counter

sync_rx_sfw

Description Conn Sync SFW

Type: number

Format: counter

sync_rx_smp_clear_counter

Description Sync Clear SMP Session Pkts Received counter

Type: number

Format: counter

sync_rx_smp_create_counter

Description Sync Create SMP Session Pkts Received counter

Type: number

Format: counter

sync_rx_smp_delete_counter

Description Sync Delete SMP Session Pkts Received counter

Type: number

Format: counter

sync_rx_smp_radius_table_counter

Description Conn Sync Update LSN RADIUS Received counter

Type: number

Format: counter

sync_rx_smp_update_counter

Description Sync Update SMP Session Pkts Received counter

Type: number

Format: counter

sync_rx_table_entry_create_counter

Description Conn Sync receive packet with table entry create

Type: number

Format: counter

sync_rx_table_entry_del_counter

Description Conn Sync receive packet with table entry delete

Type: number

Format: counter

sync_rx_table_entry_update_counter

Description Conn Sync receive packet with table entry update

Type: number

Format: counter

sync_rx_total_info_counter

Description Conn Sync Total Info Pkts Received counter

Type: number

Format: counter

sync_rx_type_invalid

Description Conn Sync Type Invalid

Type: number

Format: counter

sync_rx_unk_counter

Description Conn Sync Unknown Type

Type: number

Format: counter

sync_rx_unreached_pkt_counter

Description total number of unreached packets

Type: number

Format: counter

sync_rx_update_age_counter

Description Conn Sync Update Age Received counter

Type: number

Format: counter

sync_rx_update_sctp_conn_addr

Description Update SCTP Addresses Received

Type: number

Format: counter

sync_rx_update_seqnos_counter

Description Conn Sync Update Seq Num Received counter

Type: number

Format: counter

sync_rx_zero_info_counter

Description Conn Sync Packet Empty

Type: number

Format: counter

sync_rx_zone_failure_counter

Description Conn Sync Zone Failure

Type: number

Format: counter

sync_tx_aflex_table_entry_add_counter

Description Sync send packet with aflex table entry add

Type: number

Format: counter

sync_tx_aflex_table_entry_append_counter

Description Sync send packet with aflex table entry append

Type: number

Format: counter

sync_tx_aflex_table_entry_delete_counter

Description Sync send packet with aflex table entry delete

Type: number

Format: counter

sync_tx_aflex_table_entry_error_counter

Description Error on send packet with aflex table entry

Type: number

Format: counter

sync_tx_aflex_table_entry_fastsync_counter

Description Sync send packet with aflex table entry fast sync

Type: number

Format: counter

sync_tx_aflex_table_entry_incr_counter

Description Sync send packet with aflex table entry incr

Type: number

Format: counter

sync_tx_aflex_table_entry_lifetime_counter

Description Sync send packet with aflex table entry lifetime

Type: number

Format: counter

sync_tx_aflex_table_entry_lookup_counter

Description Sync send packet with aflex table entry lookup

Type: number

Format: counter

sync_tx_aflex_table_entry_not_eligible_counter

Description send of aflex table entry not eligible

Type: number

Format: counter

sync_tx_aflex_table_entry_replace_counter

Description Sync send packet with aflex table entry replace

Type: number

Format: counter

sync_tx_aflex_table_entry_set_counter

Description Sync send packet with aflex table entry set

Type: number

Format: counter

sync_tx_aflex_table_entry_timeout_counter

Description Sync send packet with aflex table entry timeout

Type: number

Format: counter

sync_tx_create_counter

Description Conn Sync Create Session Sent counter

Type: number

Format: counter

sync_tx_create_ext_bit_counter

Description Conn Sync Create with Ext Sent counter

Type: number

Format: counter

sync_tx_del_counter

Description Conn Sync Del Session Sent counter

Type: number

Format: counter

sync_tx_estab_counter

Description Conn Sync send established state

Type: number

Format: counter

sync_tx_fw_set_dscp_counter

Description Conn Sync send fw set dscp counter

Type: number

Format: counter

sync_tx_get_buff_failed

Description Conn Sync Get Buff Failure

Type: number

Format: counter

sync_tx_lsn_fullcone

Description Conn Sync Update LSN Fullcone Sent counter

Type: number

Format: counter

sync_tx_max_packed

Description Min Sync Msg Per Packet

Type: number

Format: counter

sync_tx_min_packed

Description Max Sync Msg Per Packet

Type: number

Format: counter

sync_tx_mon_entity

Description Acos Monitoring Entities Sync Messages Sent

Type: number

Format: counter

sync_tx_persist_create_counter

Description Conn Sync Create Persist Session Pkts Sent counter

Type: number

Format: counter

sync_tx_persist_del_counter

Description Conn Sync Delete Persist Session Pkts Sent counter

Type: number

Format: counter

sync_tx_persist_update_age_counter

Description Conn Sync Update Persist Age Pkts Sent counter

Type: number

Format: counter

sync_tx_smp_clear_counter

Description Sync Clear SMP Session Pkts Sent counter

Type: number

Format: counter

sync_tx_smp_create_counter

Description Sync Create SMP Session Pkts Sent counter

Type: number

Format: counter

sync_tx_smp_delete_counter

Description Sync Delete SMP Session Pkts Sent counter

Type: number

Format: counter

sync_tx_smp_radius_table_counter

Description Conn Sync Update LSN RADIUS Sent counter

Type: number

Format: counter

sync_tx_smp_update_counter

Description Sync Update SMP Session Pkts Sent counter

Type: number

Format: counter

sync_tx_total_info_counter

Description Conn Sync Total Info Pkts Sent counter

Type: number

Format: counter

sync_tx_update_age_counter

Description Conn Sync Update Age Sent counter

Type: number

Format: counter

sync_tx_update_misc_bearer

Description Conn Sync update misc bearer sent

Type: number

Format: counter

sync_tx_update_sctp_conn_addr

Description Update SCTP Addresses Sent

Type: number

Format: counter

sync_tx_update_seqnos_counter

Description Conn Sync Update Seq Num Sent counter

Type: number

Format: counter

2.152.28 vrrp-a te-mac oper

Operational Status for the object te-mac

Block object keys	

ethernet

Description Ethernet (for link-local address only)

Type: number

Format: interface

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

trunk

Description Trunk interface (for link-local address only)

Type: number

Range: 1-4096

Reference Object: */axapi/v3/interface/trunk*

ve

Description VE interface (for link-local address only)

Type: number

Range: 2-4094

Reference Object: */axapi/v3/network/vlan*

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'associated_vip_count': Number of vips associated to vrid; 'associated_vport_count': Number of vports associated to vrid; 'associated_natpool_count': Number of nat pools associated to vrid;

Type: string

Supported Values: all, associated_vip_count, associated_vport_count, associated_natpool_count

preempt-mode

Specification	Value
Type	*object*

disable

Description disable preemption

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold

Description preemption threshold (preemption threshhold (0-255), default 0)

Type: number

Range: 0-255

Default: 0

follow

Specification	Value
Type	*object*

vrid-lead

Description Define a VRRP-A VRID leader

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

2.152.30 vrrp-a vrid blade-parameters

blade parameters of VRRP-A vrid

blade-parameters Specification

cloud-query-cache-size

Description Maximum cache size for storing cloud query results

Type: number

cloud-query-disable

Description Disables cloud queries for URL's not present in local database(default enable)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

database-server

Description BrightCloud Database Server

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

db-update-time

Description Time of day to update database (default: 00:00)

Type: string

Format: time-hhmm

enable

Description Enable BrightCloud SDK

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

intercepted-urls

Description: intercepted-urls is a **JSON Block**. Please see below for *intercepted-urls*

Type: Object

Reference Object: */axapi/v3/web-category/intercepted-urls*

license

Description: license is a **JSON Block**. Please see below for *license*

Type: Object

Reference Object: */axapi/v3/web-category/license*

online-check-disable

Description Disables online queries for license. By default it is enabled.

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description BrightCloud Query Server Listening Port(default 80)

Type: number

Range: 1-65535

Default: 80

proxy-server

Description: proxy-server is a **JSON Block**. Please see below for *proxy-server*

Type: Object

Reference Object: */axapi/v3/web-category/proxy-server*

remote-syslog-enable

Description Enable data plane logging to a remote syslog server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reputation-scope-list

Type: List

Reference Object: */axapi/v3/web-category/reputation-scope/{name}*

rtu-cache-size

Description Maximum cache size for storing RTU updates

Type: number

rtu-update-disable

Description Disables real time updates(default enable)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rtu-update-interval

Description Interval to check for real time updates if enabled in mins(default 60)

Type: number

Range: 10-14400

Default: 60

server

Description BrightCloud Query Server

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

server-timeout

Description BrightCloud Servers Timeout in seconds (default: 15s)

Type: number

Range: 1-30

Default: 15

ssl-port

Description BrightCloud Servers SSL Port(default 443)

Type: number

Range: 1-65535

Default: 443

statistics

Description: statistics is a **JSON Block**. Please see below for *statistics*

Maximum Length: 1 characters

intercepted-urls

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

proxy-server

Specification	Value
Type	*object*

auth-type

Description 'ntlm': NTLM authentication(default); 'basic': Basic authentication;

Type: string

Supported Values: ntlm, basic

Default: ntlm

domain

Description Realm for NTLM authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

http-port

Description Proxy server HTTP port

Type: number

Range: 1-65535

https-port

Description Proxy server HTTPS port(HTTP port will be used if not configured)

Type: number

Range: 1-65535

password

Description Password for proxy authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-host

Description Proxy server hostname or IP address

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

secret-string

Description password value

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Username for proxy authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Type	*object*

less-low-risk

Description Reputation score is less than or equal to 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: less-low-risk,less-trustworthy, less-moderate-risk, less-suspicious, less-malicious, and less-threshold are mutually exclusive

less-malicious

Description Reputation score is less than or equal to 20

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: less-malicious,less-trustworthy, less-low-risk, less-moderate-risk, less-suspicious, and less-threshold are mutually exclusive

less-moderate-risk

Description Reputation score is less than or equal to 60

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: less-moderate-risk,less-trustworthy, less-low-risk, less-suspicious, less-malicious, and less-threshold are mutually exclusive

less-suspicious

Description Reputation score is less than or equal to 40

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: less-suspicious,less-trustworthy, less-low-risk, less-moderate-risk, less-malicious, and less-threshold are mutually exclusive

less-threshold

Description Reputation score is less than or equal to a customized value (1-100)

Type: number

Range: 1-100

Mutual Exclusion: less-threshold,less-trustworthy, less-low-risk, less-moderate-risk, less-suspicious, and less-malicious are mutually exclusive

less-trustworthy

Description Reputation score is less than or equal to 100

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: less-trustworthy,less-low-risk, less-moderate-risk, less-suspicious, less-malicious, and less-threshold are mutually exclusive

web-service attributes

auto-redirt-disable

Description Diable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

axapi-idle

Description Idle timeout of a xml service connection in minutes (Connection idle timeout value in minutes, default 10, 0 means never timeout)

Type: number

Range: 0-60

Default: 10

axapi-session-limit

Description Set the max allowed aXAPI sessions (Session limit (default 30))

Type: number

Range: 1-100

Default: 30

axapi-token-sharing

Description Enable axapi token sharing within multiple hosts

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gui-idle

Description Idle timeout of a connection in minutes (Connection idle timeout value in minutes, default 10, 0 means never timeout)

Type: number

Range: 0-60

Default: 10

gui-session-limit

Description Set the max allowed GUI sessions (Session limit (default 30))

Type: number

Range: 1-100

Default: 30

keep-alive-timeout

Description Set KeepAliveTimeout in seconds (KeepAliveTimeout in seconds (default 30))

Type: number

Range: 1-65535

Default: 30

login-message

Description Set GUI login message

Type: string

Format: string-rlx

Maximum Length: 1985 characters

Maximum Length: 1 characters

max-keep-alive-requests

Description Set MaxKeepAliveRequests (MaxKeepAliveRequests (default 100))

Type: number

Range: 0-65535

Default: 100

mpm-max-conn

Description Set Max Connections of MPM

Type: number

Range: 1-20000

mpm-max-conn-per-child

Description Set Max Connections Per Child of MPM

Type: number

Range: 0-20000

mpm-min-spare-conn

Description Set Min Spare Connections of MPM

Type: number

Range: 1-20000

port

Description Set Web Server Port (Port number(default 80))

Type: number

Range: 1-65535

Default: 80

pre-login-message

Description Set Pre GUI login message

Type: string

Format: string-rlx

Maximum Length: 1985 characters

Maximum Length: 1 characters

public-apis

Type: List

secure

Description: secure is a **JSON Block**. Please see below for *secure*

Type: Object

Reference Object: */axapi/v3/web-service/secure*

secure-port

Description Set web secure server port number for listening (Secure Port Number(default 443))

Type: number

Range: 1-65535

Default: 443

secure-server-disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

secure

Specification	Value
Type	*object*

certificate

Description: certificate is a **JSON Block**. Please see below for *secure_certificate*

Type: Object

Reference Object: */axapi/v3/web-service/secure/certificate*

generate

Description: generate is a **JSON Block**. Please see below for *secure_generate*

Type: Object

private-key

Description: private-key is a **JSON Block**. Please see below for *secure_private-key*

Type: Object

Reference Object: */axapi/v3/web-service/secure/private-key*

regenerate

Description: regenerate is a **JSON Block**. Please see below for *secure_regenerate*

Type: Object

Reference Object: */axapi/v3/web-service/secure/regenerate*

restart

Description Restart WEB service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wipe

Description Wipe WEB private-key and certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secure_certificate

Specification	Value
Type	*object*

file-url

Description File URL

Type: string

Format: url

load

Description Load WEB certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secure_regenerate

Specification	Value
Type	*object*

country

Description The country name

Type: string

Maximum Length: 2 characters

Maximum Length: 2 characters

domain-name

Description The domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

state

Description The location

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Element Attributes	aws-accesskey_attributes
Partition Visibility	shared
Schema	`aws-accesskey schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/admin/{user}/aws-accesskey

aws-accesskey attributes

aws-accesskey attributes

delete

Description Delete an authorized aws accesskey

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-url

Description File URL

Type: string

Format: url

import

Description Import an aws-accesskey

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show

Description Show authorized aws accesskey

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.4.2 admin azure-cred

Config Azure credentials

azure-cred Specification

Parameter	Value
Type	*operational*
Element Name	azure-cred
Element URI	/axapi/v3/admin/{user}/azure-cred
Element Attributes	azure-cred_attributes
Partition Visibility	shared
Schema	`azure-cred schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/admin/{user}/azure-cred

azure-cred attributes

azure-cred attributes

delete

Description Delete an authorized Azure credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-url

Description File URL

Type: string

Format: url

import

Description Import an azure-credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show

Description Show authorized azure credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.4.3 admin cloud-cred

Config Cloud Credentials

cloud-cred Specification

Parameter	Value
Type	*operational*

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/admin/{user}/cloud-cred

cloud-cred attributes

cloud-cred attributes

delete

Description Delete an authorized cloud credentials and cloud configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-url

Description File URL

Type: string

Format: url

import

Description Import an Cloud-Cred and Cloud-Config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show

Description Show authorized cloud credentials and cloud configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

type

Description 'aws-cred': aws-cred; 'aws-config': aws-config; 'azure-cred': azure-cred; 'vmware-cred': vmware-cred;

Type: string

Supported Values: aws-cred, aws-config, azure-cred, vmware-cred

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.4.4 admin gcp-cred

Config GCP credentials

gcp-cred Specification

Parameter	Value
Type	*operational*
Element Name	gcp-cred
Element URI	/axapi/v3/admin/{user}/gcp-cred
Element Attributes	gcp-cred_attributes
Partition Visibility	shared
Schema	`gcp-cred schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/admin/{user}/gcp-cred

gcp-cred attributes

gcp-cred attributes

delete

Description Delete an authorized GCP credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-url

Description File URL

Type: string

Format: url

import

Description Import an GCP-credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show

Description Show authorized GCP credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.4.5 admin ssh-pubkey

Config openssh authorized public keys management

ssh-pubkey Specification

Parameter	Value
Type	*operational*
Element Name	ssh-pubkey
Element URI	/axapi/v3/admin/{user}/ssh-pubkey
Element Attributes	ssh-pubkey_attributes
Partition Visibility	shared
Schema	`ssh-pubkey schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/admin/{user}/ssh-pubkey

ssh-pubkey attributes

ssh-pubkey attributes

delete

Description Delete an authorized public key (SSH key index)

Type: number

Range: 1-1000000

file-url

Description File URL

Type: string

Format: url

import

Description Import an authorized public key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

list

Description List all authorized public keys

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.5 admin-detail

Objects:

3.6 admin-session

Objects:

3.7 automatic-update

Objects:

3.7.1 automatic-update check-now

Manually check for update now

check-now Specification

Parameter	Value
Type	*operational*
Element Name	check-now
Element URI	/axapi/v3/automatic-update/check-now
Element Attributes	check-now_attributes
Partition Visibility	shared
Schema	`check-now schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/automatic-update/check-now

check-now attributes

check-now attributes

feature-name

Description 'app-fw': Application Firewall; 'ca-bundle': CA Certificate Bundle; 'a10-threat-intel': A10 Threat intel class list; 'central-cert-pin-list': Central updated cert pinning list;

Type: string

Supported Values: app-fw, ca-bundle, a10-threat-intel, central-cert-pin-list

from-staging-server

Description Get files from GLM Staging storage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prod-ver

Description update to this specific version, if this option is not configured, update to the latest version

Type: string

Maximum Length: 70 characters

Maximum Length: 1 characters

stage-ver

Description update this specific version

Type: string

Maximum Length: 70 characters

Maximum Length: 1 characters

3.7.2 automatic-update checknow

Manually check for update from axapi

checknow Specification

Parameter	Value
Type	*operational*
Element Name	checknow
Element URI	/axapi/v3/automatic-update/checknow
Element Attributes	checknow_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/automatic-update/checknow/stats
Operational Data URI	/axapi/v3/automatic-update/checknow/oper
Schema	`checknow schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/automatic-update/checknow

checknow attributes

checknow attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.7.3 automatic-update info

automatic-update information opers

info Specification

Parameter	Value
Type	*operational*
Element Name	info
Element URI	/axapi/v3/automatic-update/info
Element Attributes	info_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/automatic-update/info/stats
Operational Data URI	/axapi/v3/automatic-update/info/oper
Schema	`info schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/automatic-update/info

info attributes

info attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.7.4 automatic-update reset

Manually reset to default software version

reset Specification

Parameter	Value
Type	*operational*
Element Name	reset
Element URI	/axapi/v3/automatic-update/reset
Element Attributes	reset_attributes
Partition Visibility	shared
Schema	`reset schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/automatic-update/reset

reset attributes

reset attributes

feature-name

Description 'app-fw': Application Firewall; 'ca-bundle': CA Certificate Bundle;

Type: string

Supported Values: app-fw, ca-bundle

3.7.5 automatic-update revert

Manually revert to previous software version

revert Specification

Parameter	Value
Type	*operational*
Element Name	revert
Element URI	/axapi/v3/automatic-update/revert
Element Attributes	revert_attributes
Partition Visibility	shared
Schema	`revert schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/automatic-update/revert

revert attributes

revert attributes

feature-name

Description 'app-fw': Application Firewall; 'a10-threat-intel': A10 Threat intel class list; 'central-cert-pin-list': Central updated cert pinning list;

Type: string

Supported Values: app-fw, a10-threat-intel, central-cert-pin-list

3.8 axdebug

Objects:

3.8.1 axdebug apply-config

Apply AXDebug config file

apply-config Specification

Parameter	Value
Type	*operational*
Element Name	apply-config
Element URI	/axapi/v3/axdebug/apply-config
Element Attributes	apply-config_attributes
Partition Visibility	shared
Schema	`apply-config schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/axdebug/apply-config

apply-config attributes

apply-config attributes

config-file

Description config file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

3.8.2 axdebug capture

Dump packets

capture Specification

Parameter	Value
Type	*operational*
Element Name	capture
Element URI	/axapi/v3/axdebug/capture
Element Attributes	capture_attributes
Partition Visibility	shared
Schema	`capture schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/axdebug/capture

capture attributes

capture attributes

brief

Description Print basic packet information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

current-slot

Description Only for current-slot of chassis

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Include packet payload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-stop

Description Non-stop execution

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

save

Description Save packets into file (Specify filename to save packets)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

3.8.3 axdebug delete

delete axdebug file

delete Specification

Parameter	Value
Type	*operational*
Element Name	delete
Element URI	/axapi/v3/axdebug/delete
Element Attributes	delete_attributes
Partition Visibility	shared
Schema	`delete schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/axdebug/delete

delete attributes

delete attributes

capture-file

Description Delete a capture file (Specify target filename to change)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

config-file

Description Delete AXDebug config file (Specify target filename to change)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

3.8.4 axdebug exit

exit from axdebug and stop capture

exit Specification

Parameter	Value
Type	*operational*
Element Name	exit
Element URI	/axapi/v3/axdebug/exit
Element Attributes	exit_attributes
Partition Visibility	shared
Schema	`exit schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/axdebug/exit

exit attributes

exit attributes

stop-capture

Description stop capture traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.8.5 axdebug save-config

save AXDebug config file

save-config Specification

Parameter	Value
Type	*operational*
Element Name	save-config
Element URI	/axapi/v3/axdebug/save-config
Element Attributes	save-config_attributes
Partition Visibility	shared
Schema	`save-config schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/axdebug/save-config

save-config attributes

save-config attributes

config-file

Description config file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

default

Description save to default config file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.9 backup

Objects:

3.9.1 backup log

Backup log files

log Specification

Parameter	Value
Type	*operational*
Element Name	log
Element URI	/axapi/v3/backup/log
Element Attributes	log_attributes
Partition Visibility	shared
Schema	`log schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/backup/log

log attributes

log attributes

all

Description all log

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

core

Description Backup core files only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

date

Description specify number of days

Type: number

Range: 1-31

day

Description Most recent day

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

expedite

Description Expedite the Backup

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

messages

Description Backup messages file only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

month

Description Most recent month

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

period

Description Specify backup period

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remote-file

Description profile name for remote url

Type: string

Format: url

showtech

Description Backup showtech files only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data

Description Backup web statistical data

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

store-name

Description Save backup store information

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

week

Description Most recent week

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.9.2 backup status

Get backup system or backup log status

status Specification

Parameter	Value
Type	*operational*
Element Name	status
Element URI	/axapi/v3/backup/status
Element Attributes	status_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/backup/status/oper
Schema	`status schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/backup/status

status attributes

status attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.9.3 backup store

Save backup store information

store Specification

Parameter	Value
Type	*operational*
Element Name	store
Element URI	/axapi/v3/backup/store
Element Attributes	store_attributes
Partition Visibility	shared
Schema	`store schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/backup/store

store attributes

store attributes

creat-cfg

Description: creat-cfg is a **JSON Block**. Please see below for *creat-cfg*

Type: Object

delete-cfg

Description: delete-cfg is a **JSON Block**. Please see below for *delete-cfg*

Type: Object

delete-cfg

Specification	Value
Type	*object*

delete

Description Delete store

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

store-name-del

Description profile name for deleting

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

creat-cfg

Specification	Value
Type	*object*

create

Description Create store

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remote-file

Description profile name for remote url

Type: string

Format: url

store-name

Description profile name to store remote url

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

3.9.4 backup system

Backup system files

system Specification

Parameter	Value
Type	*operational*
Element Name	system
Element URI	/axapi/v3/backup/system
Element Attributes	system_attributes
Partition Visibility	shared
Schema	`system schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/backup/system

system attributes

system attributes

encrypt

Description Encrypt the backup file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

remote-file

Description profile name for remote url

Type: string

Format: url

store-name

Description Save backup store information

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.10 boot-block-fix

Objects:

3.10.1 boot-block-fix

Fix booting problem

boot-block-fix Specification

Parameter	Value
Type	*operational*
Element Name	boot-block-fix
Element URI	/axapi/v3/boot-block-fix
Element Attributes	boot-block-fix_attributes
Partition Visibility	shared
Schema	`boot-block-fix schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/boot-block-fix

boot-block-fix attributes

boot-block-fix attributes

cf

Description Compact flash

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hd

Description Hard disk

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.11 bootimage

Objects:

3.12 capture-config-oper

Objects:

3.13 cgnv6

Objects:

3.13.1 cgnv6 fixed-nat disable

Disable fixed-nat configuration (Operation)

disable Specification

Parameter	Value
Type	*operational*
Element Name	disable
Element URI	/axapi/v3/cgnv6/fixed-nat/disable
Element Attributes	disable_attributes
Partition Visibility	shared
Schema	`disable schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/cgnv6/fixed-nat/disable

disable attributes

disable attributes

clear-session

Description Clear all sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inside-end-v4address

Description IPv4 Inside User End Address

Type: string

Format: ipv4-address

inside-end-v6address

Description IPv6 Inside User End Address

Type: string

Format: ipv6-address

inside-start-v4address

Description IPv4 Inside User Start Address

Type: string

Format: ipv4-address

inside-start-v6address

Description IPv6 Inside User Start Address

Type: string

Format: ipv6-address

ip-list

Description Name of IP List used to specify Inside Users

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

v4-netmask

Description IPv4 Netmask

Type: string

Format: ipv4-netmask-brief

v6-netmask

Description Inside User IPv6 Netmask

Type: number

Range: 64-128

3.13.2 cgnv6 lw-4o6 binding-table

Configure LW-4over6 Binding Table

binding-table Specification

Parameter	Value
Type	*operational*
Object Key(s)	*name*
Element Name	binding-table
Element URI	/axapi/v3/cgnv6/lw-4o6/binding-table/{name}
Element Attributes	binding-table_attributes
Partition Visibility	shared
Schema	`binding-table schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/cgnv6/lw-4o6/binding-table/{name}

binding-table attributes

binding-table-list

binding-table-list is **JSON List** of *binding-table attributes*

binding-table-list : [

{ *binding-table attributes* },

{ *binding-table attributes* },

...

]

binding-table attributes

name

Description LW-4over6 Binding Table Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tunnel-address-list

Type: List

Reference Object: */axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

tunnel-address-list

Specification	Value
Type	*list*
Block object keys	

ipv6-tunnel-addr

Description Tunnel IPv6 Endpoint Address

Type: string

Format: ipv6-address

nat-address-list

Type: List

Reference Object: */axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}/nat-address/{ipv4-nat-addr}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

tunnel-address-list_nat-address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-nat-addr

Description NAT IPv4 Address

Type: string

Format: ipv4-address

port-range-list

Type: List

Reference Object: */axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}/nat-address/{ipv4-nat-addr}/port-range/{port-start}+{port-end}+{tunnel-endpoint-address}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

tunnel-address-list_nat-address-list_port-range-list

Specification	Value
Type	*list*
Block object keys	

port-end

Description Port Range End

Type: number

Range: 1-65535

port-start

Description Single Port or Port Range Start

Type: number

Range: 1-65535

tunnel-endpoint-address

Description Configure LW-4over6 IPIP Tunnel Endpoint Address (LW-4over6 Tunnel Endpoint Address)

Type: string

Format: ipv6-address

3.13.3 cgnv6 lw-4o6 binding-table tunnel-address

Tunnel IPv6 Endpoint Address

tunnel-address Specification

Parameter	Value
Type	*operational*
Object Key(s)	*ipv6-tunnel-addr*
Element Name	tunnel-address
Element URI	/axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}
Element Attributes	tunnel-address_attributes
Partition Visibility	shared
Schema	`tunnel-address schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}

tunnel-address attributes

tunnel-address-list

tunnel-address-list is **JSON List** of *tunnel-address attributes*

tunnel-address-list : [

{ *tunnel-address attributes* },

{ *tunnel-address attributes* },

...

]

tunnel-address attributes

ipv6-tunnel-addr

Description Tunnel IPv6 Endpoint Address

Type: string

Format: ipv6-address

nat-address-list

Type: List

Reference Object: */axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}/nat-address/{ipv4-nat-addr}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

nat-address-list

Specification	Value
Type	*list*
Block object keys	

ipv4-nat-addr

Description NAT IPv4 Address

Type: string

Format: ipv4-address

port-range-list

Type: List

Reference Object: */axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}/nat-address/{ipv4-nat-addr}/port-range/{port-start}+{port-end}+{tunnel-endpoint-address}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

nat-address-list_port-range-list

Specification	Value
Type	*list*
Block object keys	

port-end

Description Port Range End

Type: number

Range: 1-65535

port-start

Description Single Port or Port Range Start

Type: number

Range: 1-65535

tunnel-endpoint-address

Description Configure LW-4over6 IPIP Tunnel Endpoint Address (LW-4over6 Tunnel Endpoint Address)

Type: string

Format: ipv6-address

3.13.4 cgnv6 lw-4o6 binding-table tunnel-address nat-address

NAT IPv4 address

nat-address Specification

Parameter	Value
Type	*operational*
Object Key(s)	*ipv4-nat-addr*
Element Name	nat-address
Element URI	/axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}/nat-address/{ipv4-nat-addr}
Element Attributes	nat-address_attributes
Partition Visibility	shared
Schema	`nat-address schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}/nat-address/{ipv4-nat-addr}

nat-address attributes

nat-address-list

nat-address-list is **JSON List** of *nat-address attributes*

```
nat-address-list : [
        { nat-address attributes },
        { nat-address attributes },
        ...
    ]
```

nat-address attributes

ipv4-nat-addr

Description NAT IPv4 Address

Type: string

Format: ipv4-address

port-range-list

Type: List

Reference Object: */axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}/nat-address/{ipv4-nat-addr}/port-range/{port-start}+{port-end}+{tunnel-endpoint-address}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

port-range-list

Specification	Value
Type	*list*
Block object keys	

port-end

Description Port Range End

Type: number

Range: 1-65535

port-start

Description Single Port or Port Range Start

Type: number

Range: 1-65535

tunnel-endpoint-address

Description Configure LW-4over6 IPIP Tunnel Endpoint Address (LW-4over6 Tunnel Endpoint Address)

Type: string

Format: ipv6-address

3.13.5 cgnv6 lw-4o6 binding-table tunnel-address nat-address port-range

Single Port or Port Range Start

port-range Specification

Parameter	Value
Type	*operational*
Object Key(s)	*port-start, port-end, tunnel-endpoint-address*
Element Name	port-range
Element URI	/axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}/nat-address/{ipv4-nat-addr}/port-range/{port-start}+{port-end}+{tunnel-endpoint-address}
Element Attributes	port-range_attributes
Partition Visibility	shared
Schema	`port-range schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}/nat-address/{ipv4-nat-addr}/port-range/{port-start}+{port-end}+{tunnel-endpoint-address}

port-range attributes

port-range-list

port-range-list is **JSON List** of *port-range attributes*

port-range-list : [

{ *port-range attributes* },

{ *port-range attributes* },

...

]

port-range attributes

port-end

Description Port Range End

Type: number

Range: 1-65535

port-start

Description Single Port or Port Range Start

Type: number

Range: 1-65535

tunnel-endpoint-address

Description Configure LW-4over6 IPIP Tunnel Endpoint Address (LW-4over6 Tunnel Endpoint Address)

Type: string

Format: ipv6-address

3.13.6 cgnv6 lw-4o6 binding-table-validate

Check for errors in LW-4over6 Binding Table

binding-table-validate Specification

Parameter	Value
Type	*operational*
Element Name	binding-table-validate
Element URI	/axapi/v3/cgnv6/lw-4o6/binding-table-validate
Element Attributes	binding-table-validate_attributes
Partition Visibility	shared
Schema	`binding-table-validate schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/cgnv6/lw-4o6/binding-table-validate

binding-table-validate attributes

binding-table-validate attributes

binding-name

Description LW-4over6 Binding Table Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

3.13.7 cgnv6 scaleout address-mapping inside-user-or-nat-ip

inside-user-or-nat-ip Specification

Parameter	Value
Type	*operational*
Element Name	inside-user-or-nat-ip
Element URI	/axapi/v3/cgnv6/scaleout/address-mapping/inside-user-or-nat-ip
Element Attributes	inside-user-or-nat-ip_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/cgnv6/scaleout/address-mapping/inside-user-or-nat-ip/oper
Schema	`inside-user-or-nat-ip schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/cgnv6/scaleout/address-mapping/inside-user-or-nat-ip

inside-user-or-nat-ip attributes

inside-user-or-nat-ip attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.13.8 cgnv6 scaleout address-mapping nat-pool-or-fixed-nat

nat-pool-or-fixed-nat Specification

Parameter	Value
Type	*operational*
Element Name	nat-pool-or-fixed-nat
Element URI	/axapi/v3/cgnv6/scaleout/address-mapping/nat-pool-or-fixed-nat
Element Attributes	nat-pool-or-fixed-nat_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/cgnv6/scaleout/address-mapping/nat-pool-or-fixed-nat/oper
Schema	`nat-pool-or-fixed-nat schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/cgnv6/scaleout/address-mapping/nat-pool-or-fixed-nat

nat-pool-or-fixed-nat attributes

nat-pool-or-fixed-nat attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.14 chassis-info

Objects:

3.14.1 chassis-info

Info regarding the chassis state

chassis-info Specification

Parameter	Value
Type	*operational*
Element Name	chassis-info
Element URI	/axapi/v3/chassis-info
Element Attributes	chassis-info_attributes
Partition Visibility	shared
Schema	`chassis-info schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/chassis-info

chassis-info attributes

chassis-info attributes

brief

Description Give brief Chassis State Info

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.15 chassis-infra

Objects:

3.15.1 chassis-infra

Chassis infrastructure commands

chassis-infra Specification

Parameter	Value
Type	*operational*
Element Name	chassis-infra
Element URI	/axapi/v3/chassis-infra
Element Attributes	chassis-infra_attributes
Partition Visibility	shared
Schema	`chassis-infra schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/chassis-infra

chassis-infra attributes

chassis-infra attributes

debug-disable

Description Disable chassis infrastruture debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

debug-enable

Description Enable chassis infrastruture debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

debug-status

Description Show chassis infrastruture debugging status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detailed

Description Give Chassis filesystem info(USED BY TAC ONLY)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sys-sync

Description Synchronize the Master and Blade filesystems (For A10 TAC Use Only)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-sync-verify

Description Validate chassis filesytem synchronization status (For A10 TAC Use Only)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.16 clock

Objects:

3.16.1 clock set

Set the Time and Date

set Specification

Parameter	Value
Type	*operational*
Element Name	set
Element URI	/axapi/v3/clock/set
Element Attributes	set_attributes
Partition Visibility	shared
Schema	`set schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/clock/set

set attributes

set attributes

time-cfg

Description: time-cfg is a **JSON Block**. Please see below for *time-cfg*

Type: Object

time-cfg

Specification	Value
Type	*object*

day-of-month

Description Day of the Month

Type: number

Range: 1-31

day-of-month-2

Description Day of the Month

Type: number

Range: 1-31

month

Description 'January': Month of the year; 'February': Month of the year; 'March': Month of the year; 'April': Month of the year; 'May': Month of the year; 'June': Month of the year; 'July': Month of the year; 'August': Month of the year; 'September': Month of the year; 'October': Month of the year; 'November': Month of the year; 'December': Month of the year;

Type: string

Supported Values: January, February, March, April, May, June, July, August, September, October, November, December

month-2

Description 'January': Month of the year; 'February': Month of the year; 'March': Month of the year; 'April': Month of the year; 'May': Month of the year; 'June': Month of the year; 'July': Month of the year; 'August': Month of the year; 'September': Month of the year; 'October': Month of the year; 'November': Month of the year; 'December': Month of the year;

Type: string

Supported Values: January, February, March, April, May, June, July, August, September, October, November, December

time

Description Current Time

Type: string

Format: time

year

Description Year

Type: number

Range: 2005-2035

3.16.2 clock show

Configure time-of-day Clock

show Specification

Parameter	Value
Type	*operational*
Element Name	show
Element URI	/axapi/v3/clock/show
Element Attributes	show_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/clock/show/oper
Schema	`show schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/clock/show

show attributes

show attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.17 cmcov

Objects:

3.17.1 cmcov

CM code coverage

cmcov Specification

Parameter	Value
Type	*operational*
Element Name	cmcov
Element URI	/axapi/v3/cmcov
Element Attributes	cmcov_attributes
Partition Visibility	shared
Schema	`cmcov schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/cmcov

cmcov attributes

cmcov attributes

dump

Description Dump code coverage data and and generate report}

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

export

Description Export code coverage report

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.18 config-filter

Objects:

3.18.1 config-filter

Filter for config-replace-{start/end}

config-filter Specification

Parameter	Value
Type	*operational*
Element Name	config-filter
Element URI	/axapi/v3/config-filter
Element Attributes	config-filter_attributes
Partition Visibility	shared
Schema	`config-filter schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/config-filter

config-filter attributes

config-filter attributes

action

Description 'skip': Skip current lineage during replace; 'accept': Skip other lineages during replace;

Type: string

Supported Values: skip, accept

lineage

Description lineage to filter

Type: string

Format: string-rlx

Maximum Length: 256 characters

Maximum Length: 1 characters

3.19 config-replace

Objects:

3.19.1 config-replace

Options for config-replace-{start/end}

config-replace Specification

Parameter	Value
Type	*operational*
Element Name	config-replace
Element URI	/axapi/v3/config-replace
Element Attributes	config-replace_attributes
Partition Visibility	shared
Schema	`config-replace schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/config-replace

config-replace attributes

config-replace attributes

action

Description 'skip': Skip object and its children; 'accept': Skip siblings of object and its parents;

Type: string

Supported Values: skip, accept

filter

Description Set scope of objects by specifying object class

Type: string

Format: string-rlx

Maximum Length: 256 characters

Maximum Length: 1 characters

gslb-syncing-off

Description Turn off syncing changes to GSLB Group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-error

Description Ignore errors and continue to apply changes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-error

Description Log errors

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.20 config-sync-status

Objects:

3.21 configure

Objects:

3.21.1 configure

Configure sync Commands

configure Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	configure
Element URI	/axapi/v3/configure
Element Attributes	configure_attributes
Partition Visibility	shared
Schema	`configure schema`

Operations Allowed:

Get Object

GET

/axapi/v3/configure

configure_attributes

configure attributes

sync

Description: sync is a **JSON Block**. Please see below for *sync*

Type: Object

Reference Object: */axapi/v3/configure/sync*

sync

Specification	Value
Type	*object*

address

Description Specify the destination ip address to sync

Type: string

Format: ipv4-address

all-partitions

Description All partition configurations

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-authentication

Description Authenticate with local username and password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

partition-name

Description Partition name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

private-key

Description Use private key for authentication

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

pwd

Description

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

pwd-enc

Description

shared

Description Shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the timeout (in second)

Type: number

Range: 60-1800

type

Description 'running': Sync local running to peer's running configuration; 'all': Sync local running to peer's running configuration, and local startup to peer's startup configuration;

Type: string

Supported Values: running, all

usr

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

3.21.2 configure sync

Sync operation

sync Specification

Parameter	Value
Type	*operational*
Element Name	sync
Element URI	/axapi/v3/configure/sync
Element Attributes	sync_attributes
Partition Visibility	shared
Schema	`sync schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/configure/sync

sync attributes

sync attributes

address

Description Specify the destination ip address to sync

Type: string

Format: ipv4-address

all-partitions

Description All partition configurations

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-authentication

Description Authenticate with local username and password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

partition-name

Description Partition name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

private-key

Description Use private key for authentication

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

pwd

Description

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

pwd-enc

Description

shared

Description Shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the timeout (in second)

Type: number

Range: 60-1800

type

Description 'running': Sync local running to peer's running configuration; 'all': Sync local running to peer's running configuration, and local startup to peer's startup configuration;

Type: string

Supported Values: running, all

usr

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

3.22 controller

Objects:

3.22.1 controller profile force

Controller profile

force Specification

Parameter	Value
Type	*operational*
Element Name	force
Element URI	/axapi/v3/controller/profile/force
Element Attributes	force_attributes
Partition Visibility	shared
Schema	`force schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/controller/profile/force

force attributes

force attributes

deregister

Description forcefully deregister thunder from harmony controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.22.2 controller profile re-sync

re sync some options to controller

re-sync Specification

Parameter	Value
Type	*operational*
Element Name	re-sync
Element URI	/axapi/v3/controller/profile/re-sync
Element Attributes	re-sync_attributes
Partition Visibility	shared
Schema	`re-sync schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/controller/profile/re-sync

re-sync attributes

re-sync attributes

analytics-bus

Description re-sync analtyics bus connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

schema-registry

Description re-sync the schema registry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.23 convert-startup-config

Objects:

3.23.1 convert-startup-config

Convert configuration profile from older version to new version

convert-startup-config Specification

Parameter	Value
Type	*operational*
Element Name	convert-startup-config
Element URI	/axapi/v3/convert-startup-config
Element Attributes	convert-startup-config_attributes
Partition Visibility	shared
Schema	`convert-startup-config schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/convert-startup-config

convert-startup-config attributes

convert-startup-config attributes

dest-profile

Description Local Configuration Profile Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

profile

Description Choose a config profile to convert

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

type

Description '3_0': Convert from 3.0 to 3.2; '3_2_5': Convert from 3.2.5 to 5.0.0-TPS; '5_0': Convert from 5.0-TPS to 5.3-TPS;

Type: string

Supported Values: 3_0, 3_2_5, 5_0

3.24 copy

Objects:

3.24.1 copy

Copy configuration to/from remote server

copy Specification

Parameter	Value
Type	*operational*
Element Name	copy
Element URI	/axapi/v3/copy
Element Attributes	copy_attributes
Partition Visibility	shared
Schema	`copy schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/copy

copy attributes

copy attributes

dest-profile

Description Local Configuration Profile Name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

dest-remote-file

Description Remote file path

Type: string

Format: url

dest-use-mgmt-port

Description Use management port as destination port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

profile

Description From Startup-config Profile

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

remote-file

Description Remote file path

Type: string

Format: url

running-config

Description From Running Config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

startup-config

Description From Startup Config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

to-profile

Description To Local Configuration Profile

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

to-running-config

Description To Running Config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

to-startup-config

Description To Startup Config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.25 ddos

Objects:

3.25.1 ddos detection ddos-script

Display ddos scripts

ddos-script Specification

Parameter	Value
Type	*operational*
Element Name	ddos-script
Element URI	/axapi/v3/ddos/detection/ddos-script
Element Attributes	ddos-script_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/ddos/detection/ddos-script/oper
Schema	`ddos-script schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ddos/detection/ddos-script

ddos-script attributes

ddos-script attributes

action

Description 'delete': delete;

Type: string

Supported Values: delete

file

Description startup-config local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.25.2 ddos detection resource-usage

DDoS Resource Usage

resource-usage Specification

Parameter	Value
Type	*operational*
Element Name	resource-usage
Element URI	/axapi/v3/ddos/detection/resource-usage
Element Attributes	resource-usage_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/ddos/detection/resource-usage/oper
Schema	`resource-usage schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ddos/detection/resource-usage

resource-usage attributes

resource-usage attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.25.3 ddos dns-cache fqdn-manual-override-action

DNS Cache FQDN response action set

fqdn-manual-override-action Specification

Parameter	Value
Type	*operational*
Object Key(s)	*fqdn-name*
Element Name	fqdn-manual-override-action
Element URI	/axapi/v3/ddos/dns-cache/{name}/fqdn-manual-override-action/{fqdn-name}
Element Attributes	fqdn-manual-override-action_attributes
Partition Visibility	shared
Schema	`fqdn-manual-override-action schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ddos/dns-cache/{name}/fqdn-manual-override-action/{fqdn-name}

fqdn-manual-override-action attributes

fqdn-manual-override-action-list

fqdn-manual-override-action-list is **JSON List** of *fqdn-manual-override-action attributes*

fqdn-manual-override-action-list : [

{ *fqdn-manual-override-action attributes* },

{ *fqdn-manual-override-action attributes* },

...

]

fqdn-manual-override-action attributes

action

Description 'default': Default; 'forward': Forward to DNS server; 'drop': Drop the request; 'serve-from-cache': Serve DNS records;

Type: string

Supported Values: default, forward, drop, serve-from-cache

fqdn-name

Description Specify fqdn name

Type: string

Format: string-rlx

Maximum Length: 253 characters

Maximum Length: 1 characters

3.25.4 ddos dns-cache zone-manual-override-action

DNS Cache FQDN response action set

zone-manual-override-action Specification

Parameter	Value
Type	*operational*
Object Key(s)	*zone-name*
Element Name	zone-manual-override-action
Element URI	/axapi/v3/ddos/dns-cache/{name}/zone-manual-override-action/{zone-name}
Element Attributes	zone-manual-override-action_attributes
Partition Visibility	shared
Schema	`zone-manual-override-action schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ddos/dns-cache/{name}/zone-manual-override-action/{zone-name}

zone-manual-override-action attributes

zone-manual-override-action-list

zone-manual-override-action-list is **JSON List** of *zone-manual-override-action attributes*

zone-manual-override-action-list : [

{ *zone-manual-override-action attributes* },

{ *zone-manual-override-action attributes* },

...

]

zone-manual-override-action attributes

action

Description 'default': Default; 'forward': Forward to DNS server; 'drop': Drop the request; 'serve-from-cache': Serve DNS records;

Type: string

Supported Values: default, forward, drop, serve-from-cache

zone-name

Description Specify zone name

Type: string

Format: string-rlx

Maximum Length: 253 characters

Maximum Length: 1 characters

3.25.5 ddos dst dynamic-entry

Dst dynamic entry info

dynamic-entry Specification

Parameter	Value
Type	*operational*
Element Name	dynamic-entry
Element URI	/axapi/v3/ddos/dst/dynamic-entry
Element Attributes	dynamic-entry_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/ddos/dst/dynamic-entry/oper
Schema	`dynamic-entry schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ddos/dst/dynamic-entry

dynamic-entry attributes

dynamic-entry attributes

all-entries

Description: all-entries is a **JSON Block**. Please see below for *all-entries*

Type: Object

Reference Object: */axapi/v3/ddos/dst/dynamic-entry/all-entries*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

all-entries

Specification	Value
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

all-entries_sampling-enable

Specification	Value
Type	*list*
Block object keys

Type: string

Supported Values: dst_hw_drop_rule_insert, dst_hw_drop_rule_remove, src_hw_drop_rule_insert, src_hw_drop_rule_remove, prog_first_req_time_exceed, prog_req_resp_time_exceed, prog_request_len_exceed, prog_response_len_exceed, prog_resp_pkt_rate_exceed, prog_resp_req_time_exceed, entry_sync_message_received, entry_sync_message_sent, prog_conn_sent_exceed, prog_conn_rcvd_exceed, prog_conn_time_exceed, prog_conn_rcvd_sent_ratio_exceed, prog_win_sent_exceed, prog_win_rcvd_exceed, prog_win_rcvd_sent_ratio_exceed, prog_exceed_drop, prog_exceed_bl, prog_conn_exceed_drop, prog_conn_exceed_bl, prog_win_exceed_drop, prog_win_exceed_bl, dst_exceed_action_drop, src_hw_drop, dst_tcp_auth_rst, dst_src_learn_overflow, tcp_fwd_sent, udp_fwd_sent, prog_query_exceed, prog_think_exceed

3.25.7 ddos exec-script

Execute scripts

exec-script Specification

Parameter	Value
Type	*operational*
Element Name	exec-script
Element URI	/axapi/v3/ddos/exec-script
Element Attributes	exec-script_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/ddos/exec-script/stats
Schema	`exec-script schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ddos/exec-script

exec-script attributes

exec-script attributes

alert-type

Description 1: UDP Pkt Rate 2: TCP Pkt Rate 3: ICMP Pkt Rate

Type: number

Range: 1-3

exec-script-ip-portocol

Description 'icmp-v4': ip-proto icmp-v4; 'icmp-v6': ip-proto icmp-v6; 'other': ip-proto other; 'gre': ip-proto gre; 'ipv4-encap': ip-proto IPv4 Encapsulation; 'ipv6-encap': ip-proto IPv6 Encapsulation;

Type: string

Supported Values: icmp-v4, icmp-v6, other, gre, ipv4-encap, ipv6-encap

exec-script-port-other-protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

level

Description Current Level

Type: number

Range: 1-4

mock

Description Use mock data

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-num

Description Port Number

Type: number

Range: 1-65535

port-other

Description 'other': other;

Type: string

Supported Values: other

protocol

Description 'dns-tcp': DNS-TCP Port; 'dns-udp': DNS-UDP Port; 'http': HTTP Port; 'tcp': TCP Port; 'udp': UDP Port; 'ssl-l4': SSL-L4 Port; 'sip-tcp': SIP-TCP Port; 'sip-udp': SIP-UDP Port; 'quic': QUIC Port;

Type: string

Supported Values: dns-tcp, dns-udp, http, tcp, udp, ssl-l4, sip-tcp, sip-udp, quic

protocol-num

Description Protocol Number

Type: number

Range: 0-255

script

Description Specify script to execute

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

src-ip

Type: List

src-ipv6

Type: List

threshold

Description Threshold

Type: number

Range: 1-3000

timeout

Description Timeout (Default: 10 seconds, Mock Default: 2 seconds)

Type: number

Range: 1-31

zone

Description DST Zone name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

src-ip

Specification	Value
Type	*list*
Block object keys	

ip-addr

Description Specify IP address

Type: string

Format: ipv4-address

subnet-ip-addr

Description IP Subnet

Type: string

Format: ipv4-cidr

src-ipv6

Specification	Value
Type	*list*
Block object keys	

ip6-addr

Description Specify IPv6 address

Type: string

Format: ipv6-address

subnet-ipv6-addr

Description IPV6 Subnet

Type: string

Format: ipv6-address-plen

3.25.8 ddos geo-location db

Geo-location Database

db Specification

Parameter	Value
Type	*operational*
Element Name	db
Element URI	/axapi/v3/ddos/geo-location/db
Element Attributes	db_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/ddos/geo-location/db/oper
Schema	`db schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ddos/geo-location/db

db attributes

db attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.25.9 ddos geo-location file

Geo-location File

file Specification

Parameter	Value
Type	*operational*
Element Name	file
Element URI	/axapi/v3/ddos/geo-location/file
Element Attributes	file_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/ddos/geo-location/file/oper
Schema	`file schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ddos/geo-location/file

file attributes

file attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.25.10 ddos notification-template-debug-log

Display DDoS Notification Template Debug Log

notification-template-debug-log Specification

Parameter	Value
Type	*operational*
Element Name	notification-template-debug-log
Element URI	/axapi/v3/ddos/notification-template-debug-log
Element Attributes	notification-template-debug-log_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/ddos/notification-template-debug-log/oper
Schema	`notification-template-debug-log schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ddos/notification-template-debug-log

notification-template-debug-log attributes

notification-template-debug-log attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.25.11 ddos pattern-recognition cpu

Attack Pattern Recognition CPU information

cpu Specification

Parameter	Value
Type	*operational*
Element Name	cpu
Element URI	/axapi/v3/ddos/pattern-recognition/cpu
Element Attributes	cpu_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/ddos/pattern-recognition/cpu/oper
Schema	`cpu schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ddos/pattern-recognition/cpu

cpu attributes

cpu attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.25.12 ddos src dynamic-entry

Src dynamic entry info

dynamic-entry Specification

Parameter	Value
Type	*operational*
Element Name	dynamic-entry
Element URI	/axapi/v3/ddos/src/dynamic-entry
Element Attributes	dynamic-entry_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/ddos/src/dynamic-entry/oper
Schema	`dynamic-entry schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ddos/src/dynamic-entry

dynamic-entry attributes

dynamic-entry attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.25.13 ddos token-authentication players

Token Authentication Player Mode

players Specification

Parameter	Value
Type	*operational*
Object Key(s)	*src-ip, src-port, dst-ip, dst-port*
Element Name	players
Element URI	/axapi/v3/ddos/token-authentication/players/{src-ip}+{src-port}+{dst-ip}+{dst-port}
Element Attributes	players_attributes
Partition Visibility	shared
Schema	`players schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ddos/token-authentication/players/{src-ip}+{src-port}+{dst-ip}+{dst-port}

players attributes

players-list

players-list is **JSON List** of *players attributes*

players-list : [

{ *players attributes* },

{ *players attributes* },

...

]

players attributes

dst-ip

Description

Type: string

Format: ipv4-address

dst-port

Description

Type: number

Range: 0-65535

magic-value

Description

Type: number

Range: 0-4294967295

src-ip

Description

Type: string

Format: ipv4-address

src-port

Description

Type: number

Range: 0-65535

3.26 debug

Objects:

3.26.1 debug a10support

Enter the password

a10support Specification

Parameter	Value
Type	*operational*
Element Name	a10support
Element URI	/axapi/v3/debug/a10support
Element Attributes	a10support_attributes
Partition Visibility	shared
Schema	`a10support schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/a10support

a10support attributes

a10support attributes

duration

Description Duration in minutes

Type: number

Range: 1-10080

Default: 2

password

Description Password to be set

Type: string

Format: password

Maximum Length: 24 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.2 debug aflow

Debug aFlow

aflow Specification

Parameter	Value
Type	*operational*
Element Name	aflow
Element URI	/axapi/v3/debug/aflow
Element Attributes	aflow_attributes
Partition Visibility	shared
Schema	`aflow schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/aflow

aflow attributes

aflow attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.3 debug appcls

Debug application classification

appcls Specification

Parameter	Value
Type	*operational*
Element Name	appcls
Element URI	/axapi/v3/debug/appcls
Element Attributes	appcls_attributes
Partition Visibility	shared
Schema	`appcls schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/appcls

appcls attributes

appcls attributes

level

Description '1': Display critical errors only; '2': Display all unusual results; '3': Display all appcls engine information;

Type: string

Supported Values: 1, 2, 3

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.4 debug auth

Debug authentication

auth Specification

Parameter	Value
Type	*operational*
Element Name	auth
Element URI	/axapi/v3/debug/auth
Element Attributes	auth_attributes
Partition Visibility	shared
Schema	`auth schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/auth

auth attributes

auth attributes

authd

Description enable detail authd log

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-addr

Description Filter SAML logs by client IP address

Type: string

Format: ipv4-address

level

Description '1': Diagnose Problems; '2': Detail packet flow;

Type: string

Supported Values: 1, 2

saml

Description Enable debug SAML authentication logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml-sp

Description Filter SAML logs by SAML service provider name (SAML SP name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Show the logs of specific username (User name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-server

Description Show the logs of specific virtual-server (Virtual-server name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

3.26.5 debug backtrace

add backtrace into rima_log

backtrace Specification

Parameter	Value
Type	*operational*
Element Name	backtrace
Element URI	/axapi/v3/debug/backtrace
Element Attributes	backtrace_attributes
Partition Visibility	shared
Schema	`backtrace schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/backtrace

backtrace attributes

backtrace attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.6 debug bgp

Debug Border Gateway Protocol (BGP)

bgp Specification

Parameter	Value
Type	*operational*
Element Name	bgp
Element URI	/axapi/v3/debug/bgp
Element Attributes	bgp_attributes
Partition Visibility	shared
Schema	`bgp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/bgp

bgp attributes

bgp attributes

all

Description all debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening

Description BGP Dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description BGP events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filters

Description BGP filters

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fsm

Description BGP Finite State Machine

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

in

Description Inbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

keepalives

Description BGP keepalives

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nht

Description NHT message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nsm

Description NSM message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

updates

Description BGP updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.7 debug bridge-vlan-group

Debug bridge vlan traffic

bridge-vlan-group Specification

Parameter	Value
Type	*operational*
Element Name	bridge-vlan-group
Element URI	/axapi/v3/debug/bridge-vlan-group
Element Attributes	bridge-vlan-group_attributes
Partition Visibility	shared
Schema	`bridge-vlan-group schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/bridge-vlan-group

bridge-vlan-group attributes

bridge-vlan-group attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.8 debug cache

Debug RAM caching

cache Specification

Parameter	Value
Type	*operational*
Element Name	cache
Element URI	/axapi/v3/debug/cache
Element Attributes	cache_attributes
Partition Visibility	shared
Schema	`cache schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/cache

cache attributes

cache attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.9 debug cgnv6

cgnv6 packet debugging

cgnv6 Specification

Parameter	Value
Type	*operational*
Element Name	cgnv6
Element URI	/axapi/v3/debug/cgnv6
Element Attributes	cgnv6_attributes
Partition Visibility	shared
Schema	`cgnv6 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/cgnv6

cgnv6 attributes

cgnv6 attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.10 debug cli

CLI module parameters

cli Specification

Parameter	Value
Type	*operational*
Element Name	cli
Element URI	/axapi/v3/debug/cli
Element Attributes	cli_attributes
Partition Visibility	shared
Schema	`cli schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/cli

cli attributes

cli attributes

all

Description CLI all debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

io

Description CLI debug input-output switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

parser

Description CLI debug parser switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.11 debug conn-reuse

Debug connection reuse

conn-reuse Specification

Parameter	Value
Type	*operational*
Element Name	conn-reuse
Element URI	/axapi/v3/debug/conn-reuse
Element Attributes	conn-reuse_attributes
Partition Visibility	shared
Schema	`conn-reuse schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/conn-reuse

conn-reuse attributes

conn-reuse attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.12 debug controller

Debug Controller

controller Specification

Parameter	Value
Type	*operational*
Element Name	controller
Element URI	/axapi/v3/debug/controller
Element Attributes	controller_attributes
Partition Visibility	shared
Schema	`controller schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/controller

controller attributes

controller attributes

anomaly

Description Dump per-request in anomaly cases only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

app-svc-id

Description Application service id (virtual-server_port_protocol)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

error

Description Debug logs for controller (error)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logd-audit-export

Description Debug logs for controller (logd-audit-export)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logd-syslog-export

Description Debug logs for controller (logd-syslog-export)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metrics

Description Debug logs for controller (metrics)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

object-uuid

Description UUID of the object to filter

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

per-connection

Description Debug logs for controller (per-connection)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per-request

Description Debug logs for controller (per-request)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

registration

Description Debug logs for controller (registration)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uri

Description URI of the object to filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.13 debug cpu

Debug CPU

cpu Specification

Parameter	Value
Type	*operational*
Element Name	cpu
Element URI	/axapi/v3/debug/cpu
Element Attributes	cpu_attributes
Partition Visibility	shared
Schema	`cpu schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/cpu

cpu attributes

cpu attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.14 debug ddos

Debug DDOS

ddos Specification

Parameter	Value
Type	*operational*
Element Name	ddos
Element URI	/axapi/v3/debug/ddos
Element Attributes	ddos_attributes
Partition Visibility	shared
Schema	`ddos schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ddos

ddos attributes

ddos attributes

control-var

Description Debug DDOS Control Var

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache

Description Debug DDOS DNS Cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event

Description Debug DDOS event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event-filter

Description Set debug DDOS event filter

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

flow-based-detection

Description Debug flow samples based DDOS detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

progression-tracking-source

Description Debug DDOS Progression Tracking Slow Attacker Identification Event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zbar

Description Debug DDOS zbar event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.26.15 debug diameter

Debug diameter proxy

diameter Specification

Parameter	Value
Type	*operational*
Element Name	diameter
Element URI	/axapi/v3/debug/diameter
Element Attributes	diameter_attributes
Partition Visibility	shared
Schema	`diameter schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/diameter

diameter attributes

diameter attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.16 debug dns-cache

Debug DNS cache

dns-cache Specification

Parameter	Value
Type	*operational*
Element Name	dns-cache
Element URI	/axapi/v3/debug/dns-cache
Element Attributes	dns-cache_attributes
Partition Visibility	shared
Schema	`dns-cache schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/dns-cache

dns-cache attributes

dns-cache attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.17 debug dns-rrl

Debug DNS Response-Rate-Limiting

dns-rrl Specification

Parameter	Value
Type	*operational*
Element Name	dns-rrl
Element URI	/axapi/v3/debug/dns-rrl
Element Attributes	dns-rrl_attributes
Partition Visibility	shared
Schema	`dns-rrl schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/dns-rrl

dns-rrl attributes

dns-rrl attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.18 debug drop

Debug Packet Drop

drop Specification

Parameter	Value
Type	*operational*
Element Name	drop
Element URI	/axapi/v3/debug/drop
Element Attributes	drop_attributes
Partition Visibility	shared
Schema	`drop schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/drop

drop attributes

drop attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.19 debug dumpthread

Generate system threads info

dumpthread Specification

Parameter	Value
Type	*operational*
Element Name	dumpthread
Element URI	/axapi/v3/debug/dumpthread
Element Attributes	dumpthread_attributes
Partition Visibility	shared
Schema	`dumpthread schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/dumpthread

dumpthread attributes

dumpthread attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.20 debug es

Debug external service

es Specification

Parameter	Value
Type	*operational*
Element Name	es
Element URI	/axapi/v3/debug/es
Element Attributes	es_attributes
Partition Visibility	shared
Schema	`es schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/es

es attributes

es attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.21 debug fix

Debug FIX Proxy

fix Specification

Parameter	Value
Type	*operational*
Element Name	fix
Element URI	/axapi/v3/debug/fix
Element Attributes	fix_attributes
Partition Visibility	shared
Schema	`fix schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/fix

fix attributes

fix attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.22 debug ftp

Debug FTP

ftp Specification

Parameter	Value
Type	*operational*
Element Name	ftp
Element URI	/axapi/v3/debug/ftp
Element Attributes	ftp_attributes
Partition Visibility	shared
Schema	`ftp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ftp

ftp attributes

ftp attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.23 debug ftp-proxy

Debug FTP Proxy

ftp-proxy Specification

Parameter	Value
Type	*operational*
Element Name	ftp-proxy
Element URI	/axapi/v3/debug/ftp-proxy
Element Attributes	ftp-proxy_attributes
Partition Visibility	shared
Schema	`ftp-proxy schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ftp-proxy

ftp-proxy attributes

ftp-proxy attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.24 debug fw

Debug Firewall

fw Specification

Parameter	Value
Type	*operational*
Element Name	fw
Element URI	/axapi/v3/debug/fw
Element Attributes	fw_attributes
Partition Visibility	shared
Schema	`fw schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/fw

fw attributes

fw attributes

ddos

Description FW DDoS detection/mitigation logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.25 debug generic-proxy

Debug generic Proxy

generic-proxy Specification

Parameter	Value
Type	*operational*
Element Name	generic-proxy
Element URI	/axapi/v3/debug/generic-proxy
Element Attributes	generic-proxy_attributes
Partition Visibility	shared
Schema	`generic-proxy schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/generic-proxy

generic-proxy attributes

generic-proxy attributes

debug-level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.26 debug gslb

Debug GSLB

gslb Specification

Parameter	Value
Type	*operational*
Element Name	gslb
Element URI	/axapi/v3/debug/gslb
Element Attributes	gslb_attributes
Partition Visibility	shared
Schema	`gslb schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/gslb

gslb attributes

gslb attributes

extended

Description Debug for additional info

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

glname

Description Debug for matched Geo-location

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

group

Description: group is a **JSON Block**. Please see below for *group*

Type: Object

Reference Object: */axapi/v3/debug/gslb/group*

id

Description Specify ID

Type: number

Range: 0-128

Default: 0

ip-addr

Description Debug for matched IP address

Type: string

Format: ipv4-address

ipv6-addr

Description Debug for matched IPv6 address

Type: string

Format: ipv6-address

memory

Description Debug GSLB memory

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-shot

Description Stop after get 64 states

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description: protocol is a **JSON Block**. Please see below for *protocol*

Type: Object

Reference Object: */axapi/v3/debug/gslb/protocol*

state

Description Keep GSLB state information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

group

Specification	Value
Type	*object*

all

Description All trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Cache trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event

Description EVENTS trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fsm

Description FSM trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description Remote IP address of GSLB controller of the group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipc

Description IPC trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

keep-alive

Description KEEPALIVE trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message

Description Debug GSLB group message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-all

Description All messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-control

Description GMP control messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-group

Description GMP group messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-keepalive

Description GMP keepalive messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-notify

Description GMP notify messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-open

Description GMP open messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-query

Description GMP query messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Name of GSLB group

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

normal

Description Normal trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-ipv4

Description Specify remote IPv4 Address

Type: string

Format: ipv4-address

peer-ipv6

Description Specify remote IPv6 Address

Type: string

Format: ipv6-address

timer

Description Timer trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

update

Description Update trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

protocol

Specification	Value
Type	*object*

active-rdt

Description ARDT trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all

Description All trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Cache trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event

Description EVENTS trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fsm

Description FSM trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description Specify the remote IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipc

Description IPC trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

keep-alive

Description KEEPALIVE trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message

Description Debug GSLB protocol message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-all

Description All messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-ardt-query

Description GMP ardt-query messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-ardt-report

Description GMP ardt-report messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-control

Description GMP control messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-keepalive

Description GMP keepalive messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-notify

Description GMP notify messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-open

Description GMP open messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-query

Description GMP query messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-update

Description GMP update messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify the slb device name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

normal

Description Normal trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-ipv4

Description Specify remote IPv4 Address

Type: string

Format: ipv4-address

peer-ipv6

Description Specify remote IPv6 Address

Type: string

Format: ipv6-address

timer

Description Timer trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

update

Description Update trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.27 debug gslb group

Debug GSLB group

group Specification

Parameter	Value
Type	*operational*
Element Name	group
Element URI	/axapi/v3/debug/gslb/group
Element Attributes	group_attributes
Partition Visibility	shared
Schema	`group schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/gslb/group

group attributes

group attributes

all

Description All trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Cache trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event

Description EVENTS trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fsm

Description FSM trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description Remote IP address of GSLB controller of the group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipc

Description IPC trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

keep-alive

Description KEEPALIVE trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message

Description Debug GSLB group message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-all

Description All messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-control

Description GMP control messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-group

Description GMP group messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-keepalive

Description GMP keepalive messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-notify

Description GMP notify messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-open

Description GMP open messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-query

Description GMP query messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Name of GSLB group

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

normal

Description Normal trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-ipv4

Description Specify remote IPv4 Address

Type: string

Format: ipv4-address

peer-ipv6

Description Specify remote IPv6 Address

Type: string

Format: ipv6-address

timer

Description Timer trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

update

Description Update trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.28 debug gslb protocol

Debug GSLB protocol

protocol Specification

Parameter	Value
Type	*operational*
Element Name	protocol
Element URI	/axapi/v3/debug/gslb/protocol
Element Attributes	protocol_attributes
Partition Visibility	shared
Schema	`protocol schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/gslb/protocol

protocol attributes

protocol attributes

active-rdt

Description ARDT trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all

Description All trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Cache trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event

Description EVENTS trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fsm

Description FSM trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description Specify the remote IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipc

Description IPC trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

keep-alive

Description KEEPALIVE trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message

Description Debug GSLB protocol message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-all

Description All messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-ardt-query

Description GMP ardt-query messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-ardt-report

Description GMP ardt-report messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-control

Description GMP control messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-keepalive

Description GMP keepalive messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-notify

Description GMP notify messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-open

Description GMP open messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-query

Description GMP query messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-update

Description GMP update messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify the slb device name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

normal

Description Normal trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-ipv4

Description Specify remote IPv4 Address

Type: string

Format: ipv4-address

peer-ipv6

Description Specify remote IPv6 Address

Type: string

Format: ipv6-address

timer

Description Timer trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

update

Description Update trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.29 debug gtp

Debug GTP

gtp Specification

Parameter	Value
Type	*operational*
Element Name	gtp
Element URI	/axapi/v3/debug/gtp
Element Attributes	gtp_attributes
Partition Visibility	shared
Schema	`gtp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/gtp

gtp attributes

gtp attributes

level

Description Debug level (Level 1: Errors Level 2: Minimal_info Level 3: Detailed_info)

Type: number

Range: 1-3

Default: 1

packet

Description Debug GTP packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.30 debug h323

Debug H323

h323 Specification

Parameter	Value
Type	*operational*
Element Name	h323
Element URI	/axapi/v3/debug/h323
Element Attributes	h323_attributes
Partition Visibility	shared
Schema	`h323 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/h323

h323 attributes

h323 attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.31 debug ha

Debug HA

ha Specification

Parameter	Value
Type	*operational*
Element Name	ha
Element URI	/axapi/v3/debug/ha
Element Attributes	ha_attributes
Partition Visibility	shared
Schema	`ha schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ha

ha attributes

ha attributes

debug-level

Description Debug level (Level 1-7)

Type: number

Range: 1-7

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.32 debug hc

Debug Harmony Controller

hc Specification

Parameter	Value
Type	*operational*
Element Name	hc
Element URI	/axapi/v3/debug/hc
Element Attributes	hc_attributes
Partition Visibility	shared
Schema	`hc schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/hc

hc attributes

hc attributes

anomaly

Description Dump per-request in anomaly cases only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

app-svc-id

Description Application service id (virtual-server_port_protocol)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

error

Description Debug logs for harmony controller (error)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logd-audit-export

Description Debug logs for harmony controller (logd-audit-export)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logd-syslog-export

Description Debug logs for harmony controller (logd-syslog-export)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metrics

Description Debug logs for harmony controller (metrics)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

object-uuid

Description UUID of the object to filter

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

per-connection

Description Debug logs for harmony controller (per-connection)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per-request

Description Debug logs for harmony controller (per-request)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

registration

Description Debug logs for harmony controller (registration)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uri

Description URI of the object to filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.33 debug hm

Debug health monitor

hm Specification

Parameter	Value
Type	*operational*
Element Name	hm
Element URI	/axapi/v3/debug/hm
Element Attributes	hm_attributes
Partition Visibility	shared
Schema	`hm schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/hm

hm attributes

hm attributes

level

Description Debug level (Level 1-3)

Type: number

Range: 1-3

method-type

Description 'icmp': ICMP type; 'tcp': TCP type; 'udp': UDP type; 'ftp': FTP type; 'http': HTTP type; 'snmp': SNMP type; 'smtp': SMTP type; 'dns': DNS type; 'dns-tcp': DNS TCP type; 'pop3': POP3 type; 'imap': IMAP type; 'sip': SIP type; 'sip-tcp': SIP TCP type; 'radius': RADIUS type; 'ldap': LDAP type; 'rtsp': RTSP type; 'kerberos-kdc': Kerberos KDC type; 'database': DATABASE type; 'external': EXTERNAL type; 'https': HTTPS type; 'ntp': NTP type; 'compound': Compound type;

Type: string

Supported Values: icmp, tcp, udp, ftp, http, snmp, smtp, dns, dns-tcp, pop3, imap, sip, sip-tcp, radius, ldap, rtsp, kerberos-kdc, database, external, https, ntp, compound

pin-uid

Description Debug Pin Unique Id

Type: number

Range: 1-2000000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.34 debug hm-dplane

Debug health monitor in dplane

hm-dplane Specification

Parameter	Value
Type	*operational*
Element Name	hm-dplane
Element URI	/axapi/v3/debug/hm-dplane
Element Attributes	hm-dplane_attributes
Partition Visibility	shared
Schema	`hm-dplane schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/hm-dplane

hm-dplane attributes

hm-dplane attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.35 debug http2

Debug HTTP/2 processing

http2 Specification

Parameter	Value
Type	*operational*
Element Name	http2
Element URI	/axapi/v3/debug/http2
Element Attributes	http2_attributes
Partition Visibility	shared
Schema	`http2 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/http2

http2 attributes

http2 attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.36 debug http-proxy

Debug HTTP proxy

http-proxy Specification

Parameter	Value
Type	*operational*
Element Name	http-proxy
Element URI	/axapi/v3/debug/http-proxy
Element Attributes	http-proxy_attributes
Partition Visibility	shared
Schema	`http-proxy schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/http-proxy

http-proxy attributes

http-proxy attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.37 debug hw-accelerate

Debug HW accelerate

hw-accelerate Specification

Parameter	Value
Type	*operational*
Element Name	hw-accelerate
Element URI	/axapi/v3/debug/hw-accelerate
Element Attributes	hw-accelerate_attributes
Partition Visibility	shared
Schema	`hw-accelerate schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/hw-accelerate

hw-accelerate attributes

hw-accelerate attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.38 debug hw-compression

Debug Hardware Compression

hw-compression Specification

Parameter	Value
Type	*operational*
Element Name	hw-compression
Element URI	/axapi/v3/debug/hw-compression
Element Attributes	hw-compression_attributes
Partition Visibility	shared
Schema	`hw-compression schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/hw-compression

hw-compression attributes

hw-compression attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.39 debug imap-proxy

Debug IMAP proxy

imap-proxy Specification

Parameter	Value
Type	*operational*
Element Name	imap-proxy
Element URI	/axapi/v3/debug/imap-proxy
Element Attributes	imap-proxy_attributes
Partition Visibility	shared
Schema	`imap-proxy schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/imap-proxy

imap-proxy attributes

imap-proxy attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.40 debug imish

Debug imish outputs

imish Specification

Parameter	Value
Type	*operational*
Element Name	imish
Element URI	/axapi/v3/debug/imish
Element Attributes	imish_attributes
Partition Visibility	shared
Schema	`imish schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/imish

imish attributes

imish attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.41 debug imish-profile

add imish expect time profile into rima_log

imish-profile Specification

Parameter	Value
Type	*operational*
Element Name	imish-profile
Element URI	/axapi/v3/debug/imish-profile
Element Attributes	imish-profile_attributes
Partition Visibility	shared
Schema	`imish-profile schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/imish-profile

imish-profile attributes

imish-profile attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.42 debug ip

Debug IP Functions

ip Specification

Parameter	Value
Type	*operational*
Element Name	ip
Element URI	/axapi/v3/debug/ip
Element Attributes	ip_attributes
Partition Visibility	shared
Schema	`ip schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ip

ip attributes

ip attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.43 debug ipv6

Internet Protocol version 6 (IPv6)

ipv6 Specification

Parameter	Value
Type	*operational*
Element Name	ipv6
Element URI	/axapi/v3/debug/ipv6
Element Attributes	ipv6_attributes
Partition Visibility	shared
Schema	`ipv6 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ipv6

ipv6 attributes

ipv6 attributes

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Reference Object: */axapi/v3/debug/ipv6/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Reference Object: */axapi/v3/debug/ipv6/rip*

ospf

Specification	Value
Type	*object*

all

Description: all is a **JSON Block**. Please see below for *ospf_all*

Type: Object

Reference Object: */axapi/v3/debug/ipv6/ospf/all*

bfd

Description: bfd is a **JSON Block**. Please see below for *ospf_bfd*

Type: Object

Reference Object: */axapi/v3/debug/ipv6/ospf/bfd*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description: events is a **JSON Block**. Please see below for *ospf_events*

Type: Object

Reference Object: */axapi/v3/debug/ipv6/ospf/events*

ifsm

Description: ifsm is a **JSON Block**. Please see below for *ospf_ifsm*

Type: Object

Reference Object: */axapi/v3/debug/ipv6/ospf/ifsm*

lsa

Description: lsa is a **JSON Block**. Please see below for *ospf_lsa*

Type: Object

Reference Object: */axapi/v3/debug/ipv6/ospf/lsa*

nfsm

Description: nfsm is a **JSON Block**. Please see below for *ospf_nfsm*

Type: Object

Reference Object: */axapi/v3/debug/ipv6/ospf/nfsm*

nsm

Description: nsm is a **JSON Block**. Please see below for *ospf_nsm*

Type: Object

Reference Object: */axapi/v3/debug/ipv6/ospf/nsm*

packet

Description: packet is a **JSON Block**. Please see below for *ospf_packet*

Type: Object

Reference Object: */axapi/v3/debug/ipv6/ospf/packet*

route

Description: route is a **JSON Block**. Please see below for *ospf_route*

Type: Object

Reference Object: */axapi/v3/debug/ipv6/ospf/route*

ospf_all

Specification	Value
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ifsm

Specification	Value
Type	*object*

events

Description IFSM Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status

Description IFSM Status Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description IFSM Timer Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_lsa

Specification	Value
Type	*object*

flooding

Description LSA Flooding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gererate

Description LSA Generation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

install

Description LSA Installation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maxage

Description LSA MaxAge processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

refresh

Description LSA Refreshment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_route

Specification	Value
Type	*object*

ase

Description External route calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ia

Description Inter-Area route calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

install

Description Route installation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spf

Description SPF calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_bfd

Specification	Value
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_nfsm

Specification	Value
Type	*object*

events

Description NFSM Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status

Description NFSM Status Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description NFSM Timer Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_packet

Specification	Value
Type	*object*

dd

Description OSPFv3 Database Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Detail information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello

Description OSPFv3 Hello

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-ack

Description OSPFv3 Link State Acknowledgment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-request

Description OSPFv3 Link State Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-update

Description OSPFv3 Link State Update

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv

Description Packet received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send

Description Packet sent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_events

Specification	Value
Type	*object*

abr

Description OSPF ABR events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

asbr

Description OSPF ASBR events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

os

Description OS events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description Other router events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlink

Description Virtual-Link event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_nsm

Specification	Value
Type	*object*

interface

Description NSM interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description NSM redistribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	Value
Type	*object*

all

Description Enable all debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Detailed information display

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description RIPng events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nsm

Description RIPng and NSM communication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet

Description RIPng packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv

Description RIPng receive packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send

Description RIPng send packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.26.44 debug ipv6 ospf

Open Shortest Path First (OSPF) for IPv6

ospf Specification

Parameter	Value
Type	*operational*
Element Name	ospf
Element URI	/axapi/v3/debug/ipv6/ospf
Element Attributes	ospf_attributes
Partition Visibility	shared
Schema	`ospf schema`

Operations Allowed:

EXECUTE Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.45 debug ipv6 ospf all

Enable all debugging

all Specification

Parameter	Value
Type	*operational*
Element Name	all
Element URI	/axapi/v3/debug/ipv6/ospf/all
Element Attributes	all_attributes
Partition Visibility	shared
Schema	`all schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ipv6/ospf/all

all attributes

all attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.46 debug ipv6 ospf bfd

Bidirectional Forwarding Detection (BFD)

bfd Specification

Parameter	Value
Type	*operational*
Element Name	bfd
Element URI	/axapi/v3/debug/ipv6/ospf/bfd
Element Attributes	bfd_attributes
Partition Visibility	shared
Schema	`bfd schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ipv6/ospf/bfd

bfd attributes

bfd attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.47 debug ipv6 ospf events

OSPFv3 event

events Specification

Parameter	Value
Type	*operational*
Element Name	events
Element URI	/axapi/v3/debug/ipv6/ospf/events
Element Attributes	events_attributes
Partition Visibility	shared
Schema	`events schema`

Operations Allowed:

POST

/axapi/v3/debug/ipv6/ospf/events

events attributes

events attributes

abr

Description OSPF ABR events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

asbr

Description OSPF ASBR events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

os

Description OS events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description Other router events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlink

Description Virtual-Link event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.26.48 debug ipv6 ospf ifsm

OSPFv3 Interface State Machine

ifsm Specification

Parameter	Value
Type	*operational*
Element Name	ifsm
Element URI	/axapi/v3/debug/ipv6/ospf/ifsm
Element Attributes	ifsm_attributes
Partition Visibility	shared
Schema	`ifsm schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ipv6/ospf/ifsm

ifsm attributes

ifsm attributes

events

Description IFSM Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status

Description IFSM Status Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description IFSM Timer Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.49 debug ipv6 ospf lsa

OSPFv3 Link State Advertisement

lsa Specification

Parameter	Value
Type	*operational*
Element Name	lsa
Element URI	/axapi/v3/debug/ipv6/ospf/lsa
Element Attributes	lsa_attributes
Partition Visibility	shared
Schema	`lsa schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ipv6/ospf/lsa

lsa attributes

lsa attributes

flooding

Description LSA Flooding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gererate

Description LSA Generation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

install

Description LSA Installation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maxage

Description LSA MaxAge processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

refresh

Description LSA Refreshment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.50 debug ipv6 ospf nfsm

OSPFv3 Neighbor State Machine

nfsm Specification

Parameter	Value
Type	*operational*
Element Name	nfsm
Element URI	/axapi/v3/debug/ipv6/ospf/nfsm
Element Attributes	nfsm_attributes
Partition Visibility	shared
Schema	`nfsm schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ipv6/ospf/nfsm

nfsm attributes

nfsm attributes

events

Description NFSM Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status

Description NFSM Status Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description NFSM Timer Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.51 debug ipv6 ospf nsm

OSPFv3 NSM information

nsm Specification

Parameter	Value
Type	*operational*
Element Name	nsm
Element URI	/axapi/v3/debug/ipv6/ospf/nsm
Element Attributes	nsm_attributes
Partition Visibility	shared
Schema	`nsm schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ipv6/ospf/nsm

nsm attributes

nsm attributes

interface

Description NSM interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Description NSM redistribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.52 debug ipv6 ospf packet

OSPFv3 packets

packet Specification

Parameter	Value
Type	*operational*
Element Name	packet
Element URI	/axapi/v3/debug/ipv6/ospf/packet
Element Attributes	packet_attributes
Partition Visibility	shared
Schema	`packet schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ipv6/ospf/packet

packet attributes

packet attributes

dd

Description OSPFv3 Database Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Detail information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello

Description OSPFv3 Hello

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-ack

Description OSPFv3 Link State Acknowledgment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-request

Description OSPFv3 Link State Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-update

Description OSPFv3 Link State Update

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv

Description Packet received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send

Description Packet sent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.53 debug ipv6 ospf route

OSPFv3 route information

route Specification

Parameter	Value
Type	*operational*
Element Name	route
Element URI	/axapi/v3/debug/ipv6/ospf/route
Element Attributes	route_attributes
Partition Visibility	shared
Schema	`route schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ipv6/ospf/route

route attributes

route attributes

ase

Description External route calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ia

Description Inter-Area route calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

install

Description Route installation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spf

Description SPF calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.54 debug ipv6 rip

Routing Information Protocol (RIP) for IPv6

rip Specification

Parameter	Value
Type	*operational*
Element Name	rip
Element URI	/axapi/v3/debug/ipv6/rip
Element Attributes	rip_attributes
Partition Visibility	shared
Schema	`rip schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ipv6/rip

rip attributes

rip attributes

all

Description Enable all debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Detailed information display

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description RIPng events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nsm

Description RIPng and NSM communication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet

Description RIPng packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv

Description RIPng receive packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send

Description RIPng send packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.26.55 debug isis

Intermediate System - Intermediate System (IS-IS)

isis Specification

Parameter	Value
Type	*operational*
Element Name	isis
Element URI	/axapi/v3/debug/isis
Element Attributes	isis_attributes
Partition Visibility	shared
Schema	`isis schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/isis

isis attributes

isis attributes

all

Description Enable all debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description IS-IS Events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ifsm

Description IS-IS Interface Finite State Machine

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lsp

Description IS-IS Link State PDU

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nfsm

Description IS-IS Neighbor Finite State Machine

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nsm

Description IS-IS NSM information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pdu

Description IS-IS Protocol Data Unit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spf

Description IS-IS SPF Calculation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.56 debug l2

Layer 2

l2 Specification

Parameter	Value
Type	*operational*
Element Name	l2
Element URI	/axapi/v3/debug/l2
Element Attributes	l2_attributes
Partition Visibility	shared
Schema	`l2 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/l2

l2 attributes

l2 attributes

mac

Description Debug mac learned packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.57 debug l2-redirect

Debug L2 SSLi Redirect

l2-redirect Specification

Parameter	Value
Type	*operational*
Element Name	l2-redirect
Element URI	/axapi/v3/debug/l2-redirect
Element Attributes	l2-redirect_attributes
Partition Visibility	shared
Schema	`l2-redirect schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/l2-redirect

l2-redirect attributes

l2-redirect attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.58 debug l3

Layer 3

l3 Specification

Parameter	Value
Type	*operational*
Element Name	l3
Element URI	/axapi/v3/debug/l3
Element Attributes	l3_attributes
Partition Visibility	shared
Schema	`l3 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/l3

l3 attributes

l3 attributes

icmp

Description Debug icmp packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.59 debug l4

Layer 4

l4 Specification

Parameter	Value
Type	*operational*
Element Name	l4
Element URI	/axapi/v3/debug/l4
Element Attributes	l4_attributes
Partition Visibility	shared
Schema	`l4 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/l4

l4 attributes

l4 attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.60 debug l7

Layer 7

l7 Specification

Parameter	Value
Type	*operational*
Element Name	l7
Element URI	/axapi/v3/debug/l7
Element Attributes	l7_attributes
Partition Visibility	shared
Schema	`l7 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/l7

l7 attributes

l7 attributes

http3

Description: http3 is a **JSON Block**. Please see below for *http3*

Type: Object

Reference Object: */axapi/v3/debug/l7/http3*

http3

Specification	Value
Type	*object*

level

Description Debug level (Level 1-5)

Type: number

Range: 1-5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.61 debug l7 http3

HTTP/3 processing

http3 Specification

Parameter	Value
Type	*operational*
Element Name	http3
Element URI	/axapi/v3/debug/l7/http3
Element Attributes	http3_attributes
Partition Visibility	shared
Schema	`http3 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/l7/http3

http3 attributes

http3 attributes

level

Description Debug level (Level 1-5)

Type: number

Range: 1-5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.62 debug l7session

Debug L7 session processing

l7session Specification

Parameter	Value
Type	*operational*
Element Name	l7session
Element URI	/axapi/v3/debug/l7session
Element Attributes	l7session_attributes
Partition Visibility	shared
Schema	`l7session schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/l7session

l7session attributes

l7session attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.63 debug lacp

lacp - LACP commands

lacp Specification

Parameter	Value
Type	*operational*
Element Name	lacp
Element URI	/axapi/v3/debug/lacp
Element Attributes	lacp_attributes
Partition Visibility	shared
Schema	`lacp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/lacp

lacp attributes

lacp attributes

all

Description all - turn on all debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cli

Description cli - echo commands to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description detail - echo timer start/stop to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event

Description event - echo events to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha

Description ha - echo High availability events to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet

Description packet - echo packet contents to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sync

Description sync - echo synchronization to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timer

Description timer - echo timer expiry to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.64 debug layer2

Layer2 module parameters

layer2 Specification

Parameter	Value
Type	*operational*
Element Name	layer2
Element URI	/axapi/v3/debug/layer2
Element Attributes	layer2_attributes
Partition Visibility	shared
Schema	`layer2 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/layer2

layer2 attributes

layer2 attributes

all

Description Layer2 all debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

arp

Description Layer2 debug arp switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interface

Description Layer2 debug interface switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

misc

Description Layer2 debug misc switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trace

Description Layer2 debug trace switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description Layer2 debug vlan switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.26.65 debug lb

Load Balancing debug switch parameter

lb Specification

Parameter	Value
Type	*operational*
Element Name	lb
Element URI	/axapi/v3/debug/lb
Element Attributes	lb_attributes
Partition Visibility	shared
Schema	`lb schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/lb

lb attributes

lb attributes

all

Description Load Balancing debug all switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cfg

Description Load Balancing configuration debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clb

Description Cache Load Balancing debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

flow

Description Packet flow debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fwlb

Description Firewall Load Balancing debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

llb

Description Link Load Balancing debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb

Description Server Load Balancing debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.66 debug link-probe

Link Probe module parameters

link-probe Specification

Parameter	Value
Type	*operational*
Element Name	link-probe
Element URI	/axapi/v3/debug/link-probe
Element Attributes	link-probe_attributes
Partition Visibility	shared
Schema	`link-probe schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/link-probe

link-probe attributes

link-probe attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.67 debug list_all_cli

list_all_cli Specification

Parameter	Value
Type	*operational*
Element Name	list_all_cli
Element URI	/axapi/v3/debug/list_all_cli
Element Attributes	list_all_cli_attributes
Partition Visibility	shared
Schema	`list_all_cli schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/list_all_cli

list_all_cli attributes

list_all_cli attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.68 debug local-log

Debug LOCAL log

local-log Specification

Parameter	Value
Type	*operational*
Element Name	local-log
Element URI	/axapi/v3/debug/local-log
Element Attributes	local-log_attributes
Partition Visibility	shared
Schema	`local-log schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/local-log

local-log attributes

local-log attributes

group

Description 'query': Debug local log query (axapi).; 'db-mgr': Debug local log database management.; 'db-write': Debug local log insert local log into database.; 'queue': Debug local log generate and inqueue/dequeue.;

Type: string

Supported Values: query, db-mgr, db-write, queue

level

Description Debug level (Level 1-3. 1:error, 2:notice, 3:Info)

Type: number

Range: 1-3

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.69 debug logging

Logging module parameters

logging Specification

Parameter	Value
Type	*operational*
Element Name	logging
Element URI	/axapi/v3/debug/logging
Element Attributes	logging_attributes
Partition Visibility	shared
Schema	`logging schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/logging

logging attributes

logging attributes

all

Description Logging all debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

command

Description Logging debug command switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

error

Description Logging debug error switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.70 debug lsn

Debug LSN

lsn Specification

Parameter	Value
Type	*operational*
Element Name	lsn
Element URI	/axapi/v3/debug/lsn
Element Attributes	lsn_attributes
Partition Visibility	shared
Schema	`lsn schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/lsn

lsn attributes

lsn attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.71 debug management

management module parameters

management Specification

Parameter	Value
Type	*operational*
Element Name	management
Element URI	/axapi/v3/debug/management
Element Attributes	management_attributes
Partition Visibility	shared
Schema	`management schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/management

management attributes

management attributes

all

Description management all debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system

Description management system debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.72 debug mgcp

Debug mgcp

mgcp Specification

Parameter	Value
Type	*operational*
Element Name	mgcp
Element URI	/axapi/v3/debug/mgcp
Element Attributes	mgcp_attributes
Partition Visibility	shared
Schema	`mgcp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/mgcp

mgcp attributes

mgcp attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.73 debug migration

Debug VIP Migration

migration Specification

Parameter	Value
Type	*operational*
Element Name	migration
Element URI	/axapi/v3/debug/migration
Element Attributes	migration_attributes
Partition Visibility	shared
Schema	`migration schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/migration

migration attributes

migration attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.74 debug mlb

Debug MLB

mlb Specification

Parameter	Value
Type	*operational*
Element Name	mlb
Element URI	/axapi/v3/debug/mlb
Element Attributes	mlb_attributes
Partition Visibility	shared
Schema	`mlb schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/mlb

mlb attributes

mlb attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.75 debug monitor

Monitor debug output

monitor Specification

Parameter	Value
Type	*operational*
Element Name	monitor
Element URI	/axapi/v3/debug/monitor
Element Attributes	monitor_attributes
Partition Visibility	shared
Schema	`monitor schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/monitor

monitor attributes

monitor attributes

all-slots

Description Display debug output of both Master and Blade

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cpuid

Description CPU id to debug (0,1,...)

Type: number

Range: 0-65535

filename

Description Filename to save debug output

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

filesize

Description maximum file size to save debug messages (MB)

Type: number

Range: 1-300

Default: 1

no-stop

Description Donot spawn another rimacli

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description timeout to stop debug monitor in minutes

Type: number

Range: 1-9999

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.76 debug mqtt

Debug MQTT

mqtt Specification

Parameter	Value
Type	*operational*
Element Name	mqtt
Element URI	/axapi/v3/debug/mqtt
Element Attributes	mqtt_attributes
Partition Visibility	shared
Schema	`mqtt schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/mqtt

mqtt attributes

mqtt attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.77 debug msg-proxy

Debug msg proxy

msg-proxy Specification

Parameter	Value
Type	*operational*
Element Name	msg-proxy
Element URI	/axapi/v3/debug/msg-proxy
Element Attributes	msg-proxy_attributes
Partition Visibility	shared
Schema	`msg-proxy schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/msg-proxy

msg-proxy attributes

msg-proxy attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.78 debug ospf

Debug Open Shortest Path First (OSPF)

ospf Specification

Parameter	Value
Type	*operational*
Element Name	ospf
Element URI	/axapi/v3/debug/ospf
Element Attributes	ospf_attributes
Partition Visibility	shared
Schema	`ospf schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ospf

ospf attributes

ospf attributes

all

Description: all is a **JSON Block**. Please see below for *all*

Type: Object

Reference Object: */axapi/v3/debug/ospf/all*

bfd

Description: bfd is a **JSON Block**. Please see below for *bfd*

Type: Object

Reference Object: */axapi/v3/debug/ospf/bfd*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description: events is a **JSON Block**. Please see below for *events*

Type: Object

Reference Object: */axapi/v3/debug/ospf/events*

ifsm

Description: ifsm is a **JSON Block**. Please see below for *ifsm*

Type: Object

Reference Object: */axapi/v3/debug/ospf/ifsm*

lsa

Description: lsa is a **JSON Block**. Please see below for *lsa*

Type: Object

Reference Object: */axapi/v3/debug/ospf/lsa*

nfsm

Description: nfsm is a **JSON Block**. Please see below for *nfsm*

Type: Object

Reference Object: */axapi/v3/debug/ospf/nfsm*

nsm

Description: nsm is a **JSON Block**. Please see below for *nsm*

Type: Object

Reference Object: */axapi/v3/debug/ospf/nsm*

packet

Description: packet is a **JSON Block**. Please see below for *packet*

Type: Object

Reference Object: */axapi/v3/debug/ospf/packet*

route

Description: route is a **JSON Block**. Please see below for *route*

Type: Object

Reference Object: */axapi/v3/debug/ospf/route*

all

Specification	Value
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ifsm

Specification	Value
Type	*object*

events

Description IFSM Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status

Description IFSM Status Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description IFSM Timer Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsa

Specification	Value
Type	*object*

flooding

Description LSA Flooding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gererate

Description LSA Generation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

install

Description LSA Installation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maxage

Description LSA MaxAge processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

refresh

Description LSA Refreshment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route

Specification	Value
Type	*object*

ase

Description External route calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ia

Description Inter-Area route calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

install

Description Route installation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spf

Description SPF calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd

Specification	Value
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nfsm

Specification	Value
Type	*object*

events

Description NFSM Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status

Description NFSM Status Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description NFSM Timer Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

packet

Specification	Value
Type	*object*

dd

Description OSPFv3 Database Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Detail information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello

Description OSPFv3 Hello

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-ack

Description OSPFv3 Link State Acknowledgment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-request

Description OSPFv3 Link State Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-update

Description OSPFv3 Link State Update

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv

Description Packet received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send

Description Packet sent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

events

Specification	Value
Type	*object*

abr

Description OSPF ABR events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

asbr

Description OSPF ASBR events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

os

Description OS events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description Other router events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlink

Description Virtual-Link event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nsm

Specification	Value
Type	*object*

interface

Description NSM interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description NSM redistribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.79 debug ospf all

Enable all debugging

all Specification

Parameter	Value
Type	*operational*
Element Name	all
Element URI	/axapi/v3/debug/ospf/all
Element Attributes	all_attributes
Partition Visibility	shared
Schema	`all schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ospf/all

all attributes

all attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.80 debug ospf bfd

Bidirectional Forwarding Detection (BFD)

bfd Specification

Parameter	Value
Type	*operational*
Element Name	bfd
Element URI	/axapi/v3/debug/ospf/bfd
Element Attributes	bfd_attributes
Partition Visibility	shared
Schema	`bfd schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ospf/bfd

bfd attributes

bfd attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.81 debug ospf events

OSPFv3 event

events Specification

Parameter	Value
Type	*operational*
Element Name	events
Element URI	/axapi/v3/debug/ospf/events
Element Attributes	events_attributes
Partition Visibility	shared
Schema	`events schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ospf/events

events attributes

events attributes

abr

Description OSPF ABR events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

asbr

Description OSPF ASBR events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

os

Description OS events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description Other router events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlink

Description Virtual-Link event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.26.82 debug ospf ifsm

OSPFv3 Interface State Machine

ifsm Specification

Parameter	Value
Type	*operational*
Element Name	ifsm
Element URI	/axapi/v3/debug/ospf/ifsm
Element Attributes	ifsm_attributes
Partition Visibility	shared
Schema	`ifsm schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ospf/ifsm

ifsm attributes

ifsm attributes

events

Description IFSM Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status

Description IFSM Status Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description IFSM Timer Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.83 debug ospf lsa

OSPFv3 Link State Advertisement

lsa Specification

Parameter	Value
Type	*operational*
Element Name	lsa
Element URI	/axapi/v3/debug/ospf/lsa
Element Attributes	lsa_attributes
Partition Visibility	shared
Schema	`lsa schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ospf/lsa

lsa attributes

lsa attributes

flooding

Description LSA Flooding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gererate

Description LSA Generation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

install

Description LSA Installation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maxage

Description LSA MaxAge processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

refresh

Description LSA Refreshment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.84 debug ospf nfsm

OSPFv3 Neighbor State Machine

nfsm Specification

Parameter	Value
Type	*operational*
Element Name	nfsm
Element URI	/axapi/v3/debug/ospf/nfsm
Element Attributes	nfsm_attributes
Partition Visibility	shared
Schema	`nfsm schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ospf/nfsm

nfsm attributes

nfsm attributes

events

Description NFSM Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status

Description NFSM Status Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description NFSM Timer Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.85 debug ospf nsm

OSPFv3 NSM information

nsm Specification

Parameter	Value
Type	*operational*
Element Name	nsm
Element URI	/axapi/v3/debug/ospf/nsm
Element Attributes	nsm_attributes
Partition Visibility	shared
Schema	`nsm schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ospf/nsm

nsm attributes

nsm attributes

interface

Description NSM interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description NSM redistribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.86 debug ospf packet

OSPFv3 packets

packet Specification

Parameter	Value
Type	*operational*
Element Name	packet
Element URI	/axapi/v3/debug/ospf/packet
Element Attributes	packet_attributes
Partition Visibility	shared
Schema	`packet schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ospf/packet

packet attributes

packet attributes

dd

Description OSPFv3 Database Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Detail information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello

Description OSPFv3 Hello

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-ack

Description OSPFv3 Link State Acknowledgment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-request

Description OSPFv3 Link State Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-update

Description OSPFv3 Link State Update

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv

Description Packet received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send

Description Packet sent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.87 debug ospf route

OSPFv3 route information

route Specification

Parameter	Value
Type	*operational*
Element Name	route
Element URI	/axapi/v3/debug/ospf/route
Element Attributes	route_attributes
Partition Visibility	shared
Schema	`route schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ospf/route

route attributes

route attributes

ase

Description External route calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ia

Description Inter-Area route calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

install

Description Route installation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spf

Description SPF calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.88 debug packet

Debug packet

packet Specification

Parameter	Value
Type	*operational*
Element Name	packet
Element URI	/axapi/v3/debug/packet
Element Attributes	packet_attributes
Partition Visibility	shared
Schema	`packet schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/packet

packet attributes

packet attributes

all-ipv4

Description All

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all-ipv6

Description All

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all-sctp-ports

Description All

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all-tcp-ports

Description All

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all-udp-ports

Description All

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

arp

Description ARP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

count

Description Maximum packets to capture. Default is 3000 (Specify maximum packet number. For unlimited, specify 0)

Type: number

Range: 0-65535

detail

Description Print packet content

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface number

Type: number

Format: interface

icmp

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmpv6

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interface

Description Interface to debug

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4ad

Description IP Address

Type: string

Format: ipv4-address

ipv6

Description IPV6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6ad

Description IPV6 Address

Type: string

Format: ipv6-address

l3-protocol

Description Layer 3 protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4-protocol

Description Layer 4 protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor

Description IPv6 Neighbor/Router

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-range

Description Port Number

Type: number

Range: 1-65535

sctp

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timestamp

Description Print timestamp instead of jiffies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description ve number

Type: number

Range: 2-4094

3.26.89 debug packet-capture

Display live captures from packet-capture

packet-capture Specification

Parameter	Value
Type	*operational*
Element Name	packet-capture
Element URI	/axapi/v3/debug/packet-capture
Element Attributes	packet-capture_attributes
Partition Visibility	shared
Schema	`packet-capture schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/packet-capture

packet-capture attributes

packet-capture attributes

capture-config

Description Specify capture-config. Default all (Capture config)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

count

Description Maximum packets to capture. Default is 10 (Specify maximum packet number. For unlimited, specify 0)

Type: number

Range: 0-1000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.90 debug polltech-enable

Enable polltech switch

polltech-enable Specification

Parameter	Value
Type	*operational*
Element Name	polltech-enable
Element URI	/axapi/v3/debug/polltech-enable
Element Attributes	polltech-enable_attributes
Partition Visibility	shared
Schema	`polltech-enable schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/polltech-enable

polltech-enable attributes

polltech-enable attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.91 debug pop3-proxy

Debug POP3 proxy

pop3-proxy Specification

Parameter	Value
Type	*operational*
Element Name	pop3-proxy
Element URI	/axapi/v3/debug/pop3-proxy
Element Attributes	pop3-proxy_attributes
Partition Visibility	shared
Schema	`pop3-proxy schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/pop3-proxy

pop3-proxy attributes

pop3-proxy attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.92 debug proxy

Debug proxy

proxy Specification

Parameter	Value
Type	*operational*
Element Name	proxy
Element URI	/axapi/v3/debug/proxy
Element Attributes	proxy_attributes
Partition Visibility	shared
Schema	`proxy schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/proxy

proxy attributes

proxy attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.93 debug quic

Debug QUIC

quic Specification

Parameter	Value
Type	*operational*
Element Name	quic
Element URI	/axapi/v3/debug/quic
Element Attributes	quic_attributes
Partition Visibility	shared
Schema	`quic schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/quic

quic attributes

quic attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description Debug level (Level 1-5)

Type: number

Range: 1-5

tls

Description QUIC TLS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tls-level

Description Debug level (Level 1-5)

Type: number

Range: 1-5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.94 debug rate-limit

Debug Rate Limiting

rate-limit Specification

Parameter	Value
Type	*operational*
Element Name	rate-limit
Element URI	/axapi/v3/debug/rate-limit
Element Attributes	rate-limit_attributes
Partition Visibility	shared
Schema	`rate-limit schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/rate-limit

rate-limit attributes

rate-limit attributes

cpu-id

Description Starting From 0

Type: number

Range: 0-60

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

entry-ip

Description Source Address

Type: string

Format: ipv4-address

life-cycle-log

Description Print entry life cycle info

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description CPS 0 Uplink 1 Downlink 2 Total 3

Type: number

Range: 0-3

per-pkt-log

Description Print entry info based on code path of each pkt

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

raw-log

Description Print entry info per second

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tpl-id

Description Template ID

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.95 debug rip

Routing Information Protocol (RIP) for IPv6

rip Specification

Parameter	Value
Type	*operational*
Element Name	rip
Element URI	/axapi/v3/debug/rip
Element Attributes	rip_attributes
Partition Visibility	shared
Schema	`rip schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/rip

rip attributes

rip attributes

all

Description Enable all debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Detailed information display

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description RIPng events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nsm

Description RIPng and NSM communication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet

Description RIPng packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv

Description RIPng receive packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send

Description RIPng send packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.26.96 debug rt

Routing module parameters

rt Specification

Parameter	Value
Type	*operational*
Element Name	rt
Element URI	/axapi/v3/debug/rt
Element Attributes	rt_attributes
Partition Visibility	shared
Schema	`rt schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/rt

rt attributes

rt attributes

all

Description Routing all debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

check

Description ROUTING debug check switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

command

Description Routing debug command switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.97 debug scaleout

Debug scaleout

scaleout Specification

Parameter	Value
Type	*operational*
Element Name	scaleout
Element URI	/axapi/v3/debug/scaleout
Element Attributes	scaleout_attributes
Partition Visibility	shared
Schema	`scaleout schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/scaleout

scaleout attributes

scaleout attributes

config

Description Debug logs for scaleout config change

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

debug-level

Description Debug level (Level 1-3)

Type: number

Range: 1-3

event

Description Debug logs for scaleout events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet

Description Debug logs for scaleout packet flow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-sync

Description Debug logs for scaleout session sync events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.98 debug sctp

Debug SCTP

sctp Specification

Parameter	Value
Type	*operational*
Element Name	sctp
Element URI	/axapi/v3/debug/sctp
Element Attributes	sctp_attributes
Partition Visibility	shared
Schema	`sctp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/sctp

sctp attributes

sctp attributes

level

Description Debug level (Level 1: Errors Level 2: Minimal_info Level 3: Detailed_info)

Type: number

Range: 1-3

Default: 1

packet

Description Debug SCTP packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.99 debug sess

Debug sessions

sess Specification

Parameter	Value
Type	*operational*
Element Name	sess
Element URI	/axapi/v3/debug/sess
Element Attributes	sess_attributes
Partition Visibility	shared
Schema	`sess schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/sess

sess attributes

sess attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.100 debug sip

Debug SIP

sip Specification

Parameter	Value
Type	*operational*
Element Name	sip
Element URI	/axapi/v3/debug/sip
Element Attributes	sip_attributes
Partition Visibility	shared
Schema	`sip schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/sip

sip attributes

sip attributes

ACK

Description Method ACK

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

BYE

Description SIP Method BYE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

CANCEL

Description SIP Method CANCEL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

INFO

Description SIP Method INFO

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

INVITE

Description Method INVITE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

MESSAGE

Description SIP Method MESSAGE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

NOTIFY

Description SIP Method NOTIFY

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

OPTIONS

Description SIP Method OPTIONS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

PRACK

Description SIP Method PRACK

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

PUBLISH

Description SIP Method PUBLISH

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

REFER

Description SIP Method REFER

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

REGISTER

Description SIP Method REGISTER

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

SUBSCRIBE

Description SIP Method SUBSCRIBE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

UPDATE

Description SIP Method UPDATE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description Set filter with SIP method types

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.101 debug smpp

Debug smpp

smpp Specification

Parameter	Value
Type	*operational*
Element Name	smpp
Element URI	/axapi/v3/debug/smpp
Element Attributes	smpp_attributes
Partition Visibility	shared
Schema	`smpp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/smpp

smpp attributes

smpp attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.102 debug smtp

Debug SMTP

smtp Specification

Parameter	Value
Type	*operational*
Element Name	smtp
Element URI	/axapi/v3/debug/smtp
Element Attributes	smtp_attributes
Partition Visibility	shared
Schema	`smtp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/smtp

smtp attributes

smtp attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.103 debug snmp

SNMP module parameters

snmp Specification

Parameter	Value
Type	*operational*
Element Name	snmp
Element URI	/axapi/v3/debug/snmp
Element Attributes	snmp_attributes
Partition Visibility	shared
Schema	`snmp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/snmp

snmp attributes

snmp attributes

all

Description SNMP all debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

error

Description SNMP debug error switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event

Description SNMP debug event switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.104 debug ssl

Debug SSL operation

ssl Specification

Parameter	Value
Type	*operational*
Element Name	ssl
Element URI	/axapi/v3/debug/ssl
Element Attributes	ssl_attributes
Partition Visibility	shared
Schema	`ssl schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ssl

ssl attributes

ssl attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.105 debug ssli

Debug SSLi

ssli Specification

Parameter	Value
Type	*operational*
Element Name	ssli
Element URI	/axapi/v3/debug/ssli
Element Attributes	ssli_attributes
Partition Visibility	shared
Schema	`ssli schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/ssli

ssli attributes

ssli attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.106 debug system

System module parameters

system Specification

Parameter	Value
Type	*operational*
Element Name	system
Element URI	/axapi/v3/debug/system
Element Attributes	system_attributes
Partition Visibility	shared
Schema	`system schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/system

system attributes

system attributes

debug_system_enum

Description 'all': System all debug switch; 'aaa': System debug aaa switch; 'import-export': System debug import or export switch; 'ssl': System debug ssl switch;

Type: string

Supported Values: all, aaa, import-export, ssl

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.107 debug table-sync-event

Debug table sync events

table-sync-event Specification

Parameter	Value
Type	*operational*
Element Name	table-sync-event
Element URI	/axapi/v3/debug/table-sync-event
Element Attributes	table-sync-event_attributes
Partition Visibility	shared
Schema	`table-sync-event schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/table-sync-event

table-sync-event attributes

table-sync-event attributes

all

Description all Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all,mac, arp, nd6, fibv4, and fibv6 are mutually exclusive

arp

Description ARP Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: arp,all, mac, nd6, fibv4, and fibv6 are mutually exclusive

fibv4

Description IPv4 FIB Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fibv4,all, mac, arp, nd6, and fibv6 are mutually exclusive

fibv6

Description IPv6 FIB Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fibv6,all, mac, arp, nd6, and fibv4 are mutually exclusive

mac

Description MAC Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: mac,all, arp, nd6, fibv4, and fibv6 are mutually exclusive

nd6

Description ND6 Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: nd6,all, mac, arp, fibv4, and fibv6 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.108 debug tcp

Debug TCP

tcp Specification

Parameter	Value
Type	*operational*
Element Name	tcp
Element URI	/axapi/v3/debug/tcp
Element Attributes	tcp_attributes
Partition Visibility	shared
Schema	`tcp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/tcp

tcp attributes

tcp attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

stack

Description Debug TCP stack

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.109 debug threat-intel

Debug threat intel module

threat-intel Specification

Parameter	Value
Type	*operational*
Element Name	threat-intel
Element URI	/axapi/v3/debug/threat-intel
Element Attributes	threat-intel_attributes
Partition Visibility	shared
Schema	`threat-intel schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/threat-intel

threat-intel attributes

threat-intel attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.110 debug tunnel

Debug IPsec tunnel

tunnel Specification

Parameter	Value
Type	*operational*
Element Name	tunnel
Element URI	/axapi/v3/debug/tunnel
Element Attributes	tunnel_attributes
Partition Visibility	shared
Schema	`tunnel schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/tunnel

tunnel attributes

tunnel attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.111 debug vector

Debug vector flow

vector Specification

Parameter	Value
Type	*operational*
Element Name	vector
Element URI	/axapi/v3/debug/vector
Element Attributes	vector_attributes
Partition Visibility	shared
Schema	`vector schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/vector

vector attributes

vector attributes

error

Description Debug logs for vector errors

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet

Description Debug logs for vector packet flow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trace

Description Debug logs for vector callbacks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.112 debug visibility

Debug visibility

visibility Specification

Parameter	Value
Type	*operational*
Element Name	visibility
Element URI	/axapi/v3/debug/visibility
Element Attributes	visibility_attributes
Partition Visibility	shared
Schema	`visibility schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/visibility

visibility attributes

visibility attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

xflow

Description debug xflow monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.26.113 debug vpn

Debug IPsec vpn

vpn Specification

Parameter	Value
Type	*operational*
Element Name	vpn
Element URI	/axapi/v3/debug/vpn
Element Attributes	vpn_attributes
Partition Visibility	shared
Schema	`vpn schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/vpn

vpn attributes

vpn attributes

ike-gateway

Description Specify IKE gateway name (gateway filter name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/vpn/ike-gateway*

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

strict

Description Only record the logs that can match Ike-gateway name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.114 debug vtep-error

Debug Overlay errors

vtep-error Specification

Parameter	Value
Type	*operational*
Element Name	vtep-error
Element URI	/axapi/v3/debug/vtep-error
Element Attributes	vtep-error_attributes
Partition Visibility	shared
Schema	`vtep-error schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/vtep-error

vtep-error attributes

vtep-error attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.115 debug vtep-event

Debug Overlay related control plane events

vtep-event Specification

Parameter	Value
Type	*operational*
Element Name	vtep-event
Element URI	/axapi/v3/debug/vtep-event
Element Attributes	vtep-event_attributes
Partition Visibility	shared
Schema	`vtep-event schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/vtep-event

vtep-event attributes

vtep-event attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.116 debug vtep-packet

Debug Overlay packet forwarding

vtep-packet Specification

Parameter	Value
Type	*operational*
Element Name	vtep-packet
Element URI	/axapi/v3/debug/vtep-packet
Element Attributes	vtep-packet_attributes
Partition Visibility	shared
Schema	`vtep-packet schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/vtep-packet

vtep-packet attributes

vtep-packet attributes

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.117 debug waf

Debug Web Application Firewall

waf Specification

Parameter	Value
Type	*operational*
Element Name	waf
Element URI	/axapi/v3/debug/waf
Element Attributes	waf_attributes
Partition Visibility	shared
Schema	`waf schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/waf

waf attributes

waf attributes

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.26.118 debug web-category

Debug Web Category

web-category Specification

Parameter	Value
Type	*operational*
Element Name	web-category
Element URI	/axapi/v3/debug/web-category
Element Attributes	web-category_attributes
Partition Visibility	shared
Schema	`web-category schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug/web-category

web-category attributes

web-category attributes

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.27 delete

Objects:

3.27.1 delete auth-jwks

JWK file

auth-jwks Specification

Parameter	Value
Type	*operational*
Element Name	auth-jwks
Element URI	/axapi/v3/delete/auth-jwks
Element Attributes	auth-jwks_attributes
Partition Visibility	shared
Schema	`auth-jwks schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/auth-jwks

auth-jwks attributes

auth-jwks attributes

jwk-name

Description Local File Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

3.27.2 delete auth-portal

Portal file for http authentication

auth-portal Specification

Parameter	Value
Type	*operational*
Element Name	auth-portal
Element URI	/axapi/v3/delete/auth-portal
Element Attributes	auth-portal_attributes
Partition Visibility	shared
Schema	`auth-portal schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/auth-portal

auth-portal attributes

auth-portal attributes

portal-name

Description Local File Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

3.27.3 delete auth-portal-image

Image file for default portal

auth-portal-image Specification

Parameter	Value
Type	*operational*
Element Name	auth-portal-image
Element URI	/axapi/v3/delete/auth-portal-image
Element Attributes	auth-portal-image_attributes
Partition Visibility	shared
Schema	`auth-portal-image schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/auth-portal-image

auth-portal-image attributes

auth-portal-image attributes

image-name

Description Local File Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

3.27.4 delete auth-saml-idp

SAML metadata of identity provider

auth-saml-idp Specification

Parameter	Value
Type	*operational*
Element Name	auth-saml-idp
Element URI	/axapi/v3/delete/auth-saml-idp
Element Attributes	auth-saml-idp_attributes
Partition Visibility	shared
Schema	`auth-saml-idp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/auth-saml-idp

auth-saml-idp attributes

auth-saml-idp attributes

saml-idp-name

Description Local IDP metadata name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

3.27.5 delete bw-list

Blacklist/whitelist

bw-list Specification

Parameter	Value
Type	*operational*
Element Name	bw-list
Element URI	/axapi/v3/delete/bw-list
Element Attributes	bw-list_attributes
Partition Visibility	shared
Schema	`bw-list schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/bw-list

bw-list attributes

bw-list attributes

file-name

Description Blacklist/whitelist Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

3.27.6 delete cgnv6

Delete cgnv6 related files

cgnv6 Specification

Parameter	Value
Type	*operational*
Element Name	cgnv6
Element URI	/axapi/v3/delete/cgnv6
Element Attributes	cgnv6_attributes
Partition Visibility	shared
Schema	`cgnv6 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/cgnv6

cgnv6 attributes

cgnv6 attributes

filename

Description Specify the port-mapping-file to be deleted

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

fixed-nat

Description Delete fixed-nat port-mapping-file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-4o6-binding-table-validation-log

Description LW-4O6 Binding Table validation log File

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-filename

Description LW-4O6 Binding Table Validation Log File Name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

3.27.7 delete ddos

Delete ddos file

ddos Specification

Parameter	Value
Type	*operational*
Element Name	ddos
Element URI	/axapi/v3/delete/ddos
Element Attributes	ddos_attributes
Partition Visibility	shared
Schema	`ddos schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/ddos

ddos attributes

ddos attributes

ddos-script

Description Specify file to be deleted

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

3.27.8 delete debug-monitor

Debug File

debug-monitor Specification

Parameter	Value
Type	*operational*
Element Name	debug-monitor
Element URI	/axapi/v3/delete/debug-monitor
Element Attributes	debug-monitor_attributes
Partition Visibility	shared
Schema	`debug-monitor schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/debug-monitor

debug-monitor attributes

debug-monitor attributes

file-name

Description Local File Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

3.27.9 delete domain-list

Delete ddos file

domain-list Specification

Parameter	Value
Type	*operational*
Element Name	domain-list
Element URI	/axapi/v3/delete/domain-list
Element Attributes	domain-list_attributes
Partition Visibility	shared
Schema	`domain-list schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/domain-list

domain-list attributes

domain-list attributes

domain-list-name

Description Specify file to be deleted

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

3.27.10 delete geo-location

Delete geo-location file

geo-location Specification

Parameter	Value
Type	*operational*
Element Name	geo-location
Element URI	/axapi/v3/delete/geo-location
Element Attributes	geo-location_attributes
Partition Visibility	shared
Schema	`geo-location schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/geo-location

geo-location attributes

geo-location attributes

all

Description Delete all files

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and filename are mutually exclusive

filename

Description Specify file to be deleted

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: filename and all are mutually exclusive

3.27.11 delete glm-license

Remove glm license

glm-license Specification

Parameter	Value
Type	*operational*
Element Name	glm-license
Element URI	/axapi/v3/delete/glm-license
Element Attributes	glm-license_attributes
Partition Visibility	shared
Schema	`glm-license schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/glm-license

glm-license attributes

glm-license attributes

a10-ti

Description only remove A10 Threat Intel license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipsec-vpn

Description only remove IPSEC VPN license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ngwaf

Description only remove NGWAF license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

qosmos

Description only remove QOSMOS license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secure-gaming

Description only remove Secure gaming license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threatstop

Description only remove ThreatSTOP license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

webroot

Description only remove Webroot license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

webroot-ti

Description only remove Webroot Threat Intel license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.27.12 delete guest-file

Delete guest-file

guest-file Specification

Parameter	Value
Type	*operational*
Element Name	guest-file
Element URI	/axapi/v3/delete/guest-file
Element Attributes	guest-file_attributes
Partition Visibility	shared
Schema	`guest-file schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/guest-file

guest-file attributes

guest-file attributes

file-name

Description Guest-File Name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

3.27.13 delete health-external

Address the External Script Program

health-external Specification

Parameter	Value
Type	*operational*
Element Name	health-external
Element URI	/axapi/v3/delete/health-external
Element Attributes	health-external_attributes
Partition Visibility	shared
Schema	`health-external schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/health-external

health-external attributes

health-external attributes

file-name

Description Specify the Program Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

3.27.14 delete health-postfile

Address the HTTP Post data file

health-postfile Specification

Parameter	Value
Type	*operational*
Element Name	health-postfile
Element URI	/axapi/v3/delete/health-postfile
Element Attributes	health-postfile_attributes
Partition Visibility	shared
Schema	`health-postfile schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/health-postfile

health-postfile attributes

health-postfile attributes

file-name

Description Specify the File Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

3.27.15 delete local-uri-file

Local URI files for http response

local-uri-file Specification

Parameter	Value
Type	*operational*
Element Name	local-uri-file
Element URI	/axapi/v3/delete/local-uri-file
Element Attributes	local-uri-file_attributes
Partition Visibility	shared
Schema	`local-uri-file schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/local-uri-file

local-uri-file attributes

local-uri-file attributes

file-name

Description Local File Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

3.27.16 delete ng-waf-custom-page

Custom html file for ng-waf

ng-waf-custom-page Specification

Parameter	Value
Type	*operational*
Element Name	ng-waf-custom-page
Element URI	/axapi/v3/delete/ng-waf-custom-page
Element Attributes	ng-waf-custom-page_attributes
Partition Visibility	shared
Schema	`ng-waf-custom-page schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/ng-waf-custom-page

ng-waf-custom-page attributes

ng-waf-custom-page attributes

page-name

Description Local File Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

3.27.17 delete partition

hard delete a partition

partition Specification

Parameter	Value
Type	*operational*
Element Name	partition
Element URI	/axapi/v3/delete/partition
Element Attributes	partition_attributes
Partition Visibility	shared
Schema	`partition schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/partition

partition attributes

partition attributes

id

Description Specify unique Partition id

Type: number

partition-name

Description Object partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/partition*

3.27.18 delete rpz

Delete Response Policy Zone file

rpz Specification

Parameter	Value
Type	*operational*
Element Name	rpz
Element URI	/axapi/v3/delete/rpz
Element Attributes	rpz_attributes
Partition Visibility	shared
Schema	`rpz schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/rpz

rpz attributes

rpz attributes

file-name

Description Response Policy Zone File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

3.27.19 delete service-partition

Hard delete a service partition

service-partition Specification

Parameter	Value
Type	*operational*
Element Name	service-partition
Element URI	/axapi/v3/delete/service-partition
Element Attributes	service-partition_attributes
Partition Visibility	shared
Schema	`service-partition schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/service-partition

service-partition attributes

service-partition attributes

id

Description Specify unique service partition id

Type: number

partition-name

Description Object service partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Reference Object: */axapi/v3/service-partition*

3.27.20 delete startup-config

Startup Configuration profile

startup-config Specification

Parameter	Value
Type	*operational*
Element Name	startup-config
Element URI	/axapi/v3/delete/startup-config
Element Attributes	startup-config_attributes
Partition Visibility	shared
Schema	`startup-config schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/startup-config

startup-config attributes

startup-config attributes

file-name

Description Local Configuration Profile Name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

3.27.21 delete threat-intel

Delete threat-intel files

threat-intel Specification

Parameter	Value
Type	*operational*
Element Name	threat-intel
Element URI	/axapi/v3/delete/threat-intel
Element Attributes	threat-intel_attributes
Partition Visibility	shared
Schema	`threat-intel schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/threat-intel

threat-intel attributes

threat-intel attributes

database

Description 'webroot': Delete webroot module database;

Type: string

Supported Values: webroot

3.27.22 delete tsig

Delete Transaction SIGnatures Key file

tsig Specification

Parameter	Value
Type	*operational*
Element Name	tsig
Element URI	/axapi/v3/delete/tsig
Element Attributes	tsig_attributes
Partition Visibility	shared
Schema	`tsig schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/tsig

tsig attributes

tsig attributes

file-name

Description Transaction SIGnatures Key File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

3.27.23 delete web-category

Delete web-category database

web-category Specification

Parameter	Value
Type	*operational*
Element Name	web-category
Element URI	/axapi/v3/delete/web-category
Element Attributes	web-category_attributes
Partition Visibility	shared
Schema	`web-category schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/delete/web-category

web-category attributes

web-category attributes

database

Description Delete web-category database

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.28 device-context

Objects:

3.28.1 device-context

Switch context to a particular device for VCS config

device-context Specification

Parameter	Value
Type	*operational*
Element Name	device-context
Element URI	/axapi/v3/device-context
Element Attributes	device-context_attributes
Partition Visibility	shared
Schema	`device-context schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/device-context

device-context attributes

device-context attributes

device-id

Description Device ID

Type: number

3.29 dnssec

Objects:

3.29.1 dnssec dnskey

DNSKEY Resource Records of child zones

dnskey Specification

Parameter	Value
Type	*operational*
Element Name	dnskey
Element URI	/axapi/v3/dnssec/dnskey
Element Attributes	dnskey_attributes
Partition Visibility	shared
Schema	`dnskey schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/dnssec/dnskey

dnskey attributes

dnskey attributes

key-delete

Description Delete the DNSKEY file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zone-name

Description DNS zone name of the child zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

3.29.2 dnssec ds

Delegation Signer(DS) Resource Records of child zones

ds Specification

Parameter	Value
Type	*operational*
Element Name	ds
Element URI	/axapi/v3/dnssec/ds
Element Attributes	ds_attributes
Partition Visibility	shared
Schema	`ds schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/dnssec/ds

ds attributes

ds attributes

ds-delete

Description Delete the DS file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zone-name

Description DNS zone name of the child zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

3.29.3 dnssec key-rollover

DNSSEC Key rollover

key-rollover Specification

Parameter	Value
Type	*operational*
Element Name	key-rollover
Element URI	/axapi/v3/dnssec/key-rollover
Element Attributes	key-rollover_attributes
Partition Visibility	shared
Schema	`key-rollover schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/dnssec/key-rollover

key-rollover attributes

key-rollover attributes

dnssec-key-type

Description 'ZSK': Zone Signing Key; 'KSK': Key Signing Key;

Type: string

Supported Values: ZSK, KSK

ds-ready-in-parent-zone

Description DS RR is already ready in the parent zone

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ksk-start

Description start KSK rollover in emergency mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zone-name

Description Specify the name for the DNS zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

zsk-start

Description start ZSK rollover in emergency mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.29.4 dnssec sign-zone-now

sign zone right now

sign-zone-now Specification

Parameter	Value
Type	*operational*
Element Name	sign-zone-now
Element URI	/axapi/v3/dnssec/sign-zone-now
Element Attributes	sign-zone-now_attributes
Partition Visibility	shared
Schema	`sign-zone-now schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/dnssec/sign-zone-now

sign-zone-now attributes

sign-zone-now attributes

zone-name

Description Specify the name for the DNS zone, empty means sign all zones

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

3.30 domain-group-oper

Objects:

3.31 domain-list-oper

Objects:

3.32 enable-bgp-advertisement

Objects:

3.32.1 enable-bgp-advertisement

Enable BGP Advertisement

enable-bgp-advertisement Specification

Parameter	Value
Type	*operational*
Element Name	enable-bgp-advertisement
Element URI	/axapi/v3/enable-bgp-advertisement
Element Attributes	enable-bgp-advertisement_attributes
Partition Visibility	shared
Schema	`enable-bgp-advertisement schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/enable-bgp-advertisement

enable-bgp-advertisement attributes

enable-bgp-advertisement attributes

enable-bgp-advertisement

Description Enable BGP Advertisement

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.33 enable-password

Objects:

3.33.1 enable-password

Modify enable password parameters

enable-password Specification

Parameter	Value
Type	*operational*
Element Name	enable-password
Element URI	/axapi/v3/enable-password
Element Attributes	enable-password_attributes
Partition Visibility	shared
Schema	`enable-password schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/enable-password

enable-password attributes

enable-password attributes

encrypted

Description Specific an ENCRYPTED password string (The ENCRYPTED password string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

password

Description The password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

3.34 enable-site-license

Objects:

3.34.1 enable-site-license

Enable Site License for Azure

enable-site-license Specification

Parameter	Value
Type	*operational*
Object Key(s)	*hash-key*
Element Name	enable-site-license
Element URI	/axapi/v3/enable-site-license
Element Attributes	enable-site-license_attributes
Partition Visibility	shared
Schema	`enable-site-license schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/enable-site-license

enable-site-license attributes

enable-site-license attributes

hash-key

Description Input Hash key to enable licensing

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

3.35 erase

Objects:

3.35.1 erase

Erase Configuration

erase Specification

Parameter	Value
Type	*operational*
Element Name	erase
Element URI	/axapi/v3/erase
Element Attributes	erase_attributes
Partition Visibility	shared
Schema	`erase schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/erase

erase attributes

erase attributes

all-partitions

Description Wipe out all service config for all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

grubconfig

Description Reset boot grub settings

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preserve-accounts

Description preserve admin accounts

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preserve-management

Description preserve managememt ip and default gateway

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reload

Description reload after erase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-config

Description Wipe out all service config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.36 export

Objects:

3.36.1 export

Put files to remote site

export Specification

Parameter	Value
Type	*operational*
Element Name	export
Element URI	/axapi/v3/export
Element Attributes	export_attributes
Partition Visibility	shared
Schema	`export schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/export

export attributes

export attributes

aflex

Description aFleX Script Source File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-jwks

Description Json web key

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-portal

Description Portal file for http authentication

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-portal-image

Description Image file for default portal

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

axdebug

Description AX Debug Packet File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

bw-list

Description Black white List File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ca-cert

Description CA Cert File

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

capture-config

Description Capture-config pcapng file

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

capture-config-realtime

Description Capture-config pcapng real-time file (For GUI)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

class-list

Description Class List File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

csr

Description Certificate Signing Request

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

debug-monitor

Description Debug Monitor Output

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

debug-traffic-capture

Description Debug-Traffic-Capture pcapng file

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

debug-traffic-capture-chassis

Description Debug-Traffic-Capture pcapng file

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

debug-traffic-capture-chassis-slot

Description specify slot id in chassis

Type: number

Range: 0-1

dnssec-dnskey

Description DNSSEC DNSKEY(KSK) file for child zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

dnssec-ds

Description DNSSEC DS file for child zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

domain-list

Description Domain List File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

externalfilename

Description Export the External Program from the System

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

fixed-nat

Description Fixed NAT Port Mapping File

Type: string

Maximum Length: 256 characters

Maximum Length: 1 characters

fixed-nat-archive

Description Fixed NAT Port Mapping Archive File

Type: string

Format: string-rlx

Maximum Length: 256 characters

Maximum Length: 1 characters

geo-location

Description Geo-location CSV File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

geo-location-archive

Description: geo-location-archive is a **JSON Block**. Please see below for *geo-location-archive*

Type: Object

Reference Object: */axapi/v3/export/geo-location-archive*

ip-map-list

Description IP Map List File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ipsec-error-dump

Description IPsec error dump File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

local-uri-file

Description Local URI files for http response

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lw-4o6

Description LW-4over6 Binding Table File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lw-4o6-binding-table-validation-log

Description LW-4over6 Binding Table Validation Log File

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

merged-pcap

Description Export the merged pcap file when there are multiple Export sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mon-entity-debug-file

Description Enter Mon entity debug file name

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

password

Description password for the remote site

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

per-cpu

Description Export the per-cpu files along with the merged pcap file in .tgz format

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pkt-count

Description Specify number of latest packets to export

Type: number

Range: 1-1000

pktcapture-file

Description Enter Pktcapture file name

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

profile

Description Startup-config Profile

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

remote-file

Description profile name for remote url

Type: string

Format: url

Mutual Exclusion: remote-file and store-name are mutually exclusive

rpz

Description Response Policy Zone File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

running-config

Description Running Config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml-idp-name

Description SAML metadata of identity provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ssl-cert

Description SSL Cert File

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ssl-cert-key

Description Local SSL Key/Certificate file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ssl-crl

Description SSL Crl File

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ssl-key

Description SSL Key File

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

startup-config

Description Startup Config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status-check

Description check export task status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

store

Description: store is a **JSON Block**. Please see below for *store*

Type: Object

Reference Object: */axapi/v3/export/store*

store-name

Description Export store name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: store-name and remote-file are mutually exclusive

syslog

Description Enter "messages" as the default syslog file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

tgz

Description Export the merged pcap in .tgz format

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

thales-kmdata

Description Thales Kmdata files

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

thales-secworld

Description Thales security world files

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

tsig

Description Transaction SIGnatures Key file

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

visibility

Description Export Visibility module related files

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

xml-schema

Description XML-Schema File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

geo-location-archive

Specification	Value
Type	*object*

geo-location-archive-name

Description 'GeoLite2-ASN-Archive': GeoLite2-ASN CSV Zipped File; 'GeoLite2-City-Archive': GeoLite2-City CSV Zipped File; 'GeoLite2-Country-Archive': GeoLite2-Country CSV Zipped File;

Type: string

Supported Values: GeoLite2-ASN-Archive, GeoLite2-City-Archive, GeoLite2-Country-Archive

password

Description password for the remote site

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

remote-file

Description Profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

store

Specification	Value
Type	*object*

create

Description Create an export store profile

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

delete

Description Delete an export store profile

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description profile name to store remote url

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

remote-file

Description

Type: string

Format: url

3.36.2 export geo-location-archive

Geo-location Archive File

geo-location-archive Specification

Parameter	Value
Type	*operational*
Element Name	geo-location-archive
Element URI	/axapi/v3/export/geo-location-archive
Element Attributes	geo-location-archive_attributes
Partition Visibility	shared
Schema	`geo-location-archive schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/export/geo-location-archive

geo-location-archive attributes

geo-location-archive attributes

geo-location-archive-name

Description 'GeoLite2-ASN-Archive': GeoLite2-ASN CSV Zipped File; 'GeoLite2-City-Archive': GeoLite2-City CSV Zipped File; 'GeoLite2-Country-Archive': GeoLite2-Country CSV Zipped File;

Type: string

Supported Values: GeoLite2-ASN-Archive, GeoLite2-City-Archive, GeoLite2-Country-Archive

password

Description password for the remote site

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

remote-file

Description Profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.36.3 export store

Create store name for remote url

store Specification

Parameter	Value
Type	*operational*
Element Name	store
Element URI	/axapi/v3/export/store
Element Attributes	store_attributes
Partition Visibility	shared
Schema	`store schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/export/store

store attributes

store attributes

create

Description Create an export store profile

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

delete

Description Delete an export store profile

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description profile name to store remote url

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

remote-file

Description

Type: string

Format: url

3.37 file

Objects:

3.37.1 file aflex

aflex file information and management commands

aflex Specification

Parameter	Value
Type	*operational*
Element Name	aflex
Element URI	/axapi/v3/file/aflex
Element Attributes	aflex_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/aflex/oper
Schema	`aflex schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/aflex

aflex attributes

aflex attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description aflex local file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

skip-backup

Description Skip backup logic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.2 file auth-jwks

JWK file information and management commands

auth-jwks Specification

Parameter	Value
Type	*operational*
Element Name	auth-jwks
Element URI	/axapi/v3/file/auth-jwks
Element Attributes	auth-jwks_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/auth-jwks/oper
Schema	`auth-jwks schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/auth-jwks

auth-jwks attributes

auth-jwks attributes

action

Description 'create': create; 'import': import; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, copy, rename, check, replace, delete

dst-file

Description Destination file name for copy and rename action

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description JWK local file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description Full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.3 file auth-portal

Authentication portal file information and management commands

auth-portal Specification

Parameter	Value
Type	*operational*
Element Name	auth-portal
Element URI	/axapi/v3/file/auth-portal
Element Attributes	auth-portal_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/auth-portal/oper
Schema	`auth-portal schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/auth-portal

auth-portal attributes

auth-portal attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description Destination file name for copy and rename action

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description Authentication portal local file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description Full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.4 file auth-portal-image

Authentication portal image file information and management commands

auth-portal-image Specification

Parameter	Value
Type	*operational*
Element Name	auth-portal-image
Element URI	/axapi/v3/file/auth-portal-image
Element Attributes	auth-portal-image_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/auth-portal-image/oper
Schema	`auth-portal-image schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/auth-portal-image

auth-portal-image attributes

auth-portal-image attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description Destination file name for copy and rename action

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description Authentication portal image local file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description Full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.5 file auth-saml-idp

SAML metadata file information and management commands

auth-saml-idp Specification

Parameter	Value
Type	*operational*
Element Name	auth-saml-idp
Element URI	/axapi/v3/file/auth-saml-idp
Element Attributes	auth-saml-idp_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/auth-saml-idp/oper
Schema	`auth-saml-idp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/auth-saml-idp

auth-saml-idp attributes

auth-saml-idp attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description Destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description SAML metadata local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description Full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-xml-signature

Description Verify metadata's XML signature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.37.6 file aws-accesskey

The aws accesskey for admin user

aws-accesskey Specification

Parameter	Value
Type	*operational*
Element Name	aws-accesskey
Element URI	/axapi/v3/file/aws-accesskey
Element Attributes	aws-accesskey_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/aws-accesskey/oper
Schema	`aws-accesskey schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/aws-accesskey

aws-accesskey attributes

aws-accesskey attributes

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user

Description user name of the pub key

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.7 file axdebug-capture

axdebug file information and management commands

axdebug-capture Specification

Parameter	Value
Type	*operational*
Element Name	axdebug-capture
Element URI	/axapi/v3/file/axdebug-capture
Element Attributes	axdebug-capture_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/axdebug-capture/oper
Schema	`axdebug-capture schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/axdebug-capture

axdebug-capture attributes

axdebug-capture attributes

action

Description 'delete': delete;

Type: string

Supported Values: delete

file

Description axdebug local capture file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.8 file axdebug-config

axdebug file information and management commands

axdebug-config Specification

Parameter	Value
Type	*operational*
Element Name	axdebug-config
Element URI	/axapi/v3/file/axdebug-config
Element Attributes	axdebug-config_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/axdebug-config/oper
Schema	`axdebug-config schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/axdebug-config

axdebug-config attributes

axdebug-config attributes

action

Description 'export': export; 'delete': delete;

Type: string

Supported Values: export, delete

file

Description axdebug local config file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.9 file bw-list

black white list file information and management commands

bw-list Specification

Parameter	Value
Type	*operational*
Element Name	bw-list
Element URI	/axapi/v3/file/bw-list
Element Attributes	bw-list_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/bw-list/oper
Schema	`bw-list schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/bw-list

bw-list attributes

bw-list attributes

action

Description 'check': check; 'create': create; 'delete': delete; 'export': export; 'import': import; 'replace': replace;

Type: string

Supported Values: check, create, delete, export, import, replace

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description bw-list file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.10 file ca-cert

ssl certificate file information and management commands

ca-cert Specification

Parameter	Value
Type	*operational*
Element Name	ca-cert
Element URI	/axapi/v3/file/ca-cert
Element Attributes	ca-cert_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/ca-cert/oper
Schema	`ca-cert schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/ca-cert

ca-cert attributes

ca-cert attributes

action

Description 'create': create; 'import': import; 'export': export; 'replace': replace;

Type: string

Supported Values: create, import, export, replace

certificate-type

Description 'pem': pem; 'der': der; 'pfx': pfx; 'p7b': p7b;

Type: string

Supported Values: pem, der, pfx, p7b

file

Description ssl ca certificate local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 300 characters

Maximum Length: 1 characters

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

pfx-password-export

Description The password for exported certificate file (pfx type only)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.11 file class-list

class list file information and management commands

class-list Specification

Parameter	Value
Type	*operational*
Element Name	class-list
Element URI	/axapi/v3/file/class-list
Element Attributes	class-list_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/class-list/oper
Schema	`class-list schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/class-list

class-list attributes

class-list attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description class list local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.12 file core

file operation for core files

core Specification

Parameter	Value
Type	*operational*
Element Name	core
Element URI	/axapi/v3/file/core
Element Attributes	core_attributes
Partition Visibility	shared
Schema	`core schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/core

core attributes

core attributes

action

Description 'export': export; 'delete': delete;

Type: string

Supported Values: export, delete

file

Description local core file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

slot

Description specify slot id in chassis

Type: number

Range: 0-1

3.37.13 file csr

ssl certificate signing request file

csr Specification

Parameter	Value
Type	*operational*
Element Name	csr
Element URI	/axapi/v3/file/csr
Element Attributes	csr_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/csr/oper
Schema	`csr schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/csr

csr attributes

csr attributes

action

Description 'export': export;

Type: string

Supported Values: export

file

Description Specify the File Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 300 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.14 file debug-monitor

debug monitor file information and management commands

debug-monitor Specification

Parameter	Value
Type	*operational*
Element Name	debug-monitor
Element URI	/axapi/v3/file/debug-monitor
Element Attributes	debug-monitor_attributes
Partition Visibility	shared
Schema	`debug-monitor schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/debug-monitor

debug-monitor attributes

debug-monitor attributes

action

Description 'export': export;

Type: string

Supported Values: export

file

Description debug monitor local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

3.37.15 file dnssec-dnskey

dnssec dnskey file information and management commands

dnssec-dnskey Specification

Parameter	Value
Type	*operational*
Element Name	dnssec-dnskey
Element URI	/axapi/v3/file/dnssec-dnskey
Element Attributes	dnssec-dnskey_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/dnssec-dnskey/oper
Schema	`dnssec-dnskey schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/dnssec-dnskey

dnssec-dnskey attributes

dnssec-dnskey attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

file

Description dnssec dnskey local file name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.16 file dnssec-ds

dnssec ds file information and management commands

dnssec-ds Specification

Parameter	Value
Type	*operational*
Element Name	dnssec-ds
Element URI	/axapi/v3/file/dnssec-ds
Element Attributes	dnssec-ds_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/dnssec-ds/oper
Schema	`dnssec-ds schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/dnssec-ds

dnssec-ds attributes

dnssec-ds attributes

action

Description 'import': import; 'export': export;

Type: string

Supported Values: import, export

file

Description dnssec ds local file name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.17 file geo-location

Display geo-location files

geo-location Specification

Parameter	Value
Type	*operational*
Element Name	geo-location
Element URI	/axapi/v3/file/geo-location
Element Attributes	geo-location_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/geo-location/oper
Schema	`geo-location schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/geo-location

geo-location attributes

geo-location attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description geo-location database local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.18 file glm-cert

GLM certificate

glm-cert Specification

Parameter	Value
Type	*operational*
Element Name	glm-cert
Element URI	/axapi/v3/file/glm-cert
Element Attributes	glm-cert_attributes
Partition Visibility	shared
Schema	`glm-cert schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/glm-cert

glm-cert attributes

glm-cert attributes

action

Description 'import': import;

Type: string

Supported Values: import

device

Description Device (Device ID)

Type: number

file

Description glm license local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

3.37.19 file glm-license

glm license file information and management commands

glm-license Specification

Parameter	Value
Type	*operational*
Element Name	glm-license
Element URI	/axapi/v3/file/glm-license
Element Attributes	glm-license_attributes
Partition Visibility	shared
Schema	`glm-license schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/glm-license

glm-license attributes

glm-license attributes

action

Description 'import': import;

Type: string

Supported Values: import

device

Description Device (Device ID)

Type: number

file

Description glm license local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

3.37.20 file health-external

Address the External Script Program

health-external Specification

Parameter	Value
Type	*operational*
Element Name	health-external
Element URI	/axapi/v3/file/health-external
Element Attributes	health-external_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/health-external/oper
Schema	`health-external schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/health-external

health-external attributes

health-external attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

description

Description Describe the Program Function briefly

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

file

Description Specify the Program Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.21 file health-postfile

Address the HTTP Post data file

health-postfile Specification

Parameter	Value
Type	*operational*
Element Name	health-postfile
Element URI	/axapi/v3/file/health-postfile
Element Attributes	health-postfile_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/health-postfile/oper
Schema	`health-postfile schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/health-postfile

health-postfile attributes

health-postfile attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

file

Description Specify the File Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.22 file license

license file information and management commands

license Specification

Parameter	Value
Type	*operational*
Element Name	license
Element URI	/axapi/v3/file/license
Element Attributes	license_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/license/oper
Schema	`license schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/license

license attributes

license attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: import, export

device

Description Device (Device ID)

Type: number

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description license local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.23 file local-uri-file

local uri file information and management commands

local-uri-file Specification

Parameter	Value
Type	*operational*
Element Name	local-uri-file
Element URI	/axapi/v3/file/local-uri-file
Element Attributes	local-uri-file_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/local-uri-file/oper
Schema	`local-uri-file schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/local-uri-file

local-uri-file attributes

local-uri-file attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description local uri file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.24 file log-backup

Backup system files

log-backup Specification

Parameter	Value
Type	*operational*
Element Name	log-backup
Element URI	/axapi/v3/file/log-backup
Element Attributes	log-backup_attributes
Partition Visibility	shared
Schema	`log-backup schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/log-backup

log-backup attributes

log-backup attributes

all

Description all log

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

date

Description specify number of days

Type: number

Range: 1-31

day

Description Most recent day

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

expedite

Description Expedite the Backup

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

month

Description Most recent month

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

period

Description Specify backup period

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data

Description Backup web statistical data

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

week

Description Most recent week

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.37.25 file ng-waf-module

WAF module

ng-waf-module Specification

Parameter	Value
Type	*operational*
Element Name	ng-waf-module
Element URI	/axapi/v3/file/ng-waf-module
Element Attributes	ng-waf-module_attributes
Partition Visibility	shared
Schema	`ng-waf-module schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/ng-waf-module

ng-waf-module attributes

ng-waf-module attributes

action

Description 'import': import; 'replace': replace;

Type: string

Supported Values: import, replace

file

Description NG WAF module local file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

3.37.26 file ssh-pubkey

The ssh pubkey for admin user

ssh-pubkey Specification

Parameter	Value
Type	*operational*
Element Name	ssh-pubkey
Element URI	/axapi/v3/file/ssh-pubkey
Element Attributes	ssh-pubkey_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/ssh-pubkey/oper
Schema	`ssh-pubkey schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/ssh-pubkey

ssh-pubkey attributes

ssh-pubkey attributes

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user

Description user name of the pub key

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.27 file ssl-cert

ssl certificate file information and management commands

ssl-cert Specification

Parameter	Value
Type	*operational*
Element Name	ssl-cert
Element URI	/axapi/v3/file/ssl-cert
Element Attributes	ssl-cert_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/ssl-cert/oper
Schema	`ssl-cert schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/ssl-cert

ssl-cert attributes

ssl-cert attributes

action

Description ‘create’: create; ‘import’: import; ‘export’: export; ‘replace’: replace;

Type: string

Supported Values: create, import, export, replace

certificate-type

Description ‘pem’: pem; ‘der’: der; ‘pfx’: pfx; ‘p7b’: p7b;

Type: string

Supported Values: pem, der, pfx, p7b

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

file

Description ssl certificate local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 300 characters

Maximum Length: 1 characters

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

pfx-password-export

Description The password for exported certificate file (pfx type only)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.28 file ssl-cert-key

ssl certificate and key file information and management commands

ssl-cert-key Specification

Parameter	Value
Type	*operational*
Element Name	ssl-cert-key
Element URI	/axapi/v3/file/ssl-cert-key
Element Attributes	ssl-cert-key_attributes
Partition Visibility	shared
Schema	`ssl-cert-key schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/ssl-cert-key

ssl-cert-key attributes

ssl-cert-key attributes

action

Description 'create': create; 'import': import; 'export': export; 'replace': replace;

Type: string

Supported Values: create, import, export, replace

file

Description ssl certificate local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 300 characters

Maximum Length: 1 characters

secured

Description Mark keys as non-exportable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.37.29 file ssl-cert-poc

ssl certificate file information and management commands

ssl-cert-poc Specification

Parameter	Value
Type	*operational*
Element Name	ssl-cert-poc
Element URI	/axapi/v3/file/ssl-cert-poc
Element Attributes	ssl-cert-poc_attributes
Partition Visibility	shared
Schema	`ssl-cert-poc schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/ssl-cert-poc

ssl-cert-poc attributes

ssl-cert-poc attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

certificate-type

Description 'pem': pem; 'der': der; 'pfx': pfx; 'p7b': p7b;

Type: string

Supported Values: pem, der, pfx, p7b

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

file

Description ssl certificate local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

file-handle

Description public-key

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

3.37.30 file ssl-crl

ssl crl file information and management commands

ssl-crl Specification

Parameter	Value
Type	*operational*
Element Name	ssl-crl
Element URI	/axapi/v3/file/ssl-crl
Element Attributes	ssl-crl_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/ssl-crl/oper
Schema	`ssl-crl schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/ssl-crl

ssl-crl attributes

ssl-crl attributes

action

Description 'create': create; 'import': import; 'export': export; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, replace, delete

file

Description ssl crl local file name

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 300 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.31 file ssl-key

ssl key file information and management commands

ssl-key Specification

Parameter	Value
Type	*operational*
Element Name	ssl-key
Element URI	/axapi/v3/file/ssl-key
Element Attributes	ssl-key_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/ssl-key/oper
Schema	`ssl-key schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/ssl-key

ssl-key attributes

ssl-key attributes

action

Description 'create': create; 'import': import; 'export': export; 'replace': replace;

Type: string

Supported Values: create, import, export, replace

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

file

Description ssl key local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 300 characters

Maximum Length: 1 characters

secured

Description Mark as non-exportable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.32 file startup-config

Contents of Startup Configuration

startup-config Specification

Parameter	Value
Type	*operational*
Element Name	startup-config
Element URI	/axapi/v3/file/startup-config
Element Attributes	startup-config_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/startup-config/oper
Schema	`startup-config schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/startup-config

startup-config attributes

startup-config attributes

action

Description 'import': import;

Type: string

Supported Values: import

file

Description startup-config local file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.33 file syslog

syslog file information and management commands

syslog Specification

Parameter	Value
Type	*operational*
Element Name	syslog
Element URI	/axapi/v3/file/syslog
Element Attributes	syslog_attributes
Partition Visibility	shared
Schema	`syslog schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/syslog

syslog attributes

syslog attributes

action

Description 'export': export;

Type: string

Supported Values: export

file

Description syslog local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

3.37.34 file system-backup

Backup system files

system-backup Specification

Parameter	Value
Type	*operational*
Element Name	system-backup
Element URI	/axapi/v3/file/system-backup
Element Attributes	system-backup_attributes
Partition Visibility	shared
Schema	`system-backup schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/system-backup

system-backup attributes

system-backup attributes

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

3.37.35 file techsupport

Generate the current showtech file

techsupport Specification

Parameter	Value
Type	*operational*
Element Name	techsupport
Element URI	/axapi/v3/file/techsupport
Element Attributes	techsupport_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/techsupport/oper
Schema	`techsupport schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/techsupport

techsupport attributes

techsupport attributes

action

Description 'create': create; 'check': check; 'delete': delete; 'export': export;

Type: string

Supported Values: create, check, delete, export

file

Description techsupport local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

slot

Description specify slot id in chassis

Type: number

Range: 0-1

status

Description: status is a **JSON Block**. Please see below for *status*

Type: Object

Reference Object: */axapi/v3/file/techsupport/status*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

status

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.36 file techsupport status

Generate the current showtech file status

status Specification

Parameter	Value
Type	*operational*
Element Name	status
Element URI	/axapi/v3/file/techsupport/status
Element Attributes	status_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/techsupport/status/oper
Schema	`status schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/techsupport/status

status attributes

status attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.37 file template

upgrade acos wizard template

template Specification

Parameter	Value
Type	*operational*
Element Name	template
Element URI	/axapi/v3/file/template
Element Attributes	template_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/template/oper
Schema	`template schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/template

template attributes

template attributes

act-type

Description Specify ACT package type (i.e. slug/destination name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

app

Description: app is a **JSON Block**. Please see below for *app*

Type: Object

Reference Object: */axapi/v3/file/template/app*

dst-file

Description destination file name for copy and rename action

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description aflex local file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

app

Specification	Value
Type	*object*

act-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

action

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

version

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

3.37.38 file template app

ACT action axAPI

app Specification

Parameter	Value
Type	*operational*
Element Name	app
Element URI	/axapi/v3/file/template/app
Element Attributes	app_attributes
Partition Visibility	shared
Schema	`app schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/template/app

app attributes

app attributes

act-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

action

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

version

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

3.37.39 file waf

Display waf files

waf Specification

Parameter	Value
Type	*operational*
Element Name	waf
Element URI	/axapi/v3/file/waf
Element Attributes	waf_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/waf/oper
Schema	`waf schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/waf

waf attributes

waf attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.37.40 file web-category-license

License file to enable web-category feature activation

web-category-license Specification

Parameter	Value
Type	*operational*
Element Name	web-category-license
Element URI	/axapi/v3/file/web-category-license
Element Attributes	web-category-license_attributes
Partition Visibility	shared
Schema	`web-category-license schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/web-category-license

web-category-license attributes

web-category-license attributes

action

Description 'import': import;

Type: string

Supported Values: import

device

Description Device (Device ID)

Type: number

file

Description Web-Category license local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description Full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

use-mgmt-port

Description Enable management port for backend

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.37.41 file web-service-cert-key

Import web service's private key and certificate

web-service-cert-key Specification

Parameter	Value
Type	*operational*
Element Name	web-service-cert-key
Element URI	/axapi/v3/file/web-service-cert-key
Element Attributes	web-service-cert-key_attributes
Partition Visibility	shared
Schema	`web-service-cert-key schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/web-service-cert-key

web-service-cert-key attributes

web-service-cert-key attributes

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

3.37.42 file xml-schema

XML-Schema file information and management commands

xml-schema Specification

Parameter	Value
Type	*operational*
Element Name	xml-schema
Element URI	/axapi/v3/file/xml-schema
Element Attributes	xml-schema_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file/xml-schema/oper
Schema	`xml-schema schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file/xml-schema

xml-schema attributes

xml-schema attributes

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description XML-schema local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.38 file-system

Objects:

3.38.1 file-system a10log

Manage logs of ACOS components

a10log Specification

Parameter	Value
Type	*operational*
Element Name	a10log
Element URI	/axapi/v3/file-system/a10log
Element Attributes	a10log_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file-system/a10log/oper
Schema	`a10log schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file-system/a10log

a10log attributes

a10log attributes

filename

Description Filename to remove

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

rm

Description Remove file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.38.2 file-system syslog

Manage var logs of Linux system

syslog Specification

Parameter	Value
Type	*operational*
Element Name	syslog
Element URI	/axapi/v3/file-system/syslog
Element Attributes	syslog_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file-system/syslog/oper
Schema	`syslog schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file-system/syslog

syslog attributes

syslog attributes

filename

Description Filename to remove

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

rm

Description Remove file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.38.3 file-system varlog

Manage var logs of ACOS system

varlog Specification

Parameter	Value
Type	*operational*
Element Name	varlog
Element URI	/axapi/v3/file-system/varlog
Element Attributes	varlog_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/file-system/varlog/oper
Schema	`varlog schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/file-system/varlog

varlog attributes

varlog attributes

filename

Description Filename to remove

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

rm

Description Remove file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.39 fw

Objects:

3.39.1 fw apply-changes

Recompile rule-set immediately

apply-changes Specification

Parameter	Value
Type	*operational*
Element Name	apply-changes
Element URI	/axapi/v3/fw/apply-changes
Element Attributes	apply-changes_attributes
Partition Visibility	shared
Schema	`apply-changes schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/fw/apply-changes

apply-changes attributes

apply-changes attributes

forced

Description Force recompile rule-set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.40 glm

Objects:

3.40.1 glm new-license

Create license

new-license Specification

Parameter	Value
Type	*operational*
Element Name	new-license
Element URI	/axapi/v3/glm/new-license
Element Attributes	new-license_attributes
Partition Visibility	shared
Schema	`new-license schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/glm/new-license

new-license attributes

new-license attributes

account-name

Description Account Name

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

country

Description Country

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

existing-org

Description Use existing account with organization ID

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

existing-user

Description Use an existing account with email and password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

first-name

Description First Name

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

glm-email

Description GLM email

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

glm-password

Description GLM password

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

last-name

Description Last Name

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

name

Description License name (Configure license name)

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

new-email

Description GLM email

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

new-password

Description GLM password

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

new-user

Description Create a new account

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

org-id

Description GLM organization id

Type: number

Range: 1-899760

phone

Description Phone

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

type

Description 'webroot': webroot; 'webroot_trial': webroot_trial; 'webroot_ti': webroot_ti; 'webroot_ti_trial': webroot_ti_trial; 'qosmos': qosmos; 'qosmos_trial': qosmos_trial; 'ipsec_vpn': ipsec_vpn;

Type: string

Supported Values: webroot, webroot_trial, webroot_ti, webroot_ti_trial, qosmos, qosmos_trial, ipsec_vpn

3.40.2 glm send

Trigger GLM Connect

send Specification

Parameter	Value
Type	*operational*
Element Name	send
Element URI	/axapi/v3/glm/send
Element Attributes	send_attributes
Partition Visibility	shared
Schema	`send schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/glm/send

send attributes

send attributes

ha-status

Description Send a ELM HA status request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

harmony

Description Harmony specific single GLM license request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

license-request

Description Immediately send a single GLM license request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.41 gslb

Objects:

3.41.1 gslb geoloc

geoloc Specification

Parameter	Value
Type	*operational*
Element Name	geoloc
Element URI	/axapi/v3/gslb/geoloc
Element Attributes	geoloc_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/gslb/geoloc/oper
Schema	`geoloc schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/gslb/geoloc

geoloc attributes

geoloc attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.41.2 gslb geoloc-rdt

geoloc-rdt Specification

Parameter	Value
Type	*operational*
Element Name	geoloc-rdt
Element URI	/axapi/v3/gslb/geoloc-rdt
Element Attributes	geoloc-rdt_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/gslb/geoloc-rdt/oper
Schema	`geoloc-rdt schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/gslb/geoloc-rdt

geoloc-rdt attributes

geoloc-rdt attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.41.3 gslb geolocation-file

Geolocation File

geolocation-file Specification

Parameter	Value
Type	*operational*
Element Name	geolocation-file
Element URI	/axapi/v3/gslb/geolocation-file
Element Attributes	geolocation-file_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/gslb/geolocation-file/oper
Schema	`geolocation-file schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/gslb/geolocation-file

geolocation-file attributes

geolocation-file attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.41.4 gslb group-info

group-info Specification

Parameter	Value
Type	*operational*
Element Name	group-info
Element URI	/axapi/v3/gslb/group-info
Element Attributes	group-info_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/gslb/group-info/oper
Schema	`group-info schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/gslb/group-info

group-info attributes

group-info attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.41.5 gslb ip-list-info

Geo-location ip-lists

ip-list-info Specification

Parameter	Value
Type	*operational*
Element Name	ip-list-info
Element URI	/axapi/v3/gslb/ip-list-info
Element Attributes	ip-list-info_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/gslb/ip-list-info/oper
Schema	`ip-list-info schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/gslb/ip-list-info

ip-list-info attributes

ip-list-info attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.41.6 gslb service-port

service-port Specification

Parameter	Value
Type	*operational*
Element Name	service-port
Element URI	/axapi/v3/gslb/service-port
Element Attributes	service-port_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/gslb/service-port/oper
Schema	`service-port schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/gslb/service-port

service-port attributes

service-port attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.42 harmony-controller

Objects:

3.42.1 harmony-controller profile force

Harmony controller profile

force Specification

Parameter	Value
Type	*operational*
Element Name	force
Element URI	/axapi/v3/harmony-controller/profile/force
Element Attributes	force_attributes
Partition Visibility	shared
Schema	`force schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/harmony-controller/profile/force

force attributes

force attributes

deregister

Description forcefully deregister thunder from harmony controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.42.2 harmony-controller profile re-sync

re sync some options to harmony controller

re-sync Specification

Parameter	Value
Type	*operational*
Element Name	re-sync
Element URI	/axapi/v3/harmony-controller/profile/re-sync
Element Attributes	re-sync_attributes
Partition Visibility	shared
Schema	`re-sync schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/harmony-controller/profile/re-sync

re-sync attributes

re-sync attributes

analytics-bus

Description re-sync analtyics bus connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

schema-registry

Description re-sync the schema registry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.43 health

Objects:

3.43.1 health external copy

Copy external health monitor script

copy Specification

Parameter	Value
Type	*operational*
Element Name	copy
Element URI	/axapi/v3/health/external/copy
Element Attributes	copy_attributes
Partition Visibility	shared
Schema	`copy schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/health/external/copy

copy attributes

copy attributes

dst-file

Description Destination external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

src-file

Description Source external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

3.43.2 health external create

Create external health monitor script

create Specification

Parameter	Value
Type	*operational*
Element Name	create
Element URI	/axapi/v3/health/external/create
Element Attributes	create_attributes
Partition Visibility	shared
Schema	`create schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/health/external/create

create attributes

create attributes

description

Description Describe health external monitor script briefly

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

3.43.3 health external delete

Delete external health monitor script

delete Specification

Parameter	Value
Type	*operational*
Element Name	delete
Element URI	/axapi/v3/health/external/delete
Element Attributes	delete_attributes
Partition Visibility	shared
Schema	`delete schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/health/external/delete

delete attributes

delete attributes

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

3.43.4 health external edit

Edit external health monitor script

edit Specification

Parameter	Value
Type	*operational*
Element Name	edit
Element URI	/axapi/v3/health/external/edit
Element Attributes	edit_attributes
Partition Visibility	shared
Schema	`edit schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/health/external/edit

edit attributes

edit attributes

description

Description Describe health external monitor script briefly

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

3.43.5 health external rename

Rename external health monitor script

rename Specification

Parameter	Value
Type	*operational*
Element Name	rename
Element URI	/axapi/v3/health/external/rename
Element Attributes	rename_attributes
Partition Visibility	shared
Schema	`rename schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/health/external/rename

rename attributes

rename attributes

dst-file

Description Destination external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

src-file

Description Source external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

3.44 hotfix

Objects:

3.44.1 hotfix

hotfix System

hotfix Specification

Parameter	Value
Type	*operational*
Element Name	hotfix
Element URI	/axapi/v3/hotfix
Element Attributes	hotfix_attributes
Partition Visibility	shared
Schema	`hotfix schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/hotfix

hotfix attributes

hotfix attributes

apply

Description: apply is a **JSON Block**. Please see below for *apply*

Type: Object

Reference Object: */axapi/v3/hotfix/apply*

revoke

Description revoke a hotfix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

apply

Specification	Value
Type	*object*

file-url

Description File URL

Type: string

Format: url

image-file

Description image file from AXAPI

Type: string

Format: string-rlx

source-ip-address

Description Source ip address

Type: string

Format: ipv4-address

Mutual Exclusion: source-ip-address and use-mgmt-port are mutually exclusive

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port and source-ip-address are mutually exclusive

3.44.2 hotfix apply

apply a hotfix

apply Specification

Parameter	Value
Type	*operational*
Element Name	apply
Element URI	/axapi/v3/hotfix/apply
Element Attributes	apply_attributes
Partition Visibility	shared
Schema	`apply schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/hotfix/apply

apply attributes

apply attributes

file-url

Description File URL

Type: string

Format: url

image-file

Description image file from AXAPI

Type: string

Format: string-rlx

source-ip-address

Description Source ip address

Type: string

Format: ipv4-address

Mutual Exclusion: source-ip-address and use-mgmt-port are mutually exclusive

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port and source-ip-address are mutually exclusive

3.45 import

Objects:

3.45.1 import

Get files from remote site

import Specification

Parameter	Value
Type	*operational*
Element Name	import
Element URI	/axapi/v3/import
Element Attributes	import_attributes
Partition Visibility	shared
Schema	`import schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/import

import attributes

import attributes

aflex

Description aFleX Script Source File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-jwks

Description JSON web key

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-portal

Description Portal file for http authentication

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-portal-image

Description Image file for default portal

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-saml-idp

Description: auth-saml-idp is a **JSON Block**. Please see below for *auth-saml-idp*

Type: Object

Reference Object: */axapi/v3/import/auth-saml-idp*

background

Description Background mode for importing class-list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bios-file

Description BIOS Image file

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

bw-list

Description Black white List File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ca-cert

Description CA Cert File(enter bulk when import an archive file)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

certificate-type

Description ‘pem’: pem; ‘der’: der; ‘pfx’: pfx; ‘p7b’: p7b;

Type: string

Supported Values: pem, der, pfx, p7b

class-list

Description Class List File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

class-list-convert

Description Convert Class List File to A10 format

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

class-list-type

Description ‘ac’: ac; ‘ipv4’: ipv4; ‘ipv6’: ipv6; ‘string’: string; ‘string-case-insensitive’: string-case-insensitive;

Type: string

Supported Values: ac, ipv4, ipv6, string, string-case-insensitive

cloud-config

Description Cloud Configuration File

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

cloud-creds

Description Cloud Credentials File

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

csr-generate

Description Generate CSR file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ddos-script

Description Python/Perl/Bash/TCL script to be used with ddos action-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

digest

Description 'sha1': sha1; 'sha256': sha256; 'sha384': sha384; 'sha512': sha512;

Type: string

Supported Values: sha1, sha256, sha384, sha512

dnssec-dnskey

Description DNSSEC DNSKEY(KSK) file for child zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

dnssec-ds

Description DNSSEC DS file for child zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

domain-list

Description Domain List File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

geo-location

Description Geo-location CSV File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

geo-location-archive

Description: geo-location-archive is a **JSON Block**. Please see below for *geo-location-archive*

Type: Object

Reference Object: */axapi/v3/import/geo-location-archive*

glm-cert

Description GLM certificate

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

glm-license

Description License File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

health-external

Description: health-external is a **JSON Block**. Please see below for *health-external*

Type: Object

Reference Object: */axapi/v3/import/health-external*

health-postfile

Description: health-postfile is a **JSON Block**. Please see below for *health-postfile*

Type: Object

Reference Object: */axapi/v3/import/health-postfile*

ip-map-list

Description IP Map List File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

local-uri-file

Description Local URI files for http response

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lw-4o6

Description LW-4over6 Binding Table File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ng-waf-custom-page

Description: ng-waf-custom-page is a **JSON Block**. Please see below for *ng-waf-custom-page*

Type: Object

Reference Object: */axapi/v3/import/ng-waf-custom-page*

ng-waf-module

Description: ng-waf-module is a **JSON Block**. Please see below for *ng-waf-module*

Type: Object

Reference Object: */axapi/v3/import/ng-waf-module*

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description profile name for remote url

Type: string

Format: url

Mutual Exclusion: remote-file, terminal, and store-name are mutually exclusive

remote-file-zone-transfer

Description profile name for remote url

Type: string

Format: url

Mutual Exclusion: remote-file-zone-transfer and terminal are mutually exclusive

rpz

Description Response Policy Zone File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secured

Description Mark as non-exportable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert

Description SSL Cert File(enter bulk when import an archive file)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ssl-cert-key

Description 'bulk': import an archive file;

Type: string

Supported Values: bulk

ssl-crl

Description SSL Crl File

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ssl-key

Description SSL Key File(enter bulk when import an archive file)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

store

Description: store is a **JSON Block**. Please see below for *store*

Type: Object

Reference Object: */axapi/v3/import/store*

store-name

Description Import store name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: store-name, terminal, and remote-file are mutually exclusive

terminal

Description terminal vi

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: terminal,remote-file, remote-file-zone-transfer, and store-name are mutually exclusive

thales-kmdata

Description Thales Kmdata files

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

thales-secworld

Description Thales security world files

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

to-device

Description: to-device is a **JSON Block**. Please see below for *to-device*

Type: Object

Reference Object: */axapi/v3/import/to-device*

tsig

Description Transaction SIGnatures Key file

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

usb-license

Description USB License File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-ssh-key

Description Use private key to authenticate

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

web-category-license

Description License file to enable web-category feature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

xml-schema

Description XML-Schema File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

zone-transfer

Description 'zone-transfer': zone-transfer;

Type: string

Supported Values: zone-transfer

geo-location-archive

Specification	Value
Type	*object*

geo-location-archive-format

Description 'GeoLite2-ASN': GeoLite2-ASN CSV Zipped File; 'GeoLite2-City': GeoLite2-City CSV Zipped File; 'GeoLite2-Country': GeoLite2-Country CSV Zipped File;

Type: string

Supported Values: GeoLite2-ASN, GeoLite2-City, GeoLite2-Country

password

Description password for the remote site

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description Profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-external

Specification	Value
Type	*object*

description

Description Describe the Program Function briefly

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

externalfilename

Description Specify the Program Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ng-waf-custom-page

Specification	Value
Type	*object*

custom-page

Description Custom html file for ng-waf

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description Profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management interface for reachability

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-postfile

Specification	Value
Type	*object*

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

postfilename

Description Specify the File Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description Profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ng-waf-module

Specification	Value
Type	*object*

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description Profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management interface for reachability

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

store

Specification	Value
Type	*object*

create

Description Create an import store profile

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

delete

Description Delete an import store profile

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description profile name to store remote url

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

remote-file

Description

Type: string

Format: url

to-device

Specification	Value
Type	*object*

device

Description Device (Device ID)

Type: number

glm-cert

Description GLM certificate

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

glm-license

Description License File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

web-category-license

Description License file to enable web-category feature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-saml-idp

Specification	Value
Type	*object*

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description Profile name for remote url

Type: string

Format: url

saml-idp-name

Description Metadata name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

verify-xml-signature

Description Verify metadata's XML signature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.45.2 import auth-saml-idp

SAML metadata of identity provider

auth-saml-idp Specification

Parameter	Value
Type	*operational*
Element Name	auth-saml-idp
Element URI	/axapi/v3/import/auth-saml-idp
Element Attributes	auth-saml-idp_attributes
Partition Visibility	shared
Schema	`auth-saml-idp schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/import/auth-saml-idp

auth-saml-idp attributes

auth-saml-idp attributes

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description Profile name for remote url

Type: string

Format: url

saml-idp-name

Description Metadata name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

verify-xml-signature

Description Verify metadata's XML signature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.45.3 import geo-location-archive

Geo-location Archive File

geo-location-archive Specification

Parameter	Value
Type	*operational*
Element Name	geo-location-archive
Element URI	/axapi/v3/import/geo-location-archive
Element Attributes	geo-location-archive_attributes
Partition Visibility	shared
Schema	`geo-location-archive schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/import/geo-location-archive

geo-location-archive attributes

geo-location-archive attributes

geo-location-archive-format

Description 'GeoLite2-ASN': GeoLite2-ASN CSV Zipped File; 'GeoLite2-City': GeoLite2-City CSV Zipped File; 'GeoLite2-Country': GeoLite2-Country CSV Zipped File;

Type: string

Supported Values: GeoLite2-ASN, GeoLite2-City, GeoLite2-Country

password

Description password for the remote site

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description Profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.45.4 import health-external

Address the External Script Program

health-external Specification

Parameter	Value
Type	*operational*
Element Name	health-external
Element URI	/axapi/v3/import/health-external
Element Attributes	health-external_attributes
Partition Visibility	shared
Schema	`health-external schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/import/health-external

health-external attributes

health-external attributes

description

Description Describe the Program Function briefly

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

externalfilename

Description Specify the Program Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.45.5 import health-postfile

Address the HTTP Post data file

health-postfile Specification

Parameter	Value
Type	*operational*
Element Name	health-postfile
Element URI	/axapi/v3/import/health-postfile
Element Attributes	health-postfile_attributes
Partition Visibility	shared
Schema	`health-postfile schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/import/health-postfile

health-postfile attributes

health-postfile attributes

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

postfilename

Description Specify the File Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description Profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.45.6 import ng-waf-custom-page

Custom html file for ng-waf

ng-waf-custom-page Specification

Parameter	Value
Type	*operational*
Element Name	ng-waf-custom-page
Element URI	/axapi/v3/import/ng-waf-custom-page
Element Attributes	ng-waf-custom-page_attributes
Partition Visibility	shared
Schema	`ng-waf-custom-page schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/import/ng-waf-custom-page

ng-waf-custom-page attributes

ng-waf-custom-page attributes

custom-page

Description Custom html file for ng-waf

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description Profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management interface for reachability

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.45.7 import ng-waf-module

WAF module

ng-waf-module Specification

Parameter	Value
Type	*operational*
Element Name	ng-waf-module
Element URI	/axapi/v3/import/ng-waf-module
Element Attributes	ng-waf-module_attributes
Partition Visibility	shared
Schema	`ng-waf-module schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/import/ng-waf-module

ng-waf-module attributes

ng-waf-module attributes

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

proxy

Description Specific a proxy (format=HOST:PORT)

Type: string

Format: string-rlx

Maximum Length: 261 characters

Maximum Length: 1 characters

remote-file

Description Profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management interface for reachability

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.45.8 import store

Create store name for remote url

store Specification

Parameter	Value
Type	*operational*
Element Name	store
Element URI	/axapi/v3/import/store
Element Attributes	store_attributes
Partition Visibility	shared
Schema	`store schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/import/store

store attributes

store attributes

create

Description Create an import store profile

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

delete

Description Delete an import store profile

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description profile name to store remote url

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

remote-file

Description

Type: string

Format: url

3.45.9 import to-device

specify the target device to import in aVCS

to-device Specification

Parameter	Value
Type	*operational*
Element Name	to-device
Element URI	/axapi/v3/import/to-device
Element Attributes	to-device_attributes
Partition Visibility	shared
Schema	`to-device schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/import/to-device

to-device attributes

to-device attributes

device

Description Device (Device ID)

Type: number

glm-cert

Description GLM certificate

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

glm-license

Description License File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

web-category-license

Description License file to enable web-category feature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

3.46 interface

Objects:

3.46.1 interface driver-statistic

display packet size statistic from Driver

driver-statistic Specification

Parameter	Value
Type	*operational*
Element Name	driver-statistic
Element URI	/axapi/v3/interface/driver-statistic
Element Attributes	driver-statistic_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/interface/driver-statistic/oper
Schema	`driver-statistic schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/interface/driver-statistic

driver-statistic attributes

driver-statistic attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.46.2 interface packet-size-bucket

display packet sized buckets from Hardware

packet-size-bucket Specification

Parameter	Value
Type	*operational*
Element Name	packet-size-bucket
Element URI	/axapi/v3/interface/packet-size-bucket
Element Attributes	packet-size-bucket_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/interface/packet-size-bucket/oper
Schema	`packet-size-bucket schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/interface/packet-size-bucket

packet-size-bucket attributes

packet-size-bucket attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.46.3 interface switch-drop-reason

display packet drop reasons from Hardware

switch-drop-reason Specification

Parameter	Value
Type	*operational*
Element Name	switch-drop-reason
Element URI	/axapi/v3/interface/switch-drop-reason
Element Attributes	switch-drop-reason_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/interface/switch-drop-reason/oper
Schema	`switch-drop-reason schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/interface/switch-drop-reason

switch-drop-reason attributes

switch-drop-reason attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.47 ip

Objects:

3.47.1 ip fib

show ip fib

fib Specification

Parameter	Value
Type	*operational*
Element Name	fib
Element URI	/axapi/v3/ip/fib
Element Attributes	fib_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/ip/fib/oper
Schema	`fib schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ip/fib

fib attributes

fib attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.47.2 ip fib-summary

show ip fib summary

fib-summary Specification

Parameter	Value
Type	*operational*
Element Name	fib-summary
Element URI	/axapi/v3/ip/fib-summary
Element Attributes	fib-summary_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/ip/fib-summary/oper
Schema	`fib-summary schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ip/fib-summary

fib-summary attributes

fib-summary attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.48 ipv6

Objects:

3.48.1 ipv6 fib

show ipv6 fib

fib Specification

Parameter	Value
Type	*operational*
Element Name	fib
Element URI	/axapi/v3/ipv6/fib
Element Attributes	fib_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/ipv6/fib/oper
Schema	`fib schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ipv6/fib

fib attributes

fib attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.48.2 ipv6 fib-summary

show ipv6 fib summary

fib-summary Specification

Parameter	Value
Type	*operational*
Element Name	fib-summary
Element URI	/axapi/v3/ipv6/fib-summary
Element Attributes	fib-summary_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/ipv6/fib-summary/oper
Schema	`fib-summary schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ipv6/fib-summary

fib-summary attributes

fib-summary attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.49 license-manager

Objects:

3.49.1 license-manager ng-waf-module

Enter WAF license-keys

ng-waf-module Specification

Parameter	Value
Type	*operational*
Element Name	ng-waf-module
Element URI	/axapi/v3/license-manager/ng-waf-module
Element Attributes	ng-waf-module_attributes
Partition Visibility	shared
Schema	`ng-waf-module schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/license-manager/ng-waf-module

ng-waf-module attributes

ng-waf-module attributes

access-key-id

Description access-key

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

secret-access-key

Description

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.50 link

Objects:

3.50.1 link

Link to Configuration Profile

link Specification

Parameter	Value
Type	*operational*
Element Name	link
Element URI	/axapi/v3/link
Element Attributes	link_attributes
Partition Visibility	shared
Schema	`link schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/link

link attributes

link attributes

startup-config

Description: startup-config is a **JSON Block**. Please see below for *startup-config*

Type: Object

Reference Object: */axapi/v3/link/startup-config*

startup-config

Specification	Value
Type	*object*

all-partitions

Description All-partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default

Description Default startup-config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-name

Description Local Configuration Profile Name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

primary

Description Create link in primary partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secondary

Description Create link in secondary partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.50.2 link startup-config

Startup Configuration

startup-config Specification

Parameter	Value
Type	*operational*
Element Name	startup-config
Element URI	/axapi/v3/link/startup-config
Element Attributes	startup-config_attributes
Partition Visibility	shared
Schema	`startup-config schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/link/startup-config

startup-config attributes

startup-config attributes

all-partitions

Description All-partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default

Description Default startup-config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-name

Description Local Configuration Profile Name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

primary

Description Create link in primary partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secondary

Description Create link in secondary partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.51 locale

Objects:

3.51.1 locale test

To test current terminal encodings for specific locale

test Specification

Parameter	Value
Type	*operational*
Element Name	test
Element URI	/axapi/v3/locale/test
Element Attributes	test_attributes
Partition Visibility	shared
Schema	`test schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/locale/test

test attributes

test attributes

locale

Description 'zh_CN': Chinese locale for PRC; 'zh_TW': Chinese locale for Taiwan; 'ja_JP': Japanese locale for Japan;

Type: string

Supported Values: zh_CN, zh_TW, ja_JP

3.52 logging

Objects:

3.52.1 logging export

Export cached log items to the specified destination

export Specification

Parameter	Value
Type	*operational*
Element Name	export
Element URI	/axapi/v3/logging/export
Element Attributes	export_attributes
Partition Visibility	shared
Schema	`export schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/logging/export

export attributes

export attributes

all

Description System support messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

remote-file

Description Remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.52.2 logging local-log access

EP access log Info

access Specification

Parameter	Value
Type	*operational*
Element Name	access
Element URI	/axapi/v3/logging/local-log/access
Element Attributes	access_attributes
Partition Visibility	shared
Schema	`access schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/logging/local-log/access

access attributes

access attributes

log

Description: log is a **JSON Block**. Please see below for *log*

Type: Object

Reference Object: */axapi/v3/logging/local-log/access/log*

top-n

Description: top-n is a **JSON Block**. Please see below for *top-n*

Type: Object

Reference Object: */axapi/v3/logging/local-log/access/top-n*

top-n

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.52.3 logging local-log access log

Access Log Info

log Specification

Parameter	Value
Type	*operational*
Element Name	log
Element URI	/axapi/v3/logging/local-log/access/log
Element Attributes	log_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/logging/local-log/access/log/oper
Schema	`log schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/logging/local-log/access/log

log attributes

log attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.52.4 logging local-log access top-n

Access Log Info

top-n Specification

Parameter	Value
Type	*operational*
Element Name	top-n
Element URI	/axapi/v3/logging/local-log/access/top-n
Element Attributes	top-n_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/logging/local-log/access/top-n/oper
Schema	`top-n schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/logging/local-log/access/top-n

top-n attributes

top-n attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.52.5 logging local-log app-fw

Application firewall

app-fw Specification

Parameter	Value
Type	*operational*
Element Name	app-fw
Element URI	/axapi/v3/logging/local-log/app-fw
Element Attributes	app-fw_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/logging/local-log/app-fw/oper
Schema	`app-fw schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/logging/local-log/app-fw

app-fw attributes

app-fw attributes

dot-plot

Description: dot-plot is a **JSON Block**. Please see below for *dot-plot*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.52.6 logging local-log app-fw dot-plot

Application firewall dot plot

dot-plot Specification

Parameter	Value
Type	*operational*
Element Name	dot-plot
Element URI	/axapi/v3/logging/local-log/app-fw/dot-plot
Element Attributes	dot-plot_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/logging/local-log/app-fw/dot-plot/oper
Schema	`dot-plot schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/logging/local-log/app-fw/dot-plot

dot-plot attributes

dot-plot attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.52.7 logging local-log app-fw top-n

Application firewall

top-n Specification

Parameter	Value
Type	*operational*
Element Name	top-n
Element URI	/axapi/v3/logging/local-log/app-fw/top-n
Element Attributes	top-n_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/logging/local-log/app-fw/top-n/oper
Schema	`top-n schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/logging/local-log/app-fw/top-n

top-n attributes

top-n attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.52.8 logging local-log authentication

authentication log

authentication Specification

Parameter	Value
Type	*operational*
Element Name	authentication
Element URI	/axapi/v3/logging/local-log/authentication
Element Attributes	authentication_attributes
Partition Visibility	shared
Schema	`authentication schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/logging/local-log/authentication

authentication attributes

authentication attributes

log

Description: log is a **JSON Block**. Please see below for *log*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.52.9 logging local-log authentication log

Authentication Log Info

log Specification

Parameter	Value
Type	*operational*
Element Name	log
Element URI	/axapi/v3/logging/local-log/authentication/log
Element Attributes	log_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/logging/local-log/authentication/log/oper
Schema	`log schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/logging/local-log/authentication/log

log attributes

log attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.52.10 logging local-log authentication top-n

Authentication Log Info

top-n Specification

Parameter	Value
Type	*operational*
Element Name	top-n
Element URI	/axapi/v3/logging/local-log/authentication/top-n
Element Attributes	top-n_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/logging/local-log/authentication/top-n/oper
Schema	`top-n schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/logging/local-log/authentication/top-n

top-n attributes

top-n attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.53 miscellenious-alb

Objects:

3.54 multi-ctrl-cpu

Objects:

3.54.1 multi-ctrl-cpu

Enable Multiple Control CPUs

multi-ctrl-cpu Specification

Parameter	Value
Type	*operational*
Element Name	multi-ctrl-cpu
Element URI	/axapi/v3/multi-ctrl-cpu
Element Attributes	multi-ctrl-cpu_attributes
Partition Visibility	shared
Schema	`multi-ctrl-cpu schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/multi-ctrl-cpu

multi-ctrl-cpu attributes

multi-ctrl-cpu attributes

num-ctrl-cpus

Description Set number of control CPUs. Default is 1, and max limit is platform dependent.

Type: number

3.55 network

Objects:

3.55.1 network arp dynamic

Dynamic ARP commands

dynamic Specification

Parameter	Value
Type	*operational*
Element Name	dynamic
Element URI	/axapi/v3/network/arp/dynamic
Element Attributes	dynamic_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/network/arp/dynamic/oper
Schema	`dynamic schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/network/arp/dynamic

dynamic attributes

dynamic attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.55.2 network mac-address dynamic

dynamic MAC commands

dynamic Specification

Parameter	Value
Type	*operational*
Element Name	dynamic
Element URI	/axapi/v3/network/mac-address/dynamic
Element Attributes	dynamic_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/network/mac-address/dynamic/oper
Schema	`dynamic schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/network/mac-address/dynamic

dynamic attributes

dynamic attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.56 ntp-status

Objects:

3.57 offload-cpus

Objects:

3.57.1 offload-cpus

Enable Offload CPUs

offload-cpus Specification

Parameter	Value
Type	*operational*
Element Name	offload-cpus
Element URI	/axapi/v3/offload-cpus
Element Attributes	offload-cpus_attributes
Partition Visibility	shared
Schema	`offload-cpus schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/offload-cpus

offload-cpus attributes

offload-cpus attributes

num-offload-cpus

Description Set number of offload CPUs. Max limit is platform dependent.

Type: number

Range: 1-50

3.58 overlay-tunnel

Objects:

3.58.1 overlay-tunnel debug encap-table

encap-table Specification

Parameter	Value
Type	*operational*
Element Name	encap-table
Element URI	/axapi/v3/overlay-tunnel/debug/encap-table
Element Attributes	encap-table_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/overlay-tunnel/debug/encap-table/oper
Schema	`encap-table schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/overlay-tunnel/debug/encap-table

encap-table attributes

encap-table attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.59 partition-all

Objects:

3.60 partition-available-id

Objects:

3.61 pki

Objects:

3.61.1 pki ca-cert

ca-cert Specification

Parameter	Value
Type	*operational*
Element Name	ca-cert
Element URI	/axapi/v3/pki/ca-cert
Element Attributes	ca-cert_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/pki/ca-cert/oper
Schema	`ca-cert schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/pki/ca-cert

ca-cert attributes

ca-cert attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.61.2 pki cert

cert Specification

Parameter	Value
Type	*operational*
Element Name	cert
Element URI	/axapi/v3/pki/cert
Element Attributes	cert_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/pki/cert/stats
Operational Data URI	/axapi/v3/pki/cert/oper
Schema	`cert schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/pki/cert

cert attributes

cert attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.61.3 pki cert-stats

cert-stats Specification

Parameter	Value
Type	*operational*
Element Name	cert-stats
Element URI	/axapi/v3/pki/cert-stats
Element Attributes	cert-stats_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/pki/cert-stats/oper
Schema	`cert-stats schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/pki/cert-stats

cert-stats attributes

cert-stats attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.61.4 pki copy-cert

Copy SSL certificate to another file

copy-cert Specification

Parameter	Value
Type	*operational*
Element Name	copy-cert
Element URI	/axapi/v3/pki/copy-cert
Element Attributes	copy-cert_attributes
Partition Visibility	shared
Schema	`copy-cert schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/pki/copy-cert

copy-cert attributes

copy-cert attributes

dest-cert

Description Destination certificate file

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

overwrite

Description Overwrite the destination file if already present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rotation

Description Specify rotation number of SCEP/CMP generated certificate file

Type: number

Range: 1-4

src-cert

Description Source certificate file

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

3.61.5 pki copy-key

Copy SSL key to another file

copy-key Specification

Parameter	Value
Type	*operational*
Element Name	copy-key
Element URI	/axapi/v3/pki/copy-key
Element Attributes	copy-key_attributes
Partition Visibility	shared
Schema	`copy-key schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/pki/copy-key

copy-key attributes

copy-key attributes

dest-key

Description Destination key file

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

overwrite

Description Overwrite the destination file if already present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rotation

Description Specify rotation number of SCEP/CMP generated key file

Type: number

Range: 1-4

src-key

Description Source key file

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

3.61.6 pki create-oper

create-oper Specification

Parameter	Value
Type	*operational*
Element Name	create-oper
Element URI	/axapi/v3/pki/create-oper
Element Attributes	create-oper_attributes
Partition Visibility	shared
Schema	`create-oper schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/pki/create-oper

create-oper attributes

create-oper attributes

bits

Description '256': 256; '384': 384; '1024': 1024; '2048': 2048; '4096': 4096;

Type: string

Supported Values: 256, 384, 1024, 2048, 4096

Default: 1024

cert-type

Description 'rsa': rsa; 'ecdsa': ecdsa;

Type: string

Supported Values: rsa, ecdsa

Default: rsa

common-name

Description

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

country

Description

Type: string

Maximum Length: 3 characters

Maximum Length: 2 characters

csr-generate

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

digest

Description 'sha1': sha1; 'sha256': sha256; 'sha384': sha384; 'sha512': sha512;

Type: string

Supported Values: sha1, sha256, sha384, sha512

Default: sha1

division

Description

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

email

Description

Type: string

Format: email-addr

Maximum Length: 64 characters

Maximum Length: 1 characters

filename

Description

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Description

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

organization

Description

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rootca

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secured

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

state-province

Description

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

v3-request

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

valid-days

Description

Type: number

Range: 30-3650

Default: 730

3.61.7 pki delete

Delete SSL cert

delete Specification

Parameter	Value
Type	*operational*
Element Name	delete
Element URI	/axapi/v3/pki/delete
Element Attributes	delete_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/pki/delete/oper
Schema	`delete schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/pki/delete

delete attributes

delete attributes

ca

Description CA certificate file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

cert-name

Description Certificate file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

crl

Description CRL file name

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

csr

Description CSR file name

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

private-key

Description Private key file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

3.61.8 pki delete-oper

delete-oper Specification

Parameter	Value
Type	*operational*
Element Name	delete-oper
Element URI	/axapi/v3/pki/delete-oper
Element Attributes	delete-oper_attributes
Partition Visibility	shared
Schema	`delete-oper schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/pki/delete-oper

delete-oper attributes

delete-oper attributes

filename

Description

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

3.61.9 pki ssli generate crl

Generate a CRL for for a vport

crl Specification

Parameter	Value
Type	*operational*
Element Name	crl
Element URI	/axapi/v3/pki/ssli/generate/crl
Element Attributes	crl_attributes
Partition Visibility	shared
Schema	`crl schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/pki/ssli/generate/crl

crl attributes

crl attributes

port

Description port number

Type: number

Range: 0-65534

vip-name

Description VIP name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

3.61.10 pki ssli revoke

Revoke an SSLi certificate

revoke Specification

Parameter	Value
Type	*operational*
Element Name	revoke
Element URI	/axapi/v3/pki/ssli/revoke
Element Attributes	revoke_attributes
Partition Visibility	shared
Schema	`revoke schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/pki/ssli/revoke

revoke attributes

revoke attributes

port

Description port number

Type: number

Range: 0-65534

serial

Description Serial number in hex

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

vip-name

Description VIP name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

3.62 plat-buff-stats

Objects:

3.63 plat-cpu-drop

Objects:

3.64 plat-cpu-packet

Objects:

3.65 poap

Objects:

3.65.1 poap

Set POAP; when next boot, if startup-config is empty, system will enter POAP Mode

poap Specification

Parameter	Value
Type	*operational*
Element Name	poap
Element URI	/axapi/v3/poap
Element Attributes	poap_attributes
Partition Visibility	shared
Schema	`poap schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/poap

poap attributes

poap attributes

action

Description 'enable': Enable POAP mode; 'disable': Disable POAP mode;

Type: string

Supported Values: enable, disable

3.66 reboot

Objects:

3.66.1 reboot

Reboot the System

reboot Specification

Parameter	Value
Type	*operational*
Element Name	reboot
Element URI	/axapi/v3/reboot
Element Attributes	reboot_attributes
Partition Visibility	shared
Schema	`reboot schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/reboot

reboot attributes

reboot attributes

all

Description Reboot all devices when VCS is enabled, or only this device itself if VCS is not enabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

at

Description Reboot at a Specific time/date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cancel

Description Cancel Pending Reboot

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

day-of-month

Description Day of the Month

Type: number

Range: 1-31

day-of-month-2

Description Day of the Month

Type: number

Range: 1-31

device

Description Reboot a specific device when VCS is enabled (device id)

Type: number

in

Description Reboot after a time interval (Time in hours and minutes)

Type: string

Format: time-hhmm

month

Description 'January': Month of the year; 'February': Month of the year; 'March': Month of the year; 'April': Month of the year; 'May': Month of the year; 'June': Month of the year; 'July': Month of the year; 'August': Month of the year; 'September': Month of the year; 'October': Month of the year; 'November': Month of the year; 'December': Month of the year;

Type: string

Supported Values: January, February, March, April, May, June, July, August, September, October, November, December

month-2

Description 'January': Month of the year; 'February': Month of the year; 'March': Month of the year; 'April': Month of the year; 'May': Month of the year; 'June': Month of the year; 'July': Month of the r; 'August': Month of the year; 'September': Month of the year; 'October': Month of the year; 'November': Month of the year; 'December': Month of the year;

Type: string

Supported Values: January, February, March, April, May, June, July, August, September, October, November, December

reason

Description Reason for Reboot

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

reason-2

Description Reason for Reboot

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

reason-3

Description Reason for Reboot

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

time

Description Time to Reboot (hh:mm)

Type: string

Format: time-hhmm

3.67 reload

Objects:

3.67.1 reload

Reload the system without rebooting

reload Specification

Parameter	Value
Type	*operational*
Element Name	reload
Element URI	/axapi/v3/reload
Element Attributes	reload_attributes
Partition Visibility	shared
Schema	`reload schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/reload

reload attributes

reload attributes

all

Description Reload all devices when VCS is enabled, or only this device itself if VCS is not enabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

device

Description Reload a specific device when VCS is enabled (device id)

Type: number

3.68 rename

Objects:

3.68.1 rename

Rename Object Name

rename Specification

Parameter	Value
Type	*operational*
Element Name	rename
Element URI	/axapi/v3/rename
Element Attributes	rename_attributes
Partition Visibility	shared
Schema	`rename schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rename

rename attributes

rename attributes

instance-name

Description Old Instance Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

new-instance-name

Description New Instance Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

object

Description Lineage of object being renamed e.g: slb.server, slb.service-group, slb.virtual-server

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

3.69 report

Objects:

3.69.1 report debug

Report debugging options

debug Specification

Parameter	Value
Type	*operational*
Element Name	debug
Element URI	/axapi/v3/report/debug
Element Attributes	debug_attributes
Partition Visibility	shared
Schema	`debug schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/report/debug

debug attributes

debug attributes

log

Description Enable Report module's normal logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sflow

Description: sflow is a **JSON Block**. Please see below for *sflow*

Type: Object

Reference Object: */axapi/v3/report/debug/sflow*

sflow

Specification	Value
Type	*object*

parser

Description Enable logs by parser

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-oid

Description Specify stats-oid to dump raw packets, 0 to disable

Type: number

Range: 0-9999

3.69.2 report debug sflow

Report sFlow parser options

sflow Specification

Parameter	Value
Type	*operational*
Element Name	sflow
Element URI	/axapi/v3/report/debug/sflow
Element Attributes	sflow_attributes
Partition Visibility	shared
Schema	`sflow schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/report/debug/sflow

sflow attributes

sflow attributes

parser

Description Enable logs by parser

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-oid

Description Specify stats-oid to dump raw packets, 0 to disable

Type: number

Range: 0-9999

3.70 restore

Objects:

3.70.1 restore

Restore system files

restore Specification

Parameter	Value
Type	*operational*
Element Name	restore
Element URI	/axapi/v3/restore
Element Attributes	restore_attributes
Partition Visibility	shared
Schema	`restore schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/restore

restore attributes

restore attributes

password

Description password for the remote site

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

remote-file

Description Remote file path

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.71 rrd

Objects:

3.71.1 rrd cgn

cgn data in RRD

cgn Specification

Parameter	Value
Type	*operational*
Element Name	cgn
Element URI	/axapi/v3/rrd/cgn
Element Attributes	cgn_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/rrd/cgn/oper
Schema	`cgn schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rrd/cgn

cgn attributes

cgn attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.71.2 rrd cpu

CPU usage in RRD

cpu Specification

Parameter	Value
Type	*operational*
Element Name	cpu
Element URI	/axapi/v3/rrd/cpu
Element Attributes	cpu_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/rrd/cpu/oper
Schema	`cpu schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rrd/cpu

cpu attributes

cpu attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.71.3 rrd cpuavg

CPU average usage in RRD

cpuavg Specification

Parameter	Value
Type	*operational*
Element Name	cpuavg
Element URI	/axapi/v3/rrd/cpuavg
Element Attributes	cpuavg_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/rrd/cpuavg/oper
Schema	`cpuavg schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rrd/cpuavg

cpuavg attributes

cpuavg attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.71.4 rrd disk

Disk usage in RRD

disk Specification

Parameter	Value
Type	*operational*
Element Name	disk
Element URI	/axapi/v3/rrd/disk
Element Attributes	disk_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/rrd/disk/oper
Schema	`disk schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rrd/disk

disk attributes

disk attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.71.5 rrd ethernet

ethernet statistics in RRD

ethernet Specification

Parameter	Value
Type	*operational*
Element Name	ethernet
Element URI	/axapi/v3/rrd/ethernet
Element Attributes	ethernet_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/rrd/ethernet/oper
Schema	`ethernet schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rrd/ethernet

ethernet attributes

ethernet attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.71.6 rrd ethernet-all

all ethernet statistics in RRD

ethernet-all Specification

Parameter	Value
Type	*operational*
Element Name	ethernet-all
Element URI	/axapi/v3/rrd/ethernet-all
Element Attributes	ethernet-all_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/rrd/ethernet-all/oper
Schema	`ethernet-all schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rrd/ethernet-all

ethernet-all attributes

ethernet-all attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.71.7 rrd global

global session data in RRD

global Specification

Parameter	Value
Type	*operational*
Element Name	global
Element URI	/axapi/v3/rrd/global
Element Attributes	global_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/rrd/global/oper
Schema	`global schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rrd/global

global attributes

global attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.71.8 rrd memory

Memory usage in RRD

memory Specification

Parameter	Value
Type	*operational*
Element Name	memory
Element URI	/axapi/v3/rrd/memory
Element Attributes	memory_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/rrd/memory/oper
Schema	`memory schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rrd/memory

memory attributes

memory attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.71.9 rrd performance

performance data in RRD

performance Specification

Parameter	Value
Type	*operational*
Element Name	performance
Element URI	/axapi/v3/rrd/performance
Element Attributes	performance_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/rrd/performance/oper
Schema	`performance schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rrd/performance

performance attributes

performance attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.71.10 rrd slb-server

slb server statistics in RRD

slb-server Specification

Parameter	Value
Type	*operational*
Element Name	slb-server
Element URI	/axapi/v3/rrd/slb-server
Element Attributes	slb-server_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/rrd/slb-server/oper
Schema	`slb-server schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rrd/slb-server

slb-server attributes

slb-server attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.71.11 rrd slb-service-group

slb service group statistics in RRD

slb-service-group Specification

Parameter	Value
Type	*operational*
Element Name	slb-service-group
Element URI	/axapi/v3/rrd/slb-service-group
Element Attributes	slb-service-group_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/rrd/slb-service-group/oper
Schema	`slb-service-group schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rrd/slb-service-group

slb-service-group attributes

slb-service-group attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.71.12 rrd slb-virtual-server

slb virtual server statistics in RRD

slb-virtual-server Specification

Parameter	Value
Type	*operational*
Element Name	slb-virtual-server
Element URI	/axapi/v3/rrd/slb-virtual-server
Element Attributes	slb-virtual-server_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/rrd/slb-virtual-server/oper
Schema	`slb-virtual-server schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rrd/slb-virtual-server

slb-virtual-server attributes

slb-virtual-server attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.72 rule-set

Objects:

3.72.1 rule-set rule move-rule

Move Rule

move-rule Specification

Parameter	Value
Type	*operational*
Element Name	move-rule
Element URI	/axapi/v3/rule-set/{name}/rule/{name}/move-rule
Element Attributes	move-rule_attributes
Partition Visibility	shared
Schema	`move-rule schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/rule-set/{name}/rule/{name}/move-rule

move-rule attributes

move-rule attributes

location

Description 'top': top; 'before': before; 'after': after; 'bottom': bottom;

Type: string

Supported Values: top, before, after, bottom

Default: bottom

target-rule

Description

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

3.73 scaleout

Objects:

3.73.1 scaleout debug cluster database

database Specification

Parameter	Value
Type	*operational*
Element Name	database
Element URI	/axapi/v3/scaleout/debug/cluster/database
Element Attributes	database_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/cluster/database/oper
Schema	`database schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/cluster/database

database attributes

database attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.2 scaleout debug cluster status

status Specification

Parameter	Value
Type	*operational*
Element Name	status
Element URI	/axapi/v3/scaleout/debug/cluster/status
Element Attributes	status_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/cluster/status/oper
Schema	`status schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/cluster/status

status attributes

status attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.3 scaleout debug hash-table

hash-table Specification

Parameter	Value
Type	*operational*
Element Name	hash-table
Element URI	/axapi/v3/scaleout/debug/hash-table
Element Attributes	hash-table_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/hash-table/oper
Schema	`hash-table schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/hash-table

hash-table attributes

hash-table attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.4 scaleout debug info

info Specification

Parameter	Value
Type	*operational*
Element Name	info
Element URI	/axapi/v3/scaleout/debug/info
Element Attributes	info_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/info/oper
Schema	`info schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/info

info attributes

info attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.5 scaleout debug ipv6 reachability

reachability Specification

Parameter	Value
Type	*operational*
Element Name	reachability
Element URI	/axapi/v3/scaleout/debug/ipv6/reachability
Element Attributes	reachability_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/ipv6/reachability/oper
Schema	`reachability schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/ipv6/reachability

reachability attributes

reachability attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.6 scaleout debug ipv6 redirect-table l2

l2 Specification

Parameter	Value
Type	*operational*
Element Name	l2
Element URI	/axapi/v3/scaleout/debug/ipv6/redirect-table/l2
Element Attributes	l2_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/ipv6/redirect-table/l2/oper
Schema	`l2 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/ipv6/redirect-table/l2

l2 attributes

l2 attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.7 scaleout debug ipv6 redirect-table l3

l3 Specification

Parameter	Value
Type	*operational*
Element Name	l3
Element URI	/axapi/v3/scaleout/debug/ipv6/redirect-table/l3
Element Attributes	l3_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/ipv6/redirect-table/l3/oper
Schema	`l3 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/ipv6/redirect-table/l3

l3 attributes

l3 attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.8 scaleout debug nat-list

nat-list Specification

Parameter	Value
Type	*operational*
Element Name	nat-list
Element URI	/axapi/v3/scaleout/debug/nat-list
Element Attributes	nat-list_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/nat-list/oper
Schema	`nat-list schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/nat-list

nat-list attributes

nat-list attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.9 scaleout debug nat-map

nat-map Specification

Parameter	Value
Type	*operational*
Element Name	nat-map
Element URI	/axapi/v3/scaleout/debug/nat-map
Element Attributes	nat-map_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/nat-map/oper
Schema	`nat-map schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/nat-map

nat-map attributes

nat-map attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.10 scaleout debug reachability

reachability Specification

Parameter	Value
Type	*operational*
Element Name	reachability
Element URI	/axapi/v3/scaleout/debug/reachability
Element Attributes	reachability_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/reachability/oper
Schema	`reachability schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/reachability

reachability attributes

reachability attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.11 scaleout debug redirect-table l2

l2 Specification

Parameter	Value
Type	*operational*
Element Name	l2
Element URI	/axapi/v3/scaleout/debug/redirect-table/l2
Element Attributes	l2_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/redirect-table/l2/oper
Schema	`l2 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/redirect-table/l2

l2 attributes

l2 attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.12 scaleout debug redirect-table l3

l3 Specification

Parameter	Value
Type	*operational*
Element Name	l3
Element URI	/axapi/v3/scaleout/debug/redirect-table/l3
Element Attributes	l3_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/redirect-table/l3/oper
Schema	`l3 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/redirect-table/l3

l3 attributes

l3 attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.13 scaleout debug resource-tracking

resource-tracking Specification

Parameter	Value
Type	*operational*
Element Name	resource-tracking
Element URI	/axapi/v3/scaleout/debug/resource-tracking
Element Attributes	resource-tracking_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/resource-tracking/oper
Schema	`resource-tracking schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/resource-tracking

resource-tracking attributes

resource-tracking attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.14 scaleout debug role

role Specification

Parameter	Value
Type	*operational*
Element Name	role
Element URI	/axapi/v3/scaleout/debug/role
Element Attributes	role_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/role/oper
Schema	`role schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/role

role attributes

role attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.15 scaleout debug traffic-map

traffic-map Specification

Parameter	Value
Type	*operational*
Element Name	traffic-map
Element URI	/axapi/v3/scaleout/debug/traffic-map
Element Attributes	traffic-map_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/debug/traffic-map/oper
Schema	`traffic-map schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/debug/traffic-map

traffic-map attributes

traffic-map attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.16 scaleout status

status Specification

Parameter	Value
Type	*operational*
Element Name	status
Element URI	/axapi/v3/scaleout/status
Element Attributes	status_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/status/oper
Schema	`status schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/status

status attributes

status attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.17 scaleout traffic-map

traffic-map Specification

Parameter	Value
Type	*operational*
Element Name	traffic-map
Element URI	/axapi/v3/scaleout/traffic-map
Element Attributes	traffic-map_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/traffic-map/oper
Schema	`traffic-map schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/traffic-map

traffic-map attributes

traffic-map attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.18 scaleout user-group-assignment address

address Specification

Parameter	Value
Type	*operational*
Element Name	address
Element URI	/axapi/v3/scaleout/user-group-assignment/address
Element Attributes	address_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/user-group-assignment/address/oper
Schema	`address schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/user-group-assignment/address

address attributes

address attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.73.19 scaleout user-group-assignment template-info

template-info Specification

Parameter	Value
Type	*operational*
Element Name	template-info
Element URI	/axapi/v3/scaleout/user-group-assignment/template-info
Element Attributes	template-info_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scaleout/user-group-assignment/template-info/oper
Schema	`template-info schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout/user-group-assignment/template-info

template-info attributes

template-info attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.74 scaleout-cgn

Objects:

3.74.1 scaleout-cgn

Enable Scaleout for CGN

scaleout-cgn Specification

Parameter	Value
Type	*operational*
Element Name	scaleout-cgn
Element URI	/axapi/v3/scaleout-cgn
Element Attributes	scaleout-cgn_attributes
Partition Visibility	shared
Schema	`scaleout-cgn schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scaleout-cgn

scaleout-cgn attributes

scaleout-cgn attributes

enable

Description Enable Scaleout for CGN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.75 scm

Objects:

3.75.1 scm license-src-info

license source opers

license-src-info Specification

Parameter	Value
Type	*operational*
Element Name	license-src-info
Element URI	/axapi/v3/scm/license-src-info
Element Attributes	license-src-info_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scm/license-src-info/oper
Schema	`license-src-info schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scm/license-src-info

license-src-info attributes

license-src-info attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.75.2 scm licensecpe

license opers

licensecpe Specification

Parameter	Value
Type	*operational*
Element Name	licensecpe
Element URI	/axapi/v3/scm/licensecpe
Element Attributes	licensecpe_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scm/licensecpe/oper
Schema	`licensecpe schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scm/licensecpe

licensecpe attributes

licensecpe attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.75.3 scm licenseinfo

license opers

licenseinfo Specification

Parameter	Value
Type	*operational*
Element Name	licenseinfo
Element URI	/axapi/v3/scm/licenseinfo
Element Attributes	licenseinfo_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/scm/licenseinfo/oper
Schema	`licenseinfo schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/scm/licenseinfo

Objects:

3.77.1 set-product-id

Set product ID

set-product-id Specification

Parameter	Value
Type	*operational*
Element Name	set-product-id
Element URI	/axapi/v3/set-product-id
Element Attributes	set-product-id_attributes
Partition Visibility	shared
Schema	`set-product-id schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/set-product-id

set-product-id attributes

set-product-id attributes

id

Description Enter the desired product ID, default is 2

Type: number

Range: 1-10

3.78 shutdown

Objects:

3.78.1 shutdown

Shutdown the System

shutdown Specification

Parameter	Value
Type	*operational*
Element Name	shutdown
Element URI	/axapi/v3/shutdown
Element Attributes	shutdown_attributes
Partition Visibility	shared
Schema	`shutdown schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/shutdown

shutdown attributes

shutdown attributes

at

Description Shutdown at a specific time/date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cancel

Description Cancel Pending Shutdown

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

day-of-month

Description Day of the Month

Type: number

Range: 1-31

day-of-month-2

Description Day of the Month

Type: number

Range: 1-31

in

Description Delay before Shutdown (Time in hours and minutes)

Type: string

Format: time-hhmm

month

Description 'January': Month of the year; 'February': Month of the year; 'March': Month of the year; 'April': Month of the year; 'May': Month of the year; 'June': Month of the year; 'July': Month of the year; 'August': Month of the year; 'September': Month of the year; 'October': Month of the year; 'November': Month of the year; 'December': Month of the year;

Type: string

Supported Values: January, February, March, April, May, June, July, August, September, October, November, December

month-2

Description 'January': Month of the year; 'February': Month of the year; 'March': Month of the year; 'April': Month of the year; 'May': Month of the year; 'June': Month of the year; 'July': Month of the year; 'August': Month of the year; 'September': Month of the year; 'October': Month of the year; 'November': Month of the year; 'December': Month of the year;

Type: string

Supported Values: January, February, March, April, May, June, July, August, September, October, November, December

reason

Description Reason for Shutdown

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

reason-2

Description Reason for Shutdown

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

reason-3

Description Reason for Shutdown

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

time

Description Time to Shutdown (hh:mm)

Type: string

Format: time-hhmm

3.79 slb

Objects:

Operational Data URI	/axapi/v3/slb/health-up-reason/oper
Schema	`health-up-reason schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/slb/health-up-reason

health-up-reason attributes

health-up-reason attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.79.6 slb ipv6-class-list

IPv6 subnet add remove config

ipv6-class-list Specification

Parameter	Value
Type	*operational*
Object Key(s)	*name*
Element Name	ipv6-class-list
Element URI	/axapi/v3/slb/ipv6-class-list/{name}
Element Attributes	ipv6-class-list_attributes
Partition Visibility	shared
Schema	`ipv6-class-list schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/slb/ipv6-class-list/{name}

ipv6-class-list attributes

ipv6-class-list-list

ipv6-class-list-list is **JSON List** of *ipv6-class-list attributes*

```
ipv6-class-list-list : [
        { ipv6-class-list attributes },
        { ipv6-class-list attributes },
        ...
    ]
```

ipv6-class-list attributes

ipv6-list

Type: List

name

Description Specify name of the class list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: test

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ipv6-list

Specification	Value
Type	*list*
Block object keys	

action

Description 'add': Add the entry; 'delete': Delete the entry;

Type: string

Supported Values: add, delete

glid

Description Use global Limit ID (Specify global LID index)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: glid,lid, lsn-lid, and lsn-radius-profile are mutually exclusive

ipv6-addr

Description Specify IPv6 host or subnet

Type: string

Format: ipv6-address-plen

lid

Description Use Limit ID defined in template (Specify LID index)

Type: number

Range: 1-1023

Mutual Exclusion: lid,glid, lsn-lid, and lsn-radius-profile are mutually exclusive

lsn-lid

Description LSN Limit ID (LID index)

Type: number

Range: 1-1023

Mutual Exclusion: lsn-lid,lid, glid, and lsn-radius-profile are mutually exclusive

lsn-radius-profile

Description LSN RADIUS Profile Index

Type: number

Range: 1-16

Mutual Exclusion: lsn-radius-profile,lid, glid, and lsn-lid are mutually exclusive

3.79.7 slb player-id-list

Player id records config

player-id-list Specification

Parameter	Value
Type	*operational*
Element Name	player-id-list
Element URI	/axapi/v3/slb/player-id-list
Element Attributes	player-id-list_attributes
Partition Visibility	shared
Schema	`player-id-list schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/slb/player-id-list

player-id-list attributes

player-id-list attributes

player-record

Type: List

player-record

Specification	Value
Type	*list*
Block object keys	

game-server-ipv4

Description Specify IP address

Type: string

Format: ipv4-address

game-server-ipv6

Description Specify IPv6 address

Type: string

Format: ipv6-address

game-server-port-v4

Description Port

Type: number

Range: 0-65534

game-server-port-v6

Description Port

Type: number

Range: 0-65534

player-id

Description 64/32 bit player id based on config

Type: number

Range: 0-2147483647

3.79.8 slb reset-unknown-conn

reset-unknown-conn Specification

Parameter	Value

POST

/axapi/v3/slb/ssl-scep-cert-log

ssl-scep-cert-log attributes

ssl-scep-cert-log attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.79.28 slb ssl-scep-cert-status

ssl-scep-cert-status Specification

Parameter	Value
Type	*operational*
Element Name	ssl-scep-cert-status
Element URI	/axapi/v3/slb/ssl-scep-cert-status
Element Attributes	ssl-scep-cert-status_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/slb/ssl-scep-cert-status/oper
Schema	`ssl-scep-cert-status schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/slb/ssl-scep-cert-status

ssl-scep-cert-status attributes

ssl-scep-cert-status attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.79.29 slb ssl-stats

SSL Statistics

ssl-stats Specification

Parameter	Value
Type	*operational*
Element Name	ssl-stats
Element URI	/axapi/v3/slb/ssl-stats
Element Attributes	ssl-stats_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/slb/ssl-stats/oper
Schema	`ssl-stats schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/slb/ssl-stats

ssl-stats attributes

ssl-stats attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.79.30 slb template dblb calc-sha1

Calculate sha1 value of a cleartext password

calc-sha1 Specification

Parameter	Value
Type	*operational*
Element Name	calc-sha1
Element URI	/axapi/v3/slb/template/dblb/{name}/calc-sha1
Element Attributes	calc-sha1_attributes
Partition Visibility	shared
Schema	`calc-sha1 schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/slb/template/dblb/{name}/calc-sha1

calc-sha1 attributes

calc-sha1 attributes

sha1-value

Description Cleartext password

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

3.79.31 slb tsig

Manage TSIG Key File

tsig Specification

Parameter	Value
Type	*operational*
Element Name	tsig
Element URI	/axapi/v3/slb/tsig
Element Attributes	tsig_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/slb/tsig/oper
Schema	`tsig schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/slb/tsig

tsig attributes

tsig attributes

check

Description Check TSIG file

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.79.32 slb virtual-server migrate-vip

Migrate this virtual server

migrate-vip Specification

Parameter	Value
Type	*operational*
Element Name	migrate-vip
Element URI	/axapi/v3/slb/virtual-server/{name}/migrate-vip
Element Attributes	migrate-vip_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/slb/virtual-server/{name}/migrate-vip/oper
Schema	`migrate-vip schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/slb/virtual-server/{name}/migrate-vip

migrate-vip attributes

migrate-vip attributes

cancel-migration

Description Cancel migration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cancel-migration and finish-migration are mutually exclusive

finish-migration

Description Complete the migration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: finish-migration and cancel-migration are mutually exclusive

target-data-cpu

Description Number of CPUs on the target platform

Type: number

Range: 1-75

target-floating-ipv4

Description Specify IP address

Type: string

Format: ipv4-address

Mutual Exclusion: target-floating-ipv4 and target-floating-ipv6 are mutually exclusive

target-floating-ipv6

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: target-floating-ipv6 and target-floating-ipv4 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.80 sshd

Objects:

3.80.1 sshd

SSHD service operation

sshd Specification

Parameter	Value
Type	*operational*
Element Name	sshd
Element URI	/axapi/v3/sshd
Element Attributes	sshd_attributes
Partition Visibility	shared
Schema	`sshd schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/sshd

sshd attributes

sshd attributes

file-url

Description File URL

Type: string

Format: url

generate

Description Generate SSH key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

load

Description Load SSH key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

re-add-rsa

Description remove ip address from known_hosts

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

regenerate

Description Wipe and generate SSH key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart

Description Restart SSH service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

size

Description '2048': Key size 2048bit; '4096': Key size 4096bit;

Type: string

Supported Values: 2048, 4096

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wipe

Description Wipe SSH key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.81 ssl

Objects:

3.81.1 ssl

Local file Mangement

ssl Specification

Parameter	Value
Type	*Intermediate Resource*
Element Name	ssl
Element URI	/axapi/v3/ssl
Element Attributes	ssl_attributes
Partition Visibility	shared
Schema	`ssl schema`

Operations Allowed:

Get Object

GET

/axapi/v3/ssl

ssl_attributes

ssl attributes

certificate

Description: certificate is a **JSON Block**. Please see below for *certificate*

Type: Object

Reference Object: */axapi/v3/ssl/certificate/{name}*

key

Description: key is a **JSON Block**. Please see below for *key*

Type: Object

Reference Object: */axapi/v3/ssl/key/{name}*

key

Specification	Value
Type	*object*

name

Description ssl certificate local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

private-key

Description

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

certificate

Specification	Value
Type	*object*

certificate-type

Description 'pem': pem; 'der': der; 'pfx': pfx; 'p7b': p7b;

Type: string

Supported Values: pem, der, pfx, p7b

name

Description ssl certificate local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

public-key

Description

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

3.81.2 ssl certificate

ssl certificate file information and management commands

certificate Specification

Parameter	Value
Type	*operational*
Object Key(s)	*name*
Element Name	certificate
Element URI	/axapi/v3/ssl/certificate/{name}
Element Attributes	certificate_attributes
Partition Visibility	shared
Schema	`certificate schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ssl/certificate/{name}

certificate attributes

certificate attributes

certificate-type

Description 'pem': pem; 'der': der; 'pfx': pfx; 'p7b': p7b;

Type: string

Supported Values: pem, der, pfx, p7b

name

Description ssl certificate local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

public-key

Description

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

3.81.3 ssl key

ssl certificate and key file information and management commands

key Specification

Parameter	Value
Type	*operational*
Object Key(s)	*name*
Element Name	key
Element URI	/axapi/v3/ssl/key/{name}
Element Attributes	key_attributes
Partition Visibility	shared
Schema	`key schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/ssl/key/{name}

key attributes

key attributes

name

Description ssl certificate local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

private-key

Description

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

3.82 sys-audit-log

Objects:

3.83 sys-ut

Objects:

3.83.1 sys-ut run-test

Run currently setup test

run-test Specification

Parameter	Value
Type	*operational*
Element Name	run-test
Element URI	/axapi/v3/sys-ut/run-test
Element Attributes	run-test_attributes
Partition Visibility	shared
Schema	`run-test schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/sys-ut/run-test

run-test attributes

run-test attributes

mode

Description 'basic': Run Basic mode; 'fault-injection': Run FI mode. This will also run Basic mode to gather data; 'cpu-rr': Run CPU RR mode; 'frag': Run IP frag mode;

Type: string

Supported Values: basic, fault-injection, cpu-rr, frag

3.84 syslog

Objects:

3.85 system

Objects:

3.85.1 system add-cpu-core

Add CPU cores

add-cpu-core Specification

Parameter	Value
Type	*operational*
Element Name	add-cpu-core
Element URI	/axapi/v3/system/add-cpu-core
Element Attributes	add-cpu-core_attributes
Partition Visibility	shared
Schema	`add-cpu-core schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/add-cpu-core

add-cpu-core attributes

add-cpu-core attributes

core-index

Description core index to be added (Specify core index)

Type: number

Range: 0-128

3.85.2 system add-port

Add port to Active list

add-port Specification

Parameter	Value
Type	*operational*
Element Name	add-port
Element URI	/axapi/v3/system/add-port
Element Attributes	add-port_attributes
Partition Visibility	shared
Schema	`add-port schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/add-port

add-port attributes

add-port attributes

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

3.85.3 system cm-update-file-name-ref

update the bind name

cm-update-file-name-ref Specification

Parameter	Value
Type	*operational*
Element Name	cm-update-file-name-ref
Element URI	/axapi/v3/system/cm-update-file-name-ref
Element Attributes	cm-update-file-name-ref_attributes
Partition Visibility	shared
Schema	`cm-update-file-name-ref schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/cm-update-file-name-ref

cm-update-file-name-ref attributes

cm-update-file-name-ref attributes

dest_name

Description bind dest name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

id

Description Specify unique Partition id

Type: number

source_name

Description bind source name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

3.85.4 system core

Get core dump

core Specification

Parameter	Value
Type	*operational*
Element Name	core
Element URI	/axapi/v3/system/core
Element Attributes	core_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/core/oper
Schema	`core schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/core

core attributes

core attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.5 system cosq-show

cosq-show Specification

Parameter	Value
Type	*operational*
Element Name	cosq-show
Element URI	/axapi/v3/system/cosq-show
Element Attributes	cosq-show_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/cosq-show/oper
Schema	`cosq-show schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/cosq-show

cosq-show attributes

cosq-show attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.6 system cosq-stats

cosq-stats Specification

Parameter	Value
Type	*operational*
Element Name	cosq-stats
Element URI	/axapi/v3/system/cosq-stats
Element Attributes	cosq-stats_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/cosq-stats/oper
Schema	`cosq-stats schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/cosq-stats

cosq-stats attributes

cosq-stats attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.7 system cpu-hyper-thread

Cpu Hyperthreading

cpu-hyper-thread Specification

Parameter	Value
Type	*operational*
Element Name	cpu-hyper-thread
Element URI	/axapi/v3/system/cpu-hyper-thread
Element Attributes	cpu-hyper-thread_attributes
Partition Visibility	shared
Schema	`cpu-hyper-thread schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/cpu-hyper-thread

cpu-hyper-thread attributes

cpu-hyper-thread attributes

disable

Description Disable CPU Hyperthreading

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable CPU Hyperthreading

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.85.8 system cpu-list

Bare-Metal cpu list

cpu-list Specification

Parameter	Value
Type	*operational*
Element Name	cpu-list
Element URI	/axapi/v3/system/cpu-list
Element Attributes	cpu-list_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/cpu-list/oper
Schema	`cpu-list schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/cpu-list

cpu-list attributes

cpu-list attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.9 system cpu-map

Bare-Metal cpu map

cpu-map Specification

Parameter	Value
Type	*operational*
Element Name	cpu-map
Element URI	/axapi/v3/system/cpu-map
Element Attributes	cpu-map_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/cpu-map/oper
Schema	`cpu-map schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/cpu-map

cpu-map attributes

cpu-map attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.10 system cpu-packet-prio-support

Enable/Disable CPU packet prioritization support

cpu-packet-prio-support Specification

Parameter	Value
Type	*operational*
Element Name	cpu-packet-prio-support
Element URI	/axapi/v3/system/cpu-packet-prio-support
Element Attributes	cpu-packet-prio-support_attributes
Partition Visibility	shared
Schema	`cpu-packet-prio-support schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/cpu-packet-prio-support

cpu-packet-prio-support attributes

cpu-packet-prio-support attributes

disable

Description Disable CPU packet prioritization Support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and enable are mutually exclusive

enable

Description Enable CPU packet prioritization Support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: enable and disable are mutually exclusive

3.85.11 system del-port

Add port to Black list

del-port Specification

Parameter	Value
Type	*operational*
Element Name	del-port
Element URI	/axapi/v3/system/del-port
Element Attributes	del-port_attributes
Partition Visibility	shared
Schema	`del-port schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/del-port

del-port attributes

del-port attributes

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

3.85.12 system delete-cpu-core

delete CPU cores

delete-cpu-core Specification

Parameter	Value
Type	*operational*
Element Name	delete-cpu-core
Element URI	/axapi/v3/system/delete-cpu-core
Element Attributes	delete-cpu-core_attributes
Partition Visibility	shared
Schema	`delete-cpu-core schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/delete-cpu-core

delete-cpu-core attributes

delete-cpu-core attributes

core-index

Description core index to be deleted (Specify core index)

Type: number

Range: 0-128

3.85.13 system environment

environment Specification

Parameter	Value
Type	*operational*
Element Name	environment
Element URI	/axapi/v3/system/environment
Element Attributes	environment_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/environment/oper
Schema	`environment schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/environment

environment attributes

environment attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.14 system geoloc

geoloc Specification

Parameter	Value
Type	*operational*
Element Name	geoloc
Element URI	/axapi/v3/system/geoloc
Element Attributes	geoloc_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/system/geoloc/stats
Operational Data URI	/axapi/v3/system/geoloc/oper
Schema	`geoloc schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/geoloc

geoloc attributes

geoloc attributes

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'place-holder': place-holder;

Type: string

Supported Values: all, place-holder

3.85.15 system geolocation-file

Geolocation File

geolocation-file Specification

Parameter	Value
Type	*operational*
Element Name	geolocation-file
Element URI	/axapi/v3/system/geolocation-file
Element Attributes	geolocation-file_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/geolocation-file/oper
Schema	`geolocation-file schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/geolocation-file

geolocation-file attributes

geolocation-file attributes

error-info

Description: error-info is a **JSON Block**. Please see below for *error-info*

Type: Object

Reference Object: */axapi/v3/system/geolocation-file/error-info*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

error-info

Specification	Value
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.16 system geolocation-file error-info

Geolocation File Error Information

error-info Specification

Parameter	Value
Type	*operational*
Element Name	error-info
Element URI	/axapi/v3/system/geolocation-file/error-info
Element Attributes	error-info_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/geolocation-file/error-info/oper
Schema	`error-info schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/geolocation-file/error-info

error-info attributes

error-info attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.17 system guest-file

list guest files

guest-file Specification

Parameter	Value
Type	*operational*
Element Name	guest-file
Element URI	/axapi/v3/system/guest-file
Element Attributes	guest-file_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/guest-file/oper
Schema	`guest-file schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/guest-file

guest-file attributes

guest-file attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.18 system gui-image-list

Get Gui Image List

gui-image-list Specification

Parameter	Value
Type	*operational*
Element Name	gui-image-list
Element URI	/axapi/v3/system/gui-image-list
Element Attributes	gui-image-list_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/gui-image-list/oper
Schema	`gui-image-list schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/gui-image-list

gui-image-list attributes

gui-image-list attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.19 system hardware

hardware Specification

Parameter	Value
Type	*operational*
Element Name	hardware
Element URI	/axapi/v3/system/hardware
Element Attributes	hardware_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/hardware/oper
Schema	`hardware schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/hardware

hardware attributes

hardware attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.20 system hardware-accelerate slb

slb Specification

Parameter	Value
Type	*operational*
Element Name	slb
Element URI	/axapi/v3/system/hardware-accelerate/slb
Element Attributes	slb_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/system/hardware-accelerate/slb/stats
Schema	`slb schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/hardware-accelerate/slb

slb attributes

slb attributes

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	Value
Type	*list*
Block object keys	

counters1

Description 'all': all; 'entry-create': Hardware Entries Created; 'entry-create-failure': Hardware Entries Created; 'entry-create-fail-server-down': Hardware Entries Created; 'entry-create-fail-max-entry': Hardware Entries Created; 'entry-free': Hardware Entries Freed; 'entry-free-opp-entry': Hardware Entries Free due to opposite tuple entry ageout event; 'entry-free-no-hw-prog': Hardware Entry Free no hw prog; 'entry-free-no-conn': Hardware Entry Free no matched conn; 'entry-free-no-sw-entry': Hardware Entry Free no software entry; 'entry-counter': Hardware Entry Count; 'entry-age-out': Hardware Entries Aged Out; 'entry-age-out-idle': Hardware Entries Aged Out Idle; 'entry-age-out-tcp-fin': Hardware Entries Aged

Out TCP FIN; 'entry-age-out-tcp-rst': Hardware Entries Aged Out TCP RST; 'entry-age-out-invalid-dst': Hardware Entries Aged Out invalid dst; 'entry-force-hw-invalidate': Hardware Entries Force HW Invalidate; 'entry-invalidate-server-down': Hardware Entries Invalidate due to server down; 'tcam-create': TCAM Entries Created; 'tcam-free': TCAM Entries Freed; 'tcam-counter': TCAM Entry Count;

Type: string

Supported Values: all, entry-create, entry-create-failure, entry-create-fail-server-down, entry-create-fail-max-entry, entry-free, entry-free-opp-entry, entry-free-no-hw-prog, entry-free-no-conn, entry-free-no-sw-entry, entry-counter, entry-age-out, entry-age-out-idle, entry-age-out-tcp-fin, entry-age-out-tcp-rst, entry-age-out-invalid-dst, entry-force-hw-invalidate, entry-invalidate-server-down, tcam-create, tcam-free, tcam-counter

3.85.21 system hrxq-status

hrxq-status Specification

Parameter	Value
Type	*operational*
Element Name	hrxq-status
Element URI	/axapi/v3/system/hrxq-status
Element Attributes	hrxq-status_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/hrxq-status/oper
Schema	`hrxq-status schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/hrxq-status

hrxq-status attributes

hrxq-status attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.22 system inuse-cpu-list

Bare-Metal lb cpu list

inuse-cpu-list Specification

Parameter	Value
Type	*operational*
Element Name	inuse-cpu-list
Element URI	/axapi/v3/system/inuse-cpu-list
Element Attributes	inuse-cpu-list_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/inuse-cpu-list/oper
Schema	`inuse-cpu-list schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/inuse-cpu-list

inuse-cpu-list attributes

inuse-cpu-list attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.23 system inuse-port-list

Bare-Metal lb port list

inuse-port-list Specification

Parameter	Value
Type	*operational*
Element Name	inuse-port-list
Element URI	/axapi/v3/system/inuse-port-list
Element Attributes	inuse-port-list_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/inuse-port-list/oper
Schema	`inuse-port-list schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/inuse-port-list

inuse-port-list attributes

inuse-port-list attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.24 system io-cpu

IO CPU cores

io-cpu Specification

Parameter	Value
Type	*operational*
Element Name	io-cpu
Element URI	/axapi/v3/system/io-cpu
Element Attributes	io-cpu_attributes
Partition Visibility	shared
Schema	`io-cpu schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/io-cpu

io-cpu attributes

io-cpu attributes

max-cores

Description max number of IO cores (Specify number of cores)

Type: number

Range: 0-128

3.85.25 system ipmi

Perform IPMI related operations

ipmi Specification

Parameter	Value
Type	*operational*
Element Name	ipmi
Element URI	/axapi/v3/system/ipmi
Element Attributes	ipmi_attributes
Partition Visibility	shared
Schema	`ipmi schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/ipmi

ipmi attributes

ipmi attributes

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Reference Object: */axapi/v3/system/ipmi/ip*

ipsrc

Description: ipsrc is a **JSON Block**. Please see below for *ipsrc*

Type: Object

Reference Object: */axapi/v3/system/ipmi/ipsrc*

reset

Description Reset IPMI Controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tool

Description: tool is a **JSON Block**. Please see below for *tool*

Type: Object

Reference Object: */axapi/v3/system/ipmi/tool*

user

Description: user is a **JSON Block**. Please see below for *user*

Type: Object

Reference Object: */axapi/v3/system/ipmi/user*

ip

Specification	Value
Type	*object*

default-gateway

Description Default gateway address

Type: string

Format: ipv4-address

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ipsrc

Specification	Value
Type	*object*

dhcp

Description IP addr obtained by BMC running DHCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Manually configured static IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tool

Specification	Value
Type	*object*

cmd

Description Command to execute in double quotes

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

user

Specification	Value
Type	*object*

add

Description Add a new IPMI user (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

administrator

Description Full control

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

callback

Description Lowest privilege level

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable an existing IPMI user (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

newname

Description New IPMI User Name

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

newpass

Description New Password

Type: string

Format: password

Maximum Length: 17 characters

Maximum Length: 1 characters

operator

Description Most BMC commands are allowed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description Password

Type: string

Format: password

Maximum Length: 17 characters

Maximum Length: 1 characters

privilege

Description Change an existing IPMI user privilege (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

setname

Description Change User Name (Current IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

setpass

Description Change Password (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

user

Description Only 'benign' commands are allowed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.85.26 system ipmi ip

Set IP address for IPMI interface

ip Specification

Parameter	Value
Type	*operational*
Element Name	ip
Element URI	/axapi/v3/system/ipmi/ip
Element Attributes	ip_attributes
Partition Visibility	shared
Schema	`ip schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/ipmi/ip

ip attributes

ip attributes

default-gateway

Description Default gateway address

Type: string

Format: ipv4-address

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

3.85.27 system ipmi ipsrc

Source of IP Address

ipsrc Specification

Parameter	Value
Type	*operational*
Element Name	ipsrc
Element URI	/axapi/v3/system/ipmi/ipsrc
Element Attributes	ipsrc_attributes
Partition Visibility	shared
Schema	`ipsrc schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/ipmi/ipsrc

ipsrc attributes

ipsrc attributes

dhcp

Description IP addr obtained by BMC running DHCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Manually configured static IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.85.28 system ipmi tool

Command to execute in double quotes

tool Specification

Parameter	Value
Type	*operational*
Element Name	tool
Element URI	/axapi/v3/system/ipmi/tool
Element Attributes	tool_attributes
Partition Visibility	shared
Schema	`tool schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/ipmi/tool

tool attributes

tool attributes

cmd

Description Command to execute in double quotes

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

3.85.29 system ipmi user

Add, Change or Disable IPMI users

user Specification

Parameter	Value
Type	*operational*
Element Name	user
Element URI	/axapi/v3/system/ipmi/user
Element Attributes	user_attributes
Partition Visibility	shared
Schema	`user schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/ipmi/user

user attributes

user attributes

add

Description Add a new IPMI user (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

administrator

Description Full control

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

callback

Description Lowest privilege level

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable an existing IPMI user (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

newname

Description New IPMI User Name

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

newpass

Description New Password

Type: string

Format: password

Maximum Length: 17 characters

Maximum Length: 1 characters

operator

Description Most BMC commands are allowed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description Password

Type: string

Format: password

Maximum Length: 17 characters

Maximum Length: 1 characters

privilege

Description Change an existing IPMI user privilege (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

setname

Description Change User Name (Current IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

setpass

Description Change Password (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

user

Description Only 'benign' commands are allowed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.85.30 system ipsec fpga-decrypt

Enable or disable FPGA decryption offload

fpga-decrypt Specification

Parameter	Value
Type	*operational*
Element Name	fpga-decrypt
Element URI	/axapi/v3/system/ipsec/fpga-decrypt
Element Attributes	fpga-decrypt_attributes
Partition Visibility	shared
Schema	`fpga-decrypt schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/ipsec/fpga-decrypt

fpga-decrypt attributes

fpga-decrypt attributes

action

Description 'enable': Enable FPGA decryption offload; 'disable': Disable FPGA decryption offload;

Type: string

Supported Values: enable, disable

Default: disable

3.85.31 system link-monitor

Link Monitoring

link-monitor Specification

Parameter	Value
Type	*operational*
Element Name	link-monitor
Element URI	/axapi/v3/system/link-monitor
Element Attributes	link-monitor_attributes
Partition Visibility	shared
Schema	`link-monitor schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/link-monitor

link-monitor attributes

link-monitor attributes

disable

Description Disable Link Monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable Link Monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.85.32 system lro

Large Receive Offload

lro Specification

Parameter	Value
Type	*operational*
Element Name	lro
Element URI	/axapi/v3/system/lro
Element Attributes	lro_attributes
Partition Visibility	shared
Schema	`lro schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/lro

lro attributes

lro attributes

disable

Description Disable Large Receive Offload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable Large Receive Offload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.85.33 system management-interface-mode

Configure management interface mode

management-interface-mode Specification

Parameter	Value
Type	*operational*
Element Name	management-interface-mode
Element URI	/axapi/v3/system/management-interface-mode
Element Attributes	management-interface-mode_attributes
Partition Visibility	shared
Schema	`management-interface-mode schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/management-interface-mode

management-interface-mode attributes

management-interface-mode attributes

dedicated

Description Set management interface in dedicated mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

non-dedicated

Description Set management interface in non-dedicated mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.85.34 system mfa-auth

MFA authentication API

mfa-auth Specification

Parameter	Value
Type	*operational*
Element Name	mfa-auth
Element URI	/axapi/v3/system/mfa-auth
Element Attributes	mfa-auth_attributes
Partition Visibility	shared
Schema	`mfa-auth schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/mfa-auth

mfa-auth attributes

mfa-auth attributes

second-factor

Description Input second factor paramter

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

username

Description Username for MFA validation

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

3.85.35 system mgmt-port

set management port

mgmt-port Specification

Parameter	Value
Type	*operational*
Element Name	mgmt-port
Element URI	/axapi/v3/system/mgmt-port
Element Attributes	mgmt-port_attributes
Partition Visibility	shared
Schema	`mgmt-port schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/mgmt-port

mgmt-port attributes

mgmt-port attributes

mac-address

Description mac-address to be configured as mgmt port

Type: string

Format: mac-address

Maximum Length: 14 characters

Maximum Length: 14 characters

pci-address

Description pci-address to be configured as mgmt port

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

3.85.36 system modify-port

Change port number

modify-port Specification

Parameter	Value
Type	*operational*
Element Name	modify-port
Element URI	/axapi/v3/system/modify-port
Element Attributes	modify-port_attributes
Partition Visibility	shared
Schema	`modify-port schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/modify-port

modify-port attributes

modify-port attributes

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

port-number

Description port number to be configured (Specify port number)

Type: number

Range: 1-32

3.85.37 system multi-queue-support

To Enable/disable Multi-Queue-Support

multi-queue-support Specification

Parameter	Value
Type	*operational*
Element Name	multi-queue-support
Element URI	/axapi/v3/system/multi-queue-support
Element Attributes	multi-queue-support_attributes
Partition Visibility	shared
Schema	`multi-queue-support schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/multi-queue-support

multi-queue-support attributes

multi-queue-support attributes

enable

Description Enable Multi-Queue-Support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.85.38 system platformtype

platformtype Specification

Parameter	Value
Type	*operational*
Element Name	platformtype
Element URI	/axapi/v3/system/platformtype
Element Attributes	platformtype_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/platformtype/oper
Schema	`platformtype schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/platformtype

platformtype attributes

platformtype attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.39 system port-info

Bare-Metal port info

port-info Specification

Parameter	Value
Type	*operational*
Element Name	port-info
Element URI	/axapi/v3/system/port-info
Element Attributes	port-info_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/port-info/oper
Schema	`port-info schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/port-info

port-info attributes

port-info attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.40 system port-list

Bare-Metal port list

port-list Specification

Parameter	Value
Type	*operational*
Element Name	port-list
Element URI	/axapi/v3/system/port-list
Element Attributes	port-list_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/port-list/oper
Schema	`port-list schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/port-list

port-list attributes

port-list attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.41 system power-on-self-test

Power-on Log Info

power-on-self-test Specification

Parameter	Value
Type	*operational*
Element Name	power-on-self-test
Element URI	/axapi/v3/system/power-on-self-test
Element Attributes	power-on-self-test_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/power-on-self-test/oper
Schema	`power-on-self-test schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/power-on-self-test

power-on-self-test attributes

power-on-self-test attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.42 system psu-info

Display system PSU information like SerialNumber

psu-info Specification

Parameter	Value
Type	*operational*
Element Name	psu-info
Element URI	/axapi/v3/system/psu-info
Element Attributes	psu-info_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/psu-info/oper
Schema	`psu-info schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/psu-info

psu-info attributes

psu-info attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.43 system reboot

reboot Specification

Parameter	Value
Type	*operational*
Element Name	reboot
Element URI	/axapi/v3/system/reboot
Element Attributes	reboot_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/reboot/oper
Schema	`reboot schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/reboot

reboot attributes

reboot attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.44 system set-rxtx-desc-size

Set the number of Descriptor size per queue

set-rxtx-desc-size Specification

Parameter	Value
Type	*operational*
Element Name	set-rxtx-desc-size
Element URI	/axapi/v3/system/set-rxtx-desc-size
Element Attributes	set-rxtx-desc-size_attributes
Partition Visibility	shared
Schema	`set-rxtx-desc-size schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/set-rxtx-desc-size

set-rxtx-desc-size attributes

set-rxtx-desc-size attributes

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

rxd-size

Description Set new rx-descriptor size

Type: number

Range: 0-65536

txd-size

Description Set new tx-descriptor size

Type: number

Range: 0-65536

3.85.45 system set-rxtx-queue

Set the number of Queues per port

set-rxtx-queue Specification

Parameter	Value
Type	*operational*
Element Name	set-rxtx-queue
Element URI	/axapi/v3/system/set-rxtx-queue
Element Attributes	set-rxtx-queue_attributes
Partition Visibility	shared
Schema	`set-rxtx-queue schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/set-rxtx-queue

set-rxtx-queue attributes

set-rxtx-queue attributes

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

rxq-size

Description Set number of new rx queues

Type: number

Range: 0-1024

txq-size

Description Set number of new tx queues

Type: number

Range: 0-1024

3.85.46 system shared-poll-mode

Configure shared poll mode

shared-poll-mode Specification

Parameter	Value
Type	*operational*
Element Name	shared-poll-mode
Element URI	/axapi/v3/system/shared-poll-mode
Element Attributes	shared-poll-mode_attributes
Partition Visibility	shared
Schema	`shared-poll-mode schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/shared-poll-mode

shared-poll-mode attributes

shared-poll-mode attributes

disable

Description Disable shared poll mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable shared poll mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.85.47 system shutdown

shutdown Specification

Parameter	Value
Type	*operational*
Element Name	shutdown
Element URI	/axapi/v3/system/shutdown
Element Attributes	shutdown_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/shutdown/oper
Schema	`shutdown schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/shutdown

shutdown attributes

shutdown attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.48 system spe-profile

Set Security Policy Engine Profile

spe-profile Specification

Parameter	Value
Type	*operational*
Element Name	spe-profile
Element URI	/axapi/v3/system/spe-profile
Element Attributes	spe-profile_attributes
Partition Visibility	shared
Schema	`spe-profile schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/spe-profile

spe-profile attributes

spe-profile attributes

action

Description 'ipv4-only': Enable IPv4 HW forward entries only; 'ipv6-only': Enable IPv6 HW forward entries only; 'ipv4-ipv6': Enable Both IPv4/IPv6 HW forward entries (shared);

Type: string

Supported Values: ipv4-only, ipv6-only, ipv4-ipv6

Default: ipv4-ipv6

3.85.49 system spe-status

spe-status Specification

Parameter	Value
Type	*operational*
Element Name	spe-status
Element URI	/axapi/v3/system/spe-status
Element Attributes	spe-status_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/spe-status/oper
Schema	`spe-status schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/spe-status

spe-status attributes

spe-status attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.50 system ssl-status

ssl-status Specification

Parameter	Value
Type	*operational*
Element Name	ssl-status
Element URI	/axapi/v3/system/ssl-status
Element Attributes	ssl-status_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/ssl-status/oper
Schema	`ssl-status schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/ssl-status

ssl-status attributes

ssl-status attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.85.51 system syslog-time-msec

Enable syslog timestamp in millisecond

syslog-time-msec Specification

Parameter	Value
Type	*operational*
Element Name	syslog-time-msec
Element URI	/axapi/v3/system/syslog-time-msec
Element Attributes	syslog-time-msec_attributes
Partition Visibility	shared
Schema	`syslog-time-msec schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/syslog-time-msec

syslog-time-msec attributes

syslog-time-msec attributes

enable-flag

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.85.52 system tso

TCP Segmentation Offload

tso Specification

Parameter	Value
Type	*operational*
Element Name	tso
Element URI	/axapi/v3/system/tso
Element Attributes	tso_attributes
Partition Visibility	shared
Schema	`tso schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/tso

tso attributes

tso attributes

disable

Description Disable TCP Segmentation Offload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable TCP Segmentation Offload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.85.53 system upgrade-status

Get upgrading status

upgrade-status Specification

Parameter	Value
Type	*operational*
Element Name	upgrade-status
Element URI	/axapi/v3/system/upgrade-status
Element Attributes	upgrade-status_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system/upgrade-status/oper
Schema	`upgrade-status schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system/upgrade-status

upgrade-status attributes

upgrade-status attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.86 system-big-buff-pool

Objects:

3.86.1 system-big-buff-pool

System big buff pool config

system-big-buff-pool Specification

Parameter	Value
Type	*operational*
Element Name	system-big-buff-pool
Element URI	/axapi/v3/system-big-buff-pool
Element Attributes	system-big-buff-pool_attributes
Partition Visibility	shared
Schema	`system-big-buff-pool schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-big-buff-pool

system-big-buff-pool attributes

system-big-buff-pool attributes

big-buff-pool

Description Configure big I/O buffer pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.87 system-cpu

Objects:

3.87.1 system-cpu ctrl-cpu

Control CPU usage

ctrl-cpu Specification

Parameter	Value
Type	*operational*
Element Name	ctrl-cpu
Element URI	/axapi/v3/system-cpu/ctrl-cpu
Element Attributes	ctrl-cpu_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system-cpu/ctrl-cpu/oper
Schema	`ctrl-cpu schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-cpu/ctrl-cpu

ctrl-cpu attributes

ctrl-cpu attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.87.2 system-cpu data-cpu

Data CPU usage

data-cpu Specification

Parameter	Value
Type	*operational*
Element Name	data-cpu
Element URI	/axapi/v3/system-cpu/data-cpu
Element Attributes	data-cpu_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system-cpu/data-cpu/oper
Schema	`data-cpu schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-cpu/data-cpu

data-cpu attributes

data-cpu attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.87.3 system-cpu data-cpu-overall

Overall Data CPU usage

data-cpu-overall Specification

Parameter	Value
Type	*operational*
Element Name	data-cpu-overall
Element URI	/axapi/v3/system-cpu/data-cpu-overall
Element Attributes	data-cpu-overall_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system-cpu/data-cpu-overall/oper
Schema	`data-cpu-overall schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-cpu/data-cpu-overall

data-cpu-overall attributes

data-cpu-overall attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.87.4 system-cpu vport-data-cpu

Data CPU usage

vport-data-cpu Specification

Parameter	Value
Type	*operational*
Element Name	vport-data-cpu
Element URI	/axapi/v3/system-cpu/vport-data-cpu
Element Attributes	vport-data-cpu_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system-cpu/vport-data-cpu/oper
Schema	`vport-data-cpu schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-cpu/vport-data-cpu

vport-data-cpu attributes

vport-data-cpu attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.87.5 system-cpu vserver-data-cpu

Data CPU usage

vserver-data-cpu Specification

Parameter	Value
Type	*operational*
Element Name	vserver-data-cpu
Element URI	/axapi/v3/system-cpu/vserver-data-cpu
Element Attributes	vserver-data-cpu_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system-cpu/vserver-data-cpu/oper
Schema	`vserver-data-cpu schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-cpu/vserver-data-cpu

vserver-data-cpu attributes

vserver-data-cpu attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.88 system-reset

Objects:

3.88.1 system-reset

Reset system to the default configuration

system-reset Specification

Parameter	Value
Type	*operational*
Element Name	system-reset
Element URI	/axapi/v3/system-reset
Element Attributes	system-reset_attributes
Partition Visibility	shared
Schema	`system-reset schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-reset

system-reset attributes

system-reset attributes

reboot-flag

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.89 system-view

Objects:

3.89.1 system-view chassis-detail

Info regarding the chassis state from axapi

chassis-detail Specification

Parameter	Value
Type	*operational*
Element Name	chassis-detail
Element URI	/axapi/v3/system-view/chassis-detail
Element Attributes	chassis-detail_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system-view/chassis-detail/oper
Schema	`chassis-detail schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-view/chassis-detail

chassis-detail attributes

chassis-detail attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.89.2 system-view hardware-view

hardware-view Specification

Parameter	Value
Type	*operational*
Element Name	hardware-view
Element URI	/axapi/v3/system-view/hardware-view
Element Attributes	hardware-view_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system-view/hardware-view/oper
Schema	`hardware-view schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-view/hardware-view

hardware-view attributes

hardware-view attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.89.3 system-view hotfix

Get hotfix info

hotfix Specification

Parameter	Value
Type	*operational*
Element Name	hotfix
Element URI	/axapi/v3/system-view/hotfix
Element Attributes	hotfix_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system-view/hotfix/oper
Schema	`hotfix schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-view/hotfix

hotfix attributes

hotfix attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.89.4 system-view show-backup

Display backup information

show-backup Specification

Parameter	Value
Type	*operational*
Element Name	show-backup
Element URI	/axapi/v3/system-view/show-backup
Element Attributes	show-backup_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system-view/show-backup/oper
Schema	`show-backup schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-view/show-backup

show-backup attributes

show-backup attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.89.5 system-view show-monitor

Show monitor threshold configuration

show-monitor Specification

Parameter	Value
Type	*operational*
Element Name	show-monitor
Element URI	/axapi/v3/system-view/show-monitor
Element Attributes	show-monitor_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system-view/show-monitor/oper
Schema	`show-monitor schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-view/show-monitor

show-monitor attributes

show-monitor attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.89.6 system-view show-process

Display backup information

show-process Specification

Parameter	Value
Type	*operational*
Element Name	show-process
Element URI	/axapi/v3/system-view/show-process
Element Attributes	show-process_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/system-view/show-process/oper
Schema	`show-process schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/system-view/show-process

show-process attributes

show-process attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.90 template

Objects:

3.90.1 template apps

axAPI to get available ACT and installed ACT

apps Specification

Parameter	Value
Type	*operational*
Element Name	apps
Element URI	/axapi/v3/template/apps
Element Attributes	apps_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/template/apps/oper
Schema	`apps schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/template/apps

apps attributes

apps attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.91 threat-intel

Objects:

3.91.1 threat-intel webroot-log

webroot log information

webroot-log Specification

Parameter	Value
Type	*operational*
Element Name	webroot-log
Element URI	/axapi/v3/threat-intel/webroot-log
Element Attributes	webroot-log_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/threat-intel/webroot-log/oper
Schema	`webroot-log schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/threat-intel/webroot-log

webroot-log attributes

webroot-log attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.92 traffic-control

Objects:

3.92.1 traffic-control rule-set rule move-rule

Move Rule

move-rule Specification

Parameter	Value
Type	*operational*
Element Name	move-rule
Element URI	/axapi/v3/traffic-control/rule-set/{name}/rule/{name}/move-rule
Element Attributes	move-rule_attributes
Partition Visibility	shared
Schema	`move-rule schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/traffic-control/rule-set/{name}/rule/{name}/move-rule

move-rule attributes

move-rule attributes

location

Description 'top': top; 'before': before; 'after': after; 'bottom': bottom;

Type: string

Supported Values: top, before, after, bottom

Default: bottom

target-rule

Description

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

3.93 upgrade

Objects:

3.93.1 upgrade

Upgrade System

upgrade Specification

Parameter	Value
Type	*operational*
Element Name	upgrade
Element URI	/axapi/v3/upgrade
Element Attributes	upgrade_attributes
Partition Visibility	shared
Schema	`upgrade schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/upgrade

upgrade attributes

upgrade attributes

cf

Type: Object

Reference Object: */axapi/v3/upgrade/hd*

gui

Specification	Value
Type	*object*

delete

Type: List

file-url

Description File URL

Type: string

Format: url

Mutual Exclusion: file-url,local, rollback, file-url, and image-file are mutually exclusive

gui-upload

Description image file from AXAPI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

image

Description 'pri': Primary image; 'sec': Secondary image;

Type: string

Supported Values: pri, sec

image-file

Description image file from AXAPI,

Type: string

Format: string-rlx

Mutual Exclusion: image-file,local, rollback, and file-url are mutually exclusive

local

Description Local GUI image name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: local, file-url, and image-file are mutually exclusive

remote-url

Description

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

rollback

Description Rollback to a specific local GUI image

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: rollback,use-mgmt-port, source-ip-address, show-percentage, save-gui, upload, file-url, and image-file are mutually exclusive

source-ip-address

Description Source IP address

Type: string

Format: ipv4-address

Mutual Exclusion: source-ip-address, rollback, and use-mgmt-port are mutually exclusive

upload

Description Upload GUI image from remote

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: upload and rollback are mutually exclusive

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port, rollback, and source-ip-address are mutually exclusive

gui_delete

Specification	Value
Type	*list*
Block object keys	

file

Description Delete one local GUI image

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

cf

Specification	Value
Type	*object*

Device

Description

Type: number

file-url

Description File URL

Type: string

Format: url

Mutual Exclusion: file-url, local, and image-file are mutually exclusive

image

Description 'pri': Primary image;

Type: string

Supported Values: pri

image-file

Description

Type: string

Format: string-rlx

Mutual Exclusion: image-file, local, and file-url are mutually exclusive

local

Description Use image from local VCS image repository (Specify an image name, format: aximage_XX_XX_XX_XX.tar.gz)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: local,use-mgmt-port, show-percentage, file-url, and image-file are mutually exclusive

reboot-after-upgrade

Description reboot system after upgrade is done

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

staggered-upgrade-mode

Description in staggered upgrade mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port and local are mutually exclusive

hd

Specification	Value
Type	*object*

Device

Description

Type: number

file-url

Description File URL

Type: string

Format: url

Mutual Exclusion: file-url,local, rollback, and image-file are mutually exclusive

image

Description 'pri': Primary image; 'sec': Secondary image;

Type: string

Supported Values: pri, sec

image-file

Description

Type: string

Format: string-rlx

Mutual Exclusion: image-file,local, rollback, and file-url are mutually exclusive

local

Description Use image from local VCS image repository (Specify an image name, format: aximage_XX_XX_XX_XX.tar.gz)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: local,use-mgmt-port, source-ip-address, show-percentage, file-url, and image-file are mutually exclusive

reboot-after-upgrade

Description reboot system after upgrade is done

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rollback

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rollback,use-mgmt-port, source-ip-address, show-percentage, file-url, and image-file are mutually exclusive

source-ip-address

Description Source ip address

Type: string

Format: ipv4-address

Mutual Exclusion: source-ip-address,local, rollback, and use-mgmt-port are mutually exclusive

staggered-upgrade-mode

Description in staggered upgrade mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port,local, rollback, and source-ip-address are mutually exclusive

3.93.2 upgrade cf

Compact flash

cf Specification

Parameter	Value
Type	*operational*
Element Name	cf
Element URI	/axapi/v3/upgrade/cf
Element Attributes	cf_attributes
Partition Visibility	shared
Schema	`cf schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/upgrade/cf

Supported Values: pri

image-file

Description

Type: string

Format: string-rlx

Mutual Exclusion: image-file, local, and file-url are mutually exclusive

local

Description Use image from local VCS image repository (Specify an image name, format: aximage_XX_XX_XX_XX.tar.gz)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: local,use-mgmt-port, show-percentage, file-url, and image-file are mutually exclusive

reboot-after-upgrade

Description reboot system after upgrade is done

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

staggered-upgrade-mode

Description in staggered upgrade mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port and local are mutually exclusive

3.93.3 upgrade gui

Upgrade or Rollback GUI

gui Specification

Parameter	Value
Type	*operational*
Element Name	gui
Element URI	/axapi/v3/upgrade/gui
Element Attributes	gui_attributes
Partition Visibility	shared
Schema	`gui schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/upgrade/gui

gui attributes

gui attributes

delete

Type: List

file-url

Description File URL

Type: string

Format: url

Mutual Exclusion: file-url,local, rollback, file-url, and image-file are mutually exclusive

gui-upload

Description image file from AXAPI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

image

Description 'pri': Primary image; 'sec': Secondary image;

Type: string

Supported Values: pri, sec

image-file

Description image file from AXAPI,

Type: string

Format: string-rlx

Mutual Exclusion: image-file,local, rollback, and file-url are mutually exclusive

local

Description Local GUI image name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: local, file-url, and image-file are mutually exclusive

remote-url

Description

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

rollback

Description Rollback to a specific local GUI image

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: rollback,use-mgmt-port, source-ip-address, show-percentage, save-gui, upload, file-url, and image-file are mutually exclusive

source-ip-address

Description Source IP address

Type: string

Format: ipv4-address

Mutual Exclusion: source-ip-address, rollback, and use-mgmt-port are mutually exclusive

upload

Description Upload GUI image from remote

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: upload and rollback are mutually exclusive

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port, rollback, and source-ip-address are mutually exclusive

delete

Specification	Value
Type	*list*
Block object keys	

file

Description Delete one local GUI image

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

3.93.4 upgrade hd

Hard Disk

hd Specification

Parameter	Value
Type	*operational*
Element Name	hd
Element URI	/axapi/v3/upgrade/hd
Element Attributes	hd_attributes
Partition Visibility	shared
Schema	`hd schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/upgrade/hd

hd attributes

hd attributes

Device

Description

Type: number

file-url

Description File URL

Type: string

Format: url

Mutual Exclusion: file-url,local, rollback, and image-file are mutually exclusive

image

Description 'pri': Primary image; 'sec': Secondary image;

Type: string

Supported Values: pri, sec

image-file

Description

Type: string

Format: string-rlx

Mutual Exclusion: image-file,local, rollback, and file-url are mutually exclusive

local

Description Use image from local VCS image repository (Specify an image name, format: aximage_XX_XX_XX_XX.tar.gz)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: local,use-mgmt-port, source-ip-address, show-percentage, file-url, and image-file are mutually exclusive

reboot-after-upgrade

Description reboot system after upgrade is done

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rollback

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rollback,use-mgmt-port, source-ip-address, show-percentage, file-url, and image-file are mutually exclusive

source-ip-address

Description Source ip address

Type: string

Format: ipv4-address

Mutual Exclusion: source-ip-address,local, rollback, and use-mgmt-port are mutually exclusive

staggered-upgrade-mode

Description in staggered upgrade mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port,local, rollback, and source-ip-address are mutually exclusive

3.94 vcs

Objects:

3.94.1 vcs debug

VCS debug

debug Specification

Parameter	Value
Type	*operational*
Element Name	debug
Element URI	/axapi/v3/vcs/debug
Element Attributes	debug_attributes
Partition Visibility	shared
Schema	`debug schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vcs/debug

debug attributes

debug attributes

daemon

Description Daemon component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

daemon_msg

Description Daemon message component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

election

Description Election component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

election_pdu

Description Election pdu component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encoder

Description Encoder component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

handler

Description Handler component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

info

Description Information component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lib

Description Lib component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

net

Description Net component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl

Description SSL component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

util

Description Utility component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vblade

Description vBlade component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vblade_msg

Description vBlade Message component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vmaster

Description vMaster component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vmaster_msg

Description vMaster Message component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.94.2 vcs images

VCS Images Information

images Specification

Parameter	Value
Type	*operational*
Element Name	images
Element URI	/axapi/v3/vcs/images
Element Attributes	images_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vcs/images/oper
Schema	`images schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vcs/images

images attributes

images attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.94.3 vcs reload

VCS reload

reload Specification

Parameter	Value
Type	*operational*
Element Name	reload
Element URI	/axapi/v3/vcs/reload
Element Attributes	reload_attributes
Partition Visibility	shared
Schema	`reload schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vcs/reload

reload attributes

reload attributes

cluster-discovery

Description apply the configuration change on the aVCS cluster

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

complete

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

db-safe

Description keep database safe

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

device

Description Reload a specific device when VCS is enabled (device id)

Type: number

disable-merge

Description don't merge this vBlade's configuration to aVCS chassis

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force

Description force to complete

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description automatically complete the db-safe mode when timeout

Type: number

Range: 5-300

3.94.4 vcs showdebug

VCS Summary Information

showdebug Specification

Parameter	Value
Type	*operational*
Element Name	showdebug
Element URI	/axapi/v3/vcs/showdebug
Element Attributes	showdebug_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vcs/showdebug/oper
Schema	`showdebug schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vcs/showdebug

showdebug attributes

showdebug attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.94.5 vcs vMaster-maintenance

During this period, vMaster can leave and come back to be vMaster again

vMaster-maintenance Specification

Parameter	Value
Type	*operational*
Element Name	vMaster-maintenance
Element URI	/axapi/v3/vcs/vMaster-maintenance
Element Attributes	vMaster-maintenance_attributes
Partition Visibility	shared
Schema	`vMaster-maintenance schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vcs/vMaster-maintenance

vMaster-maintenance attributes

vMaster-maintenance attributes

vMaster-maintenance

Description the seconds vMaster will be maintained, 60 by default

Type: number

Range: 0-3600

Default: 60

3.94.6 vcs vcs-summary

VCS Summary Information

vcs-summary Specification

Parameter	Value
Type	*operational*
Element Name	vcs-summary
Element URI	/axapi/v3/vcs/vcs-summary
Element Attributes	vcs-summary_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vcs/vcs-summary/oper
Schema	`vcs-summary schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vcs/vcs-summary

vcs-summary attributes

vcs-summary attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.94.7 vcs vmaster-take-over

Forcefully take over mastership

vmaster-take-over Specification

Parameter	Value
Type	*operational*
Element Name	vmaster-take-over
Element URI	/axapi/v3/vcs/vmaster-take-over
Element Attributes	vmaster-take-over_attributes
Partition Visibility	shared
Schema	`vmaster-take-over schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vcs/vmaster-take-over

vmaster-take-over attributes

vmaster-take-over attributes

vmaster-take-over

Description vMaster take over priority

Type: number

Range: 1-255

3.95 vcs-chassis

Objects:

3.95.1 vcs-chassis debug

VCS debug

debug Specification

Parameter	Value
Type	*operational*
Element Name	debug
Element URI	/axapi/v3/vcs-chassis/debug
Element Attributes	debug_attributes
Partition Visibility	shared
Schema	`debug schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vcs-chassis/debug

debug attributes

debug attributes

daemon

Description Daemon component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

daemon_msg

Description Daemon message component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

election

Description Election component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

election_pdu

Description Election pdu component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encoder

Description Encoder component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

handler

Description Handler component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

info

Description Information component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lib

Description Lib component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

net

Description Net component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl

Description SSL component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

util

Description Utility component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vblade

Description vBlade component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vblade_msg

Description vBlade Message component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vmaster

Description vMaster component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vmaster_msg

Description vMaster Message component

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.95.2 vcs-chassis slot-summary

Chassis Summary Information

slot-summary Specification

Parameter	Value
Type	*operational*
Element Name	slot-summary
Element URI	/axapi/v3/vcs-chassis/slot-summary
Element Attributes	slot-summary_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vcs-chassis/slot-summary/oper
Schema	`slot-summary schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vcs-chassis/slot-summary

slot-summary attributes

slot-summary attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.96 version

Objects:

3.97 visibility

Objects:

3.97.1 visibility monitor delete-debug-file

Delete the debug entity file

delete-debug-file Specification

Parameter	Value
Type	*operational*
Object Key(s)	*debug-ip-addr*
Element Name	delete-debug-file
Element URI	/axapi/v3/visibility/monitor/delete-debug-file
Element Attributes	delete-debug-file_attributes
Partition Visibility	shared
Schema	`delete-debug-file schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/visibility/monitor/delete-debug-file

delete-debug-file attributes

delete-debug-file attributes

debug-ip-addr

Description Specify source/dest ip addr

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

debug-port

Description Specify port

Type: number

Range: 1-65535

debug-protocol

Description 'TCP': TCP; 'UDP': UDP; 'ICMP': ICMP;

Type: string

Supported Values: TCP, UDP, ICMP

3.97.2 visibility monitor replay-debug-file

Replay the debug entity file

replay-debug-file Specification

Parameter	Value
Type	*operational*
Object Key(s)	*debug-ip-addr*
Element Name	replay-debug-file
Element URI	/axapi/v3/visibility/monitor/replay-debug-file
Element Attributes	replay-debug-file_attributes
Partition Visibility	shared
Schema	`replay-debug-file schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/visibility/monitor/replay-debug-file

replay-debug-file attributes

replay-debug-file attributes

debug-ip-addr

Description Specify source/dest ip addr

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

debug-port

Description Specify port

Type: number

Range: 1-65535

debug-protocol

Description 'TCP': TCP; 'UDP': UDP; 'ICMP': ICMP;

Type: string

Supported Values: TCP, UDP, ICMP

3.97.3 visibility monitor secondary-monitor delete-debug-file

Delete the debug entity file

delete-debug-file Specification

Parameter	Value
Type	*operational*
Object Key(s)	*debug-ip-addr*
Element Name	delete-debug-file
Element URI	/axapi/v3/visibility/monitor/secondary-monitor/delete-debug-file
Element Attributes	delete-debug-file_attributes
Partition Visibility	shared
Schema	`delete-debug-file schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/visibility/monitor/secondary-monitor/delete-debug-file

delete-debug-file attributes

delete-debug-file attributes

debug-ip-addr

Description Specify source/dest ip addr

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

debug-port

Description Specify port

Type: number

Range: 1-65535

debug-protocol

Description 'TCP': TCP; 'UDP': UDP; 'ICMP': ICMP;

Type: string

Supported Values: TCP, UDP, ICMP

3.97.4 visibility monitor secondary-monitor replay-debug-file

Replay the debug entity file

replay-debug-file Specification

Parameter	Value
Type	*operational*
Object Key(s)	*debug-ip-addr*
Element Name	replay-debug-file
Element URI	/axapi/v3/visibility/monitor/secondary-monitor/replay-debug-file
Element Attributes	replay-debug-file_attributes
Partition Visibility	shared
Schema	`replay-debug-file schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/visibility/monitor/secondary-monitor/replay-debug-file

replay-debug-file attributes

replay-debug-file attributes

debug-ip-addr

Description Specify source/dest ip addr

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

debug-port

Description Specify port

Type: number

Range: 1-65535

debug-protocol

Description 'TCP': TCP; 'UDP': UDP; 'ICMP': ICMP;

Type: string

Supported Values: TCP, UDP, ICMP

3.97.5 visibility packet-capture delete-packet-capture-file

Delete the Packet capture pcapng file

delete-packet-capture-file Specification

Parameter	Value
Type	*operational*
Element Name	delete-packet-capture-file
Element URI	/axapi/v3/visibility/packet-capture/delete-packet-capture-file
Element Attributes	delete-packet-capture-file_attributes
Partition Visibility	shared
Schema	`delete-packet-capture-file schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/visibility/packet-capture/delete-packet-capture-file

delete-packet-capture-file attributes

delete-packet-capture-file attributes

all

Description Delete all files in this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-name

Description Specify the name of the packet capture file to be deleted

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

3.97.6 visibility reporting template notification debug

Display Notification Template Debug

debug Specification

Parameter	Value
Type	*operational*
Element Name	debug
Element URI	/axapi/v3/visibility/reporting/template/notification/debug
Element Attributes	debug_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/visibility/reporting/template/notification/debug/oper
Schema	`debug schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/visibility/reporting/template/notification/debug

debug attributes

debug attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.97.7 visibility resource-usage

Visibility resoruces information

resource-usage Specification

Parameter	Value
Type	*operational*
Element Name	resource-usage
Element URI	/axapi/v3/visibility/resource-usage
Element Attributes	resource-usage_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/visibility/resource-usage/oper
Schema	`resource-usage schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/visibility/resource-usage

resource-usage attributes

resource-usage attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.98 vpn

Objects:

3.98.1 vpn default

Default

default Specification

Parameter	Value
Type	*operational*
Element Name	default
Element URI	/axapi/v3/vpn/default
Element Attributes	default_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vpn/default/oper
Schema	`default schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vpn/default

default attributes

default attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.98.2 vpn error

Error counters

error Specification

Parameter	Value
Type	*operational*
Element Name	error
Element URI	/axapi/v3/vpn/error
Element Attributes	error_attributes
Partition Visibility	shared
Statistics Data URI	/axapi/v3/vpn/error/stats
Schema	`error schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vpn/error

error attributes

error attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.98.3 vpn errordump

Error dump

errordump Specification

Parameter	Value
Type	*operational*
Element Name	errordump
Element URI	/axapi/v3/vpn/errordump
Element Attributes	errordump_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vpn/errordump/oper
Schema	`errordump schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vpn/errordump

errordump attributes

errordump attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.98.4 vpn ike-sa-brief

IKE SA brief

ike-sa-brief Specification

Parameter	Value
Type	*operational*
Element Name	ike-sa-brief
Element URI	/axapi/v3/vpn/ike-sa-brief
Element Attributes	ike-sa-brief_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vpn/ike-sa-brief/oper
Schema	`ike-sa-brief schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vpn/ike-sa-brief

ike-sa-brief attributes

ike-sa-brief attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.98.5 vpn ike-sa-clients

IKE SA clients

ike-sa-clients Specification

Parameter	Value
Type	*operational*
Element Name	ike-sa-clients
Element URI	/axapi/v3/vpn/ike-sa-clients
Element Attributes	ike-sa-clients_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vpn/ike-sa-clients/oper
Schema	`ike-sa-clients schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vpn/ike-sa-clients

ike-sa-clients attributes

ike-sa-clients attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.98.6 vpn ike-stats-by-gw

IKE Stats by gateway

ike-stats-by-gw Specification

Parameter	Value
Type	*operational*
Element Name	ike-stats-by-gw
Element URI	/axapi/v3/vpn/ike-stats-by-gw
Element Attributes	ike-stats-by-gw_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vpn/ike-stats-by-gw/oper
Schema	`ike-stats-by-gw schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vpn/ike-stats-by-gw

ike-stats-by-gw attributes

ike-stats-by-gw attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.98.7 vpn ipsec-sa-clients

IPsec SA clients

ipsec-sa-clients Specification

Parameter	Value
Type	*operational*
Element Name	ipsec-sa-clients
Element URI	/axapi/v3/vpn/ipsec-sa-clients
Element Attributes	ipsec-sa-clients_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vpn/ipsec-sa-clients/oper
Schema	`ipsec-sa-clients schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vpn/ipsec-sa-clients

ipsec-sa-clients attributes

ipsec-sa-clients attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.98.8 vpn log

Log

log Specification

Parameter	Value
Type	*operational*
Element Name	log
Element URI	/axapi/v3/vpn/log
Element Attributes	log_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vpn/log/oper
Schema	`log schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vpn/log

log attributes

log attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.99 vrrp-a

Objects:

3.99.1 vrrp-a detail

display vrrp-a peer detail status

detail Specification

Parameter	Value
Type	*operational*
Element Name	detail
Element URI	/axapi/v3/vrrp-a/detail
Element Attributes	detail_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vrrp-a/detail/oper
Schema	`detail schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vrrp-a/detail

detail attributes

detail attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.99.2 vrrp-a force-self-standby

HA VRRP-A Operational Command to force the unit or a group to HA standby state

force-self-standby Specification

Parameter	Value
Type	*operational*
Element Name	force-self-standby
Element URI	/axapi/v3/vrrp-a/force-self-standby
Element Attributes	force-self-standby_attributes
Partition Visibility	shared
Schema	`force-self-standby schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vrrp-a/force-self-standby

force-self-standby attributes

force-self-standby attributes

action

Description 'enable': enable vrrp-a force-self-standby; 'disable': disable vrrp-a force-self-standby;

Type: string

Supported Values: enable, disable

all-partitions

Description force all partitions in standby state

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip-check

Description skip single device check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description Specify one VRRP-A vrid to force into standby state

Type: number

Range: 0-31

3.99.3 vrrp-a hostid

vrrp-a device serial number or softax UUID

hostid Specification

Parameter	Value
Type	*operational*
Element Name	hostid
Element URI	/axapi/v3/vrrp-a/hostid
Element Attributes	hostid_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vrrp-a/hostid/oper
Schema	`hostid schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vrrp-a/hostid

hostid attributes

hostid attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.99.4 vrrp-a mac

corresponding virtual mac

mac Specification

Parameter	Value
Type	*operational*
Element Name	mac
Element URI	/axapi/v3/vrrp-a/mac
Element Attributes	mac_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vrrp-a/mac/oper
Schema	`mac schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vrrp-a/mac

mac attributes

mac attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.99.5 vrrp-a partition-vrid-all-status

display vrid all status for all partitions

partition-vrid-all-status Specification

Parameter	Value
Type	*operational*
Element Name	partition-vrid-all-status
Element URI	/axapi/v3/vrrp-a/partition-vrid-all-status
Element Attributes	partition-vrid-all-status_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vrrp-a/partition-vrid-all-status/oper
Schema	`partition-vrid-all-status schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vrrp-a/partition-vrid-all-status

partition-vrid-all-status attributes

partition-vrid-all-status attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.99.6 vrrp-a partition-vrid-status

display vrrp-a status for all partitions

partition-vrid-status Specification

Parameter	Value
Type	*operational*
Element Name	partition-vrid-status
Element URI	/axapi/v3/vrrp-a/partition-vrid-status
Element Attributes	partition-vrid-status_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vrrp-a/partition-vrid-status/oper
Schema	`partition-vrid-status schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vrrp-a/partition-vrid-status

partition-vrid-status attributes

partition-vrid-status attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.99.7 vrrp-a setid-monitor

monitor set id that has been used

setid-monitor Specification

Parameter	Value
Type	*operational*
Element Name	setid-monitor
Element URI	/axapi/v3/vrrp-a/setid-monitor
Element Attributes	setid-monitor_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vrrp-a/setid-monitor/oper
Schema	`setid-monitor schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vrrp-a/setid-monitor

setid-monitor attributes

setid-monitor attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.99.8 vrrp-a state-cpu

HA VRRP-A Global Commands

state-cpu Specification

Parameter	Value
Type	*operational*
Element Name	state-cpu
Element URI	/axapi/v3/vrrp-a/state-cpu
Element Attributes	state-cpu_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vrrp-a/state-cpu/oper
Schema	`state-cpu schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vrrp-a/state-cpu

state-cpu attributes

state-cpu attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.99.9 vrrp-a te-mac

corresponding virtual te-mac

te-mac Specification

Parameter	Value
Type	*operational*
Element Name	te-mac
Element URI	/axapi/v3/vrrp-a/te-mac
Element Attributes	te-mac_attributes
Partition Visibility	shared
Operational Data URI	/axapi/v3/vrrp-a/te-mac/oper
Schema	`te-mac schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/vrrp-a/te-mac

te-mac attributes

te-mac attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

3.100 web-service

Objects:

3.100.1 web-service secure

Web-service secure operation

secure Specification

Parameter	Value
Type	*operational*
Element Name	secure
Element URI	/axapi/v3/web-service/secure
Element Attributes	secure_attributes
Partition Visibility	shared
Schema	`secure schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/web-service/secure

secure attributes

secure attributes

certificate

Description: certificate is a **JSON Block**. Please see below for *certificate*

Type: Object

Reference Object: */axapi/v3/web-service/secure/certificate*

generate

Description: generate is a **JSON Block**. Please see below for *generate*

Type: Object

Reference Object: */axapi/v3/web-service/secure/generate*

private-key

Description: private-key is a **JSON Block**. Please see below for *private-key*

Type: Object

Reference Object: */axapi/v3/web-service/secure/private-key*

regenerate

Description: regenerate is a **JSON Block**. Please see below for *regenerate*

Type: Object

Reference Object: */axapi/v3/web-service/secure/regenerate*

restart

Description Restart WEB service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wipe

Description Wipe WEB private-key and certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

certificate

Specification	Value
Type	*object*

file-url

Description File URL

Type: string

Format: url

load

Description Load WEB certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

regenerate

Specification	Value
Type	*object*

country

Description The country name

Type: string

Maximum Length: 2 characters

Maximum Length: 2 characters

domain-name

Description The domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

state

Description The location

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

generate

Specification	Value
Type	*object*

country

Description The country name

Type: string

Maximum Length: 2 characters

Maximum Length: 2 characters

domain-name

Description The domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

state

Description The location

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

private-key

Specification	Value
Type	*object*

file-url

Description File URL

Type: string

Format: url

load

Description Load WEB private-key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.100.2 web-service secure certificate

Web-service secure certificate operation

certificate Specification

Parameter	Value
Type	*operational*
Element Name	certificate
Element URI	/axapi/v3/web-service/secure/certificate
Element Attributes	certificate_attributes
Partition Visibility	shared
Schema	`certificate schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/web-service/secure/certificate

certificate attributes

certificate attributes

file-url

Description File URL

Type: string

Format: url

load

Description Load WEB certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.100.3 web-service secure generate

Web-service secure generate operation

generate Specification

Parameter	Value
Type	*operational*
Element Name	generate
Element URI	/axapi/v3/web-service/secure/generate
Element Attributes	generate_attributes
Partition Visibility	shared
Schema	`generate schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/web-service/secure/generate

generate attributes

generate attributes

country

Description The country name

Type: string

Maximum Length: 2 characters

Maximum Length: 2 characters

domain-name

Description The domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

state

Description The location

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

3.100.4 web-service secure private-key

Web-service secure private-key operation

private-key Specification

Parameter	Value
Type	*operational*
Element Name	private-key
Element URI	/axapi/v3/web-service/secure/private-key
Element Attributes	private-key_attributes
Partition Visibility	shared
Schema	`private-key schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/web-service/secure/private-key

private-key attributes

private-key attributes

file-url

Description File URL

Type: string

Format: url

load

Description Load WEB private-key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

3.100.5 web-service secure regenerate

Web-service secure regenerate operation

regenerate Specification

Parameter	Value
Type	*operational*
Element Name	regenerate
Element URI	/axapi/v3/web-service/secure/regenerate
Element Attributes	regenerate_attributes
Partition Visibility	shared
Schema	`regenerate schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/web-service/secure/regenerate

regenerate attributes

regenerate attributes

country

Description The country name

Type: string

Maximum Length: 2 characters

Maximum Length: 2 characters

domain-name

Description The domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

state

Description The location

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

3.101 write

Objects:

3.101.1 write

Write memory

write Specification

Parameter	Value
Type	*operational*
Element Name	write
Element URI	/axapi/v3/write
Element Attributes	write_attributes
Partition Visibility	shared
Schema	`write schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/write

write attributes

write attributes

memory

Description: memory is a **JSON Block**. Please see below for *memory*

Type: Object

Reference Object: */axapi/v3/write/memory*

memory

Specification	Value
Type	*object*

destination

Description 'primary': Write to default Primary Configuration; 'secondary': Write to default Secondary Configuration; 'local': Local Configuration Profile Name;

Type: string

Supported Values: primary, secondary, local

partition

Description 'all': All partition configurations; 'shared': Shared partition; 'specified': Specified partition;

Type: string

Supported Values: all, shared, specified

profile

Description Local Configuration Profile Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

specified-partition

Description Specified partition

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

3.101.2 write memory

Write memory

memory Specification

Parameter	Value
Type	*operational*
Element Name	memory
Element URI	/axapi/v3/write/memory
Element Attributes	memory_attributes
Partition Visibility	shared
Schema	`memory schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/write/memory

memory attributes

memory attributes

destination

Description 'primary': Write to default Primary Configuration; 'secondary': Write to default Secondary Configuration; 'local': Local Configuration Profile Name;

Type: string

Supported Values: primary, secondary, local

partition

Description 'all': All partition configurations; 'shared': Shared partition; 'specified': Specified partition;

Type: string

Supported Values: all, shared, specified

profile

Description Local Configuration Profile Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

specified-partition

Description Specified partition

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters
